FINANCIAL AND MANAGERIAL ACCOUNTING

This page is intentionally left blank

ACCOUNT CLASSIFICATION AND PRESENTATION

Account Title	Classification	Financial Statement	Normal Balance
A			
Accounts Payable	Current Liability	Balance Sheet	Credit
Accounts Receivable	Current Asset	Balance Sheet	Debit
Accumulated Depreciation—Buildings	Plant Asset—Contra	Balance Sheet	Credit
Accumulated Depreciation—Equipment	Plant Asset—Contra	Balance Sheet	Credit
Administrative Expenses	Operating Expense	Income Statement	Debit
Advertising Expense	Operating Expense	Income Statement	Debit
Allowance for Doubtful Accounts	Current Asset—Contra	Balance Sheet	Credit
Amortization Expense	Operating Expense	Income Statement	Debit
B			
Bad Debt Expense	Operating Expense	Income Statement	Debit
Bonds Payable	Long-Term Liability	Balance Sheet	Credit
Buildings	Plant Asset	Balance Sheet	Debit
C			
Cash	Current Asset	Balance Sheet	Debit
Common Stock	Stockholders' Equity	Balance Sheet	Credit
Copyrights	Intangible Asset	Balance Sheet	Debit
Cost of Goods Sold	Cost of Goods Sold	Income Statement	Debit
D			
Debt Investments	Current Asset/Long-Term Investment	Balance Sheet	Debit
Depreciation Expense	Operating Expense	Income Statement	Debit
Discount on Bonds Payable	Long-Term Liability—Contra	Balance Sheet	Debit
Dividend Revenue	Other Income	Income Statement	Credit
Dividends	Temporary account closed to Retained Earnings	Retained Earnings Statement	Debit
Dividends Payable	Current Liability	Balance Sheet	Credit
E			
Equipment	Plant Asset	Balance Sheet	Debit
F			
Freight-Out	Operating Expense	Income Statement	Debit
G			
Gain on Disposal of Plant Assets	Other Income	Income Statement	Credit
Goodwill	Intangible Asset	Balance Sheet	Debit
I			
Income Summary	Temporary account closed to Retained Earnings	Not Applicable	(1)
Income Tax Expense	Income Tax Expense	Income Statement	Debit
Income Taxes Payable	Current Liability	Balance Sheet	Credit
Insurance Expense	Operating Expense	Income Statement	Debit
Interest Expense	Other Expense	Income Statement	Debit
Interest Payable	Current Liability	Balance Sheet	Credit
Interest Receivable	Current Asset	Balance Sheet	Debit
Interest Revenue	Other Income	Income Statement	Credit
Inventory	Current Asset	Balance Sheet (2)	Debit

Account Title	Classification	Financial Statement	Normal Balance
L			
Land	Plant Asset	Balance Sheet	Debit
Loss on Disposal of Plant Assets	Other Expense	Income Statement	Debit
M			
Maintenance and Repairs Expense	Operating Expense	Income Statement	Debit
Mortgage Payable	Long-Term Liability	Balance Sheet	Credit
N			
Notes Payable	Current Liability/ Long-Term Liability	Balance Sheet	Credit
P			
Patents	Intangible Asset	Balance Sheet	Debit
Paid-in Capital in Excess of Par— Common Stock	Stockholders' Equity	Balance Sheet	Credit
Paid-in Capital in Excess of Par— Preferred Stock	Stockholders' Equity	Balance Sheet	Credit
Preferred Stock	Stockholders' Equity	Balance Sheet	Credit
Premium on Bonds Payable	Long-Term Liability—Adjunct	Balance Sheet	Credit
Prepaid Insurance	Current Asset	Balance Sheet	Debit
R			
Rent Expense	Operating Expense	Income Statement	Debit
Retained Earnings	Stockholders' Equity	Balance Sheet and Retained Earnings Statement	Credit
S			
Salaries and Wages Expense	Operating Expense	Income Statement	Debit
Salaries and Wages Payable	Current Liability	Balance Sheet	Credit
Sales Discounts	Revenue—Contra	Income Statement	Debit
Sales Returns and Allowances	Revenue—Contra	Income Statement	Debit
Sales Revenue	Revenue	Income Statement	Credit
Selling Expenses	Operating Expense	Income Statement	Debit
Service Revenue	Revenue	Income Statement	Credit
Short-Term Investments	Current Asset	Balance Sheet	Debit
Stock Investments	Current Asset/Long-Term Investment	Balance Sheet	Debit
Supplies	Current Asset	Balance Sheet	Debit
Supplies Expense	Operating Expense	Income Statement	Debit
T			
Treasury Stock	Stockholders' Equity	Balance Sheet	Debit
U			
Unearned Service Revenue	Current Liability	Balance Sheet	Credit
Utilities Expense	Operating Expense	Income Statement	Debit
<p>(1) The normal balance for Income Summary will be credit when there is a net income, debit when there is a net loss. The Income Summary account does not appear on any financial statement.</p> <p>(2) If a periodic system is used, Inventory also appears on the income statement in the calculation of cost of goods sold.</p>			

The following is a sample chart of accounts. It does not represent a comprehensive chart of all the accounts used in this textbook but rather those accounts that are commonly used. This sample chart of accounts is for a company that generates both service revenue as well as sales revenue. It uses the perpetual approach to inventory. If a periodic system was used, the following temporary accounts would be needed to record inventory purchases: Purchases; Freight-In; Purchase Returns and Allowances; and Purchase Discounts.

CHART OF ACCOUNTS				
Assets	Liabilities	Stockholders' Equity	Revenues	Expenses
Cash	Notes Payable	Common Stock	Service Revenue	Administrative Expenses
Accounts Receivable	Accounts Payable	Paid-in Capital in Excess of Par—Common Stock	Sales Revenue	Amortization Expense
Allowance for Doubtful Accounts	Unearned Service Revenue	Preferred Stock	Sales Discounts	Bad Debt Expense
Interest Receivable	Salaries and Wages Payable	Paid-in Capital in Excess of Par—Preferred Stock	Sales Returns and Allowances	Cost of Goods Sold
Inventory	Interest Payable	Treasury Stock	Interest Revenue	Depreciation Expense
Supplies	Dividends Payable	Retained Earnings	Gain on Disposal of Plant Assets	Freight-Out
Prepaid Insurance	Income Taxes Payable	Dividends		Income Tax Expense
Land	Bonds Payable	Income Summary		Insurance Expense
Equipment	Discount on Bonds Payable			Interest Expense
Accumulated Depreciation—Equipment	Premium on Bonds Payable			Loss on Disposal of Plant Assets
Buildings	Mortgage Payable			Maintenance and Repairs Expense
Accumulated Depreciation—Buildings				Rent Expense
Copyrights				Salaries and Wages Expense
Goodwill				Selling Expenses
Patents				Supplies Expense
				Utilities Expense

This book was set in New Aster by Aptara[®], Inc. and printed and bound by Courier-Kendallville. The cover was printed by Courier-Kendallville.

Founded in 1807, John Wiley & Sons, Inc. has been a valued source of knowledge and understanding for more than 200 years, helping people around the world meet their needs and fulfill their aspirations. Our company is built on a foundation of principles that include responsibility to the communities we serve and where we live and work. In 2008, we launched a Corporate Citizenship Initiative, a global effort to address the environmental, social, economic, and ethical challenges we face in our business. Among the issues we are addressing are carbon impact, paper specifications and procurement, ethical conduct within our business and among our vendors, and community and charitable support. For more information, please visit our website: www.wiley.com/go/citizenship.

From the Authors

Dear Student,

Why This Course? Remember your biology course in high school? Did you have one of those “invisible man” models (or maybe something more high-tech than that) that gave you the opportunity to look “inside” the human body? This accounting course offers something similar: To understand a business, you have to understand the financial insides of a business organization. An introductory accounting course will help you understand the essential financial components of businesses. Whether you are looking at a large multinational company like *Microsoft* or *Starbucks* or a single-owner software consulting business or coffee shop, knowing the fundamentals of accounting will help you understand what is happening. As an employee, a manager, an investor, a business owner, or a director of your own personal finances—any of which roles you will have at some point in your life—you will make better decisions for having taken this course.

Why This Book? This textbook contains features to help you learn best, whatever your learning style. To understand what your learning style is, spend about 10 minutes to take the learning style quiz at the book’s companion website. Then, look at page xiii for how you can apply an understanding of your learning style to this course. When you know more about your own learning style, browse through pages xiv–xvii. These pages describe the main features you will find in this textbook and explain their purpose.

How To Succeed? We’ve asked many students and many instructors whether there is a secret for success in this course. The nearly unanimous answer turns out to be not much of a secret: “Do the homework.” This is one course where doing is learning. The more time you spend on the homework assignments—using the various tools that this textbook provides—the more likely you are to learn the essential concepts, techniques, and methods of accounting. Besides the textbook itself, the book’s companion website also offers various support resources.

Good luck in this course. We hope you enjoy the experience and that you put to good use throughout a lifetime of success the knowledge you obtain in this course. We are sure you will not be disappointed.

“Whether you are looking at a large multinational company like Microsoft or Starbucks or a single-owner software consulting business or coffee shop, knowing the fundamentals of accounting will help you understand what is happening.”

Your Team for Success in Accounting

Wiley Accounting is your partner in accounting education. We want to be the first publisher you think of when it comes to quality content, reliable technology, innovative resources, professional training, and unparalleled support for your accounting classroom.

Your Wiley Accounting Team for Success is comprised of three distinctive advantages that you won't find with any other publisher:

- Author Commitment
- Wiley Faculty Network
- WileyPLUS

Author Commitment:

*A Proven Author Team
of Inspired Teachers*

The Team for Success authors bring years of industry and academic experience to the development of each textbook that relates accounting concepts to real-world experiences. This cohesive team brings continuity of writing style, pedagogy, and problem material to each course from Principles to Intermediate so you and your students can seamlessly progress from introductory through advanced courses in accounting.

The authors understand the mindset and time limitations of today's students. They demonstrate an intangible ability to effectively deliver complex information so it is clear and understandable while staying one step ahead of emerging global trends in business.

Wiley Faculty Network:

A Team of Educators Dedicated to Your Professional Development

The Wiley Faculty Network (WFN) is a global group of seasoned accounting professionals who share best practices in teaching with their peers. Our Virtual Guest

Lecture Series provides the opportunity you need for professional development in an online environment that is relevant, convenient, and collaborative. The quality of these seminars and workshops meets the strictest standards, so we are proud to be able to offer valuable CPE credits to attendees.

With 24 faculty mentors in accounting, it's easy to find help with your most challenging curriculum questions—just ask our experts!

WileyPLUS:

An Experienced Team of Support Professionals

The *WileyPLUS* Account Managers understand the time constraints of busy instructors who want to provide the best resources available to their students with minimal headaches and planning time. They know how intimidating new software can be, so they are sure to make the transition easy and painless.

Account Managers act as your personal contact and expert resource for training, course set-up, and shortcuts throughout the *WileyPLUS* experience.

Your success as an educator directly correlates to student success, and that's our goal. The Wiley Accounting Team for Success truly strives for YOUR success! Partner with us today!

Author Commitment

Collaboration. Innovation. Experience.

After decades of success as authors of textbooks like this one, Jerry Weygandt, Paul Kimmel, and Don Kieso understand that teaching accounting goes beyond simply presenting data. The authors are truly effective because they know that teaching is about telling compelling stories in ways that make each concept come to life.

Teacher / Author / Professional

Through their textbooks, supplements, online learning tools, and classrooms, these authors have developed a comprehensive pedagogy that engages students in learning and faculty with teaching.

These authors collaborate throughout the entire process. The end result is a true collaboration where each author brings his individual experience and talent to the development of every paragraph, page, and chapter, thus creating a truly well-rounded, thorough view on any given accounting topic.

Many Ways in One Direction

Our **Team for Success** has developed a teaching system that addresses every learning style. Each year brings new insights, feedback, ideas, and improvements on how to deliver the material to every student with a passion for the subject in a format that gives them the best chance to succeed.

The key to the team's approach is in understanding that, just as there are many different ways to learn, there are also many different ways to teach.

In Their Own Words

Visit the Wiley **Team for Success** website to hear from the authors first-hand as they discuss their teaching styles, collaboration, and the future of accounting.

Author Commitment

Jerry Weygandt

Jerry J. Weygandt, PhD, CPA, is Arthur Andersen Alumni Emeritus Professor of Accounting at the University of Wisconsin—Madison. He holds a Ph.D. in accounting from the University of Illinois. Articles by Professor Weygandt have appeared in the *Accounting Review*, *Journal of Accounting Research*, *Accounting Horizons*, *Journal of Accountancy*, and other academic and professional journals. These articles have examined such financial reporting issues as accounting for price-level adjustments, pensions, convertible securities, stock option contracts, and interim reports. Professor Weygandt is author of other accounting and financial reporting books and is a member of the American Accounting Association, the American Institute of Certified Public Accountants, and the Wisconsin Society of Certified Public Accountants. He has served on numerous committees of the American Accounting Association and as a member of the editorial board of the *Accounting Review*; he also has served as President and Secretary-Treasurer of the American Accounting Association. In addition, he has been actively involved with the American Institute of Certified Public Accountants and has been a member of the Accounting Standards Executive Committee (AcSEC) of that organization. He has served on the FASB task force that examined the reporting issues related to accounting for income taxes and served as a trustee of the Financial Accounting Foundation. Professor Weygandt has received the Chancellor's Award for Excellence in Teaching and the Beta Gamma Sigma Dean's Teaching Award. He is on the board of directors of M & I Bank of Southern Wisconsin. He is the recipient of the Wisconsin Institute of CPA's Outstanding Educator's Award and the Lifetime Achievement Award. In 2001 he received the American Accounting Association's Outstanding Educator Award.

Paul Kimmel

Paul D. Kimmel, PhD, CPA, received his bachelor's degree from the University of Minnesota and his doctorate in accounting from the University of Wisconsin. He is an Associate Professor at the University of Wisconsin—Milwaukee, and has public accounting experience with Deloitte & Touche (Minneapolis). He was the recipient of the UWM School of Business Advisory Council Teaching Award, the Reggie Taite Excellence in Teaching Award and a three-time winner of the Outstanding Teaching Assistant Award at the University of Wisconsin. He is also a recipient of the Elijah Watts Sells Award for Honorary Distinction for his results on the CPA exam. He is a member of the American Accounting Association and the Institute of Management Accountants and has published articles in *Accounting Review*, *Accounting Horizons*, *Advances in Management Accounting*, *Managerial Finance*, *Issues in Accounting Education*, *Journal of Accounting Education*, as well as other journals. His research interests include accounting for financial instruments and innovation in accounting education. He has published papers and given numerous talks on incorporating critical thinking into accounting education, and helped prepare a catalog of critical thinking resources for the Federated Schools of Accountancy.

Don Kieso

Donald E. Kieso, PhD, CPA, received his bachelor's degree from Aurora University and his doctorate in accounting from the University of Illinois. He has served as chairman of the Department of Accountancy and is currently the KPMG Emeritus Professor of Accountancy at Northern Illinois University. He has public accounting experience with Price Waterhouse & Co. (San Francisco and Chicago) and Arthur Andersen & Co. (Chicago) and research experience with the Research Division of the American Institute of Certified Public Accountants (New York). He has done post doctorate work as a Visiting Scholar at the University of California at Berkeley and is a recipient of NIU's Teaching Excellence Award and four Golden Apple Teaching Awards. Professor Kieso is the author of other accounting and business books and is a member of the American Accounting Association, the American Institute of Certified Public Accountants, and the Illinois CPA Society. He has served as a member of the Board of Directors of the Illinois CPA Society, then AACSB's Accounting Accreditation Committees, the State of Illinois Comptroller's Commission, as Secretary-Treasurer of the Federation of Schools of Accountancy, and as Secretary-Treasurer of the American Accounting Association. Professor Kieso is currently serving on the Board of Trustees and Executive Committee of Aurora University, as a member of the Board of Directors of Kishwaukee Community Hospital, and as Treasurer and Director of Valley West Community Hospital. From 1989 to 1993 he served as a charter member of the national Accounting Education Change Commission. He is the recipient of the Outstanding Accounting Educator Award from the Illinois CPA Society, the FSA's Joseph A. Silvoso Award of Merit, the NIU Foundation's Humanitarian Award for Service to Higher Education, a Distinguished Service Award from the Illinois CPA Society, and in 2003 an honorary doctorate from Aurora University.

IFRS

Ready When You Are

The emerging importance of International Financial Reporting Standards presents challenges in how you teach and how your students learn accounting.

The **Wiley Accounting Team for Success** is ready when you are to help prepare you and your students for the integration of IFRS into your courses.

No matter where you are in this transition, Wiley Accounting is here to provide the tools you need to fully incorporate IFRS into your accounting courses. We offer the most extensive **Products, Content, Services, Support, and Training** available today—leading the way to prepare you and your students for success!

Innovative Products New IFRS Editions of **Kieso, Intermediate Accounting** and **Weygandt, Financial Accounting** are the most current and only textbooks available based fully on International Financial Reporting Standards. Wiley Accounting also offers numerous IFRS resources that can serve to supplement your course.

Exclusive Content Our accounting publications feature more quality and current coverage of IFRS topics than any other textbook available today! The Wiley Accounting Team for Success authors integrate IFRS content within each chapter through features like **A Look at IFRS**, which demonstrates how international standards apply to each U.S. GAAP topic, as well as provides an opportunity for practical application. **International Insights** also provide an international perspective of the accounting topic discussed in the text.

Support & Services Wiley Accounting features a dedicated **IFRS website** (at www.wileyifrs.com) and an **Accounting Weekly Updates website** (at www.wileyaccountingupdates.com) to make sure you have the most current resources available.

Timely Training Wiley Accounting and the **Wiley Faculty Network** provides free IFRS virtual training workshops, IFRS Guest Lectures, and IFRS “Boot Camps” featuring authors Paul Kimmel and Terry Warfield. You can also earn **CPE credit** for attending these sessions.

To learn more about how the Wiley Accounting Team for Success can help your students succeed, visit **www.wileyteamforsuccess.com** or contact your Wiley sales representative today.

Wiley Managerial Accounting Video Series

Watch managerial accounting in action!

New Managerial Accounting Videos use a variety of real-life, successful companies you already know to demonstrate and reinforce concepts taught in your managerial accounting course.

Companies you will learn about include:

Pizza Hut • Southwest Airlines • Starbucks • Method • Holland America Line • Jones Soda Co. • Zappos • Babycakes • Tribeca Grand • Precor • Whole Foods Market

Check out these videos in your *WileyPLUS* course. Simply go to "Course Materials" in *WileyPLUS* and type the keyword "video" in the search box.

WileyPLUS. Beyond Books.

Can homework grade itself?
Where do textbooks end and classrooms begin?
Do we need a classroom at all?

The answers to these questions used to be so obvious. Today, *WileyPLUS* delivers a whole new method of learning.

And this is not too good to be true. This is about an actual solution with the flexibility to create one exam or to plan an entire semester. A tool that enables faculty to plan, teach, test, and grade an entire course... completely online. A solution that frees up so much classroom time for "advanced" work that faculty report feeling more energized about their teaching than they have in years. Students know exactly where they stand on any given day in regards to homework, an upcoming test, or what they missed in class last week.

It also virtually eliminates all excuses for late homework.

WileyPLUS is an online suite of resources—including the complete text—that will help your students:

- Come to class better prepared for your lectures
- Get immediate feedback and context-sensitive help on assignments and quizzes
- Track progress throughout the course

New features of *WileyPLUS* include:

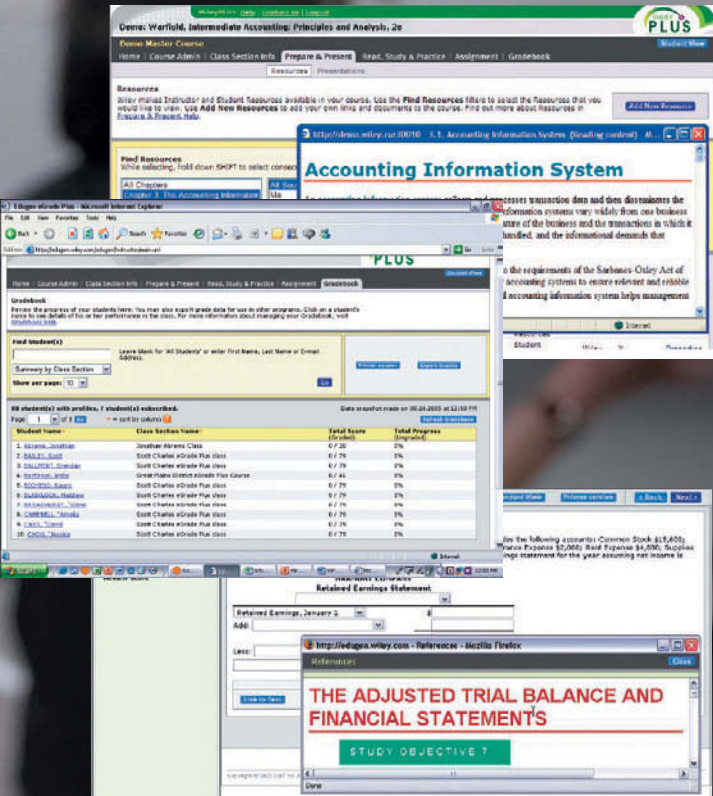

- **Blackboard integration**—Now you can seamlessly integrate all of the rich content and resources available in *WileyPLUS* with the power and convenience of Blackboard.
- **Spreadsheet-like presentation of assignments**—The look and feel of questions now replicate what students will encounter in practice.
- **Type-ahead functionality**—Students will no longer need to choose from a dropdown menu of account names.

87%
of students
surveyed said it
improved their
understanding
of the material.*

*Based on a recent survey of 519 accounting student users of *WileyPLUS*

WileyPLUS

Prepare and Present

Create outstanding class presentations using a wealth of resources, such as PowerPoint™ slides, interactive simulations, and more. Plus you can easily upload any materials you have created into your course and combine them with the resources contained in *WileyPLUS*.

Track Your Progress

Keep track of your students' progress via an instructor's gradebook, which allows you to analyze individual and overall class results. This gives you an accurate and realistic assessment of your students' progress and level of understanding.

Create Assignments

Automate the assigning and grading of homework or quizzes by using the provided question banks or by writing your own. Student results will be automatically graded and recorded in your gradebook. *WileyPLUS* also links homework problems to relevant sections of the online text, hints, or solutions—context-sensitive help where students need it most!

The Wiley Faculty Network

The Place Where Faculty Connect ...

The Wiley Faculty Network is a global community of faculty connected by a passion for teaching and a drive to learn and share. Connect with the Wiley Faculty Network to collaborate with your colleagues, find a mentor, attend virtual and live events, and view a wealth of resources all designed to help you grow as an educator. Embrace the art of teaching—great things happen where faculty connect!

Attend

Discover innovative ideas and gain knowledge you can use.

www.WHEREFACULTYCONNECT.com

Virtual Guest Lectures

Connect with recognized leaders across disciplines and collaborate with your peers on timely topics and discipline-specific issues, many of which offer CPE credit.

Live and Virtual Events

These invitation-only, discipline-specific events are organized through a close partnership between the WFN, Wiley, and the academic community near the event location.

Technology Training

Discover a wealth of topic- and technology-specific training presented by subject matter experts, authors, and faculty where and when you need it.

Teaching Resources

Propel your teaching and student learning to the next level with quality peer-reviewed case studies, testimonials, classroom tools, and checklists.

Connect with Colleagues

Achieve goals and tackle challenges more easily by enlisting the help of your peers. Connecting with colleagues through the WFN can help you improve your teaching experience.

What TYPE of learner are you?

Understanding each of these basic learning styles enables the authors to engage students' minds and motivate them to do their best work, ultimately improving the experience for both students and faculty.

Textbook Features

In this First Edition, we include numerous pedagogical tools that expand our emphasis on student learning. Our goal is to provide a teaching and learning package that instructors and students will rate as the highest in customer satisfaction.

The Accounting Cycle

For many students, success in an introductory accounting course hinges on developing a sound conceptual understanding of the accounting cycle. As a result, we have developed a framework to help students visualize how to analyze, journalize, and post transaction data.

Accounting Principles

For many students, learning about the conceptual framework can be somewhat tedious. Yet, at the same time, we believe that students need a good understanding of the accounting assumptions, principles, and constraints that accountants use as a basis for recording and reporting financial information. As a result, we decided to integrate our discussion of accounting principles throughout the textbook as they relate to the topic at hand. However, we also realize that students might find it helpful to have a summary of all the concepts, which we provide in the **Chapter 3 Appendix, Concepts in Action**.

Chart of Accounts

It is important to always try to eliminate unnecessary barriers to student understanding. Sometimes, the accounting course can seem unnecessarily complicated to students because so many account titles are used. In order to reduce possible confusion and to keep students focused on those concepts that really matter, we streamlined the number of accounts used in the textbook, supplements, and *WileyPLUS*. See inside the front cover of the textbook for a sample chart of accounts, which represent the majority of the account titles used.

Accounting Equation Analyses

ISSUING BONDS AT A PREMIUM
To illustrate the issuance of bonds at a premium, we now assume the Candlestick, Inc. bonds described above sell for \$108,111 (108.111% of face value) rather than for \$92,639. The entry to record the sale is:

Jan. 1	Cash	108,111	
	Bonds Payable		100,000
	Premium on Bonds Payable		8,111
	(To record sale of bonds at a premium)		

Candlestick adds the premium on bonds payable to the bonds payable amount on the balance sheet, as shown in Illustration 10-16.

A	=	L	+ SE
+108,111	=	+100,000	+8,111

Cash Flows
+108,111

We include **accounting equation analyses** in the margin next to key journal entries. They will help students understand the impact of an accounting transaction on the components of the accounting equation, on the stockholders' equity accounts, and on the company's cash flows.

Real-World Emphasis

One of the goals of the introductory accounting course is to orient students to the application of accounting principles and techniques in practice. Accordingly, we use numerous examples from real companies throughout the textbook. The names of these real companies are highlighted in red.

Also, throughout the chapters, **Insight** and **Accounting Across the Organization** boxes show how people, often in non-accounting functions, in actual companies make decisions using accounting information. These high-interest boxes focus on various themes—ethics, international, investor, and corporate social responsibility concerns. *Guideline Answers* to the critical thinking questions are provided at the end of each chapter.

ACCOUNTING ACROSS THE ORGANIZATION

Wall Street No Friend of Facebook

In the 1990s, it was the dream of every young technology entrepreneur to start a company and do an initial public offering (IPO), that is, list company shares on a stock exchange. It seemed like there was a never-ending supply of 20-something-year-old technology entrepreneurs that made millions doing IPOs of companies that never made a profit and eventually failed. In sharp contrast to this is Mark Zuckerberg, the 27-year-old founder and CEO of Facebook. If Facebook did an IPO, he would make billions of dollars. But, he is in no hurry to go public. Because his company doesn't need to invest in factories, distribution systems, or even marketing, it doesn't need to raise a lot of cash. Also, by not going public, Zuckerberg has more control over the direction of the company. Right now, he and the other founders don't have to answer to outside shareholders, who might be more concerned about short-term investment horizons rather than long-term goals. In addition, publicly traded companies face many more financial reporting disclosure requirements.

Source: Jessica E. Vascellaro, "Facebook CEO in No Rush to 'Friend' Wall Street," *Wall Street Journal Online* (March 4, 2010).

? Why has Mark Zuckerberg, the CEO and founder of Facebook, delayed taking his company's shares public through an initial public offering (IPO)? (See page 596.)

PEOPLE, PLANET, AND PROFIT INSIGHT

Selling Green

Here is a question an executive of PepsiCo was asked: Should PepsiCo market green? The executive indicated that the company should, as he believes it's the No. 1 thing consumers all over the world care about. Here are some thoughts on this issue:

If you are going to market green, what are some things we've learned? I'll share with you one thing we've learned at PepsiCo.

Sun Chips are part of the food business I run. It's a "healthy snack." We decided that Sun Chips, if it's a healthy snack, should be made in facilities that have a net-zero footprint. In other words, I want off the electric grid everywhere we make Sun Chips. We did that. Sun Chips should be made in a facility that puts back more water than it uses. It does that. And we partnered with our suppliers and came out with the world's first compostable chip package.

Now, there was an issue with this package: It was louder than the New York subway, louder than jet engines taking off. What would a company that's committed to green do: walk away or stay committed? If your people are passionate, they're going to fix it for you as long as you stay committed. Six months later, the compostable bag has half the noise of our current package.

So the view today is: we should market green, we should be proud to do it . . . it has to be a 360 process, both internal and external. And if you do that, you can monetize environmental sustainability for the shareholders.

Source: "Four Problems—and Solutions," *Wall Street Journal* (March 7, 2011), p. R2.

? What is meant by "monetize environmental sustainability" for shareholders? (See page 267.)

People, Planet, and Profit

Today's companies are evaluating not just their profitability but also their corporate social responsibility. To that end, we have profiled some of these companies, such as PepsiCo, to highlight their sustainable business practices.

Anatomy of a Fraud

Our *Anatomy of a Fraud* stories highlight some real-world frauds. We describe the situation, note the extent of the fraud, and then discuss the missing internal control activity that would likely have prevented or uncovered the fraud.

ANATOMY OF A FRAUD

Bobbi Jean Donnelly, the office manager for Mod Fashions Corporations design center, was responsible for preparing the design center budget and reviewing expense reports submitted by design center employees. Her desire to upgrade her wardrobe got the better of her, and she enacted a fraud that involved filing expense-reimbursement requests for her own personal clothing purchases. She was able to conceal the fraud because she was responsible for reviewing all expense reports, including her own. In addition, she sometimes was given ultimate responsibility for signing off on the expense reports when her boss was "too busy." Also, because she controlled the budget, when she submitted her expenses, she coded them to budget items that she knew were running under budget, so that they would not catch anyone's attention.

Total take: \$275,000

The Missing Control

Independent internal verification. Bobbi Jean's boss should have verified her expense reports. When asked what he thought her expenses for a year were, the boss said about \$10,000. At \$115,000 per year, her actual expenses were more than 10 times what would have been expected. However, because he was "too busy" to verify her expense reports or to review the budget, he never noticed.

Kellogg Company
Balance Sheet (partial)
(\$ in millions)

Stockholders' equity	
Common stock, \$0.25 par value, 1,000,000,000 shares authorized	
Issued: 418,669,193 shares	\$ 105
Capital in excess of par value	388
Retained earnings	4,217
Treasury stock, at cost 28,618,052 shares	(1,357)
Accumulated other comprehensive income (loss)	(827)
Total stockholders' equity	<u>\$ 2,526</u>

Financial Statements

Students will be more willing to commit time and energy to a topic when they believe it is relevant to their future careers. There is no better way to demonstrate relevance than to ground discussions in the real world. To that end, we include financial statements from actual companies regularly throughout the textbook.

Key Points

- International standards are referred to as *International Financial Reporting Standards (IFRS)*, developed by the International Accounting Standards Board (IASB).
- Recent events in the global capital markets have underscored the importance of financial disclosure and transparency not only in the United States but in markets around the world. As a result, many are examining which accounting and financial disclosure rules should be followed. As indicated in the graphic below, much of the world has voted for the standards issued by the IASB. Over 115 countries require or permit use of IFRS.

Source: <https://www.pwc.com/bdo/en/issues/ifrs/ifrs-implementation/implementation-by-country.html>

International Financial Reporting Standards

To reflect the constant changes in the accounting environment, we have included a comprehensive section at the end of each chapter on International Financial Reporting Standards (IFRS). *A Look at IFRS* includes an overview section, addresses differences between GAAP and IFRS (*Key Points*), describes convergence efforts (*Looking to the Future*), and provides students with the opportunity to test their understanding through self-test questions and exercises (*IFRS Practice*). An international financial reporting problem is also included, based on *Zetar plc's* (a U.K. candy

company) financial statements, provided in Appendix C of the textbook.

International Insights (and *International Notes* in the margin) also provide a global perspective of the accounting topics discussed in the textbook.

INTERNATIONAL INSIGHT

Can Fair Value Be Unfair?

The FASB and the International Accounting Standards Board (IASB) are considering proposals for how to account for financial instruments. The FASB has proposed that loans and receivables be accounted for at their fair value (the amount they could currently be sold for), as are most investments. The FASB believes that this would provide a more accurate view of a company's financial position. It might be especially useful as an early warning when a bank is in trouble because of poor-quality loans. But, banks argue that fair values are difficult to estimate accurately. They are also concerned that volatile fair values could cause large swings in a bank's reported net income.

Source: David Reilly, "Banks Face a Mark-to-Market Challenge," *Wall Street Journal Online* (March 15, 2010).

? What are the arguments in favor of and against fair value accounting for loans and receivables? (See page 418.)

DO IT! Exercises

Brief **DO IT!** exercises ask students to apply their newly acquired knowledge. The **DO IT!** exercises include an *Action Plan*, which reviews the necessary steps to complete the exercise, as well as a *Solution* so students can have immediate feedback. A **Comprehensive DO IT!** problem at the end of each chapter allows students a final check of their understanding before they do their homework. **DO IT! Review** problems are part of the end-of-chapter homework material.

Marginal Notes

Helpful Hints in the margin further clarify concepts being discussed. **Ethics Notes** point out ethical points related to the nearby text discussion. **Alternative Terminology** lets students know about interchangeable words and phrases. **International Notes** provide a global perspective of the accounting topics being discussed.

Managerial Decision-Making

Beginning in Chapter 15, we introduce **Current Designs**, a kayak-making company based in Winona, Minnesota. We then follow-up with a decision-making problem in every subsequent chapter based on this real-world company. Each problem presents realistic managerial accounting situations that students must analyze to determine the best course of action. In addition, many of these end-of-chapter activities also have an accompanying video.

Managerial Accounting Video Series

Through the use of real-world, cutting-edge companies, these videos engage students with a dynamic overview of managerial accounting topics and motivate them through the detailed tools, examples, and discussions presented in their textbook, *WileyPLUS* course, and classroom lectures.

Comprehensive Homework Material

Each chapter concludes with Self-Test Questions, Questions, Brief Exercises, **DO IT!** Review, Exercises, and Problems. Many chapters also include a Comprehensive Problem. An icon identifies Exercises and Problems that can be solved using **Excel templates** at the book's companion website. The **Continuing Cookie Chronicle** and the **Waterways Continuing Problem** use the business activities of two fictional companies to help students apply financial and managerial accounting topics to realistic entrepreneurial situations.

Broadening Your Perspective Section

The **Broadening Your Perspective** section at the end of each chapter presents short cases that require analytical, decision-making, and critical thinking skills. Elements in this section include the following:

- Financial Reporting Problem: PepsiCo, Inc.
- Comparative Analysis Problem: PepsiCo, Inc. vs. The Coca-Cola Company
- Real-World Focus
- Decision-Making Across the Organization
- Decision-Making at Current Designs
- Managerial Analysis
- Communication Activity
- Ethics Case
- All About You
- Considering People, Planet, and Profit
- Considering Your Costs and Benefits
- FASB Codification Activity

These assignments are designed to help develop students' decision-making and critical-thinking skills.

Teaching and Learning Supplementary Material

For Instructors

In addition to the support instructors receive from *WileyPLUS* and the Wiley Faculty Network, we offer the following useful supplements.

Book's Companion Website. On this website, www.wiley.com/college/wegandt, instructors will find the Solutions Manual, Test Bank, Instructor's Manual, Computerized Test Bank, and other resources.

Solutions Manual. The Solutions Manual contains detailed solutions to all questions, brief exercises, exercises, and problems in the textbook, as well as suggested answers to the questions and cases. The estimated time to complete exercises, problems, and cases is provided.

Instructor's Manual. Included in each chapter are lecture outlines with teaching tips, chapter reviews, illustrations, and review quizzes.

Test Bank and Computerized Test Bank. The test bank and computerized test bank allow instructors to tailor examinations according to study objectives and learning outcomes, including AACSB, AICPA, and IMA professional standards. Achievement tests, comprehensive examinations, and a final exam are included.

PowerPoint™. The PowerPoint™ presentations contain a combination of key concepts, images, and problems from the textbook.

Blackboard. Blackboard offers an integrated set of course management tools that enable instructors to easily design, develop, and manage Web-based and Web-enhanced courses.

For Students

Book's Companion Website. On this website, students will find:

- *Exercises: Set B and Challenge Exercises*
- *Problems: Set C*
- *Self-Tests and Additional Self-Tests*
- *Appendices E–H*
- *Cases for Managerial Decision-Making*

Study Guide. Each chapter of the Study Guide contains a chapter review, chapter outline, and a glossary of key terms. Demonstration problems, multiple-choice, true/false, matching, and other exercises are also included.

Working Papers and Excel Working Papers. The working papers are printed templates that can help students correctly format their textbook accounting solutions.

Excel Primer: Using Excel in Accounting. The online Excel primer and accompanying Excel templates allow students to complete select end-of-chapter exercises and problems identified by a spreadsheet icon in the margin of the textbook.

Managerial Accounting Video Series. Through the examples of real-world, cutting-edge companies, these videos engage students with a dynamic overview of managerial accounting topics and motivate them through the detailed tools, examples, and discussions presented in their textbook, *WileyPLUS* course, and classroom lectures.

Mobile Applications. Quizzing and reviewing content is available for download on iTunes.

Acknowledgments

Financial & Managerial Accounting has benefited greatly from the input of focus group participants, manuscript reviewers, ancillary authors, and proofers. We greatly appreciate the constructive suggestions and innovative ideas of reviewers and the creativity and accuracy of the ancillary authors and checkers.

We appreciate the exemplary support and commitment given to us by associate publisher Chris DeJohn, senior acquisitions editor Michael McDonald, marketing manager Karolina Zarychta Honsa, operations manager Yana Mermel, senior content editor Ed Brislin, development editors Terry Ann Tatro and Margaret Thompson, lead product designer Allie Morris, product designer Greg Chaput, vice president of higher education production and manufacturing Ann Berlin, designers Maureen Eide and Kristine Carney, illustration editor Anna Melhorn, photo editor Mary Ann Price, project editor Suzanne Ingrao of Ingrao Associates, indexer Steve Ingle, Denise Showers at Aptara, Cyndy Taylor, and project manager Angel Chavez at Integra. All of these professionals provided innumerable services that helped the textbook take shape.

We also thank Benjamin Huegel and Teresa Speck of St. Mary's University for their extensive efforts in the preparation

of the homework materials related to Current Designs. We also appreciate the considerable support provided to us by the following people at Current Designs: Mike Cichanowski, Jim Brown, Diane Buswell, and Jake Greseth. We also benefited from the assistance and suggestions provided to us by Joan Van Hise in the preparation of materials related to sustainability.

Finally, our thanks to Amy Scholz, Susan Elbe, George Hoffman, Tim Stookesberry, Joe Heider, and Steve Smith for their support and leadership in Wiley's College Division. We will appreciate suggestions and comments from users—instructors and students alike. You can send your thoughts and ideas about the textbook to us via email at: wileyauthorfeedback@gmail.com.

Feature Story

Knowing the Numbers

Many students who take this course do not plan to be accountants. If you are in that group, you might be thinking, “If I’m not going to be an accountant, why do I need to know accounting?” In response, consider the quote from Harold Geneen, the former chairman of IT&T: “To be good at your business, you have to know the numbers—cold.”

Success in any business comes back to the numbers. You will rely on them to make decisions, and managers will use them to evaluate your performance. That is true whether your job involves marketing, production, management, or information systems.

In business, accounting and financial statements are the means for communicating the numbers. If you don’t know how to read financial statements, you can’t really know your business.

Many companies spend significant resources teaching their employees basic accounting so that they can read financial statements and understand how their actions affect the company’s financial results. One such company is **Springfield ReManufacturing Corporation (SRC)**. When Jack Stack and 11 other managers purchased SRC for 10 cents a share, it was a failing division of **International Harvester**. Jack’s 119 employees, however, were counting on him for their livelihood. He decided that for the company to

The Navigator is a learning system designed to prompt you to use the learning aids in the chapter and set priorities as you study.

Learning Objectives give you a framework for learning the specific concepts covered in the chapter.

Learning Objectives

After studying this chapter, you should be able to:

- 1** Explain what accounting is.
- 2** Identify the users and uses of accounting.
- 3** Understand why ethics is a fundamental business concept.
- 4** Explain generally accepted accounting principles.
- 5** Explain the monetary unit assumption and the economic entity assumption.
- 6** State the accounting equation, and define its components.
- 7** Analyze the effects of business transactions on the accounting equation.
- 8** Understand the four financial statements and how they are prepared.

The Navigator

survive, every employee needed to think like a businessperson and to act like an owner. To accomplish this, all employees at

SRC took basic accounting courses and participated in weekly reviews of the company's financial statements. SRC survived, and eventually thrived. To this day, every employee (now numbering more than 1,000) undergoes this same training.

Many other companies have adopted this approach, which is called "open-book management." Even in companies that do not practice open-book management, employers generally assume that managers in all areas of the company are "financially literate."

Taking this course will go a long way to making you financially literate. In this book, you will learn how to read and prepare

financial statements, and how to use basic tools to evaluate financial results. Appendices A and B provide real financial statements of two well-known U.S. companies, **PepsiCo, Inc.** and **The Coca-Cola Company**. Appendix C includes the financial statements of **Zetar plc**, a U.K. candy company. Throughout this textbook, we attempt to increase your familiarity with financial reporting by providing numerous references, questions, and exercises that encourage you to explore these financial statements.

The Feature Story helps you picture how the chapter topic relates to the real world of accounting and business. You will find references to the story throughout the chapter.

Preview of Chapter 1

The opening story about **Springfield ReManufacturing Corporation** highlights the importance of having good financial information and knowing how to use it to make effective business decisions. Whatever your pursuits or occupation, the need for financial information is inescapable. You cannot earn a living, spend money, buy on credit, make an investment, or pay taxes without receiving, using, or dispensing financial information. Good decision-making depends on good information.

The purpose of this chapter is to show you that accounting is the system used to provide useful financial information. The content and organization of Chapter 1 are as follows.

The Preview describes and outlines the major topics and subtopics you will see in the chapter.

ACCOUNTING IN ACTION

What Is Accounting?

LEARNING OBJECTIVE

1

Explain what accounting is.

Essential terms are printed in blue when they first appear, and are defined in the end-of-chapter glossary.

What consistently ranks as one of the top career opportunities in business? What frequently rates among the most popular majors on campus? What was the undergraduate degree chosen by Nike founder Phil Knight, Home Depot co-founder Arthur Blank, former acting director of the Federal Bureau of Investigation (FBI) Thomas Pickard, and numerous members of Congress? Accounting.¹ Why did these people choose accounting? They wanted to understand what was happening financially to their organizations. Accounting is the financial information system that provides these insights. In short, to understand your organization, you have to know the numbers.

Accounting consists of three basic activities—it **identifies**, **records**, and **communicates** the economic events of an organization to interested users. Let's take a closer look at these three activities.

Three Activities

As a starting point to the accounting process, a company identifies the **economic events relevant to its business**. Examples of economic events are the sale of snack chips by PepsiCo, the providing of telephone services by AT&T, and the payment of wages by Ford Motor Company.

Once a company like PepsiCo identifies economic events, it **records** those events in order to provide a history of its financial activities. Recording consists of keeping a **systematic, chronological diary of events**, measured in dollars and cents. In recording, PepsiCo also classifies and summarizes economic events.

Finally, PepsiCo **communicates** the collected information to interested users by means of **accounting reports**. The most common of these reports are called **financial statements**. To make the reported financial information meaningful, PepsiCo reports the recorded data in a standardized way. It accumulates information resulting from similar transactions. For example, PepsiCo accumulates all sales transactions over a certain period of time and reports the data as one amount in the company's financial statements. Such data are said to be reported **in the aggregate**. By presenting the recorded data in the aggregate, the accounting process simplifies a multitude of transactions and makes a series of activities understandable and meaningful.

A vital element in communicating economic events is the accountant's ability to **analyze and interpret** the reported information. Analysis involves use of ratios, percentages, graphs, and charts to highlight significant financial trends and relationships. Interpretation involves **explaining the uses, meaning, and limitations of reported data**. Appendix A of this textbook shows the financial statements of PepsiCo, Inc. Appendix B illustrates the financial statements of The Coca-Cola Company. We refer to these statements at various places throughout the textbook. (In addition, in the *A Look at IFRS* section at the end of each chapter, the U.K. company Zetar plc is analyzed.) At this point, these financial statements probably strike you as complex and confusing. By the end of this course, you'll be surprised at your ability to understand, analyze, and interpret them.

Illustration 1-1 summarizes the activities of the accounting process.

¹The appendix to this chapter describes job opportunities for accounting majors and explains why accounting is such a popular major.

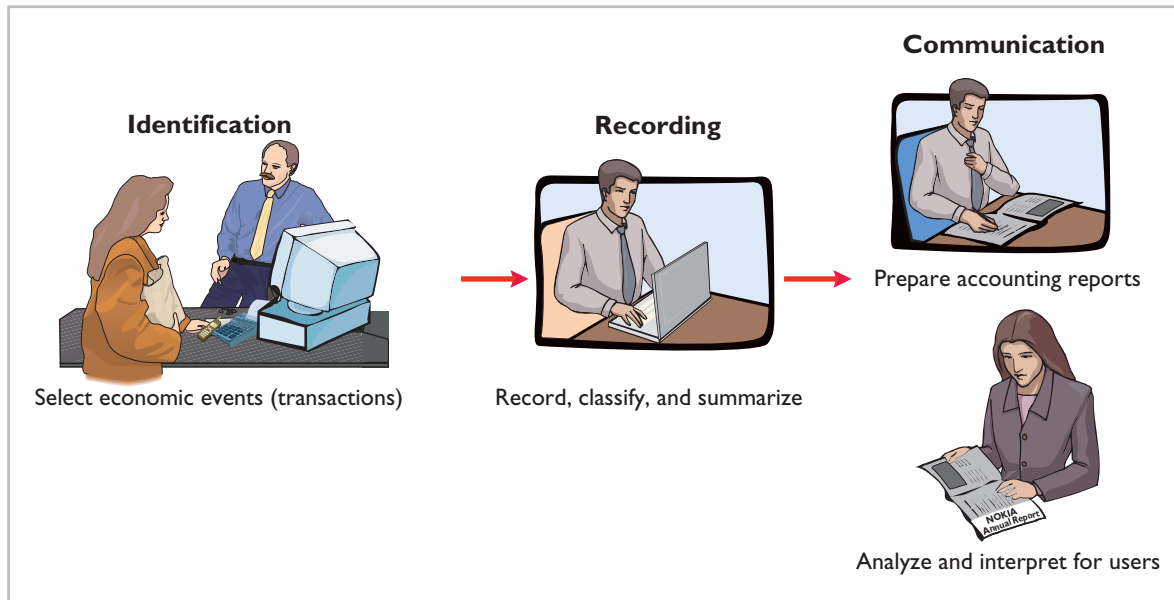

Illustration 1-1
The activities of the accounting process

You should understand that the accounting process **includes** the bookkeeping function. **Bookkeeping** usually involves **only** the recording of economic events. It is therefore just one part of the accounting process. In total, accounting involves **the entire process of identifying, recording, and communicating economic events.**²

Who Uses Accounting Data

The specific financial information that a user needs depends upon the kinds of decisions the user makes. There are two broad groups of users of financial information: internal users and external users.

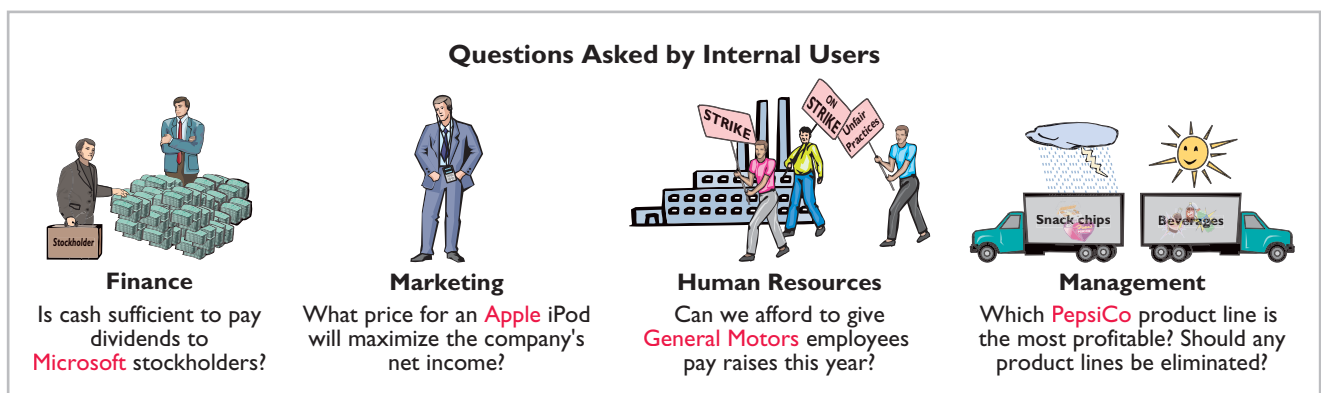

LEARNING OBJECTIVE 2

Identify the users and uses of accounting.

INTERNAL USERS

Internal users of accounting information are managers who plan, organize, and run the business. These include marketing managers, production supervisors, finance directors, and company officers. In running a business, internal users must answer many important questions, as shown in Illustration 1-2.

Illustration 1-2
Questions that internal users ask

²The origins of accounting are generally attributed to the work of Luca Pacioli, an Italian Renaissance mathematician. Pacioli was a close friend and tutor to Leonardo da Vinci and a contemporary of Christopher Columbus. In his 1494 text *Summa de Arithmetica, Geometria, Proportione et Proportionalitate*, Pacioli described a system to ensure that financial information was recorded efficiently and accurately.

To answer these and other questions, internal users need detailed information on a timely basis. **Managerial accounting** provides internal reports to help users make decisions about their companies. Examples are financial comparisons of operating alternatives, projections of income from new sales campaigns, and forecasts of cash needs for the next year.

Accounting Across the Organization boxes demonstrate applications of accounting information in various business functions.

ACCOUNTING ACROSS THE ORGANIZATION

The Scoop on Accounting

Accounting can serve as a useful recruiting tool even for the human resources department. **Rhino Foods**, located in Burlington, Vermont, is a manufacturer of specialty ice cream. Its corporate website includes the following:

“Wouldn’t it be great to work where you were part of a team? Where your input and hard work made a difference? Where you weren’t kept in the dark about what management was thinking? . . . Well—it’s not a dream! It’s the way we do business . . . Rhino Foods believes in family, honesty and open communication—we really care about and appreciate our employees—and it shows. Operating results are posted and monthly group meetings inform all employees about what’s happening in the Company. Employees also share in the Company’s profits, in addition to having an excellent comprehensive benefits package.”

Source: www.rhinofoods.com/workforus/workforus.html.

What are the benefits to the company and to the employees of making the financial statements available to all employees? (See page 48.)

EXTERNAL USERS

External users are individuals and organizations outside a company who want financial information about the company. The two most common types of external users are investors and creditors. **Investors** (owners) use accounting information to make decisions to buy, hold, or sell ownership shares of a company. **Creditors** (such as suppliers and bankers) use accounting information to evaluate the risks of granting credit or lending money. Illustration 1-3 shows some questions that investors and creditors may ask.

Illustration 1-3
Questions that external users ask

Questions Asked by External Users

Investors
Is **General Electric** earning satisfactory income?

Investors
How does **Disney** compare in size and profitability with **Time Warner**?

Creditors
Will **United Airlines** be able to pay its debts as they come due?

Financial accounting answers these questions. It provides economic and financial information for investors, creditors, and other external users. The infor-

mation needs of external users vary considerably. **Taxing authorities**, such as the Internal Revenue Service, want to know whether the company complies with tax laws. **Regulatory agencies**, such as the Securities and Exchange Commission or the Federal Trade Commission, want to know whether the company is operating within prescribed rules. **Customers** are interested in whether a company like **General Motors** will continue to honor product warranties and support its product lines. **Labor unions**, such as the **Major League Baseball Players Association**, want to know whether the owners have the ability to pay increased wages and benefits.

The Building Blocks of Accounting

A doctor follows certain standards in treating a patient's illness. An architect follows certain standards in designing a building. An accountant follows certain standards in reporting financial information. For these standards to work, a fundamental business concept must be at work—ethical behavior.

Ethics in Financial Reporting

People won't gamble in a casino if they think it is "rigged." Similarly, people won't play the stock market if they think stock prices are rigged. In recent years, the financial press has been full of articles about financial scandals at **Enron**, **WorldCom**, **HealthSouth**, **AIG**, and others. As the scandals came to light, mistrust of financial reporting in general grew. One article in the *Wall Street Journal* noted that "repeated disclosures about questionable accounting practices have bruised investors' faith in the reliability of earnings reports, which in turn has sent stock prices tumbling." Imagine trying to carry on a business or invest money if you could not depend on the financial statements to be honestly prepared. Information would have no credibility. There is no doubt that a sound, well-functioning economy depends on accurate and dependable financial reporting.

United States regulators and lawmakers were very concerned that the economy would suffer if investors lost confidence in corporate accounting because of unethical financial reporting. In response, Congress passed the **Sarbanes-Oxley Act** (SOX, or Sarbox). Its intent is to reduce unethical corporate behavior and decrease the likelihood of future corporate scandals. As a result of SOX, top management must now certify the accuracy of financial information. In addition, penalties for fraudulent financial activity are much more severe. Also, SOX increased the independence of the outside auditors who review the accuracy of corporate financial statements and increased the oversight role of boards of directors.

The standards of conduct by which one's actions are judged as right or wrong, honest or dishonest, fair or not fair, are **ethics**. Effective financial reporting depends on sound ethical behavior. To sensitize you to ethical situations in business and to give you practice at solving ethical dilemmas, we address ethics in a number of ways in this book:

1. A number of the *Feature Stories* and other parts of the textbook discuss the central importance of ethical behavior to financial reporting.
2. *Ethics Insight* boxes and marginal *Ethics Notes* highlight ethics situations and issues in actual business settings.

LEARNING OBJECTIVE

3

Understand why ethics is a fundamental business concept.

Ethics Note

Circus-founder P.T. Barnum is alleged to have said, "Trust everyone, but cut the deck." What Sarbanes-Oxley does is to provide measures that (like cutting the deck of playing cards) help ensure that fraud will not occur.

Ethics Notes help sensitize you to some of the ethical issues in accounting.

3. Many of the *People, Planet, and Profit Insight* boxes focus on ethical issues that companies face in measuring and reporting social and environmental issues.
4. At the end of the chapter, an *Ethics Case* simulates a business situation and asks you to put yourself in the position of a decision-maker in that case.

When analyzing these various ethics cases, as well as experiences in your own life, it is useful to apply the three steps outlined in Illustration 1-4.

Illustration 1-4
Steps in analyzing ethics cases and situations

	<p>1. Recognize an ethical situation and the ethical issues involved. Use your personal ethics to identify ethical situations and issues. Some businesses and professional organizations provide written codes of ethics for guidance in some business situations.</p>	<p>2. Identify and analyze the principal elements in the situation. Identify the <i>stakeholders</i>—persons or groups who may be harmed or benefited. Ask the question: What are the responsibilities and obligations of the parties involved?</p>	<p>3. Identify the alternatives, and weigh the impact of each alternative on various stakeholders. Select the most ethical alternative, considering all the consequences. Sometimes there will be one right answer. Other situations involve more than one right solution; these situations require an evaluation of each and a selection of the best alternative.</p>

Insights provide examples of business situations from various perspectives—ethics, investor, international, and corporate social responsibility.

ETHICS INSIGHT

The Numbers Behind Not-for-Profit Organizations

Accounting plays an important role for a wide range of business organizations worldwide. Just as the integrity of the numbers matters for business, it matters at least as much for not-for-profit organizations. Proper control and reporting help ensure that money is used the way donors intended. Donors are less inclined to give to an organization if they think the organization is subject to waste or theft. The accounting challenges of some large international not-for-profits rival those of the world's largest businesses. For example, after the Haitian earthquake, the Haitian-born musician Wyclef Jean was criticized for the poor accounting controls in a relief fund that he founded. Since then, he has hired a new accountant and improved the transparency regarding funds raised and spent.

What benefits does a sound accounting system provide to a not-for-profit organization? (See page 48.)

LEARNING OBJECTIVE 4

Explain generally accepted accounting principles.

Generally Accepted Accounting Principles

The accounting profession has developed standards that are generally accepted and universally practiced. This common set of standards is called **generally accepted accounting principles (GAAP)**. These standards indicate how to report economic events.

The primary accounting standard-setting body in the United States is the **Financial Accounting Standards Board (FASB)**. The **Securities and Exchange Commission (SEC)** is the agency of the U.S. government that oversees U.S. financial markets and accounting standard-setting bodies. The SEC relies on the FASB to develop accounting standards, which public companies must follow. Many countries outside of the United States have adopted the accounting standards issued by the **International Accounting Standards Board (IASB)**. These standards are called **International Financial Reporting Standards (IFRS)**.

As markets become more global, it is often desirable to compare the result of companies from different countries that report using different accounting standards. In order to increase comparability, in recent years the two standard-setting bodies have made efforts to reduce the differences between U.S. GAAP and IFRS. This process is referred to as **convergence**. As a result of these convergence efforts, it is likely that someday there will be a single set of high-quality accounting standards that are used by companies around the world. Because convergence is such an important issue, we highlight any major differences between GAAP and IFRS in *International Notes* (as shown in the margin here) and provide a more in-depth discussion in the *A Look at IFRS* section at the end of each chapter.

International Note

Over 100 countries use International Financial Reporting Standards (called IFRS). For example, all companies in the European Union follow international standards. The differences between U.S. and international standards are not generally significant.

International Notes highlight differences between U.S. and international accounting standards.

Measurement Principles

GAAP generally uses one of two measurement principles, the cost principle or the fair value principle. Selection of which principle to follow generally relates to trade-offs between relevance and faithful representation. **Relevance** means that financial information is capable of making a difference in a decision. **Faithful representation** means that the numbers and descriptions match what really existed or happened—it is factual.

COST PRINCIPLE

The **cost principle** (or historical cost principle) dictates that companies record assets at their cost. This is true not only at the time the asset is purchased, but also over the time the asset is held. For example, if **Best Buy** purchases land for \$300,000, the company initially reports it in its accounting records at \$300,000. But what does Best Buy do if, by the end of the next year, the fair value of the land has increased to \$400,000? Under the cost principle, it continues to report the land at \$300,000.

FAIR VALUE PRINCIPLE

The **fair value principle** states that assets and liabilities should be reported at fair value (the price received to sell an asset or settle a liability). Fair value information may be more useful than historical cost for certain types of assets and liabilities. For example, certain investment securities are reported at fair value because market value information is usually readily available for these types of assets. In determining which measurement principle to use, companies weigh the factual nature of cost figures versus the relevance of fair value. In general, most companies choose to use cost. Only in situations where assets are actively traded, such as investment securities, do companies apply the fair value principle extensively.

Helpful Hint

Relevance and faithful representation are two primary qualities that make accounting information useful for decision-making.

Helpful Hints further clarify concepts being discussed.

INTERNATIONAL INSIGHT

The Korean Discount

If you think that accounting standards don't matter, consider recent events in South Korea. For many years, international investors complained that the financial reports of South Korean companies were inadequate and inaccurate. Accounting practices there often resulted in huge differences between stated revenues and actual revenues. Because investors did not have faith in the accuracy of the numbers, they were unwilling to pay as much for the shares of these companies relative to shares of comparable companies in different countries. This difference in stock price was often referred to as the "Korean discount."

In response, Korean regulators decided that, beginning in 2011, companies will have to comply with international accounting standards. This change was motivated by a desire to "make the country's businesses more transparent" in order to build investor confidence and spur economic growth. Many other Asian countries, including China, India, Japan, and Hong Kong, have also decided either to adopt international standards or to create standards that are based on the international standards.

Source: Evan Ramstad, "End to 'Korea Discount'?" *Wall Street Journal* (March 16, 2007).

What is meant by the phrase "make the country's businesses more transparent"? Why would increasing transparency spur economic growth? (See page 48.)

LEARNING OBJECTIVE

5

Explain the monetary unit assumption and the economic entity assumption.

Assumptions

Assumptions provide a foundation for the accounting process. Two main assumptions are the **monetary unit assumption** and the **economic entity assumption**.

MONETARY UNIT ASSUMPTION

The **monetary unit assumption** requires that companies include in the accounting records only transaction data that can be expressed in money terms. This assumption enables accounting to quantify (measure) economic events. The monetary unit assumption is vital to applying the cost principle.

This assumption prevents the inclusion of some relevant information in the accounting records. For example, the health of a company's owner, the quality of service, and the morale of employees are not included. The reason: Companies cannot quantify this information in money terms. Though this information is important, companies record only events that can be measured in money.

ECONOMIC ENTITY ASSUMPTION

An economic entity can be any organization or unit in society. It may be a company (such as **Crocs, Inc.**), a governmental unit (the state of Ohio), a municipality (Seattle), a school district (St. Louis District 48), or a church (Southern Baptist). The **economic entity assumption** requires that the activities of the entity be kept separate and distinct from the activities of its owner and all other economic entities. To illustrate, Sally Rider, owner of Sally's Boutique, must keep her personal living costs separate from the expenses of the boutique. Similarly, **McDonald's**, **Coca-Cola**, and **Cadbury-Schweppes** are segregated into separate economic entities for accounting purposes.

Ethics Note

The importance of the economic entity assumption is illustrated by scandals involving **Adelphia**. In this case, senior company employees entered into transactions that blurred the line between the employees' financial interests and those of the company. For example, Adelphia guaranteed over \$2 billion of loans to the founding family.

PROPRIETORSHIP A business owned by one person is generally a **proprietorship**. The owner is often the manager/operator of the business. Small service-type businesses (plumbing companies, beauty salons, and auto repair shops), farms, and small retail stores (antique shops, clothing stores, and

used-book stores) are often proprietorships. **Usually only a relatively small amount of money (capital) is necessary to start in business as a proprietorship. The owner (proprietor) receives any profits, suffers any losses, and is personally liable for all debts of the business.** There is no legal distinction between the business as an economic unit and the owner, but the accounting records of the business activities are kept separate from the personal records and activities of the owner.

PARTNERSHIP A business owned by two or more persons associated as partners is a **partnership**. In most respects a partnership is like a proprietorship except that more than one owner is involved. Typically a partnership agreement (written or oral) sets forth such terms as initial investment, duties of each partner, division of net income (or net loss), and settlement to be made upon death or withdrawal of a partner. Each partner generally has unlimited personal liability for the debts of the partnership. **Like a proprietorship, for accounting purposes the partnership transactions must be kept separate from the personal activities of the partners.** Partnerships are often used to organize retail and service-type businesses, including professional practices (lawyers, doctors, architects, and certified public accountants).

CORPORATION A business organized as a separate legal entity under state corporation law and having ownership divided into transferable shares of stock is a **corporation**. The holders of the shares (stockholders) **enjoy limited liability**; that is, they are not personally liable for the debts of the corporate entity. Stockholders **may transfer all or part of their ownership shares to other investors at any time** (i.e., sell their shares). The ease with which ownership can change adds to the attractiveness of investing in a corporation. Because ownership can be transferred without dissolving the corporation, the corporation **enjoys an unlimited life**.

Although the combined number of proprietorships and partnerships in the United States is more than five times the number of corporations, the revenue produced by corporations is eight times greater. Most of the largest companies in the United States—for example, **ExxonMobil, Ford, Wal-Mart Stores Inc., Citigroup,** and **Apple**—are corporations.

> DO IT!

Basic Concepts

The DO IT! exercises ask you to put newly acquired knowledge to work. They outline the Action Plan necessary to complete the exercise, and they show a Solution.

Action Plan

- ✓ Review the basic concepts learned to date.
- ✓ Develop an understanding of the key terms used.

Indicate whether each of the five statements presented below is true or false.

1. The three steps in the accounting process are identification, recording, and communication.
2. The two most common types of external users are investors and company officers.
3. Congress passed the Sarbanes-Oxley Act to reduce unethical behavior and decrease the likelihood of future corporate scandals.
4. The primary accounting standard-setting body in the United States is the Financial Accounting Standards Board (FASB).
5. The cost principle dictates that companies record assets at their cost. In later periods, however, the fair value of the asset must be used if fair value is higher than its cost.

Solution

1. True 2. False. The two most common types of external users are investors and creditors. 3. True. 4. True. 5. False. The cost principle dictates that companies record assets at their cost. Under the cost principle, the company must also use cost in later periods.

ACCOUNTING ACROSS THE ORGANIZATION

Spinning the Career Wheel

One question that students frequently ask is, “How will the study of accounting help me?” It should help you a great deal, because a working knowledge of accounting is desirable for virtually every field of endeavor. Some examples of how accounting is used in other careers include:

General management: Imagine running **Ford Motors**, **Massachusetts General Hospital**, **Northern Virginia Community College**, a **Subway** franchise, a **Trek** bike shop. All general managers need to understand accounting data in order to make wise business decisions.

Marketing: A marketing specialist at a company like **Procter & Gamble** develops strategies to help the sales force be successful. But making a sale is meaningless unless it is a profitable sale. Marketing people must be sensitive to costs and benefits, which accounting helps them quantify and understand.

Finance: Do you want to be a banker for **Bank of America**, an investment analyst for **Goldman Sachs**, a stock broker for **Merrill Lynch**? These fields rely heavily on accounting. In all of them you will regularly examine and analyze financial statements. In fact, it is difficult to get a good finance job without two or three courses in accounting.

Real estate: Are you interested in being a real estate broker for **Prudential Real Estate**? Because a third party—the bank—is almost always involved in financing a real estate transaction, brokers must understand the numbers involved: Can the buyer afford to make the payments to the bank? Does the cash flow from an industrial property justify the purchase price? What are the tax benefits of the purchase?

How might accounting help you? (See page 48.)

The Basic Accounting Equation

LEARNING OBJECTIVE 6

State the accounting equation, and define its components.

The two basic elements of a business are what it owns and what it owes. **Assets** are the resources a business owns. For example, **Google** has total assets of approximately \$40.5 billion. Liabilities and owner’s equity are the rights or claims against these resources. Thus, Google has \$40.5 billion of claims against its \$40.5 billion of assets. Claims of those to whom the company owes money (creditors) are called **liabilities**. Claims of owners are called **stockholders’ equity**. Google has liabilities of \$4.5 billion and stockholders’ equity of \$36 billion.

We can express the relationship of assets, liabilities, and stockholders’ equity as an equation, as shown in Illustration 1-5.

Illustration 1-5
The basic accounting equation

$$\text{Assets} = \text{Liabilities} + \text{Stockholders' Equity}$$

This relationship is the **basic accounting equation**. Assets must equal the sum of liabilities and stockholders’ equity. Liabilities appear before stockholders’ equity in the basic accounting equation because they are paid first if a business is liquidated.

The accounting equation applies to all **economic entities** regardless of size, nature of business, or form of business organization. It applies to a small proprietorship such as a corner grocery store as well as to a giant corporation such as **PepsiCo**. The equation provides the **underlying framework** for recording and summarizing economic events.

Let’s look in more detail at the categories in the basic accounting equation.

Assets

As noted above, **assets** are resources a business owns. The business uses its assets in carrying out such activities as production and sales. The common characteristic possessed by all assets is **the capacity to provide future services or benefits**. In a business, that service potential or future economic benefit eventually results in cash inflows (receipts). For example, consider Campus Pizza, a local restaurant. It owns a delivery truck that provides economic benefits from delivering pizzas. Other assets of Campus Pizza are tables, chairs, jukebox, cash register, oven, tableware, and, of course, cash.

Liabilities

Liabilities are claims against assets—that is, existing debts and obligations. Businesses of all sizes usually borrow money and purchase merchandise on credit. These economic activities result in payables of various sorts:

- Campus Pizza, for instance, purchases cheese, sausage, flour, and beverages on credit from suppliers. These obligations are called **accounts payable**.
- Campus Pizza also has a **note payable** to First National Bank for the money borrowed to purchase the delivery truck.
- Campus Pizza may also have **salaries and wages payable** to employees and **sales and real estate taxes payable** to the local government.

All of these persons or entities to whom Campus Pizza owes money are its **creditors**.

Creditors may legally force the liquidation of a business that does not pay its debts. In that case, the law requires that creditor claims be paid **before** ownership claims.

Stockholders' Equity

The ownership claim on total assets is **stockholders' equity**. It is equal to total assets minus total liabilities. Here is why: The assets of a business are claimed by either creditors or stockholders. To find out what belongs to stockholders, we subtract creditors' claims (the liabilities) from the assets. The remainder is the stockholders' claim on the assets—stockholders' equity. It is often referred to as **residual equity**—that is, the equity “left over” after creditors' claims are satisfied.

The stockholders' equity section of a corporation's balance sheet generally consists of (1) common stock and (2) retained earnings.

COMMON STOCK

A corporation may obtain funds by selling shares of stock to investors. **Common stock** is the term used to describe the total amount paid in by stockholders for the shares they purchase.

RETAINED EARNINGS

The **retained earnings** section of the balance sheet is determined by three items: revenues, expenses, and dividends.

REVENUES **Revenues** are the gross increases in stockholders' equity resulting from business activities entered into for the purpose of earning income. Generally, revenues result from selling merchandise, performing services, renting property, and lending money.

Revenues usually result in an increase in an asset. They may arise from different sources and are called various names depending on the nature of the business. Campus Pizza, for instance, has two categories of sales revenues—pizza sales and beverage sales. Other titles for and sources of revenue common to many businesses are sales, fees, services, commissions, interest, dividends, royalties, and rent.

Helpful Hint

In some situations, accountants use the term *owner's equity* and in others *owners' equity*. *Owner's* refers to one owner (the case with a sole proprietorship), and *owners'* refers to multiple owners (the case with partnerships). The term *stockholders' equity* refers to ownership in corporations.

Helpful Hint

The effect of revenues is positive—an increase in stockholders' equity coupled with an increase in assets or a decrease in liabilities.

Helpful Hint

The effect of expenses is negative—a decrease in stockholders' equity coupled with a decrease in assets or an increase in liabilities.

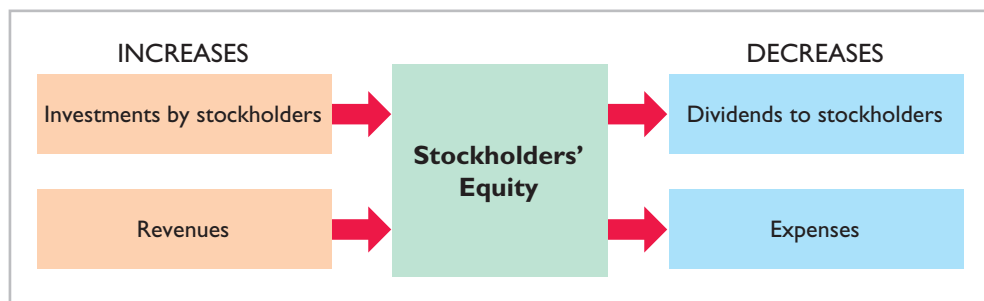

EXPENSES **Expenses** are the cost of assets consumed or services used in the process of earning revenue. **They are decreases in stockholders' equity that result from operating the business.** Like revenues, expenses take many forms and are called various names depending on the type of asset consumed or service used. For example, Campus Pizza recognizes the following types of expenses: cost of ingredients (flour, cheese, tomato paste, meat, mushrooms, etc.); cost of beverages; wages expense; utilities expense (electric, gas, and water expense); telephone expense; delivery expense (gasoline, repairs, licenses, etc.); supplies expense (napkins, detergents, aprons, etc.); rent expense; interest expense; and property tax expense.

DIVIDENDS Net income represents an increase in net assets which are then available to distribute to stockholders. The distribution of cash or other assets to stockholders is called a **dividend**. Dividends reduce retained earnings. However, dividends are **not an expense**. A corporation first determines its revenues and expenses and then computes net income or net loss. If it has net income, and decides it has no better use for that income, a corporation may decide to distribute a dividend to its owners (the stockholders).

In summary, the principal sources (increases) of stockholders' equity are investments by stockholders and revenues from business operations. In contrast, reductions (decreases) in stockholders' equity result from expenses and dividends. These relationships are shown in Illustration 1-6.

Illustration 1-6

Increases and decreases in stockholders' equity

**> DO IT!****Stockholders' Equity Effects****Action Plan**

- ✓ Understand the sources of revenue.
- ✓ Understand what causes expenses.
- ✓ Review the rules for changes in stockholders' equity: Investments and revenues increase stockholders' equity. Expenses and dividends decrease stockholders' equity.
- ✓ Recognize that dividends are distributions of cash or other assets to stockholders.

Classify the following items as issuance of stock (I), dividends (D), revenues (R), or expenses (E). Then indicate whether each item increases or decreases stockholders' equity.

- | | |
|---------------------|--------------------------------|
| (1) Rent Expense | (3) Dividends |
| (2) Service Revenue | (4) Salaries and Wages Expense |

Solution

1. Rent Expense is an expense (E); it decreases stockholders' equity. 2. Service Revenue is a revenue (R); it increases stockholders' equity. 3. Dividends is a distribution to stockholders (D); it decreases stockholders' equity. 4. Salaries and Wages Expense is an expense (E); it decreases stockholders' equity.

Related exercise material: **BE1-1, BE1-2, BE1-3, BE1-4, BE1-5, E1-5, E1-6, E1-7, and DO IT! 1-2.**

The Navigator

Using the Accounting Equation

Transactions (business transactions) are a business's economic events recorded by accountants. Transactions may be external or internal. **External transactions** involve economic events between the company and some outside enterprise. For example, Campus Pizza's purchase of cooking equipment from a supplier, payment of monthly rent to the landlord, and sale of pizzas to customers are external transactions. **Internal transactions** are economic events that occur entirely within one company. The use of cooking and cleaning supplies are internal transactions for Campus Pizza.

Companies carry on many activities that do not represent business transactions. Examples are hiring employees, answering the telephone, talking with customers, and placing merchandise orders. Some of these activities may lead to business transactions: Employees will earn wages, and suppliers will deliver ordered merchandise. The company must analyze each event to find out if it affects the components of the accounting equation. If it does, the company will record the transaction. Illustration 1-7 demonstrates the transaction-identification process.

LEARNING OBJECTIVE 7

Analyze the effects of business transactions on the accounting equation.

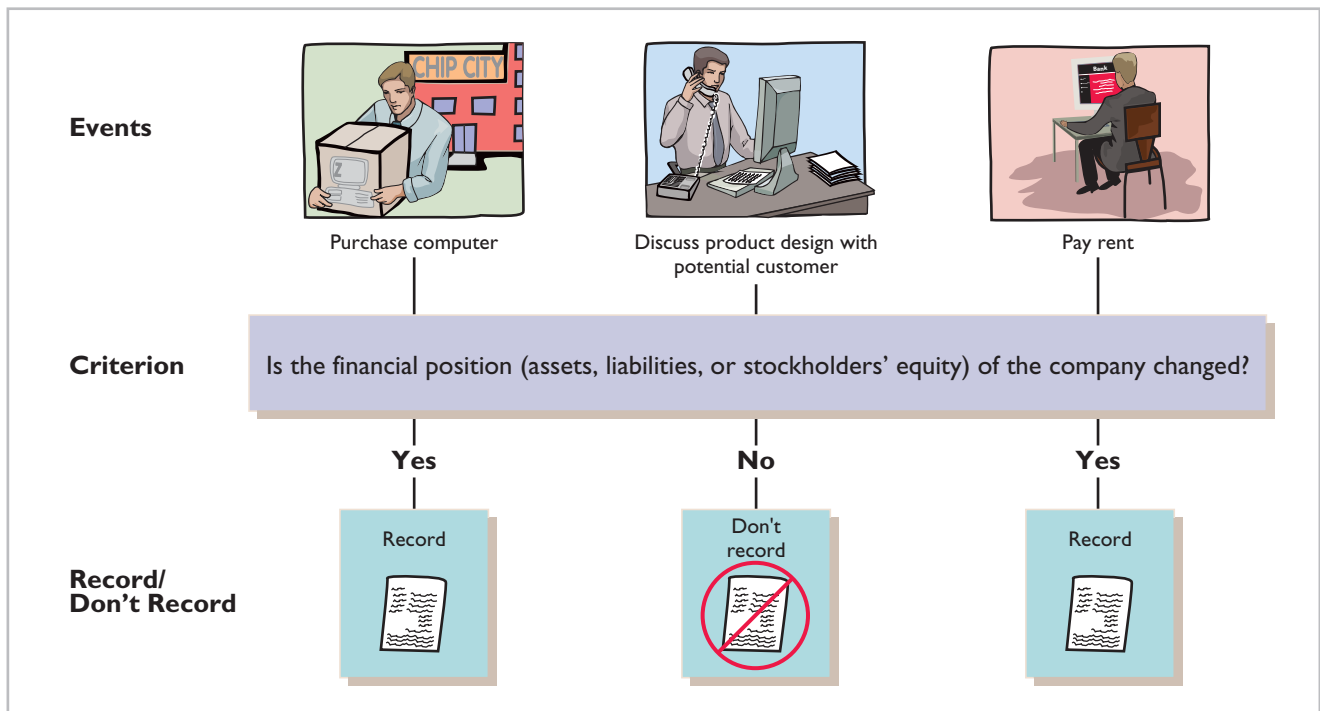

Illustration 1-7
Transaction-identification process

Each transaction must have a dual effect on the accounting equation. For example, if an asset is increased, there must be a corresponding (1) decrease in another asset, (2) increase in a specific liability, or (3) increase in stockholders' equity.

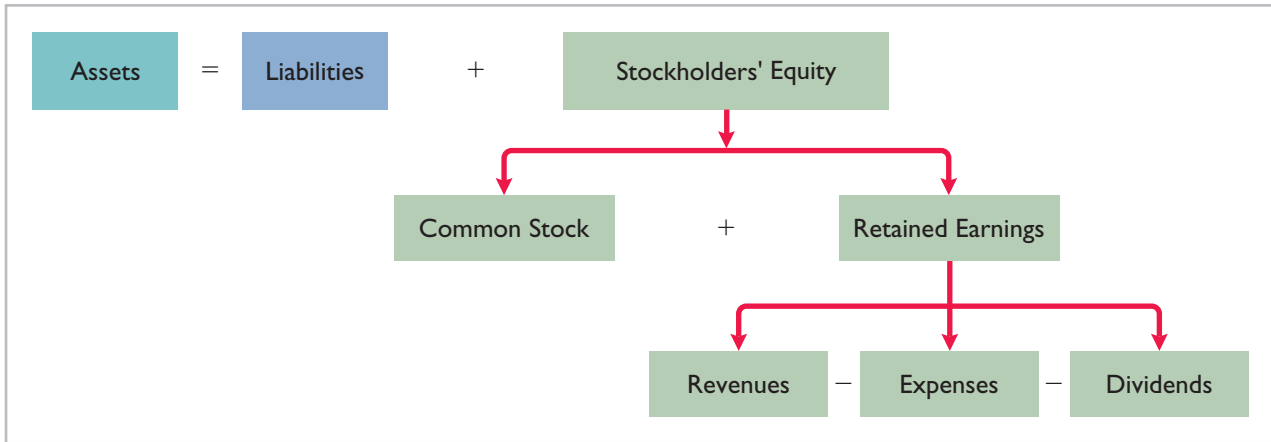

Two or more items could be affected. For example, as one asset is increased \$10,000, another asset could decrease \$6,000 and a liability could increase \$4,000. Any change in a liability or ownership claim is subject to similar analysis.

Transaction Analysis

In order to analyze transactions, we will examine a computer programming business (Softbyte Inc.) during its first month of operations. As part of this analysis, we will expand the basic accounting equation. This will allow us to better

illustrate the impact of transactions on stockholders' equity. Recall that stockholders' equity is comprised of two parts: common stock and retained earnings. Common stock is affected when the company issues new shares of stock in exchange for cash. Retained earnings is affected when the company earns revenue, incurs expenses, or pays dividends. Illustration 1-8 shows the **expanded accounting equation**.

Illustration 1-8
Expanded accounting equation

Helpful Hint

You will want to study these transactions until you are sure you understand them. They are not difficult, but understanding them is important to your success in this course. The ability to analyze transactions in terms of the basic accounting equation is essential in accounting.

If you are tempted to skip ahead after you've read a few of the following transaction analyses, don't do it. Each has something unique to teach, something you'll need later. (We assure you that we've kept them to the minimum needed!)

TRANSACTION 1. INVESTMENT BY STOCKHOLDERS Ray and Barbara Neal decide to open a computer programming company that they incorporate as Softbyte Inc. On September 1, 2014, they invest \$15,000 cash in the business in exchange for \$15,000 of common stock. The common stock indicates the ownership interest that the Neals have in Softbyte Inc. This transaction results in an equal increase in both assets and stockholders' equity.

Basic Analysis	The asset Cash increases \$15,000, and stockholders' equity identified as Common Stock increases \$15,000.
----------------	--

Equation Analysis	<u>Assets</u> = <u>Liabilities</u> + <u>Stockholders' Equity</u>
	Cash = Common Stock
	(1) +\$15,000 = +\$15,000 Issued Stock

Observe that the equality of the basic equation has been maintained. Note also that the source of the increase in stockholders' equity (in this case, issued stock) is indicated. Why does this matter? Because investments by stockholders do not represent revenues, and they are excluded in determining net income. Therefore, it is necessary to make clear that the increase is an investment rather than revenue from operations. Additional investments (i.e., investments made by stockholders after the corporation has been initially formed) have the same effect on stockholders' equity as the initial investment.

TRANSACTION 2. PURCHASE OF EQUIPMENT FOR CASH Softbyte Inc. purchases computer equipment for \$7,000 cash. This transaction results in an equal increase and decrease in total assets, though the composition of assets changes.

Basic Analysis	Cash decreases \$7,000, and the asset Equipment increases \$7,000.																																				
Equation Analysis	<table style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th colspan="2" style="text-align: center; border-bottom: 1px solid black;">Assets</th> <th style="text-align: center;">=</th> <th style="text-align: center; border-bottom: 1px solid black;">Liabilities</th> <th style="text-align: center;">+</th> <th style="text-align: center; border-bottom: 1px solid black;">Stockholders' Equity</th> </tr> </thead> <tbody> <tr> <td style="text-align: center; border-bottom: 1px solid black;">Cash</td> <td style="text-align: center;">+</td> <td></td> <td style="text-align: center; border-bottom: 1px solid black;">Common Stock</td> <td></td> <td></td> </tr> <tr> <td style="text-align: center;">\$15,000</td> <td></td> <td></td> <td style="text-align: center;">\$15,000</td> <td></td> <td></td> </tr> <tr style="background-color: #d9e1f2;"> <td style="text-align: center;">(2) -7,000</td> <td></td> <td style="text-align: center; color: red;">+\$7,000</td> <td></td> <td></td> <td></td> </tr> <tr> <td style="text-align: center; border-bottom: 1px solid black;">\$ 8,000</td> <td style="text-align: center;">+</td> <td style="text-align: center; border-bottom: 1px solid black;">\$ 7,000</td> <td style="text-align: center;">=</td> <td></td> <td style="text-align: center;">\$15,000</td> </tr> <tr> <td colspan="2" style="text-align: center;">\$15,000</td> <td></td> <td></td> <td></td> <td></td> </tr> </tbody> </table>	Assets		=	Liabilities	+	Stockholders' Equity	Cash	+		Common Stock			\$15,000			\$15,000			(2) -7,000		+\$7,000				\$ 8,000	+	\$ 7,000	=		\$15,000	\$15,000					
Assets		=	Liabilities	+	Stockholders' Equity																																
Cash	+		Common Stock																																		
\$15,000			\$15,000																																		
(2) -7,000		+\$7,000																																			
\$ 8,000	+	\$ 7,000	=		\$15,000																																
\$15,000																																					

Observe that total assets are still \$15,000. Common stock also remains at \$15,000, the amount of the original investment.

TRANSACTION 3. PURCHASE OF SUPPLIES ON CREDIT Softbyte Inc. purchases for \$1,600 from Acme Supply Company computer paper and other supplies expected to last several months. Acme agrees to allow Softbyte to pay this bill in October. This transaction is a purchase on account (a credit purchase). Assets increase because of the expected future benefits of using the paper and supplies, and liabilities increase by the amount due Acme Company.

Basic Analysis	The asset Supplies increases \$1,600, and the liability Accounts Payable increases by \$1,600.																																										
Equation Analysis	<table style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th colspan="3" style="text-align: center; border-bottom: 1px solid black;">Assets</th> <th style="text-align: center;">=</th> <th style="text-align: center; border-bottom: 1px solid black;">Liabilities</th> <th style="text-align: center;">+</th> <th style="text-align: center; border-bottom: 1px solid black;">Stockholders' Equity</th> </tr> </thead> <tbody> <tr> <td style="text-align: center; border-bottom: 1px solid black;">Cash</td> <td style="text-align: center;">+</td> <td style="text-align: center; border-bottom: 1px solid black;">Supplies</td> <td style="text-align: center;">+</td> <td style="text-align: center; border-bottom: 1px solid black;">Accounts Payable</td> <td style="text-align: center;">+</td> <td style="text-align: center; border-bottom: 1px solid black;">Common Stock</td> </tr> <tr> <td style="text-align: center;">\$8,000</td> <td></td> <td></td> <td></td> <td style="text-align: center;">\$7,000</td> <td></td> <td style="text-align: center;">\$15,000</td> </tr> <tr style="background-color: #d9e1f2;"> <td style="text-align: center;">(3)</td> <td></td> <td style="text-align: center; color: red;">+\$1,600</td> <td></td> <td style="text-align: center; color: red;">+\$1,600</td> <td></td> <td></td> </tr> <tr> <td style="text-align: center; border-bottom: 1px solid black;">\$8,000</td> <td style="text-align: center;">+</td> <td style="text-align: center; border-bottom: 1px solid black;">\$ 1,600</td> <td style="text-align: center;">+</td> <td style="text-align: center; border-bottom: 1px solid black;">\$ 7,000</td> <td style="text-align: center;">=</td> <td style="text-align: center; border-bottom: 1px solid black;">\$ 1,600</td> </tr> <tr> <td colspan="2" style="text-align: center;">\$16,600</td> <td></td> <td></td> <td style="text-align: center;">\$15,000</td> <td></td> <td style="text-align: center;">\$16,600</td> </tr> </tbody> </table>	Assets			=	Liabilities	+	Stockholders' Equity	Cash	+	Supplies	+	Accounts Payable	+	Common Stock	\$8,000				\$7,000		\$15,000	(3)		+\$1,600		+\$1,600			\$8,000	+	\$ 1,600	+	\$ 7,000	=	\$ 1,600	\$16,600				\$15,000		\$16,600
Assets			=	Liabilities	+	Stockholders' Equity																																					
Cash	+	Supplies	+	Accounts Payable	+	Common Stock																																					
\$8,000				\$7,000		\$15,000																																					
(3)		+\$1,600		+\$1,600																																							
\$8,000	+	\$ 1,600	+	\$ 7,000	=	\$ 1,600																																					
\$16,600				\$15,000		\$16,600																																					

Total assets are now \$16,600. This total is matched by a \$1,600 creditor's claim and a \$15,000 ownership claim.

TRANSACTION 4. SERVICES PROVIDED FOR CASH Softbyte Inc. receives \$1,200 cash from customers for programming services it has provided. This transaction represents Softbyte's principal revenue-producing activity. Recall that **revenue increases stockholders' equity**.

Basic Analysis	Cash increases \$1,200, and revenues (specifically, Service Revenue) increase \$1,200.																																																						
Equation Analysis	<table style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th colspan="3" style="text-align: center; border-bottom: 1px solid black;">Assets</th> <th style="text-align: center;">=</th> <th style="text-align: center; border-bottom: 1px solid black;">Liabilities</th> <th style="text-align: center;">+</th> <th colspan="3" style="text-align: center; border-bottom: 1px solid black;">Stockholders' Equity</th> </tr> </thead> <tbody> <tr> <td style="text-align: center; border-bottom: 1px solid black;">Cash</td> <td style="text-align: center;">+</td> <td style="text-align: center; border-bottom: 1px solid black;">Supplies</td> <td style="text-align: center;">+</td> <td style="text-align: center; border-bottom: 1px solid black;">Accounts Payable</td> <td style="text-align: center;">+</td> <td style="text-align: center; border-bottom: 1px solid black;">Common Stock</td> <td style="text-align: center;">+</td> <td style="text-align: center; border-bottom: 1px solid black;">Retained Earnings</td> </tr> <tr> <td style="text-align: center;">\$8,000</td> <td></td> <td style="text-align: center;">\$1,600</td> <td></td> <td style="text-align: center;">\$1,600</td> <td></td> <td style="text-align: center;">\$15,000</td> <td></td> <td style="text-align: center;">Rev. - Exp. - Div.</td> </tr> <tr style="background-color: #d9e1f2;"> <td style="text-align: center;">(4) +1,200</td> <td></td> <td></td> <td></td> <td></td> <td></td> <td style="text-align: center; color: red;">+\$1,200</td> <td></td> <td style="text-align: center; color: red;">Service Revenue</td> </tr> <tr> <td style="text-align: center; border-bottom: 1px solid black;">\$9,200</td> <td style="text-align: center;">+</td> <td style="text-align: center; border-bottom: 1px solid black;">\$1,600</td> <td style="text-align: center;">+</td> <td style="text-align: center; border-bottom: 1px solid black;">\$7,000</td> <td style="text-align: center;">=</td> <td style="text-align: center; border-bottom: 1px solid black;">\$1,600</td> <td style="text-align: center;">+</td> <td style="text-align: center; border-bottom: 1px solid black;">\$15,000</td> </tr> <tr> <td colspan="2" style="text-align: center;">\$17,800</td> <td></td> <td></td> <td style="text-align: center;">\$17,800</td> <td></td> <td style="text-align: center;">\$17,800</td> <td></td> <td></td> </tr> </tbody> </table>	Assets			=	Liabilities	+	Stockholders' Equity			Cash	+	Supplies	+	Accounts Payable	+	Common Stock	+	Retained Earnings	\$8,000		\$1,600		\$1,600		\$15,000		Rev. - Exp. - Div.	(4) +1,200						+\$1,200		Service Revenue	\$9,200	+	\$1,600	+	\$7,000	=	\$1,600	+	\$15,000	\$17,800				\$17,800		\$17,800		
Assets			=	Liabilities	+	Stockholders' Equity																																																	
Cash	+	Supplies	+	Accounts Payable	+	Common Stock	+	Retained Earnings																																															
\$8,000		\$1,600		\$1,600		\$15,000		Rev. - Exp. - Div.																																															
(4) +1,200						+\$1,200		Service Revenue																																															
\$9,200	+	\$1,600	+	\$7,000	=	\$1,600	+	\$15,000																																															
\$17,800				\$17,800		\$17,800																																																	

The two sides of the equation balance at \$17,800. Service Revenue is included in determining Softbyte’s net income.

Note that we do not have room to give details for each individual revenue and expense account in this illustration. Thus, revenues (and expenses when we get to them) are summarized under one column heading for Revenues and one for Expenses. However, it is important to keep track of the category (account) titles affected (e.g., Service Revenue) as they will be needed when we prepare financial statements later in the chapter.

TRANSACTION 5. PURCHASE OF ADVERTISING ON CREDIT Softbyte receives a bill for \$250 from the *Daily News* for advertising but postpones payment until a later date. This transaction results in an increase in liabilities and a decrease in stockholders’ equity.

Basic Analysis	Accounts Payable increases \$250, and stockholders’ equity decreases \$250 due to Advertising Expense.															
Equation Analysis	<u>Assets</u>			=	<u>Liabilities</u>		+	<u>Stockholders’ Equity</u>								
	Cash	+	Supplies	+	Equipment	=	Accounts Payable	+	Common Stock	+	<u>Retained Earnings</u>					
	\$9,200		\$1,600		\$7,000		\$1,600		\$15,000		\$1,200	Rev.	-	Exp.	-	Div.
	(5)						+250					-\$250				Advertising Expense
	\$9,200	+	\$1,600	+	\$7,000	=	\$1,850	+	\$15,000	+	\$1,200	-	\$250			
\$17,800						\$17,800										

The two sides of the equation still balance at \$17,800. Retained Earnings decreases when Softbyte incurs the expense. Expenses do not have to be paid in cash at the time they are incurred. When Softbyte pays at a later date, the liability Accounts Payable will decrease and the asset Cash will decrease (see Transaction 8). The cost of advertising is an expense (rather than an asset) because Softbyte has used the benefits. Advertising Expense is included in determining net income.

TRANSACTION 6. SERVICES RENDERED FOR CASH AND CREDIT Softbyte Inc. provides \$3,500 of programming services for customers. The company receives cash of \$1,500 from customers, and it bills the balance of \$2,000 on account. This transaction results in an equal increase in assets and stockholders’ equity.

Basic Analysis	Three specific items are affected: Cash increases \$1,500, Accounts Receivable increases \$2,000, and Service Revenue increases \$3,500.																		
Equation Analysis	<u>Assets</u>				=	<u>Liabilities</u>		+	<u>Stockholders’ Equity</u>										
	Cash	+	Accounts Receivable	+	Supplies	+	Equipment	=	Accounts Payable	+	Common Stock	+	<u>Retained Earnings</u>						
	\$ 9,200				\$1,600		\$7,000		\$1,850		\$15,000		\$1,200	\$250	Rev.	-	Exp.	-	Div.
	(6)	+1,500	+\$2,000										+3,500						Service Revenue
	\$10,700	+	\$2,000	+	\$1,600	+	\$7,000	=	\$1,850	+	\$15,000	+	\$4,700	-	\$250				
\$21,300								\$21,300											

Softbyte earns revenues when it provides the service, and therefore it recognizes \$3,500 in revenue. In exchange for this service, it received \$1,500 in Cash and Accounts Receivable of \$2,000. This Accounts Receivable represents customers' promise to pay \$2,000 to Softbyte in the future. When it later receives collections on account, Softbyte will increase Cash and will decrease Accounts Receivable (see Transaction 9).

TRANSACTION 7. PAYMENT OF EXPENSES Softbyte pays the following expenses in cash for September: store rent \$600, salaries and wages of employees \$900, and utilities \$200. These payments result in an equal decrease in assets and expenses.

Basic
Analysis

Cash decreases \$1,700, and the specific expense categories (Rent Expense, Salaries and Wages Expense, and Utilities Expense) decrease stockholders' equity by the same amount.

Equation
Analysis

Assets				=	Liabilities	+	Stockholders' Equity			
Cash	Accounts Receivable	Supplies	Equipment	=	Accounts Payable	+	Common Stock	Retained Earnings		
								Rev.	- Exp.	- Div.
\$10,700	\$2,000	\$1,600	\$7,000	=	\$1,850	+	\$15,000	\$4,700	\$ 250	
(7) -1,700									-600	Rent Exp.
									-900	Sal./Wages Exp.
									-200	Utilities Exp.
<u>\$ 9,000 + \$2,000 + \$1,600 + \$7,000</u>				=	<u>\$1,850 + \$15,000 + \$4,700 - \$1,950</u>					
\$19,600					\$19,600					

The two sides of the equation now balance at \$19,600. Three lines are required in the analysis to indicate the different types of expenses that have been incurred.

TRANSACTION 8. PAYMENT OF ACCOUNTS PAYABLE Softbyte pays its \$250 *Daily News* bill in cash. The company previously (in Transaction 5) recorded the bill as an increase in Accounts Payable and a decrease in stockholders' equity.

Basic
Analysis

This cash payment "on account" decreases the asset Cash by \$250 and also decreases the liability Accounts Payable by \$250.

Equation
Analysis

Assets				=	Liabilities	+	Stockholders' Equity			
Cash	Accounts Receivable	Supplies	Equipment	=	Accounts Payable	+	Common Stock	Retained Earnings		
								Rev.	- Exp.	- Div.
\$9,000	\$2,000	\$1,600	\$7,000	=	\$1,850	+	\$15,000	\$4,700	\$1,950	
(8) -250					-250					
<u>\$8,750 + \$2,000 + \$1,600 + \$7,000</u>				=	<u>\$1,600 + \$15,000 + \$4,700 - \$1,950</u>					
\$19,350					\$19,350					

Observe that the payment of a liability related to an expense that has previously been recorded does not affect stockholders' equity. Softbyte recorded the expense (in Transaction 5) and should not record it again.

TRANSACTION 9. RECEIPT OF CASH ON ACCOUNT Softbyte receives \$600 in cash from customers who had been billed for services (in Transaction 6). This transaction does not change total assets, but it changes the composition of those assets.

Basic
Analysis

Cash increases \$600, and Accounts Receivable decreases \$600.

Equation
Analysis

Assets				=	Liabilities	+	Stockholders' Equity			
Cash	Accounts Receivable	Supplies	Equipment	=	Accounts Payable	+	Common Stock	Retained Earnings		
								Rev.	Exp.	Div.
\$8,750	\$2,000	\$1,600	\$7,000	=	\$1,600	+	\$15,000	\$4,700	\$1,950	
(9) +600	-600			=						
<u>\$9,350 + \$1,400 + \$1,600 + \$7,000</u>				=	<u>\$1,600 + \$15,000 + \$4,700 - \$1,950</u>					
\$19,350					\$19,350					

Note that the collection of an account receivable for services previously billed and recorded does not affect stockholders' equity. Softbyte already recorded this revenue (in Transaction 6) and should not record it again.

TRANSACTION 10. DIVIDENDS The corporation pays a dividend of \$1,300 in cash to Ray and Barbara Neal, the stockholders of Softbyte Inc. This transaction results in an equal decrease in assets and stockholders' equity.

Basic
Analysis

Cash decreases \$1,300, and stockholders' equity decreases \$1,300 due to dividends.

Equation
Analysis

Assets				=	Liabilities	+	Stockholders' Equity			
Cash	Accounts Receivable	Supplies	Equipment	=	Accounts Payable	+	Common Stock	Retained Earnings		
								Rev.	Exp.	Div.
\$9,350	\$1,400	\$1,600	\$7,000	=	\$1,600	+	\$15,000	\$4,700	\$1,950	
(10) -1,300				=						-1,300 Dividends
<u>\$8,050 + \$1,400 + \$1,600 + \$7,000</u>				=	<u>\$1,600 + \$15,000 + \$4,700 - \$1,950 - \$1,300</u>					
\$18,050					\$18,050					

Note that the dividend reduces retained earnings, which is part of stockholders' equity. **Dividends are not expenses.** Like stockholders' investments, dividends are excluded in determining net income.

Summary of Transactions

Illustration 1-9 summarizes the September transactions of Softbyte Inc. to show their cumulative effect on the basic accounting equation. It also indicates the transaction number and the specific effects of each transaction. Finally, Illustration 1-9 demonstrates a number of significant facts:

- Each transaction must be analyzed in terms of its effect on:
 - The three components of the basic accounting equation.
 - Specific types (kinds) of items within each component.
- The two sides of the equation must always be equal.
- The Common Stock and Retained Earnings columns indicate the causes of each change in the stockholders' claim on assets.

Transaction	Assets				=	Liabilities	+	Stockholders' Equity			
	Cash	Accounts Receivable	Supplies	Equipment				Accounts Payable	Common Stock	Retained Earnings	
								Rev.	Exp.	Div.	
(1)	+\$15,000						+\$15,000				Issued Stock
(2)	-7,000			+\$7,000							
(3)			+\$1,600		+\$1,600						
(4)	+1,200									+\$1,200	Service Revenue
(5)					+250					-\$250	Advert. Expense
(6)	+1,500	+\$2,000								+3,500	Service Revenue
(7)	-1,700									-600	Rent Expense
										-900	Sal./Wages Exp.
										-200	Utilities Expense
(8)	-250				-250						
(9)	+600	-600									
(10)	-1,300										Dividends
	\$ 8,050	\$ 1,400	\$ 1,600	\$ 7,000	\$ 1,600	\$ 15,000	\$ 4,700	-\$1,950	-\$1,300		
	\$18,050					\$18,050					

Illustration 1-9

Tabular summary of Softbyte Inc. transactions

There! You made it through transaction analysis. If you feel a bit shaky on any of the transactions, it might be a good idea at this point to get up, take a short break, and come back again for a brief (10- to 15-minute) review of the transactions, to make sure you understand them before you go on to the next section.

> DO IT!

Tabular Analysis

Action Plan

- ✓ Analyze the effects of each transaction on the accounting equation.
- ✓ Use appropriate category names (not descriptions).
- ✓ Keep the accounting equation in balance.

Transactions made by Virmari & Co., a public accounting firm, for the month of August are shown below. Prepare a tabular analysis which shows the effects of these transactions on the expanded accounting equation, similar to that shown in Illustration 1-9.

1. Stockholders purchased shares of stock for \$25,000 cash.
2. The company purchased \$7,000 of office equipment on credit.
3. The company received \$8,000 cash in exchange for services performed.
4. The company paid \$850 for this month's rent.
5. The company paid a dividend of \$1,000 in cash to stockholders.

Solution

Transaction	Assets		=	Liabilities	+	Stockholders' Equity			
	Cash	Equipment				Accounts Payable	Common Stock	Retained Earnings	
						Rev.	Exp.	Div.	
(1)	+\$25,000								
(2)		+\$7,000	+\$7,000						
(3)	+8,000								
(4)	-850								
(5)	-1,000								
	\$31,150	\$7,000	\$7,000	\$25,000	\$8,000	-\$850		-\$1,000	
	\$38,150			\$38,150

Financial Statements

LEARNING OBJECTIVE 8

Understand the four financial statements and how they are prepared.

International Note

The primary types of financial statements required by GAAP and IFRS are the same. In practice, some format differences do exist in presentations employed by GAAP companies compared to IFRS companies.

Helpful Hint

The income statement, retained earnings statement, and statement of cash flows are all for a *period* of time, whereas the balance sheet is for a *point* in time.

Alternative Terminology

The income statement is sometimes referred to as the *statement of operations*, *earnings statement*, or *profit and loss statement*.

Alternative Terminology notes present synonymous terms that you may come across in practice.

Companies prepare four financial statements from the summarized accounting data:

1. An **income statement** presents the revenues and expenses and resulting net income or net loss for a specific period of time.
2. A **retained earnings statement** summarizes the changes in retained earnings for a specific period of time.
3. A **balance sheet** reports the assets, liabilities, and stockholders' equity of a company at a specific date.
4. A **statement of cash flows** summarizes information about the cash inflows (receipts) and outflows (payments) for a specific period of time.

These statements provide relevant financial data for internal and external users. Illustration 1-10 shows the financial statements of Softbyte Inc. Note that the statements shown in Illustration 1-10 are interrelated:

1. Net income of \$2,750 on the **income statement** is added to the beginning balance of retained earnings in the **retained earnings statement**.
2. Retained earnings of \$1,450 at the end of the reporting period shown in the **retained earnings statement** is reported on the **balance sheet**.
3. Cash of \$8,050 on the **balance sheet** is reported on the **statement of cash flows**.

Also, explanatory notes and supporting schedules are an integral part of every set of financial statements. We illustrate these notes and schedules in later chapters of this textbook.

Be sure to carefully examine the format and content of each statement in Illustration 1-10. We describe the essential features of each in the following sections.

Income Statement

The income statement reports the success or profitability of the company's operations over a specific period of time. For example, Softbyte Inc.'s income statement is dated "For the Month Ended September 30, 2014." It is prepared from the data appearing in the revenue and expense columns of Illustration 1-9 (page 21). The heading of the statement identifies the company, the type of statement, and the time period covered by the statement.

The income statement lists revenues first, followed by expenses. Finally, the statement shows net income (or net loss). When revenues exceed expenses, **net income** results. When expenses exceed revenues, a **net loss** results.

Although practice varies, we have chosen in our illustrations and homework solutions to list expenses in order of magnitude. (We will consider alternative formats for the income statement in later chapters.)

Note that the income statement does not include investment and dividend transactions between the stockholders and the business in measuring net income. For example, as explained earlier, the cash dividend from Softbyte Inc. was not regarded as a business expense. This type of transaction is considered a reduction of retained earnings, which causes a decrease in stockholders' equity.

Retained Earnings Statement

Softbyte Inc.'s retained earnings statement reports the changes in retained earnings for a specific period of time. The time period is the same as that covered by

Softbyte Inc.
Income Statement
For the Month Ended September 30, 2014

Revenues		
Service revenue		\$ 4,700
Expenses		
Salaries and wages expense	\$900	
Rent expense	600	
Advertising expense	250	
Utilities expense	<u>200</u>	
Total expenses		1,950
Net income		<u>\$2,750</u>

Softbyte Inc.
Retained Earnings Statement
For the Month Ended September 30, 2014

Retained earnings, September 1	\$ 0
Add: Net income	<u>2,750</u>
	2,750
Less: Dividends	<u>1,300</u>
Retained earnings, September 30	<u>\$1,450</u>

Softbyte Inc.
Balance Sheet
September 30, 2014

<u>Assets</u>	
Cash	\$ 8,050
Accounts receivable	1,400
Supplies	1,600
Equipment	<u>7,000</u>
Total assets	<u>\$18,050</u>
<u>Liabilities and Stockholders' Equity</u>	
Liabilities	
Accounts payable	\$ 1,600
Stockholders' equity	
Common stock	\$15,000
Retained earnings	<u>1,450</u>
Total liabilities and stockholder's equity	<u>\$18,050</u>

Softbyte Inc.
Statement of Cash Flows
For the Month Ended September 30, 2014

Cash receipts from revenues		\$ 3,300
Cash payments for expenses		<u>(1,950)</u>
Net cash provided by operating activities		1,350
Cash flows from investing activities		
Purchase of equipment		(7,000)
Cash flows from financing activities		
Sale of common stock	\$15,000)	
Payment of cash dividends	<u>(1,300)</u>	13,700
Net increase in cash		8,050
Cash at the beginning of the period		<u>0</u>
Cash at the end of the period		<u>\$8,050</u>

Illustration 1-10
Financial statements and their interrelationships

Helpful Hint
The heading of each statement identifies the company, the type of statement, and the specific date or time period covered by the statement.

Helpful Hint
Note that final sums are double-underlined, and negative amounts (in the statement of cash flows) are presented in parentheses.

Helpful Hint
The arrows in this illustration show the interrelationships of the four financial statements.
1. Net income is computed first and is needed to determine the ending balance in retained earnings.
2. The ending balance in retained earnings is needed in preparing the balance sheet.
3. The cash shown on the balance sheet is needed in preparing the statement of cash flows.

the income statement (“For the Month Ended September 30, 2014”). Data for the preparation of the retained earnings statement come from the retained earnings columns of the tabular summary (Illustration 1-9) and from the income statement (Illustration 1-10, page 23).

The first line of the statement shows the beginning retained earnings amount. Then come net income and dividends. The retained earnings ending balance is the final amount on the statement. The information provided by this statement indicates the reasons why retained earnings increased or decreased during the period. If there is a net loss, it is deducted with dividends in the retained earnings statement.

Balance Sheet

Softbyte Inc.’s balance sheet reports the assets, liabilities, and stockholders’ equity at a specific date (September 30, 2014). The company prepares the balance sheet from the column headings and the month-end data shown in the last line of the tabular summary (Illustration 1-9).

Observe that the balance sheet lists assets at the top, followed by liabilities and stockholders’ equity. Total assets must equal total liabilities and stockholders’ equity. Softbyte Inc. reports only one liability, Accounts Payable, on its balance sheet. In most cases, there will be more than one liability. When two or more liabilities are involved, a customary way of listing is as shown in Illustration 1-11.

Illustration 1-11
Presentation of liabilities

	<u>Liabilities</u>	
Notes payable		\$ 10,000
Accounts payable		63,000
Salaries and wages payable		<u>18,000</u>
Total liabilities		\$91,000

The balance sheet is like a snapshot of the company’s financial condition at a specific moment in time (usually the month-end or year-end).

Statement of Cash Flows

Helpful Hint

Investing activities pertain to investments made by the company, not investments made by the owners.

The statement of cash flows provides information on the cash receipts and payments for a specific period of time. The statement of cash flows reports (1) the cash effects of a company’s operations during a period, (2) its investing transactions, (3) its financing transactions, (4) the net increase or decrease in cash during the period, and (5) the cash amount at the end of the period.

Reporting the sources, uses, and change in cash is useful because investors, creditors, and others want to know what is happening to a company’s most liquid resource. The statement of cash flows provides answers to the following simple but important questions.

1. Where did cash come from during the period?
2. What was cash used for during the period?
3. What was the change in the cash balance during the period?

As shown in Softbyte Inc.’s statement of cash flows in Illustration 1-10, cash increased \$8,050 during the period. Net cash flow provided from operating activities increased cash \$1,350. Cash flow from investing transactions decreased cash \$7,000. And cash flow from financing transactions increased cash \$13,700. At this time, you need not be concerned with how these amounts are determined. Chapter 13 will examine in detail how the statement is prepared.

PEOPLE, PLANET, AND PROFIT INSIGHT

Beyond Financial Statements

Should we expand our financial statements beyond the income statement, retained earnings statement, balance sheet, and statement of cash flows? Some believe we should take into account ecological and social performance, in addition to financial results, in evaluating a company. The argument is that a company's responsibility lies with anyone who is influenced by its actions. In other words, a company should be interested in benefiting many different parties, instead of only maximizing stockholder's interests.

A socially responsible business does not exploit or endanger any group of individuals. It follows fair trade practices, provides safe environments for workers, and bears responsibility for environmental damage. Granted, measurement of these factors is difficult. How to report this information is also controversial. But, many interesting and useful efforts are underway. Throughout this textbook, we provide additional insights into how companies are attempting to meet the challenge of measuring and reporting their contributions to society, as well as their financial results, to stockholders.

Why might a company's stockholders be interested in its environmental and social performance? (See page 48.)

> DO IT!

Financial Statement Items

Presented below is selected information related to Flanagan Corporation at December 31, 2014. Flanagan reports financial information monthly.

Equipment	\$10,000	Utilities Expense	\$ 4,000
Cash	8,000	Accounts Receivable	9,000
Service Revenue	36,000	Salaries and Wages Expense	7,000
Rent Expense	11,000	Notes Payable	16,500
Accounts Payable	2,000	Dividends	5,000

- Determine the total assets of Flanagan at December 31, 2014.
- Determine the net income that Flanagan reported for December 2014.
- Determine the stockholders' equity of Flanagan at December 31, 2014.

Solution

Action Plan

- ✓ Remember the basic accounting equation: assets must equal liabilities plus stockholders' equity.
- ✓ Review previous financial statements to determine how total assets, net income, and stockholders' equity are computed.

- The total assets are \$27,000, comprised of Cash \$8,000, Accounts Receivable \$9,000, and Equipment \$10,000.
- Net income is \$14,000, computed as follows.

Revenues		
Service revenue		\$36,000
Expenses		
Rent expense	\$11,000	
Salaries and wages expense	7,000	
Utilities expense	4,000	
Total expenses		<u>22,000</u>
Net income		<u>\$14,000</u>

(c) The ending stockholders' equity of Flanagan Corporation is \$8,500. By rewriting the accounting equation, we can compute stockholders' equity as assets minus liabilities, as follows.

Total assets [as computed in (a)]			\$27,000
Less: Liabilities			
Notes payable	\$16,500		
Accounts payable	2,000	18,500	
		<u> </u>	
Stockholders' equity			<u>\$ 8,500</u>

Note that it is not possible to determine the corporation's stockholders' equity in any other way, because the beginning total for stockholders' equity is not provided.

Related exercise material: **BE1-10, BE1-11, E1-9, E1-12, E1-13, E1-14, E1-15, E1-16, and DO IT! 1-4.**

> Comprehensive **DO IT!**

The Comprehensive DO IT! is a final review of the chapter. The Action Plan gives tips about how to approach the problem, and the Solution demonstrates both the form and content of complete answers.

Legal Services Inc. was incorporated on July 1, 2014. During the first month of operations, the following transactions occurred.

1. Stockholders invested \$10,000 in cash in exchange for common stock of Legal Services Inc.
2. Paid \$800 for July rent on office space.
3. Purchased office equipment on account \$3,000.
4. Provided legal services to clients for cash \$1,500.
5. Borrowed \$700 cash from a bank on a note payable.
6. Performed legal services for client on account \$2,000.
7. Paid monthly expenses: salaries \$500, utilities \$300, and advertising \$100.

Instructions

- (a) Prepare a tabular summary of the transactions.
- (b) Prepare the income statement, retained earnings statement, and balance sheet at July 31 for Legal Services Inc.

Solution to Comprehensive DO IT!

(a) Trans- action	Assets			=	Liabilities		+	Stockholder's Equity										
	Cash	+	Accounts Receivable	+	Equipment	=	Notes Payable	+	Accounts Payable	+	Common Stock	+	Retained Earnings					
													Rev.	-	Exp.	-	Div.	
(1)	+\$10,000										+\$10,000							
(2)	-800																	-800
(3)					+\$3,000				+\$3,000									
(4)	+1,500												+\$1,500

	\$15,500						\$15,500											

Issued Stock
Rent Expense

Service Revenue

Service Revenue
Sal./Wages Exp.
Utilities Expense
Advertising Expense

Action Plan

- ✓ Make sure that assets equal liabilities plus stockholders' equity after each transaction.
- ✓ Investments and revenues increase stockholders' equity. Dividends and expenses decrease stockholders' equity.
- ✓ Prepare the financial statements in the order listed.
- ✓ The income statement shows revenues and expenses for a period of time.
- ✓ The retained earnings statement shows the changes in retained earnings for the same period of time as the income statement.
- ✓ The balance sheet reports assets, liabilities, and stockholders' equity at a specific date.

(b)

Legal Services Inc. Income Statement For the Month Ended July 31, 2014		
Revenues		
Service revenue		\$3,500
Expenses		
Rent expense	\$800	
Salaries and wages expense	500	
Utilities expense	300	
Advertising expense	<u>100</u>	
Total expenses		<u>1,700</u>
Net income		<u><u>\$1,800</u></u>

Legal Services Inc. Retained Earnings Statement For the Month Ended July 31, 2014	
Retained earnings, July 1	\$ -0-
Add: Net income	<u>1,800</u>
Retained earnings, July 31	<u><u>\$1,800</u></u>

Legal Services Inc. Balance Sheet July 31, 2014

Total liabilities		\$ 3,700
Stockholder's equity		
Common stock	10,000	
Retained earnings	<u>1,800</u>	<u>11,800</u>
Total liabilities and stockholder's equity		<u><u>\$15,500</u></u>

SUMMARY OF LEARNING OBJECTIVES

- 1 Explain what accounting is.** Accounting is an information system that identifies, records, and communicates the economic events of an organization to interested users.
- 2 Identify the users and uses of accounting.** The major users and uses of accounting are as follows. (a) Management uses accounting information to plan, organize, and run the business. (b) Investors (owners) decide whether to buy, hold, or sell their financial interests on the basis of accounting data. (c) Creditors (suppliers and bankers) evaluate the risks of granting credit or lending money on the basis of accounting information. Other groups that use accounting information are taxing authorities, regulatory agencies, customers, and labor unions.
- 3 Understand why ethics is a fundamental business concept.** Ethics are the standards of conduct by which actions are judged as right or wrong. Effective financial reporting depends on sound ethical behavior.
- 4 Explain generally accepted accounting principles.** Generally accepted accounting principles are a common set of standards used by accountants.
- 5 Explain the monetary unit assumption and the economic entity assumption.** The monetary unit assumption requires that companies include in the accounting records only transaction data that can be expressed in terms of money. The economic entity assumption requires that the activities of each economic entity be kept separate from the activities of its owner(s) and other economic entities.
- 6 State the accounting equation, and define its components.** The basic accounting equation is:

$$\text{Assets} = \text{Liabilities} + \text{Stockholders' Equity}$$

Assets are resources a business owns. Liabilities are creditorship claims on total assets. Stockholders' equity is the ownership claim on total assets.

The expanded accounting equation is:

$$\text{Assets} = \text{Liabilities} + \text{Common Stock} + \text{Revenues} - \text{Expenses} - \text{Dividends}$$

Common stock is affected when the company issues new shares of stock in exchange for cash. Revenues are increases in assets resulting from income-earning activities. Expenses are the costs of assets consumed or services used in the process of earning revenue. Dividends are payments the company makes to its stockholders.

- 7 Analyze the effects of business transactions on the accounting equation.** Each business transaction must have a dual effect on the accounting equation. For example, if an individual asset increases, there must be a corresponding (1) decrease in another asset, or (2) increase in a specific liability, or (3) increase in stockholders' equity.
- 8 Understand the four financial statements and how they are prepared.** An income statement presents the revenues and expenses, and resulting net income or net loss, for a specific period of time. A retained earnings statement summarizes the changes in retained earnings for a specific period of time. A balance sheet reports the assets, liabilities, and stockholders' equity at a specific date. A statement of cash flows summarizes information about the cash inflows (receipts) and outflows (payments) for a specific period of time.

GLOSSARY

Accounting The information system that identifies, records, and communicates the economic events of an organization to interested users. (p. 4).

Assets Resources a business owns. (p. 13).

Balance sheet A financial statement that reports the assets, liabilities, and stockholders' equity of a company at a specific date. (p. 22).

Basic accounting equation $\text{Assets} = \text{Liabilities} + \text{Stockholders' Equity}$. (p. 12).

Bookkeeping A part of accounting that involves only the recording of economic events. (p. 5).

Common stock Term used to describe the total amount paid in by stockholders for the shares they purchase. (p. 13).

Convergence Effort to reduce differences between U.S. GAAP and IFRS to enhance comparability. (p. 9).

Corporation A business organized as a separate legal entity under state corporation law, having ownership divided into transferable shares of stock. (p. 11).

Cost principle An accounting principle that states that companies should record assets at their cost. (p. 9).

Dividend A distribution by a corporation to its stockholders. (p. 14).

Economic entity assumption An assumption that requires that the activities of the entity be kept separate and distinct from the activities of its owner and all other economic entities. (p. 10).

Ethics The standards of conduct by which one's actions are judged as right or wrong, honest or dishonest, fair or not fair. (p. 7).

Expanded accounting equation Assets = Liabilities + Common Stock + Revenues – Expenses – Dividends. (p. 16).

Expenses The cost of assets consumed or services used in the process of earning revenue. (p. 14).

Fair value principle An accounting principle stating that assets and liabilities should be reported at fair value (the price received to sell an asset or settle a liability). (p. 9).

Faithful representation Numbers and descriptions match what really existed or happened—it is factual. (p. 9).

Financial accounting The field of accounting that provides economic and financial information for investors, creditors, and other external users. (p. 6).

Financial Accounting Standards Board (FASB) A private organization that establishes generally accepted accounting principles in the United States (GAAP). (p. 9).

Generally accepted accounting principles (GAAP) Common standards that indicate how to report economic events. (p. 8).

Income statement A financial statement that presents the revenues and expenses and resulting net income or net loss of a company for a specific period of time. (p. 22).

International Accounting Standards Board (IASB) An accounting standard-setting body that issues standards adopted by many countries outside of the United States. (p. 9).

International Financial Reporting Standards (IFRS) International accounting standards set by the International Accounting Standards Board (IASB). (p. 9).

Liabilities Creditor claims on total assets. (p. 13).

Managerial accounting The field of accounting that provides internal reports to help users make decisions about their companies. (p. 6).

Monetary unit assumption An assumption stating that companies include in the accounting records only transaction data that can be expressed in terms of money. (p. 10).

Net income The amount by which revenues exceed expenses. (p. 22).

Net loss The amount by which expenses exceed revenues. (p. 22).

Partnership A business owned by two or more persons associated as partners. (p. 11).

Proprietorship A business owned by one person. (p. 10).

Relevance Financial information that is capable of making a difference in a decision. (p. 9).

Retained earnings statement A financial statement that summarizes the changes in retained earnings for a specific period of time. (p. 22).

Revenues The gross increase in stockholders' equity resulting from business activities entered into for the purpose of earning income. (p. 13).

Sarbanes-Oxley Act (SOX) Law passed by Congress in 2002 intended to reduce unethical corporate behavior. (p. 7).

Securities and Exchange Commission (SEC) A governmental agency that oversees U.S. financial markets and accounting standard-setting bodies. (p. 9).

Statement of cash flows A financial statement that summarizes information about the cash inflows (receipts) and cash outflows (payments) for a specific period of time. (p. 22).

Stockholders' equity The ownership claim on a corporation's total assets. (p. 13).

Transactions The economic events of a business that are recorded by accountants. (p. 15).

APPENDIX 1A ACCOUNTING CAREER OPPORTUNITIES

Why is accounting such a popular major and career choice? First, there are a lot of jobs. In many cities in recent years, the demand for accountants exceeded the supply. Not only are there a lot of jobs, but there are a wide array of opportunities. As one accounting organization observed, “accounting is one degree with 360 degrees of opportunity.”

Accounting is also hot because it is obvious that accounting matters. Interest in accounting has increased, ironically, because of the attention caused by the accounting failures of companies such as **Enron** and **WorldCom**. These widely publicized scandals revealed the important role that accounting plays in society. Most people want to make a difference, and an accounting career provides many opportunities to contribute to society. Finally, the Sarbanes-Oxley Act (SOX) (see page 7) significantly increased the accounting and internal control requirements for corporations. This dramatically increased demand for professionals with accounting training.

Accountants are in such demand that it is not uncommon for accounting students to have accepted a job offer a year before graduation. As the following discussion reveals, the job options of people with accounting degrees are virtually unlimited.

LEARNING OBJECTIVE 9

Explain the career opportunities in accounting.

Public Accounting

Individuals in **public accounting** offer expert service to the general public, in much the same way that doctors serve patients and lawyers serve clients. A major portion of public accounting involves **auditing**. In auditing, a certified public accountant (CPA) examines company financial statements and provides an opinion as to how accurately the financial statements present the company's results and financial position. Analysts, investors, and creditors rely heavily on these "audit opinions," which CPAs have the exclusive authority to issue.

Taxation is another major area of public accounting. The work that tax specialists perform includes tax advice and planning, preparing tax returns, and representing clients before governmental agencies such as the Internal Revenue Service.

A third area in public accounting is **management consulting**. It ranges from installing basic accounting software or highly complex enterprise resource planning systems, to providing support services for major marketing projects and merger and acquisition activities.

Many CPAs are entrepreneurs. They form small- or medium-sized practices that frequently specialize in tax or consulting services.

Private Accounting

Instead of working in public accounting, you might choose to be an employee of a for-profit company such as **Starbucks**, **Google**, or **PepsiCo**. In **private** (or **managerial**) **accounting**, you would be involved in activities such as cost accounting (finding the cost of producing specific products), budgeting, accounting information system design and support, and tax planning and preparation. You might also be a member of your company's internal audit team. In response to SOX, the internal auditors' job of reviewing the company's operations to ensure compliance with company policies and to increase efficiency has taken on increased importance.

Alternatively, many accountants work for not-for-profit organizations such as the **Red Cross** or the **Bill and Melinda Gates Foundation**, or for museums, libraries, or performing arts organizations.

Governmental Accounting

Another option is to pursue one of the many accounting opportunities in governmental agencies. For example, the Internal Revenue Service (IRS), Federal Bureau of Investigation (FBI), and the Securities and Exchange Commission (SEC) all employ accountants. The FBI has a stated goal that at least 15 percent of its new agents should be CPAs. There is also a very high demand for accounting educators at public colleges and universities and in state and local governments.

Forensic Accounting

Forensic accounting uses accounting, auditing, and investigative skills to conduct investigations into theft and fraud. It is listed among the top 20 career paths of the future. The job of forensic accountants is to catch the perpetrators of the estimated \$600 billion per year of theft and fraud occurring at U.S. companies. This includes tracing money-laundering and identity-theft activities as well as tax evasion. Insurance companies hire forensic accountants to detect insurance frauds such as arson, and law offices employ forensic accountants to identify marital assets in divorces. Forensic accountants often have FBI, IRS, or similar government experience.

“Show Me the Money”

How much can a new accountant make? Take a look at the average salaries for college graduates in public and private accounting.³ Keep in mind if you also have a CPA license, you’ll make 10–15% more when you start out.

Employer	Jr. Level (0–3 yrs.)	Sr. Level (4–6 yrs.)
Public accounting (large firm)	\$48,750–\$69,250	\$66,750–\$86,000
Public accounting (small firm)	\$41,000–\$56,000	\$54,000–\$69,750
Corporate accounting (large company)	\$38,000–\$57,250	\$55,750–\$73,500
Corporate accounting (small company)	\$33,500–\$49,000	\$46,500–\$58,750

Illustration 1A-1
Salary estimates for jobs in public and corporate accounting

Serious earning potential over time gives CPAs great job security. Here are some examples of upper-level salaries for managers in corporate accounting. Note that geographic region, experience, education, CPA certification, and company size each play a role in determining salary.

Position	Large Company	Small to Medium Company
Chief financial officer	\$183,250–\$384,000	\$94,250–\$175,750
Corporate controller	\$122,000–\$180,000	\$80,500–\$134,750
Tax manager	\$ 92,250–\$130,250	\$74,250–\$100,250

Illustration 1A-2
Upper-level management salaries in corporate accounting

SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 1A

9 Explain the career opportunities in accounting. Accounting offers many different jobs in fields such as public and private accounting, government, and forensic accounting.

Accounting is a popular major because there are many different types of jobs, with unlimited potential for career advancement.

GLOSSARY FOR APPENDIX 1A

Auditing The examination of financial statements by a certified public accountant in order to express an opinion as to the fairness of presentation. (p. 30).

Forensic accounting An area of accounting that uses accounting, auditing, and investigative skills to conduct investigations into theft and fraud. (p. 30).

Management consulting An area of public accounting ranging from development of accounting and computer systems to support services for marketing projects and merger and acquisition activities. (p. 30).

Private (or managerial) accounting An area of accounting within a company that involves such activities as cost accounting, budgeting, design and support of accounting information systems, and tax planning and preparation. (p. 30).

Public accounting An area of accounting in which the accountant offers expert service to the general public. (p. 30).

Taxation An area of public accounting involving tax advice, tax planning, preparing tax returns, and representing clients before governmental agencies. (p. 30).

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more components are available for practice in WileyPLUS.

*Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

SELF-TEST QUESTIONS

Answers are on page 48.

- (LO 1) 1. Which of the following is *not* a step in the accounting process?
 (a) Identification. (c) Recording.
 (b) Verification. (d) Communication.
- (LO 2) 2. Which of the following statements about users of accounting information is *incorrect*?
 (a) Management is an internal user.
 (b) Taxing authorities are external users.
 (c) Present creditors are external users.
 (d) Regulatory authorities are internal users.
- (LO 4) 3. The cost principle states that:
 (a) assets should be initially recorded at cost and adjusted when the fair value changes.
 (b) activities of an entity are to be kept separate and distinct from its owner.
 (c) assets should be recorded at their cost.
 (d) only transaction data capable of being expressed in terms of money be included in the accounting records.
- (LO 5) 4. Which of the following statements about basic assumptions is *correct*?
 (a) Basic assumptions are the same as accounting principles.
 (b) The economic entity assumption states that there should be a particular unit of accountability.
 (c) The monetary unit assumption enables accounting to measure employee morale.
 (d) Partnerships are not economic entities.
- (LO 5) 5. The three types of business entities are:
 (a) proprietorships, small businesses, and partnerships.
 (b) proprietorships, partnerships, and corporations.
 (c) proprietorships, partnerships, and large businesses.
 (d) financial, manufacturing, and service companies.
- (LO 6) 6. Net income will result during a time period when:
 (a) assets exceed liabilities.
 (b) assets exceed revenues.
 (c) expenses exceed revenues.
 (d) revenues exceed expenses.
- (LO 7) 7. Performing services on account will have the following effects on the components of the basic accounting equation:
 (a) increase assets and decrease stockholders' equity.
 (b) increase assets and increase stockholders' equity.
 (c) increase assets and increase liabilities.
 (d) increase liabilities and increase stockholders' equity.
- (LO 7) 8. As of December 31, 2014, Stoneland Company has assets of \$3,500 and stockholders' equity of \$2,000. What are the liabilities for Stoneland Company as of December 31, 2014?
 (a) \$1,500. (b) \$1,000. (c) \$2,500. (d) \$2,000.
9. Which of the following events is *not* recorded in the accounting records? (LO 7)
 (a) Equipment is purchased on account.
 (b) An employee is terminated.
 (c) A cash investment is made into the business.
 (d) The company pays a cash dividend.
10. During 2014, Gibson Company's assets decreased \$50,000 and its liabilities decreased \$90,000. Its stockholders' equity therefore: (LO 7)
 (a) increased \$40,000. (c) decreased \$40,000.
 (b) decreased \$140,000. (d) increased \$140,000.
11. Payment of an account payable affects the components of the accounting equation in the following way: (LO 7)
 (a) decreases stockholders' equity and decreases liabilities.
 (b) increases assets and decreases liabilities.
 (c) decreases assets and increases stockholders' equity.
 (d) decreases assets and decreases liabilities.
12. Which of the following statements is *false*? (LO 8)
 (a) A statement of cash flows summarizes information about the cash inflows (receipts) and outflows (payments) for a specific period of time.
 (b) A balance sheet reports the assets, liabilities, and stockholders' equity at a specific date.
 (c) An income statement presents the revenues, expenses, changes in stockholders' equity, and resulting net income or net loss for a specific period of time.
 (d) A retained earnings statement summarizes the changes in retained earnings for a specific period of time.
13. On the last day of the period, Jim Otto Company buys a \$900 machine on credit. This transaction will affect the: (LO 8)
 (a) income statement only.
 (b) balance sheet only.
 (c) income statement and retained earnings statement only.
 (d) income statement, retained earnings statement, and balance sheet.
14. The financial statement that reports assets, liabilities, and stockholders' equity is the: (LO 8)
 (a) income statement.
 (b) retained earnings statement.
 (c) balance sheet.
 (d) statement of cash flows.
- *15. Services provided by a public accountant include: (LO 9)
 (a) auditing, taxation, and management consulting.
 (b) auditing, budgeting, and management consulting.
 (c) auditing, budgeting, and cost accounting.
 (d) internal auditing, budgeting, and management consulting.

Go to the book's companion website, www.wiley.com/college/weygandt, for additional Self-Test Questions.

QUESTIONS

1. "Accounting is ingrained in our society and it is vital to our economic system." Do you agree? Explain.
2. Identify and describe the steps in the accounting process.
3. (a) Who are internal users of accounting data?
(b) How does accounting provide relevant data to these users?
4. What uses of financial accounting information are made by (a) investors and (b) creditors?
5. "Bookkeeping and accounting are the same." Do you agree? Explain.
6. Jackie Remmers Travel Agency purchased land for \$85,000 cash on December 10, 2014. At December 31, 2014, the land's value has increased to \$93,000. What amount should be reported for land on Jackie Remmers' balance sheet at December 31, 2014? Explain.
7. What is the monetary unit assumption?
8. What is the economic entity assumption?
9. What are the three basic forms of profit-oriented business organizations?
10. Teresa Alvarez is the owner of a successful printing shop. Recently, her business has been increasing, and Teresa has been thinking about changing the organization of her business from a proprietorship to a corporation. Discuss some of the advantages Teresa would enjoy if she were to incorporate her business.
11. What is the basic accounting equation?
12. (a) Define the terms assets, liabilities, and stockholders' equity.
(b) What items affect stockholders' equity?
13. Which of the following items are liabilities of Designer Jewelry Stores?
(a) Cash. (f) Equipment.
(b) Accounts payable. (h) Service revenue.
(c) Dividends. (g) Salaries and wages
(d) Accounts receivable. payable.
(e) Supplies. (i) Rent expense.
14. Can a business enter into a transaction in which only the left side of the basic accounting equation is affected? If so, give an example.
15. Are the following events recorded in the accounting records? Explain your answer in each case.
(a) The president of the company dies.
(b) Supplies are purchased on account.
(c) An employee is fired.
16. Indicate how the following business transactions affect the basic accounting equation.
(a) Paid cash for janitorial services.
(b) Purchased equipment for cash.
(c) Invested cash in the business for stock.
(d) Paid accounts payable in full.
17. Listed below are some items found in the financial statements of Alex Greenway Co. Indicate in which financial statement(s) the following items would appear:
(a) Service revenue. (e) Retained earnings.
(b) Equipment. (f) Salaries and wages
(c) Advertising expense. payable.
(d) Accounts receivable.
18. In February 2014, Paula Klink invested an additional \$10,000 in Midtown Company. Midtown's accountant, Jon Shin, recorded this receipt as an increase in cash and revenues. Is this treatment appropriate? Why or why not?
19. "A company's net income appears directly on the income statement and the retained earnings statement, and it is included indirectly in the company's balance sheet." Do you agree? Explain.
20. Jardine Enterprises had a stockholders' equity balance of \$158,000 at the beginning of the period. At the end of the accounting period, the stockholders' equity balance was \$198,000.
(a) Assuming no additional investment or distributions during the period, what is the net income for the period?
(b) Assuming an additional investment of \$13,000 but no distributions during the period, what is the net income for the period?
21. Summarized operations for H. J. Oslo Co. for the month of July are as follows.
Revenues earned: for cash \$30,000; on account \$70,000.
Expenses incurred: for cash \$26,000; on account \$40,000.
Indicate for H. J. Oslo Co. (a) the total revenues, (b) the total expenses, and (c) net income for the month of July.
22. The basic accounting equation is: Assets = Liabilities + Stockholders' Equity. Replacing the words in that equation with dollar amounts, what is **The Coca-Cola Company's** accounting equation at December 31, 2010?

BRIEF EXERCISES

BE1-1 Presented below is the basic accounting equation. Determine the missing amounts. *Use basic accounting equation.*

	<u>Assets</u>	=	<u>Liabilities</u>	+	<u>Stockholders' Equity</u>
(a)	\$90,000		\$50,000		?
(b)	?		\$45,000		\$70,000
(c)	\$94,000		?		\$60,000

(LO 6)

Use basic accounting equation.

(LO 6)

BE1-2 Given the accounting equation, answer each of the following questions.

- The liabilities of Shumway Company are \$120,000 and the stockholders' equity is \$232,000. What is the amount of Shumway Company's total assets?
- The total assets of Shumway Company are \$190,000 and its stockholders' equity is \$80,000. What is the amount of its total liabilities?
- The total assets of Shumway Company are \$600,000 and its liabilities are equal to one half of its total assets. What is the amount of Shumway Company's stockholders' equity?

Use basic accounting equation.

(LO 6)

BE1-3 At the beginning of the year, Gonzales Company had total assets of \$870,000 and total liabilities of \$500,000. Answer the following questions.

- If total assets increased \$150,000 during the year and total liabilities decreased \$80,000, what is the amount of stockholders' equity at the end of the year?
- During the year, total liabilities increased \$100,000 and stockholders' equity decreased \$70,000. What is the amount of total assets at the end of the year?
- If total assets decreased \$80,000 and stockholders' equity increased \$120,000 during the year, what is the amount of total liabilities at the end of the year?

Solve accounting equation.

(LO 6)

BE1-4 Use the accounting equation to answer each of the following questions.

- The liabilities of Alli Company are \$90,000. Common stock account is \$150,000; dividends are \$40,000; revenues, \$450,000; and expenses, \$320,000. What is the amount of Alli Company's total assets?
- The total assets of Planke Company are \$57,000. Common stock account is \$23,000; dividends are \$7,000; revenues, \$50,000; and expenses, \$35,000. What is the amount of the company's total liabilities?
- The total assets of Thao Co. are \$600,000 and its liabilities are equal to two-thirds of its total assets. What is the amount of Thao Co.'s stockholders' equity?

Identify assets, liabilities, and stockholders' equity.

(LO 6)

BE1-5 Indicate whether each of the following items is an asset (A), liability (L), or part of stockholders' equity (SE).

- | | |
|--------------------------------------|------------------------------|
| _____ (a) Accounts receivable | _____ (d) Supplies |
| _____ (b) Salaries and wages payable | _____ (e) Owner's investment |
| _____ (c) Equipment | _____ (f) Notes payable |

Determine effect of transactions on basic accounting equation.

(LO 7)

BE1-6 Presented below are three business transactions. On a sheet of paper, list the letters (a), (b), and (c) with columns for assets, liabilities, and stockholders' equity. For each column, indicate whether the transactions increased (+), decreased (-), or had no effect (NE) on assets, liabilities, and stockholders' equity.

- Purchased supplies on account.
- Received cash for providing a service.
- Paid expenses in cash.

Determine effect of transactions on accounting equation.

(LO 7)

BE1-7 Follow the same format as BE1-6 above. Determine the effect on assets, liabilities, and stockholders' equity of the following three transactions.

- Stockholders invested cash in the business for common stock.
- Paid a cash dividend.
- Received cash from a customer who had previously been billed for services provided.

Classify items affecting stockholders' equity.

(LO 6)

BE1-8 Classify each of the following items as dividends (D), revenue (R), or expense (E).

- | | |
|--------------------------------------|-----------------------------|
| _____ (a) Advertising expense | _____ (e) Dividends |
| _____ (b) Service revenue | _____ (f) Rent revenue |
| _____ (c) Insurance expense | _____ (g) Utilities expense |
| _____ (d) Salaries and wages expense | |

Determine effect of transactions on stockholders' equity.

(LO 6)

BE1-9 Presented below are three transactions. Mark each transaction as affecting common stock (C), dividends (D), revenue (R), expense (E), or not affecting stockholders' equity (NSE).

- Received cash for services performed
- Paid cash to purchase equipment
- Paid employee salaries.

Prepare a balance sheet.

(LO 8)

BE1-10 In alphabetical order below are balance sheet items for Grande Company at December 31, 2014. Kit Grande is the owner of Grande Company. Prepare a balance sheet, following the format of Illustration 1-10.

Accounts payable	\$85,000
Accounts receivable	\$72,500
Cash	\$44,000
Common stock	\$31,500

BE1-11 Indicate whether the following items would appear on the income statement (IS), balance sheet (BS), or retained earnings statement (RE).

- | | |
|-------------------------------|---------------------------|
| _____ (a) Notes payable | _____ (d) Cash |
| _____ (b) Advertising expense | _____ (e) Service revenue |
| _____ (c) Common stock | _____ (f) Dividends |

Determine where items appear on financial statements.

(LO 8)

> DO IT! REVIEW

DO IT! 1-1 Indicate whether each of the five statements presented below is true or false.

- The three steps in the accounting process are identification, recording, and examination.
- The two most common types of external users are investors and creditors.
- Congress passed the Sarbanes-Oxley Act to ensure that investors invest only in companies that will be profitable.
- The primary accounting standard-setting body in the United States is the Securities and Exchange Commission (SEC).
- The cost principle dictates that companies record assets at their cost and continue to report them at their cost over the time the asset is held.

Review basic concepts.

(LO 1, 2, 4)

DO IT! 1-2 Classify the following items as issuance of stock (I), dividends (D), revenues (R), or expenses (E). Then indicate whether each item increases or decreases stockholders' equity.

- | | |
|-----------------|---|
| 1. Dividends | 3. Advertising expense |
| 2. Rent revenue | 4. Stockholders invest cash in the business |

Evaluate effects of transactions on stockholders' equity.

(LO 6)

DO IT! 1-3 Transactions made by Callahan and Co., a law firm, for the month of March are shown below. Prepare a tabular analysis which shows the effects of these transactions on the accounting equation, similar to that shown in Illustration 1-9.

- The company provided \$23,000 of services for customers, on credit.
- The company received \$23,000 in cash from customers who had been billed for services (in transaction 1).
- The company received a bill for \$2,000 of advertising, but will not pay it until a later date.
- The company paid a dividend of \$5,000 in cash to stockholders.

Prepare tabular analysis.

(LO 7)

DO IT! 1-4 Presented below is selected information related to Narrow Gage Company at December 31, 2014. Narrow Gage reports financial information monthly.

Accounts Payable	\$ 3,000	Salaries and Wages Expense	\$16,500
Cash	9,000	Notes Payable	25,000
Advertising Expense	6,000	Rent Expense	9,800
Service Revenue	54,000	Accounts Receivable	13,500
Equipment	29,000	Dividends	7,500

Calculate effects of transactions on financial statement items.

(LO 8)

- Determine the total assets of Narrow Gage Company at December 31, 2014.
- Determine the net income that Narrow Gage Company reported for December 2014.
- Determine the stockholders' equity of Narrow Gage Company at December 31, 2014.

The Navigator

EXERCISES

E1-1 Sondgeroth Company performs the following accounting tasks during the year.

- _____ Analyzing and interpreting information.
- _____ Classifying economic events.
- _____ Explaining uses, meaning, and limitations of data.
- _____ Keeping a systematic chronological diary of events.

Classify the three activities of accounting.

(LO 1)

- _____ Measuring events in dollars and cents.
- _____ Preparing accounting reports.
- _____ Reporting information in a standard format.
- _____ Selecting economic activities relevant to the company.
- _____ Summarizing economic events.

Accounting is “an information system that **identifies**, **records**, and **communicates** the economic events of an organization to interested users.”

Instructions

Categorize the accounting tasks performed by Sondgeroth as relating to either the identification (I), recording (R), or communication (C) aspects of accounting.

Identify users of accounting information.

(LO 2)

E1-2 (a) The following are users of financial statements.

- | | |
|--------------------------------|--|
| _____ Customers | _____ Securities and Exchange Commission |
| _____ Internal Revenue Service | _____ Store manager |
| _____ Labor unions | _____ Suppliers |
| _____ Marketing manager | _____ Vice president of finance |
| _____ Production supervisor | |

Instructions

Identify the users as being either **external users** or **internal users**.

(b) The following questions could be asked by an internal user or an external user.

- _____ Can we afford to give our employees a pay raise?
- _____ Did the company earn a satisfactory income?
- _____ Do we need to borrow in the near future?
- _____ How does the company’s profitability compare to other companies?
- _____ What does it cost us to manufacture each unit produced?
- _____ Which product should we emphasize?
- _____ Will the company be able to pay its short-term debts?

Instructions

Identify each of the questions as being more likely asked by an **internal user** or an **external user**.

Discuss ethics and the cost principle.

(LO 3)

E1-3 Leon Manternach, president of Manternach Company, has instructed Carla Ruden, the head of the accounting department for Manternach Company, to report the company’s land in the company’s accounting reports at its fair value of \$170,000 instead of its cost of \$100,000. Manternach says, “Showing the land at \$170,000 will make our company look like a better investment when we try to attract new investors next month.”

Instructions

Explain the ethical situation involved for Carla Ruden, identifying the stakeholders and the alternatives.

Use accounting concepts.

(LO 4, 5)

E1-4 The following situations involve accounting principles and assumptions.

1. Julia Company owns buildings that are worth substantially more than they originally cost. In an effort to provide more relevant information, Julia reports the buildings at fair value in its accounting reports.
2. Dekalb Company includes in its accounting records only transaction data that can be expressed in terms of money.
3. Omar Shariff, president of Omar’s Oasis, records his personal living costs as expenses of the Oasis.

Instructions

For each of the three situations, state if the accounting method used is correct or incorrect. If correct, identify which principle or assumption supports the method used. If incorrect, identify which principle or assumption has been violated.

Classify accounts as assets, liabilities, and stockholders’ equity.

(LO 6)

E1-5 Robinson Cleaners has the following balance sheet items.

- | | |
|------------------|----------------------------|
| Accounts payable | Accounts receivable |
| Cash | Notes payable |
| Equipment | Salaries and wages payable |
| Supplies | Common stock |

Instructions

Classify each item as an asset, liability, or stockholders' equity.

E1-6 Selected transactions for Spring Green Lawn Care Company are listed below.

- Sold common stock for cash to start business.
- Paid monthly rent.
- Purchased equipment on account.
- Billed customers for services performed.
- Paid dividends.
- Received cash from customers billed in (4).
- Incurred advertising expense on account.
- Purchased additional equipment for cash.
- Received cash from customers when service was performed.

Analyze the effect of transactions.

(LO 6, 7)

Instructions

List the numbers of the above transactions and describe the effect of each transaction on assets, liabilities, and stockholders' equity. For example, the first answer is (1) Increase in assets and increase in stockholders' equity.

E1-7 Collins Computer Timeshare Company entered into the following transactions during May 2014.

- Purchased computer terminals for \$20,000 from Digital Equipment on account.
- Paid \$3,000 cash for May rent on storage space.
- Received \$15,000 cash from customers for contracts billed in April.
- Provided computer services to Schmidt Construction Company for \$2,400 cash.
- Paid Central States Power Co. \$11,000 cash for energy usage in May.
- Stockholders invested an additional \$32,000 in the business.
- Paid Digital Equipment for the terminals purchased in (1) above.
- Incurred advertising expense for May of \$900 on account.

Analyze the effect of transactions on assets, liabilities, and stockholders' equity.

(LO 6, 7)

Instructions

Indicate with the appropriate letter whether each of the transactions above results in:

- An increase in assets and a decrease in assets.
- An increase in assets and an increase in stockholders' equity.
- An increase in assets and an increase in liabilities.
- A decrease in assets and a decrease in stockholders' equity.
- A decrease in assets and a decrease in liabilities.
- An increase in liabilities and a decrease in stockholders' equity.
- An increase in stockholders' equity and a decrease in liabilities.

E1-8 An analysis of the transactions made by J. L. Kang & Co., a certified public accounting firm, for the month of August is shown below. Each increase and decrease in stockholders' equity is explained.

Analyze transactions and compute net income.

(LO 7, 8)

		Assets			= Liabilities +	Stockholders' Equity				
Cash	+	Accounts Receivable	+ Supplies	+ Equipment	=	Accounts Payable	+	Common Stock	+ Retained Earnings	
								Rev.	- Exp.	- Div.
1.	+	\$15,000						+\$15,000		
2.	-	2,000				+\$3,000				
3.	-	750								
4.	+	4,600	+	750				+\$9,100		Service Revenue
5.	-	1,500				-1,500				
6.	-	2,000								-\$2,000
7.	-	650							-\$650	Rent Expense
8.	+	450	-	450						
9.	-	3,900							-3,900	Sal./Wages Expense
10.						+500			-500	Utilities Expense

Instructions

-  Describe each transaction that occurred for the month.
- Determine how much stockholders' equity increased for the month.
- Compute the amount of net income for the month.

Prepare financial statements.

(LO 8)

E1-9 An analysis of transactions for J. L. Kang & Co. was presented in E1-8.

Instructions

Prepare an income statement and a retained earnings statement for August and a balance sheet at August 31, 2014.

Determine net income (or loss).

(LO 7)

E1-10 Kimmy Company had the following assets and liabilities on the dates indicated.

<u>December 31</u>	<u>Total Assets</u>	<u>Total Liabilities</u>
2013	\$400,000	\$260,000
2014	\$480,000	\$300,000
2015	\$590,000	\$400,000

Kimmy began business on January 1, 2013, with an investment of \$100,000 from stockholders.

Instructions

From an analysis of the change in stockholders' equity during the year, compute the net income (or loss) for:

- 2013, assuming Kimmy paid \$15,000 in dividends for the year.
- 2014, assuming stockholders made an additional investment of \$50,000 and Kimmy paid no dividends in 2014.
- 2015, assuming stockholders made an additional investment of \$15,000 and Kimmy paid dividends of \$30,000 in 2015.

Analyze financial statements items.

(LO 6, 7)

E1-11 Two items are omitted from each of the following summaries of balance sheet and income statement data for two corporations for the year 2014, Steven Craig and Georgia Enterprises.

	<u>Steven Craig</u>	<u>Georgia Enterprises</u>
Beginning of year:		
Total assets	\$ 97,000	\$129,000
Total liabilities	85,000	(c)
Total stockholders' equity	(a)	75,000
End of year:		
Total assets	160,000	180,000
Total liabilities	120,000	50,000
Total stockholders' equity	40,000	130,000
Changes during year in stockholders' equity:		
Additional investment	(b)	25,000
Dividends	24,000	(d)
Total revenues	215,000	100,000
Total expenses	175,000	55,000

Instructions

Determine the missing amounts.

Prepare income statement and retained earnings statement.

(LO 8)

E1-12 The following information relates to Karen Weigel Co. for the year 2014.

Retained earnings, January 1, 2014	\$48,000	Advertising expense	\$ 1,800
Dividends during 2014	5,000	Rent expense	10,400
Service revenue	62,500	Utilities expense	3,100
Salaries and wages expense	28,000		

Instructions

After analyzing the data, prepare an income statement and a retained earnings statement for the year ending December 31, 2014.

Correct an incorrectly prepared balance sheet.

(LO 8)

E1-13 Lynn Dreise is the bookkeeper for Sanculi Company. Lynn has been trying to get the balance sheet of Sanculi Company to balance. Sanculi's balance sheet is shown on the next page.

Sanculi Company
Balance Sheet
December 31, 2014

Assets		Liabilities	
Cash	\$14,000	Accounts payable	\$20,000
Supplies	8,000	Accounts receivable	(8,500)
Equipment	48,000	Common stock	50,000
Dividends	9,000	Retained earnings	17,500
Total assets	\$79,000	Total liabilities and stockholders' equity	\$79,000

Instructions

Prepare a correct balance sheet.

E1-14 Bear Park, a public camping ground near the Lake Mead National Recreation Area, has compiled the following financial information as of December 31, 2014.

Compute net income and prepare a balance sheet.

Revenues during 2014—camping fees	\$140,000	Notes payable	\$ 60,000	(LO 8)
Revenues during 2014—general store	47,000	Expenses during 2014	150,000	
Accounts payable	11,000	Supplies on hand	2,500	
Cash on hand	20,000	Common stock	20,000	
Original cost of equipment	105,500	Retained earnings	?	
Fair value of equipment	140,000			

Instructions

- (a) Determine Bear Park's net income for 2014.
(b) Prepare a balance sheet for Bear Park as of December 31, 2014.

E1-15 Presented below is financial information related to the 2014 operations of Donna Marie Cruise Company.

Prepare an income statement.

Maintenance and repairs expense	\$ 97,000	(LO 8)
Utilities expense	10,000	
Salaries and wages expense	142,000	
Advertising expense	3,500	
Ticket revenue	335,000	

Instructions

Prepare the 2014 income statement for Donna Marie Cruise Company.

E1-16 Presented below is information related to Williams and Douglas, Attorneys at Law.

Prepare a retained earnings statement.

Retained earnings, January 1, 2014	\$ 23,000	(LO 8)
Legal service revenue—2014	340,000	
Total expenses—2014	211,000	
Assets, January 1, 2014	85,000	
Liabilities, January 1, 2014	62,000	
Assets, December 31, 2014	168,000	
Liabilities, December 31, 2014	80,000	
Dividends—2014	64,000	

Instructions

Prepare the 2014 retained earnings statement for Williams and Douglas, Attorneys at Law.

E1-17 This information is for Belleview Company for the year ended December 31, 2014.

Prepare a cash flow statement.

Cash received from revenues from customers	\$600,000	(LO 8)
Cash received for issuance of common stock	280,000	
Cash paid for new equipment	100,000	
Cash dividends paid	20,000	
Cash paid for expenses	430,000	
Cash balance 1/1/14	30,000	

Instructions

Prepare the 2014 statement of cash flows for Belleview Company.

EXERCISES: SET B AND
CHALLENGE EXERCISES

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Exercise Set B and Challenge Exercises.

PROBLEMS: SET A

Analyze transactions and compute net income.

(LO 6, 7)

Check figures next to some Problems give you a key number, to let you know if you are on the right track with your solution.

(a) Total assets \$13,140

(b) Net income \$3,890

Analyze transactions and prepare income statement, retained earnings statement, and balance sheet.

(LO 6, 7, 8)

(a) Ending cash \$15,900

(b) Net income \$4,330
Total assets \$29,800

Prepare income statement, retained earnings statement, and balance sheet.

(LO 8)

P1-1A Kinney's Repair Inc. was started on May 1. A summary of May transactions is presented below.

1. Stockholders invested \$10,000 cash in the business in exchange for common stock.
2. Purchased equipment for \$5,000 cash.
3. Paid \$400 cash for May office rent.
4. Paid \$500 cash for supplies.
5. Incurred \$250 of advertising costs in the *Beacon News* on account.
6. Received \$4,700 in cash from customers for repair service.
7. Declared and paid a \$1,000 cash dividend.
8. Paid part-time employee salaries \$1,000.
9. Paid utility bills \$140.
10. Provided repair service on account to customers \$980.
11. Collected cash of \$120 for services billed in transaction (10).

Instructions

- (a) Prepare a tabular analysis of the transactions, using the following column headings: Cash, Accounts Receivable, Supplies, Equipment, Accounts Payable, Common Stock, and Retained Earnings (with separate columns for Revenues, Expenses, and Dividends). Include margin explanations for any changes in Retained Earnings. Revenue is called Service Revenue.
- (b) From an analysis of the Retained Earnings columns, compute the net income or net loss for May.

P1-2A On August 31, the balance sheet of Donahue Veterinary Clinic showed Cash \$9,000, Accounts Receivable \$1,700, Supplies \$600, Equipment \$6,000, Accounts Payable \$3,600, Common Stock \$13,000, and Retained Earnings \$700. During September, the following transactions occurred.

1. Paid \$2,900 cash for accounts payable due.
2. Collected \$1,300 of accounts receivable.
3. Purchased additional office equipment for \$2,100, paying \$800 in cash and the balance on account.
4. Earned revenue of \$7,300, of which \$2,500 is collected in cash and the balance is due in October.
5. Declared and paid a \$400 cash dividend.
6. Paid salaries \$1,700, rent for September \$900, and advertising expense \$200.
7. Incurred utilities expense for month on account \$170.
8. Received \$10,000 from Capital Bank on a 6-month note payable.

Instructions

- (a) Prepare a tabular analysis of the September transactions beginning with August 31 balances. The column headings should be as follows: Cash + Accounts Receivable + Supplies + Equipment = Notes Payable + Accounts Payable + Common Stock + Retained Earnings + Revenues – Expenses – Dividends.
- (b) Prepare an income statement for September, a retained earnings statement for September, and a balance sheet at September 30.

P1-3A On May 1, Blue Sky Flying School, a company that provides flying lessons, was started with an investment of \$45,000 cash in the business. Following are the assets and liabilities of the company on May 31, 2014, and the revenues and expenses for the month of May.

Cash	\$ 4,500	Notes Payable	\$28,000
Accounts Receivable	7,200	Rent Expense	1,200
Equipment	64,000	Maintenance and	
Service Revenue	6,800	Repairs Expense	400
Advertising Expense	500	Gasoline Expense	2,500
Accounts Payable	1,400	Utilities Expense	400

No additional investments were made in May, but the company paid dividends of \$500 during the month.

Instructions

- (a) Prepare an income statement and a retained earnings statement for the month of May and a balance sheet at May 31. (a) Net income \$1,800
Total assets \$75,700
- (b) Prepare an income statement and a retained earnings statement for May assuming the following data are not included above: (1) \$900 of revenue was earned and billed but not collected at May 31, and (2) \$1,500 of gasoline expense was incurred but not paid. (b) Net income \$1,200

P1-4A Matt Stiner started a delivery service, Stiner Deliveries, on June 1, 2014. The following transactions occurred during the month of June.

Analyze transactions and prepare financial statements.

- June 1 Stockholders invested \$10,000 cash in the business in exchange for common stock.
- 2 Purchased a used van for deliveries for \$14,000. Matt paid \$2,000 cash and signed a note payable for the remaining balance.
- 3 Paid \$500 for office rent for the month.
- 5 Performed \$4,800 of services on account.
- 9 Declared and paid \$300 in cash dividends.
- 12 Purchased supplies for \$150 on account.
- 15 Received a cash payment of \$1,250 for services provided on June 5.
- 17 Purchased gasoline for \$100 on account.
- 20 Received a cash payment of \$1,500 for services provided.
- 23 Made a cash payment of \$500 on the note payable.
- 26 Paid \$250 for utilities.
- 29 Paid for the gasoline purchased on account on June 17.
- 30 Paid \$1,000 for employee salaries.

(LO 6, 7, 8)

Instructions

- (a) Show the effects of the previous transactions on the accounting equation using the following format. (a) Total assets \$25,800

Assets				=	Liabilities			+	Stockholders' Equity					
Date	Cash	+ Accounts Receivable	+ Supplies	+ Equipment	=	Notes Payable	+ Accounts Payable	+ Common Stock	+ Common	Retained Earnings			Div.	
										Rev.	-	Exp.	-	

Include margin explanations for any changes in the Retained Earnings account in your analysis.

- (b) Prepare an income statement for the month of June. (b) Net income \$4,450
- (c) Prepare a balance sheet at June 30, 2014. (c) Cash \$8,100

P1-5A Financial statement information about four different companies is as follows.

Determine financial statement amounts and prepare retained earnings statement.

	Crosby Company	Stills Company	Nash Company	Young Company
January 1, 2014				
Assets	\$ 75,000	\$110,000	(g)	\$150,000
Liabilities	50,000	(d)	\$ 75,000	(j)
Stockholders' equity	(a)	60,000	45,000	100,000
December 31, 2014				
Assets	(b)	137,000	200,000	(k)
Liabilities	55,000	75,000	(h)	80,000
Stockholders' equity	40,000	(e)	130,000	140,000
Stockholders' equity changes in year				
Additional investment	(c)	15,000	10,000	15,000
Dividends	10,000	(f)	14,000	10,000
Total revenues	350,000	420,000	(i)	500,000
Total expenses	330,000	385,000	342,000	(l)

(LO 7, 8)

Instructions

- Determine the missing amounts. (*Hint:* For example, to solve for (a), $\text{Assets} - \text{Liabilities} = \text{Stockholders' Equity} = \$25,000$.)
- Prepare the retained earnings statement for Stills Company. Assume beginning retained earnings was \$20,000.
-  Write a memorandum explaining the sequence for preparing financial statements and the interrelationship of the retained earnings statement to the income statement and balance sheet.

PROBLEMS: SET B

Analyze transactions and compute net income.

(LO 6, 7)

(a) Ending cash \$11,500

(b) Net income \$5,600

Analyze transactions and prepare income statement, retained earnings statement, and balance sheet.

(LO 6, 7, 8)

(a) Ending expenses \$4,460

(b) Net income \$3,440
Total assets \$14,100

P1-1B On April 1, Holly Dahl established Holiday Travel Agency. The following transactions were completed during the month.

- Stockholders invested \$10,000 cash in the business in exchange for common stock.
- Paid \$400 cash for April office rent.
- Purchased office equipment for \$2,500 cash.
- Incurred \$300 of advertising costs in the *Chicago Tribune*, on account.
- Paid \$600 cash for office supplies.
- Earned \$8,500 for services provided: \$2,000 cash is received from customers, and the balance of \$6,500 is billed to customers on account.
- Declared and paid a \$200 cash dividend.
- Paid *Chicago Tribune* amount due in transaction (4).
- Paid employees' salaries \$2,200.
- Received \$5,700 in cash from customers billed previously in transaction (6).

Instructions

- Prepare a tabular analysis of the transactions using the following column headings: Cash, Accounts Receivable, Supplies, Equipment, Accounts Payable, Common Stock, and Retained Earnings (with separate columns for Revenues, Expenses, and Dividends). Include margin explanation for any changes in Retained Earnings.
- From an analysis of the Retained Earnings columns, compute the net income or net loss for April.

P1-2B Mandy Arnold opened a law office, Mandy Arnold, Attorney at Law, on July 1, 2014. On July 31, the balance sheet showed Cash \$4,000, Accounts Receivable \$1,500, Supplies \$500, Equipment \$5,000, Accounts Payable \$4,200, and Common Stock \$6,000, and Retained Earnings \$800. During August, the following transactions occurred.

- Collected \$1,400 of accounts receivable due from clients.
- Paid \$2,700 cash for accounts payable due.
- Earned revenue of \$7,900 of which \$3,000 is collected in cash and the balance is due in September.
- Purchased additional office equipment for \$1,000, paying \$400 in cash and the balance on account.
- Paid salaries \$3,000, rent for August \$900, and advertising expenses \$350.
- Declared and paid a \$450 cash dividend.
- Received \$2,000 from Standard Federal Bank; the money was borrowed on a 4-month note payable.
- Incurred utility expenses for month on account \$210.

Instructions

- Prepare a tabular analysis of the August transactions beginning with July 31 balances. The column headings should be as follows: Cash + Accounts Receivable + Supplies + Equipment = Notes Payable + Accounts Payable + Common Stock + Retained Earnings + Revenues - Expenses - Dividends.
- Prepare an income statement for August, a retained earnings statement for August, and a balance sheet at August 31.

P1-3B Angelic Cosmetics Co., a company that provides individual skin care treatment, was started on June 1 with an investment of \$25,000 cash. Following are the assets and liabilities of the company at June 30 and the revenues and expenses for the month of June.

Prepare income statement, retained earnings statement, and balance sheet.

(LO 8)

Cash	\$10,000	Notes Payable	\$13,000
Accounts Receivable	4,000	Accounts Payable	1,400
Service Revenue	5,500	Rent Expense	1,600
Supplies	2,000	Gasoline Expense	600
Advertising Expense	500	Utilities Expense	300
Equipment	25,000		

Stockholders made no additional investments in June. The company paid a cash dividend of \$900 during the month.

Instructions

- (a) Prepare an income statement and a retained earnings statement for the month of June and a balance sheet at June 30, 2014.
- (b) Prepare an income statement and a retained earnings statement for June assuming the following data are not included above: (1) \$800 of revenue was earned and billed but not collected at June 30, and (2) \$100 of gasoline expense was incurred but not paid.

(a) Net income \$2,500
Total assets \$41,000
(b) Net income \$3,200

P1-4B Jessi Paulis started a consulting firm, Paulis Consulting, on May 1, 2014. The following transactions occurred during the month of May.

Analyze transactions and prepare financial statements.

(LO 6, 7, 8)

- May 1 Paulis invested \$8,000 cash in the business in exchange for stock.
- 2 Paid \$800 for office rent for the month.
- 3 Purchased \$500 of supplies on account.
- 5 Paid \$50 to advertise in the *County News*.
- 9 Received \$3,000 cash for services provided.
- 12 Declared and paid a \$700 cash dividend.
- 15 Performed \$3,300 of services on account.
- 17 Paid \$2,100 for employee salaries.
- 20 Paid for the supplies purchased on account on May 3.
- 23 Received a cash payment of \$2,000 for services provided on account on May 15.
- 26 Borrowed \$5,000 from the bank on a note payable.
- 29 Purchased office equipment for \$2,300 on account.
- 30 Paid \$150 for utilities.

Instructions

- (a) Show the effects of the previous transactions on the accounting equation using the following format.

(a) Total assets \$17,800

	Assets				=	Liabilities		+	Stockholders' Equity						
Date	Cash	+ Accounts Receivable	+ Supplies	+ Equipment	=	Notes Payable	+ Accounts Payable	+	Common Stock	+	Retained Earnings				
											Rev.	-	Exp.	-	Div.

Include margin explanations for any changes in the Retained Earnings account in your analysis.

- (b) Prepare an income statement for the month of May.
- (c) Prepare a balance sheet at May 31, 2014.

(b) Net income \$3,200
(c) Cash \$13,700

P1-5B Financial statement information about four different companies is shown on the next page.

Determine financial statement amounts and prepare retained earnings statement.

(LO 7, 8)

Instructions

- (a) Determine the missing amounts. (*Hint:* For example, to solve for (a), Assets – Liabilities = Stockholders' Equity = \$28,000.)
- (b) Prepare the retained earnings statement for John Company. Assume beginning retained earnings was \$0.
- (c)  Write a memorandum explaining the sequence for preparing financial statements and the interrelationship of the retained earnings statement to the income statement and balance sheet.

	<u>John Company</u>	<u>Paul Company</u>	<u>George Company</u>	<u>Ringo Company</u>
January 1, 2014				
Assets	\$ 78,000	\$ 90,000	(g)	\$150,000
Liabilities	50,000	(d)	\$ 75,000	(j)
Stockholders' equity	(a)	50,000	54,000	100,000
December 31, 2014				
Assets	(b)	117,000	180,000	(k)
Liabilities	55,000	79,000	(h)	80,000
Stockholders' equity	40,000	(e)	100,000	145,000
Stockholders' equity changes in year				
Additional investment	(c)	8,000	10,000	15,000
Dividends	10,000	(f)	12,000	10,000
Total revenues	350,000	390,000	(i)	500,000
Total expenses	335,000	400,000	360,000	(l)

PROBLEMS: SET C

Visit the book's website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Problem Set C.

CONTINUING COOKIE CHRONICLE

The Continuing Cookie Chronicle starts in this chapter and continues in every chapter. You also can find this problem at the book's companion website.

CCC1 Natalie Koebel spent much of her childhood learning the art of cookie-making from her grandmother. They passed many happy hours mastering every type of cookie imaginable and later creating new recipes that were both healthy and delicious. Now at the start of her second year in college, Natalie is investigating various possibilities for starting her own business as part of the requirements of the entrepreneurship program in which she is enrolled.

A long-time friend insists that Natalie has to somehow include cookies in her business plan. After a series of brainstorming sessions, Natalie settles on the idea of operating a cookie-making school. She will start on a part-time basis and offer her services in people's homes. Now that she has started thinking about it, the possibilities seem endless. During the fall, she will concentrate on holiday cookies. She will offer individual lessons and group sessions (which will probably be more entertaining than education for the participants). Natalie also decides to include children in her target market.

The first difficult decision is coming up with the perfect name for her business. In the end, she settles on "Cookie Creations" and then moves on to more important issues.

Instructions

- What form of business organization—proprietorship, partnership, or corporation—do you recommend that Natalie use for her business? Discuss the benefits and weaknesses of each form and give the reasons for your choice.
- Will Natalie need accounting information? If yes, what information will she need and why? How often will she need this information?
- Identify specific asset, liability, and owner's/stockholders' equity accounts that Cookie Creations will likely use to record its business transactions.
- Should Natalie open a separate bank account for the business? Why or why not?

Broadening Your PERSPECTIVE

Financial Reporting and Analysis

Financial Reporting Problem: PepsiCo, Inc.

BYP1-1 The actual financial statements of **PepsiCo, Inc.**, as presented in the company's 2010 Annual Report, are contained in Appendix A (at the back of the textbook).

Instructions

Refer to PepsiCo's financial statements and answer the following questions.

- What were PepsiCo's total assets at December 25, 2010? At December 26, 2009?
- How much cash (and cash equivalents) did PepsiCo have on December 25, 2010?
- What amount of accounts payable did PepsiCo report on December 25, 2010? On December 26, 2009?
- What were PepsiCo's net sales in 2008? In 2009? In 2010?
- What is the amount of the change in PepsiCo's net income from 2009 to 2010?

Comparative Analysis Problem: PepsiCo, Inc. vs. The Coca-Cola Company

BYP1-2 PepsiCo's financial statements are presented in Appendix A. **The Coca-Cola Company's** financial statements are presented in Appendix B.

Instructions

Refer to the financial statements and answer the following questions.

- Based on the information contained in these financial statements, determine the following for each company.
 - Total assets at December 25, 2010, for PepsiCo, and for Coca-Cola at December 31, 2010.
 - Accounts (notes) receivable, net at December 25, 2010, for PepsiCo and at December 31, 2010, for Coca-Cola.
 - Net sales for year ended in 2010.
 - Net income for year ended in 2010.
- What conclusions concerning the two companies can be drawn from these data?

Real-World Focus

BYP1-3 This exercise will familiarize you with skill requirements, job descriptions, and salaries for accounting careers.

Address: www.careers-in-accounting.com, or go to www.wiley.com/college/weygandt

Instructions

Go to the site shown above. Answer the following questions.

- What are the three broad areas of accounting (from "Skills and Talents Required")?
- List eight skills required in accounting.
- How do the three accounting areas differ in terms of these eight required skills?
- Explain one of the key job functions in accounting.
- What is the salary range for a junior staff accountant to a Big 4 firm?

Critical Thinking

Decision-Making Across the Organization

BYP1-4 Lucy and Nick Lars, local golf stars, opened the Chip-Shot Driving Range Company on March 1, 2014. They invested \$20,000 cash and received common stock in exchange for their investment. A caddy shack was constructed for cash at a cost of \$6,000, and \$800 was spent on golf

balls and golf clubs. The Lars leased five acres of land at a cost of \$1,000 per month and paid the first month's rent. During the first month, advertising costs totaled \$750, of which \$150 was unpaid at March 31, and \$400 was paid to members of the high school golf team for retrieving golf balls. All revenues from customers were deposited in the company's bank account. On March 15, Lucy and Nick received a dividend of \$800. A \$100 utility bill was received on March 31 but was not paid. On March 31, the balance in the company's bank account was \$15,100.

Lucy and Nick thought they had a pretty good first month of operations. But, their estimates of profitability ranged from a loss of \$4,900 to net income of \$1,650.

Instructions

With the class divided into groups, answer the following.

- How could the Lars have concluded that the business operated at a loss of \$4,900? Was this a valid basis on which to determine net income?
- How could the Lars have concluded that the business operated at a net income of \$1,650? (*Hint:* Prepare a balance sheet at March 31.) Was this a valid basis on which to determine net income?
- Without preparing an income statement, determine the actual net income for March.
- What was the revenue earned in March?

Communication Activity

BYP1-5 Erin Danielle, the bookkeeper for New York Company, has been trying to get the balance sheet to balance. The company's balance sheet is shown below.

New York Company Balance Sheet For the Month Ended December 31, 2014			
Assets		Liabilities	
Equipment	\$22,500	Common stock	\$23,000
Cash	9,000	Accounts receivable	(6,000)
Supplies	2,000	Retained earnings	(2,000)
Accounts payable	(8,000)	Notes payable	10,500
	<u>\$25,500</u>		<u>\$25,500</u>

Instructions

Explain to Erin Danielle in a memo why the original balance sheet is incorrect, and what should be done to correct it.

Ethics Case

BYP1-6 After numerous campus interviews, Jeff Hunter, a senior at Great Northern College, received two office interview invitations from the Baltimore offices of two large firms. Both firms offered to cover his out-of-pocket expenses (travel, hotel, and meals). He scheduled the interviews for both firms on the same day, one in the morning and one in the afternoon. At the conclusion of each interview, he submitted to both firms his total out-of-pocket expenses for the trip to Baltimore: mileage \$112 (280 miles at \$0.40), hotel \$130, meals \$36, parking and tolls \$18, for a total of \$296. He believes this approach is appropriate. If he had made two trips, his cost would have been two times \$296. He is also certain that neither firm knew he had visited the other on that same trip. Within 10 days, Jeff received two checks in the mail, each in the amount of \$296.

Instructions

- Who are the stakeholders (affected parties) in this situation?
- What are the ethical issues in this case?
- What would you do in this situation?

All About You

BYP1-7 Some people are tempted to make their finances look worse to get financial aid. Companies sometimes also manage their financial numbers in order to accomplish certain goals. Earnings management is the planned timing of revenues, expenses, gains, and losses to smooth out bumps in net income. In managing earnings, companies' actions vary from being within the range of ethical activity, to being both unethical and illegal attempts to mislead investors and creditors.

Instructions

Provide responses for each of the following questions.

- (a) Discuss whether you think each of the following actions (adapted from www.finaid.org/fafsa/) to increase the chances of receiving financial aid is ethical.
 - (1) Spend down the student's assets and income first, before spending parents' assets and income.
 - (2) Accelerate necessary expenses to reduce available cash. For example, if you need a new car, buy it before applying for financial aid.
 - (3) State that a truly financially dependent child is independent.
 - (4) Have a parent take an unpaid leave of absence for long enough to get below the "threshold" level of income.
- (b) What are some reasons why a *company* might want to overstate its earnings?
- (c) What are some reasons why a *company* might want to understate its earnings?
- (d) Under what circumstances might an otherwise ethical person decide to illegally overstate or understate earnings?

BYP1-8 When companies need money, they go to investors or creditors. Before investors or creditors will give a company cash, they want to know the company's financial position and performance. They want to see the company's financial statements—the balance sheet and the income statement. When students need money for school, they often apply for financial aid. When you apply for financial aid, you must submit your own version of a financial statement—the Free Application for Federal Student Aid (FAFSA) form.

Suppose you have \$4,000 in cash and \$4,000 in credit card bills. The more cash and other assets that you have, the less likely you are to get financial aid. Also, if you have a lot of consumer debt (credit card bills), schools are not more likely to loan you money. To increase your chances of receiving aid, should you use the cash to pay off your credit card bills, and therefore make yourself look "worse off" to the financial aid decision-makers?

YES: You are playing within the rules. You are not hiding assets. You are simply restructuring your assets and liabilities to best conform with the preferences that are built into the federal aid formulas.

NO: You are engaging in a transaction solely to take advantage of a loophole in the federal aid rules. In doing so, you are potentially depriving someone who is actually worse off than you from receiving aid.

Instructions

Write a response indicating your position regarding this situation. Provide support for your view.

FASB Codification Activity

BYP1-9 The FASB has developed the Financial Accounting Standards Board Accounting Standards Codification (or more simply "the Codification"). The FASB's primary goal in developing the Codification is to provide in one place all the authoritative literature related to a particular topic. To provide easy access to the Codification, the FASB also developed the Financial Accounting Standards Board Codification Research System (CRS). CRS is an online, real-time database that provides easy access to the Codification. The Codification and the related CRS provide a topically organized structure, subdivided into topic, subtopics, sections, and paragraphs, using a numerical index system.

You may find this system useful in your present and future studies, and so we have provided an opportunity to use this online system as part of the *Broadening Your Perspective* section.

Instructions

Academic access to the FASB Codification is available through university subscriptions, obtained from the American Accounting Association (at <http://aaahq.org/FASB/Access.cfm>), for an annual fee of \$150. This subscription covers an unlimited number of students within a single institution. Once this access has been obtained by your school, you should log in (at <http://aaahq.org/ascLogin.cfm>) and familiarize yourself with the resources that are accessible at the FASB Codification site.

Answers to Chapter Questions

Answers to Insight and Accounting Across the Organization Questions

p. 6 The Scoop on Accounting Q: What are the benefits to the company and to the employees of making the financial statements available to all employees? **A:** If employees can read and use financial reports, a company will benefit in the following ways. The *marketing department* will make better decisions about products to offer and prices to charge. The *finance department* will make better decisions about debt and equity financing and how much to distribute in dividends. The *production department* will make better decisions about when to buy new equipment and how much inventory to produce. The *human resources department* will be better able to determine whether employees can be given raises. Finally, *all employees* will be better informed about the basis on which they are evaluated, which will increase employee morale.

p. 8 The Numbers Behind Not-for-Profit Organizations Q: What benefits does a sound accounting system provide to a not-for-profit organization? **A:** Accounting provides at least two benefits to not-for-profit organizations. First, it helps to ensure that money is used in the way that donors intended. Second, it assures donors that their money is not going to waste and thus increases the likelihood of future donations.

p. 10 The Korean Discount Q: What is meant by the phrase “make the country’s businesses more transparent”? Why would increasing transparency spur economic growth? **A:** Transparency refers to the extent to which outsiders have knowledge regarding a company’s financial performance and financial position. If a company lacks transparency, its financial reports do not adequately inform investors of critical information that is needed to make investment decisions. If corporate transparency is increased, investors will be more willing to supply the financial capital that businesses need in order to grow, which would spur the country’s economic growth.

p. 12 Spinning the Career Wheel Q: How might accounting help you? **A:** You will need to understand financial reports in any enterprise with which you are associated. Whether you become a manager, a doctor, a lawyer, a social worker, a teacher, an engineer, an architect, or an entrepreneur, a working knowledge of accounting is relevant.

p. 25 Beyond Financial Statements Q: Why might a company’s stockholders be interested in its environmental and social performance? **A:** Many companies now recognize that being a socially responsible organization is not only the right thing to do, but it also is good for business. Many investment professionals understand, for example, that environmental, social, and proper corporate governance of companies affects the performance of their investment portfolios. For example, **British Petroleum’s** oil leak disaster is a classic example of the problems that can occur for a company and its stockholders. BP’s stock price was slashed, its dividend reduced, its executives replaced, and its reputation badly damaged. It is interesting that socially responsible investment funds are now gaining momentum in the marketplace such that companies now recognize this segment as an important investment group.

A Look at IFRS

Most agree that there is a need for one set of international accounting standards. Here is why:

Multinational corporations. Today's companies view the entire world as their market. For example, **Coca-Cola**, **Intel**, and **McDonald's** generate more than 50% of their sales outside the United States, and many foreign companies, such as **Toyota**, **Nestlé**, and **Sony**, find their largest market to be the United States.

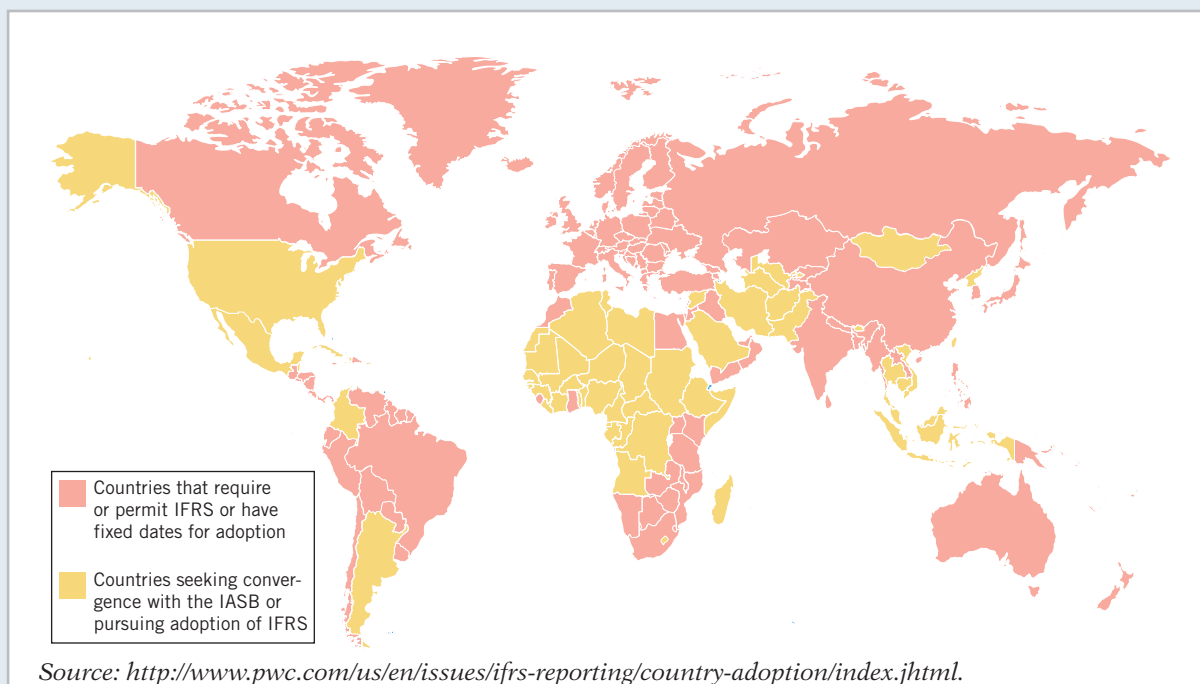

Mergers and acquisitions. The mergers between **Fiat/Chrysler** and **Vodafone/Mannesmann** suggest that we will see even more such business combinations in the future.

Information technology. As communication barriers continue to topple through advances in technology, companies and individuals in different countries and markets are becoming more comfortable buying and selling goods and services from one another.

Financial markets. Financial markets are of international significance today. Whether it is currency, equity securities (stocks), bonds, or derivatives, there are active markets throughout the world trading these types of instruments.

Key Points

- International standards are referred to as *International Financial Reporting Standards (IFRS)*, developed by the International Accounting Standards Board (IASB).
- Recent events in the global capital markets have underscored the importance of financial disclosure and transparency not only in the United States but in markets around the world. As a result, many are examining which accounting and financial disclosure rules should be followed. As indicated in the graphic below, much of the world has voted for the standards issued by the IASB. Over 115 countries require or permit use of IFRS.

- U.S. standards, referred to as generally accepted accounting principles (GAAP), are developed by the Financial Accounting Standards Board (FASB). The fact that there are differences between what is in this textbook (which is based on U.S. standards) and IFRS should not be surprising because the FASB and IASB have responded to different user needs. In some countries, the primary users of financial statements are private investors. In others, the primary users are tax authorities

or central government planners. It appears that the United States and the international standard-setting environment are primarily driven by meeting the needs of investors and creditors.

- The internal control standards applicable to Sarbanes-Oxley (SOX) apply only to large public companies listed on U.S. exchanges. There is a continuing debate as to whether non-U.S. companies should have to comply with this extra layer of regulation. Debate about international companies (non-U.S.) adopting SOX-type standards centers on whether the benefits exceed the costs. The concern is that the higher costs of SOX compliance are making the U.S. securities markets less competitive.
- The textbook mentions a number of ethics violations, such as **Enron**, **WorldCom**, and **AIG**. These problems have also occurred internationally, for example, at **Satyam Computer Services** (India), **Parmalat** (Italy), and **Royal Ahold** (the Netherlands).
- IFRS tends to be simpler in its accounting and disclosure requirements; some people say more “principles-based.” GAAP is more detailed; some people say it is more “rules-based.” This difference in approach has resulted in a debate about the merits of “principles-based” versus “rules-based” standards.
- U.S. regulators have recently eliminated the need for foreign companies that trade shares in U.S. markets to reconcile their accounting with GAAP.
- The three most common forms of business organization, proprietorships, partnerships, and corporations, are also found in countries that use IFRS. Because the choice of business organization is influenced by factors such as legal environment, tax rates and regulations, and degree of entrepreneurship, the relative use of each form will vary across countries.
- The conceptual framework that underlies IFRS is very similar to that used to develop GAAP. The basic definitions provided in this textbook for the key elements of financial statements, that is, assets, liabilities, equity, revenues (**referred to as income**), and expenses, are simplified versions of the official definitions provided by the FASB. The more substantive definitions, using the IASB definitional structure, are as follows.

Assets. A resource controlled by the entity as a result of past events and from which future economic benefits are expected to flow to the entity.

Liabilities. A present obligation of the entity arising from past events, the settlement of which is expected to result in an outflow from the entity of resources embodying economic benefits. Liabilities may be legally enforceable via a contract or law, but need not be, i.e., they can arise due to normal business practice or customs.

Equity. A residual interest in the assets of the entity after deducting all its liabilities.

Income. Increases in economic benefits that result in increases in equity (other than those related to contributions from shareholders). Income includes both revenues (resulting from ordinary activities) and gains.

Expenses. Decreases in economic benefits that result in decreases in equity (other than those related to distributions to shareholders). Expenses includes losses that are not the result of ordinary activities.

Looking to the Future

Both the IASB and the FASB are hard at work developing standards that will lead to the elimination of major differences in the way certain transactions are accounted for and reported. In fact, at one time the IASB stated that no new major standards would become effective until 2011. The major reason for this policy was to provide companies the time to translate and implement IFRS into practice, as much has happened in a very short period of time. Consider, for example, that as a result of a joint project on the conceptual framework, the definitions of the most fundamental elements (assets, liabilities, equity, revenues, and expenses) may actually change. However, whether the IASB adopts internal control provisions similar to those in SOX remains to be seen.

IFRS Practice

IFRS Self-Test Questions

1. Which of the following is *not* a reason why a single set of high-quality international accounting standards would be beneficial?
 - (a) Mergers and acquisition activity.
 - (b) Financial markets.

- (c) Multinational corporations.
 - (d) GAAP is widely considered to be a superior reporting system.
2. The Sarbanes-Oxley Act determines:
 - (a) international tax regulations.
 - (b) internal control standards as enforced by the IASB.
 - (c) internal control standards of U.S. publicly traded companies.
 - (d) U.S. tax regulations.
 3. IFRS is considered to be more:
 - (a) principles-based and less rules-based than GAAP.
 - (b) rules-based and less principles-based than GAAP.
 - (c) detailed than GAAP.
 - (d) None of the above.
 4. Which of the following statements is *false*?
 - (a) IFRS is based on a conceptual framework that is similar to that used to develop GAAP.
 - (b) Assets are defined by the IASB as resources controlled by the entity as a result of past events and from which future economic benefits are expected to flow to the entity.
 - (c) Non-U.S. companies that trade shares in U.S. markets must reconcile their accounting with GAAP.
 - (d) Proprietorships, partnerships, and corporations are also found in countries that use IFRS.
 5. Which of the following statements is *true*?
 - (a) Under IFRS, the term income refers to what would be called revenues and gains under GAAP.
 - (b) The term income is not used under IFRS.
 - (c) The term income refers only to gains on investments.
 - (d) Under IFRS, expenses include distributions to owners.

IFRS Exercises

IFRS1-1 Who are the two key international players in the development of international accounting standards? Explain their role.

IFRS1-2 What might explain the fact that different accounting standard-setters have developed accounting standards that are sometimes quite different in nature?

IFRS1-3 What is the benefit of a single set of high-quality accounting standards?

IFRS1-4 Discuss the potential advantages and disadvantages that countries outside the United States should consider before adopting regulations, such as those in the Sarbanes-Oxley Act, that increase corporate internal control requirements.

International Financial Reporting Problem: Zetar plc

IFRS1-5 The financial statements of **Zetar plc** are presented in Appendix C. The company's complete annual report, including the notes to its financial statements, is available at www.zetarplc.com.

Instructions

Visit Zetar's corporate website and answer the following questions from Zetar's 2010 annual report.

- (a) What accounting firm performed the audit of Zetar's financial statements?
- (b) What is the address of the company's corporate headquarters?
- (c) What is the company's reporting currency?
- (d) What two segments does the company operate in, and what were the sales for each segment in the year ended April 30, 2010?

Chapter 2

The Recording Process

Feature Story

Accidents Happen

How organized are you financially? Take a short quiz. Answer *yes* or *no* to each question:

- Does your wallet contain so many debit card receipts that you've been declared a walking fire hazard?
- Was Dwight Howard playing high school basketball the last time you balanced your checkbook?
- Have you ever been tempted to burn down your house so you don't have to try to find all of the receipts and records that you need to fill out your tax return?

If you think it is hard to keep track of the many transactions that make

up *your* life, imagine what it is like for a major corporation like **Fidelity Investments**. Fidelity is one of the largest mutual fund management firms in the world. If you had your life savings invested at Fidelity Investments, you might be just slightly displeased if, when you checked your balance online, a message appeared on the screen indicating that your account information was lost.

To ensure the accuracy of your balance and the security of your funds, Fidelity Investments, like all other companies large and small, relies on a sophisticated accounting information system. That's not to say that Fidelity or any other

Learning Objectives

After studying this chapter, you should be able to:

- 1** Explain what an account is and how it helps in the recording process.
- 2** Define debits and credits and explain their use in recording business transactions.
- 3** Identify the basic steps in the recording process.
- 4** Explain what a journal is and how it helps in the recording process.
- 5** Explain what a ledger is and how it helps in the recording process.
- 6** Explain what posting is and how it helps in the recording process.
- 7** Prepare a trial balance and explain its purposes.

The Navigator

company is error-free. In fact, if you've ever overdrawn your bank account because you failed to track your debit card purchases properly, you may take some comfort from one accountant's mistake at Fidelity Investments. The accountant failed to include a minus sign while doing a calculation, making what was actually a \$1.3 billion loss look like a \$1.3 billion—yes, *billion*—gain! Fortunately, like most accounting errors, it was detected before any real harm was done.

No one expects that kind of mistake at a company like Fidelity, which has

sophisticated computer systems and top investment managers. In explaining the mistake to shareholders, a spokesperson

wrote, "Some people have asked how, in this age of technology, such a mistake could be made. While many of our processes are computerized, accounting systems are complex and dictate that some steps must be handled manually by our managers and accountants, and people can make mistakes."

✓ The Navigator

Preview of Chapter 2

In Chapter 1, we analyzed business transactions in terms of the accounting equation. We then presented the cumulative effects of these transactions in tabular form. Imagine a company like **Fidelity Investments** (as in the Feature Story) using the same tabular format as Softbyte Inc. to keep track of its transactions. In a single day, Fidelity engages in thousands of business transactions. To record each transaction this way would be impractical, expensive, and unnecessary. Instead, companies use a set of procedures and records to keep track of transaction data more easily. This chapter introduces and illustrates these basic procedures and records.

The content and organization of Chapter 2 are as follows.

THE RECORDING PROCESS			
The Account	Steps in the Recording Process	The Recording Process Illustrated	The Trial Balance
<ul style="list-style-type: none"> • Debits and credits • Stockholders' equity relationships • Summary of debit/credit rules 	<ul style="list-style-type: none"> • Journal • Ledger • Posting 	<ul style="list-style-type: none"> • Summary illustration of journalizing and posting 	<ul style="list-style-type: none"> • Limitations of a trial balance • Locating errors • Use of dollar signs

The Account

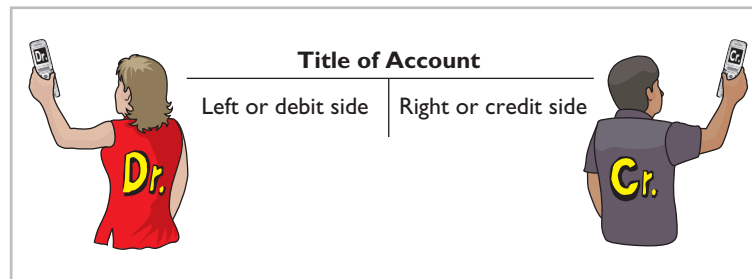

LEARNING OBJECTIVE 1

Explain what an account is and how it helps in the recording process.

An **account** is an individual accounting record of increases and decreases in a specific asset, liability, or owner's equity item. For example, Softbyte Inc. (the company discussed in Chapter 1) would have separate accounts for Cash, Accounts Receivable, Accounts Payable, Service Revenue, Salaries and Wages Expense, and so on. (Note that whenever we are referring to a specific account, we capitalize the name.)

In its simplest form, an account consists of three parts: (1) a title, (2) a left or debit side, and (3) a right or credit side. Because the format of an account resembles the letter T, we refer to it as a **T-account**. Illustration 2-1 shows the basic form of an account.

Illustration 2-1
Basic form of account

We use this form often throughout this book to explain basic accounting relationships.

Debits and Credits

LEARNING OBJECTIVE 2

Define debits and credits and explain their use in recording business transactions.

The term **debit** indicates the left side of an account, and **credit** indicates the right side. They are commonly abbreviated as **Dr.** for debit and **Cr.** for credit. They **do not** mean increase or decrease, as is commonly thought. We use the terms *debit* and *credit* repeatedly in the recording process to describe **where** entries are made in accounts. For example, the act of entering an amount on the left side of an account is called **debiting** the account. Making an entry on the right side is **crediting** the account.

When comparing the totals of the two sides, an account shows a **debit balance** if the total of the debit amounts exceeds the credits. An account shows a **credit balance** if the credit amounts exceed the debits. Note the position of the debit side and credit side in Illustration 2-1.

The procedure of recording debits and credits in an account is shown in Illustration 2-2 for the transactions affecting the Cash account of Softbyte Inc. The data are taken from the Cash column of the tabular summary in Illustration 1-9 (page 21).

Illustration 2-2
Tabular summary and account form for Softbyte's Cash account

-1,300			
<u>\$ 8,050</u>			

Every positive item in the tabular summary represents a receipt of cash; every negative amount represents a payment of cash. **Notice that in the account form we record the increases in cash as debits, and the decreases in cash as credits.** For example, the \$15,000 receipt of cash (in red) is debited to Cash, and the -\$7,000 payment of cash (in blue) is credited to Cash.

Having increases on one side and decreases on the other reduces recording errors and helps in determining the totals of each side of the account as well as the account balance. The balance is determined by netting the two sides (subtracting one amount from the other). The account balance, a debit of \$8,050, indicates that Softbyte had \$8,050 more increases than decreases in cash. That is, since it started with a balance of zero, it has \$8,050 in its Cash account.

DEBIT AND CREDIT PROCEDURE

In Chapter 1, you learned the effect of a transaction on the basic accounting equation. Remember that each transaction must affect two or more accounts to keep the basic accounting equation in balance. In other words, for each transaction, debits must equal credits. The equality of debits and credits provides the basis for the **double-entry system** of recording transactions.

Under the double-entry system, the dual (two-sided) effect of each transaction is recorded in appropriate accounts. This system provides a logical method for recording transactions. The double-entry system also helps ensure the accuracy of the recorded amounts and helps to detect errors such as those at **Fidelity Investments** as discussed in the Feature Story. If every transaction is recorded with equal debits and credits, the sum of all the debits to the accounts must equal the sum of all the credits.

The double-entry system for determining the equality of the accounting equation is much more efficient than the plus/minus procedure used in Chapter 1. On the following pages, we will illustrate debit and credit procedures in the double-entry system.

International Note

Rules for accounting for specific events sometimes differ across countries. For example, European companies rely less on historical cost and more on fair value than U.S. companies. Despite the differences, the double-entry accounting system is the basis of accounting systems worldwide.

DR./CR. PROCEDURES FOR ASSETS AND LIABILITIES

In Illustration 2-2 for Softbyte Inc. increases in Cash—an asset—were entered on the left side, and decreases in Cash were entered on the right side. We know that both sides of the basic equation ($\text{Assets} = \text{Liabilities} + \text{Stockholders' Equity}$) must be equal. It therefore follows that increases and decreases in liabilities will have to be recorded *opposite from* increases and decreases in assets. Thus, increases in liabilities must be entered on the right or credit side, and decreases in liabilities must be entered on the left or debit side. The effects that debits and credits have on assets and liabilities are summarized in Illustration 2-3.

Debits	Credits
Increase assets	Decrease assets
Decrease liabilities	Increase liabilities

Illustration 2-3
Debit and credit effects—
assets and liabilities

Asset accounts normally show debit balances. That is, debits to a specific asset account should exceed credits to that account. Likewise, **liability accounts normally show credit balances.** That is, credits to a liability account should exceed debits to that account. The **normal balance** of an account is on the side where an increase in the account is recorded. Illustration 2-4 (page 56) shows the normal balances for assets and liabilities.

Illustration 2-4
Normal balances—assets
and liabilities

Knowing the normal balance in an account may help you trace errors. For example, a credit balance in an asset account such as Land or a debit balance in a liability account such as Salaries and Wages Payable usually indicates an error. Occasionally, though, an abnormal balance may be correct. The Cash account, for example, will have a credit balance when a company has overdrawn its bank balance (i.e., written a check that “bounced”).

STOCKHOLDERS’ EQUITY

As Chapter 1 indicated, there are five subdivisions of stockholders’ equity: common stock, retained earnings, dividends, revenues, and expenses. In a double-entry system, companies keep accounts for each of these subdivisions, as explained below.

COMMON STOCK Companies issue **common stock** in exchange for the owners’ investment paid in to the corporation. Credits increase the Common Stock account, and debits decrease it. For example, when an owner invests cash in the business in exchange for shares of the corporation’s stock, the company debits (increases) Cash and credits (increases) Common Stock.

Illustration 2-5 shows the rules of debit and credit for the Common Stock account.

Illustration 2-5
Debit and credit effects—
common stock

We can diagram the normal balance in Common Stock as follows.

Illustration 2-6
Normal balance—common
stock

Helpful Hint
The rules for debit and credit and the normal balances of common stock and retained earnings are the same as for liabilities.

RETAINED EARNINGS **Retained earnings** is net income that is kept (retained) in the business. It represents the portion of stockholders’ equity that the company has accumulated through the profitable operation of the business. Credits (net income) increase the Retained Earnings account, and debits (dividends or net losses) decrease it, as Illustration 2-7 shows.

Illustration 2-7
Debit and credit effects and
normal balance—retained
earnings

DIVIDENDS A **dividend** is a company's distribution to its stockholders on a pro rata (equal) basis. The most common form of a distribution is a **cash dividend**. Dividends reduce the stockholders' claims on retained earnings. Debits increase the Dividends account, and credits decrease it. Illustration 2-8 shows that this account normally has a debit balance.

Illustration 2-8
Debit and credit effect and normal balance—dividends

REVENUES AND EXPENSES

The purpose of earning revenues is to benefit the stockholders of the business. When a company earns revenues, stockholders' equity increases. Revenues are a subdivision of stockholders' equity that provides information as to **why** stockholders' equity increased. Credits increase revenue accounts and debits decrease them. Therefore, **the effect of debits and credits on revenue accounts is the same as their effect on stockholders' equity.**

Expenses have the opposite effect: expenses decrease stockholders' equity. Since expenses decrease net income, and revenues increase it, it is logical that the increase and decrease sides of expense accounts should be the reverse of revenue accounts. Thus, debits increase expense accounts, and credits decrease them.

Illustration 2-9 shows the effect of debits and credits on revenues and expenses.

Helpful Hint
Because revenues increase stockholders' equity, a revenue account has the same debit/credit rules as the Common Stock account. Expenses have the opposite effect.

Illustration 2-9
Debit and credit effects—revenues and expenses

Credits to revenue accounts should exceed debits. Debits to expense accounts should exceed credits. Thus, revenue accounts normally show credit balances, and expense accounts normally show debit balances. We can diagram the normal balance as follows.

Illustration 2-10
Normal balances—revenues and expenses

INVESTOR INSIGHT

Keeping Score

The **Chicago Cubs** baseball team has these major revenue and expense accounts:

Revenues	Expenses
Admissions (ticket sales)	Players' salaries
Concessions	Administrative salaries
Television and radio	Travel
Advertising	Ballpark maintenance

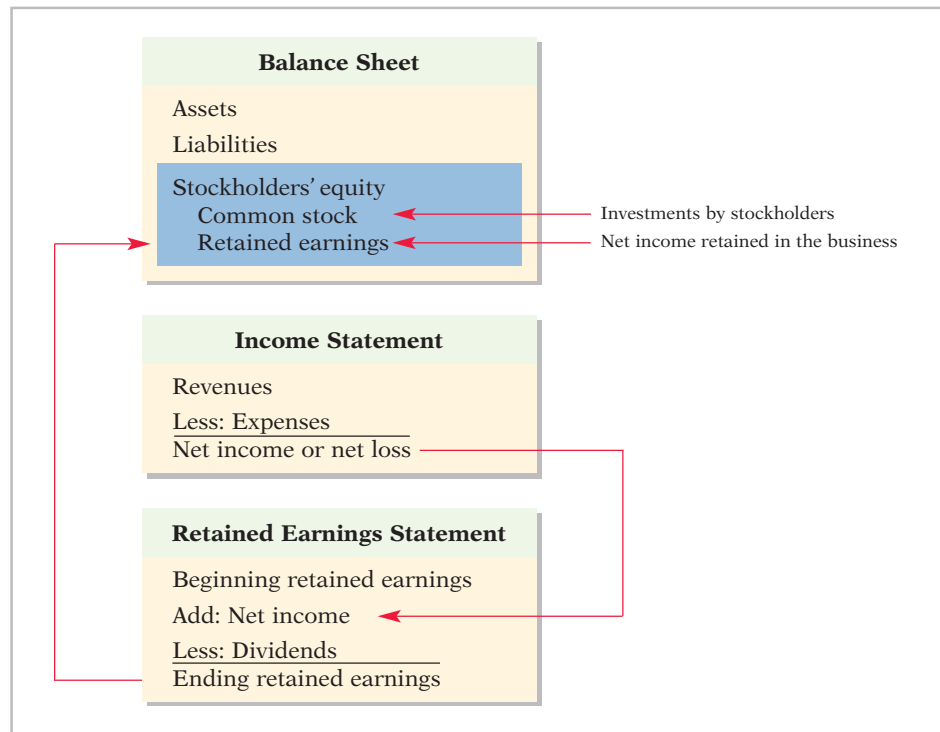

Do you think that the **Chicago Bears** football team would be likely to have the same major revenue and expense accounts as the Cubs? (See page 97.)

Stockholders' Equity Relationships

As Chapter 1 indicated, companies report common stock and retained earnings in the stockholders' equity section of the balance sheet. They report dividends on the retained earnings statement. And they report revenues and expenses on the income statement. Dividends, revenues, and expenses are eventually transferred to retained earnings at the end of the period. As a result, a change in any one of these three items affects stockholders' equity. Illustration 2-11 shows the relationships related to stockholders' equity.

Illustration 2-11
Stockholders' equity relationships

Summary of Debit/Credit Rules

Illustration 2-12 shows a summary of the debit/credit rules and effects on each type of account. Study this diagram carefully. It will help you understand the fundamentals of the double-entry system.

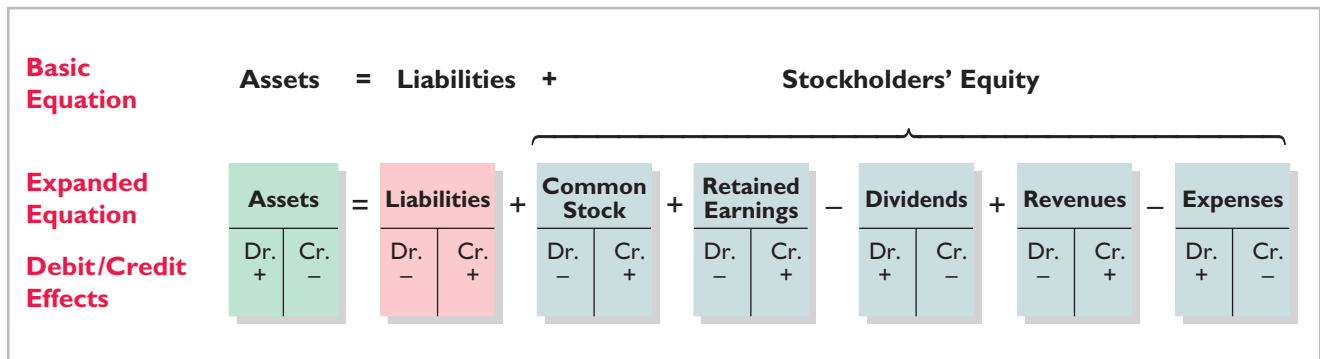

Illustration 2-12
Summary of debit/credit rules

> DO IT!

Normal Balances

Action Plan

- ✓ Determine the types of accounts needed. Kate will need asset accounts for each different type of asset she invests in the business, and liability accounts for any debts she incurs.
- ✓ Understand the types of stockholders' equity accounts. When Kate begins the business, she will need only Common Stock. Later, she will need other stockholders' equity accounts.

Kate Browne, president of Hair It Is, Inc., has just rented space in a shopping mall in which she will open and operate a beauty salon. A friend has advised Kate to set up a double-entry set of accounting records in which to record all of her business transactions.

Identify the balance sheet accounts that Hair It Is, Inc., will likely need to record the transactions needed to establish and open the business. Also, indicate whether the normal balance of each account is a debit or a credit.

Solution

Hair It Is, Inc., would likely need the following accounts to record the transactions needed to ready the beauty salon for opening day:

Cash (debit balance)	Equipment (debit balance)
Supplies (debit balance)	Accounts Payable (credit balance)
Notes Payable (credit balance), if the business borrows money	Common Stock (credit balance)

Related exercise material: **BE2-1, BE2-2, BE2-5, E2-1, E2-2, E2-4, and DO IT! 2-1.**

✓ **The Navigator**

Steps in the Recording Process

Although it is possible to enter transaction information directly into the accounts without using a journal, few businesses do so. Practically every business uses three basic steps in the recording process:

1. Analyze each transaction for its effects on the accounts.
2. Enter the transaction information in a *journal*.
3. Transfer the journal information to the appropriate accounts in the *ledger*.

The recording process begins with the transaction. **Business documents**, such as a sales slip, a check, a bill, or a cash register tape, provide evidence of the transaction. The company analyzes this evidence to determine the transaction's

LEARNING OBJECTIVE 3

Identify the basic steps in the recording process.

effects on specific accounts. The company then enters the transaction in the journal. Finally, it transfers the journal entry to the designated accounts in the ledger. Illustration 2-13 shows the recording process.

Illustration 2-13
The recording process

The steps in the recording process occur repeatedly. In Chapter 1, we illustrated the first step, the analysis of transactions, and will give further examples in this and later chapters. The other two steps in the recording process are explained in the next sections.

The Journal

LEARNING OBJECTIVE 4

Explain what a journal is and how it helps in the recording process.

Companies initially record transactions in chronological order (the order in which they occur). Thus, the **journal** is referred to as the book of original entry. For each transaction, the journal shows the debit and credit effects on specific accounts.

Companies may use various kinds of journals, but every company has the most basic form of journal, a **general journal**. Typically, a general journal has spaces for dates, account titles and explanations, references, and two amount columns. (See the format of the journal in Illustration 2-14, page 61.) *Whenever we use the term “journal” in this textbook, we mean the general journal, unless we specify otherwise.*

The journal makes several significant contributions to the recording process:

1. It discloses in one place the **complete effects of a transaction**.
2. It provides a **chronological record** of transactions.
3. It helps **to prevent or locate errors** because the debit and credit amounts for each entry can be easily compared.

JOURNALIZING

Entering transaction data in the journal is known as **journalizing**. Companies make separate journal entries for each transaction. A complete entry consists of: (1) the date of the transaction, (2) the accounts and amounts to be debited and credited, and (3) a brief explanation of the transaction.

Illustration 2-14 shows the technique of journalizing, using the first two transactions of Softbyte Inc. On September 1, stockholders invested \$15,000 cash in the corporation in exchange for shares of stock, and Softbyte purchased computer equipment for \$7,000 cash. The number J1 indicates that the company records these two entries on the first page of the general journal. (The boxed numbers correspond to explanations in the list below the illustration.)

General Journal				J1
Date	Account Titles and Explanation	Ref.	Debit	Credit
2014		5		
Sept. 1	Cash		15,000	
1	Common Stock			15,000
	(Issued shares of stock for cash)			
1	Equipment		7,000	
	Cash			7,000
	(Purchase equipment for cash)			

Illustration 2-14
Technique of journalizing

- 1 The date of the transaction is entered in the Date column.
- 2 The debit account title (that is, the account to be debited) is entered first at the extreme left margin of the column headed "Account Titles and Explanation," and the amount of the debit is recorded in the Debit column.
- 3 The credit account title (that is, the account to be credited) is indented and entered on the next line in the column headed "Account Titles and Explanation," and the amount of the credit is recorded in the Credit column.
- 4 A brief explanation of the transaction appears on the line below the credit account title. A space is left between journal entries. The blank space separates individual journal entries and makes the entire journal easier to read.
- 5 The column titled Ref. (which stands for Reference) is left blank when the journal entry is made. This column is used later when the journal entries are transferred to the ledger accounts.

It is important to use correct and specific account titles in journalizing.

Erroneous account titles lead to incorrect financial statements. However, some flexibility exists initially in selecting account titles. The main criterion is that each title must appropriately describe the content of the account. Once a company chooses the specific title to use, it should record under that account title all later transactions involving the account.¹

SIMPLE AND COMPOUND ENTRIES

Some entries involve only two accounts, one debit and one credit. (See, for example, the entries in Illustration 2-14.) An entry like these is considered a **simple entry**. Some transactions, however, require more than two accounts in journalizing. An entry that requires three or more accounts is a **compound entry**. To illustrate, assume that on July 1, Butler Company purchases a delivery truck costing \$14,000. It pays \$8,000 cash now and agrees to pay the remaining \$6,000 on account (to be paid later). The compound entry is as follows.

General Journal				J1
Date	Account Titles and Explanation	Ref.	Debit	Credit
2014				
July 1	Equipment		14,000	
	Cash			8,000
	Accounts Payable			6,000
	(Purchased truck for cash with balance on account)			

Illustration 2-15
Compound journal entry

¹In homework problems, you should use specific account titles when they are given. When account titles are not given, you may select account titles that identify the nature and content of each account. The account titles used in journalizing should not contain explanations such as Cash Paid or Cash Received.

In a compound entry, the standard format requires that all debits be listed before the credits.

> DO IT!

Recording Business Activities

As president and sole stockholder, Kate Browne engaged in the following activities in establishing her beauty salon, Hair It Is, Inc.

1. Opened a bank account in the name of Hair It Is, Inc. and deposited \$20,000 of her own money in this account in exchange for shares of common stock.
2. Purchased equipment on account (to be paid in 30 days) for a total cost of \$4,800.
3. Interviewed three applicants for the position of beautician.

In what form (type of record) should Hair It Is, Inc., record these three activities? Prepare the entries to record the transactions.

Solution

Each transaction that is recorded is entered in the general journal. The three activities would be recorded as follows.

1. Cash	20,000	
Common Stock		20,000
(Issued shares of stock for cash)		
2. Equipment	4,800	
Accounts Payable		4,800
(Purchase of equipment on account)		
3. No entry because no transaction has occurred.		

Action Plan

- ✓ Understand which activities need to be recorded and which do not. Any that have economic effects should be recorded in a journal.
- ✓ Analyze the effects of transactions on asset, liability, and stockholders' equity accounts.

Related exercise material: **BE2-3, BE2-6, E2-3, E2-5, E2-6, E2-7, and DO IT! 2-2.**

The Ledger

LEARNING OBJECTIVE 5

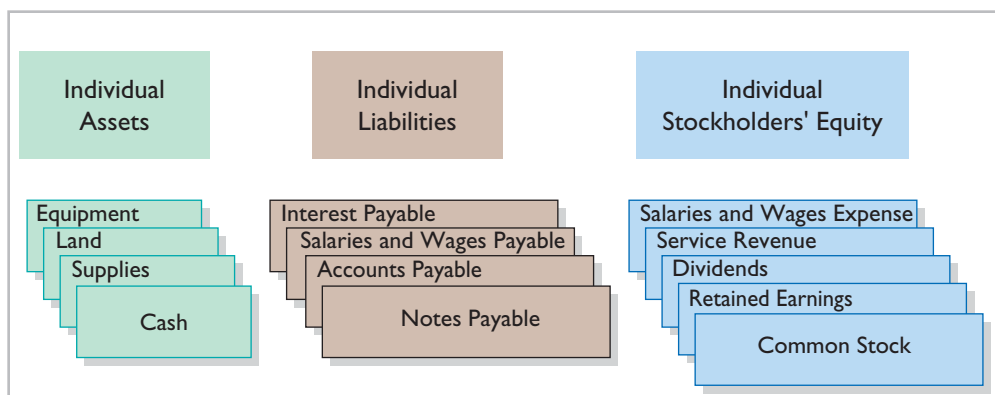

Explain what a ledger is and how it helps in the recording process.

The entire group of accounts maintained by a company is the **ledger**. The ledger keeps in one place all the information about changes in specific account balances.

Companies may use various kinds of ledgers, but every company has a general ledger. A **general ledger** contains all the asset, liability, and stockholders' equity accounts, as shown in Illustration 2-16. *Whenever we use the term "ledger" in this textbook, we mean the general ledger, unless we specify otherwise.*

Illustration 2-16

The general ledger

Companies arrange the ledger in the sequence in which they present the accounts in the financial statements, beginning with the balance sheet accounts. First in order are the asset accounts, followed by liability accounts, stockholders' equity accounts, revenues, and expenses. Each account is numbered for easier identification.

The ledger provides the balance in each of the accounts and keeps track of changes in these balances. For example, the Cash account shows the amount of cash available to meet current obligations. The Accounts Receivable account shows amounts due from customers. The Accounts Payable account shows amounts owned to creditors.

ACCOUNTING ACROSS THE ORGANIZATION

What Would Sam Do?

In his autobiography Sam Walton described the double-entry accounting system he used when Wal-Mart was just getting started: "We kept a little pigeonhole on the wall for the cash receipts and paperwork of each [Wal-Mart] store. I had a blue binder ledger book for each store. When we added a store, we added a pigeonhole. We did this at least up to twenty stores. Then once a month, the bookkeeper and I would enter the merchandise, enter the sales, enter the cash, and balance it."

Source: Sam Walton, *Made in America* (New York: Doubleday, 1992), p. 53.

Why did Sam Walton keep separate pigeonholes and blue binders? Why bother to keep separate records for each store? (See page 97.)

STANDARD FORM OF ACCOUNT

The simple T-account form used in accounting textbooks is often very useful for illustration purposes. However, in practice, the account forms used in ledgers are much more structured. Illustration 2-17 shows a typical form, using assumed data from a cash account.

Cash					No. 101
Date	Explanation	Ref.	Debit	Credit	Balance
2014					
June 1			25,000		25,000
2				8,000	17,000
3			4,200		21,200
9			7,500		28,700
17				11,700	17,000
20				250	16,750
30				7,300	9,450

Illustration 2-17
Three-column form of account

This is called the **three-column form of account**. It has three money columns—debit, credit, and balance. The balance in the account is determined after each transaction. Companies use the explanation space and reference columns to provide special information about the transaction.

LEARNING OBJECTIVE 6

Explain what posting is and how it helps in the recording process.

Posting

Transferring journal entries to the ledger accounts is called **posting**. This phase of the recording process accumulates the effects of journalized transactions into the individual accounts. Posting involves the following steps.

1. In the **ledger**, enter, in the appropriate columns of the account(s) debited, the date, journal page, and debit amount shown in the journal.
2. In the reference column of the **journal**, write the account number to which the debit amount was posted.
3. In the **ledger**, enter, in the appropriate columns of the account(s) credited, the date, journal page, and credit amount shown in the journal.
4. In the reference column of the **journal**, write the account number to which the credit amount was posted.

Illustration 2-18 shows these four steps using Softbyte Inc.'s first journal entry, the issuance of common stock for \$15,000 cash. The boxed numbers indicate the sequence of the steps.

Illustration 2-18
Posting a journal entry

GENERAL JOURNAL					J1	
Date	Account Titles and Explanation	Ref.	Debit	Credit		
2014 Sept. 1	Cash Common Stock (Issued shares of stock for cash)	101 311	15,000	15,000		

GENERAL LEDGER						
Cash						No. 101
Date	Explanation	Ref.	Debit	Credit	Balance	
2014 Sept. 1		J1	15,000		15,000	

Common Stock						No. 311
Date	Explanation	Ref.	Debit	Credit	Balance	
2014 Sept. 1		J1		15,000	15,000	

Key: **1** Post to debit account—date, journal page number, and amount.
2 Enter debit account number in journal reference column.
3 Post to credit account—date, journal page number, and amount.
4 Enter credit account number in journal reference column.

Posting should be performed in chronological order. That is, the company should post all the debits and credits of one journal entry before proceeding to the next journal entry. Postings should be made on a timely basis to ensure that the ledger is up to date.²

²In homework problems, you can journalize all transactions before posting any of the journal entries.

The reference column **of a ledger** account indicates the journal page from which the transaction was posted.³ The explanation space of the ledger account is used infrequently because an explanation already appears in the journal.

CHART OF ACCOUNTS

The number and type of accounts differ for each company. The number of accounts depends on the amount of detail management desires. For example, the management of one company may want a single account for all types of utility expense. Another may keep separate expense accounts for each type of utility, such as gas, electricity, and water. Similarly, a small company like Softbyte Inc. will have fewer accounts than a corporate giant like Dell. Softbyte may be able to manage and report its activities in 20 to 30 accounts, while Dell may require thousands of accounts to keep track of its worldwide activities.

Most companies have a **chart of accounts**. This chart lists the accounts and the account numbers that identify their location in the ledger. The numbering system that identifies the accounts usually starts with the balance sheet accounts and follows with the income statement accounts.

In this and the next two chapters, we will be explaining the accounting for Pioneer Advertising Agency Inc. (a service company). The ranges of the account numbers are as follows.

- Accounts 101–199 indicate asset accounts
- 200–299 indicate liabilities
- 300–399 indicate stockholders' equity accounts
- 400–499, revenues
- 500–799, expenses
- 800–899, other revenues
- 900–999, other expenses.

Illustration 2-19 shows the chart of accounts for Pioneer Advertising Agency Inc. Accounts shown in red are used in this chapter. Accounts shown in black are explained in later chapters.

Pioneer Advertising Agency Inc. Chart of Accounts	
Assets	Stockholders' Equity
<p>101 Cash 112 Accounts Receivable 126 Supplies 130 Prepaid Insurance 157 Equipment 158 Accumulated Depreciation— Equipment</p>	<p>311 Common Stock 320 Retained Earnings 332 Dividends 350 Income Summary</p>
	Revenues
	<p>400 Service Revenue</p>
Liabilities	Expenses
<p>200 Notes Payable 201 Accounts Payable 209 Unearned Service Revenue 212 Salaries and Wages Payable 230 Interest Payable</p>	<p>631 Supplies Expense 711 Depreciation Expense 722 Insurance Expense 726 Salaries and Wages Expense 729 Rent Expense 905 Interest Expense</p>

Helpful Hint

On the textbook's endpapers, you will also find an expanded chart of accounts.

Illustration 2-19

Chart of accounts for Pioneer Advertising Agency Inc.

³After the last entry has been posted, the accountant should scan the reference column **in the journal**, to confirm that all postings have been made.

You will notice that there are gaps in the numbering system of the chart of accounts for Pioneer Advertising. Gaps are left to permit the insertion of new accounts as needed during the life of the business.

The Recording Process Illustrated

Illustrations 2-20 through 2-29 show the basic steps in the recording process, using the October transactions of Pioneer Advertising Agency Inc. Pioneer's accounting period is a month. A basic analysis and a debit-credit analysis precede the journalizing and posting of each transaction. For simplicity, we use the T-account form in the illustrations instead of the standard account form.

Study these transaction analyses carefully. **The purpose of transaction analysis is first to identify the type of account involved, and then to determine whether to make a debit or a credit to the account.** You should always perform this type of analysis before preparing a journal entry. Doing so will help you understand the journal entries discussed in this chapter as well as more complex journal entries in later chapters.

In addition, an Accounting Cycle Tutorial is available in *WileyPLUS*. It provides an interactive presentation of the steps in the accounting cycle, using the examples in the illustrations on the following pages.

Illustration 2-20

Investment of cash by stockholders

Helpful Hint

Follow these steps:

1. Determine what type of account is involved.
2. Determine what items increased or decreased and by how much.
3. Translate the increases and decreases into debits and credits.

Transaction		On October 1, C. R. Byrd invests \$10,000 cash in an advertising company to be known as Pioneer Advertising Agency Inc.																												
Basic Analysis	The asset Cash increases \$10,000, and stockholders' equity (specifically, Common Stock) increases \$10,000.																													
Equation Analysis	<table style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="text-align: left; border-bottom: 1px solid black;">Assets</th> <th style="text-align: center;">=</th> <th style="text-align: left; border-bottom: 1px solid black;">Liabilities</th> <th style="text-align: center;">+</th> <th style="text-align: left; border-bottom: 1px solid black;">Stockholders' Equity</th> <th></th> </tr> </thead> <tbody> <tr> <td style="border-bottom: 1px solid black;">Cash</td> <td style="text-align: center;">=</td> <td></td> <td></td> <td style="border-bottom: 1px solid black;">Common Stock</td> <td></td> </tr> <tr> <td style="text-align: right;">+10,000</td> <td></td> <td></td> <td></td> <td style="text-align: right;">+10,000</td> <td style="text-align: right;">Issued Stock</td> </tr> </tbody> </table>					Assets	=	Liabilities	+	Stockholders' Equity		Cash	=			Common Stock		+10,000				+10,000	Issued Stock

Oct. 1 10,000																														

Illustration 2-21
Purchase of office equipment

Transaction On October 1, Pioneer purchases office equipment costing \$5,000 by signing a 3-month, 12%, \$5,000 note payable.

Basic Analysis The asset Equipment increases \$5,000, and the liability Notes Payable increases \$5,000.

Equation Analysis

<u>Assets</u>	=	<u>Liabilities</u>	+	<u>Stockholders' Equity</u>
Equipment	=	Notes Payable		
+5,000		+5,000		

Debit-Credit Analysis Debits increase assets: debit Equipment \$5,000.
Credits increase liabilities: credit Notes Payable \$5,000.

Journal Entry

	Oct. 1	Equipment	157	5,000	
		Notes Payable (Issued 3-month, 12% note for office equipment)	200		5,000

Posting

Equipment 157	Notes Payable 200
Oct. 1 5,000	Oct. 1 5,000

Illustration 2-22
Receipt of cash for future service

Transaction On October 2, Pioneer receives a \$1,200 cash advance from R. Knox, a client, for advertising services that are expected to be completed by December 31.

Basic Analysis The asset Cash increases \$1,200; the liability Unearned Service Revenue increases \$1,200 because the service has not been provided yet. That is, when Pioneer receives an advance payment, it should record an unearned revenue (a liability) in order to recognize the obligation that exists. Note also that although many liabilities have the word "payable" in their title, unearned revenue is considered a liability even though the word payable is not used.

Equation Analysis

<u>Assets</u>	=	<u>Liabilities</u>	+	<u>Stockholders' Equity</u>
Cash	=	Unearned Service Revenue		
+1,200		+1,200		

Debit-Credit Analysis Debits increase assets: debit Cash \$1,200.
Credits increase liabilities: credit Unearned Service Revenue \$1,200.

Journal Entry

	Oct. 2	Cash	101	1,200	
		Unearned Service Revenue (Received cash from R. Knox for future service)	209		1,200

Posting

Cash 101	Unearned Service Revenue 209
Oct. 1 10,000 2 1,200	Oct. 2 1,200

Illustration 2-23
Payment of monthly rent

Transaction	On October 3, Pioneer pays office rent for October in cash, \$900.														
Basic Analysis	Rent Expense increases \$900 because the payment pertains only to the current month; the asset Cash decreases \$900.														
Equation Analysis	$\begin{array}{r} \text{Assets} \\ \text{Cash} \\ -900 \end{array} = \begin{array}{r} \text{Liabilities} \\ \text{Expenses} \\ -900 \end{array} + \begin{array}{r} \text{Stockholders' Equity} \\ \text{Rent Expense} \\ 900 \end{array}$														
Debit-Credit Analysis	Debits increase expenses: debit Rent Expense \$900. Credits decrease assets: credit Cash \$900.														
Journal Entry	Oct. 3	Rent Expense Cash (Paid October rent)	729 101	900	900										
Posting	<table border="1"> <tr><th colspan="2">Cash 101</th></tr> <tr><td>Oct. 1 10,000</td><td>Oct. 3 900</td></tr> <tr><td>2 1,200</td><td></td></tr> </table>		Cash 101		Oct. 1 10,000	Oct. 3 900	2 1,200		<table border="1"> <tr><th colspan="2">Rent Expense 729</th></tr> <tr><td>Oct. 3 900</td><td></td></tr> </table>			Rent Expense 729		Oct. 3 900

Oct. 3 900															

Illustration 2-24
Payment for insurance

Transaction	On October 4, Pioneer pays \$600 for a one-year insurance policy that will expire next year on September 30.														
Basic Analysis	The asset Prepaid Insurance increases \$600 because the payment extends to more than the current month; the asset Cash decreases \$600. Payments of expenses that will benefit more than one accounting period are prepaid expenses or prepayments. When a company makes a payment, it debits an asset account in order to show the service or benefit that will be received in the future.														
Equation Analysis	$\begin{array}{r} \text{Assets} \\ \text{Cash} \\ -600 \end{array} + \begin{array}{r} \text{Prepaid Insurance} \\ +600 \end{array} = \begin{array}{r} \text{Liabilities} \\ \text{Expenses} \end{array} + \begin{array}{r} \text{Stockholders' Equity} \end{array}$														
Debit-Credit Analysis	Debits increase assets: debit Prepaid Insurance \$600. Credits decrease assets: credit Cash \$600.

Illustration 2-25
Purchase of supplies on credit

Transaction	On October 5, Pioneer purchases an estimated 3-month supply of advertising materials on account from Aero Supply for \$2,500.																			
Basic Analysis	The asset Supplies increases \$2,500; the liability Accounts Payable increases \$2,500.																			
Equation Analysis	<table style="margin-left: auto; margin-right: auto;"> <tr> <td style="text-align: center;"><u>Assets</u></td> <td style="text-align: center;">=</td> <td style="text-align: center;"><u>Liabilities</u></td> <td style="text-align: center;">+</td> <td style="text-align: center;"><u>Stockholders' Equity</u></td> </tr> <tr> <td style="text-align: center;">Supplies</td> <td style="text-align: center;">=</td> <td style="text-align: center;">Accounts Payable</td> <td></td> <td></td> </tr> <tr> <td style="text-align: center;">+2,500</td> <td></td> <td style="text-align: center;">+2,500</td> <td></td> <td></td> </tr> </table>					<u>Assets</u>	=	<u>Liabilities</u>	+	<u>Stockholders' Equity</u>	Supplies	=	Accounts Payable			+2,500		+2,500

Illustration 2-26
Hiring of employees

Event	On October 9, Pioneer hires four employees to begin work on October 15. Each employee is to receive a weekly salary of \$500 for a 5-day work week, payable every 2 weeks—first payment made on October 26.
Basic Analysis	A business transaction has not occurred. There is only an agreement between the employer and the employees to enter into a business transaction beginning on October 15. Thus, a debit–credit analysis is not needed because there is no accounting entry. (See transaction of October 26 for first entry.)

Illustration 2-27
Declaration and payment of dividend

Transaction	On October 20, Pioneer's board of directors declares and pays a \$500 cash dividend to stockholders.																						
Basic Analysis	The Dividends account increases \$500; the asset Cash decreases \$500.																						
Equation Analysis	$\begin{array}{r} \text{Assets} \\ \text{Cash} \\ -500 \end{array} = \begin{array}{r} \text{Liabilities} \\ \text{Dividends} \\ -500 \end{array} + \begin{array}{r} \text{Stockholders' Equity} \\ \text{Dividends} \\ -500 \end{array}$																						
Debit-Credit Analysis	Debits increase dividends: debit Dividends \$500. Credits decrease assets: credit Cash \$500.

Salaries and Wages Expense		726																								
Oct. 26	4,000																									

Transaction On October 31, Pioneer receives \$10,000 in cash from Copa Company for advertising services provided in October.

Basic Analysis The asset Cash increases \$10,000; the revenue account Service Revenue increases \$10,000.

Equation Analysis

<u>Assets</u>	=	<u>Liabilities</u>	+	<u>Stockholders' Equity</u>
Cash	=			Revenues
+10,000				+10,000 Service Revenue

Debit-Credit Analysis Debits increase assets: debit Cash \$10,000.
Credits increase revenues: credit Service Revenue \$10,000.

Journal Entry

	Oct. 31	Cash	101	10,000	
		Service Revenue	400		10,000
		(Received cash for services provided)			

Posting

Cash		101	Service Revenue		400
Oct. 1	10,000	Oct. 3	900		
2	1,200	4	600		
31	10,000	20	500		
		26	4,000		

Illustration 2-29
Receipt of cash for services provided

> DO IT!

Posting

Kate Browne recorded the following transactions in a general journal during the month of March.

Mar. 4	Cash	2,280		
	Service Revenue		2,280	
Mar. 15	Salaries and Wages Expense	400		
	Cash		400	
Mar. 19	Utilities Expense	92		
	Cash		92	

Post these entries to the Cash account of the general ledger to determine the ending balance in cash. The beginning balance in Cash on March 1 was \$600.

Action Plan

- ✓ Recall that posting involves transferring the journalized debits and credits to specific accounts in the ledger.
- ✓ Determine the ending balance by netting the total debits and credits.

Solution

Cash			
3/1	600	3/15	400
3/4	2,280	3/19	92
3/31 Bal.	2,388		

Related exercise material: **BE2-7, BE2-8, E2-8, E2-12, and DO IT! 2-3.**

Summary Illustration of Journalizing and Posting

General ledger

The Trial Balance

A **trial balance** is a list of accounts and their balances at a given time. Customarily, companies prepare a trial balance at the end of an accounting period. They list accounts in the order in which they appear in the ledger. Debit balances appear in the left column and credit balances in the right column.

The trial balance proves the mathematical equality of debits and credits after posting. Under the double-entry system, this equality occurs when the sum of the debit account balances equals the sum of the credit account balances. **A trial balance may also uncover errors in journalizing and posting.** For example, a trial balance may well have detected the error at Fidelity Investments discussed in the Feature Story. **In addition, a trial balance is useful in the preparation of financial statements,** as we will explain in the next two chapters.

LEARNING OBJECTIVE 7

Prepare a trial balance and explain its purposes.

The steps for preparing a trial balance are:

1. List the account titles and their balances.
2. Total the debit and credit columns.
3. Prove the equality of the two columns.

Illustration 2-32 shows the trial balance prepared from Pioneer Advertising's ledger. Note that the total debits (\$28,700) equal the total credits (\$28,700).

Illustration 2-32
A trial balance

Pioneer Advertising Agency Inc.		
Trial Balance		
October 31, 2014		
	<u>Debit</u>	<u>Credit</u>
Cash	\$ 15,200	
Supplies	2,500	
Prepaid Insurance	600	
Equipment	5,000	
Notes Payable		\$ 5,000
Accounts Payable		2,500
Unearned Service Revenue		1,200
Common Stock		10,000
Dividends	500	
Service Revenue		10,000
Salaries and Wages Expense	4,000	
Rent Expense	900	
	<u>\$28,700</u>	<u>\$28,700</u>

Helpful Hint

To sum a column of figures is sometimes referred to as to *foot* the column. The column is then said to be *footed*.

Helpful Hint

A trial balance is so named because it is a test to see if the sum of the debit balances equals the sum of the credit balances.

A trial balance is a necessary checkpoint for uncovering certain types of errors. For example, if only the debit portion of a journal entry has been posted, the trial balance would bring this error to light.

Limitations of a Trial Balance

A trial balance does not guarantee freedom from recording errors, however. Numerous errors may exist even though the totals of the trial balance columns agree. For example, the trial balance may balance even when (1) a transaction is not journalized, (2) a correct journal entry is not posted, (3) a journal entry is posted twice, (4) incorrect accounts are used in journalizing or posting, or (5) offsetting errors are made in recording the amount of a transaction. As long as equal debits and credits are posted, even to the wrong account or in the wrong amount, the total debits will equal the total credits. **The trial balance does not prove that the company has recorded all transactions or that the ledger is correct.**

Ethics Note

An *error* is the result of an unintentional mistake; it is neither ethical nor unethical. An *irregularity* is an intentional misstatement, which is viewed as unethical.

Locating Errors

Errors in a trial balance generally result from mathematical mistakes, incorrect postings, or simply transcribing data incorrectly. What do you do if you are faced with a trial balance that does not balance? First, determine the amount of the

difference between the two columns of the trial balance. After this amount is known, the following steps are often helpful:

1. If the error is \$1, \$10, \$100, or \$1,000, re-add the trial balance columns and recompute the account balances.
2. If the error is divisible by 2, scan the trial balance to see whether a balance equal to half the error has been entered in the wrong column.
3. If the error is divisible by 9, retrace the account balances on the trial balance to see whether they are incorrectly copied from the ledger. For example, if a balance was \$12 and it was listed as \$21, a \$9 error has been made. Reversing the order of numbers is called a **transposition error**.
4. If the error is not divisible by 2 or 9, scan the ledger to see whether an account balance in the amount of the error has been omitted from the trial balance, and scan the journal to see whether a posting of that amount has been omitted.

Use of Dollar Signs

Note that dollar signs do not appear in journals or ledgers. Dollar signs are typically used only in the trial balance and the financial statements. Generally, a dollar sign is shown only for the first item in the column and for the total of that column. A single line (a totaling rule) is placed under the column of figures to be added or subtracted. Total amounts are double-underlined to indicate they are final sums. Negative signs or parentheses do not appear in journals or ledgers.

INVESTOR INSIGHT

Why Accuracy Matters

While most companies record transactions very carefully, the reality is that mistakes still happen. For example, bank regulators fined **Bank One Corporation** (now **Chase**) \$1.8 million because they felt that the unreliability of the bank's accounting system caused it to violate regulatory requirements.

Also, in recent years **Fannie Mae**, the government-chartered mortgage association, announced a series of large accounting errors. These announcements caused alarm among investors, regulators, and politicians because they fear that the errors may suggest larger, undetected problems. This is important because the home-mortgage market depends on Fannie Mae to buy hundreds of billions of dollars of mortgages each year from banks, thus enabling the banks to issue new mortgages.

Finally, before a major overhaul of its accounting system, the financial records of **Waste Management, Inc.** were in such disarray that 10,000 of the company's 57,000 employees were receiving pay slips that were in error.

The Sarbanes-Oxley Act was created to minimize the occurrence of errors like these by increasing every employee's responsibility for accurate financial reporting.

In order for these companies to prepare and issue financial statements, their accounting equations (debits and credits) must have been in balance at year-end. How could these errors or misstatements have occurred? (See page 97.)

> DO IT!**Trial Balance**

The following accounts come from the ledger of SnowGo Corporation at December 31, 2014.

157	Equipment	\$88,000	311	Common Stock	\$20,000
332	Dividends	8,000	212	Salaries and	
201	Accounts Payable	22,000		Wages Payable	2,000
726	Salaries and		200	Notes Payable	19,000
	Wages Expense	42,000	722	Utilities Expense	3,000
112	Accounts Receivable	4,000	130	Prepaid Insurance	6,000
400	Service Revenue	95,000	101	Cash	7,000

Prepare a trial balance in good form.

Solution**Action Plan**

- ✓ Determine normal balances and list accounts in the order they appear in the ledger.
- ✓ Accounts with debit balances appear in the left column, and those with credit balances in the right column.
- ✓ Total the debit and credit columns to prove equality.

SnowGo Corporation		
Trial Balance		
December 31, 2014		
	<u>Debit</u>	<u>Credit</u>

**> Comprehensive DO IT!****Transactions**

Bob Sample and other student investors opened Campus Laundromat Inc. on September 1, 2014. During the first month of operations, the following transactions occurred.

- Sept. 1 Stockholders invested \$20,000 cash in the business.
- 2 Paid \$1,000 cash for store rent for the month of September.
- 3 Purchased washers and dryers for \$25,000, paying \$10,000 in cash and signing a \$15,000, 6-month, 12% note payable.
- 4 Paid \$1,200 for a one-year accident insurance policy.
- 10 Received a bill from the *Daily News* for advertising the opening of the laundromat \$200.
- 20 Declared and paid a cash dividend to stockholders \$700.
- 30 Determined that cash receipts for laundry fees for the month were \$6,200.

The chart of accounts for the company is the same as for Pioneer Advertising Agency Inc. except for the following: No. 610 Advertising Expense.

Instructions

- (a) Journalize the September transactions. (Use J1 for the journal page number.)
- (b) Open ledger accounts and post the September transactions.
- (c) Prepare a trial balance at September 30, 2014.

Solution to Comprehensive DO IT!

(a) GENERAL JOURNAL					J1
Date	Account Titles and Explanation	Ref.	Debit	Credit	
2014					
Sept. 1	Cash	101	20,000		
	Common Stock (Stockholders' investment of cash in business)	311		20,000	
2	Rent Expense	729	1,000		
	Cash (Paid September rent)	101		1,000	
3	Equipment	157	25,000		
	Cash	101		10,000	
	Notes Payable (Purchased laundry equipment for cash and 6-month, 12% note payable)	200		15,000	
4	Prepaid Insurance	130	1,200		
	Cash (Paid one-year insurance policy)	101		1,200	
10	Advertising Expense	610	200		
	Accounts Payable (Received bill from <i>Daily News</i> for advertising)	201		200	
20	Dividends	332	700		
	Cash (Declared and paid a cash dividend)	101		700	
30	Cash	101	6,200		
	Service Revenue (Received cash for services provided)	400		6,200	

Action Plan

- ✓ Make separate journal entries for each transaction.
- ✓ In journalizing, make sure debits equal credits.
- ✓ In journalizing, use specific account titles taken from the chart of accounts.
- ✓ Provide appropriate description of each journal entry.
- ✓ Arrange ledger in statement order, beginning with the balance sheet accounts.
- ✓ Post in chronological order.
- ✓ Use numbers in the reference column to indicate the amount has been posted.
- ✓ In the trial balance, list accounts in the order in which they appear in the ledger.
- ✓ List debit balances in the left column, and credit balances in the right column.

SUMMARY OF LEARNING OBJECTIVES

- 1 Explain what an account is and how it helps in the recording process.** An account is a record of increases and decreases in specific asset, liability, or stockholders' equity items.
- 2 Define debits and credits and explain their use in recording business transactions.** The terms debit and credit are synonymous with left and right. Assets, dividends, and expenses are increased by debits and decreased by credits. Liabilities, common stock, retained earnings, and revenues are increased by credits and decreased by debits.
- 3 Identify the basic steps in the recording process.** The basic steps in the recording process are (a) analyze each transaction for its effects on the accounts, (b) enter the transaction information in a journal, and (c) transfer the journal information to the appropriate accounts in the ledger.
- 4 Explain what a journal is and how it helps in the recording process.** The initial accounting record of a transaction is entered in a journal before the data are

entered in the accounts. A journal (a) discloses in one place the complete effects of a transaction, (b) provides a chronological record of transactions, and (c) prevents or locates errors because the debit and credit amounts for each entry can be easily compared.

- 5 Explain what a ledger is and how it helps in the recording process.** The ledger is the entire group of accounts maintained by a company. The ledger keeps in one place all the information about changes in specific account balances.
- 6 Explain what posting is and how it helps in the recording process.** Posting is the transfer of journal entries to the ledger accounts. This phase of the recording process accumulates the effects of journalized transactions in the individual accounts.
- 7 Prepare a trial balance and explain its purposes.** A trial balance is a list of accounts and their balances at a given time. Its primary purpose is to prove the equality of debits and credits after posting. A trial balance also uncovers errors in journalizing and posting and is useful in preparing financial statements.

GLOSSARY

- Account** A record of increases and decreases in specific asset, liability, or stockholders' equity items. (p. 54).
- Chart of accounts** A list of accounts and the account numbers that identify their location in the ledger. (p. 65).
- Common stock** Issued in exchange for the owners' investment paid in to the corporation. (p. 56).
- Compound entry** A journal entry that involves three or more accounts. (p. 61).
- Credit** The right side of an account. (p. 54).
- Debit** The left side of an account. (p. 54).
- Dividend** A distribution by a corporation to its stockholders on a pro rata (equal) basis. (p. 57).
- Double-entry system** A system that records in appropriate accounts the dual effect of each transaction. (p. 55).
- General journal** The most basic form of journal. (p. 60).
- General ledger** A ledger that contains all asset, liability, and stockholders' equity accounts. (p. 62).
- Journal** An accounting record in which transactions are initially recorded in chronological order. (p. 60).
- Journalizing** The entering of transaction data in the journal. (p. 60).
- Ledger** The entire group of accounts maintained by a company. (p. 62).
- Normal balance** An account balance on the side where an increase in the account is recorded. (p. 55).
- Posting** The procedure of transferring journal entries to the ledger accounts. (p. 64).
- Retained earnings** Net income that is kept (retained) in the business. (p. 56).
- Simple entry** A journal entry that involves only two accounts. (p. 61).
- T-account** The basic form of an account. (p. 54).
- Three-column form of account** A form with columns for debit, credit, and balance amounts in an account. (p. 63).
- Trial balance** A list of accounts and their balances at a given time. (p. 73).

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more resources are available for practice in WileyPLUS.

SELF-TEST QUESTIONS

Answers are on page 97.

- (LO 1) 1. Which of the following statements about an account is *true*?
- In its simplest form, an account consists of two parts.
 - An account is an individual accounting record of increases and decreases in specific asset, liability, and stockholders' equity items.
 - There are separate accounts for specific assets and liabilities but only one account for stockholders' equity items.
 - The left side of an account is the credit or decrease side.
- (LO 2) 2. Debits:
- increase both assets and liabilities.
 - decrease both assets and liabilities.
 - increase assets and decrease liabilities.
 - decrease assets and increase liabilities.
- (LO 2) 3. A revenue account:
- is increased by debits.
 - is decreased by credits.
 - has a normal balance of a debit.
 - is increased by credits.
- (LO 2) 4. Accounts that normally have debit balances are:
- assets, expenses, and revenues.
 - assets, expenses, and common stock.
 - assets, liabilities, and dividends.
 - assets, dividends, and expenses.
5. The expanded accounting equation is: (LO 3)
- $\text{Assets} + \text{Liabilities} = \text{Common Stock} + \text{Retained Earnings} + \text{Dividends} + \text{Revenues} + \text{Expenses}$
 - $\text{Assets} = \text{Liabilities} + \text{Common Stock} + \text{Retained Earnings} + \text{Dividends} + \text{Revenues} - \text{Expenses}$
 - $\text{Assets} = \text{Liabilities} - \text{Common Stock} - \text{Retained Earnings} - \text{Dividends} - \text{Revenues} - \text{Expenses}$
 - $\text{Assets} = \text{Liabilities} + \text{Common Stock} + \text{Retained Earnings} - \text{Dividends} + \text{Revenues} - \text{Expenses}$
6. Which of the following is *not* part of the recording process? (LO 2)
- Analyzing transactions.
 - Preparing a trial balance.
 - Entering transactions in a journal.
 - Posting transactions.
7. Which of the following statements about a journal is *false*? (LO 4)
- It is not a book of original entry.
 - It provides a chronological record of transactions.
 - It helps to locate errors because the debit and credit amounts for each entry can be readily compared.
 - It discloses in one place the complete effect of a transaction.
8. The purchase of supplies on account should result in: (LO 4)
- a debit to Supplies Expense and a credit to Cash.
 - a debit to Supplies Expense and a credit to Supplies.

- (c) a debit to Supplies and a credit to Accounts Payable.
 (d) a debit to Supplies and a credit to Accounts Receivable.
- (LO 5) 9. The order of the accounts in the ledger is:
 (a) assets, revenues, expenses, liabilities, common stock, dividends.
 (b) assets, liabilities, common stock, dividends, revenues, expenses.
 (c) common stock, assets, revenues, expenses, liabilities, dividends.
 (d) revenues, assets, expenses, liabilities, common stock, dividends.
- (LO 5) 10. A ledger:
 (a) contains only asset and liability accounts.
 (b) should show accounts in alphabetical order.
 (c) is a collection of the entire group of accounts maintained by a company.
 (d) is a book of original entry.
- (LO 6) 11. Posting:
 (a) normally occurs before journalizing.
 (b) transfers ledger transaction data to the journal.
 (c) is an optional step in the recording process.
 (d) transfers journal entries to ledger accounts.
- (LO 6) 12. Before posting a payment of \$5,000, the Accounts Payable of Senator Corporation had a normal balance of \$16,000. The balance after posting this transaction was:
 (a) \$21,000. (b) \$5,000.
 (c) \$11,000. (d) Cannot be determined.
13. A trial balance: (LO 7)
 (a) is a list of accounts with their balances at a given time.
 (b) proves the mathematical accuracy of journalized transactions.
 (c) will not balance if a correct journal entry is posted twice.
 (d) proves that all transactions have been recorded.
14. A trial balance will not balance if: (LO 7)
 (a) a correct journal entry is posted twice.
 (b) the purchase of supplies on account is debited to Supplies and credited to Cash.
 (c) a \$100 cash dividend is debited to Dividends for \$1,000 and credited to Cash for \$100.
 (d) a \$450 payment on account is debited to Accounts Payable for \$45 and credited to Cash for \$45.
15. The trial balance of Clooney Corporation had accounts with the following normal balances: Cash \$5,000, Service Revenue \$85,000, Salaries and Wages Payable \$4,000, Salaries and Wages Expense \$40,000, Rent Expense \$10,000, Common Stock \$42,000, Dividends \$15,000, and Equipment \$61,000. In preparing a trial balance, the total in the debit column is: (LO 7)
 (a) \$131,000.
 (b) \$216,000.
 (c) \$91,000.
 (d) \$116,000.

Go to the book's companion website, www.wiley.com/college/weygandt, for additional Self-Test Questions.

QUESTIONS

- Describe the parts of a T-account.
- "The terms *debit* and *credit* mean increase and decrease, respectively." Do you agree? Explain.
- Jason Hilbert, a fellow student, contends that the double-entry system means each transaction must be recorded twice. Is Jason correct? Explain.
- Sandra Browne, a beginning accounting student, believes debit balances are favorable and credit balances are unfavorable. Is Sandra correct? Discuss.
- State the rules of debit and credit as applied to (a) asset accounts, (b) liability accounts, and (c) the stockholders' equity accounts (revenue, expenses, dividends, common stock, and retained earnings).
- What is the normal balance for each of the following accounts? (a) Accounts Receivable. (b) Cash. (c) Dividends. (d) Accounts Payable. (e) Service Revenue. (f) Salaries and Wages Expense. (g) Common Stock.
- Indicate whether each of the following accounts is an asset, a liability, or a stockholders' equity account and whether it has a normal debit or credit balance: (a) Accounts Receivable, (b) Accounts Payable, (c) Equipment, (d) Dividends, (e) Supplies.
- For the following transactions, indicate the account debited and the account credited.
 - Supplies are purchased on account.
 - Cash is received on signing a note payable.
 - Employees are paid salaries in cash.
- Indicate whether the following accounts generally will have (a) debit entries only, (b) credit entries only, or (c) both debit and credit entries.
 - Cash.
 - Accounts Receivable.
 - Dividends.
 - Accounts Payable.
 - Salaries and Wages Expense.
 - Service Revenue.
- What are the basic steps in the recording process?
- What are the advantages of using a journal in the recording process?
- (a) When entering a transaction in the journal, should the debit or credit be written first?
 (b) Which should be indented, the debit or credit?
- Describe a compound entry, and provide an example.

14. (a) Should business transaction debits and credits be recorded directly in the ledger accounts?
 (b) What are the advantages of first recording transactions in the journal and then posting to the ledger?
15. The account number is entered as the last step in posting the amounts from the journal to the ledger. What is the advantage of this step?
16. Journalize the following business transactions.
 (a) Alberto Rivera invests \$9,000 cash in the business in exchange for shares of common stock.
 (b) Insurance of \$800 is paid for the year.
 (c) Supplies of \$2,000 are purchased on account.
 (d) Cash of \$7,500 is received for services rendered.
17. (a) What is a ledger?
 (b) What is a chart of accounts and why is it important?
18. What is a trial balance and what are its purposes?
19. Joe Kirby is confused about how accounting information flows through the accounting system. He believes the flow of information is as follows.
 (a) Debits and credits posted to the ledger.
 (b) Business transaction occurs.
 (c) Information entered in the journal.
 (d) Financial statements are prepared.
 (e) Trial balance is prepared.
- Is Joe correct? If not, indicate to Joe the proper flow of the information.
20. Two students are discussing the use of a trial balance. They wonder whether the following errors, each considered separately, would prevent the trial balance from balancing. What would you tell them?
 (a) The bookkeeper debited Cash for \$600 and credited Salaries and Wages Expense for \$600 for payment of wages.
 (b) Cash collected on account was debited to Cash for \$900 and Service Revenue was credited for \$90.
21.  **PEPSICO** What are the normal balances for PepsiCo's Cash, Accounts Payable, and Interest Expense accounts?

BRIEF EXERCISES

BE2-1 For each of the following accounts indicate the effects of (a) a debit and (b) a credit on the accounts and (c) the normal balance of the account.

1. Accounts Payable.
2. Advertising Expense.
3. Service Revenue.
4. Accounts Receivable.
5. Common Stock.
6. Dividends.

Indicate debit and credit effects and normal balance.

(LO 2)

BE2-2 Transactions for the Kaustav Sen Company, which provides welding services, for the month of June are presented below. Identify the accounts to be debited and credited for each transaction.

- June 1 Kaustav Sen invests \$4,000 cash in exchange for shares of common stock in a small welding business.
 2 Purchases equipment on account for \$900.
 3 \$800 cash is paid to landlord for June rent.
 12 Bills L. Nigh \$300 for welding work done on account.

Identify accounts to be debited and credited.

(LO 2)

BE2-3 Using the data in BE2-2, journalize the transactions. (You may omit explanations.)

Journalize transactions.

(LO 4)

BE2-4  Tim Weber, a fellow student, is unclear about the basic steps in the recording process. Identify and briefly explain the steps in the order in which they occur.

Identify and explain steps in recording process.

(LO 3)

BE2-5 J.A. Motzek Inc. has the following transactions during August of the current year. Indicate (a) the effect on the accounting equation and (b) the debit-credit analysis illustrated on pages 66–71 of the text.

Indicate basic and debit-credit analysis.

(LO 2)

- Aug. 1 Opens an office as a financial advisor, investing \$5,000 in cash in exchange for common stock.
 4 Pays insurance in advance for 6 months, \$1,800 cash.
 16 Receives \$1,100 from clients for services provided.
 27 Pays secretary \$1,000 salary.

BE2-6 Using the data in BE2-5, journalize the transactions. (You may omit explanations.)

Journalize transactions.

(LO 4)

Post journal entries to T-accounts.

(LO 6)

BE2-7 Selected transactions for the Gilles Company are presented in journal form below. Post the transactions to T-accounts. Make one T-account for each item and determine each account's ending balance.

				J1
Date	Account Titles and Explanation	Ref.	Debit	Credit
May 5	Accounts Receivable		5,000	
	Service Revenue (Billed for services provided)			5,000
12	Cash		2,100	
	Accounts Receivable (Received cash in payment of account)			2,100
15	Cash		3,000	
	Service Revenue (Received cash for services provided)			3,000

Post journal entries to standard form of account.

(LO 6)

BE2-8 Selected journal entries for the Gilles Company are presented in BE2-7. Post the transactions using the standard form of account.

Prepare a trial balance.

(LO 7)

BE2-9 From the ledger balances given below, prepare a trial balance for the Starr Company at June 30, 2014. List the accounts in the order shown on page 74 of the text. All account balances are normal.

Accounts Payable \$9,000, Cash \$6,800, Common Stock \$20,000, Dividends \$1,200, Equipment \$17,000, Service Revenue \$6,000, Accounts Receivable \$3,000, Salaries and Wages Expense \$6,000, and Rent Expense \$1,000.

Prepare a correct trial balance.

(LO 7)

BE2-10 An inexperienced bookkeeper prepared the following trial balance. Prepare a correct trial balance, assuming all account balances are normal.

**Cheng Company
Trial Balance
December 31, 2014**

	<u>Debit</u>	<u>Credit</u>
Cash	\$16,800	
Prepaid Insurance		\$ 3,500
Accounts Payable		3,000
Unearned Service Revenue	4,200	
Common Stock		13,000
Dividends		4,500
Service Revenue		25,600
Salaries and Wages Expense	18,600	
Rent Expense		2,400
	<u>\$39,600</u>	<u>\$52,000</u>

> DO IT! REVIEW

Identify normal balances.

(LO 2)

DO IT! 2-1 Graham Kahl has just rented space in a strip mall. In this space, he will open a photography studio, to be called "Picture This!" A friend has advised Graham to set up a double-entry set of accounting records in which to record all of his business transactions.

Identify the balance sheet accounts that Graham will likely need to record the transactions needed to open his business (a corporation). Indicate whether the normal balance of each account is a debit or credit.

DO IT! 2-2 Graham Kahl engaged in the following activities in establishing his photography studio, Picture This!:

1. Opened a bank account in the name of Picture This! and deposited \$8,000 of his own money into this account in exchange for common stock.
2. Purchased photography supplies at a total cost of \$1,600. The business paid \$400 in cash and the balance is on account.
3. Obtained estimates on the cost of photography equipment from three different manufacturers.

In what form (type of record) should Graham record these three activities? Prepare the entries to record the transactions.

Record business activities.

(LO 4)

DO IT! 2-3 Graham Kahl recorded the following transactions during the month of April.

April 3	Cash	3,700	
	Service Revenue		3,700
April 16	Rent Expense	600	
	Cash		600
April 20	Salaries and Wages Expense	500	
	Cash		500

Post transactions.

(LO 6)

Post these entries to the Cash T-account of the general ledger to determine the ending balance in cash. The beginning balance in cash on April 1 was \$1,600.

DO IT! 2-4 The following accounts are taken from the ledger of Chillin' Company at December 31, 2014.

Prepare a trial balance.

(LO 7)

200	Notes Payable	\$20,000	101	Cash	\$6,000
311	Common Stock	25,000	120	Supplies	5,000
157	Equipment	76,000	522	Rent Expense	2,000
332	Dividends	8,000	220	Salaries and	
726	Salaries and			Wages Payable	3,000
	Wages Expense	38,000	201	Accounts Payable	9,000
400	Service Revenue	86,000	112	Accounts Receivable	8,000

Prepare a trial balance in good form.

The Navigator

EXERCISES

E2-1 Larry Burns has prepared the following list of statements about accounts.

1. An account is an accounting record of either a specific asset or a specific liability.
2. An account shows only increases, not decreases, in the item it relates to.
3. Some items, such as cash and accounts receivable, are combined into one account.
4. An account has a left, or credit side, and a right, or debit side.
5. A simple form of an account consisting of just the account title, the left side, and the right side, is called a T-account.

Analyze statements about accounting and the recording process.

(LO 1)

Instructions

Identify each statement as true or false. If false, indicate how to correct the statement.

E2-2 Selected transactions for B. Madar, an interior decorating firm, in its first month of business, are shown below and on page 84.

Identify debits, credits, and normal balances.

- Jan. 2 Invested \$15,000 cash in the business in exchange for common stock.
 3 Purchased used car for \$7,000 cash for use in the business.
 9 Purchased supplies on account for \$500.
 11 Billed customers \$1,800 for services performed.

(LO 2)

- 16 Paid \$200 cash for advertising.
- 20 Received \$700 cash from customers billed on January 11.
- 23 Paid creditor \$300 cash on balance owed.
- 28 Declared and paid a \$1,000 cash dividend.

Instructions

For each transaction indicate the following.

- (a) The basic type of account debited and credited (asset, liability, stockholders' equity).
- (b) The specific account debited and credited (cash, rent expense, service revenue, etc.).
- (c) Whether the specific account is increased or decreased.
- (d) The normal balance of the specific account.

Use the following format, in which the January 2 transaction is given as an example.

Date	Account Debited				Account Credited			
	(a) Basic Type	(b) Specific Account	(c) Effect	(d) Normal Balance	(a) Basic Type	(b) Specific Account	(c) Effect	(d) Normal Balance
Jan. 2	Asset	Cash	Increase	Debit	Stockholders' Equity	Common Stock	Increase	Credit

Journalize transactions.
(LO 4)

E2-3 Data for B. Madar, interior decorating, are presented in E2-2.

Instructions

Journalize the transactions using journal page J1. (You may omit explanations.)

Analyze transactions and determine their effect on accounts.

(LO 2)

E2-4 Presented below is information related to Robbins Real Estate Agency.

- Oct. 1 Lynn Robbins begins business as a real estate agent with a cash investment of \$20,000 in exchange for common stock.
- 2 Hires an administrative assistant.
- 3 Purchases office furniture for \$1,900, on account.
- 6 Sells a house and lot for N. Fennig; bills N. Fennig \$3,200 for realty services provided.
- 27 Pays \$850 on the balance related to the transaction of October 3.
- 30 Pays the administrative assistant \$2,500 in salary for October.

Instructions

Prepare the debit-credit analysis for each transaction as illustrated on pages 66–71.

Journalize transactions.
(LO 4)

E2-5 Transaction data for Robbins Real Estate Agency are presented in E2-4.

Instructions

Journalize the transactions. (You may omit explanations.)

Analyze transactions and journalize.

(LO 2, 3, 4)

E2-6 Elvira Industries had the following transactions.

- 1. Borrowed \$5,000 from the bank by signing a note.
- 2. Paid \$2,500 cash for a computer.
- 3. Purchased \$450 of supplies on account.

Instructions

- (a) Indicate what accounts are increased and decreased by each transaction.
- (b) Journalize each transaction. (Omit explanations.)

Analyze transactions and journalize.

(LO 2, 3, 4)

E2-7 Rockford Enterprises had the following selected transactions.

- 1. Kris Rockford invested \$5,000 cash in the business in exchange for common stock.
- 2. Paid office rent of \$1,100.
- 3. Performed consulting services and billed a client \$4,700.
- 4. Declared and paid a \$700 cash dividend.

Instructions

- (a) Indicate the effect each transaction has on the accounting equation (Assets = Liabilities + Stockholders' Equity), using plus and minus signs.
- (b) Journalize each transaction. (Omit explanations.)

E2-8 Rachel Manny has prepared the following list of statements about the general ledger.

1. The general ledger contains all the asset and liability accounts, but no stockholders' equity accounts.
2. The general ledger is sometimes referred to as simply the ledger.
3. The accounts in the general ledger are arranged in alphabetical order.
4. Each account in the general ledger is numbered for easier identification.
5. The general ledger is a book of original entry.

Analyze statements about the ledger.

(LO 5)

Instructions

Identify each statement as true or false. If false, indicate how to correct the statement.

E2-9 Selected transactions from the journal of Roberta Mendez, investment broker, are presented below.

Post journal entries and prepare a trial balance.

(LO 6, 7)

Date	Account Titles and Explanation	Ref.	Debit	Credit
Aug. 1	Cash		5,000	
	Common Stock			5,000
	(Investment of cash for stock)			
10	Cash		2,700	
	Service Revenue			2,700
	(Received cash for services provided)			
12	Equipment		5,000	
	Cash			1,000
	Notes Payable			4,000
	(Purchased office equipment for cash and notes payable)			
25	Account Receivable		1,600	
	Service Revenue			1,600
	(Billed clients for services provided)			
31	Cash		850	
	Accounts Receivable			850
	(Receipt of cash on account)			

Instructions

- (a) Post the transactions to T-accounts.
- (b) Prepare a trial balance at August 31, 2014.

E2-10 The T-accounts below summarize the ledger of Padre Landscaping Company at the end of the first month of operations.

Journalize transactions from account data and prepare a trial balance.

(LO 4, 7)

Cash		No. 101		Unearned		Service Revenue		No. 209	
4/1	10,000	4/15	720			4/30	1,000		
4/12	900	4/25	1,500						
4/29	400			Common Stock		No. 311			
4/30	1,000					4/1	10,000		
Accounts Receivable		No. 112		Service Revenue		No. 400			
4/7	3,200	4/29	400			4/7	3,200		
Supplies		No. 126				4/12	900		
4/4	1,800			Salaries and		Wages Expense		No. 726	
Accounts Payable		No. 201		415	720				
4/25	1,500	4/4	1,800						

Instructions

- (a) Prepare the complete general journal (including explanations) from which the postings to Cash were made.
 (b) Prepare a trial balance at April 30, 2014.

Journalize transactions from account data and prepare a trial balance.

(LO 4, 7)

E2-11 Presented below is the ledger for Sparks Co.

Cash		No. 101		Common Stock		No. 311	
10/1	5,000	10/4	400		10/1	5,000	
10/10	650	10/12	1,500		10/25	2,000	
10/10	3,000	10/15	280				
10/20	500	10/30	300				
10/25	2,000	10/31	500				
Accounts Receivable		No. 112		Dividends		No. 332	
10/6	800	10/20	500	10/30	300		
10/20	940						
Supplies		No. 126		Service Revenue		No. 400	
10/4	400				10/6	800	
					10/10	650	
					10/20	940	
Equipment		No. 157		Salaries and Wages Expense		No. 726	
10/3	2,000			10/31	500		
Notes Payable		No. 200		Rent Expense		No. 729	
		10/10	3,000	10/15	280		
Accounts Payable		No. 201					
10/12	1,500	10/3	2,000				

Instructions

- (a) Reproduce the journal entries for the transactions that occurred on October 1, 10, and 20, and provide explanations for each.
 (b) Determine the October 31 balance for each of the accounts above, and prepare a trial balance at October 31, 2014.

Prepare journal entries and post using standard account form.

(LO 4, 6)

E2-12 Selected transactions for Neve Campbell Company during its first month in business are presented below.

- Sept. 1 Invested \$10,000 cash in the business in exchange for common stock.
 5 Purchased equipment for \$12,000 paying \$4,000 in cash and the balance on account.
 25 Paid \$2,400 cash on balance owed for equipment.
 30 Declared and paid a \$500 cash dividend.

Campbell's chart of accounts shows No. 101 Cash, No. 157 Equipment, No. 201 Accounts Payable, No. 311 Common Stock; No. 332 Dividends.

Instructions

- (a) Journalize the transactions on page J1 of the journal. (Omit explanations.)
 (b) Post the transactions using the standard account form.

Analyze errors and their effects on trial balance.

(LO 7)

E2-13 The bookkeeper for Stan Tucci Equipment Repair made a number of errors in journalizing and posting, as described below.

- A credit posting of \$400 to Accounts Receivable was omitted.
- A debit posting of \$750 for Prepaid Insurance was debited to Insurance Expense.
- A collection from a customer of \$100 in payment of its account owed was journalized and posted as a debit to Cash \$100 and a credit to Service Revenue \$100.
- A credit posting of \$300 to Property Taxes Payable was made twice.
- A cash purchase of supplies for \$250 was journalized and posted as a debit to Supplies \$25 and a credit to Cash \$25.
- A debit of \$495 to Advertising Expense was posted as \$459.

Instructions

For each error:

- Indicate whether the trial balance will balance.
 - If the trial balance will not balance, indicate the amount of the difference.
 - Indicate the trial balance column that will have the larger total.
- Consider each error separately. Use the following form, in which error (1) is given as an example.

<u>Error</u>	<u>(a)</u> <u>In Balance</u>	<u>(b)</u> <u>Difference</u>	<u>(c)</u> <u>Larger Column</u>
(1)	No	\$400	debit

E2-14 The accounts in the ledger of Tempus Fugit Delivery Service contain the following balances on July 31, 2014.

Prepare a trial balance.
(LO 2, 7)

Accounts Receivable	\$10,642	Prepaid Insurance	\$ 1,968
Accounts Payable	8,396	Maintenance and Repairs Expense	961
Cash	?	Service Revenue	10,610
Equipment	49,360	Dividends	700
Gasoline Expense	758	Common Stock	40,000
Utilities Expense	523	Salaries and Wages Expense	4,428
Notes Payable	26,450	Salaries and Wages Payable	815
		Retained Earnings	4,636

Instructions

Prepare a trial balance with the accounts arranged as illustrated in the chapter and fill in the missing amount for Cash.

E2-15 The statement of cash flows classifies each transaction as an operating activity, an investing activity, or a financing activity. Operating activities are the types of activities the company performs to generate profits. Investing activities include the purchase of long-lived assets such as equipment or the purchase of investment securities. Financing activities are borrowing money, issuing shares of stock, and paying dividends.

Identify cash flow activities.
(LO 7)

Presented below are the following transactions.

- Issued stock for \$20,000 cash.
- Issued note payable for \$10,000 cash.
- Purchased office equipment for \$11,000 cash.
- Received \$15,000 cash for services provided.
- Paid \$1,000 cash for rent.
- Paid \$600 cash dividend to stockholders.
- Paid \$6,500 cash for salaries.

Instructions

Classify each of these transactions as operating, investing, or financing activities.

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Exercise Set B and Challenge Exercises.

PROBLEMS: SET A

P2-1A Prairie Park was started on April 1 by C. J. Amaro and associates. The following selected events and transactions occurred during April.

Journalize a series of transactions.

- Apr. 1 Stockholders invested \$50,000 cash in the business in exchange for common stock.
 4 Purchased land costing \$30,000 for cash.
 8 Incurred advertising expense of \$1,800 on account.
 11 Paid salaries to employees \$1,500.

(LO 2, 4)

- 12 Hired park manager at a salary of \$4,000 per month, effective May 1.
- 13 Paid \$1,500 cash for a one-year insurance policy.
- 17 Declared and paid a \$1,400 cash dividend.
- 20 Received \$5,700 in cash for admission fees.
- 25 Sold 100 coupon books for \$30 each. Each book contains 10 coupons that entitle the holder to one admission to the park.
- 30 Received \$8,900 in cash admission fees.
- 30 Paid \$900 on balance owed for advertising incurred on April 8.

Amaro uses the following accounts: Cash, Prepaid Insurance, Land, Accounts Payable, Unearned Service Revenue, Common Stock; Dividends; Service Revenue, Advertising Expense, and Salaries and Wages Expense.

Instructions

Journalize the April transactions.

Journalize transactions, post, and prepare a trial balance.

(LO 2, 4, 6, 7)

P2-2A Kara Shin is a licensed CPA. During the first month of operations of her business, Kara Shin, Inc., the following events and transactions occurred.

- May 1 Stockholders invested \$20,000 cash in exchange for common stock.
- 2 Hired a secretary-receptionist at a salary of \$2,000 per month.
- 3 Purchased \$1,500 of supplies on account from Hartig Supply Company.
- 7 Paid office rent of \$900 cash for the month.
- 11 Completed a tax assignment and billed client \$2,800 for services provided.
- 12 Received \$3,500 advance on a management consulting engagement.
- 17 Received cash of \$1,200 for services completed for Lucille Co.
- 31 Paid secretary-receptionist \$2,000 salary for the month.
- 31 Paid 40% of balance due Hartig Supply Company.

Kara uses the following chart of accounts: No. 101 Cash, No. 112 Accounts Receivable, No. 126 Supplies, No. 201 Accounts Payable, No. 209 Unearned Service Revenue, No. 311 Common Stock, No. 400 Service Revenue, No. 726 Salaries and Wages Expense, and No. 729 Rent Expense.

Instructions

- (a) Journalize the transactions.
- (b) Post to the ledger accounts.
- (c) Prepare a trial balance on May 31, 2014.

Trial balance totals \$28,400

Journalize and post transactions and prepare a trial balance.

(LO 2, 4, 6, 7)

P2-3A Mark Hockenberry owns and manages a computer repair service, which had the following trial balance on December 31, 2013 (the end of its fiscal year).

Byte Repair Service, Inc. Trial Balance December 31, 2013

Cash	\$ 8,000	
Accounts Receivable	15,000	
Supplies	13,000	
Prepaid Rent	3,000	
Equipment	21,000	
Accounts Payable		\$19,000
Common Stock		30,000
Retained Earnings		11,000
	\$60,000	\$60,000

Summarized transactions for January 2014 were as follows.

1. Advertising costs, paid in cash, \$1,000.
2. Additional supplies acquired on account \$4,000.
3. Miscellaneous expenses, paid in cash, \$1,700.
4. Cash collected from customers in payment of accounts receivable \$13,000.
5. Cash paid to creditors for accounts payable due \$15,000.
6. Repair services performed during January: for cash \$5,000; on account \$9,000.
7. Wages for January, paid in cash, \$3,000.
8. Dividends during January were \$2,000.

Instructions

- Open T-accounts for each of the accounts listed in the trial balance, and enter the opening balances for 2014.
- Prepare journal entries to record each of the January transactions. (Omit explanations.)
- Post the journal entries to the accounts in the ledger. (Add accounts as needed.)
- Prepare a trial balance as of January 31, 2014.

P2-4A The trial balance of the Garland Company shown below does not balance.

**Garland Company
Trial Balance
May 31, 2014**

	<u>Debit</u>	<u>Credit</u>
Cash	\$ 3,850	
Accounts Receivable		\$ 2,750
Prepaid Insurance	700	
Equipment	12,000	
Accounts Payable		4,500
Unearned Service Revenue	560	
Common Stock		11,700
Service Revenue	8,690	
Salaries and Wages Expense	4,200	
Advertising Expense		1,100
Utilities Expense	800	
	<u>\$30,800</u>	<u>\$20,050</u>

Your review of the ledger reveals that each account has a normal balance. You also discover the following errors.

- The totals of the debit sides of Prepaid Insurance, Accounts Payable, and Utilities Expense were each understated \$100.
- Transposition errors were made in Accounts Receivable and Service Revenue. Based on postings made, the correct balances were \$2,570 and \$8,960, respectively.
- A debit posting to Salaries and Wages Expense of \$200 was omitted.
- A \$1,000 cash dividend was debited to Common Stock for \$1,000 and credited to Cash for \$1,000.
- A \$520 purchase of supplies on account was debited to Equipment for \$520 and credited to Cash for \$520.
- A cash payment of \$450 for advertising was debited to Advertising Expense for \$45 and credited to Cash for \$45.
- A collection from a customer for \$420 was debited to Cash for \$420 and credited to Accounts Payable for \$420.

Instructions

Prepare a correct trial balance. Note that the chart of accounts includes the following: Dividends and Supplies. (*Hint:* It helps to prepare the correct journal entry for the transaction described and compare it to the mistake made.)

P2-5A The Classic Theater opened on April 1. All facilities were completed on March 31. At this time, the ledger showed No. 101 Cash \$6,000, No. 140 Land \$10,000, No. 145 Buildings (concession stand, projection room, ticket booth, and screen) \$8,000, No. 157 Equipment \$6,000, No. 201 Accounts Payable \$2,000, No. 275 Mortgage Payable \$8,000, and No. 311 Common Stock \$20,000. During April, the following events and transactions occurred.

- Apr. 2 Paid film rental of \$800 on first movie.
- 3 Ordered two additional films at \$1,000 each.
- 9 Received \$1,800 cash from admissions.
- 10 Made \$2,000 payment on mortgage and \$1,000 for accounts payable due.
- 11 Classic Theater contracted with D. Zarle Company to operate the concession stand. Zarle is to pay 18% of gross concession receipts (payable monthly) for the rental of the concession stand.
- 12 Paid advertising expenses \$300.

Trial balance totals \$63,000

Prepare a correct trial balance.

(LO 7)

Trial balance totals \$26,720

Journalize transactions, post, and prepare a trial balance.

(LO 2, 4, 6, 7)

- 20 Received one of the films ordered on April 3 and was billed \$1,000. The film will be shown in April.
- 25 Received \$5,200 cash from admissions.
- 29 Paid salaries \$1,600.
- 30 Received statement from D. Zarle showing gross concession receipts of \$1,000 and the balance due to The Classic Theater of \$180 ($\$1,000 \times 18\%$) for April. Zarle paid one-half of the balance due and will remit the remainder on May 5.
- 30 Prepaid \$900 rental on special film to be run in May.

In addition to the accounts identified above, the chart of accounts shows No. 112 Accounts Receivable, No. 136 Prepaid Rent, No. 400 Service Revenue, No. 429 Rent Revenue, No. 610 Advertising Expense, No. 726 Salaries and Wages Expense, and No. 729 Rent Expense.

Instructions

- (a) Enter the beginning balances in the ledger as of April 1. Insert a check mark (✓) in the reference column of the ledger for the beginning balance.
- (b) Journalize the April transactions.
- (c) Post the April journal entries to the ledger. Assume that all entries are posted from page 1 of the journal.
- (d) Prepare a trial balance on April 30, 2014.

Trial balance totals \$35,180

PROBLEMS: SET B

Journalize a series of transactions.

(LO 2, 4)

P2-1B Surepar Disc Golf Course was opened on March 1 by Bill Arnsdorf. The following selected events and transactions occurred during March:

- Mar. 1 Invested \$60,000 cash in the business in exchange for common stock.
- 3 Purchased Lee's Golf Land for \$38,000 cash. The price consists of land \$23,000, shed \$9,000, and equipment \$6,000. (Make one compound entry.)
- 5 Advertised the opening of the driving range and miniature golf course, paying advertising expenses of \$1,600.
- 6 Paid cash \$2,400 for a one-year insurance policy.
- 10 Purchased golf discs and other equipment for \$1,050 from Parton Company payable in 30 days.
- 18 Received \$340 in cash for golf fees earned.
- 19 Sold 100 coupon books for \$18 each. Each book contains 4 coupons that enable the holder to play one round of disc golf.
- 25 Declared and paid an \$800 cash dividend.
- 30 Paid salaries of \$250.
- 30 Paid Parton Company in full.
- 31 Received \$200 cash for fees earned.

Bill Arnsdorf uses the following accounts: Cash, Prepaid Insurance, Land, Buildings, Equipment, Accounts Payable, Unearned Service Revenue, Common Stock, Dividends, Service Revenue, Advertising Expense, and Salaries and Wages Expense.

Instructions

Journalize the March transactions.

P2-2B Judi Dench is a licensed dentist. During the first month of the operation of her business, the following events and transactions occurred.

- April 1 Stockholders invested \$40,000 cash in exchange for common stock.
- 1 Hired a secretary-receptionist at a salary of \$600 per week payable monthly.
- 2 Paid office rent for the month \$1,400.
- 3 Purchased dental supplies on account from Halo Company \$5,200.
- 10 Provided dental services and billed insurance companies \$6,600.
- 11 Received \$1,000 cash advance from Rich Welk for an implant.
- 20 Received \$2,100 cash for services completed and delivered to Phil Stueben.
- 30 Paid secretary-receptionist for the month \$2,400.
- 30 Paid \$1,900 to Halo Company for accounts payable due.

Judi uses the following chart of accounts: No. 101 Cash, No. 112 Accounts Receivable, No. 126 Supplies, No. 201 Accounts Payable, No. 209 Unearned Service Revenue, No. 311 Common Stock, No. 400 Service Revenue, No. 726 Salaries and Wages Expense, and No. 729 Rent Expense.

Journalize transactions, post, and prepare a trial balance.

(LO 2, 4, 6, 7)

Instructions

- Journalize the transactions.
- Post to the ledger accounts.
- Prepare a trial balance on April 30, 2014.

P2-3B Chamberlain Services was formed on May 1, 2014. The following transactions took place during the first month.

Transactions on May 1:

- Stockholders invested \$50,000 cash in exchange for common stock.
- Hired two employees to work in the warehouse. They will each be paid a salary of \$2,800 per month.
- Signed a 2-year rental agreement on a warehouse; paid \$24,000 cash in advance for the first year.
- Purchased furniture and equipment costing \$30,000. A cash payment of \$8,000 was made immediately; the remainder will be paid in 6 months.
- Paid \$1,800 cash for a one-year insurance policy on the furniture and equipment.

Transactions during the remainder of the month:

- Purchased basic office supplies for \$750 cash.
- Purchased more office supplies for \$1,300 on account.
- Total revenues earned were \$20,000—\$8,000 cash and \$12,000 on account.
- Paid \$400 to suppliers for accounts payable due.
- Received \$3,000 from customers in payment of accounts receivable.
- Received utility bills in the amount of \$260, to be paid next month.
- Paid the monthly salaries of the two employees, totalling \$5,600.

Instructions

- Prepare journal entries to record each of the events listed. (Omit explanations.)
- Post the journal entries to T-accounts.
- Prepare a trial balance as of May 31, 2014.

P2-4B The trial balance of Ron Salem Co. shown below does not balance.

Ron Salem Co.
Trial Balance
June 30, 2014

	Debit	Credit
Cash		\$ 3,840
Accounts Receivable	\$ 2,898	
Supplies	800	
Equipment	3,000	
Accounts Payable		2,666
Unearned Service Revenue	2,200	
Common Stock		9,000
Dividends	800	
Service Revenue		2,380
Salaries and Wages Expense	3,400	
Utilities Expense	910	
	\$14,008	\$17,886

Each of the listed accounts has a normal balance per the general ledger. An examination of the ledger and journal reveals the following errors.

- Cash received from a customer in payment of its account was debited for \$570, and Accounts Receivable was credited for the same amount. The actual collection was for \$750.
- The purchase of a computer on account for \$620 was recorded as a debit to Supplies for \$620 and a credit to Accounts Payable for \$620.
- Services were performed on account for a client for \$890. Accounts Receivable was debited for \$890, and Service Revenue was credited for \$89.
- A debit posting to Salaries and Wages Expense of \$700 was omitted.
- A payment of a balance due for \$309 was credited to Cash for \$309 and credited to Accounts Payable for \$390.
- The payment of a \$600 cash dividend was debited to Salaries and Wages Expense for \$600 and credited to Cash for \$600.

P2-5B The Russo Theater, owned by Alan Russo, will begin operations in March. The Russo will be unique in that it will show only triple features of sequential theme movies. As of March 1, the ledger of Russo showed No. 101 Cash \$8,000, No. 140 Land \$21,000, No. 145 Buildings (concession stand, projection room, ticket booth, and screen) \$10,000, No. 157 Equipment \$8,000, No. 201 Accounts Payable \$7,000, and No. 311 Common Stock \$40,000. During the month of March, the following events and transactions occurred.

- Mar. 2 Rented the three *Indiana Jones* movies to be shown for the first 3 weeks of March. The film rental was \$3,500; \$1,000 was paid in cash and \$2,500 will be paid on March 10.
- 3 Ordered the *Lord of the Rings* movies to be shown the last 10 days of March. It will cost \$240 per night.
- 9 Received \$4,000 cash from admissions.
- 10 Paid balance due on *Indiana Jones* movies rental and \$1,600 on March 1 accounts payable.
- 11 Russo Theater contracted with M. Brewer to operate the concession stand. Brewer is to pay 15% of gross concession receipts (payable monthly) for the right to operate the concession stand.
- 12 Paid advertising expenses \$450.
- 20 Received \$5,000 cash from customers for admissions.
- 20 Received the *Lord of Rings* movies and paid the rental fee of \$2,400.
- 31 Paid salaries of \$2,500.
- 31 Received statement from M. Brewer showing gross receipts from concessions of \$5,000 and the balance due to Russo Theater of \$750 ($\$5,000 \times 15\%$) for March. Brewer paid one-half the balance due and will remit the remainder on April 5.
- 31 Received \$9,000 cash from customers for admissions.

In addition to the accounts identified above, the chart of accounts includes No. 112 Accounts Receivable, No. 400 Service Revenue, No. 429 Rent Revenue, No. 610 Advertising Expense, No. 729 Rent Expense, and No. 726 Salaries and Wages Expense.

Instructions

- (a) Enter the beginning balances in the ledger. Insert a check mark (✓) in the reference column of the ledger for the beginning balance.
- (b) Journalize the March transactions.
- (c) Post the March journal entries to the ledger. Assume that all entries are posted from page 1 of the journal.
- (d) Prepare a trial balance on March 31, 2014.

Trial balance totals \$64,150

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Problem Set C.

CONTINUING COOKIE CHRONICLE

(*Note:* This is a continuation of the Cookie Chronicle from Chapter 1.)

CCC2 After researching the different forms of business organization, Natalie Koebel decides to operate "Cookie Creations" as a corporation. She then starts the process of getting the business running. In November 2014, the following activities take place.

- Nov. 8 Natalie cashes her U.S. Savings Bonds and receives \$520, which she deposits in her personal bank account.
- 8 She opens a bank account under the name "Cookie Creations" and transfers \$500 from her personal account to the new account in exchange for common stock.

- 11 Natalie pays \$65 to have advertising brochures and posters printed. She plans to distribute these as opportunities arise. (*Hint: Use Advertising Expense.*)
- 13 She buys baking supplies, such as flour, sugar, butter, and chocolate chips, for \$125 cash.
- 14 Natalie starts to gather some baking equipment to take with her when teaching the cookie classes. She has an excellent top-of-the-line food processor and mixer that originally cost her \$750. Natalie decides to start using it only in her new business. She estimates that the equipment is currently worth \$300. She invests the equipment in the business in exchange for common stock.
- 16 Natalie realizes that her initial cash investment is not enough. Her grandmother lends her \$2,000 cash, for which Natalie signs a note payable in the name of the business. Natalie deposits the money in the business bank account. (*Hint: The note does not have to be repaid for 24 months. As a result, the notes payable should be reported in the accounts as the last liability and also on the balance sheet as the last liability.*)
- 17 She buys more baking equipment for \$900 cash.
- 20 She teaches her first class and collects \$125 cash.
- 25 Natalie books a second class for December 4 for \$150. She receives \$30 cash in advance as a down payment.
- 30 Natalie pays \$1,320 for a one-year insurance policy that will expire on December 1, 2015.

Instructions

- (a) Prepare journal entries to record the November transactions.
- (b) Post the journal entries to general ledger accounts.
- (c) Prepare a trial balance at November 30.

Broadening Your PERSPECTIVE

Financial Reporting and Analysis

Financial Reporting Problem: PepsiCo, Inc.

BY2-1 The financial statements of **PepsiCo, Inc.** are presented in Appendix A. The notes accompanying the statements contain the following selected accounts, stated in millions of dollars.

Accounts Payable	Income Taxes Payable
Accounts Receivable	Interest Expense
Property, Plant, and Equipment	Inventory

Instructions

- (a) Answer the following questions.
 - (1) What is the increase and decrease side for each account?
 - (2) What is the normal balance for each account?
- (b) Identify the probable other account in the transaction and the effect on that account when:
 - (1) Accounts Receivable is decreased.
 - (2) Accounts Payable is decreased.
 - (3) Inventory is increased.
- (c) Identify the other account(s) that ordinarily would be involved when:
 - (1) Interest Expense is increased.
 - (2) Property, Plant, and Equipment is increased.

Comparative Analysis Problem: PepsiCo, Inc. vs. The Coca-Cola Company

BY2-2 PepsiCo's financial statements are presented in Appendix A. Financial statements of The Coca-Cola Company are presented in Appendix B.

Instructions

- (a) Based on the information contained in the financial statements, determine the normal balance of the listed accounts for each company.

Pepsi	Coca-Cola
1. Inventory	1. Accounts Receivable
2. Property, Plant, and Equipment	2. Cash and Cash Equivalents
3. Accounts Payable	3. Cost of Goods Sold (expense)
4. Interest Expense	4. Sales (revenue)

- (b) Identify the other account ordinarily involved when:
- (1) Accounts Receivable is increased.
 - (2) Salaries and Wages Payable is decreased.
 - (3) Property, Plant, and Equipment is increased.
 - (4) Interest Expense is increased.

Real-World Focus

BYP2-3 Much information about specific companies is available on the Internet. Such information includes basic descriptions of the company's location, activities, industry, financial health, and financial performance.

Address: biz.yahoo.com/i, or go to www.wiley.com/college/weygandt

Steps

1. Type in a company name, or use index to find company name.
2. Choose **Profile**. Perform instructions (a)–(c) below.
3. Click on the company's specific industry to identify competitors. Perform instructions (d)–(g) below.

Instructions

Answer the following questions.

- (a) What is the company's industry?
- (b) What was the company's total sales?
- (c) What was the company's net income?
- (d) What are the names of four of the company's competitors?
- (e) Choose one of these competitors.
- (f) What is this competitor's name? What were its sales? What was its net income?
- (g) Which of these two companies is larger by size of sales? Which one reported higher net income?

Critical Thinking**Decision-Making Across the Organization**

BYP2-4 Amy Torbert operates Hollins Riding Academy. The academy's primary sources of revenue are riding fees and lesson fees, which are paid on a cash basis. Amy also boards horses for owners, who are billed monthly for boarding fees. In a few cases, boarders pay in advance of expected use. For its revenue transactions, the academy maintains the following accounts: No. 1 Cash, No. 5 Boarding Accounts Receivable, No. 27 Unearned Boarding Revenue, No. 51 Riding Revenue, No. 52 Lesson Revenue, and No. 53 Boarding Revenue.

The academy owns 10 horses, a stable, a riding corral, riding equipment, and office equipment. These assets are accounted for in accounts No. 11 Horses, No. 12 Building, No. 13 Riding Corral, No. 14 Riding Equipment, and No. 15 Office Equipment.

For its expenses, the academy maintains the following accounts: No. 6 Hay and Feed Supplies, No. 7 Prepaid Insurance, No. 21 Accounts Payable, No. 60 Salaries Expense, No. 61 Advertising Expense, No. 62 Utilities Expense, No. 63 Veterinary Expense, No. 64 Hay and Feed Expense, and No. 65 Insurance Expense.

Amy makes periodic payments of cash dividends to stockholders. To record stockholders' equity in the business and dividends, Torbert maintains three accounts: No. 50 Common Stock, No. 51 Retained Earnings, and No. 52 Dividends.

During the first month of operations, an inexperienced bookkeeper was employed. Amy Torbert asks you to review the following eight entries of the 50 entries made during the month. In each case, the explanation for the entry is correct.

May 1	Cash Common Stock (Invested \$18,000 cash in exchange for stock)	18,000	18,000
5	Cash Riding Revenue (Received \$250 cash for lessons provided)	250	250
7	Cash Boarding Revenue (Received \$500 for boarding of horses beginning June 1)	500	500
14	Riding Equipment Cash (Purchased desk and other office equipment for \$800 cash)	80	800
15	Salaries Expense Cash (Issued dividend checks to stockholders)	440	440
20	Cash Riding Revenue (Received \$184 cash for riding fees)	148	184
30	Veterinary Expense Accounts Payable (Received bill of \$75 from veterinarian for services rendered)	75	75
31	Hay and Feed Expense Cash (Purchased an estimated 2 months' supply of feed and hay for \$1,700 on account)	1,500	1,500

Instructions

With the class divided into groups, answer the following.

- Identify each journal entry that is correct. For each journal entry that is incorrect, prepare the entry that should have been made by the bookkeeper.
- Which of the incorrect entries would prevent the trial balance from balancing?
- What was the correct net income for May, assuming the bookkeeper reported net income of \$4,600 after posting all 50 entries?
- What was the correct cash balance at May 31, assuming the bookkeeper reported a balance of \$12,475 after posting all 50 entries (and the only errors occurred in the items listed above)?

Communication Activity

BYP2-5 Shandler's Maid Company offers home cleaning service. Two recurring transactions for the company are billing customers for services rendered and paying employee salaries. For example, on March 15, bills totaling \$6,000 were sent to customers and \$2,000 was paid in salaries to employees.

Instructions

Write a memo to your instructor that explains and illustrates the steps in the recording process for each of the March 15 transactions. Use the format illustrated in the text under the heading, "The Recording Process Illustrated" (page 66).

Ethics Case

BYP2-6 Sara Rankin is the assistant chief accountant at Hokey Company, a manufacturer of computer chips and cellular phones. The company presently has total sales of \$20 million. It is the end of the first quarter. Sara is hurriedly trying to prepare a general ledger trial balance so that quarterly financial statements can be prepared and released to management and the regulatory agencies. The total credits on the trial balance exceed the debits by \$1,000. In order to meet the 4 p.m. deadline, Sara decides to force the debits and credits into balance by adding the amount of the difference to the Equipment account. She chose Equipment because it is one of the larger account balances; percentage-wise, it will be the least misstated. Sara “plugs” the difference! She believes that the difference will not affect anyone’s decisions. She wishes that she had another few days to find the error but realizes that the financial statements are already late.

Instructions

- Who are the stakeholders in this situation?
- What are the ethical issues involved in this case?
- What are Sara’s alternatives?

All About You

BYP2-7 Every company needs to plan in order to move forward. Its top management must consider where it wants the company to be in three to five years. Like a company, you need to think about where you want to be three to five years from now, and you need to start taking steps now in order to get there.

Instructions

Provide responses to each of the following items.

- Where would you like to be working in three to five years? Describe your plan for getting there by identifying between five and 10 specific steps that you need to take in order to get there.
- In order to get the job you want, you will need a résumé. Your résumé is the equivalent of a company’s annual report. It needs to provide relevant and reliable information about your past accomplishments so that employers can decide whether to “invest” in you. Do a search on the Internet to find a good résumé format. What are the basic elements of a résumé?
- A company’s annual report provides information about a company’s accomplishments. In order for investors to use the annual report, the information must be reliable; that is, users must have faith that the information is accurate and believable. How can you provide assurance that the information on your résumé is reliable?
- Prepare a résumé assuming that you have accomplished the five to 10 specific steps you identified in part (a). Also, provide evidence that would give assurance that the information is reliable.

BYP2-8 If you haven’t already done so, in the not-too-distant future you will prepare a résumé. In some ways, your résumé is like a company’s annual report. Its purpose is to enable others to evaluate your past, in an effort to predict your future.

A résumé is your opportunity to create a positive first impression. It is important that it be impressive—but it should also be accurate. In order to increase their job prospects, some people are tempted to “inflate” their résumés by overstating the importance of some past accomplishments or positions. In fact, you might even think that “everybody does it” and that if you don’t do it, you will be at a disadvantage.

David Edmondson, the president and CEO of well-known electronics retailer **Radio Shack**, overstated his accomplishments by claiming that he had earned a bachelor’s of science degree, when in fact he had not. Apparently, his employer had not done a background check to ensure the accuracy of his résumé. Should Radio Shack have fired him?

YES: Radio Shack is a publicly traded company. Investors, creditors, employees, and others doing business with the company will not trust it if its leader is known to have poor integrity. The “tone at the top” is vital to creating an ethical organization.

NO: Mr. Edmondson had been a Radio Shack employee for 11 years. He had served the company in a wide variety of positions, and had earned the position of CEO through exceptional performance. While the fact that he lied 11 years earlier on his résumé was unfortunate, his service since then made this

past transgression irrelevant. In addition, the company was in the midst of a massive restructuring, which included closing 700 of its 7,000 stores. It could not afford additional upheaval at this time.

Instructions

Write a response indicating your position regarding this situation. Provide support for your view.

Answers to Chapter Questions

Answers to Insight and Accounting Across the Organization Questions

p. 58 Keeping Score Q: Do you think that the **Chicago Bears** football team would be likely to have the same major revenue and expense accounts as the Cubs? **A:** Because their businesses are similar—professional sports—many of the revenue and expense accounts for the baseball and football teams might be similar.

p. 63 What Would Sam Do? Q: Why did Sam Walton keep separate pigeonholes and blue binders? **A:** Using separate pigeonholes and blue binders for each store enabled Walton to accumulate and track the performance of each individual store easily. **Q:** Why bother to keep separate records for each store? **A:** Keeping separate records for each store provided Walton with more information about performance of individual stores and managers, and greater control. Walton would want and need the same advantages if he were starting his business today. The difference is that he might now use a computerized system for small businesses.

p. 75 Why Accuracy Matters Q: In order for these companies to prepare and issue financial statements, their accounting equations (debits and credits) must have been in balance at year-end. How could these errors or misstatements have occurred? **A:** A company's accounting equation (its books) can be in balance yet its financial statements have errors or misstatements because of the following: entire transactions were not recorded; transactions were recorded at wrong amounts; transactions were recorded in the wrong accounts; transactions were recorded in the wrong accounting period. Audits of financial statements uncover some, but obviously not all, errors or misstatements.

Answers to Self-Test Questions

1. b 2. c 3. d 4. d 5. d 6. b 7. a 8. c 9. b 10. c 11. d 12. c (\$16,000 - \$5,000)

A Look at IFRS

International companies use the same set of procedures and records to keep track of transaction data. Thus, the material in Chapter 2 dealing with the account, general rules of debit and credit, and steps in the recording process—the journal, ledger, chart of accounts, and trial balance—is the same under both GAAP and IFRS.

Key Points

- Transaction analysis is the same under IFRS and GAAP but, as you will see in later chapters, different standards sometimes impact how transactions are recorded.
- Rules for accounting for specific events sometimes differ across countries. For example, European companies rely less on historical cost and more on fair value than U.S. companies. Despite the differences, the double-entry accounting system is the basis of accounting systems worldwide.

- Both the IASB and FASB go beyond the basic definitions provided in this textbook for the key elements of financial statements, that is, assets, liabilities, equity, revenues, and expenses. The more substantive definitions, using the IASB definitional structure, are provided in the Chapter 1 *A Look at IFRS* discussion.
- A trial balance under IFRS follows the same format as shown in the textbook.
- As shown in the textbook, dollars signs are typically used only in the trial balance and the financial statements. The same practice is followed under IFRS, using the currency sign of the country that the reporting company is headquartered.
- In February 2010, the SEC expressed a desire to continue working toward a single set of high-quality standards. In deciding whether the United States should adopt IFRS, some of the issues the SEC said should be considered are:
 - ◆ Whether IFRS is sufficiently developed and consistent in application.
 - ◆ Whether the IASB is sufficiently independent.
 - ◆ Whether IFRS is established for the benefit of investors.
 - ◆ The issues involved in educating investors about IFRS.
 - ◆ The impact of a switch to IFRS on U.S. laws and regulations.
 - ◆ The impact on companies including changes to their accounting systems, contractual arrangements, corporate governance, and litigation.
 - ◆ The issues involved in educating accountants, so they can prepare statements under IFRS.

Looking to the Future

The basic recording process shown in this textbook is followed by companies across the globe. It is unlikely to change in the future. The definitional structure of assets, liabilities, equity, revenues, and expenses may change over time as the IASB and FASB evaluate their overall conceptual framework for establishing accounting standards.

IFRS Practice

IFRS Self-Test Questions

1. Which statement is *correct* regarding IFRS?
 - (a) IFRS reverses the rules of debits and credits, that is, debits are on the right and credits are on the left.
 - (b) IFRS uses the same process for recording transactions as GAAP.
 - (c) The chart of accounts under IFRS is different because revenues follow assets.
 - (d) None of the above statements are correct.
2. The expanded accounting equation under IFRS is as follows:
 - (a) $\text{Assets} = \text{Liabilities} + \text{Common Stock} + \text{Retained Earnings} + \text{Dividends} + \text{Revenues} - \text{Expenses}$.
 - (b) $\text{Assets} + \text{Liabilities} = \text{Common Stock} + \text{Retained Earnings} - \text{Dividends} + \text{Revenues} - \text{Expenses}$.
 - (c) $\text{Assets} = \text{Liabilities} + \text{Common Stock} + \text{Retained Earnings} - \text{Dividends} + \text{Revenues} - \text{Expenses}$.
 - (d) $\text{Assets} = \text{Liabilities} + \text{Common Stock} + \text{Retained Earnings} - \text{Dividends} - \text{Revenues} - \text{Expenses}$.
3. A trial balance:
 - (a) is the same under IFRS and GAAP.
 - (b) proves that transactions are recorded correctly.
 - (c) proves that all transactions have been recorded.
 - (d) will not balance if a correct journal entry is posted twice.

4. One difference between IFRS and GAAP is that:
 - (a) GAAP uses accrual-accounting concepts and IFRS uses primarily the cash basis of accounting.
 - (b) IFRS uses a different posting process than GAAP.
 - (c) IFRS uses more fair value measurements than GAAP.
 - (d) the limitations of a trial balance are different between IFRS and GAAP.
5. The general policy for using proper currency signs (dollar, yen, pound, etc.) is the same for both IFRS and this textbook. This policy is as follows:
 - (a) Currency signs only appear in ledgers and journal entries.
 - (b) Currency signs are only shown in the trial balance.
 - (c) Currency signs are shown for all compound journal entries.
 - (d) Currency signs are shown in trial balances and financial statements.

IFRS Exercise

IFRS2-1 Describe some of the issues the SEC must consider in deciding whether the United States should adopt IFRS.

International Financial Reporting Problem: Zetar plc

IFRS2-2 The financial statements of **Zetar plc** are presented in Appendix C. The company's complete annual report, including the notes to its financial statements, is available at www.zetarplc.com.

Instructions

Describe in which statement each of the following items is reported, and the position in the statement (e.g., current asset).

- (a) Other administrative expenses.
- (b) Cash at bank.
- (c) Borrowings and overdrafts.
- (d) Finance costs.

Chapter 3

Adjusting the Accounts

Feature Story

What Was Your Profit?

The accuracy of the financial reporting system depends on answers to a few fundamental questions: At what point has revenue been recognized? At what point is the earnings process complete? When have expenses really been incurred?

During the 1990s, the stock prices of dot-com companies boomed. Most dot-coms earned most of their revenue from selling advertising space on their websites. To boost reported revenue, some dot-coms began swapping website ad space. Company A would put an ad for its website on company B's website, and company B would put

an ad for its website on company A's website. No money changed hands, but each company recorded revenue (for the value of the space that it gave the other company on its site). This practice did little to boost net income, and it resulted in no additional cash flow—but it did boost *reported revenue*. Regulators eventually put an end to this misleading practice.

Another type of transgression results from companies recording revenues or expenses in the wrong year. In fact, shifting revenues and expenses is one of the most common abuses of financial accounting. Xerox admitted reporting billions of dollars of lease revenue in periods earlier than it should have been reported. And

Learning Objectives

After studying this chapter, you should be able to:

- 1 Explain the time period assumption.
- 2 Explain the accrual basis of accounting.
- 3 Explain the reasons for adjusting entries.
- 4 Identify the major types of adjusting entries.
- 5 Prepare adjusting entries for deferrals.
- 6 Prepare adjusting entries for accruals.
- 7 Describe the nature and purpose of an adjusted trial balance.

The Navigator

WorldCom stunned the financial markets with its admission that it had boosted net income by billions of dollars by delaying the recognition of expenses until later years.

Unfortunately, revelations such as these have become all too common in the corporate world. It is no wonder that a U.S. Trust survey of affluent Americans reported that 85% of respondents believed that there should be tighter regulation of financial disclosures; 66% said

they did not trust the management of publicly traded companies.

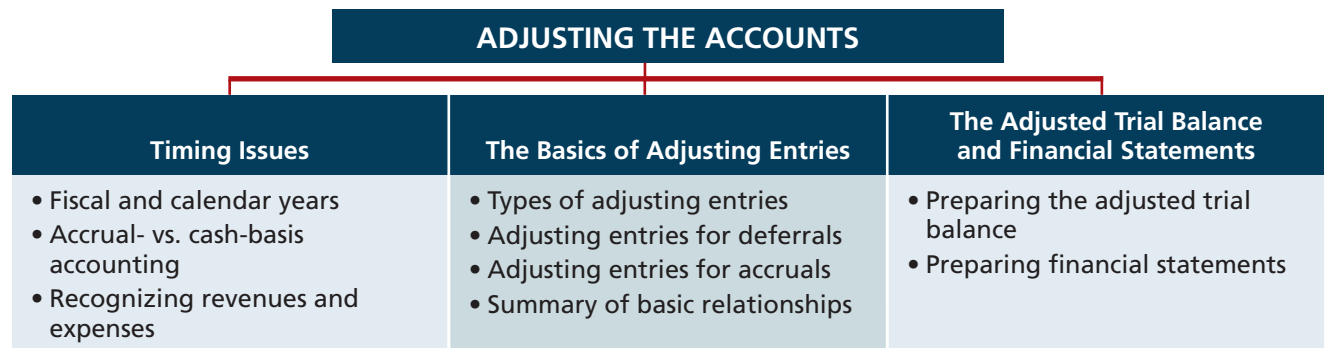

Why did so many companies violate basic financial reporting rules and sound ethics? Many speculate that as stock prices climbed, executives were under increasing pressure to meet higher and higher earnings expectations. If actual results weren't as good as hoped for, some gave in to temptation and "adjusted" their numbers to meet market expectations.

Preview of Chapter 3

In Chapter 1, you learned a neat little formula: $\text{Net income} = \text{Revenues} - \text{Expenses}$. In Chapter 2, you learned some rules for recording revenue and expense transactions. Guess what? Things are not really that nice and neat. In fact, it is often difficult for companies to determine in what time period they should report some revenues and expenses. In other words, in measuring net income, timing is everything.

The content and organization of Chapter 3 are as follows.

Timing Issues

LEARNING OBJECTIVE 1

Explain the time period assumption.

Time Period Assumption

Alternative Terminology

The time period assumption is also called the *periodicity assumption*.

We would need no adjustments if we could wait to prepare financial statements until a company ended its operations. At that point, we could easily determine its final balance sheet and the amount of lifetime income it earned.

However, most companies need immediate feedback about how well they are doing. For example, management usually wants monthly financial statements, and the Internal Revenue Service requires all businesses to file annual tax returns. Therefore, **accountants divide the economic life of a business into artificial time periods**. This convenient assumption is referred to as the **time period assumption**.

Many business transactions affect more than one of these arbitrary time periods. For example, the airplanes purchased by **Southwest Airlines** five years ago are still in use today. We must determine the relevance of each business transaction to specific accounting periods. (How much of the cost of an airplane contributed to operations this year?)

Fiscal and Calendar Years

Both small and large companies prepare financial statements periodically in order to assess their financial condition and results of operations. **Accounting time periods are generally a month, a quarter, or a year**. Monthly and quarterly time periods are called **interim periods**. Most large companies must prepare both quarterly and annual financial statements.

An accounting time period that is one year in length is a **fiscal year**. A fiscal year usually begins with the first day of a month and ends twelve months later on the last day of a month. Most businesses use the **calendar year** (January 1 to December 31) as their accounting period. Some do not. Companies whose fiscal year differs from the calendar year include **Delta Air Lines**, June 30, and **Walt Disney Productions**, September 30. Sometimes a company's year-end will vary from year to year. For example, **PepsiCo's** fiscal year ends on the Friday closest to December 31, which was December 29 in 2009 and December 31 in 2010.

Accrual- versus Cash-Basis Accounting

LEARNING OBJECTIVE 2

Explain the accrual basis of accounting.

What you will learn in this chapter is **accrual-basis accounting**. Under the accrual basis, companies record transactions that change a company's financial statements **in the periods in which the events occur**. For example, using the accrual basis to determine net income means companies recognize revenues when they actually perform the services (rather than when they receive cash). It also means recognizing expenses when incurred (rather than when paid).

An alternative to the accrual basis is the cash basis. Under **cash-basis accounting**, companies record revenue when they receive cash. They record an expense when they pay out cash. The cash basis seems appealing due to its simplicity, but it often produces misleading financial statements. It fails to record revenue for a company that has provided services but for which it has not received the cash. As a result, it does not match expenses with earned revenues. **Cash-basis accounting is not in accordance with generally accepted accounting principles (GAAP)**.

Individuals and some small companies do use cash-basis accounting. The cash basis is justified for small businesses because they often have few receivables and payables. Medium and large companies use accrual-basis accounting.

Recognizing Revenues and Expenses

It can be difficult to determine the amount of revenues and expenses to report in a given accounting period. Two principles help in this task: the revenue recognition principle and the expense recognition principle.

REVENUE RECOGNITION PRINCIPLE

When a company agrees to perform a service or sell a product to a customer, it has a performance obligation. When the company meets this performance obligation, it recognizes revenue. The **revenue recognition principle** therefore requires that companies recognize revenue in the accounting period in which the performance obligation is satisfied.¹ To illustrate, assume that Dave’s Dry Cleaning cleans clothing on June 30, but customers do not claim and pay for their clothes until the first week of July. Under the revenue recognition principle, Dave’s recognizes revenue in June when it performed the service, rather than in July when it received the cash. At June 30, Dave’s would report a receivable on its balance sheet and revenue in its income statement for the service performed.

EXPENSE RECOGNITION PRINCIPLE

Accountants follow a simple rule in recognizing expenses: “Let the expenses follow the revenues.” Thus, expense recognition is tied to revenue recognition. In the dry cleaning example, this means that Dave’s should report the salary expense incurred in performing the June 30 cleaning service in the same period in which it recognizes the service revenue. The critical issue in expense recognition is when the expense makes its contribution to revenue. This may or may not be the same period in which the expense is paid. If Dave’s does not pay the salary incurred on June 30 until July, it would report salaries payable on its June 30 balance sheet.

This practice of expense recognition is referred to as the **expense recognition principle** (often referred to as the **matching principle**). It dictates that efforts (expenses) be matched with results (revenues). Illustration 3-1 summarizes the revenue and expense recognition principles.

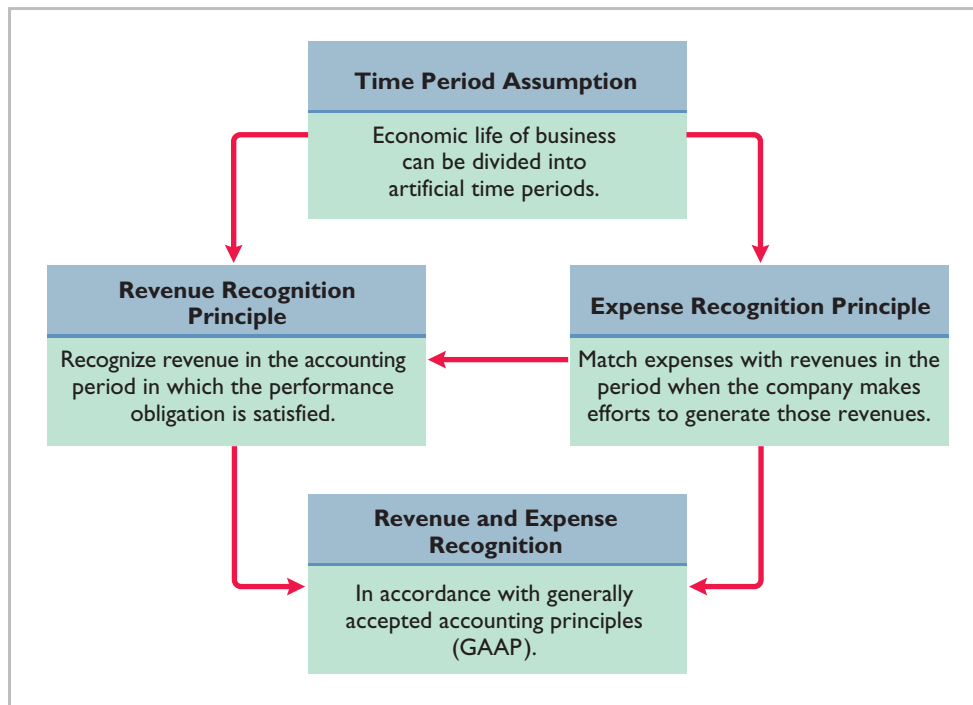

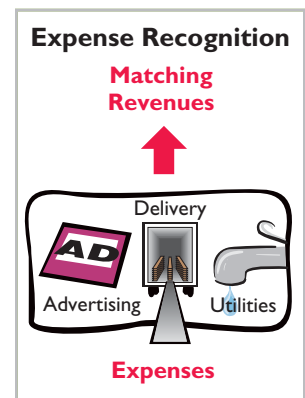

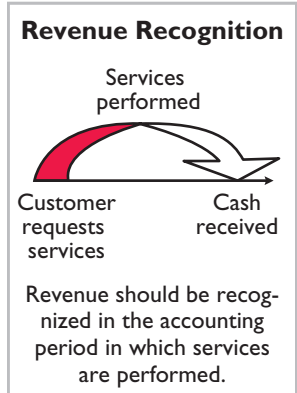

Illustration 3-1
GAAP relationships in revenue and expense recognition

¹The definition for the revenue recognition principle is based on the revised exposure draft issued by the FASB.

ETHICS INSIGHT

Cooking the Books?

Allegations of abuse of the revenue recognition principle have become all too common in recent years. For example, it was alleged that **Krispy Kreme** sometimes doubled the number of doughnuts shipped to wholesale customers at the end of a quarter to boost quarterly results. The customers shipped the unsold doughnuts back after the beginning of the next quarter for a refund. Conversely, **Computer Associates International** was accused of backdating sales—that is, saying that a sale that occurred at the beginning of one quarter occurred at the end of the previous quarter in order to achieve the previous quarter's sales targets.

What motivates sales executives and finance and accounting executives to participate in activities that result in inaccurate reporting of revenues? (See page 158.)

> DO IT!

Timing Concepts

Numerous timing concepts are discussed on pages 102–103. A list of concepts is provided in the left column below, with a description of the concept in the right column below. There are more descriptions provided than concepts. Match the description of the concept to the concept.

- | | |
|---------------------------------------|--|
| 1. ___ Accrual-basis accounting. | (a) Monthly and quarterly time periods. |
| 2. ___ Calendar year. | (b) Efforts (expenses) should be matched with results (revenues). |
| 3. ___ Time period assumption. | (c) Accountants divide the economic life of a business into artificial time periods. |
| 4. ___ Expense recognition principle. | (d) Companies record revenues when they receive cash and record expenses when they pay out cash. |
| | (e) An accounting time period that starts on January 1 and ends on December 31. |
| | (f) Companies record transactions in the period in which the events occur. |

Action Plan

- ✓ Review the glossary terms identified on pages 102–103 and 126.
- ✓ Study carefully the revenue recognition principle, the expense recognition principle, and the time period assumption.

Solution

The Basics of Adjusting Entries

LEARNING OBJECTIVE 3

Explain the reasons for adjusting entries.

In order for revenues to be recorded in the period in which services are performed, and for expenses to be recognized in the period in which they are incurred, companies make adjusting entries. **Adjusting entries ensure that the revenue recognition and expense recognition principles are followed.**

Adjusting entries are necessary because the **trial balance**—the first pulling together of the transaction data—may not contain up-to-date and complete data. This is true for several reasons:

1. Some events are not recorded daily because it is not efficient to do so. Examples are the use of supplies and the earning of wages by employees.
2. Some costs are not recorded during the accounting period because these costs expire with the passage of time rather than as a result of recurring daily transactions. Examples are charges related to the use of buildings and equipment, rent, and insurance.
3. Some items may be unrecorded. An example is a utility service bill that will not be received until the next accounting period.

Adjusting entries are required every time a company prepares financial statements. The company analyzes each account in the trial balance to determine whether it is complete and up to date for financial statement purposes. **Every adjusting entry will include one income statement account and one balance sheet account.**

International Note

Internal controls are a system of checks and balances designed to detect and prevent fraud and errors. The Sarbanes-Oxley Act requires U.S. companies to enhance their systems of internal control. However, many foreign companies do not have to meet strict internal control requirements. Some U.S. companies believe that this gives foreign firms an unfair advantage because developing and maintaining internal controls can be very expensive.

Types of Adjusting Entries

Adjusting entries are classified as either **deferrals** or **accruals**. As Illustration 3-2 shows, each of these classes has two subcategories.

Deferrals:

1. **Prepaid expenses:** Expenses paid in cash before they are used or consumed.
2. **Unearned revenues:** Cash received before services are performed.

Accruals:

1. **Accrued revenues:** Revenues for services performed but not yet received in cash or recorded.
2. **Accrued expenses:** Expenses incurred but not yet paid in cash or recorded.

Subsequent sections give examples of each type of adjustment. Each example is based on the October 31 trial balance of Pioneer Advertising Agency Inc. from Chapter 2, reproduced in Illustration 3-3.

LEARNING OBJECTIVE 4

Identify the major types of adjusting entries.

Illustration 3-2
Categories of adjusting entries

Pioneer Advertising Agency Inc. Trial Balance October 31, 2014		
	<u>Debit</u>	<u>Credit</u>
Cash	\$15,200	
Supplies	2,500	
Prepaid Insurance	600	
Equipment	5,000	
Notes Payable		\$ 5,000
Accounts Payable		2,500
Unearned Service Revenue		1,200
Common Stock		10,000
Retained Earnings		-0-
Dividends	500	
Service Revenue		10,000
Salaries and Wages Expense	4,000	
Rent Expense	900	
	<u>\$28,700</u>	<u>\$28,700</u>

Illustration 3-3
Trial balance

We assume that Pioneer Advertising uses an accounting period of one month. Thus, monthly adjusting entries are made. The entries are dated October 31.

Adjusting Entries for Deferrals

LEARNING OBJECTIVE 5
Prepare adjusting entries for deferrals.

To defer means to postpone or delay. **Deferrals** are costs or revenues that are recognized at a date later than the point when cash was originally exchanged. Companies make adjusting entries for deferrals to record the portion of the deferred item that was incurred as an expense or recognized as revenue during the current accounting period. The two types of deferrals are prepaid expenses and unearned revenues.

PREPAID EXPENSES

When companies record payments of expenses that will benefit more than one accounting period, they record an asset called **prepaid expenses** or **prepayments**. When expenses are prepaid, an asset account is increased (debited) to show the service or benefit that the company will receive in the future. Examples of common prepayments are insurance, supplies, advertising, and rent. In addition, companies make prepayments when they purchase buildings and equipment.

Prepaid expenses are costs that expire either with the passage of time (e.g., rent and insurance) **or through use** (e.g., supplies). The expiration of these costs does not require daily entries, which would be impractical and unnecessary. Accordingly, companies postpone the recognition of such cost expirations until they prepare financial statements. At each statement date, they make adjusting entries to record the expenses applicable to the current accounting period and to show the remaining amounts in the asset accounts.

Prior to adjustment, assets are overstated and expenses are understated. Therefore, as shown in Illustration 3-4, **an adjusting entry for prepaid expenses results in an increase (a debit) to an expense account and a decrease (a credit) to an asset account.**

Illustration 3-4
 Adjusting entries for prepaid expenses

Supplies

Oct. 5

Supplies purchased; record asset

Oct. 31
 Supplies used; record supplies expense

Let's look in more detail at some specific types of prepaid expenses, beginning with supplies.

SUPPLIES The purchase of supplies, such as paper and envelopes, results in an increase (a debit) to an asset account. During the accounting period, the company uses supplies. Rather than record supplies expense as the supplies are used, companies recognize supplies expense at the **end** of the accounting period. At the end of the accounting period, the company counts the remaining supplies. The difference between the unadjusted balance in the Supplies (asset) account and the actual cost of supplies on hand represents the supplies used (an expense) for that period (page 107).

Recall from Chapter 2 that Pioneer Advertising Agency Inc. purchased supplies costing \$2,500 on October 5. Pioneer recorded the purchase by increasing

(debiting) the asset Supplies. This account shows a balance of \$2,500 in the October 31 trial balance. An inventory count at the close of business on October 31 reveals that \$1,000 of supplies are still on hand. Thus, the cost of supplies used is \$1,500 (\$2,500 – \$1,000). This use of supplies decreases an asset, Supplies. It also decreases stockholders' equity by increasing an expense account, Supplies Expense. This is shown in Illustration 3-5.

Illustration 3-5
Adjustment for supplies

Basic Analysis	The expense Supplies Expense is increased \$1,500, and the asset Supplies is decreased \$1,500.																									
Equation Analysis	$\begin{array}{r} \text{Assets} \\ \text{Supplies} \\ -\$1,500 \end{array} = \begin{array}{r} \text{Liabilities} \\ \text{Stockholders' Equity} \\ \text{Supplies Expense} \\ -\$1,500 \end{array}$																									
Debit-Credit Analysis	Debits increase expenses: debit Supplies Expense \$1,500. Credits decrease assets: credit Supplies \$1,500.																									
Journal Entry	<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 10%;"></td> <td style="width: 10%; text-align: center;">Oct. 31</td> <td style="width: 50%; border-left: 1px solid black;">Supplies Expense Supplies (To record supplies used)</td> <td style="width: 10%; text-align: right; border-left: 1px solid black;">1,500</td> <td style="width: 10%; text-align: right;">1,500</td> </tr> </table>			Oct. 31	Supplies Expense Supplies (To record supplies used)	1,500	1,500																			
	Oct. 31	Supplies Expense Supplies (To record supplies used)	1,500	1,500																						
Posting	<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 25%;"></td> <td style="width: 25%; text-align: center;">Supplies</td> <td style="width: 25%; text-align: right;">126</td> <td style="width: 25%;"></td> </tr> <tr> <td style="border-left: 1px solid black;">Oct. 5</td> <td style="border-left: 1px solid black; text-align: right;">2,500</td> <td style="border-left: 1px solid black;">Oct. 31</td> <td style="border-left: 1px solid black; text-align: right;">Adj. 1,500</td> </tr> <tr> <td style="border-left: 1px solid black;">Oct. 31</td> <td style="border-left: 1px solid black; text-align: right;">Bal. 1,000</td> <td></td> <td></td> </tr> </table> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 25%;"></td> <td style="width: 25%; text-align: center;">Supplies Expense</td> <td style="width: 25%; text-align: right;">631</td> <td style="width: 25%;"></td> </tr> <tr> <td style="border-left: 1px solid black;">Oct. 31</td> <td style="border-left: 1px solid black; text-align: right;">Adj. 1,500</td> <td></td> <td></td> </tr> <tr> <td style="border-left: 1px solid black;">Oct. 31</td> <td style="border-left: 1px solid black; text-align: right;">Bal. 1,500</td> <td></td> <td></td> </tr> </table>			Supplies	126		Oct. 5	2,500	Oct. 31	Adj. 1,500	Oct. 31	Bal. 1,000				Supplies Expense	631		Oct. 31	Adj. 1,500			Oct. 31	Bal. 1,500

Oct. 31	Bal. 1,000																									
	Supplies Expense	631																								
Oct. 31	Adj. 1,500																									
Oct. 31	Bal. 1,500																									

After adjustment, the asset account Supplies shows a balance of \$1,000, which is equal to the cost of supplies on hand at the statement date. In addition, Supplies Expense shows a balance of \$1,500, which equals the cost of supplies used in October. **If Pioneer does not make the adjusting entry, October expenses will be understated and net income overstated by \$1,500. Moreover, both assets and stockholders' equity will be overstated by \$1,500 on the October 31 balance sheet.**

INSURANCE Companies purchase insurance to protect themselves from losses due to fire, theft, and unforeseen events. Insurance must be paid in advance, often for more than one year. The cost of insurance (premiums) paid in advance is recorded as an increase (debit) in the asset account Prepaid Insurance. At the financial statement date, companies increase (debit) Insurance Expense and decrease (credit) Prepaid Insurance for the cost of insurance that has expired during the period.

On October 4, Pioneer Advertising paid \$600 for a one-year fire insurance policy. Coverage began on October 1. Pioneer recorded the payment by increasing (debiting) Prepaid Insurance. This account shows a balance of \$600 in the October 31 trial balance. Insurance of \$50 (\$600 ÷ 12) expires each month. The expiration of prepaid insurance decreases an asset, Prepaid Insurance. It also decreases stockholders' equity by increasing an expense account, Insurance Expense.

As shown in Illustration 3-6 (page 108), the asset Prepaid Insurance shows a balance of \$550, which represents the unexpired cost for the remaining 11 months of coverage. At the same time, the balance in Insurance Expense equals the insurance cost that expired in October. If Pioneer does not make this adjustment, October

DEPRECIATION A company typically owns a variety of assets that have long lives, such as buildings, equipment, and motor vehicles. The period of service is referred to as the **useful life** of the asset. Because a building is expected to provide service for many years, it is recorded as an asset, rather than an expense, on the date it is acquired. As explained in Chapter 1, companies record such assets **at cost**, as required by the cost principle. To follow the expense recognition principle, companies allocate a portion of this cost as an expense during each period of the asset's useful life. **Depreciation** is the process of allocating the cost of an asset to expense over its useful life.

Need for Adjustment. The acquisition of long-lived assets is essentially a long-term prepayment for the use of an asset. An adjusting entry for depreciation is needed to recognize the cost that has been used (an expense) during the period and to report the unused cost (an asset) at the end of the period. One very important point to understand: **Depreciation is an allocation concept, not a valuation concept.** That is, depreciation **allocates an asset's cost to the periods in which it is used. Depreciation does not attempt to report the actual change in the value of the asset.**

For Pioneer Advertising, assume that depreciation on the equipment is \$480 a year, or \$40 per month. As shown in Illustration 3-7 on the next page, rather than decrease (credit) the asset account directly, Pioneer instead credits Accumulated Depreciation—Equipment. Accumulated Depreciation is called a **contra asset account**. Such an account is offset against an asset account on the balance sheet. Thus, the Accumulated Depreciation—Equipment account offsets the asset Equipment. This account keeps track of the total amount of depreciation expense taken over the life of the asset. To keep the accounting equation in balance, Pioneer decreases stockholders' equity by increasing an expense account, Depreciation Expense.

Depreciation

	Accumulated Depreciation—Equipment 158		Depreciation Expense 711	
		Oct. 31	Adj. 40	
		Oct. 31	Bal. 40	

Illustration 3-7
Adjustment for depreciation

The balance in the Accumulated Depreciation—Equipment account will increase \$40 each month, and the balance in Equipment remains \$5,000.

Statement Presentation. As indicated, Accumulated Depreciation—Equipment is a contra asset account. It is offset against Equipment on the balance sheet. The normal balance of a contra asset account is a credit. A theoretical alternative to using a contra asset account would be to decrease (credit) the asset account by the amount of depreciation each period. But using the contra account is preferable for a simple reason: It discloses *both* the original cost of the equipment *and* the total cost that has expired to date. Thus, in the balance sheet, Pioneer deducts Accumulated Depreciation—Equipment from the related asset account, as shown in Illustration 3-8.

Helpful Hint
All contra accounts have increases, decreases, and normal balances opposite to the account to which they relate.

Equipment	\$ 5,000
Less: Accumulated depreciation—equipment	40
	\$4,960

Illustration 3-8
Balance sheet presentation of accumulated depreciation

Book value is the difference between the cost of any depreciable asset and its related accumulated depreciation. In Illustration 3-8, the book value of the equipment at the balance sheet date is \$4,960. The book value and the fair value of the asset are generally two different values. As noted earlier, **the purpose of depreciation is not valuation but a means of cost allocation.**

Alternative Terminology
Book value is also referred to as *carrying value*.

Depreciation expense identifies the portion of an asset's cost that expired during the period (in this case, in October). The accounting equation shows that without

this adjusting entry, total assets, total stockholders' equity, and net income are overstated by \$40 and depreciation expense is understated by \$40.

Illustration 3-9 summarizes the accounting for prepaid expenses.

UNEARNED REVENUES

When companies receive cash before services are performed, they record a liability called **unearned revenues**. In other words, a company now has a performance obligation (liability) to transfer a service to one of its customers. Items like rent, magazine subscriptions, and customer deposits for future service may result in unearned revenues. Airlines such as **United**, **American**, and **Delta**, for instance, treat receipts from the sale of tickets as unearned revenue until the flight service is provided.

Unearned revenues are the opposite of prepaid expenses. Indeed, unearned revenue on the books of one company is likely to be a prepaid expense on the books of the company that has made the advance payment. For example, if identical accounting periods are assumed, a landlord will have unearned rent revenue when a tenant has prepaid rent.

When a company receives payment for services to be performed in a future accounting period, it increases (credits) an unearned revenue (a liability) account to recognize the liability that exists. The company subsequently recognizes revenues when it performs the service. During the accounting period, it is not practical to make daily entries as the company provides services. Instead, the company delays recognition of revenue until the adjustment process. Then, the company makes an adjusting entry to record the revenue for services performed during the period and to show the liability that remains at the end of the accounting period. Typically, prior to adjustment, liabilities are overstated and revenues are understated. Therefore, as shown in Illustration 3-10, **the adjusting entry for unearned revenues results in a decrease (a debit) to a liability account and an increase (a credit) to a revenue account.**

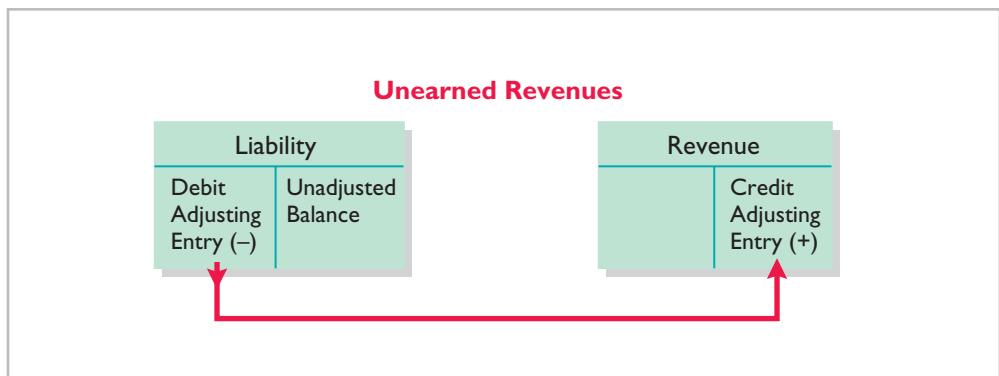

Illustration 3-10
Adjusting entries for unearned revenues

Pioneer Advertising received \$1,200 on October 2 from R. Knox for advertising services expected to be completed by December 31. Pioneer credited the payment to Unearned Service Revenue, and this liability account shows a balance of \$1,200 in the October 31 trial balance. From an evaluation of the service Pioneer performed for Knox during October, the company determines that it should recognize \$400 of revenue in October. The liability (Unearned Service Revenue) is therefore decreased, and stockholder's equity (Service Revenue) is increased.

Alternative Terminology
Unearned revenue is sometimes referred to as *deferred revenue*.

As shown in Illustration 3-11, the liability Unearned Service Revenue now shows a balance of \$800. That amount represents the remaining advertising services expected to be performed in the future. At the same time, Service Revenue shows total revenue recognized in October of \$10,400. **Without this adjustment, revenues and net income are understated by \$400 in the income statement. Moreover, liabilities are overstated and stockholders' equity is understated by \$400 on the October 31 balance sheet.**

Illustration 3-11
Service revenue accounts after adjustment

Basic Analysis	The liability Unearned Service Revenue is decreased \$400, and the revenue Service Revenue is increased \$400.				
Equation Analysis	<u>Assets</u>	=	<u>Liabilities</u> Unearned Service Revenue - \$400	+	<u>Stockholders' Equity</u> Service Revenue + \$400

ACCOUNTING ACROSS THE ORGANIZATION

Turning Gift Cards into Revenue

Those of you who are marketing majors (and even most of you who are not) know that gift cards are among the hottest marketing tools in merchandising today. Customers purchase gift cards and give them to someone for later use. In a recent year, gift-card sales topped \$95 billion.

Although these programs are popular with marketing executives, they create accounting questions. Should revenue be recorded at the time the gift card is sold, or when it is exercised? How should expired gift cards be accounted for? In its 2009 balance sheet, **Best Buy** reported unearned revenue related to gift cards of \$479 million.

Source: Robert Berner, "Gift Cards: No Gift to Investors," *BusinessWeek* (March 14, 2005), p. 86.

Suppose that Robert Jones purchases a \$100 gift card at Best Buy on December 24, 2013, and gives it to his wife, Mary Jones, on December 25, 2013. On January 3, 2014, Mary uses the card to purchase \$100 worth of CDs. When do you think Best Buy should recognize revenue and why? (See page 158.)

> DO IT!

Adjusting Entries for Deferrals

The ledger of Hammond, Inc., on March 31, 2014, includes these selected accounts before adjusting entries are prepared.

	<u>Debit</u>	<u>Credit</u>
Prepaid Insurance	\$ 3,600	
Supplies	2,800	
Equipment	25,000	
Accumulated Depreciation—Equipment		\$5,000
Unearned Service Revenue		9,200

An analysis of the accounts shows the following.

1. Insurance expires at the rate of \$100 per month.
2. Supplies on hand total \$800.
3. The equipment depreciates \$200 a month.
4. One-half of the unearned service revenue was recognized in March.

Prepare the adjusting entries for the month of March.

Solution

Action Plan

- ✓ Make adjusting entries at the end of the period for revenues recognized and expenses incurred in the period.
- ✓ Don't forget to make adjusting entries for deferrals. Failure to adjust for deferrals leads to overstatement of the asset or liability and understatement of the related expense or revenue.

1. Insurance Expense	100	
Prepaid Insurance		100
(To record insurance expired)		
2. Supplies Expense	2,000	
Supplies		2,000
(To record supplies used)		
3. Depreciation Expense	200	
Accumulated Depreciation—Equipment		200
(To record monthly depreciation)		
4. Unearned Service Revenue	4,600	
Service Revenue		4,600
(To record revenue for services performed)		

Related exercise material: **BE3-3, BE3-4, BE3-5, BE3-6, and DO IT! 3-2.**

Adjusting Entries for Accruals

The second category of adjusting entries is **accruals**. Prior to an accrual adjustment, the revenue account (and the related asset account) or the expense account (and the related liability account) are understated. Thus, the adjusting entry for accruals will **increase both a balance sheet and an income statement account**.

ACCRUED REVENUES

Revenues for services performed but not yet recorded at the statement date are **accrued revenues**. Accrued revenues may accumulate (accrue) with the passing of time, as in the case of interest revenue. These are unrecorded because the earning of interest does not involve daily transactions. Companies do not record interest revenue on a daily basis because it is often impractical to do so. Accrued revenues also may result from services that have been performed but not yet billed or collected, as in the case of commissions and fees. These may be unrecorded because only a portion of the total service has been provided and the clients won't be billed until the service has been completed.

An adjusting entry records the receivable that exists at the balance sheet date and the revenue for the services performed during the period. Prior to adjustment, both assets and revenues are understated. As shown in Illustration 3-13, **an adjusting entry for accrued revenues results in an increase (a debit) to an asset account and an increase (a credit) to a revenue account**.

LEARNING OBJECTIVE

6

Prepare adjusting entries for accruals.

Accrued Revenues

Oct. 31

Revenue and receivable are recorded for unbilled services

Nov. 10

Cash is received; receivable is reduced

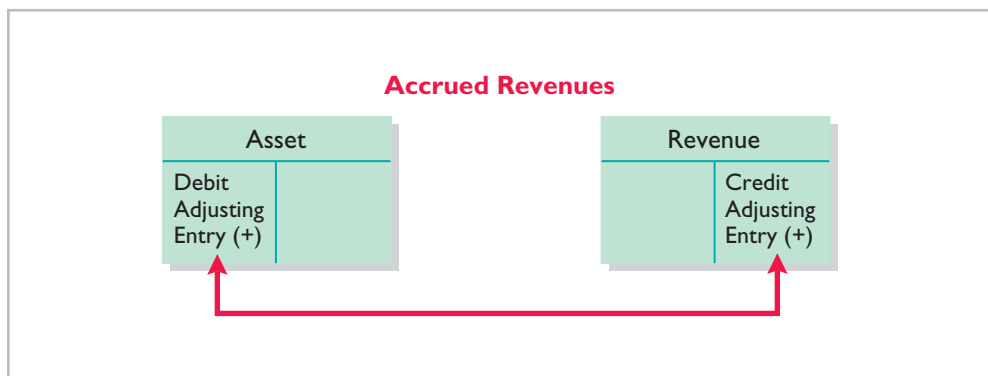

Illustration 3-13

Adjusting entries for accrued revenues

Helpful Hint

For accruals, there may have been no prior entry, and the accounts requiring adjustment may both have zero balances prior to adjustment.

In October, Pioneer Advertising Agency Inc. recognized \$200 for advertising services performed that were not billed to clients on or before October 31. Because these services are not billed, they are not recorded. The accrual of unrecorded service revenue increases an asset account, Accounts Receivable. It also increases stockholders' equity by increasing a revenue account, Service Revenue, as shown in Illustration 3-14 (page 114).

The asset Accounts Receivable shows that clients owe Pioneer \$200 at the balance sheet date. The balance of \$10,600 in Service Revenue represents the total revenue for services performed by Pioneer during the month (\$10,000 + \$400 + \$200). **Without the adjusting entry, assets and stockholders' equity on the balance sheet and revenues and net income on the income statement are understated.**

Illustration 3-14
Adjustment for accrued revenue

Basic Analysis	The asset Accounts Receivable is increased \$200, and the revenue Service Revenue is increased \$200.																									
Equation Analysis	<table border="0"> <tr> <td style="border-bottom: 1px solid black;">Assets</td> <td style="text-align: center;">=</td> <td style="border-bottom: 1px solid black;">Liabilities</td> <td style="text-align: center;">+</td> <td style="border-bottom: 1px solid black;">Stockholders' Equity</td> </tr> <tr> <td>Accounts Receivable</td> <td></td> <td></td> <td></td> <td>Service Revenue</td> </tr> <tr> <td style="text-align: center;">+\$200</td> <td></td> <td></td> <td></td> <td style="text-align: center;">+\$200</td> </tr> </table>	Assets	=	Liabilities	+	Stockholders' Equity	Accounts Receivable				Service Revenue	+\$200				+\$200

A	=	L	+	SE
+200				
-200				
Cash Flows				
+200				

On November 10, Pioneer receives cash of \$200 for the services performed in October and makes the following entry.

Nov. 10	Cash	200		200
	Accounts Receivable			
	(To record cash collected on account)			

The company records the collection of the receivables by a debit (increase) to Cash and a credit (decrease) to Accounts Receivable.

Illustration 3-15 summarizes the accounting for accrued revenues.

Illustration 3-15
Accounting for accrued revenues

Accounting for Accrued Revenues			
Examples	Reason for Adjustment	Accounts Before Adjustment	Adjusting Entry
Interest, rent, services performed but not collected	Services performed but not yet recorded.	Assets understated. Revenues understated.	Dr. Assets Cr. Revenues

Ethics Note

A report released by **Fannie Mae's** board of directors stated that improper adjusting entries at the mortgage-finance company resulted in delayed recognition of expenses caused by interest-rate changes. The motivation for such accounting apparently was the desire to hit earnings estimates.

ACCRUED EXPENSES

Expenses incurred but not yet paid or recorded at the statement date are called **accrued expenses**. Interest, taxes, and salaries are common examples of accrued expenses.

Companies make adjustments for accrued expenses to record the obligations that exist at the balance sheet date and to recognize the expenses that apply to the current accounting period. Prior to adjustment, both liabilities and expenses are understated. Therefore, as Illustration 3-16 shows, **an adjusting entry for accrued expenses results in an increase (a debit) to an expense account and an increase (a credit) to a liability account.**

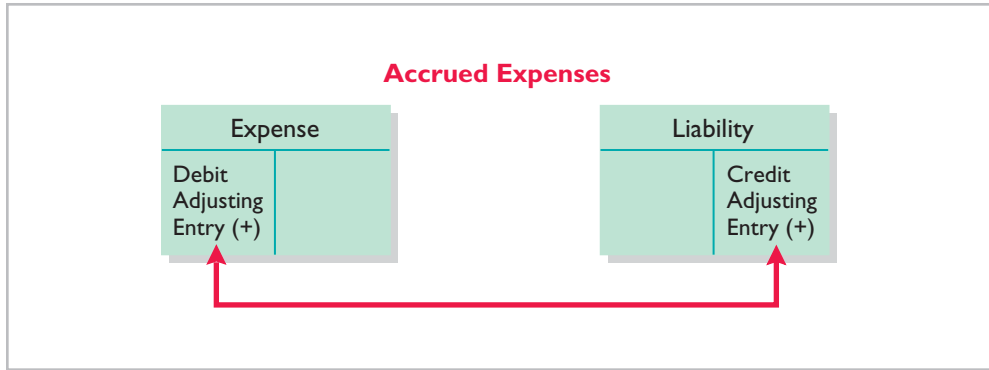

Illustration 3-16
Adjusting entries for accrued expenses

Let's look in more detail at some specific types of accrued expenses, beginning with accrued interest.

ACCRUED INTEREST Pioneer Advertising signed a three-month note payable in the amount of \$5,000 on October 1. The note requires Pioneer to pay interest at an annual rate of 12%.

The amount of the interest recorded is determined by three factors: (1) the face value of the note; (2) the interest rate, which is always expressed as an annual rate; and (3) the length of time the note is outstanding. For Pioneer, the total interest due on the \$5,000 note at its maturity date three months in the future is \$150 ($\$5,000 \times 12\% \times \frac{3}{12}$), or \$50 for one month. Illustration 3-17 shows the formula for computing interest and its application to Pioneer for the month of October.

Face Value of Note	×	Annual Interest Rate	×	Time in Terms of One Year	=	Interest
\$5,000	×	12%	×	$\frac{1}{12}$	=	\$50

Illustration 3-17
Formula for computing interest

Helpful Hint
In computing interest, we express the time period as a fraction of a year.

As Illustration 3-18 shows, the accrual of interest at October 31 increases a liability account, Interest Payable. It also decreases stockholders' equity by increasing an expense account, Interest Expense.

Illustration 3-18
Adjustment for accrued interest

Basic Analysis	The expense Interest Expense is increased \$50, and the liability Interest Payable is increased \$50.				
Equation Analysis	<u>Assets</u>	=	<u>Liabilities</u> Interest Payable +\$50	+	<u>Stockholders' Equity</u> Interest Expense -\$50
Debit-Credit Analysis	Debits increase expenses: debit Interest Expense \$50. Credits increase liabilities: credit Interest Payable \$50.				
Journal Entry	Oct. 31	Interest Expense Interest Payable (To record interest on notes payable)	50	50	
Posting	Interest Expense 905		Interest Payable 230		
	Oct. 31	Adj. 50	Oct. 31	Adj. 50	
	Oct. 31	Bal. 50	Oct. 31	Bal. 50	

Interest Expense shows the interest charges for the month of October. Interest Payable shows the amount of interest the company owes at the statement date. Pioneer will not pay the interest until the note comes due at the end of three months. Companies use the Interest Payable account, instead of crediting Notes Payable, to disclose the two different types of obligations—interest and principal—in the accounts and statements. **Without this adjusting entry, liabilities and interest expense are understated, and net income and stockholders' equity are overstated.**

INTERNATIONAL INSIGHT

Cashing In on Accrual Accounting

The Chinese government, like most governments, uses cash accounting. A recent report, however, noted that it decided to use accrual accounting versus cash accounting for about \$38 billion of expenditures in a recent budget projection. The Chinese government decided to expense the amount in the year in which the expenditures were originally allocated rather than when the payments would be made. Why did it do this? It enabled the government to keep its projected budget deficit below a 3% threshold. While the Chinese government was able to keep its projected shortfall below 3%, it did suffer some criticism for its inconsistent accounting. Critics charge that this inconsistent treatment reduces the transparency of China's accounting information. That is, it is not easy for outsiders to accurately evaluate what is really going on.

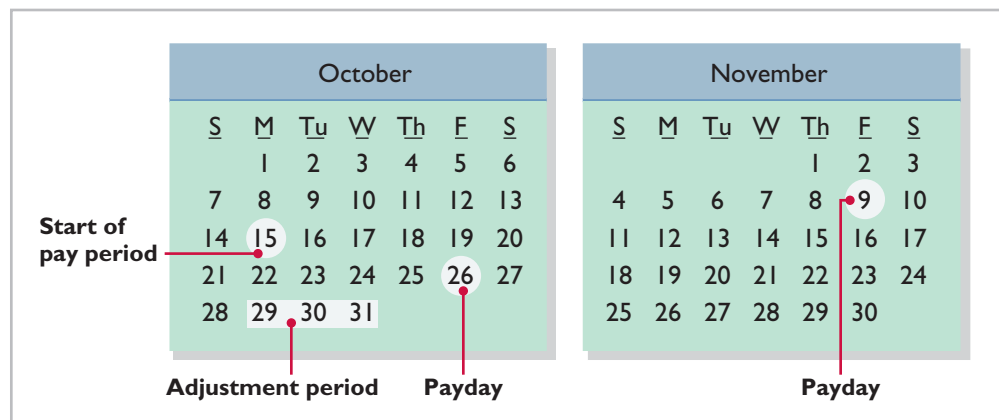

Source: Andrew Batson, "China Altered Budget Accounting to Reduce Deficit Figure," *Wall Street Journal Online* (March 15, 2010).

Accrual accounting is often considered superior to cash accounting. Why, then, were some people critical of China's use of accrual accounting in this instance? (See page 159.)

ACCRUED SALARIES AND WAGES Companies pay for some types of expenses, such as employee salaries and wages, after the services have been performed. Pioneer paid salaries and wages on October 26 for its employees' first two weeks of work; the next payment of salaries will not occur until November 9. As Illustration 3-19 shows, three working days remain in October (October 29–31).

Illustration 3-19
Calendar showing Pioneer's pay periods

At October 31, the salaries and wages for these three days represent an accrued expense and a related liability to Pioneer. The employees receive total salaries and wages of \$2,000 for a five-day work week, or \$400 per day. Thus, accrued salaries and wages at October 31 are \$1,200 (\$400 × 3). This accrual increases a liability, Salaries and Wages Payable. It also decreases stockholders' equity by increasing an expense account, Salaries and Wages Expense, as shown in Illustration 3-20.

Illustration 3-20
Adjustment for accrued salaries and wages

Basic Analysis	The expense Salaries and Wages Expense is increased \$1,200, and the liability account Salaries and Wages Payable is decreased \$1,200.				
Equation Analysis	<u>Assets</u>	=	<u>Liabilities</u> Salaries and Wages Payable + \$1,200	+	<u>Stockholders' Equity</u> Salaries and Wages Expense - \$1,200
Debit-Credit Analysis	Debits increase expenses: debit Salaries and Wages Expense \$1,200. Credits increase liabilities: credit Salaries and Wages Payable \$1,200.				
Journal Entry	Oct. 31	Salaries and Wages Expense Salaries and Wages Payable (To record accrued salaries and wages)	1,200	1,200	
Posting	Salaries and Wages Expense 726		Salaries and Wages Payable 212		
	Oct. 26 31	4,000 Adj. 1,200		Oct. 31	Adj. 1,200
	Oct. 31	Bal. 5,200		Oct. 31	Bal. 1,200

After this adjustment, the balance in Salaries and Wages Expense of \$5,200 (13 days × \$400) is the actual salary and wages expense for October. The balance in Salaries and Wages Payable of \$1,200 is the amount of the liability for salaries and wages Pioneer owes as of October 31. **Without the \$1,200 adjustment for salaries and wages, Pioneer's expenses are understated \$1,200 and its liabilities are understated \$1,200.**

Pioneer Advertising pays salaries and wages every two weeks. Consequently, the next payday is November 9, when the company will again pay total salaries and wages of \$4,000. The payment consists of \$1,200 of salaries and wages payable at October 31 plus \$2,800 of salaries and wages expense for November (7 working days, as shown in the November calendar × \$400). Therefore, Pioneer makes the following entry on November 9.

Nov. 9	Salaries and Wages Payable Salaries and Wages Expense Cash (To record November 9 payroll)	1,200 2,800	4,000
--------	--	----------------	-------

A	=	L	+	SE
		-1,200		-2,800 Exp
		-4,000		
Cash Flows				
		-4,000		

This entry eliminates the liability for Salaries and Wages Payable that Pioneer recorded in the October 31 adjusting entry, and it records the proper amount of Salaries and Wages Expense for the period between November 1 and November 9.

Illustration 3-21 (page 118) summarizes the accounting for accrued expenses.

Illustration 3-21

PEOPLE, PLANET, AND PROFIT INSIGHT

Got Junk?

Do you have an old computer or two in your garage? How about an old TV that needs replacing? Many people do. Approximately 163,000 computers and televisions become obsolete *each day*. Yet, in a recent year, only 11% of computers were recycled. It is estimated that 75% of all computers ever sold are sitting in storage somewhere, waiting to be disposed of. Each of these old TVs and computers is loaded with lead, cadmium, mercury, and other toxic chemicals. If you have one of these electronic gadgets, you have a responsibility, and a probable cost, for disposing of it. Companies have the same problem, but their discarded materials may include lead paint, asbestos, and other toxic chemicals.

What accounting issue might this cause for companies? (See page 159.)

> DO IT!

Adjusting Entries for Accruals

Micro Computer Services Inc. began operations on August 1, 2014. At the end of August 2014, management attempted to prepare monthly financial statements. The following information relates to August.

- At August 31, the company owed its employees \$800 in salaries and wages that will be paid on September 1.
- On August 1, the company borrowed \$30,000 from a local bank on a 15-year mortgage. The annual interest rate is 10%.
- Revenue for services performed but unrecorded for August totaled \$1,100.

Prepare the adjusting entries needed at August 31, 2014.

Solution

1. Salaries and Wages Expense	800	
Salaries and Wages Payable		800
(To record accrued salaries)		
2. Interest Expense	250	
Interest Payable		250
(To record accrued interest: \$30,000 × 10% × $\frac{1}{12}$ = \$250)		
3. Accounts Receivable	1,100	
Service Revenue		1,100
(To record revenue for services performed)		

Action Plan

- ✓ Make adjusting entries at the end of the period for revenues recognized and expenses incurred in the period.
- ✓ Don't forget to make adjusting entries for accruals. Adjusting entries for accruals will increase both a balance sheet and an income statement account.

Summary of Basic Relationships

Illustration 3-22 summarizes the four basic types of adjusting entries. Take some time to study and analyze the adjusting entries. Be sure to note that **each adjusting entry affects one balance sheet account and one income statement account.**

Type of Adjustment	Accounts Before Adjustment	Adjusting Entry
Prepaid expenses	Assets overstated. Expenses understated.	Dr. Expenses Cr. Assets
Unearned revenues	Liabilities overstated. Revenues understated.	Dr. Liabilities Cr. Revenues
Accrued revenues	Assets understated. Revenues understated.	Dr. Assets Cr. Revenues
Accrued expenses	Expenses understated. Liabilities understated.	Dr. Expenses Cr. Liabilities

Illustration 3-22
Summary of adjusting entries

Illustrations 3-23 (below) and 3-24 (on page 120) show the journalizing and posting of adjusting entries for Pioneer Advertising Agency Inc. on October 31. The ledger identifies all adjustments by the reference J2 because they have been recorded on page 2 of the general journal. The company may insert a center caption “Adjusting Entries” between the last transaction entry and the first adjusting entry in the journal. When you review the general ledger in Illustration 3-24, note that the entries highlighted in color are the adjustments.

General Journal					J2
Date	Account Titles and Explanation	Ref.	Debit	Credit	
2014	Adjusting Entries				
Oct. 31	Supplies Expense	631	1,500		
	Supplies	126		1,500	
	(To record supplies used)				
31	Insurance Expense	722	50

31	Accounts Receivable	112	200		
	Service Revenue	400		200	
	(To record revenue for services performed)				
31	Interest Expense	905	50		
	Interest Payable	230		50	
	(To record interest on notes payable)				
31	Salaries and Wages Expense	726	1,200		
	Salaries and Wages Payable	212		1,200	
	(To record accrued salaries and wages)				

Illustration 3-23
General journal showing adjusting entries

- Helpful Hint**
1. Adjusting entries should not involve debits or credits to cash.
 2. Evaluate whether the adjustment makes sense. For example, an adjustment to recognize supplies used should increase supplies expense.
 3. Double-check all computations.
 4. Each adjusting entry affects one balance sheet account and one income statement account.

The Adjusted Trial Balance and Financial Statements

After a company has journalized and posted all adjusting entries, it prepares another trial balance from the ledger accounts. This trial balance is called an **adjusted trial balance**. It shows the balances of all accounts, including those adjusted, at the end of the accounting period. The purpose of an adjusted trial balance is to **prove the equality** of the total debit balances and the total credit balances in the ledger after all adjustments. Because the accounts contain all data needed for financial statements, the adjusted trial balance is the **primary basis for the preparation of financial statements**.

LEARNING OBJECTIVE 7

Describe the nature and purpose of an adjusted trial balance.

Preparing the Adjusted Trial Balance

Illustration 3-25 presents the adjusted trial balance for Pioneer Advertising Agency Inc. prepared from the ledger accounts in Illustration 3-24. The amounts affected by the adjusting entries are highlighted in color. Compare these amounts to those in the unadjusted trial balance in Illustration 3-3 on page 105. In this comparison, you will see that there are more accounts in the adjusted trial balance as a result of the adjusting entries made at the end of the month.

Pioneer Advertising Agency Inc. Adjusted Trial Balance October 31, 2014		
	Dr.	Cr.
Cash	\$15,200	
Accounts Receivable	200	
Supplies	1,000

Interest Expense	50	
Depreciation Expense	40	
	<u>\$30,190</u>	<u>\$30,190</u>

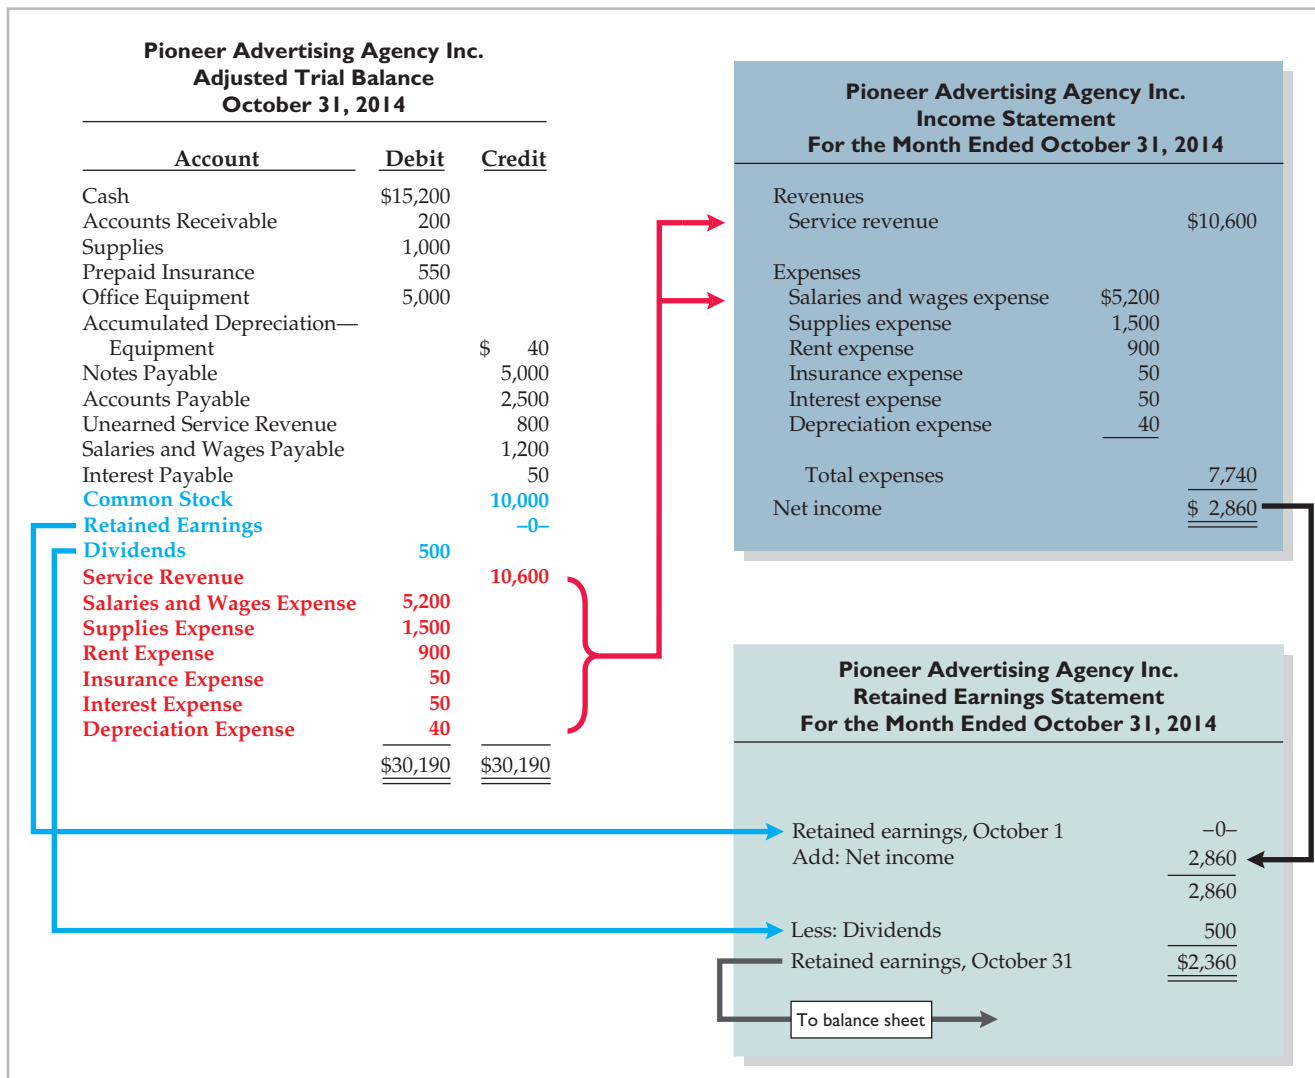

Illustration 3-25
Adjusted trial balance

Preparing Financial Statements

Companies can prepare financial statements directly from the adjusted trial balance. Illustrations 3-26 and 3-27 present the interrelationships of data in the adjusted trial balance and the financial statements.

As Illustration 3-26 shows, companies prepare the income statement from the revenue and expense accounts. Next, they use the Retained Earnings and Dividends accounts and the net income (or net loss) from the income statement to prepare the retained earnings statement. As Illustration 3-27 shows, companies then prepare the balance sheet from the asset and liability accounts and the ending retained earnings balance as reported in the retained earnings statement.

Illustration 3-26

Trial balance

Skolnick Co. was organized on April 1, 2014. The company prepares quarterly financial statements. The adjusted trial balance amounts at June 30 are shown below.

	<u>Debits</u>		<u>Credits</u>
Cash	\$ 6,700	Accumulated Depreciation—Equipment	\$ 850
Accounts Receivable	600	Notes Payable	5,000
Prepaid Rent	900	Accounts Payable	1,510
Supplies	1,000	Salaries and Wages Payable	400
Equipment	15,000	Interest Payable	50
Dividends	600	Unearned Rent Revenue	500
Salaries and Wages Expense	9,400	Common Stock	14,000
Rent Expense	1,500	Service Revenue	14,200
Depreciation Expense	850	Rent Revenue	800
Supplies Expense	200		
Utilities Expense	510		
Interest Expense	50		
Total debits	<u>\$37,310</u>	Total credits	<u>\$37,310</u>

- (a) Determine the net income for the quarter April 1 to June 30.
 (b) Determine the total assets and total liabilities at June 30, 2014, for Skolnick Co.
 (c) Determine the amount that appears for Retained Earnings at June 30, 2014.

Solution**Action Plan**

- ✓ In an adjusted trial balance, all assets, liability, revenue, and expense accounts are properly stated.
- ✓ To determine the ending balance in Retained Earnings, add net income and subtract dividends.

- (a) The net income is determined by adding revenues and subtracting expenses. The net income is computed as follows.

Revenues		
Service revenue	\$14,200	
Rent revenue	800	
Total revenues	\$15,000	
Expenses		
Salaries and wages expense	\$ 9,400	
Rent expense	1,500	
Depreciation expense	850	
Utilities expense	510	
Supplies expense	200	
Interest expense	50	
Total expenses	12,510	
Net income	\$ 2,490	

- (b) Total assets and liabilities are computed as follows.

Assets		Liabilities	
Cash	\$ 6,700	Notes payable	\$5,000
Accounts receivable	600	Accounts payable	1,510
Supplies	1,000	Unearned rent revenue	500
Prepaid rent	900	Salaries and wages payable	400
Equipment	\$15,000	Interest payable	50
Less: Accumulated depreciation—equipment	850	Total liabilities	\$7,460
Total assets	\$23,350		

(c) Retained earnings, April 1	\$ 0
Add: Net income	2,490
Less: Dividends	600
Retained earnings, June 30	\$ 1,890

Related exercise material: **BE3-9, BE3-10, E3-11, E3-13, and DO IT! 3-4.**

> Comprehensive DO IT!

The Green Thumb Lawn Care Inc. began on April 1. At April 30, the trial balance shows the following balances for selected accounts.

Prepaid Insurance	\$ 3,600
Equipment	28,000
Notes Payable	20,000
Unearned Service Revenue	4,200
Service Revenue	1,800

Analysis reveals the following additional data.

1. Prepaid insurance is the cost of a 2-year insurance policy, effective April 1.
2. Depreciation on the equipment is \$500 per month.
3. The note payable is dated April 1. It is a 6-month, 12% note.
4. Seven customers paid for the company's 6 months' lawn service package of \$600 beginning in April. The company performed services for these customers in April.
5. Lawn services provided other customers but not recorded at April 30 totaled \$1,500.

Instructions

Prepare the adjusting entries for the month of April. Show computations.

Solution to Comprehensive DO IT!

Action Plan

- ✓ Note that adjustments are being made for one month.
- ✓ Make computations carefully.
- ✓ Select account titles carefully.
- ✓ Make sure debits are made first and credits are indented.
- ✓ Check that debits equal credits for each entry.

GENERAL JOURNAL				J1
Date	Account Titles and Explanation	Ref.	Debit	Credit
<u>Adjusting Entries</u>				
Apr. 30	Insurance Expense Prepaid Insurance (To record insurance expired: \$3,600 ÷ 24 = \$150 per month)		150	150
30	Depreciation Expense Accumulated Depreciation—Equipment (To record monthly depreciation)		500	500
30	Interest Expense Interest Payable (To record interest on notes payable: \$20,000 × 12% × 1/12 = \$200)		200	200
30	Unearned Service Revenue Service Revenue (To record revenue for services performed: \$600 ÷ 6 = \$100; \$100 per month × 7 = \$700)		700	700
30	Accounts Receivable Service Revenue (To record revenue for services performed)		1,500	1,500

SUMMARY OF LEARNING OBJECTIVES

- 1 Explain the time period assumption.** The time period assumption assumes that the economic life of a business is divided into artificial time periods.
- 2 Explain the accrual basis of accounting.** Accrual-basis accounting means that companies record events that change a company's financial statements in the periods in which those events occur, rather than in the periods in which the company receives or pays cash.
- 3 Explain the reasons for adjusting entries.** Companies make adjusting entries at the end of an accounting period.

Such entries ensure that companies recognize revenues in the period in which the performance obligation is satisfied and recognize expenses in the period in which they are incurred.

- 4 Identify the major types of adjusting entries.** The major types of adjusting entries are deferrals (prepaid expenses and unearned revenues) and accruals (accrued revenues and accrued expenses).
- 5 Prepare adjusting entries for deferrals.** Deferrals are either prepaid expenses or unearned revenues.

Companies make adjusting entries for deferrals to record the portion of the prepayment that represents the expense incurred or the revenue for services performed in the current accounting period.

6 Prepare adjusting entries for accruals. Accruals are either accrued revenues or accrued expenses. Companies make adjusting entries for accruals to record revenues for services performed and expenses incurred in the

current accounting period that have not been recognized through daily entries.

7 Describe the nature and purpose of an adjusted trial balance. An adjusted trial balance shows the balances of all accounts, including those that have been adjusted, at the end of an accounting period. Its purpose is to prove the equality of the total debit balances and total credit balances in the ledger after all adjustments.

GLOSSARY

Accrual-basis accounting Accounting basis in which companies record transactions that change a company's financial statements in the periods in which the events occur. (p. 102).

Accruals Adjusting entries for either accrued revenues or accrued expenses. (p. 105).

Accrued expenses Expenses incurred but not yet paid in cash or recorded. (p. 114).

Accrued revenues Revenues for services performed but not yet received in cash or recorded. (p. 113).

Adjusted trial balance A list of accounts and their balances after the company has made all adjustments. (p. 121).

Adjusting entries Entries made at the end of an accounting period to ensure that companies follow the revenue and expense recognition principles. (p. 104).

Book value The difference between the cost of a depreciable asset and its related accumulated depreciation. (p. 109).

Calendar year An accounting period that extends from January 1 to December 31. (p. 102).

Cash-basis accounting Accounting basis in which companies record revenue when they receive cash and an expense when they pay cash. (p. 102).

Contra asset account An account offset against an asset account on the balance sheet. (p. 108).

Deferrals Adjusting entries for either prepaid expenses or unearned revenues. (p. 105).

Depreciation The allocation of the cost of an asset to expense over its useful life in a rational and systematic manner. (p. 108).

Expense recognition (matching) principle The principle that companies match efforts (expenses) with accomplishments (revenues). (p. 103).

Fiscal year An accounting period that is one year in length. (p. 102).

Interim periods Monthly or quarterly accounting time periods. (p. 102).

Prepaid expenses (prepayments) Expenses paid in cash before they are used or consumed. (p. 106).

Revenue recognition principle The principle that companies recognize revenue in the accounting period in which the performance obligation is satisfied. (p. 103).

Time period assumption An assumption that accountants can divide the economic life of a business into artificial time periods. (p. 102).

Unearned revenues Cash received before services are performed. (p. 110).

Useful life The length of service of a long-lived asset. (p. 108).

APPENDIX 3A ALTERNATIVE TREATMENT OF PREPAID EXPENSES AND UNEARNED REVENUES

LEARNING OBJECTIVE 8

Prepare adjusting entries for the alternative treatment of deferrals.

In discussing adjusting entries for prepaid expenses and unearned revenues, we illustrated transactions for which companies made the initial entries to balance sheet accounts. In the case of prepaid expenses, the company debited the prepayment to an asset account. In the case of unearned revenue, the company credited a liability account to record the cash received.

Some companies use an alternative treatment: (1) When a company prepays an expense, it debits that amount to an expense account. (2) When it receives payment for future services, it credits the amount to a revenue account. In this appendix, we describe the circumstances that justify such entries and the different adjusting entries that may be required. This alternative treatment of prepaid

expenses and unearned revenues has the same effect on the financial statements as the procedures described in the chapter.

Prepaid Expenses

Prepaid expenses become expired costs either through the passage of time (e.g., insurance) or through consumption (e.g., advertising supplies). If, at the time of purchase, the company expects to consume the supplies before the next financial statement date, **it may choose to debit (increase) an expense account rather than an asset account. This alternative treatment is simply more convenient.**

Assume that Pioneer Advertising Agency Inc. expects that it will use before the end of the month all of the supplies purchased on October 5. A debit of \$2,500 to Supplies Expense (rather than to the asset account Supplies) on October 5 will eliminate the need for an adjusting entry on October 31. At October 31, the Supplies Expense account will show a balance of \$2,500, which is the cost of supplies used between October 5 and October 31.

But what if the company does not use all the supplies? For example, what if an inventory of \$1,000 of advertising supplies remains on October 31? Obviously, the company would need to make an adjusting entry. Prior to adjustment, the expense account Supplies Expense is overstated \$1,000, and the asset account Supplies is understated \$1,000. Thus, Pioneer makes the following adjusting entry.

Oct. 31	Supplies	1,000	1,000
	Supplies Expense		
	(To record supplies inventory)		

After the company posts the adjusting entry, the accounts show:

Supplies		Supplies Expense	
10/31	Adj. 1,000	10/5	2,500
		10/31	Adj. 1,000
		10/31	Bal. 1,500

After adjustment, the asset account Supplies shows a balance of \$1,000, which is equal to the cost of supplies on hand at October 31. In addition, Supplies Expense shows a balance of \$1,500. This is equal to the cost of supplies used between October 5 and October 31. Without the adjusting entry expenses are overstated and net income is understated by \$1,000 in the October income statement. Also, both assets and stockholders' equity are understated by \$1,000 on the October 31 balance sheet.

Illustration 3A-2 compares the entries and accounts for advertising supplies in the two adjustment approaches.

Prepayment Initially Debited to Asset Account (per chapter)				Prepayment Initially Debited to Expense Account (per appendix)			
Oct. 5	Supplies	2,500		Oct. 5	Supplies Expense	2,500	
	Accounts Payable		2,500		Accounts Payable		2,500
Oct. 31	Supplies Expense	1,500		Oct. 31	Supplies	1,000	
	Supplies		1,500		Supplies Expense		1,000

$$\begin{array}{r}
 \text{A} = \text{L} + \text{SE} \\

Illustration 3A-2
Adjustment approaches—a comparison

After Pioneer posts the entries, the accounts appear as follows.

Illustration 3A-3
Comparison of accounts

(per chapter)				(per appendix)			
Supplies				Supplies			
10/5	2,500	10/31 Adj.	1,500	10/31 Adj.	1,000		
10/31 Bal.	1,000						
Supplies Expense				Supplies Expense			
10/31 Adj.	1,500			10/5	2,500	10/31 Adj.	1,000
				10/31 Bal.	1,500		

Note that the account balances under each alternative are the same at October 31: Supplies \$1,000, and Supplies Expense \$1,500.

Unearned Revenues

Unearned revenues are recognized as revenue at the time services are performed. Similar to the case for prepaid expenses, companies may credit (increase) a revenue account when they receive cash for future services.

To illustrate, assume that Pioneer Advertising Agency Inc. received \$1,200 for future services on October 2. Pioneer expects to perform the services before October 31.² In such a case, the company credits Service Revenue. If Pioneer in fact performs the service before October 31, no adjustment is needed.

However, if at the statement date Pioneer has not performed \$800 of the services, it would make an adjusting entry. Without the entry, the revenue account Service Revenue is overstated \$800, and the liability account Unearned Service Revenue is understated \$800. Thus, Pioneer makes the following adjusting entry.

Oct. 31	Service Revenue	800	
	Unearned Service Revenue		800
	(To record unearned service revenue)		

After Pioneer posts the adjusting entry, the accounts show:

Unearned Service Revenue				Service Revenue			
	10/31 Adj.	800		10/31 Adj.	800	10/2	1,200
						10/31 Bal.	400

The liability account Unearned Service Revenue shows a balance of \$800. This equals the services that will be performed in the future. In addition, the balance in Service Revenue equals the services performed in October. Without the adjusting entry, both revenues and net income are overstated by \$800 in the October income statement. Also, liabilities are understated by \$800, and stockholders' equity is overstated by \$800 on the October 31 balance sheet.

Illustration 3A-5 compares the entries and accounts for initially recording unearned service revenue in (1) a liability account or (2) a revenue account.

Helpful Hint

The required adjusted balances here are Service Revenue \$400 and Unearned Service Revenue \$800.

$$A = L + SE$$

-800 Rev.

+800

Cash Flows
no effect

Illustration 3A-4
Unearned service revenue accounts after adjustment

²This example focuses only on the alternative treatment of unearned revenues. For simplicity, we have ignored the entries to Service Revenue pertaining to the immediate recognition of revenue (\$10,000) and the adjusting entry for accrued revenue (\$200).

Unearned Service Revenue Initially Credited to Liability Account (per chapter)			Unearned Service Revenue Initially Credited to Revenue Account (per appendix)		
Oct. 2	Cash	1,200	Oct. 2	Cash	1,200
	Unearned Service Revenue	1,200		Service Revenue	1,200
Oct. 31	Unearned Service Revenue	400	Oct. 31	Service Revenue	800
	Service Revenue	400		Unearned Service Revenue	800

Illustration 3A-5
Adjustment approaches—
a comparison

After Pioneer posts the entries, the accounts appear as follows.

(per chapter) Unearned Service Revenue			(per appendix) Unearned Service Revenue			
10/31	Adj.	400	10/2		1,200	
			10/31	Bal.	800	
Service Revenue			Service Revenue			
	10/31	Adj.	400	10/31	Adj.	800
				10/2		1,200
				10/31	Bal.	400

Illustration 3A-6
Comparison of accounts

Note that the balances in the accounts are the same under the two alternatives: Unearned Service Revenue \$800, and Service Revenue \$400.

Summary of Additional Adjustment Relationships

Illustration 3A-7 provides a summary of basic relationships for deferrals.

Illustration 3A-7
Summary of basic relationships
for deferrals.

Type of Adjustment	Reason for Adjustment	Account Balances before Adjustment	Adjusting Entry
Prepaid expenses	(a) Prepaid expenses initially recorded in asset accounts have been used.	Assets overstated. Expenses understated.	Dr. Expenses Cr. Assets
	(b) Prepaid expenses initially recorded in expense accounts have not been used.	Assets understated. Expenses overstated.	Dr. Assets Cr. Expenses
Unearned revenues	(a) Unearned revenues initially recorded in liability accounts are now recognized as revenue.	Liabilities overstated. Revenues understated.	Dr. Liabilities Cr. Revenues
	(b) Unearned revenues initially recorded in revenue accounts are still unearned.	Liabilities understated. Revenues overstated.	Dr. Revenues Cr. Liabilities

Alternative adjusting entries **do not apply** to accrued revenues and accrued expenses because **no entries occur before companies make these types of adjusting entries.**

SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 3A

8 Prepare adjusting entries for the alternative treatment of deferrals. Companies may initially debit prepayments to an expense account. Likewise, they may credit unearned revenues to a revenue account. At the end of the period, these accounts may be overstated. The

adjusting entries for prepaid expenses are a debit to an asset account and a credit to an expense account. Adjusting entries for unearned revenues are a debit to a revenue account and a credit to a liability account.

APPENDIX 3B CONCEPTS IN ACTION

LEARNING OBJECTIVE 9

Discuss financial reporting concepts.

This appendix provides a summary of the concepts in action used in this textbook. In addition, it provides other useful concepts which accountants use as a basis for recording and reporting financial information.

Qualities of Useful Information

Recently, the FASB and IASB completed the first phase of a joint project in which they developed a conceptual framework to serve as the basis for future accounting standards. The framework begins by stating that the primary objective of financial reporting is to provide financial information that is **useful** to investors and creditors for making decisions about providing capital. According to the FASB, useful information should possess two fundamental qualities, relevance and faithful representation, as shown in Illustration 3B-1.

Illustration 3B-1
Fundamental qualities of useful information

	<p>Relevance Accounting information is considered relevant if it would make a difference in a business decision. Information is considered relevant if it provides information that has predictive value, that is, helps provide accurate expectations about the future, and has confirmatory value, that is, confirms or corrects prior expectations.</p>
	<p>Faithful Representation Faithful representation means that information accurately depicts what really happened. To provide a faithful representation, information must be complete (nothing important has been omitted) and neutral (is not biased toward one position or another).</p>

ENHANCING QUALITIES

In addition to the two fundamental qualities, the FASB and IASB also describe a number of enhancing qualities of useful information. These include **comparability**, **consistency**, **verifiability**, **timeliness**, and **understandability**. In accounting, **comparability** results when different companies use the same accounting principles. Another characteristic that enhances comparability is consistency. **Consistency** means that a company uses the same accounting principles and methods from year to year. Information is **verifiable** if we are able to prove that it is free from error. For accounting information to be relevant, it must be **timely**. That is, it must be available to decision-makers before it loses its capacity to influence decisions. For example, public companies like **Google** or **Best Buy** must provide their annual reports to investors within 60 days of their year-end. Information has the quality of **understandability** if it is presented in a clear and concise fashion, so that reasonably informed users of that information can interpret it and comprehend its meaning.

Assumptions in Financial Reporting

To develop accounting standards, the FASB relies on some key assumptions, as shown in Illustration 3B-2. These include assumptions about the monetary unit, economic entity, time period, going concern, and accrual basis.

	<p>Monetary Unit Assumption The monetary unit assumption (discussed in Chapter 1) requires that only those things that can be expressed in money are included in the accounting records. This means that certain important information needed by investors, creditors, and managers, such as customer satisfaction, is not reported in the financial statements.</p>
	<p>Economic Entity Assumption The economic entity assumption (discussed in Chapter 1) states that the activities of the entity must be kept separate and distinct from the activities of the owner. In order to assess a company's performance and financial position accurately, it is important that we not blur company transactions with personal transactions (especially those of its managers) or transactions of other companies.</p>
	<p>Time Period (Periodicity) Assumption Notice that the income statement, retained earnings statement, and statement of cash flows all cover periods of one year, and the balance sheet is prepared at the end of each year. The time period assumption (discussed in Chapter 3) states that the life of a business can be divided into artificial time periods and that useful reports covering those periods can be prepared for the business.</p>
	<p>Going Concern Assumption The going concern assumption (discussed in Chapter 9) states that the business will remain in operation for the foreseeable future. Of course, many businesses do fail, but in general, it is reasonable to assume that the business will continue operating.</p>
	<p>Accrual-Basis Assumption The accrual-basis accounting assumption (discussed in Chapter 3) means that transactions that change a company's financial statements are recorded in the periods in which the events occur. Accrual-basis accounting is addressed in more detail in Chapter 4.</p>

Illustration 3B-2
Key assumptions in financial reporting

Ethics Note

The importance of the economic entity assumption is illustrated by scandals involving **Adelphia**. In this case, senior company employees entered into transactions that blurred the line between the employees' financial interests and those of the company. For example, Adelphia guaranteed over \$2 billion of loans to the founding family.

Principles in Financial Reporting

MEASUREMENT PRINCIPLES

GAAP generally uses one of two measurement principles, the cost principle or the fair value principle. Selection of which principle to follow generally relates to trade-offs between relevance and faithful representation.

COST PRINCIPLE The **cost principle** (or *historical cost principle*, discussed in Chapter 1) dictates that companies record assets at their cost. This is true not only at the time the asset is purchased but also over the time the asset is held. For example, if land that was purchased for \$30,000 increases in value to \$40,000, it continues to be reported at \$30,000.

FAIR VALUE PRINCIPLE The **fair value principle** (discussed in Chapter 1) indicates that assets and liabilities should be reported at fair value (the price received to sell an asset or settle a liability). Fair value information may be more useful than historical cost for certain types of assets and liabilities. For example, certain investment securities are reported at fair value because market price information is often readily available for these types of assets. In choosing between cost and fair value, two qualities that make accounting information useful for decision-making are used—relevance and faithful representation. In determining which measurement principle to use, the factual nature of cost figures are weighed versus the relevance of fair value. In general, most assets follow the cost principle because market values are representationally faithful. Only in situations where assets are actively traded, such as investment securities, is the fair value principle applied.

REVENUE RECOGNITION PRINCIPLE

The **revenue recognition principle** requires that companies recognize revenue in the accounting period in which the performance obligation is satisfied. As discussed in Chapter 3, in a service company, revenue is recognized at the time the service is performed. In a merchandising company, the performance obligation is generally satisfied when the goods transfer from the seller to the buyer (discussed in Chapter 4). At this point, the sales transaction is complete and the sales price established.

EXPENSE RECOGNITION PRINCIPLE

The **expense recognition principle** (often referred to as the *matching principle*, discussed in Chapter 3) dictates that efforts (expenses) be matched with results (revenues). Thus, expenses follow revenues.

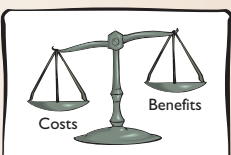

FULL DISCLOSURE PRINCIPLE

The **full disclosure principle** (discussed in Chapter 11) requires that companies disclose all circumstances and events that would make a difference to financial statement users. If an important item cannot reasonably be reported directly in one of the four types of financial statements, then it should be discussed in notes that accompany the statements.

Constraints In Financial Reporting

Efforts to provide useful financial information can be costly to a company. Therefore, the profession has agreed upon **constraints** to ensure that companies apply accounting rules in a reasonable fashion, from the perspectives of both the company and the user. The constraints are the materiality and cost constraints, as shown in Illustration 3B-3.

Illustration 3B-3
Constraints in financial reporting

	<p>Materiality Constraint The materiality constraint (discussed in Chapter 9) relates to a financial statement item's impact on a company's overall financial condition and operations. An item is material when its size makes it likely to influence the decision of an investor or creditor. It is immaterial if it is too small to impact a decision-maker. If the item does not make a difference, the company does not have to follow GAAP in reporting it.</p>
	<p>Cost Constraint The cost constraint (discussed in Chapter 1) relates to the fact that providing information is costly. In deciding whether companies should be required to provide a certain type of information, accounting standard-setters weigh the cost that companies will incur to provide the information against the benefit that financial statement users will gain from having the information available.</p>

SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 3B

The Navigator

9 Discuss financial reporting concepts. To be judged useful, information should have the primary characteristics of relevance and faithful representation. In addition, it should be comparable, consistent, verifiable, timely, and understandable.

The *monetary unit assumption* requires that companies include in the accounting records only transaction data that can be expressed in terms of money. The *economic entity assumption* states that economic events can be identified with a particular unit of accountability. The *time period assumption* states that the economic life of a business can be divided into artificial time periods and that meaningful accounting reports can be prepared for each period. The *going concern assumption* states that the company will continue in

operation long enough to carry out its existing objectives and commitments. The *accrual-basis accounting assumption* means that transactions are recorded in the periods in which the events occur.

The *cost principle* states that companies should record assets at their cost. The *fair value principle* indicates that assets and liabilities should be reported at fair value. The *revenue recognition principle* requires that companies recognize revenue in the accounting period in which the performance obligation is satisfied. The *expense recognition principle* dictates that efforts (expenses) be matched with results (revenues). The *full disclosure principle* requires that companies disclose circumstances and events that matter to financial statement users.

The major constraints are materiality and cost.

GLOSSARY FOR APPENDIX 3B

Accrual-basis accounting assumption Transactions that change a company's financial statements are recorded in the periods in which the events occur. (p. 131).

Comparability Ability to compare the accounting information of different companies because they use the same accounting principles. (p. 130).

Consistency Use of the same accounting principles and methods from year to year within a company. (p. 130).

Cost constraint Constraint of determining whether the cost that companies will incur to provide the information will outweigh the benefit that financial statement users will gain from having the information available. (p. 132).

Cost principle An accounting principle that states that companies should record assets at their cost. (p. 131).

Economic entity assumption An assumption that every economic entity can be separately identified and accounted for. (p. 131).

Expense recognition principle Efforts (expenses) should be matched with results (revenues). (p. 132)

Fair value principle Assets and liabilities should be reported at fair value (the price received to sell an asset or settle a liability). (p. 132).

Faithful representation Information that is complete, neutral, and free from error. (p. 130).

Full disclosure principle Accounting principle that dictates that companies disclose circumstances and

events that make a difference to financial statement users. (p. 132).

Going concern assumption The assumption that the company will continue in operation for the foreseeable future. (p. 131).

Materiality constraint The constraint of determining whether an item is large enough to likely influence the decision of an investor or creditor. (p. 132).

Monetary unit assumption An assumption that requires that only those things that can be expressed in money are included in the accounting records. (p. 131).

Relevance The quality of information that indicates the information makes a difference in a decision. (p. 130).

Revenue recognition principle Companies recognize revenue in the accounting period in which the performance obligation is satisfied. (p. 132).

Timely Information that is available to decision-makers before it loses its capacity to influence decisions. (p. 130).

Time period assumption An assumption that the life of a business can be divided into artificial time periods and that useful reports covering those periods can be prepared for the business. (p. 131).

Understandability Information presented in a clear and concise fashion so that users can interpret it and comprehend its meaning. (p. 130).

Verifiable Information that is proven to be free from error. (p. 130).

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more components are available for practice in WileyPLUS.

Note: All Questions, Exercises, and Problems marked with an asterisk relate to material in the appendices to the chapter.

SELF-TEST QUESTIONS

Answers are on page 159.

- (LO 1) 1. The time period assumption states that:
- revenue should be recognized in the accounting period in which a performance obligation is satisfied.
 - expenses should be matched with revenues.
 - the economic life of a business can be divided into artificial time periods.
 - the fiscal year should correspond with the calendar year.
- (LO 1) 2. The time period assumption states that:
- companies must wait until the calendar year is completed to prepare financial statements.
 - companies use the fiscal year to report financial information.
 - the economic life of a business can be divided into artificial time periods.
 - companies record information in the time period in which the events occur.
- (LO 2) 3. Which of the following statements about the accrual basis of accounting is *false*?
- Events that change a company's financial statements are recorded in the periods in which the events occur.
 - Revenue is recognized in the period in which services are performed.
 - This basis is in accord with generally accepted accounting principles.
 - Revenue is recorded only when cash is received, and expense is recorded only when cash is paid.
- (LO 2) 4. The principle or assumption dictating that efforts (expenses) be matched with accomplishments (revenues) is the:
- expense recognition principle.
 - cost assumption.
 - time period principle.
 - revenue recognition principle.
- (LO 3) 5. Adjusting entries are made to ensure that:
- expenses are recognized in the period in which they are incurred.
 - revenues are recorded in the period in which services are provided.
 - balance sheet and income statement accounts have correct balances at the end of an accounting period.
 - All of the above.
- (LO 4) 6. Each of the following is a major type (or category) of adjusting entries *except*:
- prepaid expenses.
 - accrued revenues.
 - accrued expenses.
 - recognized revenues.
7. The trial balance shows Supplies \$1,350 and Supplies Expense \$0. If \$600 of supplies are on hand at the end of the period, the adjusting entry is:
- | | | |
|------------------|-----|-----|
| Supplies | 600 | |
| Supplies Expense | | 600 |
 - | | | |
|------------------|-----|-----|
| Supplies | 750 | |
| Supplies Expense | | 750 |
 - | | | |
|------------------|-----|-----|
| Supplies Expense | 750 | |
| Supplies | | 750 |
 - | | | |
|------------------|-----|-----|
| Supplies Expense | 600 | |
| Supplies | | 600 |
8. Adjustments for prepaid expenses:
- decrease assets and increase revenues.
 - decrease expenses and increase assets.
 - decrease assets and increase expenses.
 - decrease revenues and increase assets.
9. Accumulated Depreciation is:
- a contra asset account.
 - an expense account.
 - a stockholders' equity account.
 - a liability account.
10. Queenan Company computes depreciation on delivery equipment at \$1,000 for the month of June. The adjusting entry to record this depreciation is as follows.
- | | | |
|--|-------|-------|
| Depreciation Expense | 1,000 | |
| Accumulated Depreciation—Queenan Company | | 1,000 |
 - | | | |
|----------------------|-------|-------|
| Depreciation Expense | 1,000 | |
| Equipment | | 1,000 |
 - | | | |
|------------------------------------|-------|-------|
| Depreciation Expense | 1,000 | |
| Accumulated Depreciation—Equipment | | 1,000 |
 - | | | |
|------------------------------------|-------|-------|
| Equipment Expense | 1,000 | |
| Accumulated Depreciation—Equipment | | 1,000 |
11. Adjustments for unearned revenues:
- decrease liabilities and increase revenues.
 - have an assets and revenues account relationship.
 - increase assets and increase revenues.
 - decrease revenues and decrease assets.
12. Adjustments for accrued revenues:
- have a liabilities and revenues account relationship.
 - have an assets and revenues account relationship.
 - decrease assets and revenues.
 - decrease liabilities and increase revenues.
13. Kathy Siska earned a salary of \$400 for the last week of September. She will be paid on October 1. The adjusting entry for Kathy's employer at September 30 is:

(a) No entry is required.		
(b) Salaries and Wages Expense	400	400
Salaries and Wages Payable		
(c) Salaries and Wages Expense	400	400
Cash		
(d) Salaries and Wages Payable	400	400
Cash		

(LO 7) 14. Which of the following statements is *incorrect* concerning the adjusted trial balance?

- (a) An adjusted trial balance proves the equality of the total debit balances and the total credit balances in the ledger after all adjustments are made.
- (b) The adjusted trial balance provides the primary basis for the preparation of financial statements.
- (c) The adjusted trial balance lists the account balances segregated by assets and liabilities.
- (d) The adjusted trial balance is prepared after the adjusting entries have been journalized and posted.

(LO 8) *15. The trial balance shows Supplies \$0 and Supplies Expense \$1,500. If \$800 of supplies are on hand at the end of the period, the adjusting entry is:

- (a) Debit Supplies \$800 and credit Supplies Expense \$800.
- (b) Debit Supplies Expense \$800 and credit Supplies \$800.
- (c) Debit Supplies \$700 and credit Supplies Expense \$700.
- (d) Debit Supplies Expense \$700 and credit Supplies \$700.

*16. Neutrality is an ingredient of:

(LO 9)

	Faithful Representation	Relevance
--	-------------------------	-----------

- | | | |
|-----|-----|-----|
| (a) | Yes | Yes |
| (b) | No | No |
| (c) | Yes | No |
| (d) | No | Yes |

*17. What accounting constraint allows a company to ignore GAAP if an item is too small to impact a decision?

(LO 9)

- | | |
|--------------------|------------------|
| (a) Comparability. | (c) Cost. |
| (b) Materiality. | (d) Consistency. |

Go to the book's companion website, www.wiley.com/college/weygandt, for additional Self-Test Questions.

QUESTIONS

1. (a) How does the time period assumption affect an accountant's analysis of business transactions?
(b) Explain the terms *fiscal year*, *calendar year*, and *interim periods*.
2. State two generally accepted accounting principles that relate to adjusting the accounts.
3. Gabe Corts, a lawyer, accepts a legal engagement in March, performs the work in April, and is paid in May. If Corts' law firm prepares monthly financial statements, when should it recognize revenue from this engagement? Why?
4. Why do accrual-basis financial statements provide more useful information than cash-basis statements?
5. In completing the engagement in Question 3, Corts pays no costs in March, \$2,200 in April, and \$2,500 in May (incurred in April). How much expense should the firm deduct from revenues in the month when it recognizes the revenue? Why?
6. "Adjusting entries are required by the cost principle of accounting." Do you agree? Explain.
7. Why may a trial balance not contain up-to-date and complete financial information?
8. Distinguish between the two categories of adjusting entries, and identify the types of adjustments applicable to each category.
9. What is the debit/credit effect of a prepaid expense adjusting entry?
10. "Depreciation is a valuation process that results in the reporting of the fair value of the asset." Do you agree? Explain.
11. Explain the differences between depreciation expense and accumulated depreciation.
12. M. Gibbs Company purchased equipment for \$18,000. By the current balance sheet date, \$7,000 had been depreciated. Indicate the balance sheet presentation of the data.
13. What is the debit/credit effect of an unearned revenue adjusting entry?
14. A company fails to recognize revenue for services performed but not yet received in cash or recorded. Which of the following accounts are involved in the adjusting entry: (a) asset, (b) liability, (c) revenue, or (d) expense? For the accounts selected, indicate whether they would be debited or credited in the entry.
15. A company fails to recognize an expense incurred but not paid. Indicate which of the following accounts is debited and which is credited in the adjusting entry: (a) asset, (b) liability, (c) revenue, or (d) expense.
16. A company makes an accrued revenue adjusting entry for \$900 and an accrued expense adjusting entry for \$700. How much was net income understated prior to these entries? Explain.
17. On January 9, a company pays \$6,000 for salaries and wages, of which \$2,000 was reported as Salaries and Wages Payable on December 31. Give the entry to record the payment.
18. For each of the following items before adjustment, indicate the type of adjusting entry (prepaid expense, unearned revenue, accrued revenue, or accrued expense) that is needed to correct the misstatement. If an item could result in more than one type of adjusting entry, indicate each of the types.
 - (a) Assets are understated.
 - (b) Liabilities are overstated.

- (c) Liabilities are understated.
 (d) Expenses are understated.
 (e) Assets are overstated.
 (f) Revenue is understated.
19. One-half of the adjusting entry is given below. Indicate the account title for the other half of the entry.
 (a) Salaries and Wages Expense is debited.
 (b) Depreciation Expense is debited.
 (c) Interest Payable is credited.
 (d) Supplies is credited.
 (e) Accounts Receivable is debited.
 (f) Unearned Service Revenue is debited.
20. “An adjusting entry may affect more than one balance sheet or income statement account.” Do you agree? Why or why not?
21. Why is it possible to prepare financial statements directly from an adjusted trial balance?
22.  **PEPSICO** What was PepsiCo’s depreciation and amortization expense for 2010 and 2009?
- *23. L. Thomas Company debits Supplies Expense for all purchases of supplies and credits Rent Revenue for all advanced rentals. For each type of adjustment, give the adjusting entry.
- *24. (a) What is the primary objective of financial reporting?
 (b) Identify the characteristics of useful accounting information.
- *25. Dan Fineman, the president of King Company, is pleased. King substantially increased its net income in 2014 while keeping its unit inventory relatively the same. Howard Gross, chief accountant, cautions Dan, however. Gross says that since King changed its method of inventory valuation, there is a consistency problem and it is difficult to determine whether King is better off. Is Gross correct? Why or why not?
- *26. What is the distinction between comparability and consistency?
- *27. Describe the two constraints inherent in the presentation of accounting information.
- *28. Laurie Belk is president of Better Books. She has no accounting background. Belk cannot understand why fair value is not used as the basis for all accounting measurement and reporting. Discuss.
- *29. What is the economic entity assumption? Give an example of its violation.

BRIEF EXERCISES

Indicate why adjusting entries are needed.

(LO 3)

BE3-1 The ledger of Basler Company includes the following accounts. Explain why each account may require adjustment.

- Prepaid Insurance
- Depreciation Expense
- Unearned Service Revenue
- Interest Payable

Identify the major types of adjusting entries.

(LO 4, 5, 6)

BE3-2 Lucci Company accumulates the following adjustment data at December 31. Indicate (a) the type of adjustment (prepaid expense, accrued revenues and so on), and (b) the status of accounts before adjustment (overstated or understated).

- Supplies of \$100 are on hand.
- Services provided but not recorded total \$870.
- Interest of \$200 has accumulated on a note payable.
- Rent collected in advance totaling \$560 has been recognized.

Prepare adjusting entry for supplies.

(LO 5)

BE3-3 Wow Advertising Company’s trial balance at December 31 shows Supplies \$6,700 and Supplies Expense \$0. On December 31, there are \$1,900 of supplies on hand. Prepare the adjusting entry at December 31, and using T-accounts, enter the balances in the accounts, post the adjusting entry, and indicate the adjusted balance in each account.

Prepare adjusting entry for depreciation.

(LO 5)

BE3-4 At the end of its first year, the trial balance of Wooster Company shows Equipment \$32,000 and zero balances in Accumulated Depreciation—Equipment and Depreciation Expense. Depreciation for the year is estimated to be \$6,000. Prepare the adjusting entry for depreciation at December 31, post the adjustments to T-accounts, and indicate the balance sheet presentation of the equipment at December 31.

Prepare adjusting entry for prepaid expense.

(LO 5)

BE3-5 On July 1, 2014, Pizner Co. pays \$13,200 to Orlow Insurance Co. for a 3-year insurance contract. Both companies have fiscal years ending December 31. For Pizner Co., journalize and post the entry on July 1 and the adjusting entry on December 31.

Prepare adjusting entry for unearned revenue.

(LO 5)

BE3-6 Using the data in BE3-5, journalize and post the entry on July 1 and the adjusting entry on December 31 for Orlow Insurance Co. Orlow uses the accounts Unearned Service Revenue and Service Revenue.

BE3-7 The bookkeeper for Easton Company asks you to prepare the following accrued adjusting entries at December 31.

1. Interest on notes payable of \$360 is accrued.
2. Services provided but not recorded total \$1,750.
3. Salaries earned by employees of \$900 have not been recorded.

Use the following account titles: Service Revenue, Accounts Receivable, Interest Expense, Interest Payable, Salaries and Wages Expense, and Salaries and Wages Payable.

BE3-8 The trial balance of Gleason Company includes the following balance sheet accounts, which may require adjustment. For each account that requires adjustment, indicate (a) the type of adjusting entry (prepaid expenses, unearned revenues, accrued revenues, and accrued expenses) and (b) the related account in the adjusting entry.

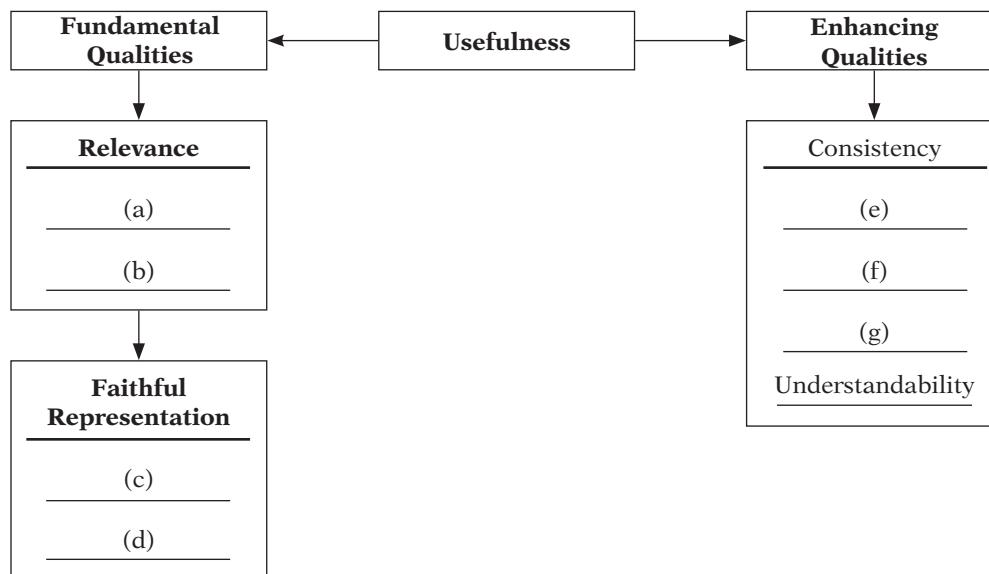

Accounts Receivable	Interest Payable
Prepaid Insurance	Unearned Service Revenue
Accumulated Depreciation—Equipment	

BE3-9 The adjusted trial balance of Lopez Company at December 31, 2014, includes the following accounts: Common Stock \$15,600; Dividends \$6,000; Service Revenue \$38,400; Salaries and Wages Expense \$16,000; Insurance Expense \$2,000; Rent Expense \$4,400; Supplies Expense \$1,500; and Depreciation Expense \$1,300. Prepare an income statement for the year.

BE3-10 Partial adjusted trial balance data for Lopez Company is presented in BE3-9. Prepare a retained earnings statement for the year assuming net income is \$13,200 for the year and Retained Earnings is \$7,240 on January 1.

***BE3-11** Lim Company records all prepayments in income statement accounts. At April 30, the trial balance shows Supplies Expense \$2,800, Service Revenue \$9,200, and zero balances in related balance sheet accounts. Prepare the adjusting entries at April 30 assuming (a) \$1,000 of supplies on hand and (b) \$2,000 of service revenue should be reported as unearned.

***BE3-12** The accompanying chart shows the qualitative characteristics of useful accounting information. Fill in the blanks.

***BE3-13** Given the *characteristics* of useful accounting information, complete each of the following statements.

- (a) For information to be _____, it should have predictive and confirmatory value.
- (b) _____ is the quality of information that gives assurance that it is free from error and bias.
- (c) _____ means using the same accounting principles and methods from year to year within a company.

Prepare adjusting entries for accruals.

(LO 6)

Analyze accounts in an unadjusted trial balance.

(LO 4, 5, 6)

Prepare an income statement from an adjusted trial balance.

(LO 7)

Prepare a retained earnings statement from an adjusted trial balance.

(LO 7)

Prepare adjusting entries under alternative treatment of deferrals.

(LO 8)

Identify characteristics of useful information.

(LO 9)

Identify characteristics of useful information.

(LO 9)

Identify characteristics of useful information.

(LO 9)

***BE3-14** Here are some qualitative characteristics of useful accounting information:

- | | |
|---------------------|---------------|
| 1. Predictive value | 3. Verifiable |
| 2. Neutral | 4. Timely |

Match each qualitative characteristic to one of the following statements.

- _____ (a) Accounting information should help provide accurate expectations about future events.
- _____ (b) Accounting information cannot be selected, prepared, or presented to favor one set of interested users over another.
- _____ (c) Accounting information must be proved to be free of error.
- _____ (d) Accounting information must be available to decision-makers before it loses its capacity to influence their decisions.

Define full disclosure principle.

(LO 9)

***BE3-15** The full disclosure principle dictates that:

- (a) financial statements should disclose all assets at their cost.
- (b) financial statements should disclose only those events that can be measured in dollars.
- (c) financial statements should disclose all events and circumstances that would matter to users of financial statements.
- (d) financial statements should not be relied on unless an auditor has expressed an unqualified opinion on them.

> DO IT! REVIEW

Identify timing concepts.

(LO 1, 2)

DO IT! 3-1 Numerous timing concepts are discussed on pages 102–103. A list of concepts is provided below in the left column, with a description of the concept in the right column. There are more descriptions provided than concepts. Match the description of the concept to the concept.

- | | |
|---|--|
| 1. _____ Cash-basis accounting. | (a) Monthly and quarterly time periods. |
| 2. _____ Fiscal year. | (b) Accountants divide the economic life of a business into artificial time periods. |
| 3. _____ Revenue recognition principle. | (c) Efforts (expenses) should be matched with accomplishments (revenues). |
| 4. _____ Expense recognition principle. | (d) Companies record revenues when they receive cash and record expenses when they pay out cash. |
| | (e) An accounting time period that is one year in length. |
| | (f) An accounting time period that starts on January 1 and ends on December 31. |
| | (g) Companies record transactions in the period in which the events occur. |
| | (h) Recognize revenue in the accounting period in which a performance obligation is satisfied. |

Prepare adjusting entries for deferrals.

(LO 5)

DO IT! 3-2 The ledger of Lafayette, Inc. on March 31, 2014, includes the following selected accounts before adjusting entries.

	<u>Debit</u>	<u>Credit</u>
Prepaid Insurance	2,400	
Supplies	2,500	
Equipment	30,000	
Unearned Service Revenue		9,000

An analysis of the accounts shows the following.

- Insurance expires at the rate of \$300 per month.
- Supplies on hand total \$1,400.
- The equipment depreciates \$200 per month.
- 2/5 of the unearned service revenue was recognized in March.

Prepare the adjusting entries for the month of March.

DO IT! 3-3 Pegasus Computer Services began operations in July 2014. At the end of the month, the company is trying to prepare monthly financial statements. Pegasus has the following information for the month.

- At July 31, Pegasus owed employees \$1,300 in salaries that the company will pay in August.
- On July 1, Pegasus borrowed \$20,000 from a local bank on a 10-year note. The annual interest rate is 9%.
- Service revenue unrecorded in July totaled \$2,400.

Prepare the adjusting entries needed at July 31, 2014.

Prepare adjusting entries for accruals.

(LO 6)

DO IT! 3-4 Phelps Co. was organized on April 1, 2014. The company prepares quarterly financial statements. The adjusted trial balance amounts at June 30 are shown below.

Calculate amounts from trial balance.

(LO 7)

Debits		Credits	
Cash	\$ 5,190	Accumulated Depreciation— Equipment	\$ 700
Accounts Receivable	480	Notes Payable	4,000
Prepaid Rent	720	Accounts Payable	790
Supplies	920	Salaries and Wages Payable	300
Equipment	12,000	Interest Payable	40
Dividends	500	Unearned Rent Revenue	400
Salaries and Wages Expense	7,400	Common Stock	11,200
Rent Expense	1,200	Service Revenue	11,360
Depreciation Expense	700	Rent Revenue	900
Supplies Expense	160	Total credits	<u>\$29,690</u>
Utilities Expense	380		
Interest Expense	40		
Total debits	<u>\$29,690</u>		

- Determine the net income for the quarter April 1 to June 30.
- Determine the total assets and total liabilities at June 30, 2014, for Phelps Company.
- Determine the amount that appears for Retained Earnings at June 30, 2014.

The Navigator

EXERCISES

E3-1 Fred Mosure has prepared the following list of statements about the time period assumption.

Explain the time period assumption.

- Adjusting entries would not be necessary if a company's life were not divided into artificial time periods.
- The IRS requires companies to file annual tax returns.
- Accountants divide the economic life of a business into artificial time periods, but each transaction affects only one of these periods.
- Accounting time periods are generally a month, a quarter, or a year.
- A time period lasting one year is called an interim period.
- All fiscal years are calendar years, but not all calendar years are fiscal years.

(LO 1)

Instructions

Identify each statement as true or false. If false, indicate how to correct the statement.

E3-2 On numerous occasions, proposals have surfaced to put the federal government on the accrual basis of accounting. This is no small issue. If this basis were used, it would mean that billions in unrecorded liabilities would have to be booked, and the federal deficit would increase substantially.

Distinguish between cash and accrual basis of accounting.

(LO 2)

Instructions 

- What is the difference between accrual-basis accounting and cash-basis accounting?
- Why would politicians prefer the cash basis over the accrual basis?
- Write a letter to your senator explaining why the federal government should adopt the accrual basis of accounting.

Compute cash and accrual accounting income.

(LO 2)

E3-3 Concordia Industries collected \$105,000 from customers in 2014. Of the amount collected, \$28,000 was from revenue accrued from services performed in 2013. In addition, Concordia recognized \$44,000 of revenue in 2014, which will not be collected until 2015.

Concordia Industries also paid \$72,000 for expenses in 2014. Of the amount paid, \$30,000 was for expenses incurred on account in 2013. In addition, Concordia incurred \$37,000 of expenses in 2014, which will not be paid until 2015.

Instructions

- Compute 2014 cash-basis net income.
- Compute 2014 accrual-basis net income.

Identify the type of adjusting entry needed.

(LO 4)

E3-4 Waverly Corporation encounters the following situations:

- Waverly collects \$1,750 from a customer in 2014 for services to be performed in 2015.
- Waverly incurs utility expense which is not yet paid in cash or recorded.
- Waverly employees worked 3 days in 2014 but will not be paid until 2015.
- Waverly performs services for a customer but has not yet received cash or recorded the transaction.
- Waverly paid \$2,400 rent on December 1 for the 4 months starting December 1.
- Waverly received cash for future services and recorded a liability until the service was performed.
- Waverly performed consulting services for a client in December 2014. On December 31, it had not billed the client for services provided of \$1,200.
- Waverly paid cash for an expense and recorded an asset until the item was used up.
- Waverly purchased \$750 of supplies in 2014; at year-end, \$400 of supplies remain unused.
- Waverly purchased equipment on January 1, 2014; the equipment will be used for 5 years.
- Waverly borrowed \$10,000 on October 1, 2014, signing an 8% one-year note payable.

Instructions

Identify what type of adjusting entry (prepaid expense, unearned revenue, accrued expense, or accrued revenue) is needed in each situation, at December 31, 2014.

Prepare adjusting entries from selected data.

(LO 5, 6)

E3-5 Dan Luther Company has the following balances in selected accounts on December 31, 2014.

Accounts Receivable	\$ -0-
Accumulated Depreciation—Equipment	-0-
Equipment	7,000
Interest Payable	-0-
Notes Payable	8,000
Prepaid Insurance	2,100
Salaries and Wages Payable	-0-
Supplies	2,450
Unearned Service Revenue	30,000

All the accounts have normal balances. The information below has been gathered at December 31, 2014.

- Dan Luther Company borrowed \$8,000 by signing a 10%, one-year note on October 1, 2014.
- A count of supplies on December 31, 2014, indicates that supplies of \$780 are on hand.
- Depreciation on the equipment for 2014 is \$1,000.
- Dan Luther Company paid \$2,100 for 12 months of insurance coverage on June 1, 2014.
- On December 1, 2014, Dan Luther collected \$30,000 for consulting services to be performed from December 1, 2014, through March 31, 2015.
- Dan Luther performed consulting services for a client in December 2014. The client will be billed \$3,900.

7. Dan Luther Company pays its employees total salaries of \$9,000 every Monday for the preceding 5-day week (Monday through Friday). On Monday, December 29, employees were paid for the week ending December 26. All employees worked the last 3 days of 2014.

Instructions

Prepare adjusting entries for the seven items described on page 140 and above.

E3-6 Orwell Company accumulates the following adjustment data at December 31.

1. Services provided but not recorded total \$1,420.
2. Supplies of \$300 have been used.
3. Utility expenses of \$225 are unpaid.
4. Unearned service revenue of \$260 is recognized for services performed.
5. Salaries of \$800 are unpaid.
6. Prepaid insurance totaling \$380 has expired.

Identify types of adjustments and account relationships.

(LO 4, 5, 6)

Instructions

For each of the above items indicate the following.

- (a) The type of adjustment (prepaid expense, unearned revenue, accrued revenue, or accrued expense).
- (b) The status of accounts before adjustment (overstatement or understatement).

E3-7 The ledger of Villa Rental Agency on March 31 of the current year includes the selected accounts, shown below, before adjusting entries have been prepared.

Prepare adjusting entries from selected account data.

(LO 5, 6)

	<u>Debit</u>	<u>Credit</u>
Prepaid Insurance	\$ 3,600	
Supplies	2,800	
Equipment	25,000	
Accumulated Depreciation—Equipment		\$ 8,400
Notes Payable		20,000
Unearned Rent Revenue		9,900
Rent Revenue		60,000
Interest Expense	-0-	
Salaries and Wages Expense	14,000	

An analysis of the accounts shows the following.

1. The equipment depreciates \$300 per month.
2. One-third of the unearned rent revenue was recognized during the quarter.
3. Interest of \$500 is accrued on the notes payable.
4. Supplies on hand total \$650.
5. Insurance expires at the rate of \$200 per month.

Instructions

Prepare the adjusting entries at March 31, assuming that adjusting entries are made **quarterly**. Additional accounts are: Depreciation Expense, Insurance Expense, Interest Payable, and Supplies Expense.

E3-8 Kari Engle, D.D.S., opened a dental practice on January 1, 2014. During the first month of operations, the following transactions occurred.

Prepare adjusting entries.

(LO 5, 6)

1. Performed services for patients who had dental plan insurance. At January 31, \$875 of such services were performed but not yet recorded.
2. Utility expenses incurred but not paid prior to January 31 totaled \$520.
3. Purchased dental equipment on January 1 for \$80,000, paying \$20,000 in cash and signing a \$60,000, 3-year note payable. The equipment depreciates \$400 per month. Interest is \$500 per month.
4. Purchased a six-month malpractice insurance policy on January 1 for \$18,000.
5. Purchased \$1,600 of dental supplies. On January 31, determined that \$700 of supplies were on hand.

Instructions

Prepare the adjusting entries on January 31. Account titles are: Accumulated Depreciation—Equipment, Depreciation Expense, Service Revenue, Accounts Receivable, Insurance Expense, Interest Expense, Interest Payable, Prepaid Insurance, Supplies, Supplies Expense, Utilities Expense, and Utilities Payable.

Prepare adjusting entries.

(LO 5, 6)

E3-9 The trial balance for Pioneer Advertising Agency Inc. is shown in Illustration 3-3, page 105. In lieu of the adjusting entries shown in the text at October 31, assume the following adjustment data.

- Supplies on hand at October 31 total \$800.
- Expired insurance for the month is \$100.
- Depreciation for the month is \$50.
- Unearned service revenue recognized in October totals \$600.
- Services provided but not recorded at October 31 are \$300.
- Interest accrued at October 31 is \$70.
- Accrued salaries at October 31 are \$1,200.

Instructions

Prepare the adjusting entries for the items above.

Prepare correct income statement.

(LO 2, 5, 6, 7)

E3-10 The income statement of Midland Co. for the month of July shows net income of \$1,500 based on Service Revenue \$5,500, Salaries and Wages Expense \$2,300, Supplies Expense \$1,200, and Utilities Expense \$500. In reviewing the statement, you discover the following.

- Insurance expired during July of \$400 was omitted.
- Supplies expense includes \$300 of supplies that are still on hand at July 31.
- Depreciation on equipment of \$150 was omitted.
- Accrued but unpaid salaries and wages at July 31 of \$280 were not included.
- Services performed but unrecorded totaled \$920.

Instructions

Prepare a correct income statement for July 2014.

Analyze adjusted data.

(LO 4, 5, 6, 7)

E3-11 A partial adjusted trial balance of Ruiz Company at January 31, 2014, shows the following.

**Ruiz Company
Adjusted Trial Balance
January 31, 2014**

	Debit	Credit
Supplies	\$ 850	
Prepaid Insurance	2,400	
Salaries and Wages Payable		\$ 800
Unearned Service Revenue		750
Supplies Expense	950	
Insurance Expense	400	
Salaries and Wages Expense	2,500	
Service Revenue		2,000

Instructions

Answer the following questions, assuming the year begins January 1.

- If the amount in Supplies Expense is the January 31 adjusting entry, and \$670 of supplies was purchased in January, what was the balance in Supplies on January 1?
- If the amount in Insurance Expense is the January 31 adjusting entry, and the original insurance premium was for one year, what was the total premium and when was the policy purchased?
- If \$3,300 of salaries was paid in January, what was the balance in Salaries and Wages Payable at December 31, 2013?

Journalize basic transactions and adjusting entries.

(LO 5, 6, 7)

E3-12 Selected accounts of Welch Company are shown on the next page.

Supplies Expense			
7/31	800		

Supplies		Salaries and Wages Payable	
7/1 Bal.	1,100	7/31	800
7/10	200		

Accounts Receivable		Unearned Service Revenue	
7/31	620	7/31	900
		7/1 Bal.	1,500
		7/20	750

Salaries and Wages Expense		Service Revenue	
7/15	1,200	7/14	2,000
7/31	1,200	7/31	900
		7/31	620

Instructions

After analyzing the accounts, journalize (a) the July transactions and (b) the adjusting entries that were made on July 31. (*Hint:* July transactions were for cash.)

E3-13 The trial balances before and after adjustment for Matusiak Company at the end of its fiscal year are presented below.

Prepare adjusting entries from analysis of trial balances.

(LO 5, 6, 7)

Matusiak Company
Trial Balance
August 31, 2014

	Before Adjustment		After Adjustment	
	Dr.	Cr.	Dr.	Cr.
Cash	\$10,400		\$10,400	
Accounts Receivable	8,800		10,000	
Supplies	2,300		700	
Prepaid Insurance	4,000		2,500	
Equipment	14,000		14,000	
Accumulated Depreciation—Equipment		\$ 3,600		\$ 4,900
Accounts Payable		5,800		5,800
Salaries and Wages Payable		–0–		1,100
Unearned Rent Revenue		1,500		800
Common Stock		12,000		12,000
Retained Earnings		3,600		3,600
Service Revenue		34,000		35,200
Rent Revenue		11,000		11,700
Salaries and Wages Expense	17,000		18,100	
Supplies Expense	–0–		1,600	
Rent Expense	15,000		15,000	
Insurance Expense	–0–		1,500	
Depreciation Expense	–0–		1,300	
	<u>\$71,500</u>	<u>\$71,500</u>	<u>\$75,100</u>	<u>\$75,100</u>

Instructions

Prepare the adjusting entries that were made.

Prepare financial statements from adjusted trial balance.

(LO 7)

Record transactions on accrual basis; convert revenue to cash receipts.

(LO 5, 6)

Compute cash flow from operations and net income.

(LO 2)

Journalize adjusting entries.

(LO 8)

E3-14 The adjusted trial balance for Matusiak Company is given in E3-13.

Instructions

Prepare the income and retained earnings statements for the year and the balance sheet at August 31.

E3-15 The following data are taken from the comparative balance sheets of Newman Billiards Club, which prepares its financial statements using the accrual basis of accounting.

<u>December 31</u>	<u>2014</u>	<u>2013</u>
Accounts receivable from members	\$12,000	\$ 9,000
Unearned service revenue	17,000	20,000

Members are billed based upon their use of the club's facilities. Unearned service revenues arise from the sale of gift certificates, which members can apply to their future use of club facilities. The 2014 income statement for the club showed that service revenue of \$153,000 was recognized during the year.

Instructions

(Hint: You will probably find it helpful to use T-accounts to analyze these data.)

- (a) Prepare journal entries for each of the following events that took place during 2014.
 - (1) Accounts receivable from 2013 were all collected.
 - (2) Gift certificates outstanding at the end of 2013 were all redeemed.
 - (3) An additional \$35,000 worth of gift certificates were sold during 2014. A portion of these was used by the recipients during the year; the remainder was still outstanding at the end of 2014.
 - (4) Services provided to members for 2014 were billed to members.
 - (5) Accounts receivable for 2014 (i.e., those billed in item [4] above) were partially collected.
- (b) Determine the amount of cash received by the club, with respect to member services, during 2014.

E3-16 In its first year of operations, Anya Company recognized \$30,000 in service revenue, \$4,800 of which was on account and still outstanding at year-end. The remaining \$25,200 was received in cash from customers.

The company incurred operating expenses of \$17,000. Of these expenses \$12,000 was paid in cash; \$5,000 was still owed on account at year-end. In addition, Anya prepaid \$2,600 for insurance coverage that would not be used until the second year of operations.

Instructions

- (a) Compute Anya's first-year cash flow from operations.
- (b) Compute Anya's first-year net income under accrual-basis accounting.
- (c) Which basis of accounting (cash or accrual) provides more useful information for decision-makers?

***E3-17** Rogert Company has the following balances in selected accounts on December 31, 2014.

Service Revenue	\$40,000
Insurance Expense	2,880
Supplies Expense	2,450

All the accounts have normal balances. Rogert Company debits prepayments to expense accounts when paid, and credits unearned revenues to revenue accounts when received. The following information below has been gathered at December 31, 2014.

1. Rogert Company paid \$2,880 for 12 months of insurance coverage on April 1, 2014.
2. On December 1, 2014, Rogert Company collected \$40,000 for consulting services to be performed from December 1, 2014, through March 31, 2015.
3. A count of supplies on December 31, 2014, indicates that supplies of \$420 are on hand.

Instructions

Prepare the adjusting entries needed at December 31, 2014.

***E3-18** At Beloit Company, prepayments are debited to expense when paid, and unearned revenues are credited to revenue when cash is received. During January of the current year, the following transactions occurred.

Journalize transactions and adjusting entries.

(LO 8)

- Jan. 2 Paid \$2,640 for fire insurance protection for the year.
 10 Paid \$1,700 for supplies.
 15 Received \$6,400 for services to be performed in the future.

On January 31, it is determined that \$2,500 of the services were performed and that there are \$650 of supplies on hand.

Instructions

- Journalize and post the January transactions. (Use T-accounts.)
- Journalize and post the adjusting entries at January 31.
- Determine the ending balance in each of the accounts.

***E3-19** Presented below are the assumptions and principles discussed in this chapter.

Identify accounting assumptions and principles.

(LO 9)

- Full disclosure principle.
- Going concern assumption.
- Monetary unit assumption.
- Time period assumption.
- Cost principle.
- Economic entity assumption.

Instructions

Identify by number the accounting assumption or principle that is described below. Do not use a number more than once.

- _____ (a) Is the rationale for why plant assets are not reported at liquidation value. (Note: Do not use the cost principle.)
- _____ (b) Indicates that personal and business record-keeping should be separately maintained.
- _____ (c) Assumes that the dollar is the “measuring stick” used to report on financial performance.
- _____ (d) Separates financial information into time periods for reporting purposes.
- _____ (e) Measurement basis used when a reliable estimate of fair value is not available.
- _____ (f) Dictates that companies should disclose all circumstances and events that make a difference to financial statement users.

***E3-20** Rosman Co. had three major business transactions during 2014.

Identify the assumption or principle that has been violated.

(LO 9)

- Reported at its fair value of \$260,000 merchandise inventory with a cost of \$208,000.
- The president of Rosman Co., Jay Rosman, purchased a truck for personal use and charged it to his expense account.
- Rosman Co. wanted to make its 2014 income look better, so it added 2 more weeks to the year (a 54-week year). Previous years were 52 weeks.

Instructions

In each situation, identify the assumption or principle that has been violated, if any, and discuss what the company should have done.

***E3-21** The following are characteristics, assumptions, principles, or constraints that guide the FASB when it creates accounting standards.

Identify financial accounting concepts and principles.

(LO 9)

Relevance	Expense recognition principle
Faithful representation	Time period assumption
Comparability	Going concern assumption
Consistency	Cost principle
Monetary unit assumption	Full disclosure principle
Economic entity assumption	Materiality constraint

Match each item above with a description below.

- _____ Ability to easily evaluate one company's results relative to another's.
- _____ Belief that a company will continue to operate for the foreseeable future.
- _____ The judgment concerning whether an item is large enough to matter to decision-makers.

4. _____ The reporting of all information that would make a difference to financial statement users.
5. _____ The practice of preparing financial statements at regular intervals.
6. _____ The quality of information that indicates the information makes a difference in a decision.
7. _____ A belief that items should be reported on the balance sheet at the price that was paid to acquire the item.
8. _____ A company's use of the same accounting principles and methods from year to year.
9. _____ Tracing accounting events to particular companies.
10. _____ The desire to minimize errors and bias in financial statements.
11. _____ Reporting only those things that can be measured in dollars.
12. _____ Dictates that efforts (expenses) be matched with results (revenues).

Comment on the objectives and qualitative characteristics of accounting information

(LO 9)

***E3-22** Net Nanny Software International Inc., headquartered in Vancouver, specializes in Internet safety and computer security products for both the home and commercial markets. In a recent balance sheet, it reported a deficit (negative retained earnings) of US \$5,678,288. It has reported only net losses since its inception. In spite of these losses, Net Nanny's common shares have traded anywhere from a high of \$3.70 to a low of \$0.32 on the Canadian Venture Exchange.

Net Nanny's financial statements have historically been prepared in Canadian dollars. Recently, the company adopted the U.S. dollar as its reporting currency.

Instructions 

- (a) What is the objective of financial reporting? How does this objective meet or not meet Net Nanny's investors' needs?
- (b) Why would investors want to buy Net Nanny's shares if the company has consistently reported losses over the last few years? Include in your answer an assessment of the relevance of the information reported on Net Nanny's financial statements.
- (c) Comment on how the change in reporting information from Canadian dollars to U.S. dollars likely affected the readers of Net Nanny's financial statements. Include in your answer an assessment of the comparability of the information.

Comment on the objectives and qualitative characteristics of financial reporting.

(LO 9)

***E3-23** A friend of yours, Ana Gehrig, recently completed an undergraduate degree in science and has just started working with a biotechnology company. Ana tells you that the owners of the business are trying to secure new sources of financing which are needed in order for the company to proceed with development of a new health care product. Ana said that her boss told her that the company must put together a report to present to potential investors.

Ana thought that the company should include in this package the detailed scientific findings related to the Phase I clinical trials for this product. She said, "I know that the biotech industry sometimes has only a 10% success rate with new products, but if we report all the scientific findings, everyone will see what a sure success this is going to be! The president was talking about the importance of following some set of accounting principles. Why do we need to look at some accounting rules? What they need to realize is that we have scientific results that are quite encouraging, some of the most talented employees around, and the start of some really great customer relationships. We haven't made any sales yet, but we will. We just need the funds to get through all the clinical testing and get government approval for our product. Then these investors will be quite happy that they bought in to our company early!"

Instructions 

- (a) What is accounting information?
- (b) Comment on how Ana's suggestions for what should be reported to prospective investors conforms to the qualitative characteristics of accounting information. Do you think that the things that Ana wants to include in the information for investors will conform to financial reporting guidelines?

PROBLEMS: SET A

P3-1A Joey Cuono started his own consulting firm, Cuono Company, on June 1, 2014. The trial balance at June 30 is shown below.

Prepare adjusting entries, post to ledger accounts, and prepare adjusted trial balance.
(LO 5, 6, 7)

Cuono Company Trial Balance June 30, 2014

<u>Account Number</u>		<u>Debit</u>	<u>Credit</u>
101	Cash	\$ 6,200	
112	Accounts Receivable	6,000	
126	Supplies	2,000	
130	Prepaid Insurance	3,000	
157	Equipment	14,400	
201	Accounts Payable		\$ 4,700
209	Unearned Service Revenue		4,000
311	Common Stock		20,000
400	Service Revenue		7,900
726	Salaries and Wages Expense	4,000	
729	Rent Expense	1,000	
		<u>\$36,600</u>	<u>\$36,600</u>

In addition to those accounts listed on the trial balance, the chart of accounts for Cuono Company also contains the following accounts and account numbers: No. 158 Accumulated Depreciation—Equipment, No. 212 Salaries and Wages Payable, No. 631 Supplies Expense, No. 711 Depreciation Expense, No. 722 Insurance Expense, and No. 732 Utilities Expense.

Other data:

- Supplies on hand at June 30 are \$1,100.
- A utility bill for \$150 has not been recorded and will not be paid until next month.
- The insurance policy is for a year.
- \$2,500 of unearned service revenue is recognized for services performed at the end of the month.
- Salaries of \$1,600 are accrued at June 30.
- The equipment has a 4-year life with no salvage value. It is being depreciated at \$300 per month for 48 months.
- Invoices representing \$2,100 of services performed during the month have not been recorded as of June 30.

Instructions

- Prepare the adjusting entries for the month of June. Use J3 as the page number for your journal.
- Post the adjusting entries to the ledger accounts. Enter the totals from the trial balance as beginning account balances and place a check mark in the posting reference column.
- Prepare an adjusted trial balance at June 30, 2014.

(c) Adj. trial balance \$40,750

Prepare adjusting entries, post, and prepare adjusted trial balance, and financial statements.

(LO 5, 6, 7)

P3-2A Lazy River Resort opened for business on June 1 with eight air-conditioned units. Its trial balance before adjustment on August 31 is as follows.

Lazy River Resort, Inc.
Trial Balance
August 31, 2014

Account Number		Debit	Credit
101	Cash	\$ 19,600	
126	Supplies	3,300	
130	Prepaid Insurance	6,000	
140	Land	25,000	
143	Buildings	125,000	
157	Equipment	26,000	
201	Accounts Payable		\$ 6,500
208	Unearned Rent Revenue		7,400
275	Mortgage Payable		80,000
311	Common Stock		100,000
332	Dividends	5,000	
429	Rent Revenue		80,000
622	Maintenance and Repairs Expense	3,600	
726	Salaries and Wages Expense	51,000	
732	Utilities Expense	9,400	
		\$273,900	\$273,900

In addition to those accounts listed on the trial balance, the chart of accounts for Lazy River Resort also contains the following accounts and account numbers: No. 112 Accounts Receivable, No. 144 Accumulated Depreciation—Buildings, No. 158 Accumulated Depreciation—Equipment, No. 212 Salaries and Wages Payable, No. 230 Interest Payable, No. 631 Supplies Expense, No. 711 Depreciation Expense, No. 718 Interest Expense, and No. 722 Insurance Expense.

Other data:

1. Insurance expires at the rate of \$400 per month.
2. A count on August 31 shows \$900 of supplies on hand.
3. Annual depreciation is \$4,500 on buildings and \$2,400 on equipment.
4. Unearned rent revenue of \$4,100 was recognized for services performed prior to August 31.
5. Salaries of \$400 were unpaid at August 31.
6. Rentals of \$3,700 were due from tenants at August 31. (Use Accounts Receivable.)
7. The mortgage interest rate is 9% per year. (The mortgage was taken out on August 1.)

Instructions

- (a) Journalize the adjusting entries on August 31 for the 3-month period June 1–August 31.
- (b) Prepare a ledger using the three-column form of account. Enter the trial balance amounts and post the adjusting entries. (Use J1 as the posting reference.)
- (c) Prepare an adjusted trial balance on August 31.
- (d) Prepare an income statement and a retained earnings statement for the 3 months ending August 31 and a balance sheet as of August 31.

(c) Adj. trial balance \$280,325

(d) Net income \$17,475
Ending retained earnings
\$12,475

Total assets \$203,275

Prepare adjusting entries and financial statements.

(LO 5, 6, 7)

P3-3A Costello Advertising Agency Inc. was founded by Pat Costello in January of 2013. Presented on the next page are both the adjusted and unadjusted trial balances as of December 31, 2014.

Instructions

- (a) Journalize the annual adjusting entries that were made.
- (b) Prepare an income statement and a retained earnings statement for the year ending December 31, 2014, and a balance sheet at December 31.
- (c) Answer the following questions.
 - (1) If the note has been outstanding 6 months, what is the annual interest rate on that note?
 - (2) If the company paid \$14,500 in salaries in 2014, what was the balance in Salaries and Wages Payable on December 31, 2013?

(b) Net income \$38,450
Ending retained earnings
\$31,950
Total assets \$69,000

(c) (1) 6%
(2) \$4,500

Costello Advertising Agency, Inc.
Trial Balance
December 31, 2014

	Unadjusted		Adjusted	
	Dr.	Cr.	Dr.	Cr.

	\$129,300	\$129,300	\$139,250	\$139,250

P3-4A A review of the ledger of Bellingham Company at December 31, 2014, produces the following data pertaining to the preparation of annual adjusting entries.

- Salaries and Wages Payable \$0. There are eight salaried employees. Salaries are paid every Friday for the current week. Five employees receive a salary of \$800 each per week, and three employees earn \$500 each per week. Assume December 31 is a Tuesday. Employees do not work weekends. All employees worked the last 2 days of December.
- Unearned Rent Revenue \$324,000. The company began subleasing office space in its new building on November 1. At December 31, the company had the following rental contracts that are paid in full for the entire term of the lease.

Date	Term (in months)	Monthly Rent	Number of Leases
Nov. 1	6	\$4,000	5
Dec. 1	6	\$8,500	4

- Prepaid Advertising \$15,600. This balance consists of payments on two advertising contracts. The contracts provide for monthly advertising in two trade magazines. The terms of the contracts are as follows.

Contract	Date	Amount	Number of Magazine Issues
A650	May 1	\$6,000	12
B974	Oct. 1	9,600	24

The first advertisement runs in the month in which the contract is signed.

- Notes Payable \$100,000. This balance consists of a note for one year at an annual interest rate of 9%, dated June 1.

Instructions

Prepare the adjusting entries at December 31, 2014. (Show all computations.)

Preparing adjusting entries.

(LO 5, 6)

1. Salaries and wages expense \$2,200

2. Rent revenue \$74,000

3. Advertising expense \$5,200

4. Interest expense \$5,250

Journalize transactions and follow through accounting cycle to preparation of financial statements.

(LO 5, 6, 7)

P3-5A On September 1, 2014, the account balances of Beck Equipment Repair, Inc. were as follows.

No.	Debits	No.	Credits
101	Cash \$ 4,880	158	Accumulated Depreciation—Equipment \$ 2,100
112	Accounts Receivable 3,520	201	Accounts Payable 3,400
126	Supplies 2,000	209	Unearned Service Revenue 1,400
157	Equipment 18,000	212	Salaries and Wages Payable 500
		311	Common Stock 10,000
		320	Retained Earnings 11,000
	\$28,400		\$28,400

During September, the following summary transactions were completed.

- Sept. 8 Paid \$1,700 for salaries due employees, of which \$1,200 is for September.
 10 Received \$1,200 cash from customers on account.
 12 Received \$3,400 cash for services performed in September.
 15 Purchased store equipment on account \$3,000.
 17 Purchased supplies on account \$1,200.
 20 Paid creditors \$4,500 on account.
 22 Paid September rent \$500.
 25 Paid salaries \$1,050.
 27 Performed services on account and billed customers for services provided \$1,600.
 29 Received \$750 from customers for future service.

Adjustment data consist of:

- Supplies on hand \$1,700.
- Accrued salaries payable \$400.
- Depreciation is \$140 per month.
- Unearned service revenue of \$1,450 is recognized for services performed.

Instructions

- Enter the September 1 balances in the ledger accounts.
- Journalize the September transactions.
- Post to the ledger accounts. Use J1 for the posting reference. Use the following additional accounts: No. 400 Service Revenue, No. 631 Supplies Expense, No. 711 Depreciation Expense, No. 726 Salaries and Wages Expense, and No. 729 Rent Expense.
- Prepare a trial balance at September 30.
- Journalize and post adjusting entries.
- Prepare an adjusted trial balance.
- Prepare an income statement and a retained earnings statement for September and a balance sheet at September 30.

- (d) Trial balance \$33,350
 (f) Adj. trial balance \$33,890
 (g) Net income \$1,660
 Ending retained earnings \$12,660
 Total assets \$26,860

Prepare adjusting entries, adjusted trial balance, and financial statements using appendix.

(LO 5, 6, 7, 8)

***P3-6A** Alpha Graphics Company, Inc. was organized on January 1, 2014. At the end of the first 6 months of operations, the trial balance contained the accounts shown below.

Debits		Credits	
Cash	\$ 8,400	Notes Payable	\$ 20,000
Accounts Receivable	14,000	Accounts Payable	9,000
Equipment	45,000	Common Stock	22,000
Insurance Expense	2,880	Service Revenue	58,280
Salaries and Wages Expense	30,000		
Supplies Expense	3,900		
Advertising Expense	1,900		
Rent Expense	1,500		
Utilities Expense	1,700		
	\$109,280		\$109,280

Analysis reveals the following additional data.

1. The \$3,900 balance in Supplies Expense represents supplies purchased in January. At June 30, \$680 of supplies are on hand.
2. The note payable was issued on February 1. It is a 9%, 6-month note.
3. The balance in Insurance Expense is the premium on a one-year policy, dated March 1, 2014.
4. Service revenues are credited to revenue when received. At June 30, service revenue of \$1,100 is still not performed for the customer.
5. Depreciation is \$2,250 per year.

Instructions

- (a) Journalize the adjusting entries at June 30. (Assume adjustments are recorded every 6 months.)
- (b) Prepare an adjusted trial balance.
- (c) Prepare an income statement and a retained earnings statement for the 6 months ended June 30 and a balance sheet at June 30.

(b) Adj. trial balance \$111,155
 (c) Net income \$16,025
 Ending retained earnings \$16,025
 Total assets \$68,875

PROBLEMS: SET B

P3-1B Lynda Rigg started her own consulting firm, Vektek Consulting, Inc. on May 1, 2014. The trial balance at May 31 is as follows.

Vektek Consulting, Inc.
Trial Balance
May 31, 2014

<u>Account Number</u>		<u>Debit</u>	<u>Credit</u>
101	Cash	\$ 7,700	
112	Accounts Receivable	4,000	
126	Supplies	1,500	
130	Prepaid Insurance	2,400	
157	Equipment	12,000	
201	Accounts Payable		\$ 4,500
209	Unearned Service Revenue		2,600
311	Common Stock		16,000
400	Service Revenue		8,500
726	Salaries and Wages Expense	3,000	
729	Rent Expense	1,000	
		<u>\$31,600</u>	<u>\$31,600</u>

Prepare adjusting entries, post to ledger accounts, and prepare an adjusted trial balance.

(LO 5, 6, 7)

In addition to those accounts listed on the trial balance, the chart of accounts for Vektek Consulting also contains the following accounts and account numbers: No. 158 Accumulated Depreciation—Equipment, No. 212 Salaries and Wages Payable, No. 631 Supplies Expense, No. 711 Depreciation Expense, No. 722 Insurance Expense, and No. 736 Utilities Expense.

Other data:

1. \$500 of supplies have been used during the month.
2. Utilities expense incurred but not paid on May 31, 2014, \$200.
3. The insurance policy is for 2 years.
4. \$1,000 of the balance in the Unearned Service Revenue account remains unearned at the end of the month.
5. May 31 is a Wednesday, and employees are paid on Fridays. Vektek Consulting has two employees, who are paid \$500 each for a 5-day work week.
6. The office equipment has a 5-year life with no salvage value. It is being depreciated at \$200 per month for 60 months.
7. Invoices representing \$1,400 of services performed during the month have not been recorded as of May 31.

Instructions

- (a) Prepare the adjusting entries for the month of May. Use J4 as the page number for your journal.
- (b) Post the adjusting entries to the ledger accounts. Enter the totals from the trial balance as beginning account balances and place a check mark in the posting reference column.
- (c) Prepare an adjusted trial balance at May 31, 2014.

(c) Adj. trial balance \$34,000

Prepare adjusting entries, post, and prepare adjusted trial balance, and financial statements.

(LO 5, 6, 7)

P3-2B The Badger Motel, Inc. opened for business on May 1, 2014. Its trial balance before adjustment on May 31 is as follows.

Badger Motel, Inc.
Trial Balance
May 31, 2014

Account Number		Debit	Credit
101	Cash	\$ 2,500	
126	Supplies	1,520	
130	Prepaid Insurance	2,400	
140	Land	14,000	
141	Buildings	58,000	
157	Equipment	15,000	
201	Accounts Payable		\$ 4,800
208	Unearned Rent Revenue		3,300

 (c) If the note bears interest at 12%, how many months has it been outstanding?

(b) Net income \$4,850
 Ending retained earnings \$3,850
 Total assets \$40,925

P3-4B A review of the ledger of Khan Company at December 31, 2014, produces the following data pertaining to the preparation of annual adjusting entries.

Prepare adjusting entries

(LO 5, 6)

- Prepaid Insurance \$9,300. The company has separate insurance policies on its buildings and its motor vehicles. Policy B4564 on the building was purchased on April 1, 2013, for \$6,000. The policy has a term of 3 years. Policy A2958 on the vehicles was purchased on January 1, 2014, for \$4,800. This policy has a term of 2 years.
- Unearned Rent Revenue \$429,000. The company began subleasing office space in its new building on November 1. At December 31, the company had the following rental contracts that are paid in full for the entire term of the lease.

1. Insurance expense \$4,400

2. Rent revenue \$84,000

Date	Term (in months)	Monthly Rent	Number of Leases
Nov. 1	9	\$5,000	5
Dec. 1	6	\$8,500	4

- Notes Payable \$120,000. This balance consists of a note for 9 months at an annual interest rate of 9%, dated November 1.
- Salaries and Wages Payable \$0. There are eight salaried employees. Salaries are paid every Friday for the current week. Five employees receive a salary of \$640 each per week, and three employees earn \$500 each per week. Assume December 31 is a Wednesday. Employees do not work weekends. All employees worked the last 3 days of December.

3. Interest expense \$1,800

4. Salaries and wages expense \$2,820

Instructions

Prepare the adjusting entries at December 31, 2014.

Journalize transactions and follow through accounting cycle to preparation of financial statements.

(LO 5, 6, 7)

P3-5B On November 1, 2014, the account balances of Samone Equipment Repair, Inc. were as follows.

No.	Debits	No.	Credits
101	Cash \$ 2,400	158	Accumulated Depreciation—Equipment \$ 2,000
112	Accounts Receivable 4,450	201	Accounts Payable 2,600
126	Supplies 1,800	209	Unearned Service Revenue 1,360
157	Equipment 16,000	212	Salaries and Wages Payable 700
		311	Common Stock 10,000
		320	Retained Earnings 7,990
	\$24,650		\$24,650

During November, the following summary transactions were completed.

- Nov. 8 Paid \$1,500 for salaries due employees, of which \$700 is for October salaries.
 10 Received \$3,420 cash from customers on account.
 12 Received \$3,100 cash for services performed in November.
 15 Purchased equipment on account \$2,000.
 17 Purchased supplies on account \$700.
 20 Paid creditors on account \$2,700.
 22 Paid November rent \$500.
 25 Paid salaries \$1,500.
 27 Performed services on account and billed customers for services provided \$1,900.
 29 Received \$350 from customers for future service.

Adjustment data consist of:

- Supplies on hand \$1,400.
- Accrued salaries payable \$350.
- Depreciation for the month is \$200.
- Unearned service revenue of \$1,380 is recognized for services performed.

Instructions

- Enter the November 1 balances in the ledger accounts.
- Journalize the November transactions.
- Post to the ledger accounts. Use J1 for the posting reference. Use the following additional accounts: No. 400 Service Revenue, No. 631 Supplies Expense, No. 711 Depreciation Expense, No. 726 Salaries and Wages Expense, and No. 729 Rent Expense.
- Prepare a trial balance at November 30.
- Journalize and post adjusting entries.
- Prepare an adjusted trial balance.
- Prepare an income statement and a retained earnings statement for November and a balance sheet at November 30.

- (d) Trial balance \$29,300
 (f) Adj. trial balance \$29,850
 (g) Net income \$1,930
 Ending retained earnings \$9,920
 Total assets \$23,200

PROBLEMS: SET C

Visit the book's companion website, at www.wiley.com/college/wegandt, and choose the Student Companion site to access Problem Set C.

CONTINUING COOKIE CHRONICLE

(Note: This is a continuation of the Cookie Chronicle from Chapters 1–2. Use the information from the previous chapters and follow the instructions on the next page using the general ledger accounts you have already prepared.)

CCC3 It is the end of November and Natalie has been in touch with her grandmother. Her grandmother asked Natalie how well things went in her first month of business. Natalie, too, would like to know if the company has been profitable or not during November.

Natalie realizes that in order to determine Cookie Creations' income, she must first make adjustments.

Natalie puts together the following additional information.

1. A count reveals that \$35 of baking supplies were used during November.
2. Natalie estimates that all of her baking equipment will have a useful life of 5 years or 60 months. (Assume Natalie decides to record a full month's worth of depreciation, regardless of when the equipment was obtained by the business.)
3. Natalie's grandmother has decided to charge interest of 6% on the note payable extended on November 16. The loan plus interest is to be repaid in 24 months. (Assume that half a month of interest accrued during November.)
4. On November 30, a friend of Natalie's asks her to teach a class at the neighborhood school. Natalie agrees and teaches a group of 35 first-grade students how to make Santa Claus cookies. The next day, Natalie prepares an invoice for \$300 and leaves it with the school principal. The principal says that he will pass the invoice along to the head office, and it will be paid sometime in December.
5. Natalie receives a utilities bill for \$45. The bill is for utilities consumed by Natalie's business during November and is due December 15.

Instructions

Using the information that you have gathered through Chapter 2, and based on the new information above, do the following.

- (a) Prepare and post the adjusting journal entries.
- (b) Prepare an adjusted trial balance.
- (c) Using the adjusted trial balance, calculate Cookie Creations' net income or net loss for the month of November. Do not prepare an income statement.

Broadening Your PERSPECTIVE

Financial Reporting and Analysis

Financial Reporting Problem: PepsiCo, Inc.

BYP3-1 The financial statements of **PepsiCo, Inc.** are presented in Appendix A at the end of this textbook.

Instructions

- (a) Using the consolidated financial statements and related information, identify items that may result in adjusting entries for prepayments.
- (b) Using the consolidated financial statements and related information, identify items that may result in adjusting entries for accruals.
- (c) Using the Selected Financial Data and 5-Year Summary, what has been the trend since 2006 for net income?

Comparative Analysis Problem: PepsiCo, Inc. vs. The Coca-Cola Company

BYP3-2 PepsiCo's financial statements are presented in Appendix A. Financial statements for **The Coca-Cola Company** are presented in Appendix B.

Instructions

Based on information contained in these financial statements, determine the following for each company.

- (a) Net increase (decrease) in property, plant, and equipment (net) from 2009 to 2010.
- (b) Increase (decrease) in selling, general, and administrative expenses from 2009 to 2010.
- (c) Increase (decrease) in long-term debt (obligations) from 2009 to 2010.

- (d) Increase (decrease) in net income from 2009 to 2010.
 (e) Increase (decrease) in cash and cash equivalents from 2009 to 2010.

Real-World Focus

BYP3-3 No financial decision-maker should ever rely solely on the financial information reported in the annual report to make decisions. It is important to keep abreast of financial news. This activity demonstrates how to search for financial news on the Web.

Address: <http://biz.yahoo.com/i>, or go to www.wiley.com/college/weygandt

Steps

1. Type in either Wal-Mart, Target Corp., or Kmart.
2. Choose **News**.
3. Select an article that sounds interesting to you and that would be relevant to an investor in these companies.

Instructions

- (a) What was the source of the article (e.g., Reuters, Businesswire, Prnewswire)?
- (b) Assume that you are a personal financial planner and that one of your clients owns stock in the company. Write a brief memo to your client summarizing the article and explaining the implications of the article for their investment.

Critical Thinking

Decision-Making Across the Organization

BYP3-4 Happy Trails Park, Inc. was organized on April 1, 2013, by Alicia Henry. Alicia is a good manager but a poor accountant. From the trial balance prepared by a part-time bookkeeper, Alicia prepared the following income statement for the quarter that ended March 31, 2014.

Happy Trails Park, Inc.
Income Statement
For the Quarter Ended March 31, 2014

Revenues		
Rent revenue		\$88,000
Operating expenses		
Advertising	\$ 5,200	
Salaries and wages	28,800	
Utilities	750	
Depreciation	800	
Maintenance and repairs	4,000	
Total operating expenses		39,550
Net income		\$48,450

Alicia thought that something was wrong with the statement because net income had never exceeded \$20,000 in any one quarter. Knowing that you are an experienced accountant, she asks you to review the income statement and other data.

You first look at the trial balance. In addition to the account balances reported above in the income statement, the ledger contains the following additional selected balances at March 31, 2014.

Supplies	\$ 6,200
Prepaid Insurance	7,500
Notes Payable	12,000

You then make inquiries and discover the following.

1. Rent revenue includes advanced rentals for summer occupancy \$14,000.
2. There were \$1,450 of supplies on hand at March 31.
3. Prepaid insurance resulted from the payment of a one-year policy on January 1, 2014.
4. The mail on April 1, 2014, brought the following bills: advertising for week of March 24, \$130; repairs made March 10, \$260; and utilities, \$120.
5. There are four employees, who receive wages totaling \$300 per day. At March 31, 2 days' salaries and wages have been incurred but not paid.
6. The note payable is a 3-month, 10% note dated January 1, 2014.

Instructions

With the class divided into groups, answer the following.

- (a) Prepare a correct income statement for the quarter ended March 31, 2014.
- (b) Explain to Alicia the generally accepted accounting principles that she did not recognize in preparing her income statement and their effect on her results.

(a) Net income
\$26,415
(b) Effect on result is
\$22,035

Communication Activity

BYP3-5 In reviewing the accounts of Maribeth Co. at the end of the year, you discover that adjusting entries have not been made.

Instructions

Write a memo to Maribeth Danon, the owner of Maribeth Co., that explains the following: the nature and purpose of adjusting entries, why adjusting entries are needed, and the types of adjusting entries that may be made.

Ethics Case

BYP3-6 Watkin Company is a pesticide manufacturer. Its sales declined greatly this year due to the passage of legislation outlawing the sale of several of Watkin's chemical pesticides. In the coming year, Watkin will have environmentally safe and competitive chemicals to replace these discontinued products. Sales in the next year are expected to greatly exceed any prior year's. The decline in sales and profits appears to be a one-year aberration. But even so, the company president fears a large dip in the current year's profits. He believes that such a dip could cause a significant drop in the market price of Watkin's stock and make the company a takeover target.

To avoid this possibility, the company president calls in Diane Leno, controller, to discuss this period's year-end adjusting entries. He urges her to accrue every possible revenue and to defer as many expenses as possible. He says to Diane, "We need the revenues this year, and next year can easily absorb expenses deferred from this year. We can't let our stock price be hammered down!" Diane didn't get around to recording the adjusting entries until January 17, but she dated the entries December 31 as if they were recorded then. Diane also made every effort to comply with the president's request.

Instructions

- (a) Who are the stakeholders in this situation?
- (b) What are the ethical considerations of (1) the president's request and (2) Diane's dating the adjusting entries December 31?
- (c) Can Diane accrue revenues and defer expenses and still be ethical?

All About You

BYP3-7 Companies must report or disclose in their financial statements information about all liabilities, including potential liabilities related to environmental clean-up. There are many situations in which you will be asked to provide personal financial information about your assets, liabilities, revenue, and expenses. Sometimes you will face difficult decisions regarding what to disclose and how to disclose it.

Instructions

Suppose that you are putting together a loan application to purchase a home. Based on your income and assets, you qualify for the mortgage loan, but just barely. How would you address each

of the following situations in reporting your financial position for the loan application? Provide responses for each of the following situations.

- You signed a guarantee for a bank loan that a friend took out for \$20,000. If your friend doesn't pay, you will have to pay. Your friend has made all of the payments so far, and it appears he will be able to pay in the future.
- You were involved in an auto accident in which you were at fault. There is the possibility that you may have to pay as much as \$50,000 as part of a settlement. The issue will not be resolved before the bank processes your mortgage request.
- The company at which you work isn't doing very well, and it has recently laid off employees. You are still employed, but it is quite possible that you will lose your job in the next few months.

BYP3-8 Many companies have potential pollution or environmental-disposal problems—not only for electronic gadgets, but also for the lead paint or asbestos they sold. How do we fit these issues into the accounting equation? Are these costs and related liabilities that companies should report?

YES: As more states impose laws holding companies responsible, and as more courts levy pollution-related fines, it becomes increasingly likely that companies will have to pay large amounts in the future.

NO: The amounts still are too difficult to estimate. Putting inaccurate estimates on the financial statements reduces their usefulness. Instead, why not charge the costs later, when the actual environmental cleanup or disposal occurs, at which time the company knows the actual cost?

Instructions

Write a response indicating your position regarding this situation. Provide support for your view.

FASB Codification Activity

BYP3-9 If your school has a subscription to the FASB Codification, go to <http://aaahq.org/asclugin.cfm> to log in and prepare responses to the following.

Instructions

Access the glossary (“Master Glossary”) to answer the following.

- What is the definition of revenue?
- What is the definition of compensation?

Answers to Chapter Questions

Answers to Insight and Accounting Across the Organization Questions

p. 104 Cooking the Books? Q: What motivates sales executives and finance and accounting executives to participate in activities that result in inaccurate reporting of revenues? **A:** Sales executives typically receive bonuses based on their ability to meet quarterly sales targets. In addition, they often face the possibility of losing their jobs if they miss those targets. Executives in accounting and finance are very aware of the earnings targets of Wall Street analysts and investors. If they fail to meet these targets, the company's stock price will fall. As a result of these pressures, executives sometimes knowingly engage in unethical efforts to misstate revenues. As a result of the Sarbanes-Oxley Act, the penalties for such behavior are now much more severe.

p. 112 Turning Gift Cards into Revenue Q: Suppose that Robert Jones purchases a \$100 gift card at Best Buy on December 24, 2013, and gives it to his wife, Mary Jones, on December 25, 2013. On January 3, 2014, Mary uses the card to purchase \$100 worth of CDs. When do you think Best Buy should recognize revenue and why? **A:** According to the revenue recognition principle, companies should recognize revenue when the performance obligation is satisfied. In this case, revenue is not recognized until Best Buy provides the goods. Thus, when Best Buy receives cash in exchange for the gift card on December 24, 2013, it should recognize a liability, Unearned Revenue, for \$100. On January 3, 2014, when Mary Jones exchanges the card for merchandise, Best Buy should recognize revenue and eliminate \$100 from the balance in the Unearned Revenue account.

p. 116 Cashing In on Accrual Accounting Q: Accrual accounting is often considered superior to cash accounting. Why, then, were some people critical of China's use of accrual accounting in this instance? **A:** In this case, some people were critical because, in general, China uses cash accounting. By switching to accrual accounting for this transaction, China was not being consistent in its accounting practices. Lack of consistency reduces the transparency and usefulness of accounting information.

p. 118 Got Junk? Q: What accounting issue might this cause for companies? **A:** The balance sheet should provide a fair representation of what a company owns and what it owes. If significant obligations of the company are not reported on the balance sheet, the company's net worth (its equity) will be overstated. While it is true that it is not possible to estimate the *exact* amount of future environmental cleanup costs, it is becoming clear that companies will be held accountable. Therefore, it doesn't seem reasonable to not accrue for environmental costs. Recognition of these liabilities provides a more accurate picture of the company's financial position. It also has the potential to improve the environment. As companies are forced to report these amounts on their financial statements, they will start to look for more effective and efficient means to reduce toxic waste and therefore reduce their costs.

A Look at IFRS

It is often difficult for companies to determine in what time period they should report particular revenues and expenses. Both the IASB and FASB are working on a joint project to develop a common conceptual framework, as well as a revenue recognition project, that will enable companies to better use the same principles to record transactions consistently over time.

Key Points

- In this chapter, you learned accrual-basis accounting applied under GAAP. Companies applying IFRS also use accrual-basis accounting to ensure that they record transactions that change a company's financial statements in the period in which events occur.
- Similar to GAAP, cash-basis accounting is not in accordance with IFRS.
- IFRS also divides the economic life of companies into artificial time periods. Under both GAAP and IFRS, this is referred to as the *time period assumption*.
- IFRS requires that companies present a complete set of financial statements, including comparative information annually.
- The **general** revenue recognition principles required by GAAP that are used in this textbook are similar to those under IFRS.
- As the Feature Story illustrates, revenue recognition fraud is a major issue in U.S. financial reporting. The same situation occurs in other countries, as evidenced by revenue recognition breakdowns at Dutch software company **Baan NV**, Japanese electronics giant **NEC**, and Dutch grocer **Ahold NV**.
- Under IFRS, revaluation of items such as land and buildings is permitted. IFRS allows depreciation based on revaluation of assets, which is not permitted under GAAP.
- The terminology used for revenues and gains, and expenses and losses, differs somewhat between IFRS and GAAP. For example, income under IFRS is defined as:

Increases in economic benefits during the accounting period in the form of inflows or enhancements of assets or decreases of liabilities that result in increases in equity, other than those relating to contributions from shareholders.

Income includes *both* revenues, which arise during the normal course of operating activities, and gains, which arise from activities outside of the normal sales of goods and services. The term income is not used this way under GAAP. Instead, under GAAP income refers to the net difference between revenues and expenses. Expenses under IFRS are defined as:

Decreases in economic benefits during the accounting period in the form of outflows or depletions of assets or incurrences of liabilities that result in decreases in equity other than those relating to distributions to shareholders.

Note that under IFRS, expenses include both those costs incurred in the normal course of operations, as well as losses that are not part of normal operations. This is in contrast to GAAP, which defines each separately.

Looking to the Future

The IASB and FASB have recently completed a joint project on revenue recognition. The purpose of this project was to develop comprehensive guidance on when to recognize revenue. This approach focuses on changes in assets and liabilities as the basis for revenue recognition. It is hoped that this approach will lead to more consistent accounting in this area. For more on this topic, see www.fasb.org/project/revenue_recognition.shtml.

IFRS Practice

IFRS Self-Test Questions

1. GAAP:
 - (a) provides the same type of guidance as IFRS for revenue recognition.
 - (b) provides only general guidance on revenue recognition, compared to the detailed guidance provided by IFRS.
 - (c) allows revenue to be recognized when a customer makes an order.
 - (d) requires that revenue not be recognized until cash is received.
2. Which of the following statements is *false*?
 - (a) IFRS employs the time period assumption.
 - (b) IFRS employs accrual accounting.
 - (c) IFRS requires that revenues and costs must be capable of being measured reliably.
 - (d) IFRS uses the cash basis of accounting.
3. As a result of the revenue recognition project by the FASB and IASB:
 - (a) revenue recognition places more emphasis on when the service obligation is satisfied.
 - (b) revenue recognition places more emphasis on when revenue is realized.
 - (c) revenue recognition places more emphasis on when changes occur in assets and liabilities.
 - (d) revenue is no longer recorded unless cash has been received.
4. Which of the following is *false*?
 - (a) Under IFRS, the term *income* describes both revenues and gains.
 - (b) Under IFRS, the term *expenses* includes losses.
 - (c) Under IFRS, firms do not engage in the closing process.
 - (d) IFRS has fewer standards than GAAP that address revenue recognition.
5. Accrual-basis accounting:
 - (a) is optional under IFRS.
 - (b) results in companies recording transactions that change a company's financial statements in the period in which events occur.
 - (c) has been eliminated as a result of the IASB/FASB joint project on revenue recognition.
 - (d) is not consistent with the IASB conceptual framework.

IFRS Exercises

IFRS3-1 Compare and contrast the rules regarding revenue recognition under IFRS versus GAAP.

IFRS3-2 Under IFRS, do the definitions of revenues and expenses include gains and losses? Explain.

International Financial Reporting Problem: Zetar plc

IFRS3-3 The financial statements of **Zetar plc** are presented in Appendix C. The company's complete annual report, including the notes to its financial statements, is available at www.zetarplc.com.

Instructions

Visit Zetar's corporate website and answer the following questions from Zetar's 2010 annual report.

- (a) From the notes to the financial statements, how does the company determine the amount of revenue to record at the time of a sale?
- (b) From the notes to the financial statements, how does the company determine whether a sale has occurred?
- (c) Using the consolidated income statement and consolidated statement of financial position, identify items that may result in adjusting entries for deferrals.
- (d) Using the consolidated income statement, identify two items that may result in adjusting entries for accruals.

Chapter 4

Completing the Accounting Cycle

Feature Story

Everyone Likes to Win

When Ted Castle was a hockey coach at the University of Vermont, his players were self-motivated by their desire to win. Hockey was a game you either won or lost. But at **Rhino Foods, Inc.**, a bakery-foods company he founded in Burlington, Vermont, he discovered that manufacturing-line workers were not so self-motivated. Ted thought, what if he turned the food-making business into a game, with rules, strategies, and trophies?

Ted knew that in a game, knowing the score is all-important. He felt only if the employees know the score—know exactly how the business is doing daily,

weekly, monthly—could he turn food-making into a game. But Rhino is a closely held, family-owned business, and its financial statements and profits were confidential. Ted wondered, should he open Rhino's books to the employees?

A consultant put Ted's concerns in perspective when he said, "Imagine you're playing touch football. You play for an hour or two, and the whole time I'm sitting there with a book, keeping score. All of a sudden I blow the whistle, and I say, 'OK, that's it. Everybody go home.' I close my book and walk away. How would you feel?" Ted opened his books and revealed the financial statements to his employees.

Learning Objectives

After studying this chapter, you should be able to:

- 1** Prepare a worksheet.
- 2** Explain the process of closing the books.
- 3** Describe the content and purpose of a post-closing trial balance.
- 4** State the required steps in the accounting cycle.
- 5** Explain the approaches to preparing correcting entries.
- 6** Identify the sections of a classified balance sheet.

The Navigator

The next step was to teach employees the rules and strategies of how to “win” at making food. The first lesson: “Your opponent at Rhino is expenses. You must cut and control expenses.” Ted and his staff distilled those lessons into daily scorecards—production reports and income statements—that keep Rhino’s employees up-to-date on the game. At noon each day, Ted posts the previous day’s results at the entrance to the production room. Everyone checks

whether they made or lost money on what they produced the day before. And it’s not just an academic exercise: There’s a bonus

check for each employee at the end of every four-week “game” that meets profitability guidelines.

Rhino has flourished since the first game. Employment has increased from 20 to 130 people, while both revenues and profits have grown dramatically.

 **The Navigator**

Preview of Chapter 4

At **Rhino Foods, Inc.**, financial statements help employees understand what is happening in the business. In Chapter 3, we prepared financial statements directly from the adjusted trial balance. However, with so many details involved in the end-of-period accounting procedures, it is easy to make errors. One way to minimize errors in the records and to simplify the end-of-period procedures is to use a worksheet.

In this chapter, we will explain the role of the worksheet in accounting. We also will study the remaining steps in the accounting cycle, especially the closing process, again using Pioneer Advertising Agency Inc. as an example. Then we will consider correcting entries and classified balance sheets. The content and organization of Chapter 4 are as follows.

COMPLETING THE ACCOUNTING CYCLE

 **The Navigator**

Using a Worksheet

LEARNING OBJECTIVE 1**Prepare a worksheet.**

A **worksheet** is a multiple-column form used in the adjustment process and in preparing financial statements. As its name suggests, the worksheet is a working tool. **It is not a permanent accounting record**; it is neither a journal nor a part of the general ledger. The worksheet is merely a device used in preparing adjusting entries and the financial statements. Companies generally computerize worksheets using an electronic spreadsheet program such as Excel.

Illustration 4-1 shows the basic form of a worksheet and the five steps for preparing it. Each step is performed in sequence. **The use of a worksheet is optional.** When a company chooses to use one, it prepares financial statements from the worksheet. It enters the adjustments in the worksheet columns and then journalizes and posts the adjustments after it has prepared the financial statements. Thus, worksheets make it possible to provide the financial statements to management and other interested parties at an earlier date.

5 Total the statement columns, compute net income (or net loss), and complete worksheet

Illustration 4-1

Form and procedure for a worksheet

Steps in Preparing a Worksheet

We will use the October 31 trial balance and adjustment data of Pioneer Advertising Agency Inc., from Chapter 3, to illustrate how to prepare a worksheet. We describe each step of the process and demonstrate these steps in Illustration 4-2 (page 166) and transparencies 4-3A, B, C, and D.

STEP 1. PREPARE A TRIAL BALANCE ON THE WORKSHEET

Enter all ledger accounts with balances in the account titles space. Enter debit and credit amounts from the ledger in the trial balance columns. Illustration 4-2 shows the worksheet trial balance for Pioneer Advertising Agency Inc. This trial balance is the same one that appears in Illustration 2-32 (page 74) and Illustration 3-3 (page 105).

STEP 2. ENTER THE ADJUSTMENTS IN THE ADJUSTMENTS COLUMNS

Turn over the first transparency, Illustration 4-3A. When using a worksheet, enter all adjustments in the adjustments columns. In entering the adjustments, use applicable trial balance accounts. If additional accounts are needed, insert them on the lines immediately below the trial balance totals. A different letter identifies the debit and credit for each adjusting entry. The term used to describe this process is **keying**. **Companies do not journalize the adjustments until after they complete the worksheet and prepare the financial statements.**

The adjustments for Pioneer Advertising Agency Inc. are the same as the adjustments in Illustration 3-23 (page 119). They are keyed in the adjustments columns of the worksheet as follows.

- (a) Pioneer debits an additional account, Supplies Expense, \$1,500 for the cost of supplies used, and credits Supplies \$1,500.
- (b) Pioneer debits an additional account, Insurance Expense, \$50 for the insurance that has expired, and credits Prepaid Insurance \$50.
- (c) The company needs two additional depreciation accounts. It debits Depreciation Expense \$40 for the month's depreciation, and credits Accumulated Depreciation—Equipment \$40.
- (d) Pioneer debits Unearned Service Revenue \$400 for services provided, and credits Service Revenue \$400.
- (e) Pioneer debits an additional account, Accounts Receivable, \$200 for services provided but not billed, and credits Service Revenue \$200.
- (f) The company needs two additional accounts relating to interest. It debits Interest Expense \$50 for accrued interest, and credits Interest Payable \$50.
- (g) Pioneer debits Salaries and Wages Expense \$1,200 for accrued salaries, and credits an additional account, Salaries and Wages Payable, \$1,200.

After Pioneer has entered all the adjustments, the adjustments columns are totaled to prove their equality.

STEP 3. ENTER ADJUSTED BALANCES IN THE ADJUSTED TRIAL BALANCE COLUMNS

Turn over the second transparency, Illustration 4-3B. Pioneer determines the adjusted balance of an account by combining the amounts entered in the first four columns of the worksheet for each account. For example, the Prepaid Insurance account in the trial balance columns has a \$600 debit balance and a \$50 credit in the adjustments columns. The result is a \$550 debit balance recorded in the adjusted trial balance columns. **For each account, the amount**

(Note: Text continues on page 167, following acetate overlays.)

50	200
	50
	1,200

Extend all revenue and expense account balances to the income statement columns.

Extend all asset and liability account balances, as well as Common Stock and Dividends account balances, to the balance sheet columns.

Illustration 4-3D

Computing net income or net loss and completing the worksheet

	7,740	10,600	22,450	19,590
Net Income		2,860		2,860
Totals	10,600	10,600	22,450	22,450

The difference between the totals of the two income statement columns determines net income or net loss.

Net income is extended to the credit column of the balance sheet columns. (Net loss would be extended to the debit column.)

in the adjusted trial balance columns is the balance that will appear in the ledger after journalizing and posting the adjusting entries. The balances in these columns are the same as those in the adjusted trial balance in Illustration 3-25 (page 121).

After Pioneer has entered all account balances in the adjusted trial balance columns, the columns are totaled to prove their equality. If the column totals do not agree, the financial statement columns will not balance and the financial statements will be incorrect.

STEP 4. EXTEND ADJUSTED TRIAL BALANCE AMOUNTS TO APPROPRIATE FINANCIAL STATEMENT COLUMNS

Turn over the third transparency, Illustration 4-3C. The fourth step is to extend adjusted trial balance amounts to the income statement and balance sheet columns of the worksheet. Pioneer enters balance sheet accounts in the appropriate balance sheet debit and credit columns. For instance, it enters Cash in the balance sheet debit column, and Notes Payable in the credit column. Pioneer extends Accumulated Depreciation—Equipment to the balance sheet credit column; the reason is that accumulated depreciation is a contra-asset account with a credit balance.

Because the worksheet does not have columns for the retained earnings statement, Pioneer extends the balance in Common Stock and Retained Earnings, if any, to the balance sheet credit column. In addition, it extends the balance in Dividends to the balance sheet debit column because it is a stockholders' equity account with a debit balance.

The company enters the expense and revenue accounts such as Salaries and Wages Expense and Service Revenue in the appropriate income statement columns. Illustration 4-3C shows all of these extensions.

STEP 5. TOTAL THE STATEMENT COLUMNS, COMPUTE THE NET INCOME (OR NET LOSS), AND COMPLETE THE WORKSHEET

Turn over the fourth transparency, Illustration 4-3D. The company now must total each of the financial statement columns. The net income or loss for the period is the difference between the totals of the two income statement columns. If total credits exceed total debits, the result is net income. In such a case, as shown in Illustration 4-3D, the company inserts the words "Net Income" in the account titles space. It then enters the amount in the income statement debit column and the balance sheet credit column. **The debit amount balances the income statement columns; the credit amount balances the balance sheet columns.** In addition, the credit in the balance sheet column indicates the increase in stockholders' equity resulting from net income.

What if total debits in the income statement columns exceed total credits? In that case, the company has a net loss. It enters the amount of the net loss in the income statement credit column and the balance sheet debit column.

After entering the net income or net loss, the company determines new column totals. The totals shown in the debit and credit income statement columns will match. So will the totals shown in the debit and credit balance sheet columns. If either the income statement columns or the balance sheet columns are not equal after the net income or net loss has been entered, there is an error in the worksheet. Illustration 4-3D shows the completed worksheet for Pioneer Advertising Agency Inc.

Preparing Financial Statements from a Worksheet

After a company has completed a worksheet, it has at hand all the data required for preparation of financial statements. The income statement is prepared from the income statement columns. The balance sheet and retained earnings statement are prepared from the balance sheet columns. Illustration 4-4 (page 168)

Helpful Hint

Every adjusted trial balance amount must be extended to one of the four statement columns.

Illustration 4-4

Financial statements from a worksheet

Pioneer Advertising Agency Inc.		
Income Statement		
For the Month Ended October 31, 2014		
Revenues		
Service revenue		\$10,600
Expenses		
Salaries and wages expense	\$5,200	
Supplies expense	1,500	
Rent expense	900	
Insurance expense	50	
Interest expense	50	
Depreciation expense	40	
Total expenses	<u>7,740</u>	
Net income		<u>\$ 2,860</u>

Pioneer Advertising Agency Inc.	
Retained Earnings Statement	
For the Month Ended October 31, 2014	
Retained earnings, October 1	\$ -0-
Add: Net income	<u>2,860</u>
	2,860
Less: Dividends	<u>500</u>
Retained earnings, October 31	<u>\$2,360</u>

Pioneer Advertising Agency Inc.		
Balance Sheet		
October 31, 2014		
<u>Assets</u>		
Cash		\$15,200
Accounts receivable		200
Supplies		1,000
Prepaid insurance		550
Equipment	\$5,000	
Less: Accumulated depreciation—equipment	<u>40</u>	4,960
Total assets		<u>\$21,910</u>
<u>Liabilities and Stockholders' Equity</u>		
Liabilities		
Notes payable	\$5,000	
Accounts payable	2,500	
Interest payable	50	
Unearned service revenue	800	
Salaries and wages payable	<u>1,200</u>	
Total liabilities		\$ 9,550
Stockholders' equity		
Common stock	10,000	
Retained earnings	<u>2,360</u>	
Total stockholders' equity		<u>12,360</u>
Total liabilities and stockholders' equity		<u>\$21,910</u>

shows the financial statements prepared from Pioneer's worksheet. At this point, the company has not journalized or posted adjusting entries. Therefore, ledger balances for some accounts are not the same as the financial statement amounts.

The amount shown for common stock on the worksheet does not change from the beginning to the end of the period unless the company issues additional stock during the period. Because there was no balance in Pioneer's retained earnings, the account is not listed on the worksheet. Only after dividends and net income (or loss) are posted to retained earnings does this account have a balance at the end of the first year of the business.

Using a worksheet, companies can prepare financial statements before they journalize and post adjusting entries. **However, the completed worksheet is not a substitute for formal financial statements.** The format of the data in the financial statement columns of the worksheet is not the same as the format of the financial statements. **A worksheet is essentially a working tool of the accountant;** companies do not distribute it to management and other parties.

Accounting Cycle
Tutorial—Preparing
Financial Statements
and Closing the Books

Preparing Adjusting Entries from a Worksheet

A worksheet is not a journal, and it cannot be used as a basis for posting to ledger accounts. To adjust the accounts, the company must journalize the adjustments and post them to the ledger. **The adjusting entries are prepared from the adjustments columns of the worksheet.** The reference letters in the adjustments columns and the explanations of the adjustments at the bottom of the worksheet help identify the adjusting entries. The journalizing and posting of adjusting entries **follows** the preparation of financial statements when a worksheet is used. The adjusting entries on October 31 for Pioneer Advertising Agency Inc. are the same as those shown in Illustration 3-23 (page 119).

Helpful Hint

Note that writing the explanation to the adjustment at the bottom of the worksheet is not required.

> DO IT!

Worksheet

Susan Elbe is preparing a worksheet. Explain to Susan how she should extend the following adjusted trial balance accounts to the financial statement columns of the worksheet.

Cash
Accumulated Depreciation
Accounts Payable
Dividends
Service Revenue
Salaries and Wages Expense

Action Plan

- ✓ Balance sheet: Extend assets to debit column. Extend liabilities to credit column. Extend contra assets to credit column. Extend dividends account to debit column.
- ✓ Income statement: Extend expenses to debit column. Extend revenues to credit column.

Solution

Income statement debit column—Salaries and Wages Expense
Income statement credit column—Service Revenue
Balance sheet debit column—Cash; Dividends
Balance sheet credit column—Accumulated Depreciation; Accounts Payable

Closing the Books

LEARNING OBJECTIVE 2

Explain the process of closing the books.

Alternative Terminology

Temporary accounts are sometimes called *nominal accounts*, and permanent accounts are sometimes called *real accounts*.

Illustration 4-5

Temporary versus permanent accounts

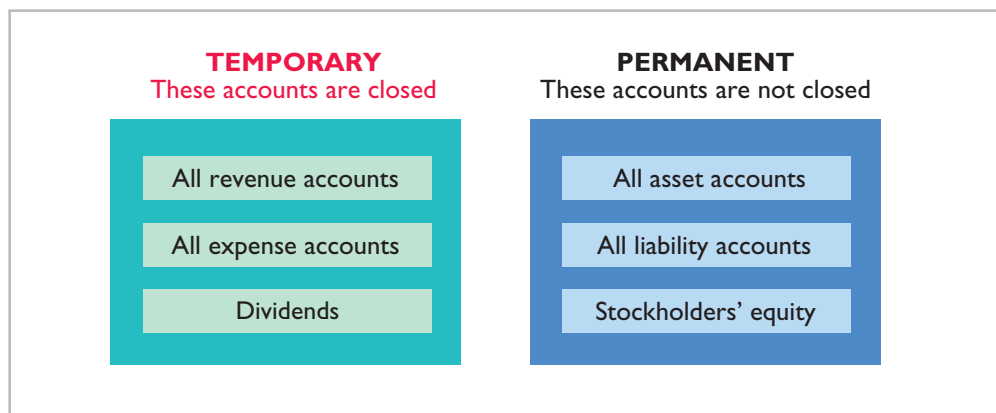

Helpful Hint

A contra-asset account, such as accumulated depreciation, is a permanent account also.

At the end of the accounting period, the company makes the accounts ready for the next period. This is called **closing the books**. In closing the books, the company distinguishes between temporary and permanent accounts.

Temporary accounts relate only to a given accounting period. They include all income statement accounts and the Dividends account. **The company closes all temporary accounts at the end of the period.**

In contrast, **permanent accounts** relate to one or more future accounting periods. They consist of all balance sheet accounts, including stockholders' equity accounts. **Permanent accounts are not closed from period to period.** Instead, the company carries forward the balances of permanent accounts into the next accounting period. Illustration 4-5 identifies the accounts in each category.

Preparing Closing Entries

At the end of the accounting period, the company transfers temporary account balances to the permanent stockholders' equity account, Retained Earnings, by means of closing entries.

Closing entries formally recognize in the ledger the transfer of net income (or net loss) and Dividends to Retained Earnings. The retained earnings statement shows the results of these entries. **Closing entries also produce a zero balance in each temporary account.** The temporary accounts are then ready to accumulate data in the next accounting period separate from the data of prior periods. Permanent accounts are not closed.

Journalizing and posting closing entries is a required step in the accounting cycle. (See Illustration 4-12 on page 177.) The company performs this step after it has prepared financial statements. In contrast to the steps in the cycle that you have already studied, companies generally journalize and post closing entries **only at the end of the annual accounting period.** Thus, all temporary accounts will contain data for the entire year.

In preparing closing entries, companies could close each income statement account directly to Retained Earnings. However, to do so would result in excessive detail in the permanent Retained Earnings account. Instead, companies close the revenue and expense accounts to another temporary account, **Income Summary**, and they transfer the resulting net income or net loss from this account to Retained Earnings.

Companies **record closing entries in the general journal.** A center caption, Closing Entries, inserted in the journal between the last adjusting entry and the first closing entry, identifies these entries. Then the company posts the closing entries to the ledger accounts.

Companies generally prepare closing entries directly from the adjusted balances in the ledger. They could prepare separate closing entries for each nominal account, but the following four entries accomplish the desired result more efficiently:

1. Debit each revenue account for its balance, and credit Income Summary for total revenues.
2. Debit Income Summary for total expenses, and credit each expense account for its balance.
3. Debit Income Summary and credit Retained Earnings for the amount of net income.
4. Debit Retained Earnings for the balance in the Dividends account, and credit Dividends for the same amount.

Helpful Hint

Dividends is closed directly to Retained Earnings and *not* to Income Summary because Dividends is not an expense.

Illustration 4-6 presents a diagram of the closing process. In it, the boxed numbers refer to the four entries required in the closing process.

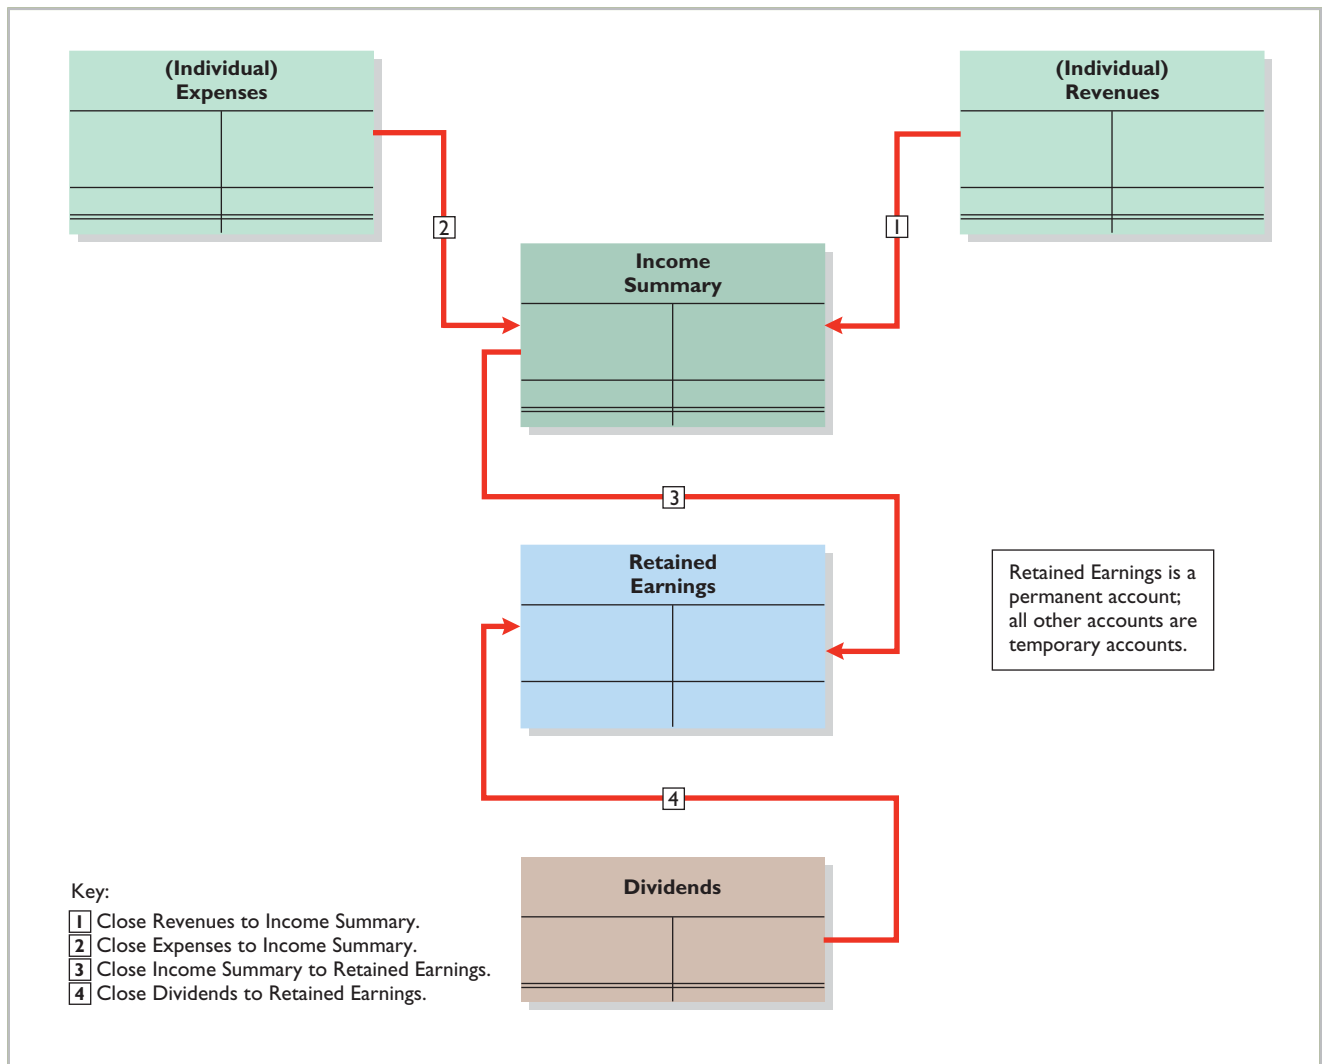

Illustration 4-6

Diagram of closing process—proprietorship

If there were a net loss (because expenses exceeded revenues), entry 3 in Illustration 4-6 would be reversed: there would be a credit to Income Summary and a debit to Retained Earnings.

CLOSING ENTRIES ILLUSTRATED

In practice, companies generally prepare closing entries only at the end of the annual accounting period. However, to illustrate the journalizing and posting

of closing entries, we will assume that Pioneer Advertising Agency Inc. closes its books monthly. Illustration 4-7 shows the closing entries at October 31. (The numbers in parentheses before each entry correspond to the four entries diagrammed in Illustration 4-6.)

Illustration 4-7
Closing entries journalized

General Journal				
				J3
Date	Account Titles and Explanation	Ref.	Debit	Credit
Closing Entries				
2014	(1)			
Oct. 31	Service Revenue	400	10,600	
	Income Summary	350		10,600
	(To close revenue account)			
	(2)			
31	Income Summary	350	7,740	
	Supplies Expense	631		1,500
	Depreciation Expense	711		40
	Insurance Expense	722		50
	Salaries and Wages Expense	726		5,200
	Rent Expense	729		900
	Interest Expense	905		50
	(To close expense accounts)			
	(3)			
31	Income Summary	350	2,860	
	Retained Earnings	320		2,860
	(To close net income to retained earnings)			
	(4)			
31	Retained Earnings	320	500	
	Dividends	332		500
	(To close dividends to retained earnings)			

Note that the amounts for Income Summary in entries (1) and (2) are the totals of the income statement credit and debit columns, respectively, in the worksheet.

A couple of cautions in preparing closing entries: (1) Avoid unintentionally doubling the revenue and expense balances rather than zeroing them. (2) Do not close Dividends through the Income Summary account. **Dividends are not an expense, and they are not a factor in determining net income.**

Posting Closing Entries

Illustration 4-8 shows the posting of the closing entries and the underlining (ruling) of the accounts. Note that all temporary accounts have zero balances after posting the closing entries. In addition, you should realize that the balance in Retained Earnings represents the accumulated undistributed earnings of the corporation at the end of the accounting period. This balance is shown on the balance sheet and is the ending amount reported on the retained earnings statement, as shown in Illustration 4-4. Pioneer uses the Income Summary account only in closing. It does not journalize and post entries to this account during the year.

As part of the closing process, Pioneer totals, balances, and double-underlines its temporary accounts—revenues, expenses, and Dividends, as shown in T-account form in Illustration 4-8. It does not close its permanent accounts—assets, liabilities, and stockholders' equity (Common Stock and Retained Earnings). Instead, Pioneer draws a single underline beneath the current-period entries for the permanent accounts. The account balance is then entered below the single rule and is carried forward to the next period. (For example, see Retained Earnings.)

Helpful Hint

The balance in Income Summary before it is closed must equal the net income or net loss for the period.

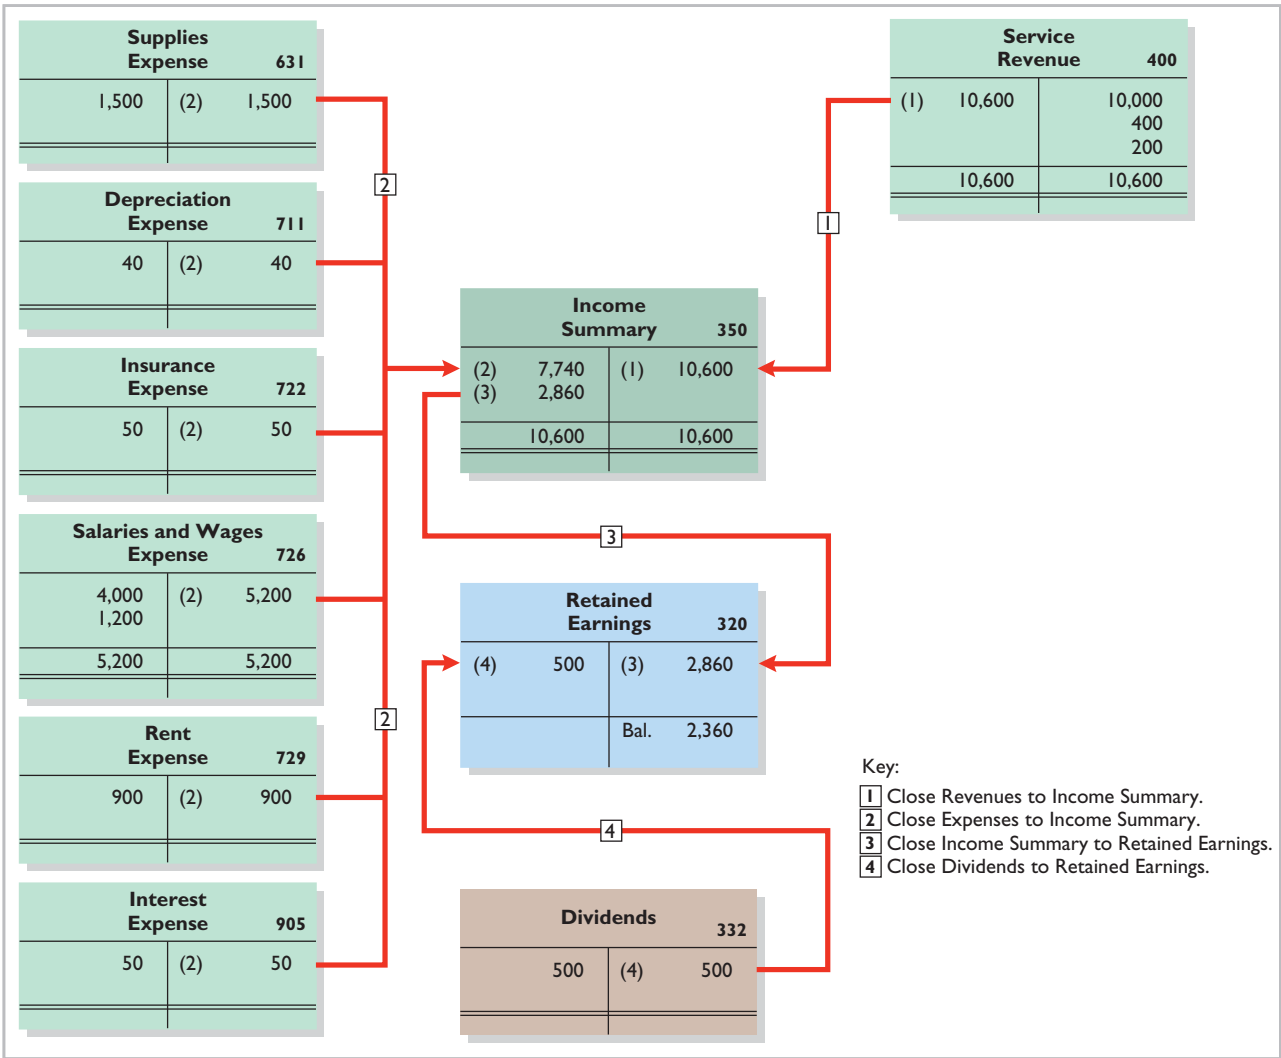

Illustration 4-8
Posting of closing entries

> DO IT!

Closing Entries

The worksheet for Hancock Company shows the following in the financial statement columns:

Dividends \$15,000
Common stock \$42,000
Net income \$18,000

Prepare the closing entries at December 31 that affect stockholders' equity.

Solution

Action Plan

- ✓ Close Income Summary to Retained Earnings.
- ✓ Close Dividends to Retained Earnings.

Dec. 31	Income Summary	18,000	
	Retained Earnings		18,000
	(To close net income to retained earnings)		
31	Retained Earnings	15,000	
	Dividends		15,000
	(To close dividends to retained earnings)

ACCOUNTING ACROSS THE ORGANIZATION

Cisco Performs the Virtual Close

Technology has dramatically shortened the closing process. Recent surveys have reported that the average company now takes only six to seven days to close, rather than 20 days. But a few companies do much better. **Cisco Systems** can perform a “virtual close”—closing within 24 hours on any day in the quarter. The same is true at **Lockheed Martin Corp.**, which improved its closing time by 85% in just the last few years. Not very long ago it took 14 to 16 days. Managers at these companies emphasize that this increased speed has not reduced the accuracy and completeness of the data.

This is not just showing off. Knowing exactly where you are financially all of the time allows the company to respond faster than competitors. It also means that the hundreds of people who used to spend 10 to 20 days a quarter tracking transactions can now be more usefully employed on things such as mining data for business intelligence to find new business opportunities.

Source: “Reporting Practices: Few Do It All,” *Financial Executive* (November 2003), p. 11.

Who else benefits from a shorter closing process? (See page 214.)

LEARNING OBJECTIVE

3

Describe the content and purpose of a post-closing trial balance.

Preparing a Post-Closing Trial Balance

After Pioneer has journalized and posted all closing entries, it prepares another trial balance, called a **post-closing trial balance**, from the ledger. The post-closing trial balance lists permanent accounts and their balances after journalizing and posting of closing entries. The purpose of the post-closing trial balance is **to prove the equality of the permanent account balances carried forward into the next accounting period**. Since all temporary accounts will have zero balances, **the post-closing trial balance will contain only permanent—balance sheet—accounts**.

Illustration 4-9 shows the post-closing trial balance for Pioneer Advertising Agency Inc.

Illustration 4-9
Post-closing trial balance

Pioneer Advertising Agency Inc.

A post-closing trial balance provides evidence that the company has properly journalized and posted the closing entries. It also shows that the accounting equation is in balance at the end of the accounting period. However, like the trial balance, it does not prove that Pioneer has recorded all transactions or that the ledger is correct.

For example, the post-closing trial balance still will balance even if a transaction is not journalized and posted or if a transaction is journalized and posted twice.

The remaining accounts in the general ledger are temporary accounts, shown in Illustration 4-11. After Pioneer correctly posts the closing entries, each temporary account has a zero balance. These accounts are double-underlined to finalize the closing process.

Summary of the Accounting Cycle

LEARNING OBJECTIVE 4

State the required steps in the accounting cycle.

Illustration 4-12 summarizes the steps in the accounting cycle. You can see that the cycle begins with the analysis of business transactions and ends with the preparation of a post-closing trial balance.

Steps 1–3 may occur daily during the accounting period, as explained in Chapter 2. Companies perform Steps 4–7 on a periodic basis, such as monthly, quarterly, or annually. Steps 8 and 9—closing entries, and a post-closing trial balance—usually take place only at the end of a company's **annual** accounting period.

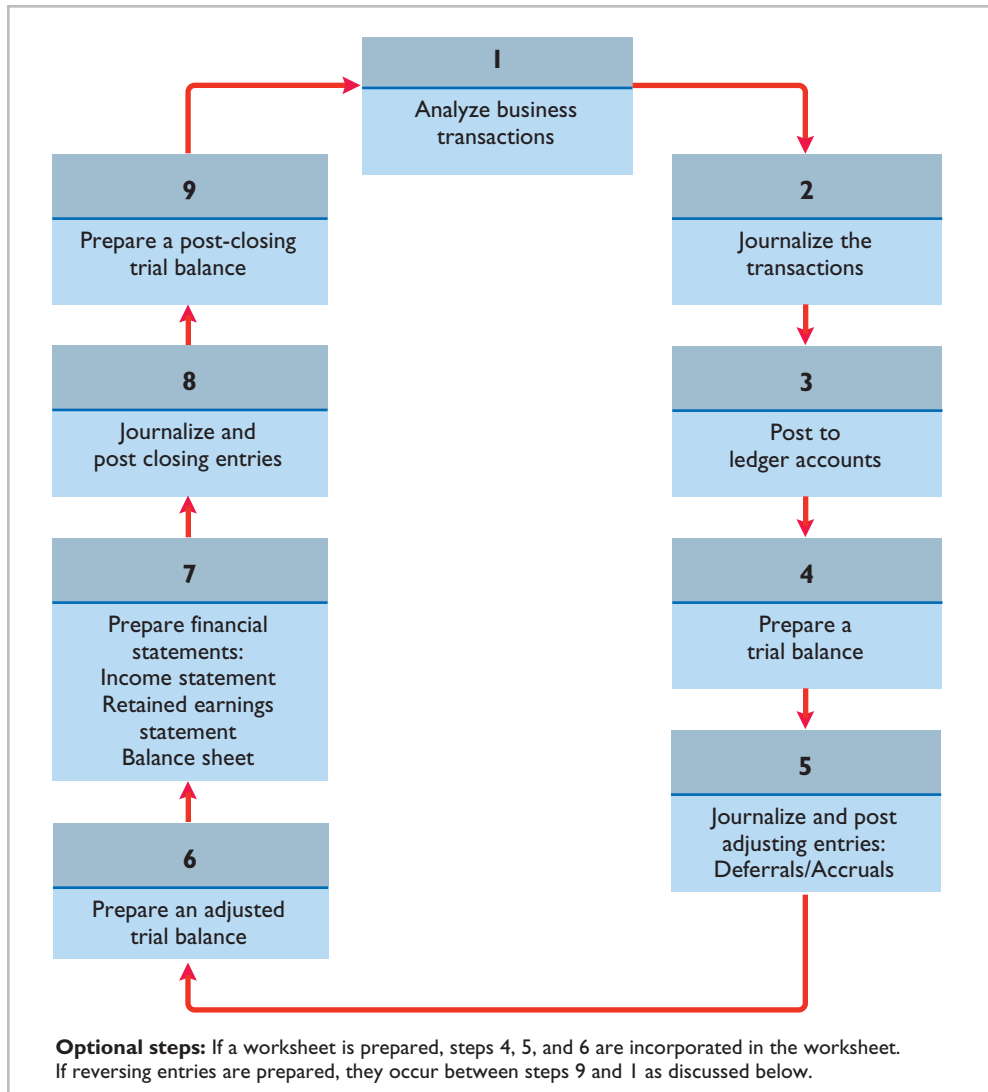

Illustration 4-12
Steps in the accounting cycle

There are also two **optional steps** in the accounting cycle. As you have seen, companies may use a worksheet in preparing adjusting entries and financial statements. In addition, they may use reversing entries, as explained below.

Reversing Entries—An Optional Step

Some accountants prefer to reverse certain adjusting entries by making a **reversing entry** at the beginning of the next accounting period. A reversing entry is the exact opposite of the adjusting entry made in the previous period. **Use of reversing entries is an optional bookkeeping procedure; it is not a required step in the accounting cycle.** Accordingly, we have chosen to cover this topic in Appendix 4A at the end of the chapter.

Correcting Entries—An Avoidable Step

Unfortunately, errors may occur in the recording process. Companies should correct errors, **as soon as they discover them**, by journalizing and posting **correcting entries**. If the accounting records are free of errors, no correcting entries are needed.

LEARNING OBJECTIVE 5

Explain the approaches to preparing correcting entries.

Ethics Note

When companies find errors in previously released income statements, they restate those numbers. Perhaps because of the increased scrutiny caused by Sarbanes-Oxley, in a recent year companies filed a record 1,195 restatements.

You should recognize several differences between correcting entries and adjusting entries. First, adjusting entries are an integral part of the accounting cycle. Correcting entries, on the other hand, are unnecessary if the records are error-free. Second, companies journalize and post adjustments **only at the end of an accounting period**. In contrast, companies make correcting entries **whenever they discover an error**. Finally, adjusting entries always affect at least one balance sheet account and one income statement account. In contrast, correcting entries may involve any combination of accounts in need of correction. **Correcting entries must be posted before closing entries.**

To determine the correcting entry, it is useful to compare the incorrect entry with the correct entry. Doing so helps identify the accounts and amounts that should—and should not—be corrected. After comparison, the accountant makes an entry to correct the accounts. The following two cases for Mercato Co. illustrate this approach.

CASE 1

On May 10, Mercato Co. journalized and posted a \$50 cash collection on account from a customer as a debit to Cash \$50 and a credit to Service Revenue \$50. The company discovered the error on May 20, when the customer paid the remaining balance in full.

Illustration 4-13
Comparison of entries

Incorrect Entry (May 10)			Correct Entry (May 10)		
Cash	50		Cash	50	
Service Revenue		50	Accounts Receivable		50

Comparison of the incorrect entry with the correct entry reveals that the debit to Cash \$50 is correct. However, the \$50 credit to Service Revenue should have been credited to Accounts Receivable. As a result, both Service Revenue and Accounts Receivable are overstated in the ledger. Mercato makes the following correcting entry.

Illustration 4-14
Correcting entry

A	=	L	+	SE
-50				-50 Rev

Cash Flows
no effect

Correcting Entry					
May 20	Service Revenue		50		
	Accounts Receivable				50
	(To correct entry of May 10)				

CASE 2

On May 18, Mercato purchased on account equipment costing \$450. The transaction was journalized and posted as a debit to Equipment \$45 and a credit to Accounts Payable \$45. The error was discovered on June 3, when Mercato received the monthly statement for May from the creditor.

Illustration 4-15
Comparison of entries

Incorrect Entry (May 18)			Correct Entry (May 18)		
Equipment	45		Equipment	450	
Accounts Payable		45	Accounts Payable		450

Comparison of the two entries shows that two accounts are incorrect. Equipment is understated \$405, and Accounts Payable is understated \$405. Mercato makes the following correcting entry.

Correcting Entry				
June 3	Equipment		405	
	Accounts Payable			405
	(To correct entry of May 18)			

A	=	L	+	SE
+405				+405

Cash Flows
no effect

Illustration 4-16
Correcting entry

Instead of preparing a correcting entry, **it is possible to reverse the incorrect entry and then prepare the correct entry.** This approach will result in more entries and postings than a correcting entry, but it will accomplish the desired result.

ACCOUNTING ACROSS THE ORGANIZATION

Yale Express Loses Some Transportation Bills

Yale Express, a short-haul trucking firm, turned over much of its cargo to local truckers to complete deliveries. Yale collected the entire delivery charge; when billed by the local trucker, Yale sent payment for the final phase to the local trucker. Yale used a cutoff period of 20 days into the next accounting period in making its adjusting entries for accrued liabilities. That is, it waited 20 days to receive the local truckers' bills to determine the amount of the unpaid but incurred delivery charges as of the balance sheet date.

On the other hand, **Republic Carloading**, a nationwide, long-distance freight forwarder, frequently did not receive transportation bills from truckers to whom it passed on cargo until months after the year-end. In making its year-end adjusting entries, Republic waited for months in order to include all of these outstanding transportation bills.

When Yale Express merged with Republic Carloading, Yale's vice president employed the 20-day cutoff procedure for both firms. As a result, millions of dollars of Republic's accrued transportation bills went unrecorded. When the company detected the error and made correcting entries, these and other errors changed a reported profit of \$1.14 million into a loss of \$1.88 million!

What might Yale Express's vice president have done to produce more accurate financial statements without waiting months for Republic's outstanding transportation bills? (See page 214.)

The Classified Balance Sheet

The balance sheet presents a snapshot of a company's financial position at a point in time. To improve users' understanding of a company's financial position, companies often use a classified balance sheet. A **classified balance sheet** groups together similar assets and similar liabilities, using a number of standard classifications and sections. This is useful because items within a group have similar economic characteristics. A classified balance sheet generally contains the standard classifications listed in Illustration 4-17.

LEARNING OBJECTIVE 6

Identify the sections of a classified balance sheet.

Assets	Liabilities and Stockholders' Equity
Current assets	Current liabilities
Long-term investments	Long-term liabilities
Property, plant, and equipment	Stockholders' equity
Intangible assets	

Illustration 4-17
Standard balance sheet classifications

These groupings help financial statement readers determine such things as (1) whether the company has enough assets to pay its debts as they come due, and (2) the claims of short- and long-term creditors on the company's total assets. Many of these groupings can be seen in the balance sheet of Franklin Corporation shown in Illustration 4-18 below. In the sections that follow, we explain each of these groupings.

Illustration 4-18
Classified balance sheet

Franklin Corporation			
Balance Sheet			
October 31, 2014

Helpful Hint

Recall that the basic accounting equation is

$$\text{Assets} = \text{Liabilities} + \text{Stockholders' Equity}.$$

Current Assets

Current assets are assets that a company expects to convert to cash or use up within one year or its operating cycle, whichever is longer. In Illustration 4-18, Franklin Corporation had current assets of \$22,100. For most businesses, the cutoff for classification as current assets is one year from the balance sheet date. For example, accounts receivable are current assets because the company will collect them and convert them to cash within one year. Supplies is a current asset because the company expects to use it up in operations within one year.

Some companies use a period longer than one year to classify assets and liabilities as current because they have an operating cycle longer than one year. The **operating cycle** of a company is the average time that it takes to purchase inventory, sell it on account, and then collect cash from customers. For most businesses this cycle takes less than a year, so they use a one-year cutoff. But, for some businesses, such as vineyards or airplane manufacturers, this period may be longer than a year. **Except where noted, we will assume that companies use one year to determine whether an asset or liability is current or long-term.**

Common types of current assets are (1) cash, (2) short-term investments (such as short-term U.S. government securities), (3) receivables (notes receivable, accounts receivable, and interest receivable), (4) inventories, and (5) prepaid expenses (supplies and insurance). **On the balance sheet, companies usually list these items in the order in which they expect to convert them into cash.**

Illustration 4-19 presents the current assets of **Southwest Airlines Co.**

Southwest Airlines Co.
Balance Sheet (partial)
(in millions)

Illustration 4-19
Current assets section

Current assets

Cash and cash equivalents	\$1,390
Short-term investments	369
Accounts receivable	241
Inventories	181
Prepaid expenses and other current assets	420
Total current assets	\$2,601

As explained later in the chapter, a company's current assets are important in assessing its short-term debt-paying ability.

Long-Term Investments

Long-term investments are generally, (1) investments in stocks and bonds of other companies that are normally held for many years, and (2) long-term assets such as land or buildings that a company is not currently using in its operating activities. In Illustration 4-18, Franklin Corporation reported total long-term investments of \$7,200 on its balance sheet.

Yahoo! Inc. reported long-term investments in its balance sheet as shown in Illustration 4-20 (page 182).

Alternative Terminology

Long-term investments are often referred to simply as *investments*.

Illustration 4-20
Long-term investments section

Yahoo! Inc. Balance Sheet (partial) (in thousands)	
Long-term investments	
Long-term investments in marketable securities	\$90,266

Property, Plant, and Equipment

Property, plant, and equipment are assets with relatively long useful lives that a company is currently using in operating the business. This category (sometimes called *fixed assets*) includes land, buildings, machinery and equipment, delivery equipment, and furniture. In Illustration 4-18, Franklin Corporation reported property, plant, and equipment of \$29,000.

Depreciation is the practice of allocating the cost of assets to a number of years. Companies do this by systematically assigning a portion of an asset's cost as an expense each year (rather than expensing the full purchase price in the year of purchase). The assets that the company depreciates are reported on the balance sheet at cost less accumulated depreciation. The **accumulated depreciation** account shows the total amount of depreciation that the company has expensed thus far in the asset's life. In Illustration 4-18, Franklin Corporation reported accumulated depreciation of \$5,000.

Illustration 4-21 presents the property, plant, and equipment of **Cooper Tire & Rubber Company**.

International Note

Recently, China adopted International Financial Reporting Standards (IFRS). This was done in an effort to reduce fraud and increase investor confidence in financial reports. Under these standards, many items, such as property, plant, and equipment, may be reported at current fair values, rather than historical cost.

Molds, cores, and rings	<u>268,158</u>	\$2,244,508
Less: Accumulated depreciation		<u>1,252,692</u>
		\$ 991,816

Helpful Hint

Sometimes intangible assets are reported under a broader heading called "Other assets."

Intangible Assets

Many companies have long-lived assets that do not have physical substance yet often are very valuable. We call these assets **intangible assets**. One common intangible asset is goodwill. Others include patents, copyrights, and trademarks or trade names that give the company **exclusive right** of use for a specified period of time. In Illustration 4-18, Franklin Corporation reported intangible assets of \$3,100.

Illustration 4-22 shows the intangible assets of media giant **Time Warner, Inc.**

	\$92,806

PEOPLE, PLANET, AND PROFIT INSIGHT

Regaining Goodwill

After falling to unforeseen lows amidst scandals, recalls, and economic crises, the American public's positive perception of the reputation of corporate America is on the rise. Overall corporate reputation is experiencing rehabilitation as the American public gives high marks overall to corporate America, specific industries, and the largest number of individual companies in a dozen years. This is according to the findings of the 2011 Harris Interactive RQ Study, which measures the reputations of the 60 most visible companies in the U.S.

The survey focuses on six reputational dimensions that influence reputation and consumer behavior. The six dimensions, along with the five corporations that ranked highest within each, are as follows.

- **Social Responsibility:** (1) Whole Foods Market, (2) Johnson & Johnson, (3) Google, (4) The Walt Disney Company, (5) Procter & Gamble Co.
- **Emotional Appeal:** (1) Johnson & Johnson, (2) amazon.com, (3) UPS, (4) General Mills, (5) Kraft Foods
- **Financial Performance:** (1) Google, (2) Berkshire Hathaway, (3) Apple, (4) Intel, (5) The Walt Disney Company
- **Products and Services:** (1) Intel Corporation, (2) 3M Company, (3) Johnson & Johnson, (4) Google, (5) Procter & Gamble Co.

Source: www.harrisinteractive.com.

Name two industries today which are probably rated low on the reputational characteristics of "being trusted" and "having high ethical standards." (See page 214.)

> DO IT!

Asset Section of Classified Balance Sheet

Baxter Hoffman recently received the following information related to Hoffman Company's December 31, 2014, balance sheet.

Prepaid insurance	\$ 2,300	Inventory	\$3,400
Cash	800	Accumulated depreciation— equipment	2,700
Equipment	10,700	Accounts receivable	1,100

Prepare the asset section of Hoffman Company's classified balance sheet.

Action Plan

- ✓ Present current assets first. Current assets are cash and other resources that the company expects to convert to cash or use up within one year.
- ✓ Present current assets in the order in which the company expects to convert them into cash.
- ✓ Subtract accumulated depreciation—equipment from equipment to determine net equipment.

Solution

<u>Assets</u>	
Current assets	
Cash	\$ 800
Accounts receivable	1,100
Inventory	3,400
Prepaid insurance	<u>2,300</u>
Total current assets	\$ 7,600
Equipment	10,700
Less: Accumulated depreciation—equipment	<u>2,700</u> <u>8,000</u>
Total assets	<u>\$15,600</u>

Related exercise material: **BE4-10** and **DO IT! 4-3**.

Ethics Note

A company that has more current assets than current liabilities can increase the ratio of current assets to current liabilities by using cash to pay off some current liabilities. This gives the appearance of being more liquid. Do you think this move is ethical?

Current Liabilities

In the liabilities and stockholders' equity section of the balance sheet, the first grouping is current liabilities. **Current liabilities** are obligations that the company is to pay within the coming year or its operating cycle, whichever is longer. Common examples are accounts payable, wages payable, bank loans payable, interest payable, and taxes payable. Also included as current liabilities are current maturities of long-term obligations—payments to be made within the next year on long-term obligations. In Illustration 4-18, Franklin Corporation reported five different types of current liabilities, for a total of \$16,050.

Within the current liabilities section, companies usually list notes payable first, followed by accounts payable. Other items then follow in the order of their magnitude. *In your homework, you should present notes payable first, followed by accounts payable, and then other liabilities in order of magnitude.*

Illustration 4-23 shows the current liabilities section adapted from the balance sheet of **Marcus Corporation**.

Illustration 4-23
Current liabilities section

Marcus Corporation
Balance Sheet (partial)
(in thousands)

Current liabilities	
Notes payable	\$ 239
Accounts payable	24,242
Current maturities of long-term debt	57,250
Other current liabilities	27,477
Income taxes payable	11,215
Salary and wages payable	<u>6,720</u>
Total current liabilities	\$127,143

Users of financial statements look closely at the relationship between current assets and current liabilities. This relationship is important in evaluating a company's **liquidity**—its ability to pay obligations expected to be due within the next year. When current assets exceed current liabilities at the balance sheet date, the

likelihood for paying the liabilities is favorable. When the reverse is true, short-term creditors may not be paid, and the company may ultimately be forced into bankruptcy.

ACCOUNTING ACROSS THE ORGANIZATION

Can a Company Be Too Liquid?

There actually is a point where a company can be too liquid—that is, it can have too much working capital (current assets less current liabilities). While it is important to be liquid enough to be able to pay short-term bills as they come due, a company does not want to tie up its cash in extra inventory or receivables that are not earning the company money.

By one estimate from the **REL Consultancy Group**, the thousand largest U.S. companies have on their books cumulative excess working capital of \$764 billion. Based on this figure, companies could have reduced debt by 36% or increased net income by 9%. Given that managers throughout a company are interested in improving profitability, it is clear that they should have an eye toward managing working capital. They need to aim for a “Goldilocks solution”—not too much, not too little, but just right.

Source: K. Richardson, “Companies Fall Behind in Cash Management,” *Wall Street Journal* (June 19, 2007).

What can various company managers do to ensure that working capital is managed efficiently to maximize net income? (See page 214.)

Long-Term Liabilities

Long-term liabilities are obligations that a company expects to pay **after** one year. Liabilities in this category include bonds payable, mortgages payable, long-term notes payable, lease liabilities, and pension liabilities. Many companies report long-term debt maturing after one year as a single amount in the balance sheet and show the details of the debt in notes that accompany the financial statements. Others list the various types of long-term liabilities. In Illustration 4-18, Franklin Corporation reported long-term liabilities of \$11,300. *In your homework, list long-term liabilities in the order of their magnitude.*

Illustration 4-24 shows the long-term liabilities that **The Procter & Gamble Company** reported in its balance sheet.

The Procter & Gamble Company Balance Sheet (partial) (in millions)

Long-term liabilities	
Long-term debt	\$23,375
Deferred income taxes	12,015
Other noncurrent liabilities	5,147
Total long-term liabilities	<u>\$40,537</u>

Illustration 4-24
Long-term liabilities section

Stockholders' (Owners') Equity

The content of the owners' equity section varies with the form of business organization. In a proprietorship, there is one capital account. In a partnership, there is a capital account for each partner. Corporations divide owners' equity into two

accounts—Common Stock (sometimes referred to as Capital Stock) and Retained Earnings. Corporations record stockholders’ investments in the company by debiting an asset account and crediting the Common Stock account. They record in the Retained Earnings account income retained for use in the business. Corporations combine the Common Stock and Retained Earnings accounts and report them on the balance sheet as **stockholders’ equity**. (We’ll learn more about these corporation accounts in later chapters.) Nordstrom, Inc. recently reported its stockholders’ equity section as follows.

Illustration 4-25

SUMMARY OF LEARNING OBJECTIVES

- 1 Prepare a worksheet.** The steps in preparing a worksheet are as follows. (a) Prepare a trial balance on the worksheet. (b) Enter the adjustments in the adjustments columns. (c) Enter adjusted balances in the adjusted trial balance columns. (d) Extend adjusted trial balance amounts to appropriate financial statement columns. (e) Total the statement columns, compute net income (or net loss), and complete the worksheet.
- 2 Explain the process of closing the books.** Closing the books occurs at the end of an accounting period. The process is to journalize and post closing entries and then underline and balance all accounts. In closing the books, companies make separate entries to close revenues and expenses to Income Summary, Income Summary to Retained Earnings, and Dividends to Retained Earnings. Only temporary accounts are closed.
- 3 Describe the content and purpose of a post-closing trial balance.** A post-closing trial balance contains the balances in permanent accounts that are carried forward to the next accounting period. The purpose of this trial balance is to prove the equality of these balances.
- 4 State the required steps in the accounting cycle.** The required steps in the accounting cycle are: (1) analyze business transactions, (2) journalize the transactions, (3) post to ledger accounts, (4) prepare a trial balance, (5) journalize and post adjusting entries, (6) prepare an adjusted trial balance, (7) prepare financial statements, (8) journalize and post closing entries, and (9) prepare a post-closing trial balance.
- 5 Explain the approaches to preparing correcting entries.** One way to determine the correcting entry is to compare the incorrect entry with the correct entry. After comparison, the company makes a correcting entry to correct the accounts. An alternative to a correcting entry is to reverse the incorrect entry and then prepare the correct entry.
- 6 Identify the sections of a classified balance sheet.** A classified balance sheet categorizes assets as current assets; long-term investments; property, plant, and equipment; and intangibles. Liabilities are classified as either current or long-term. There is also a stockholders' (owners') equity section, which varies with the form of business organization.

GLOSSARY

- Classified balance sheet** A balance sheet that contains standard classifications or sections. (p. 179).
- Closing entries** Entries made at the end of an accounting period to transfer the balances of temporary accounts to a permanent stockholders' equity account, Retained Earnings. (p. 170).
- Correcting entries** Entries to correct errors made in recording transactions. (p. 177).
- Current assets** Assets that a company expects to convert to cash or use up within one year. (p. 181).

- Current liabilities** Obligations that a company expects to pay within the coming year. (p. 184).
- Income Summary** A temporary account used in closing revenue and expense accounts. (p. 170).
- Intangible assets** Noncurrent assets that do not have physical substance. (p. 182).
- Liquidity** The ability of a company to pay obligations expected to be due within the next year. (p. 184).

Long-term investments Generally, (1) investments in stocks and bonds of other companies that companies normally hold for many years, and (2) long-term assets, such as land and buildings, not currently being used in operations. (p. 181).

Long-term liabilities Obligations that a company expects to pay after one year. (p. 185).

Operating cycle The average time that it takes to purchase inventory, sell it on account, and then collect cash from customers. (p. 181).

Permanent (real) accounts Accounts that relate to one or more accounting periods. Consist of all balance sheet accounts. Balances are carried forward to next accounting period. (p. 170).

Post-closing trial balance A list of permanent accounts and their balances after a company has journalized and posted closing entries. (p. 174).

Property, plant, and equipment Assets with relatively long useful lives and currently being used in operations. (p. 182).

Reversing entry An entry, made at the beginning of the next accounting period, that is the exact opposite of the adjusting entry made in the previous period. (p. 177).

Stockholders' equity The combination of common stock and retained earnings accounts. Often referred to as the ownership claim of shareholders on total assets. It is to a corporation what owner's equity is to a proprietorship. (p. 186).

Temporary (nominal) accounts Accounts that relate only to a given accounting period. Consist of all income statement accounts and the dividends account. All temporary accounts are closed at end of the accounting period. (p. 170).

Worksheet A multiple-column form that may be used in making adjusting entries and in preparing financial statements. (p. 164).

APPENDIX 4A REVERSING ENTRIES

LEARNING OBJECTIVE 7

Prepare reversing entries.

After preparing the financial statements and closing the books, it is often helpful to reverse some of the adjusting entries before recording the regular transactions of the next period. Such entries are **reversing entries**. Companies make **a reversing entry at the beginning of the next accounting period**. Each reversing entry **is the exact opposite of the adjusting entry made in the previous period**. The recording of reversing entries is an **optional step** in the accounting cycle.

The purpose of reversing entries is to simplify the recording of a subsequent transaction related to an adjusting entry. For example, in Chapter 3 (page 117), the payment of salaries after an adjusting entry resulted in two debits: one to Salaries and Wages Payable and the other to Salaries and Wages Expense. With reversing entries, the company can debit the entire subsequent payment to Salaries and Wages Expense. **The use of reversing entries does not change the amounts reported in the financial statements**. What it does is simplify the recording of subsequent transactions.

Reversing Entries Example

Companies most often use reversing entries to reverse two types of adjusting entries: accrued revenues and accrued expenses. To illustrate the optional use of reversing entries for accrued expenses, we will use the salaries expense transactions for Pioneer Advertising Agency Inc. as illustrated in Chapters 2, 3, and 4. The transaction and adjustment data are as follows.

1. October 26 (initial salary entry): Pioneer pays \$4,000 of salaries and wages earned between October 15 and October 26.
2. October 31 (adjusting entry): Salaries and wages earned between October 29 and October 31 are \$1,200. The company will pay these in the November 9 payroll.
3. November 9 (subsequent salary entry): Salaries and wages paid are \$4,000. Of this amount, \$1,200 applied to accrued salaries and wages payable and \$2,800 was earned between November 1 and November 9.

Illustration 4A-1 shows the entries with and without reversing entries.

Without Reversing Entries (per chapter)				With Reversing Entries (per appendix)			
<u>Initial Salary Entry</u>				<u>Initial Salary Entry</u>			
Oct. 26	Salaries and Wages Expense	4,000	4,000	Oct. 26	(Same entry)		
	Cash						
<u>Adjusting Entry</u>				<u>Adjusting Entry</u>			
Oct. 31	Salaries and Wages Expense	1,200	1,200	Oct. 31	(Same entry)		
	Salaries and Wages Payable						
<u>Closing Entry</u>				<u>Closing Entry</u>			
Oct. 31	Income Summary	5,200	5,200	Oct. 31	(Same entry)		
	Salaries and Wages Expense						
<u>Reversing Entry</u>				<u>Reversing Entry</u>			
Nov. 1	No reversing entry is made.			Nov. 1	Salaries and Wages Payable	1,200	1,200
					Salaries and Wages Expense		
<u>Subsequent Salary Entry</u>				<u>Subsequent Salary Entry</u>			
Nov. 9	Salaries and Wages Payable	1,200		Nov. 9	Salaries and Wages Expense	4,000	4,000
	Salaries and Wages Expense	2,800			Cash		
	Cash		4,000				

Illustration 4A-1
Comparative entries—not
reversing vs. reversing

The first three entries are the same whether or not Pioneer uses reversing entries. The last two entries are different. The November 1 **reversing entry** eliminates the \$1,200 balance in Salaries and Wages Payable created by the October 31 adjusting entry. The reversing entry also creates a \$1,200 credit balance in the Salaries and Wages Expense account. As you know, it is unusual for an expense account to have a credit balance. The balance is correct in this instance, though, because it anticipates that the entire amount of the first salaries and wages payment in the new accounting period will be debited to Salaries and Wages Expense. This debit will eliminate the credit balance. The resulting debit balance in the expense account will equal the salaries and wages expense incurred in the new accounting period (\$2,800 in this example).

If Pioneer makes reversing entries, it can debit all cash payments of expenses to the expense account. This means that on November 9 (and every payday) Pioneer can debit Salaries and Wages Expense for the amount paid, without regard to any accrued salaries and wages payable. Being able to make the **same entry each time** simplifies the recording process: The company can record subsequent transactions as if the related adjusting entry had never been made.

Illustration 4A-2 shows the posting of the entries with reversing entries.

Salaries and Wages Expense				Salaries and Wages Payable			
10/26 Paid	4,000	10/31 Closing	5,200	11/1 Reversing	1,200	10/31 Adjusting	1,200
31 Adjusting	1,200						
	5,200		5,200				
11/9 Paid	4,000	11/1 Reversing	1,200				

Illustration 4A-2
Postings with reversing entries

A company can also use reversing entries for accrued revenue adjusting entries. For Pioneer Advertising Inc., the adjusting entry was Accounts Receivable (Dr.) \$200 and Service Revenue (Cr.) \$200. Thus, the reversing entry on November 1 is:

$$\text{A} = \text{L} + \text{SE}$$

-200 Rev

-200

Cash Flows

no effect

Nov. 1	Service Revenue Accounts Receivable (To reverse October 31 adjusting entry)	200	200
--------	---	-----	-----

When Pioneer collects the accrued service revenue, it debits Cash and credits Service Revenue.

SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 4A

7 Prepare reversing entries. Reversing entries are the opposite of the adjusting entries made in the preceding period. Some companies choose to make reversing entries at the beginning of a new accounting period to

simplify the recording of later transactions related to the adjusting entries. In most cases, only accrued adjusting entries are reversed.

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more components are available for practice in WileyPLUS

Note: All Questions, Exercises, and Problems marked with an asterisk relate to material in the appendix to the chapter.

SELF-TEST QUESTIONS

Answers are on page 214.

- (LO 1) 1. Which of the following statements is *incorrect* concerning the worksheet?
- The worksheet is essentially a working tool of the accountant.
 - The worksheet is distributed to management and other interested parties.
 - The worksheet cannot be used as a basis for posting to ledger accounts.
 - Financial statements can be prepared directly from the worksheet before journalizing and posting the adjusting entries.
- (LO 1) 2. In a worksheet, net income is entered in the following columns:
- income statement (Dr) and balance sheet (Dr).
 - income statement (Cr) and balance sheet (Dr).
 - income statement (Dr) and balance sheet (Cr).
 - income statement (Cr) and balance sheet (Cr).
- (LO 1) 3. In the unadjusted trial balance of its worksheet for the year ended December 31, 2014, Taitum Company reported Equipment of \$120,000. The year-end adjusting entries require an adjustment of \$15,000 for depreciation expense for the equipment. After adjustment, the following adjusted amount should be reported:
- A debit of \$105,000 for Equipment in the balance sheet column.
 - A credit of \$15,000 for Depreciation Expense—Equipment in the income statement column.
 - A debit of \$120,000 for Equipment in the balance sheet column.
 - A debit of \$15,000 for Accumulated Depreciation—Equipment in the balance sheet column.
4. An account that will have a zero balance after closing entries have been journalized and posted is: (LO 2)
- Service Revenue.
 - Supplies.
 - Prepaid Insurance.
 - Accumulated Depreciation—Equipment.
5. When a net loss has occurred, Income Summary is: (LO 2)
- debited and Retained Earnings is credited.
 - credited and Retained Earnings is debited.
 - debited and Dividends is credited.
 - credited and Dividends is debited.
6. The closing process involves separate entries to close (LO 2)
- expenses, (2) dividends, (3) revenues, and (4) income summary. The correct sequencing of the entries is:
 - (4), (3), (2), (1)
 - (1), (2), (3), (4)
 - (3), (1), (4), (2)
 - (3), (2), (1), (4)

- (LO 3) 7. Which types of accounts will appear in the post-closing trial balance?
- Permanent (real) accounts.
 - Temporary (nominal) accounts.
 - Accounts shown in the income statement columns of a worksheet.
 - None of the above.
- (LO 4) 8. All of the following are required steps in the accounting cycle *except*:
- journalizing and posting closing entries.
 - preparing financial statements.
 - journalizing the transactions.
 - preparing a worksheet.
- (LO 4) 9. The proper order of the following steps in the accounting cycle is:
- prepare unadjusted trial balance, journalize transactions, post to ledger accounts, journalize and post adjusting entries.
 - journalize transactions, prepare unadjusted trial balance, post to ledger accounts, journalize and post adjusting entries.
 - journalize transactions, post to ledger accounts, prepare unadjusted trial balance, journalize and post adjusting entries.
 - prepare unadjusted trial balance, journalize and post adjusting entries, journalize transactions, post to ledger accounts.
- (LO 5) 10. When Alexander Company purchased supplies worth \$500, it incorrectly recorded a credit to Supplies for \$5,000 and a debit to Cash for \$5,000. Before correcting this error:
- Cash is overstated and Supplies is overstated.
 - Cash is understated and Supplies is understated.
 - Cash is understated and Supplies is overstated.
 - Cash is overstated and Supplies is understated.
- (LO 5) 11. Cash of \$100 received at the time the service was provided was journalized and posted as a debit to Cash \$100 and a credit to Accounts Receivable \$100. Assuming the incorrect entry is not reversed, the correcting entry is:
- debit Service Revenue \$100 and credit Accounts Receivable \$100.
 - debit Accounts Receivable \$100 and credit Service Revenue \$100.
 - debit Cash \$100 and credit Service Revenue \$100.
 - debit Accounts Receivable \$100 and credit Cash \$100.
12. The correct order of presentation in a classified balance sheet for the following current assets is: (LO 6)
- accounts receivable, cash, prepaid insurance, inventory.
 - cash, inventory, accounts receivable, prepaid insurance.
 - cash, accounts receivable, inventory, prepaid insurance.
 - inventory, cash, accounts receivable, prepaid insurance.
13. A company has purchased a tract of land. It expects to build a production plant on the land in approximately 5 years. During the 5 years before construction, the land will be idle. The land should be reported as: (LO 6)
- property, plant, and equipment.
 - land expense.
 - a long-term investment.
 - an intangible asset.
14. In a classified balance sheet, assets are usually classified using the following categories: (LO 6)
- current assets; long-term assets; property, plant, and equipment; and intangible assets.
 - current assets; long-term investments; property, plant, and equipment; and tangible assets.
 - current assets; long-term investments; tangible assets; and intangible assets.
 - current assets; long-term investments; property, plant, and equipment; and intangible assets.
15. Current assets are listed: (LO 6)
- by expected conversion to cash.
 - by importance.
 - by longevity.
 - alphabetically.
- *16. On December 31, Frank Voris Company correctly made an adjusting entry to recognize \$2,000 of accrued salaries payable. On January 8 of the next year, total salaries of \$3,400 were paid. Assuming the correct reversing entry was made on January 1, the entry on January 8 will result in a credit to Cash \$3,400 and the following debit(s): (LO 7)
- Salaries and Wages Payable \$1,400, and Salaries and Wages Expense \$2,000.
 - Salaries and Wages Payable \$2,000 and Salaries and Wages Expense \$1,400.
 - Salaries and Wages Expense \$3,400.
 - Salaries and Wages Payable \$3,400.

Go to the book's companion website, www.wiley.com/college/weygandt, for additional Self-Test Questions.

QUESTIONS

- "A worksheet is a permanent accounting record and its use is required in the accounting cycle." Do you agree? Explain.
- Explain the purpose of the worksheet.
- What is the relationship, if any, between the amount shown in the adjusted trial balance column for an account and that account's ledger balance?

4. If a company's revenues are \$125,000 and its expenses are \$113,000, in which financial statement columns of the worksheet will the net income of \$12,000 appear? When expenses exceed revenues, in which columns will the difference appear?
5. Why is it necessary to prepare formal financial statements if all of the data are in the statement columns of the worksheet?
6. Identify the account(s) debited and credited in each of the four closing entries, assuming the company has net income for the year.
7. Describe the nature of the Income Summary account and identify the types of summary data that may be posted to this account.
8. What are the content and purpose of a post-closing trial balance?
9. Which of the following accounts would not appear in the post-closing trial balance? Interest Payable; Equipment; Depreciation Expense; Dividends; Unearned Service Revenue; Accumulated Depreciation—Equipment; and Service Revenue.
10. Distinguish between a reversing entry and an adjusting entry. Are reversing entries required?
11. Indicate, in the sequence in which they are made, the three required steps in the accounting cycle that involve journalizing.
12. Identify, in the sequence in which they are prepared, the three trial balances that are often used to report financial information about a company.
13. How do correcting entries differ from adjusting entries?
14. What standard classifications are used in preparing a classified balance sheet?
15. What is meant by the term "operating cycle?"
16. Define current assets. What basis is used for arranging individual items within the current assets section?
17. Distinguish between long-term investments and property, plant, and equipment.
18. (a) What is the term used to describe the owners' equity section of a corporation? (b) Identify the two owners' equity accounts in a corporation and indicate the purpose of each.
19.  Using PepsiCo's annual report, determine its current liabilities at December 31, 2010, and December 26, 2009. Were current liabilities higher or lower than current assets in these two years?
- *20. Triumph Company prepares reversing entries. If the adjusting entry for interest payable is reversed, what type of an account balance, if any, will there be in Interest Payable and Interest Expense after the reversing entry is posted?
- *21. At December 31, accrued salaries payable totaled \$3,500. On January 10, total salaries of \$9,200 are paid. (a) Assume that reversing entries are made at January 1. Give the January 10 entry, and indicate the Salaries and Wages Expense account balance after the entry is posted. (b) Repeat part (a) assuming reversing entries are not made.

BRIEF EXERCISES

List the steps in preparing a worksheet.

(LO 1)

BE4-1 The steps in using a worksheet are presented in random order below. List the steps in the proper order by placing numbers 1–5 in the blank spaces.

- (a) ____ Prepare a trial balance on the worksheet.
- (b) ____ Enter adjusted balances.
- (c) ____ Extend adjusted balances to appropriate statement columns.
- (d) ____ Total the statement columns, compute net income (loss), and complete the worksheet.
- (e) ____ Enter adjustment data.

Prepare partial worksheet.

(LO 1)

BE4-2 The ledger of Keo Company includes the following unadjusted balances: Prepaid Insurance \$3,000, Service Revenue \$61,000, and Salaries and Wages Expense \$25,000. Adjusting entries are required for (a) expired insurance \$1,300; (b) services provided \$1,100, but unbilled and uncollected; and (c) accrued salaries payable \$800. Enter the unadjusted balances and adjustments into a worksheet and complete the worksheet for all accounts. *Note:* You will need to add the following accounts: Accounts Receivable, Salaries and Wages Payable, and Insurance Expense.

Identify worksheet columns for selected accounts.

(LO 1)

BE4-3 The following selected accounts appear in the adjusted trial balance columns of the worksheet for Cesar Company: Accumulated Depreciation; Depreciation Expense; Common Stock; Dividends; Service Revenue; Supplies; and Accounts Payable. Indicate the financial statement column (income statement Dr., balance sheet Cr., etc.) to which each balance should be extended.

Prepare closing entries from ledger balances.

(LO 2)

BE4-4 The ledger of Rowen Company contains the following balances: Retained Earnings \$30,000; Dividends \$2,000; Service Revenue \$47,000; Salaries and Wages Expense \$27,000; and Supplies Expense \$5,000. Prepare the closing entries at December 31.

Post closing entries; underline and balance T-accounts.

(LO 2)

BE4-5 Using the data in BE4-4, enter the balances in T-accounts, post the closing entries, and underline and balance the accounts.

BE4-6 The income statement for Mosquera Golf Club for the month ending July 31 shows Service Revenue \$19,200, Salaries and Wages Expense \$8,800, Maintenance and Repairs Expense \$2,500, and Net Income \$7,900. Prepare the entries to close the revenue and expense accounts. Post the entries to the revenue and expense accounts, and complete the closing process for these accounts using the three-column form of account.

Journalize and post closing entries using the three-column form of account.

(LO 2)

BE4-7 Using the data in BE4-3, identify the accounts that would be included in a post-closing trial balance.

Identify post-closing trial balance accounts.

(LO 3)

BE4-8 The steps in the accounting cycle are listed in random order below. List the steps in proper sequence, assuming no worksheet is prepared, by placing numbers 1–9 in the blank spaces.

List the required steps in the accounting cycle in sequence.

(LO 4)

- (a) ____ Prepare a trial balance.
- (b) ____ Journalize the transactions.
- (c) ____ Journalize and post closing entries.
- (d) ____ Prepare financial statements.
- (e) ____ Journalize and post adjusting entries.
- (f) ____ Post to ledger accounts.
- (g) ____ Prepare a post-closing trial balance.
- (h) ____ Prepare an adjusted trial balance.
- (i) ____ Analyze business transactions.

BE4-9 At Rafeul Company, the following errors were discovered after the transactions had been journalized and posted. Prepare the correcting entries.

Prepare correcting entries.

(LO 5)

1. A collection on account from a customer for \$690 was recorded as a debit to Cash \$690 and a credit to Service Revenue \$690.
2. The purchase of store supplies on account for \$1,580 was recorded as a debit to Supplies \$1,850 and a credit to Accounts Payable \$1,850.

BE4-10 The balance sheet debit column of the worksheet for Kren Company includes the following accounts: Accounts Receivable \$12,500; Prepaid Insurance \$3,600; Cash \$6,700; Supplies \$5,200; and Short-Term Investments \$4,900. Prepare the current assets section of the balance sheet, listing the accounts in proper sequence.

Prepare the current assets section of a balance sheet.

(LO 6)

BE4-11 The following are the major balance sheet classifications:

Classify accounts on balance sheet.

(LO 6)

Current assets (CA)	Current liabilities (CL)
Long-term investments (LTI)	Long-term liabilities (LTL)
Property, plant, and equipment (PPE)	Stockholders' equity (SE)
Intangible assets (IA)	

Match each of the following accounts to its proper balance sheet classification.

____ Accounts payable	____ Income taxes payable
____ Accounts receivable	____ Debt investment (long-term)
____ Accumulated depreciation—buildings	____ Land
____ Buildings	____ Inventory
____ Cash	____ Patents
____ Copyrights	____ Supplies

***BE4-12** At October 31, Prasad Company made an accrued expense adjusting entry of \$1,680 for salaries. Prepare the reversing entry on November 1, and indicate the balances in Salaries and Wages Payable and Salaries and Wages Expense after posting the reversing entry.

Prepare reversing entries.

(LO 7)

> DO IT! REVIEW

DO IT! 4-1 Janet Adams is preparing a worksheet. Explain to Janet how she should extend the following adjusted trial balance accounts to the financial statement columns of the worksheet.

Prepare a worksheet.

(LO 1)

Service Revenue	Accounts Receivable
Notes Payable	Accumulated Depreciation
Common Stock	Utilities Expense

Prepare closing entries.

(LO 2)

DO IT! 4-2 The worksheet for Olympic Company shows the following in the financial statement columns.

Dividends	\$15,000
Common Stock	70,000
Net income	47,000

Prepare the closing entries at December 31 that affect stockholders' equity.

Prepare assets section of the balance sheet.

(LO 6)

DO IT! 4-3 Tyler Pahl recently received the following information related to Pahl Company's December 31, 2014, balance sheet.

Inventory	\$ 4,100	Short-term investments	\$1,200
Cash	3,900	Accumulated depreciation	5,200
Equipment	21,700	Accounts receivable	4,300
Investments in stock (long-term)	6,500		

Prepare the assets section of Pahl Company's classified balance sheet.

Match accounts to balance sheet classifications.

(LO 6)

DO IT! 4-4 The following accounts were taken from the financial statements of Orville Company.

_____ Interest revenue	_____ Common stock
_____ Utilities payable	_____ Accumulated depreciation—equipment
_____ Accounts payable	_____ Equipment
_____ Supplies	_____ Salaries and wages expense
_____ Bonds payable	_____ Investment in real estate
_____ Trademarks	_____ Unearned rent revenue

Match each of the accounts to its proper balance sheet classification, as shown below. If the item would not appear on a balance sheet, use "NA."

Current assets (CA)	Current liabilities (CL)
Long-term investments (LTI)	Long-term liabilities (LTL)
Property, plant, and equipment (PPE)	Stockholders' equity (SE)
Intangible assets (IA)	

The Navigator

EXERCISES

Complete the worksheet.

(LO 1)

E4-1 The trial balance columns of the worksheet for Cajon Company at June 30, 2014, are as follows.

Cajon Company Worksheet For the Month Ended June 30, 2014

Account Titles	Trial Balance	
	Dr.	Cr.
Cash	\$4,020	
Accounts Receivable	2,440	
Supplies	1,900	
Accounts Payable		\$1,120
Unearned Service Revenue		240
Common Stock		5,000
Service Revenue		3,100
Salaries and Wages Expense	860	
Miscellaneous Expense	240	
	<u>\$9,460</u>	<u>\$9,460</u>

Other data:

1. A physical count reveals \$500 of supplies on hand.
2. \$100 of the unearned revenue is still unearned at month-end.
3. Accrued salaries are \$250.

Instructions

Enter the trial balance on a worksheet and complete the worksheet.

E4-2 The adjusted trial balance columns of the worksheet for Albanese Company are as follows.

Complete the worksheet.

(LO 1)

Albanese Company Worksheet (partial) For the Month Ended April 30, 2014						
<u>Account Titles</u>	<u>Adjusted Trial Balance</u>		<u>Income Statement</u>		<u>Balance Sheet</u>	
	<u>Dr.</u>	<u>Cr.</u>	<u>Dr.</u>	<u>Cr.</u>	<u>Dr.</u>	<u>Cr.</u>
Cash	7,442					
Accounts Receivable	7,840					
Prepaid Rent	2,280					
Equipment	23,000					
Accumulated Depreciation—Equip.		4,800				
Notes Payable		5,700				
Accounts Payable		5,672				
Common Stock		22,000				
Retained Earnings		4,000				
Dividends	3,000					
Service Revenue		12,590				
Salaries and Wages Expense	9,840					
Rent Expense	760					
Depreciation Expense	600					
Interest Expense	57					
Interest Payable		57				
Totals	<u>54,819</u>	<u>54,819</u>				

Instructions

Complete the worksheet.

Prepare financial statements from worksheet.

(LO 1, 6)

E4-3 Worksheet data for Albanese Company are presented in E4-2. No common stock was issued during April.

Instructions

Prepare an income statement, a retained earnings statement, and a classified balance sheet.

E4-4 Worksheet data for Albanese Company are presented in E4-2.

Instructions

- (a) Journalize the closing entries at April 30.
- (b) Post the closing entries to Income Summary and Retained Earnings. Use T-accounts.
- (c) Prepare a post-closing trial balance at April 30.

Journalize and post closing entries and prepare a post-closing trial balance.

(LO 2, 3)

E4-5 The adjustments columns of the worksheet for Munoz Company are shown below.

Prepare adjusting entries from a worksheet, and extend balances to worksheet columns.

(LO 1)

<u>Account Titles</u>	<u>Adjustments</u>	
	<u>Debit</u>	<u>Credit</u>
Accounts Receivable	600	
Prepaid Insurance		400
Accumulated Depreciation—Equipment		900
Salaries and Wages Payable		500
Service Revenue		600
Salaries and Wages Expense	500	
Insurance Expense	400	
Depreciation Expense	900	
Totals	<u>2,400</u>	<u>2,400</u>

Instructions

- (a) Prepare the adjusting entries.
 (b) Assuming the adjusted trial balance amount for each account is normal, indicate the financial statement column to which each balance should be extended.

Derive adjusting entries from worksheet data.

(LO 1)

E4-6 Selected worksheet data for Freeman Company are presented below.

Account Titles	Trial Balance		Adjusted Trial Balance	
	Dr.	Cr.	Dr.	Cr.
Accounts Receivable	?		34,000	
Prepaid Insurance	26,000		18,000	
Supplies	7,000		?	
Accumulated Depreciation—Equipment		12,000		?
Salaries and Wages Payable		?		5,000
Service Revenue		88,000		95,000
Insurance Expense			?	
Depreciation Expense			10,000	
Supplies Expense			4,700	
Salaries and Wages Expense	?		49,000	

Instructions

- (a) Fill in the missing amounts.
 (b) Prepare the adjusting entries that were made.

Prepare closing entries, and prepare a post-closing trial balance.

(LO 2, 3)

E4-7 Lanza Company had the following adjusted trial balance.

Lanza Company
Adjusted Trial Balance
For the Month Ended June 30, 2014

Account Titles	Adjusted Trial Balance	
	Debits	Credits
Cash	\$ 3,712	
Accounts Receivable	3,904	
Supplies	480	
Accounts Payable		\$ 1,556
Unearned Service Revenue		160
Common Stock		4,000
Retained Earnings		1,760
Dividends	600	
Service Revenue		4,300
Salaries and Wages Expense	1,344	
Miscellaneous Expense	180	
Supplies Expense	1,900	
Salaries and Wages Payable		344
	<u>\$12,120</u>	<u>\$12,120</u>

Instructions

- (a) Prepare closing entries at June 30, 2014.
 (b) Prepare a post-closing trial balance.

Journalize and post closing entries, and prepare a post-closing trial balance.

(LO 2, 3)

E4-8 Roth Company ended its fiscal year on July 31, 2014. The company's adjusted trial balance as of the end of its fiscal year is as shown on the next page.

Roth Company
Adjusted Trial Balance
July 31, 2014

No.	Account Titles	Debits	Credits
101	Cash	\$ 9,840	
112	Accounts Receivable	8,140	
157	Equipment	15,900	
167	Accumulated Depreciation—Equip.		\$ 5,400
201	Accounts Payable		2,220
208	Unearned Rent Revenue		3,800
311	Common Stock		18,000
320	Retained Earnings		20,260
332	Dividends	12,000	
404	Service Revenue		64,000
429	Rent Revenue		6,500
711	Depreciation Expense	3,700	
720	Salaries and Wages Expense	55,700	
732	Utilities Expense	14,900	
		\$120,180	\$120,180

Instructions

- (a) Prepare the closing entries using page J15.
- (b) Post to Retained Earnings and No. 350 Income Summary accounts. (Use the three-column form.)
- (c) Prepare a post-closing trial balance at July 31.

E4-9 The adjusted trial balance for Roth Company is presented in E4-8.

Prepare financial statements.

Instructions

- (a) Prepare an income statement and a retained earnings statement for the year.
- (b) Prepare a classified balance sheet at July 31.

(LO 6)

E4-10 Patrick Kellogg has prepared the following list of statements about the accounting cycle.

Answer questions related to the accounting cycle.

1. “Journalize the transactions” is the first step in the accounting cycle.
2. Reversing entries are a required step in the accounting cycle.
3. Correcting entries do not have to be part of the accounting cycle.
4. If a worksheet is prepared, some steps of the accounting cycle are incorporated into the worksheet.
5. The accounting cycle begins with the analysis of business transactions and ends with the preparation of a post-closing trial balance.
6. All steps of the accounting cycle occur daily during the accounting period.
7. The step of “post to the ledger accounts” occurs before the step of “journalize the transactions.”
8. Closing entries must be prepared before financial statements can be prepared.

(LO 4)

Instructions

Identify each statement as true or false. If false, indicate how to correct the statement.

E4-11 Selected accounts for Michelle’s Salon are presented below. All June 30 postings are from closing entries.

Prepare closing entries.

Salaries and Wages Expense				Service Revenue				Retained Earnings			
6/10	3,200	6/30	8,800	6/30	18,100	6/15	9,700	6/30	2,200	6/1	12,000
6/28	5,600					6/24	8,400			6/30	5,400
								Bal. 15,200			

Supplies Expense				Rent Expense				Dividends			
6/12	600	6/30	900	6/1	3,000	6/30	3,000	6/13	1,000	6/30	2,200
6/24	300							6/25	1,200		

(LO 2)

Instructions

- Prepare the closing entries that were made.
- Post the closing entries to Income Summary.

Prepare correcting entries.

(LO 5)

E4-12 Joshua Company discovered the following errors made in January 2014.

- A payment of Salaries and Wages Expense of \$700 was debited to Equipment and credited to Cash, both for \$700.
- A collection of \$800 from a client on account was debited to Cash \$300 and credited to Service Revenue \$300.
- The purchase of equipment on account for \$760 was debited to Equipment \$670 and credited to Accounts Payable \$670.

Instructions

- Correct the errors by reversing the incorrect entry and preparing the correct entry.
- Correct the errors without reversing the incorrect entry.

Prepare correcting entries.

(LO 5)

E4-13 Kogan Company has an inexperienced accountant. During the first 2 weeks on the job, the accountant made the following errors in journalizing transactions. All entries were posted as made.

- A payment on account of \$840 to a creditor was debited to Accounts Payable \$480 and credited to Cash \$480.
- The purchase of supplies on account for \$380 was debited to Equipment \$38 and credited to Accounts Payable \$38.
- A \$500 cash dividend was debited to Salaries and Wages Expense \$500 and credited to Cash \$500.

Instructions

Prepare the correcting entries.

Prepare a classified balance sheet.

(LO 6)

E4-14 The adjusted trial balance for Rego Bowling Alley at December 31, 2014, contains the following accounts.

Debits		Credits	
Buildings	\$128,000	Common Stock	\$ 80,000
Accounts Receivable	7,540	Retained Earnings	28,000
Prepaid Insurance	4,680	Accumulated Depreciation—Buildings	42,600
Cash	18,040	Accounts Payable	12,300
Equipment	62,400	Notes Payable	95,000
Land	67,000	Accumulated Depreciation—Equipment	18,720
Insurance Expense	780	Interest Payable	2,600
Depreciation Expense	7,360	Service Revenue	19,180
Interest Expense	2,600		<u>\$298,400</u>
	<u>\$298,400</u>		

Instructions

- Prepare a classified balance sheet; assume that \$15,000 of the note payable will be paid in 2015.
-  Comment on the liquidity of the company.

Classify accounts on balance sheet.

(LO 6)

E4-15 The following are the major balance sheet classifications.

Current assets (CA)	Current liabilities (CL)
Long-term investments (LTI)	Long-term liabilities (LTL)
Property, plant, and equipment (PPE)	Stockholders' equity (SE)
Intangible assets (IA)	

Instructions

Classify each of the following accounts taken from Geraldo Company's balance sheet.

_____ Accounts payable	_____ Accumulated depreciation
_____ Accounts receivable	_____ Buildings
_____ Cash	_____ Land
_____ Common stock	_____ Long-term debt
_____ Patents	_____ Supplies
_____ Salaries and wages payable	_____ Equipment
_____ Inventory	_____ Prepaid expenses
_____ Investments	

E4-16 The following items were taken from the financial statements of Sexton Company. *Prepare a classified balance sheet.*
(All dollars are in thousands.)

Long-term debt	\$ 1,000	Accumulated depreciation	\$ 4,125	(LO 6)
Prepaid insurance	680	Accounts payable	1,444	
Equipment	11,500	Notes payable (due after 2015)	800	
Long-term investments	1,200	Common stock	10,000	
Short-term investments	3,619	Retained earnings	4,750	
Notes payable (due in 2015)	500	Accounts receivable	1,696	
Cash	2,668	Inventory	1,256	

Instructions

Prepare a classified balance sheet in good form as of December 31, 2014.

E4-17 These financial statement items are for Emjay Company at year-end, July 31, 2014. *Prepare financial statements.*

Salaries and wages payable	\$ 2,080	Notes payable (long-term)	\$ 1,800	(LO 1, 6)
Salaries and wages expense	50,700	Cash	14,200	
Utilities expense	22,600	Accounts receivable	9,180	
Equipment	30,000	Accumulated depreciation—equip.	6,000	
Accounts payable	4,100	Dividends	3,000	
Service revenue	62,000	Depreciation expense	2,500	
Rent revenue	8,500	Retained earnings (beginning		
Common stock	25,000	of the year)	22,700	

Instructions

- (a) Prepare an income statement and a retained earnings statement for the year.
- (b) Prepare a classified balance sheet at July 31.

***E4-18** Grogan Company pays salaries of \$9,000 every Monday for the preceding 5-day week (Monday through Friday). Assume December 31 falls on a Thursday, so Grogan's employees have worked 4 days without being paid. *Use reversing entries.*
(LO 7)

Instructions

- (a) Assume the company does not use reversing entries. Prepare the December 31 adjusting entry and the entry on Monday, January 4, when Grogan pays the payroll.
- (b) Assume the company does use reversing entries. Prepare the December 31 adjusting entry, the January 1 reversing entry, and the entry on Monday, January 4, when Grogan pays the payroll.

***E4-19** On December 31, the adjusted trial balance of Select Employment Agency shows the following selected data. *Prepare closing and reversing entries.*
(LO 2, 4, 7)

Accounts Receivable	\$24,500	Service Revenue	\$93,800
Interest Expense	8,300	Interest Payable	1,300

Analysis shows that adjusting entries were made to (1) accrue \$5,000 of service revenue and (2) accrue \$1,300 interest expense.

Instructions

- (a) Prepare the closing entries for the temporary accounts shown above at December 31.
- (b) Prepare the reversing entries on January 1.
- (c) Post the entries in (a) and (b). Underline and balance the accounts. (Use T-accounts.)
- (d) Prepare the entries to record (1) the collection of the accrued revenue on January 10 and (2) the payment of all interest due (\$3,000) on January 15.
- (e) Post the entries in (d) to the temporary accounts.

EXERCISES: SET B AND CHALLENGE EXERCISES

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Exercise Set B and Challenge Exercises.

PROBLEMS: SET A

Prepare worksheet, financial statements, and adjusting and closing entries.

(LO 1, 2, 6)

P4-1A Sherlock Holmes began operations as a private investigator on January 1, 2014. The trial balance columns of the worksheet for Sherlock Holmes, P.I., Inc. at March 31 are as follows.

Sherlock Holmes P.I., Inc.
Worksheet
For the Quarter Ended March 31, 2014

Account Titles	Trial Balance	
	Dr.	Cr.
Cash	11,410	
Accounts Receivable	5,920	
Supplies	1,250	
Prepaid Insurance	2,400	
Equipment	30,000	
Notes Payable		10,000
Accounts Payable		12,350
Common Stock		20,000
Dividends	600	
Service Revenue		14,200
Salaries and Wages Expense	2,240	
Travel Expense	1,300	
Rent Expense	1,200	
Miscellaneous Expense	230	
	56,550	56,550

Other data:

1. Supplies on hand total \$480.
2. Depreciation is \$720 per quarter.
3. Interest accrued on 6-month note payable, issued January 1, \$300.
4. Insurance expires at the rate of \$200 per month.
5. Services provided but unbilled at March 31 total \$1,080.

- (a) Adjusted trial balance
\$58,650
(b) Net income \$7,920
Total assets \$49,970

Complete worksheet; prepare financial statements, closing entries, and post-closing trial balance.

(LO 1, 2, 3, 6)

Instructions

- (a) Enter the trial balance on a worksheet and complete the worksheet.
- (b) Prepare an income statement and a retained earnings statement for the quarter and a classified balance sheet at March 31.
- (c) Journalize the adjusting entries from the adjustments columns of the worksheet.
- (d) Journalize the closing entries from the financial statement columns of the worksheet.

P4-2A The adjusted trial balance columns of the worksheet for Watson Company are as follows.

Watson Company
Worksheet
For the Year Ended December 31, 2014

Account No.	Account Titles	Adjusted Trial Balance	
		Dr.	Cr.
101	Cash	17,800	
112	Accounts Receivable	14,400	
126	Supplies	2,300	
130	Prepaid Insurance	4,400	
151	Equipment	46,000	
152	Accumulated Depreciation—Equipment		18,000
200	Notes Payable		20,000
201	Accounts Payable		8,000
212	Salaries and Wages Payable		2,600
230	Interest Payable		1,000
311	Common Stock		15,000
320	Retained Earnings		9,800
332	Dividends	12,000	
400	Service Revenue		86,200
610	Advertising Expense	10,000	
631	Supplies Expense	3,700	
711	Depreciation Expense	6,000	
722	Insurance Expense	4,000	
726	Salaries and Wages Expense	39,000	
905	Interest Expense	1,000	
	Totals	<u>160,600</u>	<u>160,600</u>

Instructions

- (a) Complete the worksheet by extending the balances to the financial statement columns.
 (b) Prepare an income statement, a retained earnings statement, and a classified balance sheet. (Note: \$5,000 of the notes payable become due in 2015.)
 (c) Prepare the closing entries. Use J14 for the journal page.
 (d) Post the closing entries. Use the three-column form of account. Income Summary is account No. 350.
 (e) Prepare a post-closing trial balance.

- (a) Net income \$22,500
 (b) Current assets \$38,900
 Current liabilities \$16,600
 (e) Post-closing trial balance
 \$84,900

P4-3A The completed financial statement columns of the worksheet for Hubbs Company are shown below and on the next page.

Prepare financial statements, closing entries, and post-closing trial balance.

(LO 1, 2, 3, 6)

Hubbs Company
Worksheet
For the Year Ended December 31, 2014

Account No.	Account Titles	Income Statement		Balance Sheet	
		Dr.	Cr.	Dr.	Cr.
101	Cash			6,200

Instructions

- (a) Net income \$52,600
- (b) Total current assets \$47,500
- (e) Post-closing trial balance \$247,500
- (a) Prepare a complete worksheet.
- (b) Prepare a classified balance sheet. (Note: \$15,000 of the mortgage note payable is due for payment in the next fiscal year.)
- (c) Journalize the adjusting entries using the worksheet as a basis.
- (d) Journalize the closing entries using the worksheet as a basis.
- (e) Prepare a post-closing trial balance.

P4-5A Lynda Hines opened Fresh Step Carpet Cleaners on March 1. During March, the following transactions were completed.

- Mar. 1 Stockholders invested \$14,000 cash in the business in exchange for common stock.
- 1 Purchased used truck for \$8,000, paying \$3,000 cash and the balance on account.
- 3 Purchased cleaning supplies for \$1,200 on account.
- 5 Paid \$1,800 cash on one-year insurance policy effective March 1.
- 14 Billed customers \$4,800 for cleaning services.
- 18 Paid \$1,500 cash on amount owed on truck and \$500 on amount owed on cleaning supplies.
- 20 Paid \$1,800 cash for employee salaries.
- 21 Collected \$1,600 cash from customers billed on March 14.
- 28 Billed customers \$2,500 for cleaning services.
- 31 Paid gasoline for month on truck \$320.
- 31 Declared and paid \$800 cash dividends.

The chart of accounts for Fresh Step Carpet Cleaners contains the following accounts: No. 101 Cash, No. 112 Accounts Receivable, No. 128 Supplies, No. 130 Prepaid Insurance, No. 157 Equipment, No. 158 Accumulated Depreciation—Equipment, No. 201 Accounts Payable, No. 212 Salaries and Wages Payable, No. 311 Common Stock, No. 320 Retained Earnings, No. 332 Dividends, No. 350 Income Summary, No. 400 Service Revenue, No. 633 Gasoline Expense, No. 634 Supplies Expense, No. 711 Depreciation Expense, No. 722 Insurance Expense, and No. 726 Salaries and Wages Expense.

Instructions

- (a) Journalize and post the March transactions. Use page J1 for the journal and the three-column form of account.
- (b) Prepare a trial balance at March 31 on a worksheet.
- (c) Enter the following adjustments on the worksheet and complete the worksheet.
 - (1) Unbilled revenue for services performed at March 31 was \$750.
 - (2) Depreciation on equipment for the month was \$300.
 - (3) One-twelfth of the insurance expired.
 - (4) An inventory count shows \$250 of cleaning supplies on hand at March 31.
 - (5) Accrued but unpaid employee salaries were \$720.
- (d) Prepare the income statement and a retained earnings statement for March and a classified balance sheet at March 31.
- (e) Journalize and post adjusting entries. Use page J2 for the journal.
- (f) Journalize and post closing entries and complete the closing process. Use page J3 for the journal.
- (g) Prepare a post-closing trial balance at March 31.

Complete all steps in accounting cycle.

(LO 1, 2, 3, 4, 6)

(b) Trial balance \$25,500
(c) Adjusted trial balance \$27,270

(d) Net income \$3,810
Total assets \$21,930

(g) Post-closing trial balance \$22,230

P4-6A Sara Yu, CPA, was retained by Info Cable to prepare financial statements for April 2014. Yu accumulated all the ledger balances per Info’s records and found the following.

Analyze errors and prepare correcting entries and trial balance.

(LO 5)

**Info Cable
Trial Balance
April 30, 2014**

	Debit	Credit
Cash	\$ 4,100	
Accounts Receivable	3,200	
Supplies	800	
Equipment	10,600	
Accumulated Depreciation—Equip.		\$ 1,250
Accounts Payable		2,100
Salaries and Wages Payable		700
Unearned Service Revenue		890
Common Stock		10,000
Retained Earnings		2,880
Service Revenue		5,450
Salaries and Wages Expense	3,300	
Advertising Expense	480	
Miscellaneous Expense	290	
Depreciation Expense	500	
	\$23,270	\$23,270

Sara Yu reviewed the records and found the following errors.

1. Cash received from a customer on account was recorded as \$950 instead of \$590.
2. A payment of \$75 for advertising expense was entered as a debit to Miscellaneous Expense \$75 and a credit to Cash \$75.
3. The first salary payment this month was for \$1,850, which included \$700 of salaries payable on March 31. The payment was recorded as a debit to Salaries and Wages Expense \$1,850 and a credit to Cash \$1,850. (No reversing entries were made on April 1.)
4. The purchase on account of a printer costing \$310 was recorded as a debit to Supplies and a credit to Accounts Payable for \$310.
5. A cash payment of repair expense on equipment for \$125 was recorded as a debit to Equipment \$152 and a credit to Cash \$152.

Instructions

- (a) Prepare an analysis of each error showing (1) the incorrect entry, (2) the correct entry, and (3) the correcting entry. Items 4 and 5 occurred on April 30, 2014.
- (b) Prepare a correct trial balance.

Trial balance \$22,570

PROBLEMS: SET B

Prepare worksheet, financial statements, and adjusting and closing entries.

(LO 1, 2, 6)

P4-1B The trial balance columns of the worksheet for Firmament Roofing at March 31, 2014, are as follows.

Firmament Roofing Worksheet For the Month Ended March 31, 2014		
Account Titles	Trial Balance	
	Dr.	Cr.
Cash	2,720	
Accounts Receivable	2,700	
Supplies	1,500	
Equipment	11,000	
Accumulated Depreciation—Equipment		1,250
Accounts Payable		2,500
Unearned Service Revenue		550
Common Stock		10,000
Dividends	1,100	
Service Revenue		6,300
Salaries and Wages Expense	1,300	
Miscellaneous Expense	280	
	20,600	20,600

Other data:

1. A physical count reveals only \$550 of roofing supplies on hand.
2. Depreciation for March is \$250.
3. Unearned revenue amounted to \$290 at March 31.
4. Accrued salaries are \$480.

Instructions

- (a) Enter the trial balance on a worksheet and complete the worksheet.
- (b) Prepare an income statement and a retained earnings statement for the month of March and a classified balance sheet at March 31. Common stock of \$10,000 was issued for cash at the beginning of March.
- (c) Journalize the adjusting entries from the adjustments columns of the worksheet.
- (d) Journalize the closing entries from the financial statement columns of the worksheet.

- (a) Adjusted trial balance \$21,330
 (b) Net income \$3,300
 Total assets \$15,470

Complete worksheet; prepare financial statements, closing entries, and post-closing trial balance.

(LO 1, 2, 3, 6)

P4-2B The adjusted trial balance columns of the worksheet for Eagle Company, owned by Jeff Spiegel, are as follows.

Eagle Company
Worksheet
For the Year Ended December 31, 2014

Account No.	Account Titles	Adjusted Trial Balance	
		Dr.	Cr.
101	Cash	5,300	
112	Accounts Receivable	10,800	
126	Supplies	1,500

 \$36,700

PROBLEMS: SET C

Visit the book's companion website, at www.wiley.com/college/wegandt, and choose the Student Companion site to access Problem Set C.

COMPREHENSIVE PROBLEM: CHAPTERS 2 TO 4

CP4 Mary Coleman opened Mary's Maids Cleaning Service on July 1, 2014. During July, the company completed the following transactions.

- July 1 Stockholders invested \$15,000 cash in the business in exchange for common stock.
- 1 Purchased a used truck for \$10,000, paying \$3,000 cash and the balance on account.

- July 3 Purchased cleaning supplies for \$1,700 on account.
 5 Paid \$1,800 on a one-year insurance policy, effective July 1.
 12 Billed customers \$4,200 for cleaning services.
 18 Paid \$1,000 of amount owed on truck, and \$400 of amount owed on cleaning supplies.
 20 Paid \$1,900 for employee salaries.
 21 Collected \$2,400 from customers billed on July 12.
 25 Billed customers \$2,100 for cleaning services.
 31 Paid gasoline for the month on the truck, \$400.
 31 Declared and paid a \$500 cash dividend.

The chart of accounts for Mary's Maids Cleaning Service contains the following accounts: No. 101 Cash, No. 112 Accounts Receivable, No. 128 Supplies, No. 130 Prepaid Insurance, No. 157 Equipment, No. 158 Accumulated Depreciation—Equipment, No. 201 Accounts Payable, No. 212 Salaries and Wages Payable, No. 311 Common Stock, No. 320 Retained Earnings, No. 332 Dividends, No. 350 Income Summary, No. 400 Service Revenue, No. 633 Gasoline Expense, No. 634 Supplies Expense, No. 711 Depreciation Expense, No. 722 Insurance Expense, and No. 726 Salaries and Wages Expense.

Instructions

- (a) Journalize and post the July transactions. Use page J1 for the journal.
 (b) Prepare a trial balance at July 31 on a worksheet.
 (c) Enter the following adjustments on the worksheet, and complete the worksheet.
 (1) Unbilled fees for services performed at July 31 were \$1,300.
 (2) Depreciation on equipment for the month was \$200.
 (3) One-twelfth of the insurance expired.
 (4) An inventory count shows \$280 of cleaning supplies on hand at July 31.
 (5) Accrued but unpaid employee salaries were \$630.
 (d) Prepare the income statement and retained earnings statement for July, and a classified balance sheet at July 31, 2014.
 (e) Journalize and post the adjusting entries. Use page J2 for the journal.
 (f) Journalize and post the closing entries, and complete the closing process. Use page J3 for the journal.
 (g) Prepare a post-closing trial balance at July 31.
- (b) Trial balance totals \$28,600
- (d) Net income \$2,900
Total assets \$25,330
- (g) Trial balance totals \$25,530

CONTINUING COOKIE CHRONICLE

(Note: This is a continuation of the Cookie Chronicle from Chapters 1–3.)

CCC4 Natalie had a very busy December. At the end of the month, after journalizing and posting the December transactions and adjusting entries, Natalie prepared the following adjusted trial balance.

Cookie Creations Adjusted Trial Balance December 31, 2014

	<u>Debit</u>	<u>Credit</u>
Cash	\$1,180	
Accounts Receivable	875	
Supplies	350	
Prepaid Insurance	1,210	
Equipment	1,200	
Accumulated Depreciation—Equipment		\$ 40
Accounts Payable		75
Salaries and Wages Payable		56
Unearned Service Revenue		300
Notes Payable		2,000
Interest Payable		15

Common Stock		800	
Dividends	500		
Service Revenue		4,515	
Salaries and Wages Expense	1,006		
Utilities Expense	125		
Advertising Expense	165		
Supplies Expense	1,025		
Depreciation Expense	40		
Insurance Expense	110		
Interest Expense	15		
	<u>\$7,801</u>	<u>\$7,801</u>	

Instructions

Using the information in the adjusted trial balance, do the following.

- Prepare an income statement and a retained earnings statement for the 2 months ended December 31, 2014, and a classified balance sheet at December 31, 2014. The note payable has a stated interest rate of 6%, and the principal and interest are due on November 16, 2016.
- Natalie has decided that her year-end will be December 31, 2014. Prepare closing entries as of December 31, 2014.
- Prepare a post-closing trial balance.

Broadening Your PERSPECTIVE

Financial Reporting and Analysis

Financial Reporting Problem: PepsiCo, Inc.

BYP4-1 The financial statements of **PepsiCo, Inc.** are presented in Appendix A at the end of this textbook.

**Instructions**

Answer the questions below using the Consolidated Balance Sheet and the Notes to Consolidated Financial Statements section.

- What were PepsiCo's total current assets at December 25, 2010, and December 26, 2009?
- Are assets that PepsiCo included under current assets listed in proper order? Explain.
- How are PepsiCo's assets classified?
- What are "cash equivalents"?
- What were PepsiCo's total current liabilities at December 25, 2010, and December 26, 2009?

Comparative Analysis Problem: PepsiCo, Inc. vs. The Coca-Cola Company

BYP4-2 PepsiCo's financial statements are presented in Appendix A. Financial statements for **The Coca-Cola Company** are presented in Appendix B.

**Instructions**

- Based on the information contained in these financial statements, determine each of the following for PepsiCo at December 25, 2010, and for Coca-Cola at December 31, 2010.
 - Total current assets.
 - Net amount of property, plant, and equipment (land, buildings, and equipment).
 - Total current liabilities.
 - Total equity.
- What conclusions concerning the companies' respective financial positions can be drawn?

Real-World Focus

BYP4-3 Numerous companies have established home pages on the Internet, e.g., **Capt'n Eli Root Beer Company** (www.captneli.com/rootbeer.php) and **Kodak** (www.kodak.com).

Instructions

Examine the home pages of any two companies and answer the following questions.

- What type of information is available?
- Is any accounting-related information presented?
- Would you describe the home page as informative, promotional, or both? Why?

Critical Thinking

Decision-Making Across the Organization

BYP4-4 Everclean Janitorial Service was started 2 years ago by Lauren Baird. Because business has been exceptionally good, Lauren decided on July 1, 2014, to expand operations by acquiring an additional truck and hiring two more assistants. To finance the expansion, Lauren obtained on July 1, 2014, a \$25,000, 10% bank loan, payable \$10,000 on July 1, 2015, and the balance on July 1, 2016. The terms of the loan require the borrower to have \$10,000 more current assets than current liabilities at December 31, 2014. If these terms are not met, the bank loan will be refinanced at 15% interest. At December 31, 2014, the accountant for Everclean Janitorial Service prepared the balance sheet shown below.

Lauren presented the balance sheet to the bank's loan officer on January 2, 2015, confident that the company had met the terms of the loan. The loan officer was not impressed. She said, "We need financial statements audited by a CPA." A CPA was hired and immediately realized that the balance sheet had been prepared from a trial balance and not from an adjusted trial balance. The adjustment data at the balance sheet date consisted of the following.

- Unbilled janitorial services performed were \$3,900.
- Janitorial supplies on hand were \$2,100.
- Prepaid insurance was a 3-year policy dated January 1, 2014.
- December expenses incurred but unpaid at December 31, \$620.
- Interest on the bank loan was not recorded.
- The amounts for property, plant, and equipment presented in the balance sheet were reported net of accumulated depreciation (cost less accumulated depreciation). These amounts were \$4,000 for cleaning equipment and \$5,000 for delivery trucks as of January 1, 2014. Depreciation for 2014 was \$2,000 for cleaning equipment and \$5,000 for delivery trucks.

Everclean Janitorial Service Balance Sheet December 31, 2014

<u>Assets</u>		<u>Liabilities and Stockholders' Equity</u>	
Current assets		Current liabilities	
Cash	\$ 5,500	Notes payable	\$10,000
Accounts receivable	9,000	Accounts payable	1,500
Janitorial supplies	5,200	Total current liabilities	11,500
Prepaid insurance	4,800	Long-term liability	
Total current assets	24,500	Notes payable	15,000
Property, plant, and equipment		Total liabilities	26,500
Cleaning equipment (net)	22,000	Stockholders' equity	
Delivery trucks (net)	34,000	Common stock	30,000
Total property, plant, and equipment	56,000	Retained earnings	24,000
Total assets	\$80,500	Total liabilities and stockholders' equity	\$80,500

Instructions

With the class divided into groups, answer the following.

- Prepare a correct balance sheet.
- Were the terms of the bank loan met? Explain.

Communication Activity

BYP4-5 The accounting cycle is important in understanding the accounting process.

Instructions

Write a memo to your instructor that lists the steps of the accounting cycle in the order they should be completed. End with a paragraph that explains the optional steps in the cycle.

Ethics Case

BYP4-6 As the controller of Take No Prisoners Perfume Company, you discover a misstatement that overstated net income in the prior year's financial statements. The misleading financial statements appear in the company's annual report which was issued to banks and other creditors less than a month ago. After much thought about the consequences of telling the president, Phil McNally, about this misstatement, you gather your courage to inform him. Phil says, "Hey! What they don't know won't hurt them. But, just so we set the record straight, we'll adjust this year's financial statements for last year's misstatement. We can absorb that misstatement better in this year than in last year anyway! Just don't make such a mistake again."

Instructions

- Who are the stakeholders in this situation?
- What are the ethical issues in this situation?
- What would you do as a controller in this situation?

All About You

BYP4-7 Companies prepare balance sheets in order to know their financial position at a specific point in time. This enables them to make a comparison to their position at previous points in time, and gives them a basis for planning for the future. In order to evaluate your financial position, you need to prepare a personal balance sheet. Assume that you have compiled the following information regarding your finances. (*Hint:* Some of the items might not be used in your personal balance sheet.)

Amount owed on student loan balance (long-term)	\$ 5,000
Balance in checking account	1,200
Certificate of deposit (6-month)	3,000
Annual earnings from part-time job	12,800
Automobile	7,000
Balance on automobile loan (current portion)	1,500
Balance on automobile loan (long-term portion)	4,000
Home computer	1,100
Amount owed to you by younger brother	300
Balance in money market account	1,800
Annual tuition	6,400
Video and stereo equipment	1,250
Balance owed on credit card (current portion)	190
Balance owed on credit card (long-term portion)	1,850

Instructions

Prepare a personal balance sheet using the format you have learned for a classified balance sheet for a company. For the equity account, use Owner's Equity.

FASB Codification Activity

BYP4-8 If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following.

Instructions

- Access the glossary ("Master Glossary") at the FASB Codification website to answer the following.
 - What is the definition of current assets?
 - What is the definition of current liabilities?
- A company wants to offset its accounts payable against its cash account and show a cash amount net of accounts payable on its balance sheet. Identify the criteria (found in the FASB Codification) under which a company has the right of set off. Does the company have the right to offset accounts payable against the cash account?

Answers to Chapter Questions

Answers to Insight and Accounting Across the Organization Questions

p. 174 Cisco Performs the Virtual Close Q: Who else benefits from a shorter closing process? **A:** Investors benefit from a shorter closing process. The shorter the closing, the sooner the company can report its financial results. This means that the financial information is more timely and therefore more relevant to investors.

p. 179 Yale Express Loses Some Transportation Bills Q: What might Yale Express's vice president have done to produce more accurate financial statements without waiting months for Republic's outstanding transportation bills? **A:** Yale's vice president could have engaged his accountants and auditors to prepare an adjusting entry based on an estimate of the outstanding transportation bills. (The estimate could have been made using past experience and the current volume of business.)

p. 183 Regaining Goodwill Q: Name two industries today which are probably rated low on the reputational characteristics of "being trusted" and "having high ethical standards." **A:** Two possible industries are financial companies (Goldman Sachs or AIG) or oil companies (BP).

p. 185 Can a Company Be Too Liquid? Q: What can various company managers do to ensure that working capital is managed efficiently to maximize net income? **A:** Marketing and sales managers must understand that by extending generous repayment terms, they are expanding the company's receivables balance and slowing the company's cash flow. Production managers must strive to minimize the amount of excess inventory on hand. Managers must coordinate efforts to speed up the collection of receivables, while also ensuring that the company pays its payables on time but never too early.

A Look at IFRS

The classified balance sheet, although generally required internationally, contains certain variations in format when reporting under IFRS.

Key Points

- The procedures of the closing process are applicable to all companies, whether they are using IFRS or GAAP.
- IFRS recommends but does not require the use of the title "statement of financial position" rather than balance sheet.
- The format of statement of financial position information is often presented differently under IFRS. Although no specific format is required, most companies that follow IFRS present statement of financial position information in this order:
 - ◆ Noncurrent assets
 - ◆ Current assets
 - ◆ Equity
 - ◆ Noncurrent liabilities
 - ◆ Current liabilities
- IFRS requires a classified statement of financial position except in very limited situations. IFRS follows the same guidelines as this textbook for distinguishing between current and noncurrent assets and liabilities.

- Under IFRS, current assets are usually listed in the reverse order of liquidity. For example, under GAAP cash is listed first, but under IFRS it is listed last.
- Some companies report the subtotal *net assets*, which equals total assets minus total liabilities. See, for example, the statement of financial position of **Zetar plc** in Appendix C.
- IFRS has many differences in terminology that you will notice in this textbook. For example, in the sample statement of financial position illustrated below, notice in the investment category that stock is called shares.

Franklin Corporation			
Statement of Financial Position			
October 31, 2014			
<u>Assets</u>			
Intangible assets			
Patents			\$ 3,100
Property, plant, and equipment			
Land		\$10,000	
Equipment	\$24,000		
Less: Accumulated depreciation	<u>5,000</u>	<u>19,000</u>	29,000
Long-term investments			
Investment in shares of Walters Corp.		5,200	
Investment in real estate		<u>2,000</u>	7,200
Current assets			
Prepaid insurance		400	
Supplies		2,100	
Inventories		3,000	
Notes receivable		1,000	
Accounts receivable		7,000	
Short-term investments		2,000	
Cash		<u>6,600</u>	<u>22,100</u>
Total assets			<u><u>\$61,400</u></u>
<u>Equity and Liabilities</u>			
Equity			
Share capital		\$20,000	
Retained earnings		<u>14,050</u>	\$34,050
Non-current liabilities			
Mortgage payable		10,000	
Notes payable		<u>1,300</u>	11,300
Current liabilities			
Notes payable		11,000	
Accounts payable		2,100	
Salaries payable		1,600	
Unearned service revenue		900	
Interest payable		<u>450</u>	<u>16,050</u>
Total equity and liabilities			<u><u>\$61,400</u></u>

- Both IFRS and GAAP require disclosures about (1) accounting policies followed, (2) judgments that management has made in the process of applying the entity's accounting policies, and (3) the key assumptions and estimation uncertainty that could result in a material adjustment to the carrying amounts of assets and liabilities within the next financial year.
- Comparative prior-period information must be presented and financial statements must be prepared annually.

- Both GAAP and IFRS are increasing the use of fair value to report assets. However, at this point IFRS has adopted it more broadly. As examples, under IFRS companies can apply fair value to property, plant, and equipment; natural resources; and in some cases intangible assets.

Looking to the Future

The IASB and the FASB are working on a project to converge their standards related to financial statement presentation. A key feature of the proposed framework is that each of the statements will be organized in the same format, to separate an entity's financing activities from its operating and investing activities and, further, to separate financing activities into transactions with owners and creditors. Thus, the same classifications used in the statement of financial position would also be used in the income statement and the statement of cash flows. The project has three phases. You can follow the joint financial presentation project at the following link: http://www.fasb.org/project/financial_statement_presentation.shtml.

The IASB and the FASB face a difficult task in attempting to update, modify, and complete a converged conceptual framework. For example, how do companies choose between information that is highly relevant but difficult to verify versus information that is less relevant but easy to verify? How do companies define control when developing a definition of an asset? Is a liability the future sacrifice itself or the obligation to make the sacrifice? Should a single measurement method, such as historical cost or fair value, be used, or does it depend on whether it is an asset or liability that is being measured? It appears that the new document will be a significant improvement over its predecessors and will lead to principles-based standards, which will help financial statement users make better decisions.

IFRS Practice

IFRS Self-Test Questions

1. Which of the following statements is *false*?
 - (a) Assets equals liabilities plus equity.
 - (b) Under IFRS, companies sometimes net liabilities against assets to report "net assets."
 - (c) The FASB and IASB are working on a joint conceptual framework project.
 - (d) Under IFRS, the statement of financial position is usually referred to as the statement of assets and equity.
2. A company has purchased a tract of land and expects to build a production plant on the land in approximately 5 years. During the 5 years before construction, the land will be idle. Under IFRS, the land should be reported as:
 - (a) land expense.
 - (b) property, plant, and equipment.
 - (c) an intangible asset.
 - (d) a long-term investment.
3. Current assets under IFRS are listed generally:
 - (a) by importance.
 - (b) in the reverse order of their expected conversion to cash.
 - (c) by longevity.
 - (d) alphabetically.
4. Companies that use IFRS:
 - (a) may report all their assets on the statement of financial position at fair value.
 - (b) may offset assets against liabilities and show net assets and net liabilities on their statement of financial positions, rather than the underlying detailed line items.
 - (c) may report noncurrent assets before current assets on the statement of financial position.
 - (d) do not have any guidelines as to what should be reported on the statement of financial position.
5. Companies that follow IFRS to prepare a statement of financial position generally use the following order of classification:
 - (a) current assets, current liabilities, noncurrent assets, noncurrent liabilities, equity.
 - (b) noncurrent assets, noncurrent liabilities, current assets, current liabilities, equity.
 - (c) noncurrent assets, current assets, equity, noncurrent liabilities, current liabilities.
 - (d) equity, noncurrent assets, current assets, noncurrent liabilities, current liabilities.

IFRS Exercises

IFRS4-1 In what ways does the format of a statement of financial of position under IFRS often differ from a balance sheet presented under GAAP?

IFRS4-2 What term is commonly used under IFRS in reference to the balance sheet?

IFRS4-3 The statement of financial position for Diaz Company includes the following accounts (in pounds): Accounts Receivable £12,500; Prepaid Insurance £3,600; Cash £15,400; Supplies £5,200; and Short-Term Investments £6,700. Prepare the current assets section of the statement of financial position, listing the accounts in proper sequence.

IFRS4-4 Zurich Company recently received the following information (in Swiss francs) related to the company's December 31, 2014, statement of financial position.

Inventories	CHF 2,700	Short-term investments	CHF 120
Cash	13,100	Accumulated depreciation—	
Equipment	21,700	equipment	5,700
Investments in shares		Accounts receivable	4,300
(long-term)	6,500		

Prepare the assets section of the company's classified statement of financial position.

IFRS4-5 The following information is available for Rego Bowling Alley at December 31, 2014.

Buildings	\$128,000	Share Capital	\$90,000
Accounts Receivable	7,540	Retained Earnings	22,000
Prepaid Insurance	4,680	Accumulated Depreciation—Buildings	42,600
Cash	18,040	Accounts Payable	12,300
Equipment	62,400	Notes Payable	95,000
Land	67,000	Accumulated Depreciation—Equipment	18,720
Insurance Expense	780	Interest Payable	2,600
Depreciation Expense	7,360	Service Revenues	15,180
Interest Expense	2,600		

Prepare a classified statement of financial position; assume that \$13,900 of the notes payable will be paid in 2015.

IFRS4-6 Brian Hopkins is interested in comparing the liquidity and solvency of a U.S. software company with a Chinese competitor. Is this possible if the two companies report using different currencies?

International Comparative Analysis Problem: PepsiCo vs. Zetar plc

IFRS4-7 The financial statements of **Zetar plc** are presented in Appendix C. The company's complete annual report, including the notes to its financial statements, is available at www.zetarplc.com.

Instructions

Identify five differences in the format of the statement of financial position used by Zetar plc compared to a company, such as **PepsiCo**, that follows GAAP. (PepsiCo's financial statements are available in Appendix A.)

Accounting for Merchandising Operations

Chapter 5

Feature Story

Who Doesn't Shop at Wal-Mart?

In his book *The End of Work*, Jeremy Rifkin notes that until the 20th century the word *consumption* evoked negative images. To be labeled a “consumer” was an insult. (In fact, one of the deadliest diseases in history, tuberculosis, was often referred to as “consumption.”) Twentieth-century merchants realized, however, that in order to prosper, they had to convince people of the need for things not previously needed. For example, **General Motors** made annual changes in its cars so that people would be discontented with the cars they already owned. Thus began consumerism.

Today, consumption describes the U.S. lifestyle in a nutshell. We consume twice as much today per person as we did at the end of World War II. The amount of U.S. retail space per person is vastly greater than that of any other country. It appears that we live to shop.

The first great retail giant was **Sears Roebuck**. It started as a catalog company enabling people in rural areas to buy things by mail. For decades, it was the uncontested merchandising leader.

Today, **Wal-Mart Stores, Inc.** is the undisputed champion provider of basic (and perhaps not-so-basic) human needs. Wal-Mart opened its first store in 1962, and it now has

Learning Objectives

After studying this chapter, you should be able to:

- 1** Identify the differences between service and merchandising companies.
- 2** Explain the recording of purchases under a perpetual inventory system.
- 3** Explain the recording of sales revenues under a perpetual inventory system.
- 4** Explain the steps in the accounting cycle for a merchandising company.
- 5** Distinguish between a multiple-step and a single-step income statement.

The Navigator

more than 8,000 stores, serving more than 100 million customers every week. A key cause of Wal-Mart's incredible growth is its amazing system of inventory control and distribution.

Wal-Mart has a management information system that employs six satellite channels, from which company computers receive 8.4 million updates every minute on what items customers buy and the relationship among items sold to each person.

Measured by sales revenues, Wal-Mart is the largest company in the world. In six years, it went from selling almost no groceries to being America's largest grocery retailer.

It would appear that things have never looked better at Wal-Mart. On the other hand, a *Wall Street Journal* article

entitled "How to Sell More to Those Who Think It's Cool to Be Frugal" suggests that consumerism as a way of life might be dying. Don't bet your high-definition 3D TV on it though.

Preview of Chapter 5

Merchandising is one of the largest and most influential industries in the United States. It is likely that a number of you will work for a merchandiser. Therefore, understanding the financial statements of merchandising companies is important. In this chapter, you will learn the basics about reporting merchandising transactions. In addition, you will learn how to prepare and analyze a commonly used form of the income statement—the multiple-step income statement. The content and organization of the chapter are as follows.

ACCOUNTING FOR MERCHANDISING OPERATIONS				
Merchandising Operations	Recording Purchases of Merchandise	Recording Sales of Merchandise	Completing the Accounting Cycle	Forms of Financial Statements
<ul style="list-style-type: none"> • Operating cycles • Flow of costs—perpetual and periodic inventory systems 	<ul style="list-style-type: none"> • Freight costs • Purchase returns and allowances • Purchase discounts • Summary of purchasing transactions 	<ul style="list-style-type: none"> • Sales returns and allowances • Sales discounts 	<ul style="list-style-type: none"> • Adjusting entries • Closing entries • Summary of merchandising entries 	<ul style="list-style-type: none"> • Multiple-step income statement • Single-step income statement • Classified balance sheet

Merchandising Operations

LEARNING OBJECTIVE 1

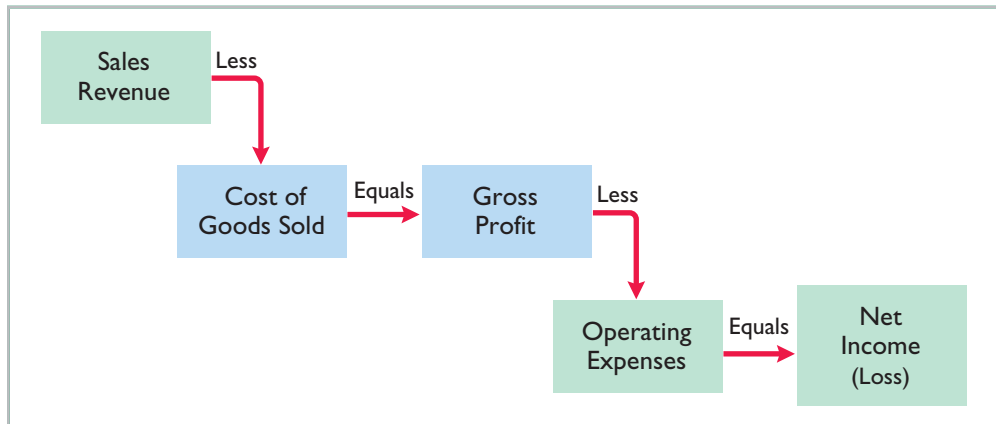

Identify the differences between service and merchandising companies.

Wal-Mart, Kmart, and Target are called merchandising companies because they buy and sell merchandise rather than perform services as their primary source of revenue. Merchandising companies that purchase and sell directly to consumers are called **retailers**. Merchandising companies that sell to retailers are known as **wholesalers**. For example, retailer Walgreens might buy goods from wholesaler McKesson; retailer Office Depot might buy office supplies from wholesaler United Stationers. The primary source of revenues for merchandising companies is the sale of merchandise, often referred to simply as **sales revenue** or **sales**. A merchandising company has two categories of expenses: cost of goods sold and operating expenses.

Cost of goods sold is the total cost of merchandise sold during the period. This expense is directly related to the revenue recognized from the sale of goods. Illustration 5-1 shows the income measurement process for a merchandising company. The items in the two blue boxes are unique to a merchandising company; they are not used by a service company.

Illustration 5-1

Income measurement process for a merchandising company

Operating Cycles

The operating cycle of a merchandising company ordinarily is longer than that of a service company. The purchase of merchandise inventory and its eventual sale lengthen the cycle. Illustration 5-2 contrasts the operating cycles of service and merchandising companies. Note that the added asset account for a merchandising company is the Inventory account. Companies report inventory as a current asset on the balance sheet.

Flow of Costs

The flow of costs for a merchandising company is as follows: Beginning inventory plus the cost of goods purchased is the cost of goods available for sale. As goods are sold, they are assigned to cost of goods sold. Those goods that are not sold by the end of the accounting period represent ending inventory. Illustration 5-3 describes these relationships. Companies use one of two systems to account for inventory: a **perpetual inventory system** or a **periodic inventory system**.

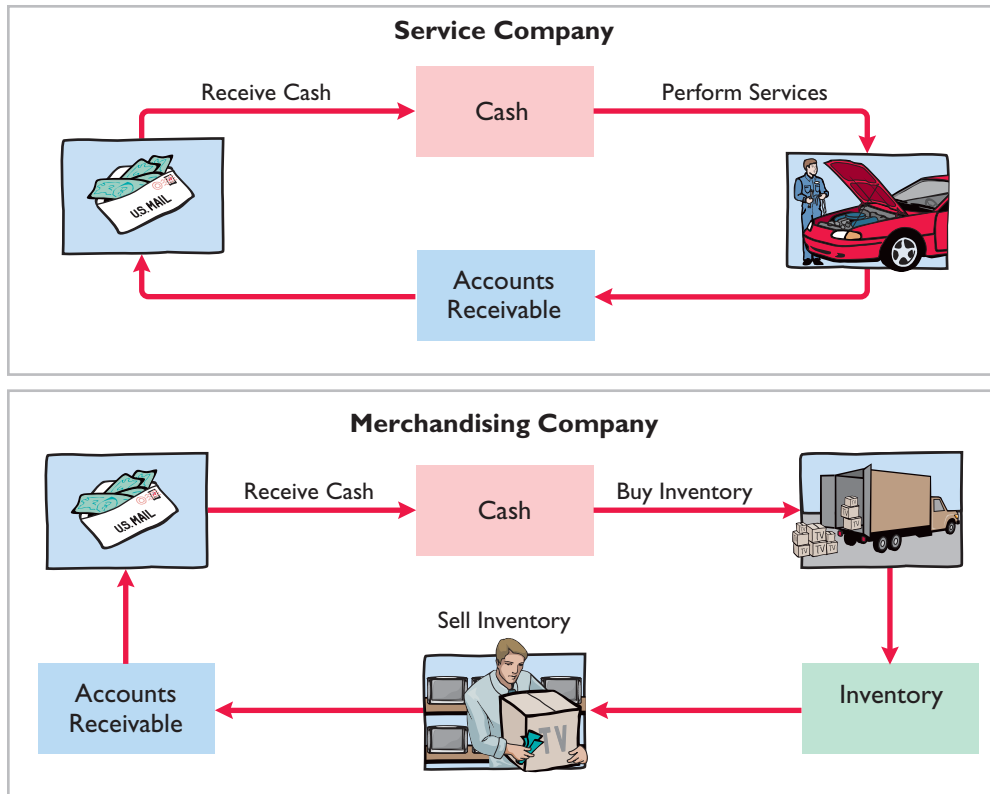

Illustration 5-2
Operating cycles for a service company and a merchandising company

PERPETUAL SYSTEM

In a **perpetual inventory system**, companies keep detailed records of the cost of each inventory purchase and sale. These records continuously—perpetually—show the inventory that should be on hand for every item. For example, a **Ford** dealership has separate inventory records for each automobile, truck, and van on its lot and showroom floor. Similarly, a **Kroger** grocery store uses bar codes and optical scanners to keep a daily running record of every box of cereal and every jar of jelly that it buys and sells. Under a perpetual inventory system, a company determines the cost of goods sold **each time a sale occurs**.

Helpful Hint

For control purposes, companies take a physical inventory count under the perpetual system, even though it is not needed to determine cost of goods sold.

PERIODIC SYSTEM

In a **periodic inventory system**, companies do not keep detailed inventory records of the goods on hand throughout the period. Instead, they determine the cost of goods sold **only at the end of the accounting period**—that is, periodically. At that point, the company takes a physical inventory count to determine the cost of goods on hand.

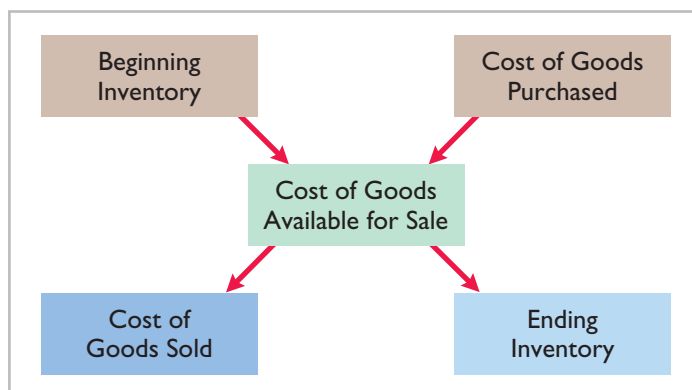

Illustration 5-3
Flow of costs

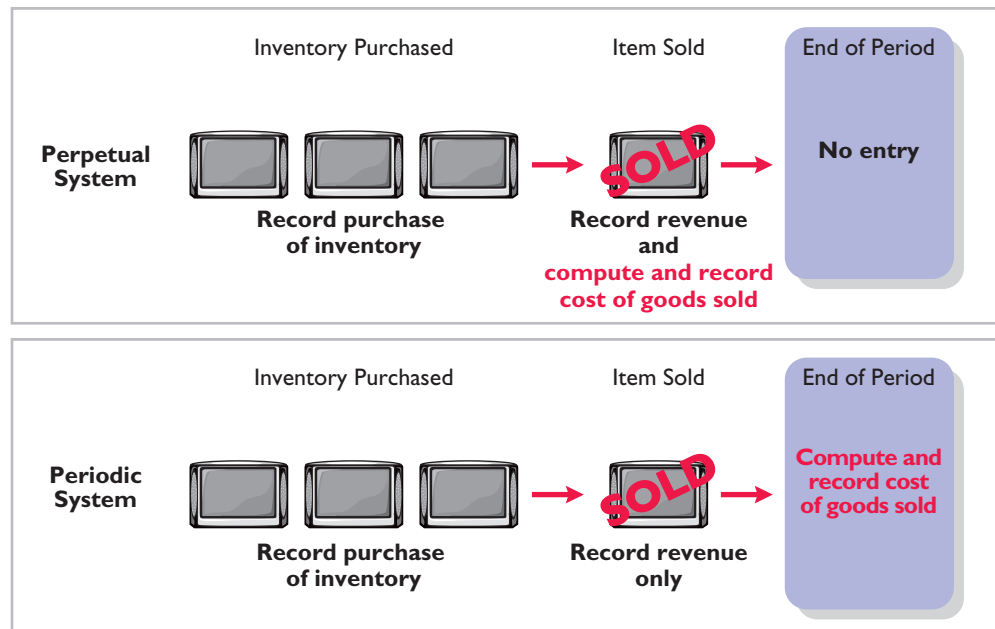

To determine the cost of goods sold under a periodic inventory system, the following steps are necessary:

1. Determine the cost of goods on hand at the beginning of the accounting period.
2. Add to it the cost of goods purchased.
3. Subtract the cost of goods on hand at the end of the accounting period.

Illustration 5-4 graphically compares the sequence of activities and the timing of the cost of goods sold computation under the two inventory systems.

Illustration 5-4

Comparing perpetual and periodic inventory systems

ADDITIONAL CONSIDERATIONS

Companies that sell merchandise with high unit values, such as automobiles, furniture, and major home appliances, have traditionally used perpetual systems. The growing use of computers and electronic scanners has enabled many more companies to install perpetual inventory systems. The perpetual inventory system is so named because the accounting records continuously—perpetually—show the quantity and cost of the inventory that should be on hand at any time.

A perpetual inventory system provides better control over inventories than a periodic system. Since the inventory records show the quantities that should be on hand, the company can count the goods at any time to see whether the amount of goods actually on hand agrees with the inventory records. If shortages are uncovered, the company can investigate immediately. Although a perpetual inventory system requires additional clerical work and additional cost to maintain the subsidiary records, a computerized system can minimize this cost. As noted in the Feature Story, much of Wal-Mart's success is attributed to its sophisticated inventory system.

Some businesses find it either unnecessary or uneconomical to invest in a computerized perpetual inventory system. Many small merchandising businesses, in particular, find that a perpetual inventory system costs more than it is worth. Managers of these businesses can control their merchandise and manage day-to-day operations using a periodic inventory system.

Because the perpetual inventory system is growing in popularity and use, we illustrate it in this chapter. Appendix 5A describes the journal entries for the periodic system.

INVESTOR INSIGHT

Morrow Snowboards Improves Its Stock Appeal

Investors are often eager to invest in a company that has a hot new product. However, when snowboard-maker **Morrow Snowboards, Inc.**, issued shares of stock to the public for the first time, some investors expressed reluctance to invest in Morrow because of a number of accounting control problems. To reduce investor concerns, Morrow implemented a perpetual inventory system to improve its control over inventory. In addition, it stated that it would perform a physical inventory count every quarter until it felt that the perpetual inventory system was reliable.

If a perpetual system keeps track of inventory on a daily basis, why do companies ever need to do a physical count? (See page 267.)

Recording Purchases of Merchandise

Companies purchase inventory using cash or credit (on account). They normally record purchases when they receive the goods from the seller. Business documents provide written evidence of the transaction. A canceled check or a cash register receipt, for example, indicates the items purchased and amounts paid for each cash purchase. Companies record cash purchases by an increase in Inventory and a decrease in Cash.

A **purchase invoice** should support each credit purchase. This invoice indicates the total purchase price and other relevant information. However, the purchaser does not prepare a separate purchase invoice. Instead, the purchaser uses as a purchase invoice a copy of the sales invoice sent by the seller. In Illustration 5-5 (page 224), for example, Sauk Stereo (the buyer) uses as a purchase invoice the sales invoice prepared by PW Audio Supply, Inc. (the seller).

Sauk Stereo makes the following journal entry to record its purchase from PW Audio Supply. The entry increases (debits) Inventory and increases (credits) Accounts Payable.

May 4	Inventory	3,800			
	Accounts Payable			3,800	
	(To record goods purchased on account from PW Audio Supply)				

Under the perpetual inventory system, companies record purchases of merchandise for sale in the Inventory account. Thus, **Wal-Mart** would increase (debit) Inventory for clothing, sporting goods, and anything else purchased for resale to customers.

Not all purchases are debited to Inventory, however. Companies record purchases of assets acquired for use and not for resale, such as supplies, equipment, and similar items, as increases to specific asset accounts rather than to Inventory. For example, to record the purchase of materials used to make shelf signs or for cash register receipt paper, Wal-Mart would increase Supplies.

Freight Costs

The sales agreement should indicate who—the seller or the buyer—is to pay for transporting the goods to the buyer’s place of business. When a common carrier

LEARNING OBJECTIVE 2

Explain the recording of purchases under a perpetual inventory system.

IMPORTANT: ALL RETURNS MUST BE MADE WITHIN 10 DAYS				TOTAL	\$3,800

such as a railroad, trucking company, or airline transports the goods, the carrier prepares a freight bill in accord with the sales agreement.

Freight terms are expressed as either FOB shipping point or FOB destination. The letters FOB mean **free on board**. Thus, **FOB shipping point** means that the seller places the goods free on board the carrier, and the buyer pays the freight costs. Conversely, **FOB destination** means that the seller places the goods free on board to the buyer's place of business, and the seller pays the freight. For example, the sales invoice in Illustration 5-5 indicates FOB shipping point. Thus, the buyer (Sauk Stereo) pays the freight charges. Illustration 5-6 illustrates these shipping terms.

Illustration 5-6
Shipping terms

FREIGHT COSTS INCURRED BY THE BUYER

When the buyer incurs the transportation costs, these costs are considered part of the cost of purchasing inventory. Therefore, the buyer debits (increases) the account Inventory. For example, if upon delivery of the goods on May 6, Sauk Stereo (the buyer) pays Acme Freight Company \$150 for freight charges, the entry on Sauk Stereo's books is:

May 6	Inventory	150	
	Cash		150
	(To record payment of freight on goods purchased)		

Thus, any freight costs incurred by the buyer are part of the cost of merchandise purchased. The reason: Inventory cost should include all costs to acquire the inventory, including freight necessary to deliver the goods to the buyer. Companies recognize these costs as cost of goods sold when the inventory is sold.

A	=	L	+	SE
+150				
-150				
<hr/>				
Cash Flows				
-150				

FREIGHT COSTS INCURRED BY THE SELLER

In contrast, **freight costs incurred by the seller on outgoing merchandise are an operating expense to the seller.** These costs increase an expense account titled Freight-Out or Delivery Expense. If the freight terms on the invoice had required PW Audio Supply (the seller) to pay the freight charges, the entry by PW Audio Supply would be:

May 4	Freight-Out (or Delivery Expense)	150	
	Cash		150
	(To record payment of freight on goods sold)		

When the seller pays the freight charges, it will usually establish a higher invoice price for the goods to cover the shipping expense.

A	=	L	+	SE
				-150 Exp
-150				
<hr/>				
Cash Flows				
-150				

Purchase Returns and Allowances

A purchaser may be dissatisfied with the merchandise received because the goods are damaged or defective, of inferior quality, or do not meet the purchaser's specifications. In such cases, the purchaser may return the goods to the seller for credit if the sale was made on credit, or for a cash refund if the purchase was for cash. This transaction is known as a **purchase return**. Alternatively, the purchaser may choose to keep the merchandise if the seller is willing to grant an allowance (deduction) from the purchase price. This transaction is known as a **purchase allowance**.

Assume that on May 8 Sauk Stereo returned goods costing \$300 to PW Audio Supply. The following entry by Sauk Stereo for the returned merchandise decreases (debits) Accounts Payable and decreases (credits) Inventory.

May 8	Accounts Payable	300	
	Inventory		300
	(To record return of goods purchased from PW Audio Supply)		

Because Sauk Stereo increased Inventory when the goods were received, Inventory is decreased when Sauk Stereo returns the goods (or when it is granted an allowance).

Suppose instead that Sauk Stereo chose to keep the goods after being granted a \$50 allowance (reduction in price). It would reduce (debit) Accounts Payable and reduce (credit) Inventory for \$50.

A	=	L	+	SE
				-300
-300				
<hr/>				
Cash Flows				
no effect				

Purchase Discounts

The credit terms of a purchase on account may permit the buyer to claim a cash discount for prompt payment. The buyer calls this cash discount a **purchase discount**. This incentive offers advantages to both parties: The purchaser saves money, and the seller shortens the operating cycle by more quickly converting the accounts receivable into cash.

Helpful Hint

The term *net* in “net 30” means the remaining amount due after subtracting any sales returns and allowances and partial payments.

Credit terms specify the amount of the cash discount and time period in which it is offered. They also indicate the time period in which the purchaser is expected to pay the full invoice price. In the sales invoice in Illustration 5-5 (page 224), credit terms are 2/10, n/30, which is read “two-ten, net thirty.” This means that the buyer may take a 2% cash discount on the invoice price less (“net of”) any returns or allowances, if payment is made within 10 days of the invoice date (the **discount period**). Otherwise, the invoice price, less any returns or allowances, is due 30 days from the invoice date.

Alternatively, the discount period may extend to a specified number of days following the month in which the sale occurs. For example, 1/10 EOM (end of month) means that a 1% discount is available if the invoice is paid within the first 10 days of the next month.

When the seller elects not to offer a cash discount for prompt payment, credit terms will specify only the maximum time period for paying the balance due. For example, the invoice may state the time period as n/30, n/60, or n/10 EOM. This means, respectively, that the buyer must pay the net amount in 30 days, 60 days, or within the first 10 days of the next month.

When the buyer pays an invoice within the discount period, the amount of the discount decreases Inventory. Why? Because companies record inventory at cost and, by paying within the discount period, the merchandiser has reduced that cost. To illustrate, assume Sauk Stereo pays the balance due of \$3,500 (gross invoice price of \$3,800 less purchase returns and allowances of \$300) on May 14, the last day of the discount period. The cash discount is \$70 ($\$3,500 \times 2\%$), and Sauk Stereo pays \$3,430 ($\$3,500 - \70). The entry Sauk Stereo makes to record its May 14 payment decreases (debits) Accounts Payable by the amount of the gross invoice price, reduces (credits) Inventory by the \$70 discount, and reduces (credits) Cash by the net amount owed.

A	=	L	+	SE
		-3,500		
-3,430				
-70				

Cash Flows
-3,430

May 14	Accounts Payable Cash Inventory (To record payment within discount period)	3,500 70	3,430 70
--------	---	---------------------	-----------------

If Sauk Stereo failed to take the discount, and instead made full payment of \$3,500 on June 3, it would debit Accounts Payable and credit Cash for \$3,500 each.

A	=	L	+	SE
		-3,500		
-3,500				

Cash Flows
-3,500

June 3	Accounts Payable Cash (To record payment with no discount taken)	3,500	3,500
--------	--	-------	-------

A merchandising company usually should take all available discounts. Passing up the discount may be viewed as **paying interest** for use of the money. For example, passing up the discount offered by PW Audio Supply would be comparable to Sauk Stereo paying an interest rate of 2% for the use of \$3,500 for 20 days. This is the equivalent of an annual interest rate of approximately 36.5% ($2\% \times 365/20$). Obviously, it would be better for Sauk Stereo to borrow at prevailing bank interest rates of 6% to 10% than to lose the discount.

Summary of Purchasing Transactions

The following T-account (with transaction descriptions in blue) provides a summary of the effect of the previous transactions on Inventory. Sauk Stereo originally purchased \$3,800 worth of inventory for resale. It then returned \$300 of goods. It paid \$150 in freight charges, and finally, it received a \$70 discount off the balance owed because it paid within the discount period. This results in a balance in Inventory of \$3,580.

		Inventory			
Purchase	May 4	3,800	May 8	300	Purchase return
Freight-in	6	150	14	70	Purchase discount
Balance		3,580			

> DO IT!

Purchase Transactions

On September 5, De La Hoya Company buys merchandise on account from Junot Diaz Company. The selling price of the goods is \$1,500, and the cost to Diaz Company was \$800. On September 8, De La Hoya returns defective goods with a selling price of \$200. Record the transactions on the books of De La Hoya Company.

Solution

Action Plan

- ✓ Purchaser records goods at cost.
- ✓ When goods are returned, purchaser reduces Inventory.

Sept. 5	Inventory	1,500	
	Accounts Payable		1,500
	(To record goods purchased on account)		
8	Accounts Payable	200	
	Inventory		200
	(To record return of defective goods)

Recording Sales of Merchandise

In accordance with the revenue recognition principle, companies record sales revenue when the performance obligation is satisfied. Typically, the performance obligation is satisfied when the goods transfer from the seller to the buyer. At this point, the sales transaction is complete and the sales price established.

Sales may be made on credit or for cash. A **business document** should support every sales transaction, to provide written evidence of the sale. **Cash register tapes** provide evidence of cash sales. A **sales invoice**, like the one shown in Illustration 5-5 (page 224), provides support for a credit sale. The original copy of the invoice goes to the customer, and the seller keeps a copy for use in recording the sale. The invoice shows the date of sale, customer name, total sales price, and other relevant information.

The seller makes two entries for each sale. **The first entry records the sale:** The seller increases (debits) Cash (or Accounts Receivable, if a credit sale), and also increases (credits) Sales Revenue. **The second entry records the cost of**

LEARNING OBJECTIVE 3

Explain the recording of sales revenues under a perpetual inventory system.

the merchandise sold: The seller increases (debits) Cost of Goods Sold, and also decreases (credits) Inventory for the cost of those goods. As a result, the Inventory account will show at all times the amount of inventory that should be on hand.

To illustrate a credit sales transaction, PW Audio Supply records its May 4 sale of \$3,800 to Sauk Stereo (see Illustration 5-5) as follows (assume the merchandise cost PW Audio Supply \$2,400).

A	=	L	+	SE
+3,800				+3,800 Rev

Cash Flows
no effect

A	=	L	+	SE
-2,400				-2,400 Exp

Cash Flows
no effect

May 4	Accounts Receivable Sales Revenue (To record credit sale to Sauk Stereo per invoice #731)	3,800 3,800
4	Cost of Goods Sold Inventory (To record cost of merchandise sold on invoice #731 to Sauk Stereo)	2,400 2,400

For internal decision-making purposes, merchandising companies may use more than one sales account. For example, PW Audio Supply may decide to keep separate sales accounts for its sales of TV sets, DVD recorders, and microwave ovens. Wal-Mart might use separate accounts for sporting goods, children’s clothing, and hardware—or it might have even more narrowly defined accounts. By using separate sales accounts for major product lines, rather than a single combined sales account, company management can more closely monitor sales trends and respond more strategically to changes in sales patterns. For example, if TV sales are increasing while microwave oven sales are decreasing, PW Audio Supply might reevaluate both its advertising and pricing policies on these items to ensure they are optimal.

On its income statement presented to outside investors, a merchandising company normally would provide only a single sales figure—the sum of all of its individual sales accounts. This is done for two reasons. First, providing detail on all of its individual sales accounts would add considerable length to its income statement. Second, companies do not want their competitors to know the details of their operating results. However, Microsoft recently expanded its disclosure of revenue from three to five types. The reason: The additional categories will better enable financial statement users to evaluate the growth of the company’s consumer and Internet businesses.

Ethics Note

Many companies are trying to improve the quality of their financial reporting. For example, General Electric now provides more detail on its revenues and operating profits.

At the end of “Anatomy of a Fraud” stories, which describe some recent real-world frauds, we discuss the missing internal control activity that would likely have prevented or uncovered the fraud.

ANATOMY OF A FRAUD¹

Holly Harmon was a cashier at a national superstore for only a short while when she began stealing merchandise using three methods. First, her husband or friends took UPC labels from cheaper items and put them on more expensive items. Holly then scanned the goods at the register. Second, Holly rang an item up but then voided the sale and left the merchandise in the shopping cart. A third approach was to put goods into large plastic containers. She rang up the plastic containers but not the goods within them. One day, Holly did not call in sick or show up for work. In such instances, the company reviews past surveillance tapes to look for suspicious activity by employees. This enabled the store to observe the thefts and to identify the participants.

¹The “Anatomy of a Fraud” stories in this textbook are adapted from *Fraud Casebook: Lessons from the Bad Side of Business*, edited by Joseph T. Wells (Hoboken, NJ: John Wiley & Sons, Inc., 2007). Used by permission. The names of some of the people and organizations in the stories are fictitious, but the facts in the stories are true.

Total take: \$12,000

The Missing Controls

Human resource controls. A background check would have revealed Holly's previous criminal record. She would not have been hired as a cashier.

Physical controls. Software can flag high numbers of voided transactions or a high number of sales of low-priced goods. Random comparisons of video records with cash register records can ensure that the goods reported as sold on the register are the same goods that are shown being purchased on the video recording. Finally, employees should be aware that they are being monitored.

Source: Adapted from Wells, *Fraud Casebook* (2007), pp. 251–259.

Sales Returns and Allowances

We now look at the “flipside” of purchase returns and allowances, which the seller records as **sales returns and allowances**. These are transactions where the seller either accepts goods back from the buyer (a return) or grants a reduction in the purchase price (an allowance) so the buyer will keep the goods. PW Audio Supply's entries to record credit for returned goods involve (1) an increase (debit) in Sales Returns and Allowances (a contra account to Sales Revenue) and a decrease (credit) in Accounts Receivable at the \$300 selling price, and (2) an increase (debit) in Inventory (assume a \$140 cost) and a decrease (credit) in Cost of Goods Sold, as shown below (assuming that the goods were not defective).

May 8	Sales Returns and Allowances	300	
	Accounts Receivable		300
	(To record credit granted to Sauk Stereo for returned goods)		
8	Inventory	140	
	Cost of Goods Sold		140
	(To record cost of goods returned)		

A	=	L	+	SE	
					– 300 Exp
– 300					
Cash Flows					
no effect					

A	=	L	+	SE	
					+ 140 Exp
+ 140					
Cash Flows					
no effect					

If Sauk Stereo returns goods because they are damaged or defective, then PW Audio Supply's entry to Inventory and Cost of Goods Sold should be for the fair value of the returned goods, rather than their cost. For example, if the returned goods were defective and had a fair value of \$50, PW Audio Supply would debit Inventory for \$50, and would credit Cost of Goods Sold for \$50.

What happens if the goods are not returned but the seller grants the buyer an allowance by reducing the purchase price? In this case, the seller debits Sales Returns and Allowances and credits Accounts Receivable for the amount of the allowance.

As mentioned above, Sales Returns and Allowances is a **contra-revenue account** to Sales Revenue. The normal balance of Sales Returns and Allowances is a debit. Companies use a contra account, instead of debiting Sales Revenue, to disclose in the accounts and in the income statement the amount of sales returns and allowances. Disclosure of this information is important to management: Excessive returns and allowances may suggest problems—inferior merchandise, inefficiencies in filling orders, errors in billing customers, or delivery or shipment mistakes. Moreover, a decrease (debit) recorded directly to Sales Revenue would obscure the relative importance of sales returns and allowances as a percentage of sales. It also could distort comparisons between total sales in different accounting periods.

ACCOUNTING ACROSS THE ORGANIZATION

Should Costco Change Its Return Policy?

In most industries, sales returns are relatively minor. But returns of consumer electronics can really take a bite out of profits. Recently, the marketing executives at **Costco Wholesale Corp.** faced a difficult decision. Costco has always prided itself on its generous return policy. Most goods have had an unlimited grace period for returns. A new policy will require that certain electronics must be returned within 90 days of their purchase. The reason? The cost of returned products such as high-definition TVs, computers, and iPods cut an estimated 8¢ per share off Costco's earnings per share, which was \$2.30.

Source: Kris Hudson, "Costco Tightens Policy on Returning Electronics," *Wall Street Journal* (February 27, 2007), p. B4.

If a company expects significant returns, what are the implications for revenue recognition? (See page 267.)

Sales Discounts

As mentioned in our discussion of purchase transactions, the seller may offer the customer a cash discount—called by the seller a **sales discount**—for the prompt payment of the balance due. Like a purchase discount, a sales discount is based on the invoice price less returns and allowances, if any. The seller increases (debits) the Sales Discounts account for discounts that are taken. For example, PW Audio Supply makes the following entry to record the cash receipt on May 14 from Sauk Stereo within the discount period.

A	=	L	+	SE
+3,430				-70 Rev
-3,500				
<hr/>				
Cash Flows				
+3,430				

May 14	Cash Sales Discounts Accounts Receivable (To record collection within 2/10, n/30 discount period from Sauk Stereo)	3,430 70	3,500
--------	---	-------------	-------

Like Sales Returns and Allowances, Sales Discounts is a **contra-revenue account** to Sales Revenue. Its normal balance is a debit. PW Audio Supply uses this account, instead of debiting Sales Revenue, to disclose the amount of cash discounts taken by customers. If Sauk Stereo does not take the discount, PW Audio Supply increases (debits) Cash for \$3,500 and decreases (credits) Accounts Receivable for the same amount at the date of collection.

The following T-accounts summarize the three sales-related transactions and show their combined effect on net sales.

> DO IT!

Sales Transactions

On September 5, De La Hoya Company buys merchandise on account from Junot Diaz Company. The selling price of the goods is \$1,500, and the cost to Diaz Company was \$800. On September 8, De La Hoya returns defective goods with a selling price of \$200 and a fair value of \$30. Record the transactions on the books of Junot Diaz Company.

Solution

Action Plan

- ✓ Seller records both the sale and the cost of goods sold at the time of the sale.
- ✓ When goods are returned, the seller records the return in a contra account, Sales Returns and Allowances, and reduces Accounts Receivable. Any goods returned increase Inventory and reduce Cost of Goods Sold.
- ✓ Defective or damaged inventory is recorded at fair value (scrap value).

Sept. 5	Accounts Receivable	1,500	
	Sales Revenue		1,500
	(To record credit sale)		
5	Cost of Goods Sold	800	
	Inventory		800
	(To record cost of goods sold on account)		
8	Sales Returns and Allowances	200	
	Accounts Receivable		200
	(To record credit granted for receipt of returned goods)		
8	Inventory	30	
	Cost of Goods Sold		30
	(To record fair value of goods returned)

PEOPLE, PLANET, AND PROFIT INSIGHT

Selling Green

Here is a question an executive of **PepsiCo** was asked: Should PepsiCo market green? The executive indicated that the company should, as he believes it's the No. 1 thing consumers all over the world care about. Here are some thoughts on this issue:

If you are going to market green, what are some things we've learned? I'll share with you one thing we've learned at PepsiCo.

Sun Chips are part of the food business I run. It's a "healthy snack." We decided that Sun Chips, if it's a healthy snack, should be made in facilities that have a net-zero footprint. In other words, I want off the electric grid everywhere we make Sun Chips. We did that. Sun Chips should be made in a facility that puts back more water than it uses. It does that. And we partnered with our suppliers and came out with the world's first compostable chip package.

Now, there was an issue with this package: It was louder than the New York subway, louder than jet engines taking off. What would a company that's committed to green do: walk away or stay committed? If your people are passionate, they're going to fix it for you as long as you stay committed. Six months later, the compostable bag has half the noise of our current package.

So the view today is: we should market green, we should be proud to do it . . . it has to be a 360 process, both internal and external. And if you do that, you can monetize environmental sustainability for the shareholders.

Source: "Four Problems—and Solutions," *Wall Street Journal* (March 7, 2011), p. R2.

What is meant by "monetize environmental sustainability" for shareholders? (See page 267.)

Completing the Accounting Cycle

LEARNING OBJECTIVE 4

Explain the steps in the accounting cycle for a merchandising company.

Up to this point, we have illustrated the basic entries for transactions relating to purchases and sales in a perpetual inventory system. Now we consider the remaining steps in the accounting cycle for a merchandising company. Each of the required steps described in Chapter 4 for service companies apply to merchandising companies. Appendix 5B to this chapter shows use of a worksheet by a merchandiser (an optional step).

Adjusting Entries

A merchandising company generally has the same types of adjusting entries as a service company. However, a merchandiser using a perpetual system will require one additional adjustment to make the records agree with the actual inventory on hand. Here's why: At the end of each period, for control purposes, a merchandising company that uses a perpetual system will take a physical count of its goods on hand. The company's unadjusted balance in Inventory usually does not agree with the actual amount of inventory on hand. The perpetual inventory records may be incorrect due to recording errors, theft, or waste. Thus, the company needs to adjust the perpetual records to make the recorded inventory amount agree with the inventory on hand. **This involves adjusting Inventory and Cost of Goods Sold.**

For example, suppose that PW Audio Supply has an unadjusted balance of \$40,500 in Inventory. Through a physical count, PW Audio Supply determines that its actual merchandise inventory at year-end is \$40,000. The company would make an adjusting entry as follows.

$$\begin{array}{r} \text{A} \\ -500 \end{array} = \begin{array}{r} \text{L} \\ -500 \text{ Exp} \end{array} + \begin{array}{r} \text{SE} \end{array}$$

Cash Flows
no effect

Cost of Goods Sold	500	
Inventory		500
(To adjust inventory to physical count)		

Closing Entries

A merchandising company, like a service company, closes to Income Summary all accounts that affect net income. In journalizing, the company credits all temporary accounts with debit balances, and debits all temporary accounts with credit balances, as shown below for PW Audio Supply. Note that PW Audio Supply closes Cost of Goods Sold to Income Summary.

Helpful Hint

The easiest way to prepare the first two closing entries is to identify the temporary accounts by their balances and then prepare one entry for the credits and one for the debits.

Dec. 31	Sales Revenue	480,000	
	Income Summary		480,000
	(To close income statement accounts with credit balances)		
31	Income Summary	450,000	
	Sales Returns and Allowances		12,000
	Sales Discounts		8,000
	Cost of Goods Sold		316,000
	Salaries and Wages Expense		64,000
	Freight-Out		7,000
	Advertising Expense		16,000
	Utilities Expense		17,000
	Depreciation Expense		8,000
	Insurance Expense		2,000
	(To close income statement accounts with debit balances)		

31	Income Summary Retained Earnings (To close net income to retained earnings)	30,000	
			30,000
31	Retained Earnings Dividends (To close dividends to retained earnings)	15,000	
			15,000

After PW Audio Supply has posted the closing entries, all temporary accounts have zero balances. Also, Retained Earnings has a balance that is carried over to the next period.

Summary of Merchandising Entries

Illustration 5-7 summarizes the entries for the merchandising accounts using a perpetual inventory system.

Illustration 5-7
Daily recurring and adjusting and closing entries

		<u>Transactions</u>	<u>Daily Recurring Entries</u>	<u>Dr.</u>	<u>Cr.</u>

> DO IT!

Closing Entries

The trial balance of Celine's Sports Wear Shop at December 31 shows Inventory \$25,000, Sales Revenue \$162,400, Sales Returns and Allowances \$4,800, Sales Discounts \$3,600, Cost of Goods Sold \$110,000, Rent Revenue \$6,000, Freight-Out \$1,800, Rent Expense \$8,800, and Salaries and Wages Expense \$22,000. Prepare the closing entries for the above accounts.

Solution

Action Plan

- ✓ Close all temporary accounts with credit balances to Income Summary by debiting these accounts.
- ✓ Close all temporary accounts with debit balances, except dividends, to Income Summary by crediting these accounts.

The two closing entries are:

Dec. 31	Sales Revenue	162,400	
	Rent Revenue	6,000	
	Income Summary		168,400
	(To close accounts with credit balances)		
31	Income Summary	151,000	
	Cost of Goods Sold		110,000
	Sales Returns and Allowances		4,800
	Sales Discounts		3,600
	Freight-Out		1,800
	Rent Expense		8,800
	Salaries and Wages Expense		22,000
	(To close accounts with debit balances)

Forms of Financial Statements

LEARNING OBJECTIVE 5

Distinguish between a multiple-step and a single-step income statement.

Merchandising companies widely use the classified balance sheet introduced in Chapter 4 and one of two forms for the income statement. This section explains the use of these financial statements by merchandisers.

Multiple-Step Income Statement

The **multiple-step income statement** is so named because it shows several steps in determining net income. Two of these steps relate to the company's principal operating activities. A multiple-step statement also distinguishes between **operating** and **nonoperating activities**. Finally, the statement also highlights intermediate components of income and shows subgroupings of expenses.

Income Statement Presentation of Sales

The multiple-step income statement begins by presenting **sales revenue**. It then deducts contra-revenue accounts—sales returns and allowances, and sales discounts—to arrive at **net sales**. Illustration 5-8 presents the sales revenues section for PW Audio Supply, using assumed data.

PW Audio Supply, Inc. Income Statement (partial)		
Sales revenues		
Sales revenue		\$ 480,000
Less: Sales returns and allowances	\$12,000	
Sales discounts	<u>8,000</u>	<u>20,000</u>
Net sales		\$460,000

Illustration 5-8
Computation of net sales

This presentation discloses the key data about the company's principal revenue-producing activities.

GROSS PROFIT

From Illustration 5-1, you learned that companies deduct cost of goods sold from sales revenue in order to determine **gross profit**. For this computation, companies use **net sales** (which takes into consideration Sales Returns and Allowances and Sales Discounts) as the amount of sales revenue. On the basis of the sales data in Illustration 5-8 (net sales of \$460,000) and cost of goods sold under the perpetual inventory system (assume \$316,000), PW Audio Supply's gross profit is \$144,000, computed as follows.

Net sales	\$ 460,000
Cost of goods sold	<u>316,000</u>
Gross profit	\$144,000

Illustration 5-9
Computation of gross profit

We also can express a company's gross profit as a percentage, called the **gross profit rate**. To do so, we divide the amount of gross profit by net sales. For PW Audio Supply, the **gross profit rate** is 31.3%, computed as follows.

Gross Profit	÷	Net Sales	=	Gross Profit Rate
\$144,000	÷	\$460,000	=	31.3%

Illustration 5-10
Gross profit rate formula and computation

Analysts generally consider the gross profit **rate** to be more useful than the gross profit **amount**. The rate expresses a more meaningful (qualitative) relationship between net sales and gross profit. For example, a gross profit of \$1,000,000 may sound impressive. But if it is the result of a gross profit rate of only 7%, it is not so impressive. The gross profit rate tells how many cents of each sales dollar go to gross profit.

Gross profit represents the **merchandising profit** of a company. It is not a measure of the overall profitability, because operating expenses are not yet deducted. But managers and other interested parties closely watch the amount and trend of gross profit. They compare current gross profit with amounts reported in past periods. They also compare the company's gross profit rate with rates of competitors and with industry averages. Such comparisons provide information about the effectiveness of a company's purchasing function and the soundness of its pricing policies.

OPERATING EXPENSES AND NET INCOME

Operating expenses are the next component in measuring net income for a merchandising company. They are the expenses incurred in the process of earning

sales revenue. These expenses are similar in merchandising and service companies. At PW Audio Supply, operating expenses were \$114,000. The company determines its net income by subtracting operating expenses from gross profit. Thus, net income is \$30,000, as shown below.

Illustration 5-11
Operating expenses in
computing net income

Gross profit	\$144,000
Operating expenses	114,000
Net income	<u>\$ 30,000</u>

The net income amount is the so-called “bottom line” of a company’s income statement.

Ethics Note

Companies manage earnings in various ways. **ConAgra Foods** recorded a nonrecurring gain for \$186 million from the sale of **Pilgrim’s Pride** stock to help meet an earnings projection for the quarter.

NONOPERATING ACTIVITIES

Nonoperating activities consist of various revenues and expenses and gains and losses that are unrelated to the company’s main line of operations. When nonoperating items are included, the label “**Income from operations**” (or “Operating income”) precedes them. This label clearly identifies the results of the company’s normal operations, an amount determined by subtracting cost of goods sold and operating expenses from net sales. The results of nonoperating activities are shown in the categories “**Other revenues and gains**” and “**Other expenses and losses.**” Illustration 5-12 lists examples of each.

Illustration 5-12
Other items of nonoperating
activities

Other Revenues and Gains
Interest revenue from notes receivable and marketable securities.
Dividend revenue from investments in common stock.
Rent revenue from subleasing a portion of the store.
Gain from the sale of property, plant, and equipment.
Other Expenses and Losses
Interest expense on notes and loans payable.
Casualty losses from recurring causes, such as vandalism and accidents.
Loss from the sale or abandonment of property, plant, and equipment.
Loss from strikes by employees and suppliers.

Merchandising companies report the nonoperating activities in the income statement immediately after the company’s operating activities. Illustration 5-13 shows these sections for PW Audio Supply, Inc., using assumed data.

The distinction between operating and nonoperating activities is crucial to many external users of financial data. These users view operating income as sustainable and many nonoperating activities as nonrecurring. Therefore, when forecasting next year’s income, analysts put the most weight on this year’s operating income, and less weight on this year’s nonoperating activities.

ETHICS INSIGHT**Disclosing More Details**

After **Enron**, increased investor criticism and regulator scrutiny forced many companies to improve the clarity of their financial disclosures. For example, **IBM** announced that it would begin providing more detail regarding its “Other gains and losses.” It had previously included these items in its selling, general, and administrative expenses, with little disclosure.

Disclosing other gains and losses in a separate line item on the income statement will not have any effect on bottom-line income. However, analysts complained that burying these details in the selling, general, and administrative expense line reduced their ability to fully understand how well IBM was performing. For example previously if IBM sold off one of its buildings at a gain, it would include this gain in the selling, general and administrative expense line item, thus reducing that expense. This made it appear that the company had done a better job of controlling operating expenses than it actually had.

Other companies that also recently announced changes to increase the informativeness of their income statements include **PepsiCo** and **General Electric**.

Why have investors and analysts demanded more accuracy in isolating “Other gains and losses” from operating items? (See page 267.)

PW Audio Supply, Inc. Income Statement For the Year Ended December 31, 2014			
Calculation of gross profit	Sales revenues		
	Sales revenue		\$480,000
	Less: Sales returns and allowances	\$12,000	
	Sales discounts	<u>8,000</u>	<u>20,000</u>
	Net sales		460,000
	Cost of goods sold		<u>316,000</u>
	Gross profit		144,000
Calculation of income from operations	Operating expenses		
	Salaries and wages expense	64,000	
	Utilities expense	17,000	
	Advertising expense	16,000	
	Depreciation expense	8,000	
	Freight-out	7,000	
	Insurance expense	<u>2,000</u>	
	Total operating expenses		<u>114,000</u>
	Income from operations		30,000
Results of nonoperating activities	Other revenues and gains		
	Interest revenue	3,000	
	Gain on disposal of plant assets	<u>600</u>	3,600
	Other expenses and losses		
Interest expense	1,800		
Casualty loss from vandalism	<u>200</u>	<u>2,000</u>	
	Net income		<u><u>\$ 31,600</u></u>

Illustration 5-13
Multiple-step income statement

Single-Step Income Statement

Another income statement format is the **single-step income statement**. The statement is so named because only one step—subtracting total expenses from total revenues—is required in determining net income.

In a single-step statement, all data are classified into two categories: (1) **revenues**, which include both operating revenues and other revenues and gains; and (2) **expenses**, which include cost of goods sold, operating expenses, and other expenses and losses. Illustration 5-14 shows a single-step statement for PW Audio Supply.

Illustration 5-14
Single-step income statement

PW Audio Supply, Inc.		
Income Statement		
For the Year Ended December 31, 2014		
Revenues		
Net sales		\$460,000
Interest revenue		3,000
Gain on disposal of plant assets		600
Total revenues		<u>463,600</u>
Expenses		
Cost of goods sold	\$316,000	
Operating expenses	114,000	
Interest expense	1,800	
Casualty loss from vandalism	200	
Total expenses		<u>432,000</u>
Net income		<u><u>\$ 31,600</u></u>

There are two primary reasons for using the single-step format: (1) A company does not realize any type of profit or income until total revenues exceed total expenses, so it makes sense to divide the statement into these two categories. (2) The format is simpler and easier to read. *For homework problems, however, you should use the single-step format only when specifically instructed to do so.*

Classified Balance Sheet

In the balance sheet, merchandising companies report inventory as a current asset immediately below accounts receivable. Recall from Chapter 4 that companies generally list current asset items in the order of their closeness to cash (liquidity). Inventory is less close to cash than accounts receivable because the goods must first be sold and then collection made from the customer. Illustration 5-15 presents the assets section of a classified balance sheet for PW Audio Supply.

Illustration 5-15
Assets section of a classified
balance sheet

PW Audio Supply, Inc.		
Balance Sheet (Partial)		
December 31, 2014		
Assets		
Current assets		
Cash		\$ 9,500
Accounts receivable		16,100
Inventory		40,000
Prepaid insurance		1,800
Total current assets		<u>67,400</u>
Property, plant, and equipment		
Equipment	\$80,000	
Less: Accumulated depreciation—equipment	24,000	56,000
Total assets		<u><u>\$123,400</u></u>

Helpful Hint

The \$40,000 is the cost of the inventory on hand, not its expected selling price.

> DO IT!**Financial Statement Classifications**

You are presented with the following list of accounts from the adjusted trial balance for merchandiser Gorman Company. Indicate in which financial statement and under what classification each of the following would be reported.

Accounts Payable	Insurance Expense
Accounts Receivable	Interest Expense
Accumulated Depreciation—Buildings	Interest Payable
Accumulated Depreciation—Equipment	Inventory
Advertising Expense	Land
Buildings	Notes Payable (due in 3 years)
Cash	Property Taxes Payable
Common Stock	Salaries and Wages Expense
Depreciation Expense	Salaries and Wages Payable
Dividends	Sales Returns and Allowances
Equipment	Sales Revenue
Freight-Out	Utilities Expense
Gain on Disposal of Plant Assets	

Solution**Action Plan**

- ✓ Review the major sections of the income statement, sales revenues, cost of goods sold, operating expenses, other revenues and gains, and other expenses and losses.
- ✓ Add net income to beginning retained earnings and deduct dividends to arrive at ending retained earnings in the retained earnings statement.
- ✓ Review the major sections of the balance sheet, income statement, and retained earnings statement.

<u>Account</u>	<u>Financial Statement</u>	<u>Classification</u>
Accounts Payable	Balance sheet	Current liabilities
Accounts Receivable	Balance sheet	Current assets
Accumulated Depreciation—Buildings	Balance sheet	Property, plant, and equipment
Accumulated Depreciation—Equipment	Balance sheet	Property, plant, and equipment
Advertising Expense	Income statement	Operating expenses
Buildings	Balance sheet	Property, plant, and equipment
Cash	Balance sheet	Current assets
Common Stock	Balance sheet	Stockholders' equity
Depreciation Expense	Income statement	Operating expenses
Dividends	Retained earnings statement	Deduction section
Equipment	Balance sheet	Property, plant, and equipment
Freight-Out	Income statement	Operating expenses
Gain on Disposal of Plant Assets	Income statement	Other revenues and gains
Insurance Expense	Income statement	Operating expenses
Interest Expense	Income statement	Other expenses and losses
Interest Payable	Balance sheet	Current liabilities
Inventory	Balance sheet	Current assets
Land	Balance sheet	Property, plant, and equipment
Notes Payable	Balance sheet	Long-term liabilities
Property Taxes Payable	Balance sheet	Current liabilities
Salaries and Wages Expense	Income statement	Operating expenses
Salaries and Wages Payable	Balance sheet	Current liabilities
Sales Returns and Allowances	Income statement	Sales revenues
Sales Revenue	Income statement	Sales revenues
Utilities Expense	Income statement	Operating expenses

> Comprehensive DO IT!

The adjusted trial balance columns of Falcetto Company's worksheet for the year ended December 31, 2014, are as follows.

Debit		Credit	
Cash	14,500	Accumulated Depreciation— Equipment	18,000
Accounts Receivable	11,100	Notes Payable	25,000
Inventory	29,000	Accounts Payable	10,600
Prepaid Insurance	2,500	Common Stock	50,000
Equipment	95,000	Retained Earnings	31,000
Dividends	12,000	Sales Revenue	536,800
Sales Returns and Allowances	6,700	Interest Revenue	2,500
Sales Discounts	5,000		<u>673,900</u>
Cost of Goods Sold	363,400		
Freight-Out	7,600		
Advertising Expense	12,000		
Salaries and Wages Expense	56,000		
Utilities Expense	18,000		
Rent Expense	24,000		
Depreciation Expense	9,000		
Insurance Expense	4,500		
Interest Expense	3,600		
	<u>673,900</u>		

Instructions

Prepare a multiple-step income statement for Falcetto Company.

Solution to Comprehensive DO IT!

Action Plan

- ✓ Remember that the key components of the income statement are net sales, cost of goods sold, gross profit, total operating expenses, and net income (loss). Report these components in the right-hand column of the income statement.
- ✓ Put nonoperating items after income from operations.

Falcetto Company Income Statement For the Year Ended December 31, 2014			
Sales revenues			
Sales revenue			\$536,800
Less: Sales returns and allowances	\$ 6,700		
Sales discounts	<u>5,000</u>		<u>11,700</u>
Net sales			525,100
Cost of goods sold			<u>363,400</u>
Gross profit			161,700
Operating expenses			
Salaries and wages expense	56,000		
Rent expense	24,000		
Utilities expense	18,000		
Advertising expense	12,000		
Depreciation expense	9,000		
Freight-out	7,600		
Insurance expense	<u>4,500</u>		
Total operating expenses			<u>131,100</u>
Income from operations			30,600
Other revenues and gains			
Interest revenue	2,500		
Other expenses and losses			
Interest expense	<u>3,600</u>		<u>1,100</u>
Net income			<u>\$ 29,500</u>

SUMMARY OF LEARNING OBJECTIVES

The Navigator

- 1 Identify the differences between service and merchandising companies.** Because of inventory, a merchandising company has sales revenue, cost of goods sold, and gross profit. To account for inventory, a merchandising company must choose between a perpetual and a periodic inventory system.
- 2 Explain the recording of purchases under a perpetual inventory system.** The company debits the Inventory account for all purchases of merchandise and freight-in, and credits it for purchase discounts and purchase returns and allowances.
- 3 Explain the recording of sales revenues under a perpetual inventory system.** When a merchandising company sells inventory, it debits Accounts Receivable (or Cash), and credits Sales Revenue for the **selling price** of the merchandise. At the same time, it debits Cost of

Goods Sold, and credits Inventory for the cost of the inventory items sold. Sales returns and allowances and sales discounts are debited.

- 4 Explain the steps in the accounting cycle for a merchandising company.** Each of the required steps in the accounting cycle for a service company applies to a merchandising company. A worksheet is again an optional step. Under a perpetual inventory system, the company must adjust the Inventory account to agree with the physical count.
- 5 Distinguish between a multiple-step and a single-step income statement.** A multiple-step income statement shows numerous steps in determining net income, including nonoperating activities sections. A single-step income statement classifies all data under two categories, revenues or expenses, and determines net income in one step.

GLOSSARY

- Contra-revenue account** An account that is offset against a revenue account on the income statement. (p. 229).
- Cost of goods sold** The total cost of merchandise sold during the period. (p. 220).
- FOB destination** Freight terms indicating that the seller places the goods free on board to the buyer's place of business, and the seller pays the freight. (p. 224).
- FOB shipping point** Freight terms indicating that the seller places goods free on board the carrier, and the buyer pays the freight costs. (p. 224).
- Gross profit** The excess of net sales over the cost of goods sold. (p. 235).
- Gross profit rate** Gross profit expressed as a percentage, by dividing the amount of gross profit by net sales. (p. 235).
- Income from operations** Income from a company's principal operating activity; determined by subtracting cost of goods sold and operating expenses from net sales. (p. 236).
- Multiple-step income statement** An income statement that shows several steps in determining net income. (p. 234).
- Net sales** Sales less sales returns and allowances and less sales discounts. (p. 234).
- Nonoperating activities** Various revenues, expenses, gains, and losses that are unrelated to a company's main line of operations. (p. 236).
- Operating expenses** Expenses incurred in the process of earning sales revenues. (p. 235).
- Other expenses and losses** A nonoperating-activities section of the income statement that shows expenses and losses unrelated to the company's main line of operations. (p. 236).
- Other revenues and gains** A nonoperating-activities section of the income statement that shows revenues

and gains unrelated to the company's main line of operations. (p. 236).

- Periodic inventory system** An inventory system under which the company does not keep detailed inventory records throughout the accounting period but determines the cost of goods sold only at the end of an accounting period. (p. 221).
- Perpetual inventory system** An inventory system under which the company keeps detailed records of the cost of each inventory purchase and sale, and the records continuously show the inventory that should be on hand. (p. 221).
- Purchase allowance** A deduction made to the selling price of merchandise, granted by the seller so that the buyer will keep the merchandise. (p. 225).
- Purchase discount** A cash discount claimed by a buyer for prompt payment of a balance due. (p. 226).
- Purchase invoice** A document that supports each credit purchase. (p. 223).
- Purchase return** A return of goods from the buyer to the seller for a cash or credit refund. (p. 225).
- Sales discount** A reduction given by a seller for prompt payment of a credit sale. (p. 230).
- Sales invoice** A document that supports each credit sale. (p. 227).
- Sales returns and allowances** Purchase returns and allowances from the seller's perspective. See *Purchase return* and *Purchase allowance*, above. (p. 229).
- Sales revenue (Sales)** The primary source of revenue in a merchandising company. (p. 220).
- Single-step income statement** An income statement that shows only one step in determining net income. (p. 237).

APPENDIX 5A PERIODIC INVENTORY SYSTEM

LEARNING OBJECTIVE 6

Explain the recording of purchases and sales of inventory under a periodic inventory system.

As described in this chapter, companies may use one of two basic systems of accounting for inventories: (1) the perpetual inventory system or (2) the periodic inventory system. In the chapter, we focused on the characteristics of the perpetual inventory system. In this appendix, we discuss and illustrate the **periodic inventory system**. One key difference between the two systems is the point at which the company computes cost of goods sold. For a visual reminder of this difference, refer back to Illustration 5-4 (page 222).

Determining Cost of Goods Sold Under a Periodic System

Determining cost of goods sold is different when a periodic inventory system is used rather than a perpetual system. As you have seen, a company using a **perpetual system** makes an entry to record cost of goods sold and to reduce inventory *each time a sale is made*. A company using a **periodic system** does not determine cost of goods sold *until the end of the period*. At the end of the period the company performs a count to determine the ending balance of inventory. It then **calculates cost of goods sold by subtracting ending inventory from the goods available for sale**. Goods available for sale is the sum of beginning inventory plus purchases, as shown in Illustration 5A-1.

Illustration 5A-1

Basic formula for cost of goods sold using the periodic system

Beginning Inventory	
+ Cost of Goods Purchased	
Cost of Goods Available for Sale	
– Ending Inventory	
Cost of Goods Sold	

Another difference between the two approaches is that the perpetual system directly adjusts the Inventory account for any transaction that affects inventory (such as freight costs, returns, and discounts). The periodic system does not do this. Instead, it creates different accounts for purchases, freight costs, returns, and discounts. These various accounts are shown in Illustration 5A-2, which presents the calculation of cost of goods sold for PW Audio Supply using the periodic approach.

Illustration 5A-2

Cost of goods sold for a merchandiser using a periodic inventory system

PW Audio Supply, Inc. Cost of Goods Sold For the Year Ended December 31, 2014

Cost of goods sold		
Inventory, January 1		\$ 36,000
Purchases	\$325,000	
Less: Purchase returns and allowances	\$10,400	
Purchase discounts	6,800	17,200
Net purchases		307,800
Add: Freight-in		12,200
Cost of goods purchased		320,000
Cost of goods available for sale		356,000
Inventory, December 31		40,000
Cost of goods sold		\$316,000

Helpful Hint

The far right column identifies the primary items that make up cost of goods sold of \$316,000. The middle column explains cost of goods purchased of \$320,000. The left column reports contra purchase items of \$17,200.

Note that the basic elements from Illustration 5A-1 are highlighted in Illustration 5A-2. You will learn more in Chapter 6 about how to determine cost of goods sold using the periodic system.

The use of the periodic inventory system does not affect the form of presentation in the balance sheet. As under the perpetual system, a company reports inventory in the current assets section.

Recording Merchandise Transactions

In a **periodic inventory system**, companies record revenues from the sale of merchandise when sales are made, just as in a perpetual system. Unlike the perpetual system, however, companies **do not attempt on the date of sale to record the cost of the merchandise sold**. Instead, they take a physical inventory count at the **end of the period** to determine (1) the cost of the merchandise then on hand and (2) the cost of the goods sold during the period. And, **under a periodic system, companies record purchases of merchandise in the Purchases account rather than the Inventory account**. Also, in a periodic system, purchase returns and allowances, purchase discounts, and freight costs on purchases are recorded in separate accounts.

To illustrate the recording of merchandise transactions under a periodic inventory system, we will use purchase/sale transactions between PW Audio Supply, Inc. and Sauk Stereo, as illustrated for the perpetual inventory system in this chapter.

Recording Purchases of Merchandise

On the basis of the sales invoice (Illustration 5-5, shown on page 224) and receipt of the merchandise ordered from PW Audio Supply, Sauk Stereo records the \$3,800 purchase as follows.

May 4	Purchases	3,800	
	Accounts Payable		3,800
	(To record goods purchased on account from PW Audio Supply)		

Purchases is a temporary account whose normal balance is a debit.

FREIGHT COSTS

When the purchaser directly incurs the freight costs, it debits the account Freight-In (or Transportation-In). For example, if Sauk Stereo pays Acme Freight Company \$150 for freight charges on its purchase from PW Audio Supply on May 6, the entry on Sauk Stereo's books is:

May 6	Freight-In (Transportation-In)	150	
	Cash		150
	(To record payment of freight on goods purchased)		

Like Purchases, Freight-In is a temporary account whose normal balance is a debit. **Freight-In is part of cost of goods purchased**. The reason is that cost of goods purchased should include any freight charges necessary to bring the goods to the purchaser. Freight costs are not subject to a purchase discount. Purchase discounts apply only to the invoice cost of the merchandise.

Helpful Hint

Be careful not to debit purchases of equipment or supplies to a Purchases account.

Alternative Terminology

Freight-in is also called *transportation-in*.

PURCHASE RETURNS AND ALLOWANCES

Sauk Stereo returns \$300 of goods to PW Audio Supply and prepares the following entry to recognize the return.

May 8	Accounts Payable	300	
	Purchase Returns and Allowances		300
	(To record return of goods purchased from PW Audio Supply)		

Purchase Returns and Allowances is a temporary account whose normal balance is a credit.

PURCHASE DISCOUNTS

On May 14, Sauk Stereo pays the balance due on account to PW Audio Supply, taking the 2% cash discount allowed by PW Audio Supply for payment within 10 days. Sauk Stereo records the payment and discount as follows.

May 14	Accounts Payable (\$3,800 – \$300)	3,500	
	Purchase Discounts (\$3,500 × .02)		70
	Cash		3,430
	(To record payment within the discount period)		

Purchase Discounts is a temporary account whose normal balance is a credit.

Recording Sales of Merchandise

The seller, PW Audio Supply, records the sale of \$3,800 of merchandise to Sauk Stereo on May 4 (sales invoice No. 731, Illustration 5-5, page 224) as follows.

May 4	Accounts Receivable	3,800	
	Sales Revenue		3,800
	(To record credit sales per invoice #731 to Sauk Stereo)		

SALES RETURNS AND ALLOWANCES

To record the returned goods received from Sauk Stereo on May 8, PW Audio Supply records the \$300 sales return as follows.

May 8	Sales Returns and Allowances	300	
	Accounts Receivable		300
	(To record credit granted to Sauk Stereo for returned goods)		

SALES DISCOUNTS

On May 14, PW Audio Supply receives payment of \$3,430 on account from Sauk Stereo. PW Audio Supply honors the 2% cash discount and records the payment of Sauk Stereo's account receivable in full as follows.

May 14	Cash	3,430	
	Sales Discounts (\$3,500 × .02)	70	
	Accounts Receivable (\$3,800 – \$300)		3,500
	(To record collection within 2/10, n/30 discount period from Sauk Stereo)		

COMPARISON OF ENTRIES—PERPETUAL VS. PERIODIC

Illustration 5A-3 summarizes the periodic inventory entries shown in this appendix and compares them to the perpetual-system entries from the chapter. Entries that differ in the two systems are shown in color.

Entries on Sauk Stereo's Books						
Transaction		Perpetual Inventory System			Periodic Inventory System	
May 4	Purchase of merchandise on credit.	Inventory	3,800		Purchases	3,800
		Accounts Payable		3,800	Accounts Payable	3,800
6	Freight costs on purchases.	Inventory	150		Freight-In	150
		Cash		150	Cash	150
8	Purchase returns and allowances.	Accounts Payable	300		Accounts Payable	300
		Inventory	300		Purchase Returns and Allowances	300
14	Payment on account with a discount.	Accounts Payable	3,500		Accounts Payable	3,500
		Cash		3,430	Cash	3,430
		Inventory	70		Purchase Discounts	70

Entries on PW Audio Supply's Books						
Transaction		Perpetual Inventory System			Periodic Inventory System	
May 4	Sale of merchandise on credit.	Accounts Receivable	3,800		Accounts Receivable	3,800
		Sales Revenue		3,800	Sales Revenue	3,800
		Cost of Goods Sold	2,400		No entry for cost of goods sold	
		Inventory	2,400			
8	Return of merchandise sold.	Sales Returns and Allowances	300		Sales Returns and Allowances	300
		Accounts Receivable		300	Accounts Receivable	300
		Inventory	140		No entry	
		Cost of Goods Sold	140			
14	Cash received on account with a discount.	Cash	3,430		Cash	3,430
		Sales Discounts	70		Sales Discounts	70
		Accounts Receivable		3,500	Accounts Receivable	3,500

Illustration 5A-3

Comparison of entries for perpetual and periodic inventory systems

SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 5A

The Navigator

6 Explain the recording of purchases and sales of inventory under a periodic inventory system. In recording purchases under a periodic system, companies must make entries for (a) cash and credit purchases, (b) pur-

chase returns and allowances, (c) purchase discounts, and (d) freight costs. In recording sales, companies must make entries for (a) cash and credit sales, (b) sales returns and allowances, and (c) sales discounts.

APPENDIX 5B WORKSHEET FOR A MERCHANDISING COMPANY

Using a Worksheet

As indicated in Chapter 4, a worksheet enables companies to prepare financial statements before they journalize and post adjusting entries. The steps in preparing a worksheet for a merchandising company are the same as for a service company (see pages 164–167). Illustration 5B-1 (page 246) shows the worksheet for PW Audio Supply (excluding nonoperating items). The unique accounts for a merchandiser using a perpetual inventory system are in boldface letters and in red.

LEARNING OBJECTIVE

7

Prepare a worksheet for a merchandising company.

PW Audio Supply, Inc. Worksheet For the Year Ended December 31, 2014											
Accounts	Trial Balance		Adjustments		Adjusted Trial Balance		Income Statement		Balance Sheet		
	Dr.	Cr.	Dr.	Cr.	Dr.	Cr.	Dr.	Cr.	Dr.	Cr.	
Cash	9,500				9,500				9,500

Key: (a) Adjustment to inventory on hand. (b) Insurance expired. (c) Depreciation expense. (d) Salaries accrued.

Illustration 5B-1

Worksheet for merchandising company

TRIAL BALANCE COLUMNS

Data for the trial balance come from the ledger balances of PW Audio Supply at December 31. The amount shown for Inventory, \$40,500, is the year-end inventory amount from the perpetual inventory system.

ADJUSTMENTS COLUMNS

A merchandising company generally has the same types of adjustments as a service company. As you see in the worksheet, adjustments (b), (c), and (d) are for insurance, depreciation, and salaries. Pioneer Advertising Agency Inc. as illustrated in Chapters 3 and 4, also had these adjustments. Adjustment (a) was required to adjust the perpetual inventory carrying amount to the actual count.

After PW Audio Supply enters all adjustments data on the worksheet, it establishes the equality of the adjustments column totals. It then extends the balances in all accounts to the adjusted trial balance columns.

ADJUSTED TRIAL BALANCE

The adjusted trial balance shows the balance of all accounts after adjustment at the end of the accounting period.

INCOME STATEMENT COLUMNS

Next, the merchandising company transfers the accounts and balances that affect the income statement from the adjusted trial balance columns to the income statement columns. PW Audio Supply shows sales of \$480,000 in the credit column. It shows the contra-revenue accounts Sales Returns and Allowances \$12,000 and Sales Discounts \$8,000 in the debit column. The difference of \$460,000 is the net sales shown on the income statement (Illustration 5-13, page 237).

Finally, the company totals all the credits in the income statement column and compares those totals to the total of the debits in the income statement column. If the credits exceed the debits, the company has net income. PW Audio Supply has net income of \$30,000. If the debits exceed the credits, the company would report a net loss.

BALANCE SHEET COLUMNS

The major difference between the balance sheets of a service company and a merchandiser is inventory. PW Audio Supply shows the ending inventory amount of \$40,000 in the balance sheet debit column. The information to prepare the retained earnings statement is also found in these columns. That is, the retained earnings beginning balance is \$33,000. The dividends are \$15,000. Net income results when the total of the debit column exceeds the total of the credit column in the balance sheet columns. A net loss results when the total of the credits exceeds the total of the debit balances.

SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 5B

The Navigator

7 Prepare a worksheet for a merchandising company.

The steps in preparing a worksheet for a merchandising company are the same as for a service company.

The unique accounts for a merchandiser are Inventory, Sales Revenue, Sales Returns and Allowances, Sales Discounts, and Cost of Goods Sold.

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more components are available for practice in WileyPLUS.

*Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

SELF-TEST QUESTIONS

Answers are on page 267.

- (LO 1) 1. Gross profit will result if:
- operating expenses are less than net income.
 - sales revenues are greater than operating expenses.
 - sales revenues are greater than cost of goods sold.
 - operating expenses are greater than cost of goods sold.
2. Under a perpetual inventory system, when goods are purchased for resale by a company (LO 2):
- purchases on account are debited to Inventory.
 - purchases on account are debited to Purchases.
 - purchase returns are debited to Purchase Returns and Allowances.
 - freight costs are debited to Freight-Out.

- (LO 3) 3. The sales accounts that normally have a debit balance are:
 (a) Sales Discounts.
 (b) Sales Returns and Allowances.
 (c) Both (a) and (b).
 (d) Neither (a) nor (b).
- (LO 3) 4. A credit sale of \$750 is made on June 13, terms 2/10, net/30. A return of \$50 is granted on June 16. The amount received as payment in full on June 23 is:
 (a) \$700. (c) \$685.
 (b) \$686. (d) \$650.
- (LO 2) 5. Which of the following accounts will normally appear in the ledger of a merchandising company that uses a perpetual inventory system?
 (a) Purchases. (c) Cost of Goods Sold.
 (b) Freight-In. (d) Purchase Discounts.
- (LO 3) 6. To record the sale of goods for cash in a perpetual inventory system:
 (a) only one journal entry is necessary to record cost of goods sold and reduction of inventory.
 (b) only one journal entry is necessary to record the receipt of cash and the sales revenue.
 (c) two journal entries are necessary: one to record the receipt of cash and sales revenue, and one to record the cost of goods sold and reduction of inventory.
 (d) two journal entries are necessary: one to record the receipt of cash and reduction of inventory, and one to record the cost of goods sold and sales revenue.
- (LO 4) 7. The steps in the accounting cycle for a merchandising company are the same as those in a service company *except*:
 (a) an additional adjusting journal entry for inventory may be needed in a merchandising company.
 (b) closing journal entries are not required for a merchandising company.
 (c) a post-closing trial balance is not required for a merchandising company.
 (d) a multiple-step income statement is required for a merchandising company.
- (LO 5) 8. The multiple-step income statement for a merchandising company shows each of the following features *except*:
 (a) gross profit.
 (b) cost of goods sold.
 (c) a sales revenue section.
 (d) investing activities section.
9. If sales revenues are \$400,000, cost of goods sold is \$310,000, and operating expenses are \$60,000, the gross profit is:
 (a) \$30,000. (c) \$340,000.
 (b) \$90,000. (d) \$400,000.
10. A single-step income statement: (LO 5)
 (a) reports gross profit.
 (b) does not report cost of goods sold.
 (c) reports sales revenues and “Other revenues and gains” in the revenues section of the income statement.
 (d) reports operating income separately.
11. Which of the following appears on both a single-step and a multiple-step income statement? (LO 5)
 (a) inventory.
 (b) gross profit.
 (c) income from operations.
 (d) cost of goods sold.
- *12. In determining cost of goods sold: (LO 6)
 (a) purchase discounts are deducted from net purchases.
 (b) freight-out is added to net purchases.
 (c) purchase returns and allowances are deducted from net purchases.
 (d) freight-in is added to net purchases.
- *13. If beginning inventory is \$60,000, cost of goods purchased is \$380,000, and ending inventory is \$50,000, cost of goods sold is: (LO 6)
 (a) \$390,000. (c) \$330,000.
 (b) \$370,000. (d) \$420,000.
- *14. When goods are purchased for resale by a company using a periodic inventory system: (LO 6)
 (a) purchases on account are debited to Inventory.
 (b) purchases on account are debited to Purchases.
 (c) purchase returns are debited to Purchase Returns and Allowances.
 (d) freight costs are debited to Purchases.
- *15. In a worksheet, Inventory is shown in the following columns: (LO 7)
 (a) Adjusted trial balance debit and balance sheet debit.
 (b) Income statement debit and balance sheet debit.
 (c) Income statement credit and balance sheet debit.
 (d) Income statement credit and adjusted trial balance debit.

Go to the book's companion website, www.wiley.com/college/weygandt, for additional Self-Test Questions.

QUESTIONS

- (a) “The steps in the accounting cycle for a merchandising company are different from the accounting cycle for a service company.” Do you agree or disagree?
 (b) Is the measurement of net income for a merchandising company conceptually the same as for a service company? Explain.
- Why is the normal operating cycle for a merchandising company likely to be longer than for a service company?
- (a) How do the components of revenues and expenses differ between merchandising and service companies?
 (b) Explain the income measurement process in a merchandising company.
- How does income measurement differ between a merchandising and a service company?
- When is cost of goods sold determined in a perpetual inventory system?

6. Distinguish between FOB shipping point and FOB destination. Identify the freight terms that will result in a debit to Inventory by the buyer and a debit to Freight-Out by the seller.
7. Explain the meaning of the credit terms 2/10, n/30.
8. Goods costing \$2,500 are purchased on account on July 15 with credit terms of 2/10, n/30. On July 18, a \$200 credit memo is received from the supplier for damaged goods. Give the journal entry on July 24 to record payment of the balance due within the discount period using a perpetual inventory system.
9. Karen Lloyd believes revenues from credit sales may be earned before they are collected in cash. Do you agree? Explain.
10. (a) What is the primary source document for recording (1) cash sales, (2) credit sales. (b) Using XXs for amounts, give the journal entry for each of the transactions in part (a).
11. A credit sale is made on July 10 for \$700, terms 2/10, n/30. On July 12, \$100 of goods are returned for credit. Give the journal entry on July 19 to record the receipt of the balance due within the discount period.
12. Explain why the Inventory account will usually require adjustment at year-end.
13. Prepare the closing entries for the Sales Revenue account, assuming a balance of \$180,000 and the Cost of Goods Sold account with a \$125,000 balance.
14. What merchandising account(s) will appear in the post-closing trial balance?
15. Regis Co. has sales revenue of \$109,000, cost of goods sold of \$70,000, and operating expenses of \$23,000. What is its gross profit and its gross profit rate?
16. Kathy Ho Company reports net sales of \$800,000, gross profit of \$570,000, and net income of \$240,000. What are its operating expenses?
17. Identify the distinguishing features of an income statement for a merchandising company.
18. Identify the sections of a multiple-step income statement that relate to (a) operating activities, and (b) nonoperating activities.
19. How does the single-step form of income statement differ from the multiple-step form?
20.  **PEPSICO** Determine PepsiCo's gross profit rate for 2010 and 2009. Indicate whether it increased or decreased from 2009 to 2010.
- *21. Identify the accounts that are added to or deducted from Purchases to determine the cost of goods purchased. For each account, indicate whether it is added or deducted.
- *22. Goods costing \$2,000 are purchased on account on July 15 with credit terms of 2/10, n/30. On July 18, a \$200 credit was received from the supplier for damaged goods. Give the journal entry on July 24 to record payment of the balance due within the discount period, assuming a periodic inventory system.
- *23. Indicate the columns of the worksheet in which (a) inventory and (b) cost of goods sold will be shown.

BRIEF EXERCISES

BE5-1 Presented below are the components in Clearwater Company's income statement. Determine the missing amounts.

	<u>Sales Revenue</u>	<u>Cost of Goods Sold</u>	<u>Gross Profit</u>	<u>Operating Expenses</u>	<u>Net Income</u>
(a)	\$75,000	?	\$30,000	?	\$10,800
(b)	\$108,000	\$55,000	?	?	\$29,500
(c)	?	\$83,900	\$79,600	\$39,500	?

BE5-2 Giovanni Company buys merchandise on account from Gordon Company. The selling price of the goods is \$780, and the cost of the goods is \$560. Both companies use perpetual inventory systems. Journalize the transaction on the books of both companies.

BE5-3 Prepare the journal entries to record the following transactions on Benson Company's books using a perpetual inventory system.

- (a) On March 2, Benson Company sold \$800,000 of merchandise to Edgebrook Company, terms 2/10, n/30. The cost of the merchandise sold was \$620,000.
- (b) On March 6, Edgebrook Company returned \$120,000 of the merchandise purchased on March 2. The cost of the returned merchandise was \$90,000.
- (c) On March 12, Benson Company received the balance due from Edgebrook Company.

BE5-4 From the information in BE5-3, prepare the journal entries to record these transactions on Edgebrook Company's books under a perpetual inventory system.

BE5-5 At year-end, the perpetual inventory records of Salsa Company showed merchandise inventory of \$98,000. The company determined, however, that its actual inventory on hand was \$94,600. Record the necessary adjusting entry.

BE5-6 Orlaida Company has the following merchandise account balances: Sales Revenue \$192,000, Sales Discounts \$2,000, Cost of Goods Sold \$105,000, and Inventory \$40,000. Prepare the entries to record the closing of these items to Income Summary.

Compute missing amounts in determining net income.

(LO 1)

Journalize perpetual inventory entries.

(LO 2, 3)

Journalize sales transactions.

(LO 3)

Journalize purchase transactions.

(LO 2)

Prepare adjusting entry for merchandise inventory.

(LO 4)

Prepare closing entries for merchandise accounts.

(LO 4)

Prepare sales revenues section of income statement.

(LO 5)

Contrast presentation in multiple-step and single-step income statements.

(LO 5)

Compute net sales, gross profit, income from operations, and gross profit rate.

(LO 5)

Compute net purchases and cost of goods purchased.

(LO 6)

Compute cost of goods sold and gross profit.

(LO 6)

Journalize purchase transactions.

(LO 6)

Identify worksheet columns for selected accounts.

(LO 7)

BE5-7 Piccola Company provides the following information for the month ended October 31, 2014: sales on credit \$280,000, cash sales \$100,000, sales discounts \$5,000, sales returns and allowances \$18,000. Prepare the sales revenues section of the income statement based on this information.

BE5-8  Explain where each of the following items would appear on (1) a multiple-step income statement, and on (2) a single-step income statement: (a) gain on sale of equipment, (b) interest expense, (c) casualty loss from vandalism, and (d) cost of goods sold.

BE5-9 Assume Jose Company has the following reported amounts: Sales revenue \$506,000, Sales returns and allowances \$13,000, Cost of goods sold \$330,000, Operating expenses \$110,000. Compute the following: (a) net sales, (b) gross profit, (c) income from operations, and (d) gross profit rate. (Round to one decimal place.)

***BE5-10** Assume that Guardian Company uses a periodic inventory system and has these account balances: Purchases \$430,000; Purchase Returns and Allowances \$13,000; Purchase Discounts \$8,000; and Freight-In \$16,000. Determine net purchases and cost of goods purchased.

***BE5-11** Assume the same information as in BE5-10 and also that Guardian Company has beginning inventory of \$60,000, ending inventory of \$90,000, and net sales of \$680,000. Determine the amounts to be reported for cost of goods sold and gross profit.

***BE5-12** Prepare the journal entries to record these transactions on Huntington Company's books using a periodic inventory system.

- (a) On March 2, Huntington Company purchased \$900,000 of merchandise from Saunder Company, terms 2/10, n/30.
- (b) On March 6, Huntington Company returned \$184,000 of the merchandise purchased on March 2.
- (c) On March 12, Huntington Company paid the balance due to Saunder Company.

***BE5-13** Presented below is the format of the worksheet presented in the chapter.

Trial Balance		Adjustments		Adjusted Trial Balance		Income Statement		Balance Sheet	
Dr.	Cr.	Dr.	Cr.	Dr.	Cr.	Dr.	Cr.	Dr.	Cr.

Indicate where the following items will appear on the worksheet: (a) Cash, (b) Inventory, (c) Sales revenue, and (d) Cost of goods sold.

Example:

Cash: Trial balance debit column; Adjusted trial balance debit column; and Balance sheet debit column.

> DO IT! REVIEW

Record transactions of purchasing company.

(LO 2)

DO IT! 5-1 On October 5, Gibson Company buys merchandise on account from Quincy Company. The selling price of the goods is \$4,700, and the cost to Quincy Company is \$3,100. On October 8, Gibson returns defective goods with a selling price of \$650 and a fair value of \$160. Record the transactions on the books of Gibson Company.

Record transactions of selling company.

(LO 3)

DO IT! 5-2 Assume information similar to that in **DO IT! 5-1**. That is: On October 5, Gibson Company buys merchandise on account from Quincy Company. The selling price of the goods is \$4,700, and the cost to Quincy Company is \$3,100. On October 8, Gibson returns defective goods with a selling price of \$650 and a fair value of \$160. Record the transactions on the books of Quincy Company.

Prepare closing entries for a merchandising company.

(LO 4)

DO IT! 5-3 The trial balance of Optique's Boutique at December 31 shows Inventory \$21,000, Sales Revenue \$156,000, Sales Returns and Allowances \$4,000, Sales Discounts \$3,000, Cost of Goods Sold \$92,400, Interest Revenue \$3,000, Freight-Out \$1,900, Utilities Expense \$7,400, and Salaries and Wages Expense \$19,500. Prepare the closing entries for Optique.

DO IT! 5-4 Dorothea Company is preparing its multiple-step income statement, retained earnings statement, and classified balance sheet. Using the column heads *Account*, *Financial Statement*, and *Classification*, indicate in which financial statement and under what classification each of the following would be reported.

Classify financial statement accounts.

(LO 5)

EXERCISES

E5-1 Mr. Soukup has prepared the following list of statements about service companies and merchandisers.

Answer general questions about merchandisers.

1. Measuring net income for a merchandiser is conceptually the same as for a service company.
2. For a merchandiser, sales less operating expenses is called gross profit.
3. For a merchandiser, the primary source of revenues is the sale of inventory.
4. Sales salaries and wages is an example of an operating expense.
5. The operating cycle of a merchandiser is the same as that of a service company.
6. In a perpetual inventory system, no detailed inventory records of goods on hand are maintained.
7. In a periodic inventory system, the cost of goods sold is determined only at the end of the accounting period.
8. A periodic inventory system provides better control over inventories than a perpetual system.

(LO 1)

Instructions

Identify each statement as true or false. If false, indicate how to correct the statement.

E5-2 Information related to Duffy Co. is presented below.

Journalize purchases transactions.

1. On April 5, purchased merchandise from Thomas Company for \$25,000, terms 2/10, net/30, FOB shipping point.
2. On April 6, paid freight costs of \$900 on merchandise purchased from Thomas.
3. On April 7, purchased equipment on account for \$26,000.

(LO 2)

4. On April 8, returned damaged merchandise to Thomas Company and was granted a \$2,600 credit for returned merchandise.
5. On April 15, paid the amount due to Thomas Company in full.

Instructions

- (a) Prepare the journal entries to record these transactions on the books of Duffy Co. under a perpetual inventory system.
- (b) Assume that Duffy Co. paid the balance due to Thomas Company on May 4 instead of April 15. Prepare the journal entry to record this payment.

Journalize perpetual inventory entries.

(LO 2, 3)

E5-3 On September 1, Roshek Office Supply had an inventory of 30 calculators at a cost of \$22 each. The company uses a perpetual inventory system. During September, the following transactions occurred.

- Sept. 6 Purchased 90 calculators at \$20 each from Harlow Co., terms 2/10, n/30.
- 9 Paid freight of \$180 on calculators purchased from Harlow Co.
- 10 Returned 3 calculators to Harlow Co. for \$66 credit (including freight) because they did not meet specifications.
- 12 Sold 26 calculators costing \$22 (including freight) for \$33 each to Village Book Store, terms n/30.
- 14 Granted credit of \$33 to Village Book Store for the return of one calculator that was not ordered.
- 20 Sold 40 calculators costing \$22 for \$32 each to Dixie Card Shop, terms n/30.

Instructions

Journalize the September transactions.

Prepare purchase and sale entries.

(LO 2, 3)

E5-4 On June 10, Rebecca Company purchased \$7,600 of merchandise from Clinton Company, FOB shipping point, terms 2/10, n/30. Rebecca pays the freight costs of \$400 on June 11. Damaged goods totaling \$300 are returned to Clinton for credit on June 12. The fair value of these goods is \$70. On June 19, Rebecca pays Clinton Company in full, less the purchase discount. Both companies use a perpetual inventory system.

Instructions

- (a) Prepare separate entries for each transaction on the books of Rebecca Company.
- (b) Prepare separate entries for each transaction for Clinton Company. The merchandise purchased by Rebecca on June 10 had cost Clinton \$4,300.

Journalize sales transactions.

(LO 3)

E5-5 Presented below are transactions related to Yarrow Company.

1. On December 3, Yarrow Company sold \$570,000 of merchandise to Lampkins Co., terms 1/10, n/30, FOB shipping point. The cost of the merchandise sold was \$364,800.
2. On December 8, Lampkins Co. was granted an allowance of \$20,000 for merchandise purchased on December 3.
3. On December 13, Yarrow Company received the balance due from Lampkins Co.

Instructions

- (a) Prepare the journal entries to record these transactions on the books of Yarrow Company using a perpetual inventory system.
- (b) Assume that Yarrow Company received the balance due from Lampkins Co. on January 2 of the following year instead of December 13. Prepare the journal entry to record the receipt of payment on January 2.

Prepare sales revenues section and closing entries.

(LO 4, 5)

E5-6 The adjusted trial balance of Mendoza Company shows the following data pertaining to sales at the end of its fiscal year October 31, 2014: Sales Revenue \$820,000, Freight-Out \$16,000, Sales Returns and Allowances \$28,000, and Sales Discounts \$13,000.

Instructions

- (a) Prepare the sales revenues section of the income statement.
- (b) Prepare separate closing entries for (1) sales, and (2) the contra accounts to sales.

Prepare adjusting and closing entries.

(LO 4)

E5-7 Twix Company had the following account balances at year-end: Cost of Goods Sold \$60,000; Inventory \$15,000; Operating Expenses \$29,000; Sales Revenue \$115,000; Sales Discounts \$1,300; and Sales Returns and Allowances \$1,700. A physical count of inventory determines that merchandise inventory on hand is \$13,600.

Instructions

- (a) Prepare the adjusting entry necessary as a result of the physical count.
- (b) Prepare closing entries.

E5-8 Presented below is information related to Taylor Co. for the month of January 2014.

Ending inventory per perpetual records	\$ 21,600	Insurance expense	\$ 12,000
Ending inventory actually on hand	21,000	Rent expense	20,000
Cost of goods sold	208,000	Salaries and wages expense	59,000
Freight-out	7,000	Sales discounts	8,000
		Sales returns and allowances	13,000
		Sales revenue	378,000

Prepare adjusting and closing entries.

(LO 4)

Instructions

- (a) Prepare the necessary adjusting entry for inventory.
- (b) Prepare the necessary closing entries.

E5-9 Presented below is information for Bach Company for the month of March 2014.

Cost of goods sold	\$212,000	Rent expense	\$ 32,000
Freight-out	9,000	Sales discounts	6,600
Insurance expense	6,000	Sales returns and allowances	13,000
Salaries and wages expense	58,000	Sales revenue	380,000

Prepare multiple-step income statement.

(LO 5)

Instructions

- (a) Prepare a multiple-step income statement.
- (b) Compute the gross profit rate.

E5-10 In its income statement for the year ended December 31, 2014, Michael Company reported the following condensed data.

Operating expenses	\$ 725,000	Interest revenue	\$ 33,000
Cost of goods sold	1,256,000	Loss on disposal of plant assets	17,000
Interest expense	70,000	Net sales	2,200,000

Prepare multiple-step and single-step income statements.

(LO 5)

Instructions

- (a) Prepare a multiple-step income statement.
- (b) Prepare a single-step income statement.

E5-11 An inexperienced accountant for Gulliver Company made the following errors in recording merchandising transactions.

1. A \$175 refund to a customer for faulty merchandise was debited to Sales Revenue \$175 and credited to Cash \$175.
2. A \$150 credit purchase of supplies was debited to Inventory \$150 and credited to Cash \$150.
3. A \$215 sales discount was debited to Sales Revenue.
4. A cash payment of \$20 for freight on merchandise purchases was debited to Freight-Out \$200 and credited to Cash \$200.

Prepare correcting entries for sales and purchases.

(LO 2, 3)

Instructions

Prepare separate correcting entries for each error, assuming that the incorrect entry is not reversed. (Omit explanations.)

E5-12 In 2014, Endeavor Company had net sales of \$860,000 and cost of goods sold of \$533,200. Operating expenses were \$221,000, and interest expense was \$7,000. Endeavor prepares a multiple-step income statement.

Compute various income measures.

(LO 5)

Instructions

- (a) Compute Endeavor's gross profit.
- (b) Compute the gross profit rate. Why is this rate computed by financial statement users?
- (c) What is Endeavor's income from operations and net income?
- (d) If Endeavor prepared a single-step income statement, what amount would it report for net income?
- (e) In what section of its classified balance sheet should Endeavor report merchandise inventory?

E5-13 Presented below is financial information for two different companies.

	<u>Lee Company</u>	<u>Chan Company</u>
Sales revenue	\$90,000	(d)
Sales returns	(a)	\$ 5,000
Net sales	81,000	98,000
Cost of goods sold	56,000	(e)
Gross profit	(b)	37,500
Operating expenses	12,000	(f)
Net income	(c)	15,000

Compute missing amounts and compute gross profit rate.

(LO 5)

Instructions

- (a) Determine the missing amounts.
- (b) Determine the gross profit rates. (Round to one decimal place.)

Compute missing amounts.

(LO 5)

E5-14 Financial information is presented below for three different companies.

	Athena Cosmetics	Harry Grocery	Panama Wholesalers
Sales revenue	\$90,000	\$ (e)	\$122,000
Sales returns and allowances	(a)	5,000	12,000
Net sales	86,000	95,000	(i)
Cost of goods sold	56,000	(f)	(j)
Gross profit	(b)	22,000	24,000
Operating expenses	15,000	(g)	18,000
Income from operations	(c)	(h)	(k)
Other expenses and losses	4,000	3,000	(l)
Net income	(d)	11,000	5,000

Instructions

Determine the missing amounts.

Prepare cost of goods sold section.

(LO 6)

***E5-15** The trial balance of Roman Company at the end of its fiscal year, August 31, 2014, includes these accounts: Inventory \$17,200; Purchases \$149,000; Sales Revenue \$190,000; Freight-In \$5,000; Sales Returns and Allowances \$3,000; Freight-Out \$1,000; and Purchase Returns and Allowances \$6,000. The ending inventory is \$14,000.

Instructions

Prepare a cost of goods sold section for the year ending August 31 (periodic inventory).

Compute various income statement items.

(LO 6)

***E5-16** On January 1, 2014, Clover Corporation had inventory of \$50,000. At December 31, 2014, Clover had the following account balances.

Freight-in	\$ 4,000
Purchases	509,000
Purchase discounts	6,000
Purchase returns and allowances	8,000
Sales revenue	840,000
Sales discounts	7,000
Sales returns and allowances	11,000

At December 31, 2014, Clover determines that its ending inventory is \$60,000.

Instructions

- (a) Compute Clover's 2014 gross profit.
- (b) Compute Clover's 2014 operating expenses if net income is \$130,000 and there are no nonoperating activities.

Prepare cost of goods sold section.

(LO 6)

***E5-17** Below is a series of cost of goods sold sections for companies Alpha, Beta, Chi, and Decca.

	Alpha	Beta	Chi	Decca
Beginning inventory	\$ 150	\$ 70	\$1,000	\$ (j)
Purchases	1,620	1,060	(g)	43,590
Purchase returns and allowances	40	(d)	290	(k)
Net purchases	(a)	1,030	6,210	41,090
Freight-in	95	(e)	(h)	2,240
Cost of goods purchased	(b)	1,280	7,940	(l)
Cost of goods available for sale	1,825	1,350	(i)	49,530
Ending inventory	310	(f)	1,450	6,230
Cost of goods sold	(c)	1,260	7,490	43,300

Instructions

Fill in the lettered blanks to complete the cost of goods sold sections.

Journalize purchase transactions.

(LO 6)

***E5-18** This information relates to Olaf Co.

1. On April 5, purchased merchandise from DeVito Company for \$18,000, terms 2/10, net/30, FOB shipping point.
2. On April 6, paid freight costs of \$820 on merchandise purchased from DeVito Company.
3. On April 7, purchased equipment on account for \$30,000.

4. On April 8, returned some of April 5 merchandise, which cost \$2,800, to DeVito Company.
5. On April 15, paid the amount due to DeVito Company in full.

Instructions

- (a) Prepare the journal entries to record these transactions on the books of Olaf Co. using a periodic inventory system.
- (b) Assume that Olaf Co. paid the balance due to DeVito Company on May 4 instead of April 15. Prepare the journal entry to record this payment.

***E5-19** Presented below is information related to Chile Co.

1. On April 5, purchased merchandise from Graham Company for \$16,000, terms 2/10, net/30, FOB shipping point.
2. On April 6, paid freight costs of \$800 on merchandise purchased from Graham.
3. On April 7, purchased equipment on account from Reed Mfg. Co. for \$27,000.
4. On April 8, returned merchandise, which cost \$4,000, to Graham Company.
5. On April 15, paid the amount due to Graham Company in full.

Journalize purchase transactions.

(LO 6)

Instructions

- (a) Prepare the journal entries to record these transactions on the books of Chile Co. using a periodic inventory system.
- (b) Assume that Chile Co. paid the balance due to Graham Company on May 4 instead of April 15. Prepare the journal entry to record this payment.

***E5-20** Presented below are selected accounts for Higley Company as reported in the worksheet at the end of May 2014.

Complete worksheet.

(LO 7)

Accounts	Adjusted Trial Balance		Income Statement		Balance Sheet	
	Dr.	Cr.	Dr.	Cr.	Dr.	Cr.
Cash	9,000					
Inventory	76,000					
Sales Revenue		460,000				
Sales Returns and Allowances	10,000					
Sales Discounts	9,000					
Cost of Goods Sold	288,000					

Instructions

Complete the worksheet by extending amounts reported in the adjusted trial balance to the appropriate columns in the worksheet. Do not total individual columns.

***E5-21** The trial balance columns of the worksheet for Adelle Company at June 30, 2014, are as follows.

Prepare a worksheet.

(LO 7)

**Adelle Company
Worksheet
For the Month Ended June 30, 2014**

Account Titles	Trial Balance	
	Debit	Credit
Cash	\$ 2,120	
Accounts Receivable	2,440	
Inventory	11,640	
Accounts Payable		\$ 1,120
Common Stock		4,000
Sales Revenue		42,500
Cost of Goods Sold	20,560	
Operating Expenses	10,860	
	\$47,620	\$47,620

Other data:

Operating expenses incurred on account, but not yet recorded, total \$1,500.

Instructions

Enter the trial balance on a worksheet and complete the worksheet.

EXERCISES: SET B AND
CHALLENGE EXERCISES

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Exercise Set B and Challenge Exercises.

PROBLEMS: SET A

Journalize purchase and sales transactions under a perpetual inventory system.

(LO 2, 3)

P5-1A Ready-Set-Go Co. distributes suitcases to retail stores and extends credit terms of 1/10, n/30 to all of its customers. At the end of June, Ready-Set-Go's inventory consisted of suitcases costing \$1,200. During the month of July, the following merchandising transactions occurred.

- July 1 Purchased suitcases on account for \$1,500 from Trunk Manufacturers, FOB destination, terms 2/10, n/30. The appropriate party also made a cash payment of \$100 for freight on this date.
- 3 Sold suitcases on account to Satchel World for \$2,200. The cost of suitcases sold is \$1,400.
- 9 Paid Trunk Manufacturers in full.
- 12 Received payment in full from Satchel World.
- 17 Sold suitcases on account to Lady GoGo for \$1,400. The cost of the suitcases sold was \$1,010.
- 18 Purchased suitcases on account for \$1,900 from Holiday Manufacturers, FOB shipping point, terms 1/10, n/30. The appropriate party also made a cash payment of \$125 for freight on this date.
- 20 Received \$300 credit (including freight) for suitcases returned to Holiday Manufacturers.
- 21 Received payment in full from Lady GoGo.
- 22 Sold suitcases on account to Vagabond for \$2,250. The cost of suitcases sold was \$1,350.
- 30 Paid Holiday Manufacturers in full.
- 31 Granted Vagabond \$200 credit for suitcases returned costing \$120.

Ready-Set-Go's chart of accounts includes the following: No. 101 Cash, No. 112 Accounts Receivable, No. 120 Inventory, No. 201 Accounts Payable, No. 401 Sales Revenue, No. 412 Sales Returns and Allowances, No. 414 Sales Discounts, and No. 505 Cost of Goods Sold.

Instructions

Journalize the transactions for the month of July for Ready-Set-Go using a perpetual inventory system.

Journalize, post, and prepare a partial income statement.

(LO 2, 3, 5)

P5-2A Shmi Distributing Company completed the following merchandising transactions in the month of April. At the beginning of April, the ledger of Shmi showed Cash of \$8,000 and Common Stock of \$8,000.

- Apr. 2 Purchased merchandise on account from Walker Supply Co. \$6,200, terms 1/10, n/30.
- 4 Sold merchandise on account \$5,500, FOB destination, terms 1/10, n/30. The cost of the merchandise sold was \$3,400.
- 5 Paid \$240 freight on April 4 sale.
- 6 Received credit from Walker Supply Co. for merchandise returned \$500.
- 11 Paid Walker Supply Co. in full, less discount.
- 13 Received collections in full, less discounts, from customers billed on April 4.
- 14 Purchased merchandise for cash \$3,800.
- 16 Received refund from supplier for returned goods on cash purchase of April 14, \$500.
- 18 Purchased merchandise from Benjamin Distributors \$4,500, FOB shipping point, terms 2/10, n/30.
- 20 Paid freight on April 18 purchase \$160.
- 23 Sold merchandise for cash \$7,400. The merchandise sold had a cost of \$4,120.

- Apr. 26 Purchased merchandise for cash \$2,300.
- 27 Paid Benjamin Distributors in full, less discount.
- 29 Made refunds to cash customers for defective merchandise \$90. The returned merchandise had a fair value of \$30.
- 30 Sold merchandise on account \$3,400, terms n/30. The cost of the merchandise sold was \$1,900.

Shmi Distributing Company's chart of accounts includes the following: No. 101 Cash, No. 112 Accounts Receivable, No. 120 Inventory, No. 201 Accounts Payable, No. 311 Common Stock, No. 401 Sales Revenue, No. 412 Sales Returns and Allowances, No. 414 Sales Discounts, No. 505 Cost of Goods Sold, and No. 644 Freight-Out.

Instructions

- (a) Journalize the transactions using a perpetual inventory system.
- (b) Enter the beginning cash and capital balances, and post the transactions. (Use J1 for the journal reference.)
- (c) Prepare the income statement through gross profit for the month of April 2014.

P5-3A Starz Department Store is located near the Towne Shopping Mall. At the end of the company's calendar year on December 31, 2014, the following accounts appeared in two of its trial balances.

	<u>Unadjusted</u>	<u>Adjusted</u>		<u>Unadjusted</u>	<u>Adjusted</u>
Accounts Payable	\$ 79,300	\$ 80,300	Interest Revenue	\$ 4,000	\$ 4,000
Accounts Receivable	50,300	50,300	Inventory	75,000	75,000
Accumulated Depr.—Buildings	42,100	52,500	Mortgage Payable	80,000	80,000
Accumulated Depr.—Equipment	29,600	42,900	Prepaid Insurance	9,600	2,400
Buildings	290,000	290,000	Property Tax Expense		4,800
Cash	23,800	23,800	Property Taxes Payable		4,800

- 13 Paid Jay-Mac Co. in full.
- 14 Purchased tennis shirts and shorts from Everett Sportswear \$800, FOB shipping point, terms 3/10, n/60.
- 15 Received cash refund of \$50 from Venus Sports for damaged merchandise that was returned.
- 17 Paid freight on Everett Sportswear purchase \$30.
- 18 Sold merchandise to members \$980, terms n/30. The cost of the merchandise sold was \$520.

(c) Gross profit \$6,765

Prepare financial statements and adjusting and closing entries.

(LO 4, 5)

(a) Net income \$128,500
 Retained earnings \$169,100
 Total assets \$456,100

Journalize, post, and prepare a trial balance.

(LO 2, 3, 4)

- Apr. 20 Received \$600 in cash from members in settlement of their accounts.
- 21 Paid Everett Sportswear in full.
- 27 Granted an allowance of \$40 to members for tennis clothing that did not fit properly.
- 30 Received cash payments on account from members, \$820.

The chart of accounts for the tennis shop includes the following: No. 101 Cash, No. 112 Accounts Receivable, No. 120 Inventory, No. 201 Accounts Payable, No. 311 Common Stock, No. 401 Sales Revenue, No. 412 Sales Returns and Allowances, and No. 505 Cost of Goods Sold.

Instructions

- (a) Journalize the April transactions using a perpetual inventory system.
- (b) Enter the beginning balances in the ledger accounts and post the April transactions. (Use J1 for the journal reference.)
- (c) Prepare a trial balance on April 30, 2014.

(c) Total debits \$6,130

Determine cost of goods sold and gross profit under periodic approach.

(LO 6)

***P5-5A** At the end of Apex Department Store’s fiscal year on December 31, 2014, these accounts appeared in its adjusted trial balance.

Freight-In	\$ 5,600
Inventory	40,500
Purchases	442,000
Purchase Discounts	12,000
Purchase Returns and Allowances	6,400
Sales Revenue	718,000
Sales Returns and Allowances	18,000

Additional facts:

- 1. Merchandise inventory on December 31, 2014, is \$65,000.
- 2. Apex Department Store uses a periodic system.

Instructions

Prepare an income statement through gross profit for the year ended December 31, 2014.

Gross profit \$295,300

Calculate missing amounts and assess profitability.

(LO 6)

***P5-6A** Valerie Fons operates a retail clothing operation. She purchases all merchandise inventory on credit and uses a periodic inventory system. The Accounts Payable account is used for recording inventory purchases only; all other current liabilities are accrued in separate accounts. You are provided with the following selected information for the fiscal years 2011–2014.

	<u>2011</u>	<u>2012</u>	<u>2013</u>	<u>2014</u>
Inventory (ending)	\$13,000	\$ 11,300	\$ 14,700	\$ 12,200
Accounts payable (ending)	20,000			
Sales revenue		225,700	240,300	235,000
Purchases of merchandise inventory on account		141,000	150,000	132,000
Cash payments to suppliers		135,000	161,000	127,000

Instructions

- (a) Calculate cost of goods sold for each of the 2012, 2013, and 2014 fiscal years.
- (b) Calculate the gross profit for each of the 2012, 2013, and 2014 fiscal years.
- (c) Calculate the ending balance of accounts payable for each of the 2012, 2013, and 2014 fiscal years.
- (d) Sales declined in fiscal 2014. Does that mean that profitability, as measured by the gross profit rate, necessarily also declined? Explain, calculating the gross profit rate for each fiscal year to help support your answer. (Round to one decimal place.)

(a) 2013 \$146,600

(c) 2013 Ending accts payable \$16,000

Journalize, post, and prepare trial balance and partial income statement using periodic approach.

(LO 6)

***P5-7A** At the beginning of the current season, the ledger of Village Tennis Shop showed Cash \$2,500; Inventory \$1,700; and Common Stock \$4,200. The following transactions were completed during April.

- Apr. 4 Purchased racquets and balls from Lowell Co. \$860, terms 3/10, n/30.
- 6 Paid freight on Lowell Co. purchase \$74.
- 8 Sold merchandise to members \$900, terms n/30.
- 10 Received credit of \$60 from Lowell Co. for a racquet that was returned.

- Apr. 11 Purchased tennis shoes from Volker Sports for cash \$300.
 13 Paid Lowell Co. in full.
 14 Purchased tennis shirts and shorts from Linzey Sportswear \$700, terms 2/10, n/60.
 15 Received cash refund of \$50 from Volker Sports for damaged merchandise that was returned.
 17 Paid freight on Linzey Sportswear purchase \$30.
 18 Sold merchandise to members \$1,200, terms n/30.
 20 Received \$500 in cash from members in settlement of their accounts.
 21 Paid Linzey Sportswear in full.
 27 Granted an allowance of \$25 to members for tennis clothing that did not fit properly.
 30 Received cash payments on account from members \$620.

The chart of accounts for the tennis shop includes Cash, Accounts Receivable, Inventory, Accounts Payable, Common Stock, Sales Revenue, Sales Returns and Allowances, Purchases, Purchase Returns and Allowances, Purchase Discounts, and Freight-In.

Instructions

- (a) Journalize the April transactions using a periodic inventory system.
 (b) Using T-accounts, enter the beginning balances in the ledger accounts and post the April transactions.
 (c) Prepare a trial balance on April 30, 2014.
 (d) Prepare an income statement through gross profit, assuming inventory on hand at April 30 is \$2,296.

(c) Tot. trial balance \$6,448
 (d) Gross profit \$855

- *P5-8A** The trial balance of Mr. Rosiak Fashion Center contained the following accounts at November 30, the end of the company's fiscal year.

Complete accounting cycle beginning with a worksheet.

(LO 4, 5, 7)

Mr. Rosiak Fashion Center Trial Balance November 30, 2014

	<u>Debit</u>	<u>Credit</u>
Cash	\$ 8,700	
Accounts Receivable	27,700	
Inventory	44,700	
Supplies	6,200	
Equipment	133,000	
Accumulated Depreciation—Equipment		\$ 23,000
Notes Payable		51,000
Accounts Payable		48,500
Common Stock		50,000
Retained Earnings		38,000
Dividends	8,000	
Sales Revenue		755,200
Sales Returns and Allowances	12,800	
Cost of Goods Sold	497,400	
Salaries and Wages Expense	136,000	
Advertising Expense	24,400	
Utilities Expense	14,000	
Maintenance and Repairs Expense	12,100	
Freight-Out	16,700	
Rent Expense	24,000	
Totals	<u>\$965,700</u>	<u>\$965,700</u>

Adjustment data:

- Supplies on hand totaled \$2,100.
- Depreciation is \$11,500 on the equipment.
- Interest of \$4,000 is accrued on notes payable at November 30.
- Inventory actually on hand is \$44,520.

- (a) Adj. trial balance
 \$981,200

Common Stock	50,000	50,000	Rent Expense	15,000	15,000
Cost of Goods Sold	507,000	507,000	Retained Earnings	61,700	61,700
Depreciation Expense		11,000	Salaries and Wages Expense	96,000	96,000
Dividends	8,000	8,000	Sales Commissions Expense	6,500	13,500
Equipment	154,300	154,300	Sales Commissions Payable		7,000
Freight-Out	6,500	6,500	Sales Returns and Allowances	9,000	9,000
Insurance Expense		7,000	Sales Revenue	706,000	706,000
Interest Expense	6,100	6,100	Utilities Expense	8,500	8,500
Interest Revenue	8,000	8,000			
Inventory	26,000	26,000			

Instructions

- (a) Prepare a multiple-step income statement, a retained earnings statement, and a classified balance sheet. Notes payable are due in 2017.
- (b) Journalize the adjusting entries that were made.
- (c) Journalize the closing entries that are necessary.

(a) Net income \$30,900
 Retained earnings \$84,600
 Total assets \$207,300

P5-4B Bill Kokott, a former disc golf star, operates Bill’s Discorama. At the beginning of the current season on April 1, the ledger of Bill’s Discorama showed Cash \$1,850, Inventory \$2,150, and Common Stock \$4,000. The following transactions were completed during April.

Journalize, post, and prepare a trial balance.

(LO 2, 3, 4)

- Apr. 5 Purchased golf discs, bags, and other inventory on account from Ellis Co. \$1,200, FOB shipping point, terms 2/10, n/60.
- 7 Paid freight on the Ellis purchase \$75.
- 9 Received credit from Ellis Co. for merchandise returned \$100.
- 10 Sold merchandise on account for \$930, terms n/30. The merchandise sold had a cost of \$540.
- 12 Purchased disc golf shirts and other accessories on account from Penguin Sportswear \$720, terms 1/10, n/30.
- 14 Paid Ellis Co. in full, less discount.
- 17 Received credit from Penguin Sportswear for merchandise returned \$120.
- 20 Made sales on account for \$610, terms n/30. The cost of the merchandise sold was \$370.

- Apr. 21 Paid Penguin Sportswear in full, less discount.
- 27 Granted an allowance to members for clothing that was flawed \$20.
- 30 Received payments on account from customers \$960.

The chart of accounts for the store includes the following: No. 101 Cash, No. 112 Accounts Receivable, No. 120 Inventory, No. 201 Accounts Payable, No. 311 Common Stock, No. 401 Sales Revenue, No. 412 Sales Returns and Allowances, and No. 505 Cost of Goods Sold.

Instructions

- (a) Journalize the April transactions using a perpetual inventory system.
- (b) Enter the beginning balances in the ledger accounts and post the April transactions. (Use J1 for the journal reference.)
- (c) Prepare a trial balance on April 30, 2014.

(c) Total debits \$5,540

Determine cost of goods sold and gross profit under periodic approach.

(LO 6)

***P5-5B** At the end of Stampfer Department Store’s fiscal year on November 30, 2014, these accounts appeared in its adjusted trial balance.

Freight-In	\$ 7,500
Inventory	40,000
Purchases	585,000
Purchase Discounts	5,300
Purchase Returns and Allowances	2,900
Sales Revenue	1,000,000
Sales Returns and Allowances	28,000

Additional facts:

- 1. Merchandise inventory on November 30, 2014, is \$54,600.
- 2. Stampfer Department Store uses a periodic system.

Instructions

Prepare an income statement through gross profit for the year ended November 30, 2014.

Gross profit \$402,300

Calculate missing amounts and assess profitability.

(LO 6)

***P5-6B** Psang Inc. operates a retail operation that purchases and sells home entertainment products. The company purchases all merchandise inventory on credit and uses a periodic inventory system. The Accounts Payable account is used for recording inventory purchases only; all other current liabilities are accrued in separate accounts. You are provided with the following selected information for the fiscal years 2011 through 2014, inclusive.

	<u>2011</u>	<u>2012</u>	<u>2013</u>	<u>2014</u>
Income Statement Data				
Sales revenue		\$53,000	\$ (e)	\$46,000
Cost of goods sold		(a)	13,800	14,300
Gross profit		38,300	35,200	(i)
Operating expenses		35,900	(f)	28,600
Net income		\$ (b)	\$ 2,500	\$ (j)
Balance Sheet Data				
Inventory	\$7,200	\$ (c)	\$ 8,100	\$ (k)
Accounts payable	3,200	3,400	2,500	(l)
Additional Information				
Purchases of merchandise inventory on account		\$14,200	\$ (g)	\$13,200
Cash payments to suppliers		(d)	(h)	13,600

Instructions

- (a) Calculate the missing amounts.
- (b) Sales declined over the 3-year fiscal period, 2012–2014. Does that mean that profitability necessarily also declined? Explain, computing the gross profit rate and the profit margin ratio for each fiscal year to help support your answer. (Round to one decimal place.)

***P5-7B** At the beginning of the current season on April 1, the ledger of Tri-State Pro Shop showed Cash \$3,000; Inventory \$4,000; and Common Stock \$7,000. These transactions occurred during April 2014.

(c) \$6,700
(g) \$15,200
(i) \$31,700

Journalize, post, and prepare trial balance and partial income statement using periodic approach.

(LO 6)

- Apr. 5 Purchased golf bags, clubs, and balls on account from Balata Co. \$1,300, FOB shipping point, terms 2/10, n/60.
 7 Paid freight on Balata Co. purchases \$70.
 9 Received credit from Balata Co. for merchandise returned \$100.
 10 Sold merchandise on account to members \$670, terms n/30.
 12 Purchased golf shoes, sweaters, and other accessories on account from Arrow Sportswear \$450, terms 1/10, n/30.
 14 Paid Balata Co. in full.
 17 Received credit from Arrow Sportswear for merchandise returned \$50.
 20 Made sales on account to members \$600, terms n/30.
 21 Paid Arrow Sportswear in full.
 27 Granted credit to members for clothing that had flaws \$55.
 30 Received payments on account from members \$630.

The chart of accounts for the pro shop includes Cash, Accounts Receivable, Inventory, Accounts Payable, Common Stock, Sales Revenue, Sales Returns and Allowances, Purchases, Purchase Returns and Allowances, Purchase Discounts, and Freight-In.

Instructions

- (a) Journalize the April transactions using a periodic inventory system.
 (b) Using T-accounts, enter the beginning balances in the ledger accounts and post the April transactions.
 (c) Prepare a trial balance on April 30, 2014.
 (d) Prepare an income statement through gross profit, assuming merchandise inventory on hand at April 30 is \$4,824.

(c) Tot. trial balance \$8,448
 Gross profit \$397

PROBLEMS: SET C

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Problem Set C.

COMPREHENSIVE PROBLEM

CP5 On December 1, 2014, Jurczyk Distributing Company had the following account balances.

	<u>Debits</u>		<u>Credits</u>
Cash	\$ 7,200	Accumulated Depreciation—	
Accounts Receivable	4,600	Equipment	\$ 2,200
Inventory	12,000	Accounts Payable	4,500
Supplies	1,200	Salaries and Wages Payable	1,000
Equipment	22,000	Common Stock	30,000
	<u>\$47,000</u>	Retained Earnings	9,300
			<u>\$47,000</u>

During December, the company completed the following summary transactions.

- Dec. 6 Paid \$1,600 for salaries and wages due employees, of which \$600 is for December and \$1,000 is for November salaries and wages payable.
 8 Received \$2,100 cash from customers in payment of account (no discount allowed).
 10 Sold merchandise for cash \$6,600. The cost of the merchandise sold was \$4,100.
 13 Purchased merchandise on account from Gong Co. \$9,000, terms 2/10, n/30.
 15 Purchased supplies for cash \$2,000.
 18 Sold merchandise on account \$12,000, terms 3/10, n/30. The cost of the merchandise sold was \$8,400.
 20 Paid salaries and wages \$1,800.
 23 Paid Gong Co. in full, less discount.
 27 Received collections in full, less discounts, from customers billed on December 18.

Adjustment data:

1. Accrued salaries and wages payable \$800.
2. Depreciation \$200 per month.
3. Supplies on hand \$1,700.

Instructions

- (a) Journalize the December transactions using a perpetual inventory system.
- (b) Enter the December 1 balances in the ledger T-accounts and post the December transactions. Use Cost of Goods Sold, Depreciation Expense, Salaries and Wages Expense, Sales Revenue, Sales Discounts, and Supplies Expense.
- (c) Journalize and post adjusting entries.
- (d) Prepare an adjusted trial balance.
- (e) Prepare an income statement and a retained earnings statement for December and a classified balance sheet at December 31.

(d) Totals \$65,600
 (e) Net income \$840

CONTINUING COOKIE CHRONICLE

(Note: This is a continuation of the Cookie Chronicle from Chapters 1–4.)

CCC5 Because Natalie has had such a successful first few months, she is considering other opportunities to develop her business. One opportunity is the sale of fine European mixers. The owner of Kzinski Supply Company has approached Natalie to become the exclusive U.S. distributor of these fine mixers in her state. The current cost of a mixer is approximately \$575 (U.S.), and Natalie would sell each one for \$1,150. Natalie comes to you for advice on how to account for these mixers.

Go to the book's companion website, www.wiley.com/college/weygandt, to see the completion of this problem.

Broadening Your PERSPECTIVE

Financial Reporting and Analysis

Financial Reporting Problem: PepsiCo, Inc.

BYP5-1 The financial statements of **PepsiCo, Inc.** are presented in Appendix A at the end of this textbook.

Instructions

Answer the following questions using PepsiCo's Consolidated Statement of Income.

- (a) What was the percentage change in (1) sales and in (2) net income from 2008 to 2009 and from 2009 to 2010?
- (b) What was the company's gross profit rate in 2008, 2009, and 2010?
- (c) What was the company's percentage of net income to net sales in 2008, 2009, and 2010? Comment on any trend in this percentage.

Comparative Analysis Problem: PepsiCo, Inc. vs. The Coca-Cola Company

BYP5-2 PepsiCo's financial statements are presented in Appendix A. Financial statements of **The Coca-Cola Company** are presented in Appendix B.

Instructions

- (a) Based on the information contained in these financial statements, determine each of the following for each company.
- (1) Gross profit for 2010.
 - (2) Gross profit rate for 2010.
 - (3) Operating income for 2010.
 - (4) Percentage change in operating income from 2009 to 2010.
- (b) What conclusions concerning the relative profitability of the two companies can you draw from these data?

Real-World Focus

BYP5-3 No financial decision-maker should ever rely solely on the financial information reported in the annual report to make decisions. It is important to keep abreast of financial news. This activity demonstrates how to search for financial news on the Web.

Address: biz.yahoo.com/i, or go to www.wiley.com/college/weygandt

Steps

1. Type in either PepsiCo or Coca-Cola.
2. Choose **News**.
3. Select an article that sounds interesting to you.

Instructions

- (a) What was the source of the article (e.g., Reuters, Businesswire, PR Newswire)?
- (b) Assume that you are a personal financial planner and that one of your clients owns stock in the company. Write a brief memo to your client, summarizing the article and explaining the implications of the article for their investment.

Critical Thinking**Decision-Making Across the Organization**

BYP5-4 Three years ago, Debbie Sells and her brother-in-law Mike Mooney opened Family Department Store. For the first two years, business was good, but the following condensed income results for 2013 were disappointing.

**Family Department Store
Income Statement
For the Year Ended December 31, 2013**

Net sales	\$700,000
Cost of goods sold	553,000
Gross profit	147,000
Operating expenses	
Selling expenses	\$100,000
Administrative expenses	20,000
	\$ 27,000
Net income	

Debbie believes the problem lies in the relatively low gross profit rate (gross profit divided by net sales) of 21%. Mike believes the problem is that operating expenses are too high.

Debbie thinks the gross profit rate can be improved by making both of the following changes. She does not anticipate that these changes will have any effect on operating expenses.

1. Increase average selling prices by 20%. This increase is expected to lower sales volume so that total sales will increase only 5%.
2. Buy merchandise in larger quantities and take all purchase discounts. These changes are expected to increase the gross profit rate by 3 percentage points.

Mike thinks expenses can be cut by making both of the following changes. He feels that these changes will not have any effect on net sales.

1. Cut 2013 sales salaries of \$60,000 in half and give sales personnel a commission of 2% of net sales.
2. Reduce store deliveries to one day per week rather than twice a week; this change will reduce 2013 delivery expenses of \$30,000 by 40%.

Debbie and Mike come to you for help in deciding the best way to improve net income.

Instructions

With the class divided into groups, answer the following.

- (a) Prepare a condensed income statement for 2014, assuming (1) Debbie's changes are implemented and (2) Mike's ideas are adopted.
- (b) What is your recommendation to Debbie and Mike?
- (c) Prepare a condensed income statement for 2014, assuming both sets of proposed changes are made.

Communication Activity

BYP5-5 The following situation is in chronological order.

1. Dexter decides to buy a surfboard.
2. He calls Boardin USA Co. to inquire about their surfboards.
3. Two days later, he requests Boardin USA Co. to make him a surfboard.
4. Three days later, Boardin USA Co. sends Dexter a purchase order to fill out.
5. He sends back the purchase order.
6. Boardin USA Co. receives the completed purchase order.
7. Boardin USA Co. completes the surfboard.
8. Dexter picks up the surfboard.
9. Boardin USA Co. bills Dexter.
10. Boardin USA Co. receives payment from Dexter.

Instructions

In a memo to the president of Boardin USA Co., answer the following.

- (a) When should Boardin USA Co. record the sale?
- (b) Suppose that with his purchase order, Dexter is required to make a down payment. Would that change your answer?

Ethics Case

BYP5-6 Anita Zurbrugg was just hired as the assistant treasurer of Yorktown Stores. The company is a specialty chain store with nine retail stores concentrated in one metropolitan area. Among other things, the payment of all invoices is centralized in one of the departments Anita will manage. Her primary responsibility is to maintain the company's high credit rating by paying all bills when due and to take advantage of all cash discounts.

Chris Dadian, the former assistant treasurer who has been promoted to treasurer, is training Anita in her new duties. He instructs Anita that she is to continue the practice of preparing all checks "net of discount" and dating the checks the last day of the discount period. "But," Chris continues, "we always hold the checks at least 4 days beyond the discount period before mailing them. That way, we get another 4 days of interest on our money. Most of our creditors need our business and don't complain. And, if they scream about our missing the discount period, we blame it on the mail room or the post office. We've only lost one discount out of every hundred we take that way. I think everybody does it. By the way, welcome to our team!"

Instructions

- (a) What are the ethical considerations in this case?
- (b) Who are the stakeholders that are harmed or benefitted in this situation?
- (c) Should Anita continue the practice started by Chris? Does she have any choice?

All About You

BYP5-7 There are many situations in business where it is difficult to determine the proper period in which to record revenue. Suppose that after graduation with a degree in finance, you take a job as a manager at a consumer electronics store called Pacifica Electronics. The company has expanded rapidly in order to compete with **Best Buy**. Pacifica has also begun selling gift cards for its electronic products. The cards are available in any dollar amount and allow the holder of the card to purchase an item for up to 2 years from the time the card is purchased. If the card is not used during that 2 years, it expires.

Instructions

Answer the following questions.

At what point should the revenue from the gift cards be recognized? Should the revenue be recognized at the time the card is sold, or should it be recorded when the card is redeemed? Explain the reasoning to support your answers.

FASB Codification Activity

BYP5-8 If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following

- (a) Access the glossary (“Master Glossary”) to answer the following.
 - (1) What is the definition provided for inventory?
 - (2) What is a customer?
- (b) What guidance does the Codification provide concerning reporting inventories above cost?

Answers to Chapter Questions

Answers to Insight and Accounting Across the Organization Questions

p. 223 Morrow Snowboards Improves Its Stock Appeal Q: If a perpetual system keeps track of inventory on a daily basis, why do companies ever need to do a physical count? **A:** A perpetual system keeps track of all sales and purchases on a continuous basis. This provides a constant record of the number of units in the inventory. However, if employees make errors in recording sales or purchases, or if there is theft, the inventory value will not be correct. As a consequence, all companies do a physical count of inventory at least once a year.

p. 230 Should Costco Change Its Return Policy? Q: If a company expects significant returns, what are the implications for revenue recognition? **A:** If a company expects significant returns, it should make an adjusting entry at the end of the year reducing sales by the estimated amount of sales returns. This is necessary so as not to overstate the amount of revenue recognized in the period.

p. 231 Selling Green Q: What is meant by “monetize environmental sustainability” for shareholders? **A:** By marketing green, not only does PepsiCo help the environment in the long run, but it also leads to long-term profitability as well. In other words, sound sustainability practices are good business and lead to sound financial results.

p. 237 Disclosing More Details Q: Why have investors and analysts demanded more accuracy in isolating “Other gains and losses” from operating items? **A:** Greater accuracy in the classification of operating versus nonoperating (“Other gains and losses”) items permits investors and analysts to judge the real operating margin, the results of continuing operations, and management’s ability to control operating expenses.

A Look at IFRS

The basic accounting entries for merchandising are the same under both GAAP and IFRS. The income statement is a required statement under both sets of standards. The basic format is similar although some differences do exist.

Key Points

- Under both GAAP and IFRS, a company can choose to use either a perpetual or a periodic system.
- Inventories are defined by IFRS as held-for-sale in the ordinary course of business, in the process of production for such sale, or in the form of materials or supplies to be consumed in the production process or in the providing of services.
- Under GAAP, companies generally classify income statement items by function. Classification by function leads to descriptions like administration, distribution, and manufacturing. Under IFRS, companies must classify expenses by either nature or function. Classification by nature leads to descriptions such as the following: salaries, depreciation expense, and utilities expense. If a company uses the functional-expense method on the income statement, disclosure by nature is required in the notes to the financial statements.
- Presentation of the income statement under GAAP follows either a single-step or multiple-step format. IFRS does not mention a single-step or multiple-step approach.
- Under IFRS, revaluation of land, buildings, and intangible assets is permitted. The initial gains and losses resulting from this revaluation are reported as adjustments to equity, often referred to as *other comprehensive income*. The effect of this difference is that the use of IFRS results in more transactions affecting equity (other comprehensive income) but not net income.
- *IAS 1*, “Presentation of Financial Statements,” provides general guidelines for the reporting of income statement information. Subsequently, a number of international standards have been issued that provide additional guidance to issues related to income statement presentation.
- Similar to GAAP, comprehensive income under IFRS includes unrealized gains and losses (such as those on so-called “non-trading” securities) that are not included in the calculation of net income.
- IFRS requires that two years of income statement information be presented, whereas GAAP requires three years.

Looking to the Future

The IASB and FASB are working on a project that would rework the structure of financial statements. Specifically, this project will address the issue of how to classify various items in the income statement. A main goal of this new approach is to provide information that better represents how businesses are run. In addition, this approach draws attention away from just one number—net income. It will adopt major groupings similar to those currently used by the statement of cash flows (operating, investing, and financing), so that numbers can be more readily traced across statements. For example, the amount of income that is generated by operations would be traceable to the assets and liabilities used to generate the income. Finally, this approach would also provide detail, beyond that currently seen in most statements (either GAAP or IFRS), by requiring that line items be presented both by function and by nature. The new financial statement format was heavily influenced by suggestions from financial statement analysts.

IFRS Practice

IFRS Self-Test Questions

1. Which of the following would *not* be included in the definition of inventory under IFRS?
 - (a) Photocopy paper held for sale by an office-supply store.
 - (b) Stereo equipment held for sale by an electronics store.
 - (c) Used office equipment held for sale by the human relations department of a plastics company.
 - (d) All of the above would meet the definition.

2. Which of the following would *not* be a line item of a company reporting costs by nature?
 - (a) Depreciation expense.
 - (b) Salaries expense.
 - (c) Interest expense.
 - (d) Manufacturing expense.
3. Which of the following would *not* be a line item of a company reporting costs by function?
 - (a) Administration.
 - (b) Manufacturing.
 - (c) Utilities expense.
 - (d) Distribution.
4. Which of the following statements is *false*?
 - (a) IFRS specifically requires use of a multiple-step income statement.
 - (b) Under IFRS, companies can use either a perpetual or periodic system.
 - (c) The proposed new format for financial statements was heavily influenced by the suggestions of financial statement analysts.
 - (d) The new income statement format will try to de-emphasize the focus on the “net income” line item.
5. Under the new format for financial statements being proposed under a joint IASB/FASB project:
 - (a) all financial statements would adopt headings similar to the current format of the balance sheet.
 - (b) financial statements would be presented consistent with the way management usually run companies.
 - (c) companies would be required to report income statement line items by function only.
 - (d) the amount of detail shown in the income statement would decrease compared to current presentations.

IFRS Exercises

IFRS5-1 Explain the difference between the “nature-of-expense” and “function-of-expense” classifications.

IFRS5-2 For each of the following income statement line items, state whether the item is a “by nature” expense item or a “by function” expense item.

- _____ Cost of goods sold
- _____ Depreciation expense
- _____ Salaries and wages expense
- _____ Selling expenses
- _____ Utilities expense
- _____ Delivery expense
- _____ General and administrative expenses

IFRS5-3 Atlantis Company reported the following amounts (in euros) in 2014: net income, €150,000; unrealized gain related to revaluation of buildings, €10,000; and unrealized loss on non-trading securities, €(35,000). Determine Atlantis’s total comprehensive income for 2014.

International Financial Reporting Problem: Zetar plc

IFRS5-4 The financial statements of **Zetar plc** are presented in Appendix C. The company’s complete annual report, including the notes to its financial statements, is available at www.zetarplc.com.

Instructions

- (a) Is Zetar using a multiple-step or a single-step income statement format? Explain how you made your determination.
- (b) Instead of “interest expense,” what label does Zetar use for interest costs that it incurs?
- (c) Using the notes to the company’s financial statements, explain what each of the following are:
 - (1) Adjusted results.
 - (2) One-off items.

Feature Story

“Where Is That Spare Bulldozer Blade?”

Let’s talk inventory—big, bulldozer-size inventory. **Caterpillar Inc.** is the world’s largest manufacturer of construction and mining equipment, diesel and natural gas engines, and industrial gas turbines. It sells its products in over 200 countries, making it one of the most successful U.S. exporters. More than 70% of its productive assets are located domestically, and nearly 50% of its sales are foreign.

During the 1980s, Caterpillar’s profitability suffered, but today it is very successful. A big part of this turnaround can be attributed to

effective management of its inventory. Imagine what it costs Caterpillar to have too many bulldozers sitting around in inventory—a situation the company definitely wants to avoid. Conversely, Caterpillar must make sure it has enough inventory to meet demand.

At one time during a 7-year period, Caterpillar’s sales increased by 100%, while its inventory increased by only 50%. To achieve this dramatic reduction in the amount of resources tied up in inventory, while continuing to meet customers’ needs, Caterpillar used a two-pronged approach. First, it completed a factory modernization program, which dramatically increased its production efficiency. The program

Learning Objectives

After studying this chapter, you should be able to:

- 1** Describe the steps in determining inventory quantities.
- 2** Explain the accounting for inventories and apply the inventory cost flow methods.
- 3** Explain the financial effects of the inventory cost flow assumptions.
- 4** Explain the lower-of-cost-or-market basis of accounting for inventories.
- 5** Indicate the effects of inventory errors on the financial statements.
- 6** Compute and interpret the inventory turnover ratio.

The Navigator

Read A Look at IFRS p. 321

reduced by 60% the amount of inventory the company processed at any one time. It also reduced by an incredible 75% the time it takes to manufacture a part.

Second, Caterpillar dramatically improved its parts distribution system. It ships more than 100,000 items daily from its 23 distribution centers strategically located around the world (10 million square feet of warehouse space—remember, we’re talking bulldozers). The company can virtually guarantee that it can get any part to anywhere in the world within 24 hours.

After these changes, Caterpillar had record exports, profits, and revenues. It would seem that things couldn’t be

better. But industry analysts, as well as the company’s managers, thought otherwise. In order to maintain Caterpillar’s position as the industry leader,

management began another major overhaul of inventory production and inventory management processes. The goal: to cut the number of repairs in half, increase productivity by 20%, and increase inventory turnover by 40%.

In short, Caterpillar’s ability to manage its inventory has been a key reason for its past success, and inventory management will very likely play a huge part in its ability to succeed in the future.

Preview of Chapter 6

In the previous chapter, we discussed the accounting for merchandise inventory using a perpetual inventory system. In this chapter, we explain the methods used to calculate the cost of inventory on hand at the balance sheet date and the cost of goods sold.

The content and organization of this chapter are as follows.

INVENTORIES				
Classifying Inventory	Determining Inventory Quantities	Inventory Costing	Inventory Errors	Statement Presentation and Analysis
<ul style="list-style-type: none"> • Finished goods • Work in process • Raw materials 	<ul style="list-style-type: none"> • Taking a physical inventory • Determining ownership of goods 	<ul style="list-style-type: none"> • Specific identification • Cost flow assumptions • Financial statement and tax effects • Consistent use • Lower-of-cost-or-market 	<ul style="list-style-type: none"> • Income statement effects • Balance sheet effects 	<ul style="list-style-type: none"> • Presentation • Analysis

Classifying Inventory

How a company classifies its inventory depends on whether the firm is a merchandiser or a manufacturer. In a *merchandising* company, such as those described in Chapter 5, inventory consists of many different items. For example, in a grocery store, canned goods, dairy products, meats, and produce are just a few of the inventory items on hand. These items have two common characteristics: (1) They are owned by the company, and (2) they are in a form ready for sale to customers in the ordinary course of business. Thus, merchandisers need only one inventory classification, **merchandise inventory**, to describe the many different items that make up the total inventory.

In a *manufacturing* company, some inventory may not yet be ready for sale. As a result, manufacturers usually classify inventory into three categories: finished goods, work in process, and raw materials. **Finished goods inventory** is manufactured items that are completed and ready for sale. **Work in process** is that portion of manufactured inventory that has been placed into the production process but is not yet complete. **Raw materials** are the basic goods that will be used in production but have not yet been placed into production.

Helpful Hint

Regardless of the classification, companies report all inventories under Current Assets on the balance sheet.

For example, **Caterpillar** classifies earth-moving tractors completed and ready for sale as **finished goods**. It classifies the tractors on the assembly line in various stages of production as **work in process**. The steel, glass, tires, and other components that are on hand waiting to be used in the production of tractors are identified as **raw materials**.

By observing the levels and changes in the levels of these three inventory types, financial statement users can gain insight into management's production plans. For example, low levels of raw materials and high levels of finished goods suggest that management believes it has enough inventory on hand, and production will be slowing down—perhaps in anticipation of a recession. On the other hand, high levels of raw materials and low levels of finished goods probably signal that management is planning to step up production.

Many companies have significantly lowered inventory levels and costs using **just-in-time (JIT) inventory** methods. Under a just-in-time method, companies manufacture or purchase goods just in time for use. **Dell** is famous for having developed a system for making computers in response to individual customer requests. Even though it makes each computer to meet each customer's particular specifications, Dell is able to assemble the computer and put it on a truck in less than 48 hours. The success of the JIT system depends on reliable suppliers. By integrating its information systems with those of its suppliers, Dell reduced its inventories to nearly zero. This is a huge advantage in an industry where products become obsolete nearly overnight.

The accounting concepts discussed in this chapter apply to the inventory classifications of both merchandising and manufacturing companies. Our focus here is on merchandise inventory.

ACCOUNTING ACROSS THE ORGANIZATION

A Big Hiccup

JIT can save a company a lot of money, but it isn't without risk. An unexpected disruption in the supply chain can cost a company a lot of money. Japanese automakers experienced just such a disruption when a 6.8-magnitude earthquake caused major damage to the company that produces 50% of their piston rings. The rings themselves cost only \$1.50, but without them you cannot make a car. No other supplier could quickly begin producing sufficient quantities of the rings to match the desired specifications. As a result, the automakers were forced to shut down production for a few days—a loss of tens of thousands of cars.

Source: Amy Chozick, "A Key Strategy of Japan's Car Makers Backfires," *Wall Street Journal* (July 20, 2007).

What steps might the companies take to avoid such a serious disruption in the future? (See page 320.)

Determining Inventory Quantities

No matter whether they are using a periodic or perpetual inventory system, all companies need to determine inventory quantities at the end of the accounting period. If using a perpetual system, companies take a physical inventory for two reasons:

1. To check the accuracy of their perpetual inventory records.
2. To determine the amount of inventory lost due to wasted raw materials, shoplifting, or employee theft.

Companies using a periodic inventory system take a physical inventory to determine the inventory on hand at the balance sheet date, and to determine the cost of goods sold for the period.

Determining inventory quantities involves two steps: (1) taking a physical inventory of goods on hand and (2) determining the ownership of goods.

Taking a Physical Inventory

Companies take a physical inventory at the end of the accounting period. Taking a physical inventory involves actually counting, weighing, or measuring each kind of inventory on hand. In many companies, taking an inventory is a formidable task. Retailers such as **Target**, **True Value Hardware**, or **Home Depot** have thousands of different inventory items. An inventory count is generally more accurate when goods are not being sold or received during the counting. Consequently, companies often "take inventory" when the business is closed or when business is slow. Many retailers close early on a chosen day in January—after the holiday sales and returns, when inventories are at their lowest level—to count inventory. Recall from Chapter 5 that **Wal-Mart Stores, Inc.** has a year-end of January 31.

LEARNING OBJECTIVE

1

Describe the steps in determining inventory quantities.

Ethics Note

In a famous fraud, a salad oil company filled its storage tanks mostly with water. The oil rose to the top, so auditors thought the tanks were full of oil. The company also said it had more tanks than it really did: It repainted numbers on the tanks to confuse auditors.

ETHICS INSIGHT

Falsifying Inventory to Boost Income

Managers at women's apparel maker **Leslie Fay** were convicted of falsifying inventory records to boost net income—and consequently to boost management bonuses. In another case, executives at **Craig Consumer Electronics** were accused of defrauding lenders by manipulating inventory records. The indictment said the company classified “defective goods as new or refurbished” and claimed that it owned certain shipments “from overseas suppliers” when, in fact, Craig either did not own the shipments or the shipments did not exist.

What effect does an overstatement of inventory have on a company's financial statements? (See page 320.)

Determining Ownership of Goods

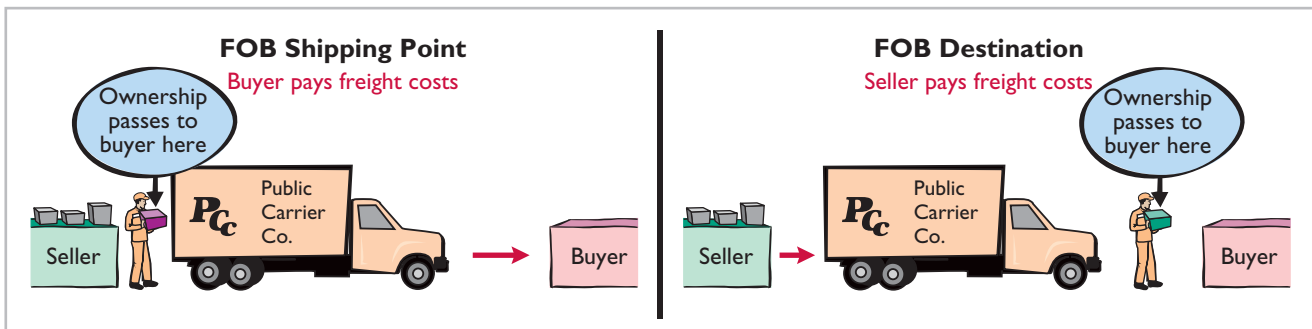

One challenge in computing inventory quantities is determining what inventory a company owns. To determine ownership of goods, two questions must be answered: Do all of the goods included in the count belong to the company? Does the company own any goods that were not included in the count?

GOODS IN TRANSIT

A complication in determining ownership is **goods in transit** (on board a truck, train, ship, or plane) at the end of the period. The company may have purchased goods that have not yet been received, or it may have sold goods that have not yet been delivered. To arrive at an accurate count, the company must determine ownership of these goods.

Goods in transit should be included in the inventory of the company that has legal title to the goods. Legal title is determined by the terms of the sale, as shown in Illustration 6-1 and described below.

Illustration 6-1
Terms of sale

1. When the terms are **FOB (free on board) shipping point**, ownership of the goods passes to the buyer when the public carrier accepts the goods from the seller.
2. When the terms are **FOB destination**, ownership of the goods remains with the seller until the goods reach the buyer.

If goods in transit at the statement date are ignored, inventory quantities may be seriously miscounted. Assume, for example, that Hargrove Company has

20,000 units of inventory on hand on December 31. It also has the following goods in transit:

1. Sales of 1,500 units shipped December 31 FOB destination.
2. Purchases of 2,500 units shipped FOB shipping point by the seller on December 31.

Hargrove has legal title to both the 1,500 units sold and the 2,500 units purchased. If the company ignores the units in transit, it would understate inventory quantities by 4,000 units (1,500 + 2,500).

As we will see later in the chapter, inaccurate inventory counts affect not only the inventory amount shown on the balance sheet but also the cost of goods sold calculation on the income statement.

CONSIGNED GOODS

In some lines of business, it is common to hold the goods of other parties and try to sell the goods for them for a fee, but without taking ownership of the goods. These are called **consigned goods**.

For example, you might have a used car that you would like to sell. If you take the item to a dealer, the dealer might be willing to put the car on its lot and charge you a commission if it is sold. Under this agreement, the dealer **would not take ownership** of the car, which would still belong to you. Therefore, if an inventory count were taken, the car would not be included in the dealer's inventory.

Many car, boat, and antique dealers sell goods on consignment to keep their inventory costs down and to avoid the risk of purchasing an item that they will not be able to sell. Today, even some manufacturers are making consignment agreements with their suppliers in order to keep their inventory levels low.

> DO IT!

Rules of Ownership

Hasbeen Company completed its inventory count. It arrived at a total inventory value of \$200,000. As a new member of Hasbeen's accounting department, you have been given the information listed below. Discuss how this information affects the reported cost of inventory.

1. Hasbeen included in the inventory goods held on consignment for Falls Co., costing \$15,000.
2. The company did not include in the count purchased goods of \$10,000 which were in transit (terms: FOB shipping point).
3. The company did not include in the count sold inventory with a cost of \$12,000 which was in transit (terms: FOB shipping point).

Solution

The goods of \$15,000 held on consignment should be deducted from the inventory count. The goods of \$10,000 purchased FOB shipping point should be added to the inventory count. Sold goods of \$12,000 which were in transit FOB shipping point should not be included in the ending inventory. Thus, inventory should be carried at \$195,000 ($\$200,000 - \$15,000 + \$10,000$).

Action Plan

- ✓ Apply the rules of ownership to goods held on consignment.
- ✓ Apply the rules of ownership to goods in transit.

ANATOMY OF A FRAUD

Ted Nickerson, CEO of clock manufacturer Dally Industries, was feared by all of his employees. Ted also had expensive tastes. To support his expensive tastes, Ted took out large loans, which he collateralized with his shares of Dally Industries stock. If the price of Dally's stock fell, he was required to provide the bank with more shares of stock. To achieve target net income figures and thus maintain the stock price, Ted coerced employees in the company to alter inventory figures. Inventory quantities were manipulated by changing the amounts on inventory control tags after the year-end physical inventory count. For example, if a tag said there were 20 units of a particular item, the tag was changed to 220. Similarly, the unit costs that were used to determine the value of ending inventory were increased from, for example, \$125 per unit to \$1,250. Both of these fraudulent changes had the effect of increasing the amount of reported ending inventory. This reduced cost of goods sold and increased net income.

Total take: \$245,000

The Missing Control

Independent internal verification. The company should have spot-checked its inventory records periodically, verifying that the number of units in the records agreed with the amount on hand and that the unit costs agreed with vendor price sheets.

Source: Adapted from Wells, *Fraud Casebook* (2007), pp. 502–509.

Inventory Costing

LEARNING OBJECTIVE 2

Explain the accounting for inventories and apply the inventory cost flow methods.

Inventory is accounted for at cost. Cost includes all expenditures necessary to acquire goods and place them in a condition ready for sale. For example, freight costs incurred to acquire inventory are added to the cost of inventory, but the cost of shipping goods to a customer are a selling expense.

After a company has determined the quantity of units of inventory, it applies unit costs to the quantities to compute the total cost of the inventory and the cost of goods sold. This process can be complicated if a company has purchased inventory items at different times and at different prices.

For example, assume that Crivitz TV Company purchases three identical 50-inch TVs on different dates at costs of \$700, \$750, and \$800. During the year, Crivitz sold two sets at \$1,200 each. These facts are summarized in Illustration 6-2.

Illustration 6-2

Data for inventory costing example

Purchases

February 3	1 TV	at	\$700
March 5	1 TV	at	\$750
May 22	1 TV	at	\$800

Sales

June 1	2 TVs	for	\$2,400 (\$1,200 × 2)
--------	-------	-----	-----------------------

Cost of goods sold will differ depending on which two TVs the company sold. For example, it might be \$1,450 (\$700 + \$750), or \$1,500 (\$700 + \$800), or \$1,550 (\$750 + \$800). In this section, we discuss alternative costing methods available to Crivitz.

Specific Identification

If Crivitz can positively identify which particular units it sold and which are still in ending inventory, it can use the **specific identification method** of inventory costing. For example, if Crivitz sold the TVs it purchased on February 3 and May 22, then its cost of goods sold is \$1,500 (\$700 + \$800), and its ending inventory is \$750 (see Illustration 6-3). Using this method, companies can accurately determine ending inventory and cost of goods sold.

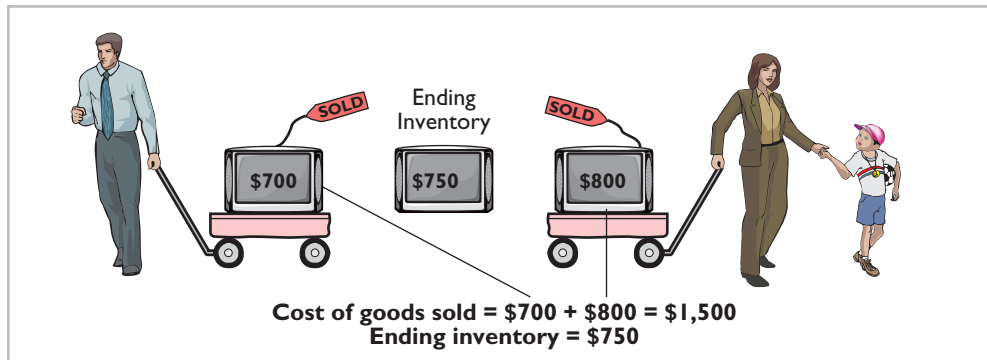

Illustration 6-3
Specific identification method

Specific identification requires that companies keep records of the original cost of each individual inventory item. Historically, specific identification was possible only when a company sold a limited variety of high-unit-cost items that could be identified clearly from the time of purchase through the time of sale. Examples of such products are cars, pianos, or expensive antiques.

Today, bar coding, electronic product codes, and radio frequency identification make it theoretically possible to do specific identification with nearly any type of product. The reality is, however, that this practice is still relatively rare. Instead, rather than keep track of the cost of each particular item sold, most companies make assumptions, called **cost flow assumptions**, about which units were sold.

Ethics Note

A major disadvantage of the specific identification method is that management may be able to manipulate net income. For example, it can boost net income by selling units purchased at a low cost, or reduce net income by selling units purchased at a high cost.

Cost Flow Assumptions

Because specific identification is often impractical, other cost flow methods are permitted. These differ from specific identification in that they **assume** flows of costs that may be unrelated to the physical flow of goods. There are three assumed cost flow methods:

1. First-in, first-out (FIFO)
2. Last-in, first-out (LIFO)
3. Average-cost

There is no accounting requirement that the cost flow assumption be consistent with the physical movement of the goods. Company management selects the appropriate cost flow method.

To demonstrate the three cost flow methods, we will use a **periodic** inventory system. We assume a periodic system for two main reasons. First, many small companies use periodic rather than perpetual systems. Second, **very few companies use perpetual LIFO, FIFO, or average-cost** to cost their inventory and related cost of goods sold. Instead, companies that use perpetual systems often use an assumed cost (called a standard cost) to record cost of goods sold at the time of sale. Then, at the end of the period when they count their inventory, they

recalculate cost of goods sold using *periodic* FIFO, LIFO, or average-cost and adjust cost of goods sold to this recalculated number.¹

To illustrate the three inventory cost flow methods, we will use the data for Houston Electronics' Astro condensers, shown in Illustration 6-4.

Illustration 6-4
Data for Houston Electronics

Houston Electronics Astro Condensers				
Date	Explanation	Units	Unit Cost	Total Cost
Jan. 1	Beginning inventory	100	\$10	\$ 1,000
Apr. 15	Purchase	200	11	2,200
Aug. 24	Purchase	300	12	3,600
Nov. 27	Purchase	400	13	5,200
	Total units available for sale	1,000		\$12,000
	Units in ending inventory	450		
	Units sold	550		

The cost of goods sold formula in a periodic system is:

$$\text{(Beginning Inventory + Purchases) - Ending Inventory = Cost of Goods Sold}$$

Houston Electronics had a total of 1,000 units available to sell during the period (beginning inventory plus purchases). The total cost of these 1,000 units is \$12,000, referred to as *cost of goods available for sale*. A physical inventory taken at December 31 determined that there were 450 units in ending inventory. Therefore, Houston sold 550 units (1,000 – 450) during the period. To determine the cost of the 550 units that were sold (the cost of goods sold), we assign a cost to the ending inventory and subtract that value from the cost of goods available for sale. The value assigned to the ending inventory **will depend on which cost flow method we use**. No matter which cost flow assumption we use, though, the sum of cost of goods sold plus the cost of the ending inventory must equal the cost of goods available for sale—in this case, \$12,000.

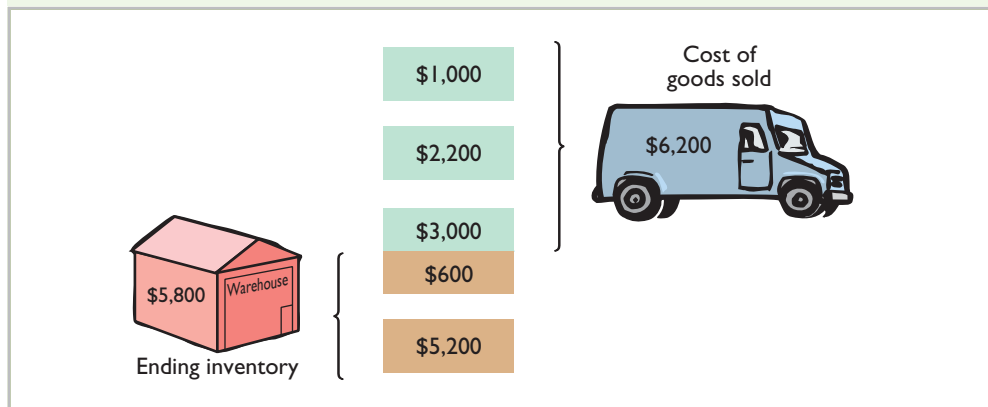

FIRST-IN, FIRST-OUT (FIFO)

The **first-in, first-out (FIFO) method** assumes that the **earliest goods** purchased are the first to be sold. FIFO often parallels the actual physical flow of merchandise. That is, it generally is good business practice to sell the oldest units first. Under the FIFO method, therefore, the **costs** of the earliest goods purchased are the first to be recognized in determining cost of goods sold. (This does not necessarily mean that the oldest units *are* sold first, but that the costs of the oldest units are *recognized* first. In a bin of picture hangers at the hardware store, for example, no one really knows, nor would it matter, which hangers are sold first.) Illustration 6-5 shows the allocation of the cost of goods available for sale at Houston Electronics under FIFO.

¹Also, some companies use a perpetual system to keep track of units, but they do not make an entry for perpetual cost of goods sold. In addition, firms that employ LIFO tend to use *dollar-value LIFO*, a method discussed in upper-level courses. FIFO periodic and FIFO perpetual give the same result. Therefore, firms should not incur the additional cost to use FIFO perpetual. Few firms use perpetual average-cost because of the added cost of record-keeping. Finally, for instructional purposes, we believe it is easier to demonstrate the cost flow assumptions under the periodic system, which makes it more pedagogically appropriate.

Cost of Goods Available for Sale				
Date	Explanation	Units	Unit Cost	Total Cost
Jan. 1	Beginning inventory	100	\$10	\$ 1,000
Apr. 15	Purchase	200	11	2,200
Aug. 24	Purchase	300	12	3,600
Nov. 27	Purchase	400	13	5,200
	Total	1,000		\$12,000

Step 1: Ending Inventory		Step 2: Cost of Goods Sold		
Date	Units	Unit Cost	Total Cost	
Nov. 27	400	\$13	\$5,200	Cost of goods available for sale
Aug. 24	50	12	600	Less: Ending inventory
Total	450		\$5,800	Cost of goods sold
				\$ 6,200

Under FIFO, since it is assumed that the first goods purchased were the first goods sold, ending inventory is based on the prices of the most recent units purchased. That is, **under FIFO, companies obtain the cost of the ending inventory by taking the unit cost of the most recent purchase and working backward until all units of inventory have been costed.** In this example, Houston Electronics prices the 450 units of ending inventory using the *most recent* prices. The last purchase was 400 units at \$13 on November 27. The remaining 50 units are priced using the unit cost of the second most recent purchase, \$12, on August 24. Next, Houston Electronics calculates cost of goods sold by subtracting the cost of the units **not sold** (ending inventory) from the cost of all goods available for sale.

Illustration 6-6 demonstrates that companies also can calculate cost of goods sold by pricing the 550 units sold using the prices of the first 550 units acquired. Note that of the 300 units purchased on August 24, only 250 units are assumed sold. This agrees with our calculation of the cost of ending inventory, where 50 of these units were assumed unsold and thus included in ending inventory.

Date	Units	Unit Cost	Total Cost
Jan. 1	100	\$10	\$ 1,000
Apr. 15	200	11	2,200
Aug. 24	250	12	3,000
Total	550		\$6,200

Illustration 6-5
Allocation of costs—FIFO method

Helpful Hint
Note the sequencing of the allocation:
(1) Compute ending inventory, and
(2) determine cost of goods sold.

Helpful Hint
Another way of thinking about the calculation of FIFO ending inventory is the *LISH assumption*—last in still here.

Illustration 6-6
Proof of cost of goods sold

LAST-IN, FIRST-OUT (LIFO)

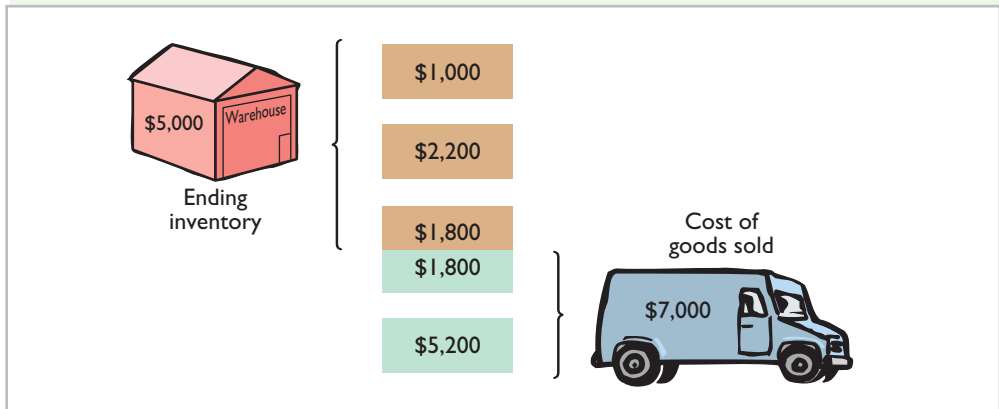

The **last-in, first-out (LIFO) method** assumes that the **latest goods** purchased are the first to be sold. LIFO seldom coincides with the actual physical flow of inventory. (Exceptions include goods stored in piles, such as coal or hay, where goods are removed from the top of the pile as they are sold.) Under the LIFO method, the **costs** of the latest goods purchased are the first to be recognized in determining cost of goods sold. Illustration 6-7 shows the allocation of the cost of goods available for sale at Houston Electronics under LIFO.

Illustration 6-7
Allocation of costs—LIFO method

Cost of Goods Available for Sale				
Date	Explanation	Units	Unit Cost	Total Cost
Jan. 1	Beginning inventory	100	\$10	\$ 1,000
Apr. 15	Purchase	200	11	2,200
Aug. 24	Purchase	300	12	3,600
Nov. 27	Purchase	400	13	5,200
	Total	<u>1,000</u>		<u>\$12,000</u>

Step 1: Ending Inventory				Step 2: Cost of Goods Sold	
Date	Units	Unit Cost	Total Cost		
Jan. 1	100	\$10	\$ 1,000	Cost of goods available for sale	\$12,000
Apr. 15	200	11	2,200	Less: Ending inventory	<u>5,000</u>
Aug. 24	150	12	<u>1,800</u>	Cost of goods sold	<u>\$ 7,000</u>
Total	<u>450</u>		<u>\$5,000</u>		

Helpful Hint
Another way of thinking about the calculation of LIFO ending inventory is the *FISH assumption*—first in still here.

Under LIFO, since it is assumed that the first goods sold were those that were most recently purchased, ending inventory is based on the prices of the oldest units purchased. That is, **under LIFO, companies obtain the cost of the ending inventory by taking the unit cost of the earliest goods available for sale and working forward until all units of inventory have been costed.** In this example, Houston Electronics prices the 450 units of ending inventory using the *earliest* prices. The first purchase was 100 units at \$10 in the January 1 beginning inventory. Then, 200 units were purchased at \$11. The remaining 150 units needed are priced at \$12 per unit (August 24 purchase). Next, Houston Electronics calculates cost of goods sold by subtracting the cost of the units **not sold** (ending inventory) from the cost of all goods available for sale.

Illustration 6-8 demonstrates that companies also can calculate cost of goods sold by pricing the 550 units sold using the prices of the last 550 units acquired. Note that of the 300 units purchased on August 24, only 150 units are assumed

sold. This agrees with our calculation of the cost of ending inventory, where 150 of these units were assumed unsold and thus included in ending inventory.

<u>Date</u>	<u>Units</u>	<u>Unit Cost</u>	<u>Total Cost</u>
Nov. 27	400	\$13	\$ 5,200
Aug. 24	150	12	1,800
Total	550		\$7,000

Illustration 6-8

Proof of cost of goods sold

Under a periodic inventory system, which we are using here, **all goods purchased during the period are assumed to be available for the first sale, regardless of the date of purchase.**

AVERAGE-COST

The **average-cost method** allocates the cost of goods available for sale on the basis of the **weighted-average unit cost** incurred. The average-cost method assumes that goods are similar in nature. Illustration 6-9 presents the formula and a sample computation of the weighted-average unit cost.

Cost of Goods Available for Sale	÷	Total Units Available for Sale	=	Weighted-Average Unit Cost
\$12,000	÷	1,000	=	\$12.00

Illustration 6-9

Formula for weighted-average unit cost

The company then applies the weighted-average unit cost to the units on hand to determine the cost of the ending inventory. Illustration 6-10 (page 282) shows the allocation of the cost of goods available for sale at Houston Electronics using average-cost.

We can verify the cost of goods sold under this method by multiplying the units sold times the weighted-average unit cost ($550 \times \$12 = \$6,600$). Note that this method does not use the average of the unit costs. That average is \$11.50 ($\$10 + \$11 + \$12 + \$13 = \$46; \$46 \div 4$). The average-cost method instead uses the average **weighted** by the quantities purchased at each unit cost.

> DO IT!

Cost Flow Methods

The accounting records of Shumway Ag Implement show the following data.

Beginning inventory	4,000 units at \$ 3
Purchases	6,000 units at \$ 4
Sales	7,000 units at \$12

Determine the cost of goods sold during the period under a periodic inventory system using (a) the FIFO method, (b) the LIFO method, and (c) the average-cost method.

Solution

Cost of goods available for sale	= (4,000 × \$3) + (6,000 × \$4) = \$36,000
Ending inventory	= 10,000 – 7,000 = 3,000 units
(a) FIFO	: \$36,000 – (3,000 × \$4) = \$24,000
(b) LIFO	: \$36,000 – (3,000 × \$3) = \$27,000
(c) Average cost per unit	: [(4,000 @ \$3) + (6,000 @ \$4)] ÷ 10,000 = \$3.60
Average-cost	: \$36,000 – (3,000 × \$3.60) = \$25,200

Action Plan

- ✓ Understand the periodic inventory system.
- ✓ Allocate costs between goods sold and goods on hand (ending inventory) for each cost flow method.
- ✓ Compute cost of goods sold for each method.

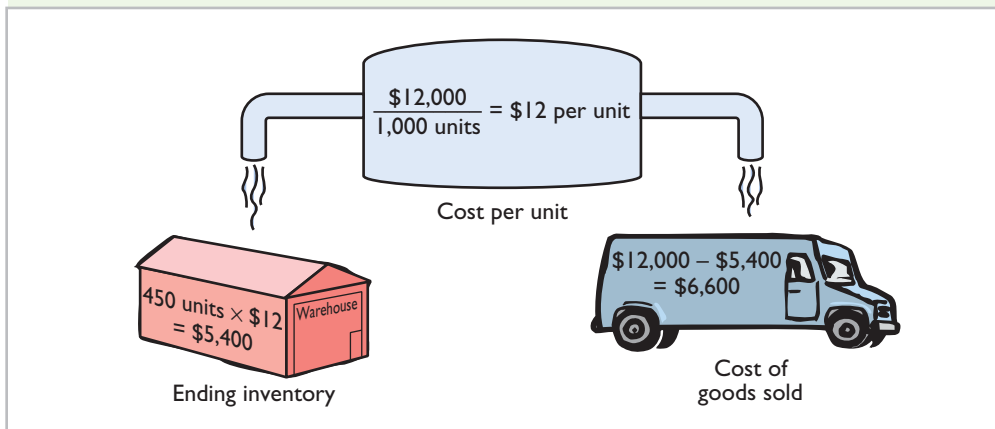

Related exercise material: **BE-3, BE-4, BE-5, E6-3, E6-4, E6-5, E6-6, E6-7, E6-8, and DO IT! 6-2.**

Illustration 6-10
Allocation of costs—
average-cost method

Cost of Goods Available for Sale				
Date	Explanation	Units	Unit Cost	Total Cost
Jan. 1	Beginning inventory	100	\$10	\$ 1,000
Apr. 15	Purchase	200	11	2,200
Aug. 24	Purchase	300	12	3,600
Nov. 27	Purchase	400	13	5,200
	Total	1,000		<u>\$12,000</u>

Step 1: Ending Inventory			Step 2: Cost of Goods Sold	
\$12,000	÷	1,000	=	\$12.00
		Unit		Total
Units		Cost		Cost
450		\$12.00		<u>\$5,400</u>

Cost of goods available for sale	\$12,000
Less: Ending inventory	5,400
Cost of goods sold	<u>\$ 6,600</u>

Financial Statement and Tax Effects of Cost Flow Methods

LEARNING OBJECTIVE 3
Explain the financial effects of the inventory cost flow assumptions.

Illustration 6-11
Use of cost flow methods in major U.S. companies

Each of the three assumed cost flow methods is acceptable for use. For example, **Reebok International Ltd.** and **Wendy’s International** currently use the FIFO method of inventory costing. **Campbell Soup Company**, **Krogers**, and **Walgreen Drugs** use LIFO for part or all of their inventory. **Bristol-Myers Squibb**, **Starbucks**, and **Motorola** use the average-cost method. In fact, a company may also use more than one cost flow method at the same time. **Stanley Black & Decker Manufacturing Company**, for example, uses LIFO for domestic inventories and FIFO for foreign inventories. Illustration 6-11 (in the margin) shows the use of the three cost flow methods in the 500 largest U.S. companies.

The reasons companies adopt different inventory cost flow methods are varied, but they usually involve one of three factors: (1) income statement effects, (2) balance sheet effects, or (3) tax effects.

INCOME STATEMENT EFFECTS

To understand why companies might choose a particular cost flow method, let’s examine the effects of the different cost flow assumptions on the financial statements of Houston Electronics. The condensed income statements in Illustration 6-12 assume that Houston sold its 550 units for \$11,500, had operating expenses of \$2,000, and is subject to an income tax rate of 30%.

Houston Electronics
Condensed Income Statements

	<u>FIFO</u>	<u>LIFO</u>	<u>Average-Cost</u>
Sales revenue	\$11,500	\$11,500	\$11,500
Beginning inventory	1,000	1,000	1,000
Purchases	11,000	11,000	11,000
Cost of goods available for sale	12,000	12,000	12,000
Ending inventory	5,800	5,000	5,400
Cost of goods sold	6,200	7,000	6,600
Gross profit	5,300	4,500	4,900
Operating expenses	2,000	2,000	2,000
Income before income taxes*	3,300	2,500	2,900
Income tax expense (30%)	990	750	870
Net income	\$ 2,310	\$ 1,750	\$ 2,030

*We are assuming that Houston Electronics is a corporation, and corporations are required to pay income taxes.

Illustration 6-12
Comparative effects of cost flow methods

Note the cost of goods available for sale (\$12,000) is the same under each of the three inventory cost flow methods. However, the ending inventories and the costs of goods sold are different. This difference is due to the unit costs that the company allocated to cost of goods sold and to ending inventory. Each dollar of difference in ending inventory results in a corresponding dollar difference in income before income taxes. For Houston, an \$800 difference exists between FIFO and LIFO cost of goods sold.

In periods of changing prices, the cost flow assumption can have a significant impact on income and on evaluations based on income. In most instances, prices are rising (inflation). In a period of inflation, FIFO produces a higher net income because the lower unit costs of the first units purchased are matched against revenues. In a period of rising prices (as is the case in the Houston example), FIFO reports the highest net income (\$2,310) and LIFO the lowest (\$1,750); average-cost falls in the middle (\$2,030). If prices are falling, the results from the use of FIFO and LIFO are reversed. FIFO will report the lowest net income and LIFO the highest.

To management, higher net income is an advantage. It causes external users to view the company more favorably. In addition, management bonuses, if based on net income, will be higher. Therefore, when prices are rising (which is usually the case), companies tend to prefer FIFO because it results in higher net income.

Some argue that the use of LIFO in a period of inflation enables the company to avoid reporting **paper** (or **phantom**) **profit** as economic gain. To illustrate, assume that Kralik Company buys 200 units of a product at \$20 per unit on January 10 and 200 more on December 31 at \$24 each. During the year, Kralik sells 200 units at \$30 each. Illustration 6-13 shows the results under FIFO and LIFO.

	<u>FIFO</u>	<u>LIFO</u>
Sales (200 × \$30)	\$6,000	\$6,000
Cost of goods sold	4,000 (200 × \$20)	4,800 (200 × \$24)
Gross profit	<u>\$2,000</u>	<u>\$1,200</u>

Illustration 6-13
Income statement effects compared

Under LIFO, Kralik Company has recovered the current replacement cost (\$4,800) of the units sold. Thus, the gross profit in economic terms is real. However, under FIFO, the company has recovered only the January 10 cost (\$4,000). To replace the units sold, it must reinvest \$800 ($200 \times \4) of the gross profit. Thus, \$800 of the gross profit is said to be phantom or illusory. As a result, reported net income is also overstated in real terms.

BALANCE SHEET EFFECTS

A major advantage of the FIFO method is that in a period of inflation, the costs allocated to ending inventory will approximate their current cost. For example, for Houston Electronics, 400 of the 450 units in the ending inventory are costed under FIFO at the higher November 27 unit cost of \$13.

Conversely, a major shortcoming of the LIFO method is that in a period of inflation, the costs allocated to ending inventory may be significantly understated in terms of current cost. The understatement becomes greater over prolonged periods of inflation if the inventory includes goods purchased in one or more prior accounting periods. For example, **Caterpillar** has used LIFO for 50 years. Its balance sheet shows ending inventory of \$6,360 million. But, the inventory's actual current cost if FIFO had been used is \$9,363 million.

Helpful Hint

A tax rule, often referred to as the *LIFO conformity rule*, requires that if companies use LIFO for tax purposes they must also use it for financial reporting purposes. This means that if a company chooses the LIFO method to reduce its tax bills, it will also have to report lower net income in its financial statements.

TAX EFFECTS

We have seen that both inventory on the balance sheet and net income on the income statement are higher when companies use FIFO in a period of inflation. Yet, many companies have selected LIFO. Why? The reason is that LIFO results in the lowest income taxes (because of lower net income) during times of rising prices. For example, at Houston Electronics, income taxes are \$750 under LIFO, compared to \$990 under FIFO. The tax savings of \$240 makes more cash available for use in the business.

Using Inventory Cost Flow Methods Consistently

Whatever cost flow method a company chooses, it should use that method consistently from one accounting period to another. This approach is often referred to as the concept of **consistency**, which means that a company uses the same accounting principles and methods from year to year. Consistent application enhances the comparability of financial statements over successive time periods. In contrast, using the FIFO method one year and the LIFO method the next year would make it difficult to compare the net incomes of the two years.

Although consistent application is preferred, it does not mean that a company may *never* change its inventory costing method. When a company adopts a different method, it should disclose in the financial statements the change and its effects on net income. Illustration 6-14 shows a typical disclosure, using information from the financial statements of **Quaker Oats** (now a unit of **PepsiCo**).

Illustration 6-14

Disclosure of change in cost flow method

Quaker Oats

Notes to the Financial Statements

Note 1: Effective July 1, the Company adopted the LIFO cost flow assumption for valuing the majority of U.S. Grocery Products inventories. The Company believes that the use of the LIFO method better matches current costs with current revenues. The effect of this change on the current year was to decrease net income by \$16.0 million.

INTERNATIONAL INSIGHT

Is LIFO Fair?

ExxonMobil Corporation, like many U.S. companies, uses LIFO to value its inventory for financial reporting and tax purposes. In one recent year, this resulted in a cost of goods sold figure that was \$5.6 billion higher than under FIFO. By increasing cost of goods sold, ExxonMobil reduces net income, which reduces taxes. Critics say that LIFO provides an unfair “tax dodge.” As Congress looks for more sources of tax revenue, some lawmakers favor the elimination of LIFO. Supporters of LIFO argue that the method is conceptually sound because it matches current costs with current revenues. In addition, they point out that this matching provides protection against inflation.

International accounting standards do not allow the use of LIFO. Because of this, the net income of foreign oil companies such as **BP** and **Royal Dutch Shell** are not directly comparable to U.S. companies, which makes analysis difficult.

Source: David Reilly, “Big Oil’s Accounting Methods Fuel Criticism,” *Wall Street Journal* (August 8, 2006), p. C1.

What are the arguments for and against the use of LIFO? (See page 320.)

Lower-of-Cost-or-Market

The value of inventory for companies selling high-technology or fashion goods can drop very quickly due to changes in technology or fashion. These circumstances sometimes call for inventory valuation methods other than those presented so far. For example, at one time purchasing managers at **Ford** decided to make a large purchase of palladium, a precious metal used in vehicle emission devices. They made this purchase because they feared a future shortage. The shortage did not materialize, and by the end of the year the price of palladium had plummeted. Ford’s inventory was then worth \$1 billion less than its original cost. Do you think Ford’s inventory should have been stated at cost, in accordance with the cost principle, or at its lower replacement cost?

As you probably reasoned, this situation requires a departure from the cost basis of accounting. When the value of inventory is lower than its cost, companies can “write down” the inventory to its market value. This is done by valuing the inventory at the **lower-of-cost-or-market (LCM)** in the period in which the price decline occurs. LCM is an example of the accounting concept of conservatism, which means that the best choice among accounting alternatives is the method that is least likely to overstate assets and net income.

Companies apply LCM to the items in inventory after they have used one of the cost flow methods (specific identification, FIFO, LIFO, or average-cost) to determine cost. Under the LCM basis, market is defined as **current replacement cost**, not selling price. For a merchandising company, market is the cost of purchasing the same goods at the present time from the usual suppliers in the usual quantities. Current replacement cost is used because a decline in the replacement cost of an item usually leads to a decline in the selling price of the item.

To illustrate the application of LCM, assume that Ken Tuckie TV has the following lines of merchandise with costs and market values as indicated. LCM produces the results shown in Illustration 6-15 (page 286). Note that the amounts shown in the final column are the lower-of-cost-or-market amounts for each item.

LEARNING OBJECTIVE

4

Explain the lower-of-cost-or-market basis of accounting for inventories.

International Note

Under U.S. GAAP, companies cannot reverse inventory write-downs if inventory increases in value in subsequent periods. IFRS permits companies to reverse write-downs in some circumstances.

Illustration 6-15

Computation of lower-of-cost-or-market

	<u>Cost</u>	<u>Market</u>	<u>Lower-of- Cost-or-Market</u>
Flat-screen TVs	\$60,000	\$55,000	\$ 55,000
Satellite radios	45,000	52,000	45,000
DVD recorders	48,000	45,000	45,000
DVDs	15,000	14,000	14,000
Total inventory			<u>\$159,000</u>

Inventory Errors

LEARNING OBJECTIVE 5

Indicate the effects of inventory errors on the financial statements.

Unfortunately, errors occasionally occur in accounting for inventory. In some cases, errors are caused by failure to count or price the inventory correctly. In other cases, errors occur because companies do not properly recognize the transfer of legal title to goods that are in transit. When errors occur, they affect both the income statement and the balance sheet.

Income Statement Effects

Under a periodic inventory system, both the beginning and ending inventories appear in the income statement. The ending inventory of one period automatically becomes the beginning inventory of the next period. Thus, inventory errors affect the computation of cost of goods sold and net income in two periods.

The effects on cost of goods sold can be computed by entering incorrect data in the formula in Illustration 6-16 and then substituting the correct data.

Illustration 6-16

Formula for cost of goods sold

Beginning Inventory	+	Cost of Goods Purchased	-	Ending Inventory	=	Cost of Goods Sold
--------------------------------	---	--	---	-----------------------------	---	-----------------------------------

If the error understates *beginning* inventory, cost of goods sold will be understated. If the error understates *ending* inventory, cost of goods sold will be overstated. Illustration 6-17 shows the effects of inventory errors on the current year's income statement.

Illustration 6-17

Effects of inventory errors on current year's income statement

<u>When Inventory Error:</u>	<u>Cost of Goods Sold Is:</u>	<u>Net Income Is:</u>
Understates beginning inventory	Understated	Overstated
Overstates beginning inventory	Overstated	Understated
Understates ending inventory	Overstated	Understated
Overstates ending inventory	Understated	Overstated

Ethics Note

Inventory fraud increases during recessions. Such fraud includes pricing inventory at amounts in excess of its actual value, or claiming to have inventory when no inventory exists. Inventory fraud usually overstates ending inventory, thereby understating cost of goods sold and creating higher income.

So far, the effects of inventory errors are fairly straightforward. Now, though, comes the (at first) surprising part: An error in the ending inventory of the current period will have a **reverse effect on net income of the next accounting period**. Illustration 6-18 shows this effect. As you study the illustration, you will see that the reverse effect comes from the fact that understating ending inventory in 2013 results in understating beginning inventory in 2014 and overstating net income in 2014.

Over the two years, though, total net income is correct because the errors **offset each other**. Notice that total income using incorrect data is \$35,000 (\$22,000 + \$13,000), which is the same as the total income of \$35,000 (\$25,000 + \$10,000) using correct data. Also note in this example

Sample Company Condensed Income Statements				
	2013		2014	
	Incorrect	Correct	Incorrect	Correct
Sales revenue	\$80,000	\$80,000	\$90,000	\$90,000
Beginning inventory	\$20,000	\$20,000	\$12,000	\$15,000
Cost of goods purchased	40,000	40,000	68,000	68,000
Cost of goods available for sale	60,000	60,000	80,000	83,000
Ending inventory	12,000	15,000	23,000	23,000
Cost of goods sold	48,000	45,000	57,000	60,000
Gross profit	32,000	35,000	33,000	30,000
Operating expenses	10,000	10,000	20,000	20,000
Net income	<u>\$22,000</u>	<u>\$25,000</u>	<u>\$13,000</u>	<u>\$10,000</u>
	\$(3,000)		\$3,000	
	Net income understated		Net income overstated	
	The errors cancel. Thus the combined total income for the 2-year period is correct.			

that an error in the beginning inventory does not result in a corresponding error in the ending inventory for that period. The correctness of the ending inventory depends entirely on the accuracy of taking and costing the inventory at the balance sheet date under the periodic inventory system.

Illustration 6-18

Effects of inventory errors on two years' income statements

Balance Sheet Effects

Companies can determine the effect of ending inventory errors on the balance sheet by using the basic accounting equation: Assets = Liabilities + Stockholders' Equity. Errors in the ending inventory have the effects shown in Illustration 6-19.

Ending Inventory Error	Assets	Liabilities	Stockholders' Equity
Overstated	Overstated	No effect	Overstated
Understated	Understated	No effect	Understated

Illustration 6-19

Effects of ending inventory errors on balance sheet

The effect of an error in ending inventory on the subsequent period was shown in Illustration 6-18. Recall that if the error is not corrected, the combined total net income for the two periods would be correct. Thus, total stockholders' equity reported on the balance sheet at the end of 2014 will also be correct.

> DO IT!**LCM Basis;
Inventory Errors**

(a) Tracy Company sells three different types of home heating stoves (gas, wood, and pellet). The cost and market value of its inventory of stoves are as follows.

	Cost	Market
Gas	\$ 84,000	\$ 79,000
Wood	250,000	280,000
Pellet	112,000	101,000

Action Plan

- ✓ Determine whether cost or market value is lower for each inventory type.
- ✓ Sum the lowest value of each inventory type to determine the total value of inventory.

Action Plan

- ✓ An ending inventory error in one period will have an equal and opposite effect on cost of goods sold and net income in the next period.
- ✓ After two years, the errors have offset each other.

Determine the value of the company's inventory under the lower-of-cost-or-market approach.

Solution

The lowest value for each inventory type is gas \$79,000, wood \$250,000, and pellet \$101,000. The total inventory value is the sum of these amounts, \$430,000.

(b) Visual Company overstated its 2013 ending inventory by \$22,000. Determine the impact this error has on ending inventory, cost of goods sold, and stockholders' equity in 2013 and 2014.

Solution

	2013	2014
Ending inventory	\$22,000 overstated	No effect
Cost of goods sold	\$22,000 understated	\$22,000 overstated
Stockholders' equity	\$22,000 overstated	No effect

Statement Presentation and Analysis

Presentation

As indicated in Chapter 5, inventory is classified in the balance sheet as a current asset immediately below receivables. In a multiple-step income statement, cost of goods sold is subtracted from sales. There also should be disclosure of (1) the major inventory classifications, (2) the basis of accounting (cost, or lower-of-cost-or-market), and (3) the cost method (FIFO, LIFO, or average).

Wal-Mart Stores, Inc., for example, in its January 31, 2011, balance sheet reported inventories of \$36,318 million under current assets. The accompanying notes to the financial statements, as shown in Illustration 6-20, disclosed the following information.

Illustration 6-20
Inventory disclosures
by Wal-Mart

Wal-Mart Stores, Inc. Notes to the Financial Statements

Note 1: Summary of Significant Accounting Policies

Inventories

The Company values inventories at the lower of cost or market as determined primarily by the retail method of accounting, using the last-in, first-out ("LIFO") method for substantially all of the Walmart U.S. segment's merchandise inventories. The retail method of accounting results in inventory being valued at the lower of cost or market since permanent markdowns are currently taken as a reduction of the retail value of inventory. The Sam's Club segment's merchandise is valued based on the weighted-average cost using the LIFO method. Inventories for the Walmart International operations are primarily valued by the retail method of accounting and are stated using the first-in, first-out ("FIFO") method. At January 31, 2011 and 2010, our inventories valued at LIFO approximate those inventories as if they were valued at FIFO.

As indicated in this note, Wal-Mart values its inventories at the lower-of-cost-or-market using LIFO and FIFO.

Analysis

The amount of inventory carried by a company has significant economic consequences. And inventory management is a double-edged sword that requires constant attention. On the one hand, management wants to have a great variety and quantity on hand so that customers have a wide selection and items are always in stock. But, such a policy may incur high carrying costs (e.g., investment, storage, insurance, obsolescence, and damage). On the other hand, low inventory levels lead to stock-outs and lost sales. Common ratios used to manage and evaluate inventory levels are inventory turnover and a related measure, days in inventory.

Inventory turnover measures the number of times on average the inventory is sold during the period. Its purpose is to measure the liquidity of the inventory. The inventory turnover is computed by dividing cost of goods sold by the average inventory during the period. Unless seasonal factors are significant, average inventory can be computed from the beginning and ending inventory balances. For example, **Wal-Mart** reported in its 2011 annual report a beginning inventory of \$32,713 million, an ending inventory of \$36,318 million, and cost of goods sold for the year ended January 31, 2011, of \$315,287 million. The inventory turnover formula and computation for Wal-Mart are shown below.

Cost of Goods Sold	÷	Average Inventory	=	Inventory Turnover
\$315,287	÷	$\frac{\$36,318 + \$32,713}{2}$	=	9.13 times

A variant of the inventory turnover ratio is **days in inventory**. This measures the average number of days inventory is held. It is calculated as 365 divided by the inventory turnover ratio. For example, Wal-Mart's inventory turnover of 9.13 times divided into 365 is approximately 40 days. This is the approximate time that it takes a company to sell the inventory once it arrives at the store.

There are typical levels of inventory in every industry. Companies that are able to keep their inventory at lower levels and higher turnovers and still satisfy customer needs are the most successful.

LEARNING OBJECTIVE 6

Compute and interpret the inventory turnover ratio.

Illustration 6-21

Inventory turnover formula and computation for Wal-Mart

ACCOUNTING ACROSS THE ORGANIZATION

Improving Inventory Control with RFID

Wal-Mart improved its inventory control with the introduction of radio frequency identification (RFID). Much like bar codes, which tell a retailer the number of boxes of a specific product it has, RFID goes a step farther, helping to distinguish one box of a specific product from another. RFID uses technology similar to that used by keyless remotes that unlock car doors.

Companies currently use RFID to track shipments from supplier to distribution center to store. Other potential uses include monitoring product expiration dates and acting quickly on product recalls. Wal-Mart also anticipates faster returns and warranty processing using RFID. This technology will further assist Wal-Mart managers in their efforts to ensure that their store has just the right type of inventory, in just the right amount, in just the right place. Other companies are also interested in RFID. **Best Buy** has spent millions researching possible applications in its stores.

Why is inventory control important to managers such as those at Wal-Mart and Best Buy? (See page 320.)

> DO IT!

Inventory Turnover

Early in 2014, Westmoreland Company switched to a just-in-time inventory system. Its sales, cost of goods sold, and inventory amounts for 2013 and 2014 are shown below.

	<u>2013</u>	<u>2014</u>
Sales revenue	\$2,000,000	\$1,800,000
Cost of goods sold	1,000,000	910,000
Beginning inventory	290,000	210,000
Ending inventory	210,000	50,000

Determine the inventory turnover and days in inventory for 2013 and 2014. Discuss the changes in the amount of inventory, the inventory turnover and days in inventory, and the amount of sales across the two years.

Solution

Action Plan

- ✓ To find the inventory turnover ratio, divide cost of goods sold by average inventory.
- ✓ To determine days in inventory, divide 365 days by the inventory turnover ratio.
- ✓ Just-in-time inventory reduces the amount of inventory on hand, which reduces carrying costs. Reducing inventory levels by too much has potential negative implications for sales.

	<u>2013</u>		<u>2014</u>
Inventory turnover ratio	$\frac{\$1,000,000}{(\$290,000 + \$210,000)/2} = 4$	=	$\frac{\$910,000}{(\$210,000 + \$50,000)/2} = 7$
Days in inventory	$365 \div 4 = 91.3$ days		$365 \div 7 = 52.1$ days

The company experienced a very significant decline in its ending inventory as a result of the just-in-time inventory. This decline improved its inventory turnover ratio and its days in inventory. However, its sales declined by 10%. It is possible that this decline was caused by the dramatic reduction in the amount of inventory that was on hand, which increased the likelihood of “stock-outs.” To determine the optimal inventory level, management must weigh the benefits of reduced inventory against the potential lost sales caused by stock-outs.

Related exercise material: **BE6-9, E6-13, E6-14, and DO IT! 6-4.**

> Comprehensive DO IT! 1

Gerald D. Englehart Company has the following inventory, purchases, and sales data for the month of March.

Inventory:	March 1	200 units @ \$4.00	\$ 800
Purchases:	March 10	500 units @ \$4.50	2,250
	March 20	400 units @ \$4.75	1,900
	March 30	300 units @ \$5.00	1,500
Sales:	March 15	500 units	
	March 25	400 units	

The physical inventory count on March 31 shows 500 units on hand.

Instructions

Under a **periodic inventory system**, determine the cost of inventory on hand at March 31 and the cost of goods sold for March under (a) (FIFO), (b) (LIFO), and (c) average-cost.

Solution to Comprehensive DO IT! 1**Action Plan**

- ✓ Compute the total goods available for sale, in both units and dollars.
- ✓ Compute the cost of ending inventory under the periodic FIFO method by allocating to the units on hand the **latest costs**.
- ✓ Compute the cost of ending inventory under the periodic LIFO method by allocating to the units on hand the **earliest costs**.
- ✓ Compute the cost of ending inventory under the periodic average-cost method by allocating to the units on hand a **weighted-average cost**.

The cost of goods available for sale is \$6,450, as follows.

Inventory:	200 units @ \$4.00	\$ 800
Purchases:		
	March 10 500 units @ \$4.50	2,250
	March 20 400 units @ \$4.75	1,900
	March 30 300 units @ \$5.00	<u>1,500</u>
Total:	<u>1,400</u>	<u>\$6,450</u>

Under a **periodic inventory system**, the cost of goods sold under each cost flow method is as follows.

FIFO Method

Ending inventory:

<u>Date</u>	<u>Units</u>	<u>Unit Cost</u>	<u>Total Cost</u>	
March 30	300	\$5.00	\$1,500	
March 20	200	4.75	<u>950</u>	<u>\$2,450</u>

Cost of goods sold: \$6,450 – \$2,450 = \$4,000

LIFO Method

Ending inventory:

<u>Date</u>	<u>Units</u>	<u>Unit Cost</u>	<u>Total Cost</u>	
March 1	200	\$4.00	\$ 800	
March 10	300	4.50	<u>1,350</u>	<u>\$2,150</u>

Cost of goods sold: \$6,450 – \$2,150 = \$4,300

Average-Cost Method

Average unit cost: \$6,450 ÷ 1,400 = \$4.607

Ending inventory: 500 × \$4.607 = \$2,303.50

Cost of goods sold: \$6,450 – \$2,303.50 = \$4,146.50

✓ **The Navigator**

SUMMARY OF LEARNING OBJECTIVES

✓ **The Navigator**

1 Describe the steps in determining inventory quantities.

The steps are (1) take a physical inventory of goods on hand and (2) determine the ownership of goods in transit or on consignment.

2 Explain the accounting for inventories and apply the inventory cost flow methods.

The primary basis of accounting for inventories is cost. Cost of goods available for sale includes (a) cost of beginning inventory and (b) cost of goods purchased. The inventory cost flow methods are specific identification and three assumed cost flow methods—FIFO, LIFO, and average-cost.

3 Explain the financial effects of the inventory cost flow assumptions.

Companies may allocate the cost of goods available for sale to cost of goods sold and ending inventory by specific identification or by a method based on an assumed cost flow. When prices are rising, the first-in, first-out (FIFO) method results in lower cost of goods sold and higher net income than the other methods. The reverse is true when prices are falling. In the balance sheet, FIFO results in an ending inventory that is closest to current value; inventory under LIFO is the farthest from current value. LIFO results in the lowest income taxes.

4 Explain the lower-of-cost-or-market basis of accounting for inventories. Companies may use the lower-of-cost-or-market (LCM) basis when the current replacement cost (market) is less than cost. Under LCM, companies recognize the loss in the period in which the price decline occurs.

5 Indicate the effects of inventory errors on the financial statements. *In the income statement of the current year:* (a) An error in beginning inventory will have a reverse effect on net income. (b) An error in ending inventory will have a similar effect on net income. In the follow-

ing period, its effect on net income for that period is reversed, and total net income for the two years will be correct.

In the balance sheet: Ending inventory errors will have the same effect on total assets and total stockholders' equity and no effect on liabilities.

6 Compute and interpret the inventory turnover ratio. The inventory turnover ratio is cost of goods sold divided by average inventory. To convert it to average days in inventory, divide 365 days by the inventory turnover ratio.

GLOSSARY

Average-cost method Inventory costing method that uses the weighted-average unit cost to allocate to ending inventory and cost of goods sold the cost of goods available for sale. (p. 281).

Consigned goods Goods held for sale by one party although ownership of the goods is retained by another party. (p. 275).

Consistency concept Dictates that a company use the same accounting principles and methods from year to year. (p. 284).

Current replacement cost The current cost to replace an inventory item. (p. 285).

Days in inventory Measure of the average number of days inventory is held; calculated as 365 divided by inventory turnover ratio. (p. 289).

Finished goods inventory Manufactured items that are completed and ready for sale. (p. 272).

First-in, first-out (FIFO) method Inventory costing method that assumes that the costs of the earliest goods purchased are the first to be recognized as cost of goods sold. (p. 278).

FOB (free on board) destination Freight terms indicating that ownership of the goods remains with the seller until the goods reach the buyer. (p. 274).

FOB (free on board) shipping point Freight terms indicating that ownership of the goods passes to the buyer when the public carrier accepts the goods from the seller. (p. 274).

Inventory turnover A ratio that measures the number of times on average the inventory sold during the period; computed by dividing cost of goods sold by the average inventory during the period. (p. 289).

Just-in-time (JIT) inventory method Inventory system in which companies manufacture or purchase goods just in time for use. (p. 272).

Last-in, first-out (LIFO) method Inventory costing method that assumes the costs of the latest units purchased are the first to be allocated to cost of goods sold. (p. 280).

Lower-of-cost-or-market (LCM) basis A basis whereby inventory is stated at the lower of either its cost or its market value as determined by current replacement cost. (p. 285).

Raw materials Basic goods that will be used in production but have not yet been placed into production. (p. 272).

Specific identification method An actual physical flow costing method in which items still in inventory are specifically costed to arrive at the total cost of the ending inventory. (p. 277).

Weighted-average unit cost Average cost that is weighted by the number of units purchased at each unit cost. (p. 281).

Work in process That portion of manufactured inventory that has been placed into the production process but is not yet complete. (p. 272).

APPENDIX 6A INVENTORY COST FLOW METHODS IN PERPETUAL INVENTORY SYSTEMS

LEARNING OBJECTIVE 7

Apply the inventory cost flow methods to perpetual inventory records.

What inventory cost flow methods do companies employ if they use a perpetual inventory system? Simple—they can use any of the inventory cost flow methods described in the chapter. To illustrate the application of the three assumed cost flow methods (FIFO, LIFO, and average-cost), we will use the data shown in Illustration 6A-1 and in this chapter for Houston Electronics' Astro Condenser.

Houston Electronics Astro Condensers					
Date	Explanation	Units	Units Cost	Total Cost	Balance in Units
1/1	Beginning inventory	100	\$10	\$ 1,000	100
4/15	Purchases	200	11	2,200	300
8/24	Purchases	300	12	3,600	600
9/10	Sale	550			50
11/27	Purchases	400	13	5,200	450
				\$12,000	

Illustration 6A-1
Inventoriable units and costs

First-In, First-Out (FIFO)

Under FIFO, the company charges to cost of goods sold the cost of the earliest goods on hand **prior to each sale**. Therefore, the cost of goods sold on September 10 consists of the units on hand January 1 and the units purchased April 15 and August 24. Illustration 6A-2 shows the inventory under a FIFO method perpetual system.

Date	Purchases	Cost of Goods Sold	Balance (in units and cost)
January 1			(100 @ \$10) \$ 1,000
April 15	(200 @ \$11) \$2,200		(100 @ \$10) } (200 @ \$11) } \$ 3,200
August 24	(300 @ \$12) \$3,600		(100 @ \$10) } (200 @ \$11) } \$ 6,800 (300 @ \$12) }
September 10		(100 @ \$10) (200 @ \$11) <u>(250 @ \$12)</u>	(50 @ \$12) \$ 600
		\$6,200	
November 27	(400 @ \$13) \$5,200		(50 @ \$12) } (400 @ \$13) } \$5,800

Cost of goods sold

Ending inventory

Illustration 6A-2
Perpetual system—FIFO

The ending inventory in this situation is \$5,800, and the cost of goods sold is \$6,200 [(100 @ \$10) + (200 @ \$11) + (250 @ \$12)].

Compare Illustrations 6-5 (page 279) and 6A-2. You can see that the results under FIFO in a perpetual system are the **same as in a periodic system**. In both cases, the ending inventory is \$5,800 and cost of goods sold is \$6,200. Regardless of the system, the first costs in are the costs assigned to cost of goods sold.

Last-In, First-Out (LIFO)

Under the LIFO method using a perpetual system, the company charges to cost of goods sold the cost of the most recent purchase prior to sale. Therefore, the cost of the goods sold on September 10 consists of all the units from the August 24 and April 15 purchases plus 50 of the units in beginning inventory. Illustration 6A-3 (page 294) shows the computation of the ending inventory under the LIFO method.

Illustration 6A-3

Perpetual system—LIFO

Date	Purchases	Cost of Goods Sold	Balance (in units and cost)
January 1			(100 @ \$10) \$1,000
April 15	(200 @ \$11) \$2,200		(100 @ \$10) } (200 @ \$11) } \$3,200
August 24	(300 @ \$12) \$3,600		(100 @ \$10) } (200 @ \$11) } \$6,800 (300 @ \$12)
September 10		(300 @ \$12) (200 @ \$11) (50 @ \$10)	(50 @ \$10) \$ 500
Cost of goods sold		\$6,300	
November 27	(400 @ \$13) \$5,200		(50 @ \$10) } (400 @ \$13) } \$5,700
Ending inventory			

The use of LIFO in a perpetual system will usually produce cost allocations that differ from those using LIFO in a periodic system. In a perpetual system, the company allocates the latest units purchased *prior to each sale* to cost of goods sold. In contrast, in a periodic system, the latest units purchased *during the period* are allocated to cost of goods sold. Thus, when a purchase is made after the last sale, the LIFO periodic system will apply this purchase to the previous sale. Compare Illustrations 6-7 (page 280) and 6A-3. Illustration 6-7 shows that the 400 units at \$13 purchased on November 27 applied to the sale of 550 units (on September 10). Under the LIFO perpetual system in Illustration 6A-3, the 400 units at \$13 purchased on November 27 are all applied to the ending inventory.

The ending inventory in this LIFO perpetual illustration is \$5,700, and cost of goods sold is \$6,300, as compared to the LIFO periodic Illustration 6-7 (on page 280) where the ending inventory is \$5,000 and cost of goods sold is \$7,000.

Average-Cost

The average-cost method in a perpetual inventory system is called the **moving-average method**. Under this method, the company computes a new average **after each purchase**, by dividing the cost of goods available for sale by the units on hand. The average cost is then applied to (1) the units sold, to determine the cost of goods sold, and (2) the remaining units on hand, to determine the ending inventory amount. Illustration 6A-4 shows the application of the moving-average cost method by Houston Electronics.

Illustration 6A-4Perpetual system—
average-cost method

Date	Purchases	Cost of Goods Sold	Balance (in units and cost)
January 1			(100 @ \$10) \$ 1,000
April 15	(200 @ \$11) \$2,200		(300 @ \$10.667) \$ 3,200
August 24	(300 @ \$12) \$3,600		(600 @ \$11.333) \$ 6,800
September 10		(550 @ \$11.333)	(50 @ \$11.333) \$ 567
Cost of goods sold		\$6,233	
November 27	(400 @ \$13) \$5,200		(450 @ \$12.816) \$5,767
Ending inventory			

As indicated, Houston Electronics computes a **new average each time it makes a purchase**. On April 15, after it buys 200 units for \$2,200, a total of 300 units costing \$3,200 (\$1,000 + \$2,200) are on hand. The average unit cost is \$10.667 (\$3,200 ÷ 300). On August 24, after Houston Electronics buys 300 units for \$3,600, a total of 600 units costing \$6,800 (\$1,000 + \$2,200 + \$3,600) are on hand, at an average cost per unit of \$11.333 (\$6,800 ÷ 600). Houston Electronics uses this unit cost of \$11.333 in costing sales until it makes another purchase, when the company computes a new unit cost. Accordingly, the unit cost of the 550 units sold (on September 10) is \$11.333, and the total cost of goods sold is \$6,233. On November 27, following the purchase of 400 units for \$5,200, there are 450 units on hand costing \$5,767 (\$567 + \$5,200) with a new average cost of \$12.816 (\$5,767 ÷ 450).

Compare this moving-average cost under the perpetual inventory system to Illustration 6-10 (on page 282) showing the average-cost method under a periodic inventory system.

> Comprehensive DO IT! 2

Comprehensive **DO IT!** 1 on page 290 showed cost of goods sold computations under a periodic inventory system. Now let's assume that Gerald D. Englehart Company uses a perpetual inventory system. The company has the same inventory, purchases, and sales data for the month of March as shown earlier:

Inventory:	March 1	200 units @ \$4.00	\$ 800
Purchases:	March 10	500 units @ \$4.50	2,250
	March 20	400 units @ \$4.75	1,900
	March 30	300 units @ \$5.00	1,500
Sales:	March 15	500 units	
	March 25	400 units	

The physical inventory count on March 31 shows 500 units on hand.

Instructions

Under a **perpetual inventory system**, determine the cost of inventory on hand at March 31 and the cost of goods sold for March under (a) FIFO, (b) LIFO, and (c) average-cost.

Solution to Comprehensive DO IT! 2

Action Plan

- ✓ Compute the cost of goods sold under the perpetual FIFO method by allocating to the goods sold the **earliest** cost of goods purchased.
- ✓ Compute the cost of goods sold under the perpetual LIFO method by allocating to the goods sold the **latest** cost of goods purchased.
- ✓ Compute the cost of goods sold under the perpetual average-cost method by allocating to the goods sold a **moving-average** cost.

The cost of goods available for sale is \$6,450, as follows.

Inventory:	200 units @ \$4.00	\$ 800
Purchases:	March 10 500 units @ \$4.50	2,250
	March 20 400 units @ \$4.75	1,900
	March 30 300 units @ \$5.00	1,500
Total:	<u>1,400</u>	<u>\$6,450</u>

Under a **perpetual inventory system**, the cost of goods sold under each cost flow method is as follows.

<u>FIFO Method</u>			
<u>Date</u>	<u>Purchases</u>	<u>Cost of Goods Sold</u>	<u>Balance</u>
March 1			(200 @ \$4.00) \$ 800
March 10	(500 @ \$4.50) \$2,250		(200 @ \$4.00) (500 @ \$4.50) \$3,050
March 15		(200 @ \$4.00) (300 @ \$4.50)	(200 @ \$4.50) \$ 900
		<u>\$2,150</u>	

<u>Date</u>	<u>Purchases</u>	<u>Cost of Goods Sold</u>	<u>Balance</u>
March 20	(400 @ \$4.75) \$1,900		(200 @ \$4.50) } (400 @ \$4.75) } \$2,800
March 25		(200 @ \$4.50) (200 @ \$4.75) \$1,850	(200 @ \$4.75) \$ 950
March 30	(300 @ \$5.00) \$1,500		(200 @ \$4.75) } (300 @ \$5.00) } \$2,450
	Ending inventory <u>\$2,450</u>	Cost of goods sold: \$2,150 + \$1,850 = <u>\$4,000</u>	
<u>LIFO Method</u>			
<u>Date</u>	<u>Purchases</u>	<u>Cost of Goods Sold</u>	<u>Balance</u>
March 1			(200 @ \$4.00) \$ 800
March 10	(500 @ \$4.50) \$2,250		(200 @ \$4.00) } (500 @ \$4.50) } \$3,050
March 15		(500 @ \$4.50) \$2,250	(200 @ \$4.00) \$ 800
March 20	(400 @ \$4.75) \$1,900		(200 @ \$4.00) } (400 @ \$4.75) } \$2,700
March 25		(400 @ \$4.75) \$1,900	(200 @ \$4.00) \$ 800
March 30	(300 @ \$5.00) \$1,500		(200 @ \$4.00) } (300 @ \$5.00) } \$2,300
	Ending inventory <u>\$2,300</u>	Cost of goods sold: \$2,250 + \$1,900 = <u>\$4,150</u>	
<u>Moving-Average Cost Method</u>			
<u>Date</u>	<u>Purchases</u>	<u>Cost of Goods Sold</u>	<u>Balance</u>
March 1			(200 @ \$4.00) \$ 800
March 10	(500 @ \$4.50) \$2,250		(700 @ \$4.357) \$3,050
March 15		(500 @ \$4.357) \$ 2,179	(200 @ \$4.357) \$ 871
March 20	(400 @ \$4.75) \$1,900		(600 @ \$4.618) \$2,771
March 25		(400 @ \$4.618) \$ 1,847	(200 @ \$4.618) \$ 924
March 30	(300 @ \$5.00) \$1,500		(500 @ \$4.848) \$2,424
	Ending inventory <u>\$2,424</u>	Cost of goods sold: \$2,179 + \$1,847 = <u>\$4,026</u>	

The Navigator

SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 6A

The Navigator

7 Apply the inventory cost flow methods to perpetual inventory records. Under FIFO and a perpetual inventory system, companies charge to cost of goods sold the cost of the earliest goods on hand prior to each sale. Under LIFO and a perpetual system, companies charge

to cost of goods sold the cost of the most recent purchase prior to sale. Under the moving-average (average cost) method and a perpetual system, companies compute a new average cost after each purchase.

APPENDIX 6B ESTIMATING INVENTORIES

LEARNING OBJECTIVE 8

Describe the two methods of estimating inventories.

In the chapter, we assumed that a company would be able to physically count its inventory. What if it cannot? What if the inventory were destroyed by fire or flood, for example? In that case, the company would use an estimate.

Two circumstances explain why companies sometimes estimate inventories. First, a casualty such as fire, flood, or earthquake may make it impossible to take a physical inventory. Second, managers may want monthly or quarterly financial statements, but a physical inventory is taken only annually. The need for estimating inventories occurs primarily with a periodic inventory system because of the absence of perpetual inventory records.

There are two widely used methods of estimating inventories: (1) the gross profit method, and (2) the retail inventory method.

Gross Profit Method

The **gross profit method** estimates the cost of ending inventory by applying a gross profit rate to net sales. This method is relatively simple but effective. Accountants, auditors, and managers frequently use the gross profit method to test the reasonableness of the ending inventory amount. It will detect large errors.

To use this method, a company needs to know its net sales, cost of goods available for sale, and gross profit rate. The company then can estimate its gross profit for the period. Illustration 6B-1 shows the formulas for using the gross profit method.

Step 1:	Net Sales	–	Estimated Gross Profit	=	Estimated Cost of Goods Sold
			↓		
Step 2:	Cost of Goods Available for Sale	–	Estimated Cost of Goods Sold	=	Estimated Cost of Ending Inventory

Illustration 6B-1
Gross profit method formulas

To illustrate, assume that Kishwaukee Company wishes to prepare an income statement for the month of January. Its records show net sales of \$200,000, beginning inventory \$40,000, and cost of goods purchased \$120,000. In the preceding year, the company realized a 30% gross profit rate. It expects to earn the same rate this year. Given these facts and assumptions, Kishwaukee can compute the estimated cost of the ending inventory at January 31 under the gross profit method as follows.

Step 1:	
Net sales	\$ 200,000
Less: Estimated gross profit (30% × \$200,000)	60,000
Estimated cost of goods sold	<u>\$140,000</u>
Step 2:	
Beginning inventory	\$ 40,000
Cost of goods purchased	120,000
Cost of goods available for sale	160,000
Less: Estimated cost of goods sold	140,000
Estimated cost of ending inventory	<u>\$ 20,000</u>

Illustration 6B-2
Example of gross profit method

The gross profit method is based on the assumption that the gross profit rate will remain constant. But, it may not remain constant, due to a change

in merchandising policies or in market conditions. In such cases, the company should adjust the rate to reflect current operating conditions. In some cases, companies can obtain a more accurate estimate by applying this method on a department or product-line basis.

Note that companies should not use the gross profit method to prepare financial statements at the end of the year. These statements should be based on a physical inventory count.

Retail Inventory Method

A retail store such as **Home Depot**, **Ace Hardware**, or **Wal-Mart** has thousands of different types of merchandise at low unit costs. In such cases, it is difficult and time-consuming to apply unit costs to inventory quantities. An alternative is to use the **retail inventory method** to estimate the cost of inventory. Most retail companies can establish a relationship between cost and sales price. The company then applies the cost-to-retail percentage to the ending inventory at retail prices to determine inventory at cost.

Under the retail inventory method, a company's records must show both the cost and retail value of the goods available for sale. Illustration 6B-3 presents the formulas for using the retail inventory method.

Illustration 6B-3
Retail inventory method formulas

Step 1:	Goods Available for Sale at Retail	–	Net Sales	=	Ending Inventory at Retail
Step 2:	Goods Available for Sale at Cost	÷	Goods Available for Sale at Retail	=	Cost-to-Retail Ratio
Step 3:	Ending Inventory at Retail	×	Cost-to-Retail Ratio	=	Estimated Cost of Ending Inventory

We can demonstrate the logic of the retail method by using unit-cost data. Assume that Ortiz Inc. has marked 10 units purchased at \$7 to sell for \$10 per unit. Thus, the cost-to-retail ratio is 70% ($\$70 \div \100). If four units remain unsold, their retail value is \$40 ($4 \times \10), and their cost is \$28 ($\$40 \times 70\%$). This amount agrees with the total cost of goods on hand on a per unit basis ($4 \times \$7$).

Illustration 6B-4 shows application of the retail method for Valley West Co. Note that it is not necessary to take a physical inventory to determine the estimated cost of goods on hand at any given time.

Illustration 6B-4
Application of retail inventory method

	At Cost	At Retail
Beginning inventory	\$14,000	\$ 21,500
Goods purchased	61,000	78,500
Goods available for sale	<u>\$75,000</u>	<u>100,000</u>
Net sales		<u>70,000</u>
Step (1) Ending inventory at retail =		<u>\$ 30,000</u>
Step (2) Cost-to-retail ratio = $\\$75,000 \div \\$100,000 = 75\%$		
Step (3) Estimated cost of ending inventory = $\\$30,000 \times 75\% =$		<u>\$22,500</u>

The retail inventory method also facilitates taking a physical inventory at the end of the year. Valley West can value the goods on hand at the prices marked on the merchandise and then apply the cost-to-retail ratio to the goods on hand at retail to determine the ending inventory at cost.

The major disadvantage of the retail method is that it is an averaging technique. Thus, it may produce an incorrect inventory valuation if the mix of the ending inventory is not representative of the mix in the goods available for sale. Assume, for example, that the cost-to-retail ratio of 75% for Valley West consists of equal proportions of inventory items that have cost-to-retail ratios of 70%, 75%, and 80%. If the ending inventory contains only items with a 70% ratio, an incorrect inventory cost will result. Companies can minimize this problem by applying the retail method on a department or product-line basis.

Helpful Hint

In determining inventory at retail, companies use selling prices of the units.

SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 6B

The Navigator

8 Describe the two methods of estimating inventories.

The two methods of estimating inventories are the gross profit method and the retail inventory method. Under the gross profit method, companies apply a gross profit rate to net sales to determine estimated cost of goods sold. They then subtract estimated cost of goods sold from cost of goods available for sale to determine the estimated cost of the ending inventory.

Under the retail inventory method, companies compute a cost-to-retail ratio by dividing the cost of goods available for sale by the retail value of the goods available for sale. They then apply this ratio to the ending inventory at retail to determine the estimated cost of the ending inventory.

GLOSSARY FOR APPENDIX 6B

Gross profit method A method for estimating the cost of the ending inventory by applying a gross profit rate to net sales and subtracting estimated cost of goods sold from cost of goods available for sale. (p. 297).

Retail inventory method A method for estimating the cost of the ending inventory by applying a cost-to-retail ratio to the ending inventory at retail. (p. 298).

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more components are available for practice in WileyPLUS.

*Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

SELF-TEST QUESTIONS

Answers are on page 320.

- (LO 1) 1. Which of the following should *not* be included in the physical inventory of a company?
- Goods held on consignment from another company.
 - Goods shipped on consignment to another company.
 - Goods in transit from another company shipped FOB shipping point.
 - None of the above.
- (LO 1) 2. As a result of a thorough physical inventory, Railway Company determined that it had inventory worth

\$180,000 at December 31, 2014. This count did not take into consideration the following facts. Rogers Consignment store currently has goods worth \$35,000 on its sales floor that belong to Railway but are being sold on consignment by Rogers. The selling price of these goods is \$50,000. Railway purchased \$13,000 of goods that were shipped on December 27, FOB destination, that will be received by Railway on January 3. Determine the correct amount of inventory that Railway should report.

- \$230,000.
- \$215,000.
- \$228,000.
- \$193,000.

- (LO 2) 3. Cost of goods available for sale consists of two elements: beginning inventory and:
- ending inventory.
 - cost of goods purchased.
 - cost of goods sold.
 - All of the above.
- (LO 2) 4. Tinker Bell Company has the following:
- | | <u>Units</u> | <u>Unit Cost</u> |
|-------------------|--------------|------------------|
| Inventory, Jan. 1 | 8,000 | \$11 |
| Purchase, June 19 | 13,000 | 12 |
| Purchase, Nov. 8 | 5,000 | 13 |
- If Tinker Bell has 9,000 units on hand at December 31, the cost of the ending inventory under FIFO is:
- \$99,000.
 - \$108,000.
 - \$113,000.
 - \$117,000.
- (LO 2) 5. Using the data in Question 4 above, the cost of the ending inventory under LIFO is:
- \$113,000.
 - \$108,000.
 - \$99,000.
 - \$100,000.
- (LO 2) 6. Davidson Electronics has the following:
- | | <u>Units</u> | <u>Unit Cost</u> |
|-------------------|--------------|------------------|
| Inventory, Jan. 1 | 5,000 | \$ 8 |
| Purchase, April 2 | 15,000 | \$10 |
| Purchase, Aug. 28 | 20,000 | \$12 |
- If Davidson has 7,000 units on hand at December 31, the cost of ending inventory under the average-cost method is:
- \$84,000.
 - \$70,000.
 - \$56,000.
 - \$75,250.
- (LO 3) 7. In periods of rising prices, LIFO will produce:
- higher net income than FIFO.
 - the same net income as FIFO.
 - lower net income than FIFO.
 - higher net income than average-cost.
- (LO 3) 8. Factors that affect the selection of an inventory costing method do *not* include:
- tax effects.
 - balance sheet effects.
 - income statement effects.
 - perpetual vs. periodic inventory system.
- (LO 4) 9. Rickety Company purchased 1,000 widgets and has 200 widgets in its ending inventory at a cost of \$91 each and a current replacement cost of \$80 each. The ending inventory under lower-of-cost-or-market is:
- \$91,000.
 - \$80,000.
 - \$18,200.
 - \$16,000.
10. Atlantis Company's ending inventory is understated \$4,000. The effects of this error on the current year's cost of goods sold and net income, respectively, are:
- understated, overstated.
 - overstated, understated.
 - overstated, overstated.
 - understated, understated.
11. Harold Company overstated its inventory by \$15,000 at December 31, 2013. It did not correct the error in 2013 or 2014. As a result, Harold's stockholders' equity was:
- overstated at December 31, 2013, and understated at December 31, 2014.
 - overstated at December 31, 2013, and properly stated at December 31, 2014.
 - understated at December 31, 2013, and understated at December 31, 2014.
 - overstated at December 31, 2013, and overstated at December 31, 2014.
12. Which of these would cause the inventory turnover ratio to increase the most?
- Increasing the amount of inventory on hand.
 - Keeping the amount of inventory on hand constant but increasing sales.
 - Keeping the amount of inventory on hand constant but decreasing sales.
 - Decreasing the amount of inventory on hand and increasing sales.
13. Carlos Company had beginning inventory of \$80,000, ending inventory of \$110,000, cost of goods sold of \$285,000, and sales of \$475,000. Carlos's days in inventory is:
- 73 days.
 - 121.7 days.
 - 102.5 days.
 - 84.5 days.
- *14. Songbird Company has sales of \$150,000 and cost of goods available for sale of \$135,000. If the gross profit rate is 30%, the estimated cost of the ending inventory under the gross profit method is:
- \$15,000.
 - \$30,000.
 - \$45,000.
 - \$75,000.
- *15. In a perpetual inventory system:
- LIFO cost of goods sold will be the same as in a periodic inventory system.
 - average costs are based entirely on unit cost averages.
 - a new average is computed under the average-cost method after each sale.
 - FIFO cost of goods sold will be the same as in a periodic inventory system.

Go to the book's companion website, www.wiley.com/college/wegandt, for additional Self-Test Questions.

QUESTIONS

- "The key to successful business operations is effective inventory management." Do you agree? Explain.
- An item must possess two characteristics to be classified as inventory by a merchandiser. What are these two characteristics?
- Your friend Art Mega has been hired to help take the physical inventory in Jaegar Hardware Store. Explain to Art Mega what this job will entail.
- (a) Hanson Company ships merchandise to Fox Company on December 30. The merchandise

- reaches the buyer on January 6. Indicate the terms of sale that will result in the goods being included in (1) Hanson's December 31 inventory, and (2) Fox's December 31 inventory.
- (b) Under what circumstances should Hanson Company include consigned goods in its inventory?
5. Topp Hat Shop received a shipment of hats for which it paid the wholesaler \$2,970. The price of the hats was \$3,000 but Topp was given a \$30 cash discount and required to pay freight charges of \$80. In addition, Topp paid \$130 to cover the travel expenses of an employee who negotiated the purchase of the hats. What amount will Topp record for inventory? Why?
 6. Explain the difference between the terms FOB shipping point and FOB destination.
 7. Jason Bradley believes that the allocation of inventoriable costs should be based on the actual physical flow of the goods. Explain to Jason why this may be both impractical and inappropriate.
 8. What is a major advantage and a major disadvantage of the specific identification method of inventory costing?
 9. "The selection of an inventory cost flow method is a decision made by accountants." Do you agree? Explain. Once a method has been selected, what accounting requirement applies?
 10. Which assumed inventory cost flow method:
 - (a) usually parallels the actual physical flow of merchandise?
 - (b) assumes that goods available for sale during an accounting period are identical?
 - (c) assumes that the latest units purchased are the first to be sold?
 11. In a period of rising prices, the inventory reported in Barto Company's balance sheet is close to the current cost of the inventory. Phelan Company's inventory is considerably below its current cost. Identify the inventory cost flow method being used by each company. Which company has probably been reporting the higher gross profit?
 12. Olsen Company has been using the FIFO cost flow method during a prolonged period of rising prices. During the same time period, Olsen has been paying out all of its net income as dividends. What adverse effects may result from this policy?
 13. Steve Kerns is studying for the next accounting mid-term examination. What should Steve know about
 - (a) departing from the cost basis of accounting for inventories and (b) the meaning of "market" in the lower-of-cost-or-market method?
 14. Steering Music Center has 5 CD players on hand at the balance sheet date. Each cost \$100. The current replacement cost is \$90 per unit. Under the lower-of-cost-or-market basis of accounting for inventories, what value should be reported for the CD players on the balance sheet? Why?
 15. Maggie Stores has 20 toasters on hand at the balance sheet date. Each cost \$28. The current replacement cost is \$30 per unit. Under the lower-of-cost-or-market basis of accounting for inventories, what value should Maggie report for the toasters on the balance sheet? Why?
 16. Cohen Company discovers in 2014 that its ending inventory at December 31, 2013, was \$7,600 understated. What effect will this error have on (a) 2013 net income, (b) 2014 net income, and (c) the combined net income for the 2 years?
 17. Raglan Company's balance sheet shows Inventory \$162,800. What additional disclosures should be made?
 18. Under what circumstances might inventory turnover be too high? That is, what possible negative consequences might occur?
 19.  **PEPSICO** What inventory cost flow does PepsiCo use for its inventories? (*Hint: you will need to examine the notes for PepsiCo's financial statements.*)
 - *20. "When perpetual inventory records are kept, the results under the FIFO and LIFO methods are the same as they would be in a periodic inventory system." Do you agree? Explain.
 - *21. How does the average-cost method of inventory costing differ between a perpetual inventory system and a periodic inventory system?
 - *22. When is it necessary to estimate inventories?
 - *23. Both the gross profit method and the retail inventory method are based on averages. For each method, indicate the average used, how it is determined, and how it is applied.
 - *24. Edmonds Company has net sales of \$400,000 and cost of goods available for sale of \$300,000. If the gross profit rate is 40%, what is the estimated cost of the ending inventory? Show computations.
 - *25. Park Shoe Shop had goods available for sale in 2014 with a retail price of \$120,000. The cost of these goods was \$84,000. If sales during the period were \$90,000, what is the ending inventory at cost using the retail inventory method?

BRIEF EXERCISES

BE6-1 Dayne Company identifies the following items for possible inclusion in the taking of a physical inventory. Indicate whether each item should be included or excluded from the inventory taking.

- (a) Goods shipped on consignment by Dayne to another company.
- (b) Goods in transit from a supplier shipped FOB destination.

Identify items to be included in taking a physical inventory.

(LO 1)

Identify the components of goods available for sale.

(LO 2)

Compute ending inventory using FIFO and LIFO.

(LO 2)

Compute the ending inventory using average-cost.

(LO 2)

Explain the financial statement effect of inventory cost flow assumptions.

(LO 3)

Explain the financial statement effect of inventory cost flow assumptions.

(LO 3)

Determine the LCM valuation using inventory categories.

(LO 4)

Determine correct income statement amounts.

(LO 5)

Compute inventory turnover and days in inventory.

(LO 6)

Apply cost flow methods to perpetual inventory records.

(LO 7)

Apply the gross profit method.

(LO 8)

Apply the retail inventory method.

(LO 8)

- (c) Goods sold but being held for customer pickup.
(d) Goods held on consignment from another company.

BE6-2 The ledger of Perez Company includes the following items: (a) Freight-In, (b) Purchase Returns and Allowances, (c) Purchases, (d) Sales Discounts, and (e) Purchase Discounts. Identify which items are included in goods available for sale.

BE6-3 In its first month of operations, Rusch Company made three purchases of merchandise in the following sequence: (1) 300 units at \$6, (2) 400 units at \$7, and (3) 200 units at \$8. Assuming there are 450 units on hand, compute the cost of the ending inventory under the (a) FIFO method and (b) LIFO method. Rusch uses a periodic inventory system.

BE6-4 Data for Rusch Company are presented in BE6-3. Compute the cost of the ending inventory under the average-cost method, assuming there are 450 units on hand.

BE6-5 The management of Muni Corp. is considering the effects of various inventory-costing methods on its financial statements and its income tax expense. Assuming that the price the company pays for inventory is increasing, which method will:

- (a) Provide the highest net income?
(b) Provide the highest ending inventory?
(c) Result in the lowest income tax expense?
(d) Result in the most stable earnings over a number of years?

BE6-6 In its first month of operation, Marquis Company purchased 100 units of inventory for \$6, then 200 units for \$7, and finally 150 units for \$8. At the end of the month, 200 units remained. Compute the amount of phantom profit that would result if the company used FIFO rather than LIFO. Explain why this amount is referred to as *phantom profit*. The company uses the periodic method.

BE6-7 Pena Appliance Center accumulates the following cost and market data at December 31.

<u>Inventory Categories</u>	<u>Cost Data</u>	<u>Market Data</u>
Cameras	\$12,000	\$12,100
Camcorders	9,500	9,200
DVD players	14,000	12,800

Compute the lower-of-cost-or-market valuation for the company's total inventory.

BE6-8 Farr Company reports net income of \$90,000 in 2014. However, ending inventory was understated \$5,000. What is the correct net income for 2014? What effect, if any, will this error have on total assets as reported in the balance sheet at December 31, 2014?

BE6-9 At December 31, 2014, the following information was available for J. Simon Company: ending inventory \$40,000, beginning inventory \$60,000, cost of goods sold \$300,000, and sales revenue \$380,000. Calculate inventory turnover and days in inventory for J. Simon Company.

***BE6-10** Abbott's Department Store uses a perpetual inventory system. Data for product E2-D2 include the following purchases.

<u>Date</u>	<u>Number of Units</u>	<u>Unit Price</u>
May 7	50	\$11
July 28	30	13

On June 1, Abbott's sold 30 units, and on August 27, 35 more units. Prepare the perpetual inventory schedule for the above transactions using (a) FIFO, (b) LIFO, and (c) moving-average cost.

***BE6-11** At May 31, Stuart Company has net sales of \$330,000 and cost of goods available for sale of \$230,000. Compute the estimated cost of the ending inventory, assuming the gross profit rate is 40%.

***BE6-12** On June 30, Dusto Fabrics has the following data pertaining to the retail inventory method: Goods available for sale: at cost \$35,000, at retail \$50,000; net sales \$42,000; and ending inventory at retail \$8,000. Compute the estimated cost of the ending inventory using the retail inventory method.

> DO IT! REVIEW

DO IT! 6-1 Brazille Company just took its physical inventory. The count of inventory items on hand at the company's business locations resulted in a total inventory cost of \$300,000. In reviewing the details of the count and related inventory transactions, you have discovered the following.

Apply rules of ownership to determine inventory cost.

(LO 1)

1. Brazille has sent inventory costing \$21,000 on consignment to Nikki Company. All of this inventory was at Nikki's showrooms on December 31.
2. The company did not include in the count inventory (cost, \$20,000) that was purchased on December 28, terms FOB shipping point. The goods were in transit on December 31.
3. The company did not include in the count inventory (cost, \$17,000) that was sold with terms of FOB shipping point. The goods were in transit on December 31.

Compute the correct December 31 inventory.

DO IT! 6-2 The accounting records of Connor Electronics show the following data.

Compute cost of goods sold under different cost flow methods.

(LO 2)

Beginning inventory	3,000 units at \$5
Purchases	8,000 units at \$7
Sales	9,400 units at \$10

Determine cost of goods sold during the period under a periodic inventory system using (a) the FIFO method, (b) the LIFO method, and (c) the average-cost method. (Round unit cost to nearest tenth of a cent.)

DO IT! 6-3 (a) Wahl Company sells three different categories of tools (small, medium, and large). The cost and market value of its inventory of tools are as follows.

Compute inventory value under LCM.

(LO 4)

	<u>Cost</u>	<u>Market Value</u>
Small	\$ 64,000	\$ 73,000
Medium	290,000	260,000
Large	152,000	149,000

Determine the value of the company's inventory under the lower-of-cost-or-market approach.

(b) Rhodex Company understated its 2013 ending inventory by \$28,000. Determine the impact this error has on ending inventory, cost of goods sold, and stockholders' equity in 2013 and 2014.

DO IT! 6-4 Early in 2014, Racine Company switched to a just-in-time inventory system. Its sales, cost of goods sold, and inventory amounts for 2013 and 2014 are shown below.

Compute inventory turnover ratio and assess inventory level.

(LO 6)

	<u>2013</u>	<u>2014</u>
Sales	\$3,120,000	\$3,713,000
Cost of goods sold	1,200,000	1,425,000
Beginning inventory	180,000	220,000
Ending inventory	220,000	100,000

Determine the inventory turnover and days in inventory for 2013 and 2014. Discuss the changes in the amount of inventory, the inventory turnover and days in inventory, and the amount of sales across the two years.

EXERCISES

E6-1 Premier Bank and Trust is considering giving Alou Company a loan. Before doing so, management decides that further discussions with Alou's accountant may be desirable. One area of particular concern is the inventory account, which has a year-end balance of \$297,000. Discussions with the accountant reveal the following.

Determine the correct inventory amount.

(LO 1)

1. Alou sold goods costing \$38,000 to Comerico Company, FOB shipping point, on December 28. The goods are not expected to arrive at Comerico until January 12. The goods were not included in the physical inventory because they were not in the warehouse.
2. The physical count of the inventory did not include goods costing \$95,000 that were shipped to Alou FOB destination on December 27 and were still in transit at year-end.
3. Alou received goods costing \$19,000 on January 2. The goods were shipped FOB shipping point on December 26 by Grant Co. The goods were not included in the physical count.
4. Alou sold goods costing \$35,000 to Emerick Co., FOB destination, on December 30. The goods were received at Emerick on January 8. They were not included in Alou's physical inventory.
5. Alou received goods costing \$44,000 on January 2 that were shipped FOB shipping point on December 29. The shipment was a rush order that was supposed to arrive December 31. This purchase was included in the ending inventory of \$297,000.

Instructions

Determine the correct inventory amount on December 31.

Determine the correct inventory amount.

(LO 1)

E6-2 Kale Wilson, an auditor with Sneed CPAs, is performing a review of Platinum Company's inventory account. Platinum did not have a good year, and top management is under pressure to boost reported income. According to its records, the inventory balance at year-end was \$740,000. However, the following information was not considered when determining that amount.

1. Included in the company's count were goods with a cost of \$250,000 that the company is holding on consignment. The goods belong to Superior Corporation.
2. The physical count did not include goods purchased by Platinum with a cost of \$40,000 that were shipped FOB destination on December 28 and did not arrive at Platinum's warehouse until January 3.
3. Included in the inventory account was \$17,000 of office supplies that were stored in the warehouse and were to be used by the company's supervisors and managers during the coming year.
4. The company received an order on December 29 that was boxed and sitting on the loading dock awaiting pick-up on December 31. The shipper picked up the goods on January 1 and delivered them on January 6. The shipping terms were FOB shipping point. The goods had a selling price of \$49,000 and a cost of \$33,000. The goods were not included in the count because they were sitting on the dock.
5. On December 29, Platinum shipped goods with a selling price of \$80,000 and a cost of \$60,000 to District Sales Corporation FOB shipping point. The goods arrived on January 3. District Sales had only ordered goods with a selling price of \$10,000 and a cost of \$8,000. However, a sales manager at Platinum had authorized the shipment and said that if District wanted to ship the goods back next week, it could.
6. Included in the count was \$48,000 of goods that were parts for a machine that the company no longer made. Given the high-tech nature of Platinum's products, it was unlikely that these obsolete parts had any other use. However, management would prefer to keep them on the books at cost, "since that is what we paid for them, after all."

Instructions

Prepare a schedule to determine the correct inventory amount. Provide explanations for each item above, saying why you did or did not make an adjustment for each item.

Calculate cost of goods sold using specific identification and FIFO.

(LO 2, 3)

E6-3 On December 1, Discount Electronics Ltd. has three DVD players left in stock. All are identical, all are priced to sell at \$150. One of the three DVD players left in stock, with serial #1012, was purchased on June 1 at a cost of \$100. Another, with serial #1045, was purchased on November 1 for \$90. The last player, serial #1056, was purchased on November 30 for \$84.

Instructions

- (a) Calculate the cost of goods sold using the FIFO periodic inventory method assuming that two of the three players were sold by the end of December, Discount Electronics' year-end.
- (b) If Discount Electronics used the specific identification method instead of the FIFO method, how might it alter its earnings by "selectively choosing" which particular players to sell to the two customers? What would Discount's cost of goods sold be if the company wished to minimize earnings? Maximize earnings?
- (c) Which of the two inventory methods do you recommend that Discount use? Explain why.

E6-4 Sherper's Boards sells a snowboard, Xpert, that is popular with snowboard enthusiasts. Information relating to Sherper's purchases of Xpert snowboards during September is shown below. During the same month, 121 Xpert snowboards were sold. Sherper's uses a periodic inventory system.

<u>Date</u>	<u>Explanation</u>	<u>Units</u>	<u>Unit Cost</u>	<u>Total Cost</u>
Sept. 1	Inventory	23	\$ 97	\$ 2,231
Sept. 12	Purchases	45	102	4,590
Sept. 19	Purchases	20	104	2,080
Sept. 26	Purchases	44	105	4,620
	Totals	<u>132</u>		<u>\$13,521</u>

Instructions

- Compute the ending inventory at September 30 and cost of goods sold using the FIFO and LIFO methods. Prove the amount allocated to cost of goods sold under each method.
- For both FIFO and LIFO, calculate the sum of ending inventory and cost of goods sold. What do you notice about the answers you found for each method?

E6-5 Zambian Co. uses a periodic inventory system. Its records show the following for the month of May, in which 68 units were sold.

		<u>Units</u>	<u>Unit Cost</u>	<u>Total Cost</u>
May 1	Inventory	30	\$ 9	\$270
15	Purchases	25	11	275
24	Purchases	35	12	420
	Totals	<u>90</u>		<u>\$965</u>

Instructions

Compute the ending inventory at May 31 and cost of goods sold using the FIFO and LIFO methods. Prove the amount allocated to cost of goods sold under each method.

E6-6 Eastland Company reports the following for the month of June.

		<u>Units</u>	<u>Unit Cost</u>	<u>Total Cost</u>
June 1	Inventory	200	\$5	\$1,000
12	Purchase	300	6	1,800
23	Purchase	500	7	3,500
30	Inventory	160		

Instructions

- Compute the cost of the ending inventory and the cost of goods sold under (1) FIFO and (2) LIFO.
- Which costing method gives the higher ending inventory? Why?
- Which method results in the higher cost of goods sold? Why?

E6-7 Givens Company had 100 units in beginning inventory at a total cost of \$10,000. The company purchased 200 units at a total cost of \$26,000. At the end of the year, Givens had 75 units in ending inventory.

Instructions

- Compute the cost of the ending inventory and the cost of goods sold under (1) FIFO, (2) LIFO, and (3) average-cost.
- Which cost flow method would result in the highest net income?
- Which cost flow method would result in inventories approximating current cost in the balance sheet?
- Which cost flow method would result in Givens paying the least taxes in the first year?

E6-8 Inventory data for Eastland Company are presented in E6-6.

Instructions

- Compute the cost of the ending inventory and the cost of goods sold using the average-cost method.
- Will the results in (a) be higher or lower than the results under (1) FIFO and (2) LIFO?
- Why is the average unit cost not \$6?

Compute inventory and cost of goods sold using FIFO and LIFO.

(LO 2)

Compute inventory and cost of goods sold using FIFO and LIFO.

(LO 2)

Compute inventory and cost of goods sold using FIFO and LIFO.

(LO 2, 3)

Compute inventory under FIFO, LIFO, and average-cost.

(LO 2, 3)

Compute inventory and cost of goods sold using average-cost.

(LO 2, 3)

Determine ending inventory under LCM.

(LO 4)

E6-9 Kinshasa Camera Shop uses the lower-of-cost-or-market basis for its inventory. The following data are available at December 31.

<u>Item</u>	<u>Units</u>	<u>Unit Cost</u>	<u>Market</u>
Cameras:			
Minolta	8	\$170	\$156
Canon	6	150	152
Light meters:			
Vivitar	12	125	115
Kodak	14	115	135

Instructions

Determine the amount of the ending inventory by applying the lower-of-cost-or-market basis.

Compute lower-of-cost-or-market.

(LO 4)

E6-10 Fenton Company applied FIFO to its inventory and got the following results for its ending inventory.

Cameras	100 units at a cost per unit of \$68
DVD players	150 units at a cost per unit of \$75
iPods	125 units at a cost per unit of \$80

The cost of purchasing units at year-end was cameras \$70, DVD players \$69, and iPods \$78.

Instructions

Determine the amount of ending inventory at lower-of-cost-or-market.

Determine effects of inventory errors.

(LO 5)

E6-11 Delhi Hardware reported cost of goods sold as follows.

	<u>2013</u>	<u>2014</u>
Beginning inventory	\$ 20,000	\$ 30,000
Cost of goods purchased	150,000	175,000
Cost of goods available for sale	170,000	205,000
Ending inventory	30,000	35,000
Cost of goods sold	<u>\$140,000</u>	<u>\$170,000</u>

Delhi made two errors: (1) 2013 ending inventory was overstated \$2,000, and (2) 2014 ending inventory was understated \$6,000.

Instructions

Compute the correct cost of goods sold for each year.

Prepare correct income statements.

(LO 5)

E6-12 Horner Watch Company reported the following income statement data for a 2-year period.

	<u>2013</u>	<u>2014</u>
Sales revenue	<u>\$210,000</u>	<u>\$250,000</u>
Cost of goods sold		
Beginning inventory	32,000	44,000
Cost of goods purchased	173,000	202,000
Cost of goods available for sale	205,000	246,000
Ending inventory	44,000	52,000
Cost of goods sold	<u>161,000</u>	<u>194,000</u>
Gross profit	<u>\$ 49,000</u>	<u>\$ 56,000</u>

Horner uses a periodic inventory system. The inventories at January 1, 2013, and December 31, 2014, are correct. However, the ending inventory at December 31, 2013, was understated \$6,000.

Instructions

- Prepare correct income statement data for the 2 years.
- What is the cumulative effect of the inventory error on total gross profit for the 2 years?
-  Explain in a letter to the president of Horner Watch Company what has happened, i.e., the nature of the error and its effect on the financial statements.

E6-13 This information is available for Sepia Photo Corporation for 2012, 2013, and 2014.

	<u>2012</u>	<u>2013</u>	<u>2014</u>
Beginning inventory	\$ 100,000	\$ 330,000	\$ 400,000
Ending inventory	330,000	400,000	480,000
Cost of goods sold	900,000	1,120,000	1,300,000
Sales revenue	1,200,000	1,600,000	1,900,000

Compute inventory turnover, days in inventory, and gross profit rate.

(LO 6)

Instructions

Calculate inventory turnover, days in inventory, and gross profit rate (from Chapter 5) for Sepia's Photo Corporation for 2012, 2013, and 2014. Comment on any trends.

Compute inventory turnover and days in inventory.

(LO 6)

E6-14 The cost of goods sold computations for Silver Company and Gold Company are shown below.

	<u>Silver Company</u>	<u>Gold Company</u>
Beginning inventory	\$ 47,000	\$ 71,000
Cost of goods purchased	200,000	290,000
Cost of goods available for sale	247,000	361,000
Ending inventory	55,000	69,000
Cost of goods sold	<u>\$192,000</u>	<u>\$292,000</u>

Instructions

- (a) Compute inventory turnover and days in inventory for each company.
- (b) Which company moves its inventory more quickly?

***E6-15** Roselle Appliance uses a perpetual inventory system. For its flat-screen television sets, the January 1 inventory was 3 sets at \$600 each. On January 10, Roselle purchased 6 units at \$648 each. The company sold 2 units on January 8 and 4 units on January 15.

Apply cost flow methods to perpetual records.

(LO 7)

Instructions

Compute the ending inventory under (1) FIFO, (2) LIFO, and (3) moving-average cost.

***E6-16** Eastland Company reports the following for the month of June.

<u>Date</u>	<u>Explanation</u>	<u>Units</u>	<u>Unit Cost</u>	<u>Total Cost</u>
June 1	Inventory	200	\$5	\$1,000
12	Purchase	300	6	1,800
23	Purchase	500	7	3,500
30	Inventory	160		

Calculate inventory and cost of goods sold using three cost flow methods in a perpetual inventory system.

(LO 7)

Instructions

- (a) Calculate the cost of the ending inventory and the cost of goods sold for each cost flow assumption, using a perpetual inventory system. Assume a sale of 400 units occurred on June 15 for a selling price of \$8 and a sale of 440 units on June 27 for \$9.
- (b) How do the results differ from E6-6 and E6-8?
- (c) Why is the average unit cost not \$6 [(\$5 + \$6 + \$7) ÷ 3 = \$6]?

***E6-17** Information about Sherper's Boards is presented in E6-4. Additional data regarding Sherper's sales of Xpert snowboards are provided below. Assume that Sherper's uses a perpetual inventory system.

Apply cost flow methods to perpetual records.

(LO 7)

<u>Date</u>		<u>Units</u>	<u>Unit Price</u>	<u>Total Revenue</u>
Sept. 5	Sale	12	\$199	\$ 2,388
Sept. 16	Sale	50	203	10,150
Sept. 29	Sale	59	209	12,331
	Totals	<u>121</u>		<u>\$24,869</u>

Instructions

- (a) Compute ending inventory at September 30 using FIFO, LIFO, and moving-average cost.
- (b) Compare ending inventory using a perpetual inventory system to ending inventory using a periodic inventory system (from E6-4).
- (c) Which inventory cost flow method (FIFO, LIFO) gives the same ending inventory value under both periodic and perpetual? Which method gives different ending inventory values?

Use the gross profit method to estimate inventory. *E6-18 Adler Company reported the following information for November and December 2014.

(LO 8)

	November	December
Cost of goods purchased	\$500,000	\$ 610,000
Inventory, beginning-of-month	100,000	120,000
Inventory, end-of-month	120,000	????
Sales revenue	750,000	1,000,000

Adler's ending inventory at December 31 was destroyed in a fire.

Instructions

- Compute the gross profit rate for November.
- Using the gross profit rate for November, determine the estimated cost of inventory lost in the fire.

Determine merchandise lost using the gross profit method of estimating inventory.

(LO 8)

*E6-19 The inventory of Florence Company was destroyed by fire on March 1. From an examination of the accounting records, the following data for the first 2 months of the year are obtained: Sales Revenue \$51,000, Sales Returns and Allowances \$1,000, Purchases \$31,200, Freight-In \$1,200, and Purchase Returns and Allowances \$1,800.

Instructions

Determine the merchandise lost by fire, assuming:

- A beginning inventory of \$20,000 and a gross profit rate of 40% on net sales.
- A beginning inventory of \$30,000 and a gross profit rate of 32% on net sales.

Determine ending inventory at cost using retail method.

(LO 8)

*E6-20 Peacock Shoe Store uses the retail inventory method for its two departments, Women's Shoes and Men's Shoes. The following information for each department is obtained.

Item	Women's Shoes	Men's Shoes
Beginning inventory at cost	\$ 36,500	\$ 45,000
Cost of goods purchased at cost	148,000	136,300
Net sales	178,000	185,000
Beginning inventory at retail	46,000	60,000
Cost of goods purchased at retail	179,000	185,000

Instructions

Compute the estimated cost of the ending inventory for each department under the retail inventory method.

EXERCISES: SET B AND CHALLENGE EXERCISES

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Exercise Set B and Challenge Exercises.

PROBLEMS: SET A

Determine items and amounts to be recorded in inventory.

(LO 1)

P6-1A Columbus Limited is trying to determine the value of its ending inventory at February 28, 2014, the company's year-end. The accountant counted everything that was in the warehouse as of February 28, which resulted in an ending inventory valuation of \$48,000. However, she didn't know how to treat the following transactions so she didn't record them.

- On February 26, Columbus shipped to a customer goods costing \$800. The goods were shipped FOB shipping point, and the receiving report indicates that the customer received the goods on March 2.
- On February 26, Shira Inc. shipped goods to Columbus FOB destination. The invoice price was \$350. The receiving report indicates that the goods were received by Columbus on March 2.
- Columbus had \$620 of inventory at a customer's warehouse "on approval." The customer was going to let Columbus know whether it wanted the merchandise by the end of the week, March 4.
- Columbus also had \$400 of inventory on consignment at a Palletine craft shop.

- (e) On February 26, Columbus ordered goods costing \$750. The goods were shipped FOB shipping point on February 27. Columbus received the goods on March 1.
- (f) On February 28, Columbus packaged goods and had them ready for shipping to a customer FOB destination. The invoice price was \$350; the cost of the items was \$220. The receiving report indicates that the goods were received by the customer on March 2.
- (g) Columbus had damaged goods set aside in the warehouse because they are no longer saleable. These goods cost \$400 and Columbus originally expected to sell these items for \$600.

Instructions

For each of the above transactions, specify whether the item in question should be included in ending inventory and, if so, at what amount. For each item that is not included in ending inventory, indicate who owns it and what account, if any, it should have been recorded in.

P6-2A Dyna Distribution markets CDs of the performing artist King James. At the beginning of March, Dyna had in beginning inventory 1,500 King James CDs with a unit cost of \$7. During March, Dyna made the following purchases of King James CDs.

March 5	3,500 @ \$8	March 21	2,000 @ \$10
March 13	4,000 @ \$9	March 26	2,000 @ \$11

During March, 10,000 units were sold. Dyna uses a periodic inventory system.

Instructions

- (a) Determine the cost of goods available for sale.
- (b) Determine (1) the ending inventory and (2) the cost of goods sold under each of the assumed cost flow methods (FIFO, LIFO, and average-cost). Prove the accuracy of the cost of goods sold under the FIFO and LIFO methods.
- (c) Which cost flow method results in (1) the highest inventory amount for the balance sheet and (2) the highest cost of goods sold for the income statement?

P6-3A Milo Company had a beginning inventory of 400 units of Product Kimbo at a cost of \$8 per unit. During the year, purchases were:

Feb. 20	300 units at \$9	Aug. 12	600 units at \$11
May 5	500 units at \$10	Dec. 8	200 units at \$12

Milo Company uses a periodic inventory system. Sales totaled 1,500 units.

Instructions

- (a) Determine the cost of goods available for sale.
- (b) Determine (1) the ending inventory and (2) the cost of goods sold under each of the assumed cost flow methods (FIFO, LIFO, and average-cost). Prove the accuracy of the cost of goods sold under the FIFO and LIFO methods.
- (c) Which cost flow method results in (1) the lowest inventory amount for the balance sheet, and (2) the lowest cost of goods sold for the income statement?

P6-4A The management of Red Robin Co. is reevaluating the appropriateness of using its present inventory cost flow method, which is average-cost. They request your help in determining the results of operations for 2014 if either the FIFO method or the LIFO method had been used. For 2014, the accounting records show the following data.

Inventories		Purchases and Sales	
Beginning (10,000 units)	\$22,800	Total net sales (225,000 units)	\$865,000
Ending (15,000 units)		Total cost of goods purchased (230,000 units)	578,500

Purchases were made quarterly as follows.

Quarter	Units	Unit Cost	Total Cost
1	60,000	\$2.30	\$138,000
2	50,000	2.50	125,000
3	50,000	2.60	130,000
4	70,000	2.65	185,500
	230,000		\$578,500

Operating expenses were \$147,000, and the company's income tax rate is 32%.

Determine cost of goods sold and ending inventory using FIFO, LIFO, and average-cost with analysis.

(LO 2, 3)

(b) (2) Cost of goods sold:

FIFO	\$84,500
LIFO	\$94,000
Average	\$89,615

Determine cost of goods sold and ending inventory using FIFO, LIFO, and average-cost with analysis.

(LO 2, 3)

(b) Cost of goods sold:

FIFO	\$14,200
LIFO	\$15,800
Average	\$14,925

Compute ending inventory, prepare income statements, and answer questions using FIFO and LIFO.

(LO 2, 3)

- (a) Net income
 FIFO \$106,386
 LIFO \$102,680
 (b)(4) \$1,744

Calculate ending inventory, cost of goods sold, gross profit, and gross profit rate under periodic method; compare results.

(LO 2, 3)

- (a)(iii) Gross profit:
 LIFO \$3,290
 FIFO \$3,470
 Average \$3,395

Compare specific identification, FIFO and LIFO under periodic method; use cost flow assumption to influence earnings.

(LO 2, 3)

- (a) Gross profit:
 (1) Maximum \$164,100
 (2) Minimum \$155,700

Compute ending inventory, prepare income statements, and answer questions using FIFO and LIFO.

(LO 2, 3)

Instructions

- (a) Prepare comparative condensed income statements for 2014 under FIFO and LIFO. (Show computations of ending inventory.)
 (b)  Answer the following questions for management.
 (1) Which cost flow method (FIFO or LIFO) produces the more meaningful inventory amount for the balance sheet? Why?
 (2) Which cost flow method (FIFO or LIFO) produces the more meaningful net income? Why?
 (3) Which cost flow method (FIFO or LIFO) is more likely to approximate actual physical flow of the goods? Why?
 (4) How much additional cash will be available for management under LIFO than under FIFO? Why?
 (5) Will gross profit under the average-cost method be higher or lower than (i) FIFO and (ii) LIFO? (Note: It is not necessary to quantify your answer.)

P6-5A You are provided with the following information for Matthew Inc. for the month ended October 31, 2014. Matthew uses a periodic method for inventory.

Date	Description	Units	Unit Cost or Selling Price
October 1	Beginning inventory	60	\$24
October 9	Purchase	120	26
October 11	Sale	100	35
October 17	Purchase	70	27
October 22	Sale	65	40
October 25	Purchase	80	28
October 29	Sale	120	40

Instructions

- (a) Calculate (i) ending inventory, (ii) cost of goods sold, (iii) gross profit, and (iv) gross profit rate under each of the following methods.
 (1) LIFO.
 (2) FIFO.
 (3) Average-cost.
 (b) Compare results for the three cost flow assumptions.

P6-6A You have the following information for Greco Diamonds. Greco Diamonds uses the periodic method of accounting for its inventory transactions. Greco only carries one brand and size of diamonds—all are identical. Each batch of diamonds purchased is carefully coded and marked with its purchase cost.

March 1	Beginning inventory	150 diamonds at a cost of \$310 per diamond.
March 3	Purchased	200 diamonds at a cost of \$350 each.
March 5	Sold	180 diamonds for \$600 each.
March 10	Purchased	350 diamonds at a cost of \$380 each.
March 25	Sold	400 diamonds for \$650 each.

Instructions

- (a) Assume that Greco Diamonds uses the specific identification cost flow method.
 (1) Demonstrate how Greco Diamonds could maximize its gross profit for the month by specifically selecting which diamonds to sell on March 5 and March 25.
 (2) Demonstrate how Greco Diamonds could minimize its gross profit for the month by selecting which diamonds to sell on March 5 and March 25.
 (b) Assume that Greco Diamonds uses the FIFO cost flow assumption. Calculate cost of goods sold. How much gross profit would Greco Diamonds report under this cost flow assumption?
 (c) Assume that Greco Diamonds uses the LIFO cost flow assumption. Calculate cost of goods sold. How much gross profit would the company report under this cost flow assumption?
 (d) Which cost flow method should Greco Diamonds select? Explain.

P6-7A The management of Mumba Inc. asks your help in determining the comparative effects of the FIFO and LIFO inventory cost flow methods. For 2014, the accounting records provide the data shown at the top of the next page.

Inventory, January 1 (10,000 units)	\$ 35,000
Cost of 120,000 units purchased	501,000
Selling price of 100,000 units sold	665,000
Operating expenses	130,000

Units purchased consisted of 40,000 units at \$4.00 on May 10; 60,000 units at \$4.20 on August 15; and 20,000 units at \$4.45 on November 20. Income taxes are 28%.

Instructions

- (a) Prepare comparative condensed income statements for 2014 under FIFO and LIFO. (Show computations of ending inventory.)
- (b)  Answer the following questions for management in the form of a business letter.
 - (1) Which inventory cost flow method produces the most meaningful inventory amount for the balance sheet? Why?
 - (2) Which inventory cost flow method produces the most meaningful net income? Why?
 - (3) Which inventory cost flow method is most likely to approximate the actual physical flow of the goods? Why?
 - (4) How much more cash will be available for management under LIFO than under FIFO? Why?
 - (5) How much of the gross profit under FIFO is illusionary in comparison with the gross profit under LIFO?

Gross profit:

FIFO	\$260,000
LIFO	\$244,000

***P6-8A** Tempo Ltd. is a retailer operating in Dartmouth, Nova Scotia. Tempo uses the perpetual inventory method. All sales returns from customers result in the goods being returned to inventory; the inventory is not damaged. Assume that there are no credit transactions; all amounts are settled in cash. You are provided with the following information for Tempo Ltd. for the month of January 2014.

Calculate cost of goods sold and ending inventory for FIFO, moving-average cost, and LIFO under the perpetual system; compare gross profit under each assumption.

Date	Description	Quantity	Unit Cost or Selling Price
December 31	Ending inventory	150	\$19
January 2	Purchase	100	21
January 6	Sale	150	40
January 9	Sale return	10	40
January 9	Purchase	75	24
January 10	Purchase return	15	24
January 10	Sale	50	45
January 23	Purchase	100	26
January 30	Sale	160	50

(LO 7)

Instructions

- (a) For each of the following cost flow assumptions, calculate (i) cost of goods sold, (ii) ending inventory, and (iii) gross profit.
 - (1) LIFO. (2) FIFO. (3) Moving-average cost.
- (b) Compare results for the three cost flow assumptions.

Gross profit:

LIFO	\$8,000
FIFO	\$8,420
Average	\$8,266

***P6-9A** Dominican Appliance Mart began operations on May 1. It uses a perpetual inventory system. During May, the company had the following purchases and sales for its Model 25 Sureshot camera.

Determine ending inventory under a perpetual inventory system.

Date	Purchases		Sales Units
	Units	Unit Cost	
May 1	7	\$155	
4			4
8	8	\$170	
12			5
15	6	\$185	
20			3
25			5

(LO 7)

Instructions

- (a) Determine the ending inventory under a perpetual inventory system using (1) FIFO, (2) moving-average cost, and (3) LIFO.

(a) FIFO	\$740
Average	\$702
LIFO	\$635

- (b) Which costing method produces (1) the highest ending inventory valuation and (2) the lowest ending inventory valuation?

Estimate inventory loss using gross profit method.

(LO 8)

***P6-10A** Fram Company lost 70% of its inventory in a fire on March 25, 2014. The accounting records showed the following gross profit data for February and March.

	<u>February</u>	<u>March</u> <u>(to 3/25)</u>
Net sales	\$300,000	\$260,000
Net purchases	197,800	191,000
Freight-in	2,900	4,000
Beginning inventory	4,500	25,200
Ending inventory	25,200	?

Fram Company is fully insured for fire losses but must prepare a report for the insurance company.

Instructions

- (a) Compute the gross profit rate for the month of February.
 (b) Using the gross profit rate for February, determine both the estimated total inventory and inventory lost in the fire in March.

Compute ending inventory using retail method.

(LO 8)

***P6-11A** Thai Department Store uses the retail inventory method to estimate its monthly ending inventories. The following information is available for two of its departments at August 31, 2014.

	<u>Sporting Goods</u>		<u>Jewelry and Cosmetics</u>	
	<u>Cost</u>	<u>Retail</u>	<u>Cost</u>	<u>Retail</u>
Net sales		\$1,010,000		\$1,150,000
Purchases	\$675,000	1,066,000	\$741,000	1,158,000
Purchase returns	(26,000)	(40,000)	(12,000)	(20,000)
Purchase discounts	(12,360)	—	(2,440)	—
Freight-in	9,000	—	14,000	—
Beginning inventory	47,360	74,000	39,440	62,000

At December 31, Thai Department Store takes a physical inventory at retail. The actual retail values of the inventories in each department are Sporting Goods \$85,000, and Jewelry and Cosmetics \$54,000.

Instructions

- (a) Determine the estimated cost of the ending inventory for each department on August 31, 2014, using the retail inventory method.
 (b) Compute the ending inventory at cost for each department at **December 31**, assuming the cost-to-retail ratios are 60% for Sporting Goods and 64% for Jewelry and Cosmetics.

PROBLEMS: SET B

Determine items and amounts to be recorded in inventory.

(LO 1)

P6-1B Banff Limited is trying to determine the value of its ending inventory as of February 28, 2014, the company's year-end. The following transactions occurred, and the accountant asked your help in determining whether they should be recorded or not.

- (a) On February 26, Banff shipped goods costing \$800 to a customer and charged the customer \$1,000. The goods were shipped with terms FOB shipping point and the receiving report indicates that the customer received the goods on March 2.
 (b) On February 26, Vendor Inc. shipped goods to Banff under terms FOB shipping point. The invoice price was \$450 plus \$30 for freight. The receiving report indicates that the goods were received by Banff on March 2.
 (c) Banff had \$720 of inventory isolated in the warehouse. The inventory is designated for a customer who has requested that the goods be shipped on March 10.
 (d) Also included in Banff's warehouse is \$700 of inventory that Jasper Producers shipped to Banff on consignment.

- (e) On February 26, Banff issued a purchase order to acquire goods costing \$900. The goods were shipped with terms FOB destination on February 27. Banff received the goods on March 2.
- (f) On February 26, Banff shipped goods to a customer under terms FOB destination. The invoice price was \$350; the cost of the items was \$200. The receiving report indicates that the goods were received by the customer on February 28.

Instructions

For each of the above transactions, specify whether the item in question should be included in ending inventory, and if so, at what amount.

P6-2B Doom’s Day Distribution markets CDs of the performing artist Marilynn. At the beginning of October, Doom’s Day had in beginning inventory 2,000 of Marilynn’s CDs with a unit cost of \$7. During October, Doom’s Day made the following purchases of Marilynn’s CDs.

Oct. 3	3,000 @ \$8	Oct. 19	4,000 @ \$10
Oct. 9	5,500 @ \$9	Oct. 25	2,000 @ \$11

During October, 13,500 units were sold. Doom’s Day uses a periodic inventory system.

Instructions

- (a) Determine the cost of goods available for sale.
- (b) Determine (1) the ending inventory and (2) the cost of goods sold under each of the assumed cost flow methods (FIFO, LIFO, and average-cost). Prove the accuracy of the cost of goods sold under the FIFO and LIFO methods.
- (c) Which cost flow method results in (1) the highest inventory amount for the balance sheet and (2) the highest cost of goods sold for the income statement?

P6-3B Collins Company had a beginning inventory on January 1 of 100 units of Product 4-18-15 at a cost of \$21 per unit. During the year, the following purchases were made.

Mar. 15	300 units at \$24	Sept. 4	300 units at \$28
July 20	200 units at \$25	Dec. 2	100 units at \$30

700 units were sold. Collins Company uses a periodic inventory system.

Instructions

- (a) Determine the cost of goods available for sale.
- (b) Determine (1) the ending inventory, and (2) the cost of goods sold under each of the assumed cost flow methods (FIFO, LIFO, and average-cost). Prove the accuracy of the cost of goods sold under the FIFO and LIFO methods.
- (c) Which cost flow method results in (1) the highest inventory amount for the balance sheet, and (2) the highest cost of goods sold for the income statement?

P6-4B The management of Gilbert Inc. is reevaluating the appropriateness of using its present inventory cost flow method, which is average-cost. The company requests your help in determining the results of operations for 2014 if either the FIFO or the LIFO method had been used. For 2014, the accounting records show these data:

Inventories		Purchases and Sales	
Beginning (8,000 units)	\$16,000	Total net sales (188,000 units)	\$780,000
Ending (15,000 units)		Total cost of goods purchased (195,000 units)	480,500

Purchases were made quarterly as follows.

Quarter	Units	Unit Cost	Total Cost
1	50,000	\$2.20	\$110,000
2	40,000	2.40	96,000
3	45,000	2.50	112,500
4	60,000	2.70	162,000
	195,000		\$480,500

Operating expenses were \$130,000, and the company’s income tax rate is 36%.

Determine cost of goods sold and ending inventory using FIFO, LIFO, and average-cost with analysis.

(LO 2, 3)

(b)(2) Cost of goods sold:

FIFO	\$117,500
LIFO	\$127,500
Average	\$122,317

Determine cost of goods sold and ending inventory, using FIFO, LIFO, and average-cost with analysis.

(LO 2, 3)

(b)(2) Cost of goods sold:

FIFO	\$17,100
LIFO	\$18,800
Average	\$17,990

Compute ending inventory, prepare income statements, and answer questions using FIFO and LIFO.

(LO 2, 3)

(a) Gross profit:
 FIFO \$324,000
 LIFO \$314,900

Calculate ending inventory, cost of goods sold, gross profit, and gross profit rate under periodic method; compare results.

(LO 2, 3)

(a)(iii) Gross profit:
 LIFO \$4,140
 FIFO \$4,605
 Average \$4,345.50

Compare specific identification, FIFO, and LIFO under periodic method; use cost flow assumption to justify price increase.

(LO 2, 3)

(a)(1) Gross profit:
 Specific identification \$3,860

(2) FIFO \$4,080

(3) LIFO \$3,525

Compute ending inventory, prepare income statements, and answer questions using FIFO and LIFO.

(LO 2, 3)

Instructions

- (a) Prepare comparative condensed income statements for 2014 under FIFO and LIFO. (Show computations of ending inventory.)
- (b)  Answer the following questions for management.
 - (1) Which cost flow method (FIFO or LIFO) produces the more meaningful inventory amount for the balance sheet? Why?
 - (2) Which cost flow method (FIFO or LIFO) produces the more meaningful net income? Why?
 - (3) Which cost flow method (FIFO or LIFO) is more likely to approximate the actual physical flow of goods? Why?
 - (4) How much more cash will be available for management under LIFO than under FIFO? Why?
 - (5) Will gross profit under the average-cost method be higher or lower than FIFO? Than LIFO? (*Note:* It is not necessary to quantify your answer.)

P6-5B You are provided with the following information for Lahti Inc. for the month ended June 30, 2014. Lahti uses the periodic method for inventory.

Date	Description	Quantity	Unit Cost or Selling Price
June 1	Beginning inventory	40	\$40
June 4	Purchase	135	43
June 10	Sale	110	70
June 11	Sale return	15	70
June 18	Purchase	55	46
June 18	Purchase return	10	46
June 25	Sale	60	75
June 28	Purchase	30	50

Instructions

- (a) Calculate (i) ending inventory, (ii) cost of goods sold, (iii) gross profit, and (iv) gross profit rate under each of the following methods.
 - (1) LIFO. (2) FIFO. (3) Average-cost.
- (b) Compare results for the three cost flow assumptions.

P6-6B You are provided with the following information for Gas Guzzlers. Gas Guzzlers uses the periodic method of accounting for its inventory transactions.

March 1	Beginning inventory 2,200 liters at a cost of 60¢ per liter.
March 3	Purchased 2,500 liters at a cost of 65¢ per liter.
March 5	Sold 2,200 liters for \$1.05 per liter.
March 10	Purchased 4,000 liters at a cost of 72¢ per liter.
March 20	Purchased 2,500 liters at a cost of 80¢ per liter.
March 30	Sold 5,500 liters for \$1.25 per liter.

Instructions

- (a) Prepare partial income statements through gross profit, and calculate the value of ending inventory that would be reported on the balance sheet, under each of the following cost flow assumptions. (Round ending inventory and cost of goods sold to the nearest dollar.)
 - (1) Specific identification method assuming:
 - (i) The March 5 sale consisted of 1,100 liters from the March 1 beginning inventory and 1,100 liters from the March 3 purchase; and
 - (ii) The March 30 sale consisted of the following number of units sold from beginning inventory and each purchase: 450 liters from March 1; 850 liters from March 3; 2,900 liters from March 10; 1,300 liters from March 20.
 - (2) FIFO.
 - (3) LIFO.
- (b) How can companies use a cost flow method to justify price increases? Which cost flow method would best support an argument to increase prices?

P6-7B The management of Creek Co. asks your help in determining the comparative effects of the FIFO and LIFO inventory cost flow methods. For 2014, the accounting records provide the data shown at the top of the next page.

Inventory, January 1 (10,000 units)	\$ 47,000
Cost of 100,000 units purchased	532,000
Selling price of 85,000 units sold	740,000
Operating expenses	140,000

Units purchased consisted of 35,000 units at \$5.10 on May 10; 35,000 units at \$5.30 on August 15; and 30,000 units at \$5.60 on November 20. Income taxes are 32%.

Instructions

- (a) Prepare comparative condensed income statements for 2014 under FIFO and LIFO. (Show computations of ending inventory.)
- (b)  Answer the following questions for management.
 - (1) Which inventory cost flow method produces the most meaningful inventory amount for the balance sheet? Why?
 - (2) Which inventory cost flow method produces the most meaningful net income? Why?
 - (3) Which inventory cost flow method is most likely to approximate actual physical flow of the goods? Why?
 - (4) How much additional cash will be available for management under LIFO than under FIFO? Why?
 - (5) How much of the gross profit under FIFO is illusory in comparison with the gross profit under LIFO?

(a) Net income

FIFO	\$109,480
LIFO	\$98,260

***P6-8B** Yuan Li Inc. is a retailer operating in Edmonton, Alberta. Yuan Li uses the perpetual inventory method. All sales returns from customers result in the goods being returned to inventory; the inventory is not damaged. Assume that there are no credit transactions; all amounts are settled in cash. You are provided with the following information for Yuan Li Inc. for the month of January 2014.

Calculate cost of goods sold and ending inventory under LIFO, FIFO, and moving-average cost under the perpetual system; compare gross profit under each assumption.

Date	Description	Quantity	Unit Cost or Selling Price
January 1	Beginning inventory	100	\$14
January 5	Purchase	150	17
January 8	Sale	110	28
January 10	Sale return	10	28
January 15	Purchase	55	19
January 16	Purchase return	5	19
January 20	Sale	80	32
January 25	Purchase	30	22

(LO 7)

Instructions

- (a) For each of the following cost flow assumptions, calculate (i) cost of goods sold, (ii) ending inventory, and (iii) gross profit.
 - (1) LIFO. (2) FIFO. (3) Moving-average cost.
- (b) Compare results for the three cost flow assumptions.

Gross profit:

LIFO	\$2,200
FIFO	\$2,600
Average	\$2,452

***P6-9B** Lemansky Co. began operations on July 1. It uses a perpetual inventory system. During July, the company had the following purchases and sales.

Determine ending inventory under a perpetual inventory system.

Date	Purchases		Sales Units
	Units	Unit Cost	
July 1	5	\$120	
July 6			3
July 11	6	\$136	
July 14			4
July 21	8	\$147	
July 27			6

(LO 7)

Instructions

- (a) Determine the ending inventory under a perpetual inventory system using (1) FIFO, (2) moving-average cost, and (3) LIFO.
- (b) Which costing method produces the highest ending inventory valuation?

(a) Ending inventory

FIFO	\$882
Avg	\$852
LIFO	\$806

Compute gross profit rate and inventory loss using gross profit method.

(LO 8)

***P6-10B** Bristol Company lost all of its inventory in a fire on December 26, 2014. The accounting records showed the following gross profit data for November and December.

	<u>November</u>	<u>December (to 12/26)</u>
Net sales	\$600,000	\$700,000
Beginning inventory	30,000	33,000
Purchases	368,000	420,000
Purchase returns and allowances	13,300	14,900
Purchase discounts	8,500	9,500
Freight-in	4,800	5,900
Ending inventory	33,000	?

Bristol is fully insured for fire losses but must prepare a report for the insurance company.

Instructions

- Compute the gross profit rate for November.
- Using the gross profit rate for November, determine the estimated cost of the inventory lost in the fire.

Compute ending inventory using retail method.

(LO 8)

***P6-11B** Hooked on Books uses the retail inventory method to estimate its monthly ending inventories. The following information is available for two of its departments at October 31, 2014.

	<u>Hardcovers</u>		<u>Paperbacks</u>	
	<u>Cost</u>	<u>Retail</u>	<u>Cost</u>	<u>Retail</u>
Beginning inventory	\$ 420,000	\$ 700,000	\$ 280,000	\$ 360,000
Purchases	2,094,000	3,200,000	1,155,000	1,540,000
Freight-in	26,000		12,000	
Purchase discounts	44,000		22,000	
Net sales		3,100,000		1,570,000

At December 31, Hooked on Books takes a physical inventory at retail. The actual retail values of the inventories in each department are Hardcovers \$790,000 and Paperbacks \$335,000.

Instructions

- Determine the estimated cost of the ending inventory for each department at October 31, 2014, using the retail inventory method.
- Compute the ending inventory at cost for each department at December 31, assuming the cost-to-retail ratios for the year are 65% for Hardcovers and 77% for Paperbacks.

PROBLEMS: SET C

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Problem Set C.

COMPREHENSIVE PROBLEM

CP6 On December 1, 2014, Seattle Company had the account balances shown below.

	<u>Debits</u>		<u>Credits</u>
Cash	\$ 4,650	Accumulated Depreciation—Equipment	\$ 1,500
Accounts Receivable	3,900	Accounts Payable	3,000
Inventory	1,950*	Common Stock	20,000
Equipment	21,000	Retained Earnings	7,000
	<u>\$31,500</u>		<u>\$31,500</u>

*(3,000 × \$0.65)

The following transactions occurred during December:

- Dec. 3 Purchased 4,000 units of inventory on account at a cost of \$0.72 per unit.
 5 Sold 4,400 units of inventory on account for \$0.92 per unit. (It sold 3,000 of the \$0.65 units and 1,400 of the \$0.72.)
 7 Granted the December 5 customer \$180 credit for 200 units of inventory returned costing \$150. These units were returned to inventory.
 17 Purchased 2,200 units of inventory for cash at \$0.78 each.
 22 Sold 2,000 units of inventory on account for \$0.95 per unit. (It sold 2,000 of the \$0.72 units.)

Adjustment data:

1. Accrued salaries payable \$400.
2. Depreciation \$200 per month.

Instructions

- (a) Journalize the December transactions and adjusting entries, assuming Seattle uses the perpetual inventory method.
- (b) Enter the December 1 balances in the ledger T-accounts and post the December transactions. In addition to the accounts mentioned above, use the following additional accounts: Cost of Goods Sold, Depreciation Expense, Salaries and Wages Expense, Salaries and Wages Payable, Sales Revenue, and Sales Returns and Allowances.
- (c) Prepare an adjusted trial balance as of December 31, 2014.
- (d) Prepare an income statement for December 2014 and a classified balance sheet at December 31, 2014.
- (e) Compute ending inventory and cost of goods sold under FIFO, assuming Seattle Company uses the periodic inventory system.
- (f) Compute ending inventory and cost of goods sold under LIFO, assuming Seattle Company uses the periodic inventory system.

CONTINUING COOKIE CHRONICLE

(Note: This is a continuation of the Cookie Chronicle from Chapters 1–5.)

CCC6 Natalie is busy establishing both divisions of her business (cookie classes and mixer sales) and completing her business degree. Her goals for the next 11 months are to sell one mixer per month and to give two to three classes per week.

The cost of the fine European mixers is expected to increase. Natalie has just negotiated new terms with Kzinski that include shipping costs in the negotiated purchase price (mixers will be shipped FOB destination). Natalie must choose a cost flow assumption for her mixer inventory.

Go to the book's companion website, www.wiley.com/college/wegandt, to see the completion of this problem.

Broadening Your PERSPECTIVE

Financial Reporting and Analysis

Financial Reporting Problem: PepsiCo, Inc.

BYP6-1 The notes that accompany a company's financial statements provide informative details that would clutter the amounts and descriptions presented in the statements. Refer to the financial statements of **PepsiCo, Inc.** and the Notes to Consolidated Financial Statements in Appendix A.

Instructions

Answer the following questions. Complete the requirements in millions of dollars, as shown in PepsiCo's annual report.

- What did PepsiCo report for the amount of inventories in its consolidated balance sheet at December 25, 2010? At December 26, 2009?
- Compute the dollar amount of change and the percentage change in inventories between 2009 and 2010. Compute inventory as a percentage of current assets at December 25, 2010.
- How does PepsiCo value its inventories? Which inventory cost flow method does PepsiCo use? (See Notes to the Financial Statements.)
- What is the cost of sales (cost of goods sold) reported by PepsiCo for 2010, 2009, and 2008? Compute the percentage of cost of sales to net sales in 2010.

Comparative Analysis Problem: PepsiCo, Inc. vs. The Coca-Cola Company

BYP6-2 PepsiCo's financial statements are presented in Appendix A. Financial statements of The Coca-Cola Company are presented in Appendix B.

Instructions

- Based on the information contained in these financial statements, compute the following 2010 ratios for each company.
 - Inventory turnover ratio.
 - Days in inventory.
- What conclusions concerning the management of the inventory can you draw from these data?

Real-World Focus

BYP6-3 A company's annual report usually will identify the inventory method used. Knowing that, you can analyze the effects of the inventory method on the income statement and balance sheet.

Address: www.cisco.com, or go to www.wiley.com/college/weygandt

Instructions

Answer the following questions based on the current year's annual report on Cisco's website.

- At Cisco's fiscal year-end, what was the inventory on the balance sheet?
- How has this changed from the previous fiscal year-end?
- How much of the inventory was finished goods?
- What inventory method does Cisco use?

Critical Thinking

Decision-Making Across the Organization

BYP6-4 On April 10, 2014, fire damaged the office and warehouse of Ehlert Company. Most of the accounting records were destroyed, but the following account balances were determined as of March 31, 2014: Inventory (January 1, 2014), \$80,000; Sales Revenue (January 1–March 31, 2014), \$180,000; Purchases (January 1–March 31, 2014), \$94,000.

The company's fiscal year ends on December 31. It uses a periodic inventory system.

From an analysis of the April bank statement, you discover cancelled checks of \$4,200 for cash purchases during the period April 1–10. Deposits during the same period totaled \$20,500. Of that amount, 60% were collections on accounts receivable, and the balance was cash sales.

Correspondence with the company's principal suppliers revealed \$12,400 of purchases on account from April 1 to April 10. Of that amount, \$1,900 was for merchandise in transit on April 10 that was shipped FOB destination.

Correspondence with the company's principal customers produced acknowledgments of credit sales totaling \$37,000 from April 1 to April 10. It was estimated that \$5,600 of credit sales will never be acknowledged or recovered from customers.

Ehlert Company reached an agreement with the insurance company that its fire-loss claim should be based on the average of the gross profit rates for the preceding 2 years. The financial statements for 2012 and 2013 showed the following data.

	<u>2013</u>	<u>2012</u>
Net sales	\$600,000	\$480,000
Cost of goods purchased	404,000	346,400
Beginning inventory	60,000	40,000
Ending inventory	80,000	60,000

Inventory with a cost of \$17,000 was salvaged from the fire.

Instructions

With the class divided into groups, answer the following.

- (a) Determine the balances in (1) Sales Revenue and (2) Purchases at April 10.
- * (b) Determine the average gross profit rate for the years 2012 and 2013. (*Hint:* Find the gross profit rate for each year and divide the sum by 2.)
- * (c) Determine the inventory loss as a result of the fire, using the gross profit method.

Communication Activity

BYP6-5 You are the controller of Classic Toys Inc. Kathy McDonnell, the president, recently mentioned to you that she found an error in the 2013 financial statements which she believes has corrected itself. She determined, in discussions with the Purchasing Department, that 2013 ending inventory was overstated by \$1 million. Kathy says that the 2014 ending inventory is correct. Thus, she assumes that 2014 income is correct. Kathy says to you, “What happened has happened—there’s no point in worrying about it anymore.”

Instructions

You conclude that Kathy is incorrect. Write a brief, tactful memo to Kathy, clarifying the situation.

Ethics Case

BYP6-6 Paeth Wholesale Corp. uses the LIFO method of inventory costing. In the current year, profit at Paeth is running unusually high. The corporate tax rate is also high this year, but it is scheduled to decline significantly next year. In an effort to lower the current year’s net income and to take advantage of the changing income tax rate, the president of Paeth Wholesale instructs the plant accountant to recommend to the purchasing department a large purchase of inventory for delivery 3 days before the end of the year. The price of the inventory to be purchased has doubled during the year, and the purchase will represent a major portion of the ending inventory value.

Instructions

- (a) What is the effect of this transaction on this year’s and next year’s income statement and income tax expense? Why?
- (b) If Paeth Wholesale had been using the FIFO method of inventory costing, would the president give the same directive?
- (c) Should the plant accountant order the inventory purchase to lower income? What are the ethical implications of this order?

All About You

BYP6-7 Some of the largest business frauds ever perpetrated have involved the misstatement of inventory. Two classics were at [Leslie Fay](#) and [McKesson Corporation](#).

Instructions

There is considerable information regarding inventory frauds available on the Internet. Search for information about one of the two cases mentioned above, or inventory fraud at any other company, and prepare a short explanation of the nature of the inventory fraud.

BYP6-8 Suppose you own a number of wine shops selling mid-level as well as expensive bottled wine. You have been experiencing significant losses from theft at your stores. You suspect that it is a combination of both employee and customer theft. Assuming that it would be cost-effective, would you install video cameras to reduce both employee theft and customer theft?

YES: Most employees and customers are honest. However, some will steal if given the opportunity. Management has a responsibility to employ reasonable, cost-effective approaches to safeguard company assets.

NO: The use of video technology to monitor employees and customers sends a message of distrust. You run the risk of alienating your employees (who may well figure out a way around the cameras anyway). Cameras might also reduce the welcoming atmosphere for your customers, who might find the cameras offensive.

Instructions

Write a response indicating your position regarding the situation, provide support for your view.

FASB Codification Activity

BYP6-9 If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following.

- The primary basis for accounting for inventories is cost. How is cost defined in the Codification?
- What does the Codification state regarding the use of consistency in the selection or employment of a basis for inventory?
- What does the Codification indicate is a justification for the use of the lower-of-cost-or-market for inventory valuation?

Answers to Chapter Questions

Answers to Insight and Accounting Across the Organization Questions

p. 273 A Big Hiccup Q: What steps might the companies take to avoid such a serious disruption in the future? **A:** The manufacturer of the piston rings should spread its manufacturing facilities across a few locations that are far enough apart that they would not all be at risk at once. In addition, the automakers might consider becoming less dependent on a single supplier.

p. 274 Falsifying Inventory to Boost Income Q: What effect does an overstatement of inventory have on a company's financial statements? **A:** The balance sheet looks stronger because inventory and retained earnings are overstated. The income statement looks better because cost of goods sold is understated and income is overstated.

p. 285 Is LIFO Fair? Q: What are the arguments for and against the use of LIFO? **A:** Proponents of LIFO argue that it is conceptually superior because it matches the most recent cost with the most recent selling price. Critics contend that it artificially understates the company's net income and consequently reduces tax payments. Also, because most foreign companies are not allowed to use LIFO, its use by U.S. companies reduces the ability of investors to compare U.S. companies with foreign companies.

p. 289 Improving Inventory Control with RFID Q: Why is inventory control important to managers such as those at Wal-Mart and Best Buy? **A:** In the very competitive environment of discount retailing, where Wal-Mart and Best Buy are major players, small differences in price matter to the customer. Wal-Mart sells a high volume of inventory at a low gross profit rate. When operating in a high-volume, low-margin environment, small cost savings can mean the difference between being profitable or going out of business.

A Look at IFRS

The major IFRS requirements related to accounting and reporting for inventories are the same as GAAP. The major differences are that IFRS prohibits the use of the LIFO cost flow assumption and determines market in the lower-of-cost-or-market inventory valuation differently.

Key Points

- The requirements for accounting for and reporting inventories are more principles-based under IFRS. That is, GAAP provides more detailed guidelines in inventory accounting.
- The definitions for inventory are essentially similar under IFRS and GAAP. Both define inventory as assets held-for-sale in the ordinary course of business, in the process of production for sale (work in process), or to be consumed in the production of goods or services (e.g., raw materials).
- Who owns the goods—goods in transit or consigned goods—as well as the costs to include in inventory, are accounted for the same under IFRS and GAAP.
- Both GAAP and IFRS permit specific identification where appropriate. IFRS actually requires that the specific identification method be used where the inventory items are not interchangeable (i.e., can be specifically identified). If the inventory items are not specifically identifiable, a cost flow assumption is used. GAAP does not specify situations in which specific identification must be used.
- A major difference between IFRS and GAAP relates to the LIFO cost flow assumption. GAAP permits the use of LIFO for inventory valuation. IFRS prohibits its use. FIFO and average-cost are the only two acceptable cost flow assumptions permitted under IFRS.
- IFRS requires companies to use the same cost flow assumption for all goods of a similar nature. GAAP has no specific requirement in this area.
- In the lower-of-cost-or-market test for inventory valuation, IFRS defines market as net realizable value. Net realizable value is the estimated selling price in the ordinary course of business, less the estimated costs of completion and estimated selling expenses. In other words, net realizable value is the best estimate of the net amounts that inventories are expected to realize. GAAP, on the other hand, defines market as essentially replacement cost.
- Under GAAP, if inventory is written down under the lower-of-cost-or-market valuation, the new basis is now considered its cost. As a result, the inventory may not be written back up to its original cost in a subsequent period. Under IFRS, the write-down may be reversed in a subsequent period up to the amount of the previous write-down. Both the write-down and any subsequent reversal should be reported on the income statement as an expense. An item-by-item approach is generally followed under IFRS.
- An example of the use of lower-of-cost-or-net realizable value under IFRS follows.

Mendel Company has the following four items in its ending inventory as of December 31, 2014. The company uses the lower-of-cost-or-net realizable value approach for inventory valuation following IFRS.

<u>Item No.</u>	<u>Cost</u>	<u>Net Realizable Value</u>
1320	\$3,600	\$3,400
1333	4,000	4,100
1428	2,800	2,100
1510	5,000	4,700

The computation of the ending inventory value to be reported in the financial statements at December 31, 2014, is as follows.

<u>Item No.</u>	<u>Cost</u>	<u>Net Realizable Value</u>	<u>LCNRV</u>
1320	\$ 3,600	\$ 3,400	\$ 3,400
1333	4,000	4,100	4,000
1428	2,800	2,100	2,100
1510	5,000	4,700	4,700
Total	<u>\$15,400</u>	<u>\$14,300</u>	<u>\$14,200</u>

- Unlike property, plant, and equipment, IFRS does not permit the option of valuing inventories at fair value. As indicated above, IFRS requires inventory to be written down, but inventory cannot be written up above its original cost.
- Similar to GAAP, certain agricultural products and mineral products can be reported at net realizable value using IFRS.

Looking to the Future

One convergence issue that will be difficult to resolve relates to the use of the LIFO cost flow assumption. As indicated, IFRS specifically prohibits its use. Conversely, the LIFO cost flow assumption is widely used in the United States because of its favorable tax advantages. In addition, many argue that LIFO from a financial reporting point of view provides a better matching of current costs against revenue and, therefore, enables companies to compute a more realistic income.

IFRS Practice

IFRS Self-Test Questions

1. Which of the following should *not* be included in the inventory of a company using IFRS?
 - (a) Goods held on consignment from another company.
 - (b) Goods shipped on consignment to another company.
 - (c) Goods in transit from another company shipped FOB shipping point.
 - (d) None of the above.
2. Which method of inventory costing is prohibited under IFRS?
 - (a) Specific identification.
 - (c) FIFO.
 - (b) LIFO.
 - (d) Average-cost.
3. Yang Company purchased 2,000 widgets and has 400 widgets in its ending inventory at a cost of \$90 each and a current replacement cost of \$80 each. The net realizable value of each unit in the ending inventory is \$70. The ending inventory under lower-of-cost-or-net realizable value is:
 - (a) \$36,000.
 - (c) \$28,000.
 - (b) \$32,000.
 - (d) None of the above.
4. Specific identification:
 - (a) must be used under IFRS if the inventory items are not interchangeable.
 - (b) cannot be used under IFRS.
 - (c) cannot be used under GAAP.
 - (d) must be used under IFRS if it would result in the most conservative net income.
5. IFRS requires the following:
 - (a) Ending inventory is written up and down to net realizable value each reporting period.
 - (b) Ending inventory is written down to net realizable value but cannot be written up.
 - (c) Ending inventory is written down to net realizable value and may be written up in future periods to its net realizable value but not above its original cost.
 - (d) Ending inventory is written down to net realizable value and may be written up in future periods to its net realizable value.

IFRS Exercises

IFRS6-1 Briefly describe some of the similarities and differences between GAAP and IFRS with respect to the accounting for inventories.

IFRS6-2 LaTour Inc. is based in France and prepares its financial statements in accordance with IFRS. In 2014, it reported (in euros) cost of goods sold of €578 million and average inventory of €154 million. Briefly discuss how analysis of LaTour's inventory turnover ratio (and comparisons to a company using GAAP) might be affected by differences in inventory accounting between IFRS and GAAP.

IFRS6-3 Franklin Company has the following four items in its ending inventory as of December 31, 2014. The company uses the lower-of-cost-or-net realizable value approach for inventory valuation following IFRS.

<u>Item No.</u>	<u>Cost</u>	<u>Net Realizable Value</u>
AB	\$1,700	\$1,400
TRX	2,200	2,300
NWA	7,800	7,100
SGH	3,000	3,700

Compute the lower-of-cost-or-net realizable value.

International Financial Reporting Problem: Zetar plc

IFRS6-4 The financial statements of **Zetar plc** are presented in Appendix C. The company's complete annual report, including the notes to its financial statements, is available at www.zetarplc.com.

Instructions

Using the notes to the company's financial statements, answer the following questions.

- What cost flow assumption does the company use to value inventory?
- What was the amount of expense that the company reported for inventory write-downs during 2010?
- What amount of raw materials, work in process, and finished goods inventory did the company report at April 30, 2010?

Feature Story

Minding the Money in Moose Jaw

If you're ever looking for a cappuccino in Moose Jaw, Saskatchewan, stop by *Stephanie's Gourmet Coffee and More*, located on Main Street. Staff there serve, on average, 650 cups of coffee a day, including both regular and specialty coffees, not to mention soups, Italian sandwiches, and a wide assortment of gourmet cheesecakes.

"We've got high school students who come here, and students from the community college," says owner/manager Stephanie Mintenko, who has run the place since opening it in 1995. "We have customers who are

retired, and others who are working people and have only 30 minutes for lunch. We have to be pretty quick."

That means that the cashiers have to be efficient. Like most businesses where purchases are low-cost and high-volume, cash control has to be simple.

"We have an electronic cash register, but it's not the fancy new kind where you just punch in the item," explains Ms. Mintenko. "You have to punch in the prices." The machine does keep track of sales in several categories, however. Cashiers punch a button to indicate whether each item is a beverage, a meal, or a Wi-Fi charge for the cafe's Internet service. An internal tape in the machine keeps a record of

Read A Look at IFRS p. 375

Learning Objectives

After studying this chapter, you should be able to:

- 1** Define fraud and internal control.
- 2** Identify the principles of internal control activities.
- 3** Explain the applications of internal control principles to cash receipts.
- 4** Explain the applications of internal control principles to cash disbursements.
- 5** Describe the operation of a petty cash fund.
- 6** Indicate the control features of a bank account.
- 7** Prepare a bank reconciliation.
- 8** Explain the reporting of cash.

The Navigator

all transactions; the customer receives a receipt only upon request.

There is only one cash register. “Up to three of us might operate it on any given shift, including myself,” says Ms. Mintenko.

She and her staff do two “cashouts” each day—one with the shift change at 5:00 p.m. and one when the shop closes at 10:00 p.m. At each cashout, they count the cash in the register drawer. That amount, minus the cash change carried forward (the float), should match the shift total on the

register tape. If there’s a discrepancy, they do another count. Then, if necessary, “we go through the whole tape to find the

mistake,” she explains. “It usually turns out to be someone who punched in \$18 instead of \$1.80, or something like that.”

Ms. Mintenko sends all the cash tapes and float totals to a bookkeeper, who double-checks everything and provides regular reports. “We try to keep the accounting simple, so we can concentrate on making great coffee and food.”

✓ The Navigator

Preview of Chapter 7

As the story about recording cash sales at **Stephanie’s Gourmet Coffee and More** indicates, control of cash is important to ensure that fraud does not occur. Companies also need controls to safeguard other types of assets. For example, Stephanie’s undoubtedly has controls to prevent the theft of food and supplies, and controls to prevent the theft of tableware and dishes from its kitchen.

In this chapter, we explain the essential features of an internal control system and how it prevents fraud. We also describe how those controls apply to a specific asset—cash. The applications include some controls with which you may be already familiar, such as the use of a bank.

The content and organization of Chapter 7 are as follows.

FRAUD, INTERNAL CONTROL, AND CASH			
Fraud and Internal Control	Cash Controls	Control Features: Use of a Bank	Reporting Cash
<ul style="list-style-type: none"> • Fraud • The Sarbanes-Oxley Act • Internal control • Principles of internal control activities • Limitations 	<ul style="list-style-type: none"> • Cash receipts controls • Cash disbursements controls 	<ul style="list-style-type: none"> • Making deposits • Writing checks • Bank statements • Reconciling the bank account • Electronic funds transfer (EFT) system 	<ul style="list-style-type: none"> • Cash equivalents • Restricted cash

Fraud and Internal Control

LEARNING OBJECTIVE 1

Define fraud and internal control.

The Feature Story describes many of the internal control procedures used by **Stephanie's Gourmet Coffee and More**. These procedures are necessary to discourage employees from fraudulent activities.

Fraud

A **fraud** is a dishonest act by an employee that results in personal benefit to the employee at a cost to the employer. Examples of fraud reported in the financial press include:

- A bookkeeper in a small company diverted \$750,000 of bill payments to a personal bank account over a three-year period.
- A shipping clerk with 28 years of service shipped \$125,000 of merchandise to himself.
- A computer operator embezzled \$21 million from **Wells Fargo Bank** over a two-year period.
- A church treasurer “borrowed” \$150,000 of church funds to finance a friend’s business dealings.

Why does fraud occur? The three main factors that contribute to fraudulent activity are depicted by the **fraud triangle** in Illustration 7-1 (in the margin).

Illustration 7-1
Fraud triangle

The most important element of the fraud triangle is **opportunity**.

For an employee to commit fraud, the workplace environment must provide opportunities that an employee can take advantage of. Opportunities occur when the workplace lacks sufficient controls to deter and detect fraud. For example, inadequate monitoring of employee actions can create opportunities for theft and can embolden employees because they believe they will not be caught.

A second factor that contributes to fraud is **financial pressure**.

Employees sometimes commit fraud because of personal financial problems caused by too much debt. Or, they might commit fraud because they want to lead a lifestyle that they cannot afford on their current salary.

The third factor that contributes to fraud is **rationalization**. In order to justify their fraud, employees rationalize their dishonest actions. For example, employees sometimes justify fraud because they believe they are underpaid while the employer is making lots of money. Employees feel justified in stealing because they believe they deserve to be paid more.

The Sarbanes-Oxley Act

What can be done to prevent or to detect fraud? After numerous corporate scandals came to light in the early 2000s, Congress addressed this issue by passing the **Sarbanes-Oxley Act (SOX)**. Under SOX, all publicly traded U.S. corporations are required to maintain an adequate system of internal control. Corporate executives and boards of directors must ensure that these controls are reliable and effective. In addition, independent outside auditors must attest to the adequacy of the internal control system. Companies that fail to comply are subject to fines, and company officers can be imprisoned. SOX also created the Public Company Accounting Oversight Board (PCAOB), to establish auditing standards and regulate auditor activity.

One poll found that 60% of investors believe that SOX helps safeguard their stock investments. Many say they would be unlikely to invest in a company that fails to follow SOX requirements. Although some corporate executives have criticized

the time and expense involved in following the SOX requirements, SOX appears to be working well. For example, the chief accounting officer of **Eli Lilly** noted that SOX triggered a comprehensive review of how the company documents controls. This review uncovered redundancies and pointed out controls that needed to be added. In short, it added up to time and money well spent. And the finance chief at **General Electric** noted, “We have seen value in SOX. It helps build investors’ trust and gives them more confidence.”¹

Internal Control

Internal control consists of all the related methods and measures adopted within an organization to safeguard its assets, enhance the reliability of its accounting records, increase efficiency of operations, and ensure compliance with laws and regulations. Internal control systems have five primary components as listed below.²

- **A control environment.** It is the responsibility of top management to make it clear that the organization values integrity and that unethical activity will not be tolerated. This component is often referred to as the “tone at the top.”
- **Risk assessment.** Companies must identify and analyze the various factors that create risk for the business and must determine how to manage these risks.
- **Control activities.** To reduce the occurrence of fraud, management must design policies and procedures to address the specific risks faced by the company.
- **Information and communication.** The internal control system must capture and communicate all pertinent information both down and up the organization, as well as communicate information to appropriate external parties.
- **Monitoring.** Internal control systems must be monitored periodically for their adequacy. Significant deficiencies need to be reported to top management and/or the board of directors.

PEOPLE, PLANET, AND PROFIT INSIGHT

And the Controls Are . . .

Internal controls are important for an effective financial reporting system. The same is true for sustainability reporting. An effective system of internal controls for sustainability reporting will help in the following ways: (1) prevent the unauthorized use of data; (2) provide reasonable assurance that the information is accurate, valid, and complete; and (3) report information that is consistent with the overall sustainability accounting policies. With these types of controls, users will have the confidence that they can use the sustainability information effectively.

Some regulators are calling for even more assurance through audits of this information. Companies that potentially can cause environmental damage through greenhouse gases are subject to reporting requirements as well as companies in the mining and extractive industries. And, as demand for more information in the sustainability area expands, the need for audits of this information will grow.

Why is sustainability information important to investors? (See page 374.)

¹“Corporate Regulation Must Be Working—There’s a Backlash,” *Wall Street Journal*, (June 16, 2004), p. C1; and Judith Burns, “Is Sarbanes-Oxley Working?” *Wall Street Journal*, (June 21, 2004), pp. R8–R9.

²The Committee of Sponsoring Organizations of the Treadway Commission, “Internal Control—Integrated Framework,” www.coso.org/publications/executive_summary_integrated_framework.htm (accessed March 2008).

LEARNING OBJECTIVE 2

Identify the principles of internal control activities.

Principles of Internal Control Activities

Each of the five components of an internal control system is important. Here, we will focus on one component, the control activities. The reason? These activities are the backbone of the company's efforts to address the risks it faces, such as fraud. The specific control activities used by a company will vary, depending on management's assessment of the risks faced. This assessment is heavily influenced by the size and nature of the company.

The six principles of control activities are as follows.

- Establishment of responsibility
- Segregation of duties
- Documentation procedures
- Physical controls
- Independent internal verification
- Human resource controls

We explain these principles in the following sections. You should recognize that they apply to most companies and are relevant to both manual and computerized accounting systems.

ESTABLISHMENT OF RESPONSIBILITY

An essential principle of internal control is to assign responsibility to specific employees. **Control is most effective when only one person is responsible for a given task.**

To illustrate, assume that the cash on hand at the end of the day in a **Safeway** supermarket is \$10 short of the cash rung up on the cash register. If only one person has operated the register, the shift manager can quickly determine responsibility for the shortage. If two or more individuals have worked the register, it may be impossible to determine who is responsible for the error. In the Feature Story, the principle of establishing responsibility does not appear to be strictly applied by **Stephanie's Gourmet Coffee and More**, since three people operate the cash register on any given shift.

Establishing responsibility often requires limiting access only to authorized personnel, and then identifying those personnel. For example, the automated systems used by many companies have mechanisms such as identifying passcodes that keep track of who made a journal entry, who rang up a sale, or who entered an inventory storeroom at a particular time. Use of identifying passcodes enables the company to establish responsibility by identifying the particular employee who carried out the activity.

ANATOMY OF A FRAUD

Maureen Frugali was a training supervisor for claims processing at Colossal Healthcare. As a standard part of the claims processing training program, Maureen created fictitious claims for use by trainees. These fictitious claims were then sent to the accounts payable department. After the training claims had been processed, she was to notify Accounts Payable of all fictitious claims, so that they would not be paid. However, she did not inform Accounts Payable about every fictitious claim. She created some fictitious claims for entities that she controlled (that is, she would receive the payment), and she let Accounts Payable pay her.

Total take: \$11 million

The Missing Control

Establishment of responsibility. The health-care company did not adequately restrict the responsibility for authoring and approving claims transactions. The training supervisor should not have been authorized to create claims in the company's "live" system.

Source: Adapted from Wells, *Fraud Casebook* (2007), pp. 61–70.

SEGREGATION OF DUTIES

Segregation of duties is indispensable in an internal control system. There are two common applications of this principle:

1. Different individuals should be responsible for related activities.
2. The responsibility for record-keeping for an asset should be separate from the physical custody of that asset.

The rationale for segregation of duties is this: **The work of one employee should, without a duplication of effort, provide a reliable basis for evaluating the work of another employee.** For example, the personnel that design and program computerized systems should not be assigned duties related to day-to-day use of the system. Otherwise, they could design the system to benefit them personally and conceal the fraud through day-to-day use.

SEGREGATION OF RELATED ACTIVITIES Making one individual responsible for related activities increases the potential for errors and irregularities.

For example, companies should assign related *purchasing activities* to different individuals. Related purchasing activities include ordering merchandise, order approval, receiving goods, authorizing payment, and paying for goods or services. Various frauds are possible when one person handles related purchasing activities. For example:

- If a purchasing agent is allowed to order goods without obtaining supervisory approval, the likelihood of the purchasing agent receiving kickbacks from suppliers increases.
- If an employee who orders goods also handles receipt of the goods and invoice, as well as payment authorization, he or she might authorize payment for a fictitious invoice.

These abuses are less likely to occur when companies divide the purchasing tasks.

Similarly, companies should assign related *sales activities* to different individuals. Related selling activities include making a sale, shipping (or delivering) the goods to the customer, billing the customer, and receiving payment. Various frauds are possible when one person handles related sales transactions. For example:

- If a salesperson can make a sale without obtaining supervisory approval, he or she might make sales at unauthorized prices to increase sales commissions.
- A shipping clerk who also has access to accounting records could ship goods to himself.
- A billing clerk who handles billing and receipt could understate the amount billed for sales made to friends and relatives.

These abuses are less likely to occur when companies divide the sales tasks: The salespeople make the sale; the shipping department ships the goods on the basis

of the sales order; and the billing department prepares the sales invoice after comparing the sales order with the report of goods shipped.

ANATOMY OF A FRAUD

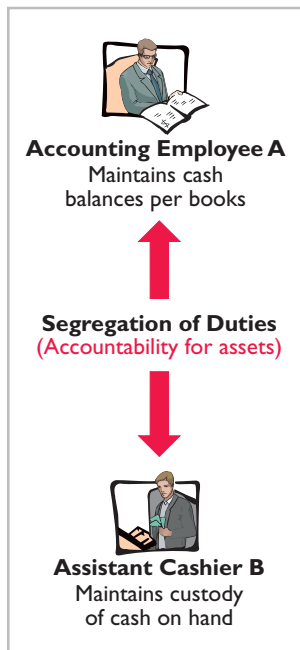

Lawrence Fairbanks, the assistant vice-chancellor of communications at Aesop University, was allowed to make purchases of under \$2,500 for his department without external approval. Unfortunately, he also sometimes bought items for himself, such as expensive antiques and other collectibles. How did he do it? He replaced the vendor invoices he received with fake vendor invoices that he created. The fake invoices had descriptions that were more consistent with the communications department's purchases. He submitted these fake invoices to the accounting department as the basis for their journal entries and to the accounts payable department as the basis for payment.

Total take: \$475,000

The Missing Control

Segregation of duties. The university had not properly segregated related purchasing activities. Lawrence was ordering items, receiving the items, and receiving the invoice. By receiving the invoice, he had control over the documents that were used to account for the purchase and thus was able to substitute a fake invoice.

Source: Adapted from Wells, *Fraud Casebook* (2007), pp. 3–15.

SEGREGATION OF RECORD-KEEPING FROM PHYSICAL CUSTODY The accountant should have neither physical custody of the asset nor access to it. Likewise, the custodian of the asset should not maintain or have access to the accounting records. **The custodian of the asset is not likely to convert the asset to personal use when one employee maintains the record of the asset, and a different employee has physical custody of the asset.** The separation of accounting responsibility from the custody of assets is especially important for cash and inventories because these assets are very vulnerable to fraud.

ANATOMY OF A FRAUD

Angela Bauer was an accounts payable clerk for Aggasiz Construction Company. She prepared and issued checks to vendors and reconciled bank statements. Angela perpetrated a fraud in this way: She wrote checks for costs that the company had not actually incurred (e.g., fake taxes). A supervisor then approved and signed the checks. Before issuing the check, though, Angela would “white-out” the payee line on the check and change it to personal accounts that she controlled. She was able to conceal the theft because she also reconciled the bank account. That is, nobody else ever saw that the checks had been altered.

Total take: \$570,000

The Missing Control

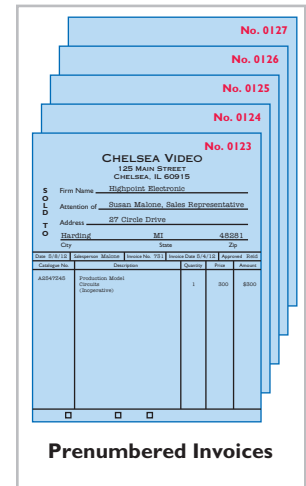

Segregation of duties. Aggasiz Construction Company did not properly segregate record-keeping from physical custody. Angela had physical custody of the checks, which essentially was control of the cash. She also had record-keeping responsibility because she prepared the bank reconciliation.

Source: Adapted from Wells, *Fraud Casebook* (2007), pp. 100–107.

DOCUMENTATION PROCEDURES

Documents provide evidence that transactions and events have occurred. At **Stephanie’s Gourmet Coffee and More**, the cash register tape is the restaurant’s documentation for the sale and the amount of cash received. Similarly, a shipping document indicates that the goods have been shipped, and a sales invoice indicates that the company has billed the customer for the goods. By requiring signatures (or initials) on the documents, the company can identify the individual(s) responsible for the transaction or event. Companies should document transactions when the transaction occurs.

Companies should establish procedures for documents. First, whenever possible, companies should use **prenumbered documents, and all documents should be accounted for**. Prenumbering helps to prevent a transaction from being recorded more than once, or conversely, from not being recorded at all. Second, the control system should require that employees **promptly forward source documents for accounting entries to the accounting department. This control measure helps to ensure timely recording of the transaction** and contributes directly to the accuracy and reliability of the accounting records.

ANATOMY OF A FRAUD

To support their reimbursement requests for travel costs incurred, employees at Mod Fashions Corporation’s design center were required to submit receipts. The receipts could include the detailed bill provided for a meal, or the credit card receipt provided when the credit card payment is made, or a copy of the employee’s monthly credit card bill that listed the item. A number of the designers who frequently traveled together came up with a fraud scheme: They submitted claims for the same expenses. For example, if they had a meal together that cost \$200, one person submitted the detailed meal bill, another submitted the credit card receipt, and a third submitted a monthly credit card bill showing the meal as a line item. Thus, all three received a \$200 reimbursement.

Total take: \$75,000

The Missing Control

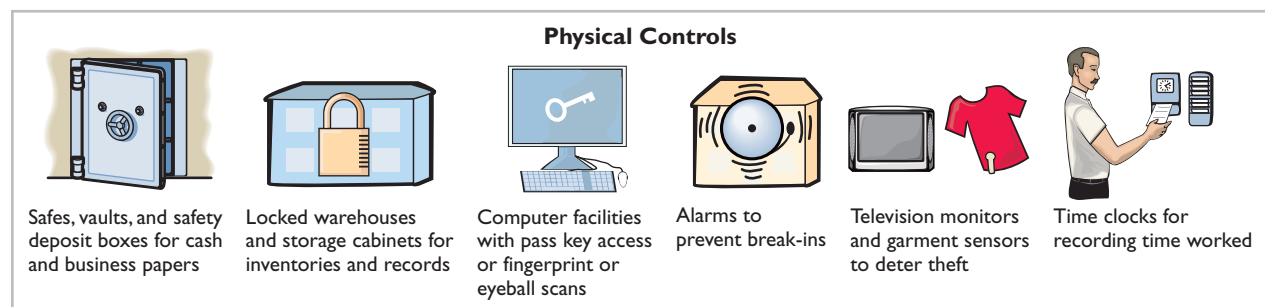

Documentation procedures. Mod Fashions should require the original, detailed receipt. It should not accept photocopies, and it should not accept credit card statements. In addition, documentation procedures could be further improved by requiring the use of a corporate credit card (rather than a personal credit card) for all business expenses.

Source: Adapted from Wells, *Fraud Casebook* (2007), pp. 79–90.

PHYSICAL CONTROLS

Use of physical controls is essential. *Physical controls* relate to the safeguarding of assets and enhance the accuracy and reliability of the accounting records. Illustration 7-2 shows examples of these controls.

Illustration 7-2
Physical controls

ANATOMY OF A FRAUD

At Centerstone Health, a large insurance company, the mailroom each day received insurance applications from prospective customers. Mailroom employees scanned the applications into electronic documents before the applications were processed. Once the applications are scanned they can be accessed online by authorized employees.

Insurance agents at Centerstone Health earn commissions based upon successful applications. The sales agent's name is listed on the application. However, roughly 15% of the applications are from customers who did not work with a sales agent. Two friends—Alex, an employee in record-keeping, and Parviz, a sales agent—thought up a way to perpetrate a fraud. Alex identified scanned applications that did not list a sales agent. After business hours, he entered the mailroom and found the hard-copy applications that did not show a sales agent. He wrote in Parviz's name as the sales agent and then rescanned the application for processing. Parviz received the commission, which the friends then split.

Total take: \$240,000

The Missing Control

Physical controls. Centerstone Health lacked two basic physical controls that could have prevented this fraud. First, the mailroom should have been locked during nonbusiness hours, and access during business hours should have been tightly controlled. Second, the scanned applications supposedly could be accessed only by authorized employees using their passwords. However, the password for each employee was the same as the employee's user ID. Since employee user-ID numbers were available to all other employees, all employees knew all other employees' passwords. Unauthorized employees could access the scanned applications. Thus, Alex could enter the system using another employee's password and access the scanned applications.

Source: Adapted from Wells, *Fraud Casebook* (2007), pp. 316–326.

INDEPENDENT INTERNAL VERIFICATION

Most internal control systems provide for **independent internal verification**. This principle involves the review of data prepared by employees. To obtain maximum benefit from independent internal verification:

1. Companies should verify records periodically or on a surprise basis.
2. An employee who is independent of the personnel responsible for the information should make the verification.
3. Discrepancies and exceptions should be reported to a management level that can take appropriate corrective action.

Independent internal verification is especially useful in comparing recorded accountability with existing assets. The reconciliation of the cash register tape with the cash in the register at **Stephanie's Gourmet Coffee and More** is an example of this internal control principle. Another common example is the reconciliation of a company's cash balance per books with the cash balance per bank and the verification of the perpetual inventory records through a count of physical inventory. Illustration 7-3 shows the relationship between this principle and the segregation of duties principle.

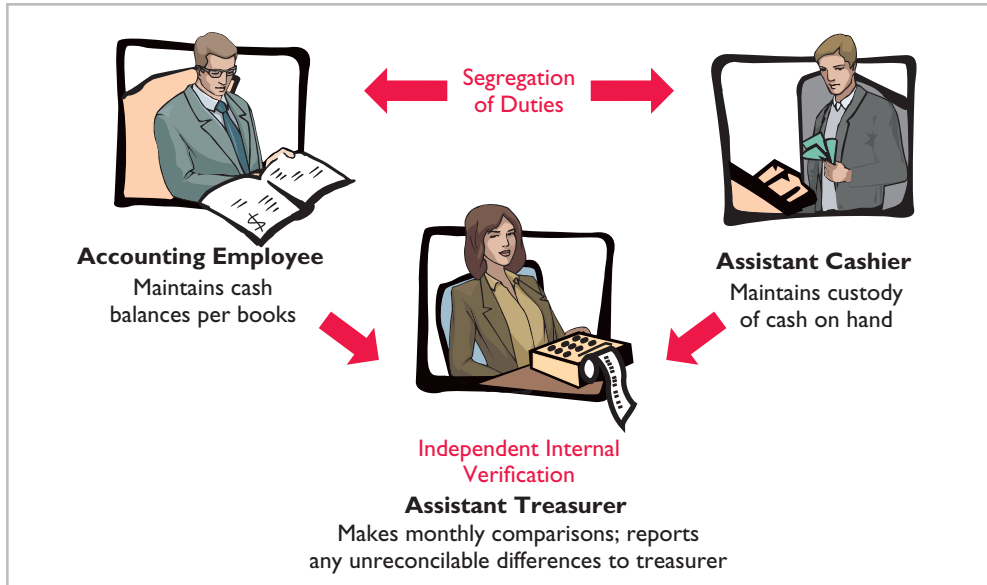

Illustration 7-3
Comparison of segregation of duties principle with independent internal verification principle

ANATOMY OF A FRAUD

Bobbi Jean Donnelly, the office manager for Mod Fashions Corporations design center, was responsible for preparing the design center budget and reviewing expense reports submitted by design center employees. Her desire to upgrade her wardrobe got the better of her, and she enacted a fraud that involved filing expense-reimbursement requests for her own personal clothing purchases. She was able to conceal the fraud because she was responsible for reviewing all expense reports, including her own. In addition, she sometimes was given ultimate responsibility for signing off on the expense reports when her boss was "too busy." Also, because she controlled the budget, when she submitted her expenses, she coded them to budget items that she knew were running under budget, so that they would not catch anyone's attention.

Total take: \$275,000

The Missing Control

Independent internal verification. Bobbi Jean's boss should have verified her expense reports. When asked what he thought her expenses for a year were, the boss said about \$10,000. At \$115,000 per year, her actual expenses were more than 10 times what would have been expected. However, because he was "too busy" to verify her expense reports or to review the budget, he never noticed.

Source: Adapted from Wells, *Fraud Casebook* (2007), pp. 79–90.

Large companies often assign independent internal verification to internal auditors. **Internal auditors** are company employees who continuously evaluate the effectiveness of the company's internal control systems. They review the activities of departments and individuals to determine whether prescribed internal controls are being followed. They also recommend improvements when needed. In fact, most fraud is discovered by the company through internal mechanisms such as existing internal controls and internal audits. For example, the alleged fraud at **WorldCom**, involving billions of dollars, was uncovered by an internal auditor.

HUMAN RESOURCE CONTROLS

Human resource control activities include the following.

- 1. Bond employees who handle cash.** **Bonding** involves obtaining insurance protection against theft by employees. It contributes to the safeguarding of cash in

two ways: First, the insurance company carefully screens all individuals before adding them to the policy and may reject risky applicants. Second, bonded employees know that the insurance company will vigorously prosecute all offenders.

2. **Rotate employees' duties and require employees to take vacations.** These measures deter employees from attempting thefts since they will not be able to permanently conceal their improper actions. Many banks, for example, have discovered employee thefts when the employee was on vacation or assigned to a new position.
3. **Conduct thorough background checks.** Many believe that the most important and inexpensive measure any business can take to reduce employee theft and fraud is for the human resources department to conduct thorough background checks. Two tips: (1) Check to see whether job applicants actually graduated from the schools they list. (2) Never use the telephone numbers for previous employers given on the reference sheet; always look them up yourself.

ANATOMY OF A FRAUD

Ellen Lowry was the desk manager and Josephine Rodriguez was the head of housekeeping at the Excelsior Inn, a luxury hotel. The two best friends were so dedicated to their jobs that they never took vacations, and they frequently filled in for other employees. In fact, Ms. Rodriguez, whose job as head of housekeeping did not include cleaning rooms, often cleaned rooms herself, "just to help the staff keep up." These two "dedicated" employees, working as a team, found a way to earn a little more cash. Ellen, the desk manager, provided significant discounts to guests who paid with cash. She kept the cash and did not register the guest in the hotel's computerized system. Instead, she took the room out of circulation "due to routine maintenance." Because the room did not show up as being used, it did not receive a normal housekeeping assignment. Instead, Josephine, the head of housekeeping, cleaned the rooms during the guests' stay.

Total take: \$95,000

The Missing Control

Human resource controls. Ellen, the desk manager, had been fired by a previous employer after being accused of fraud. If the Excelsior Inn had conducted a thorough background check, it would not have hired her. The hotel fraud was detected when Ellen missed work for a few days due to illness. A system of mandatory vacations and rotating days off would have increased the chances of detecting the fraud before it became so large.

ACCOUNTING ACROSS THE ORGANIZATION

SOX Boosts the Role of Human Resources

Under SOX, a company needs to keep track of employees' degrees and certifications to ensure that employees continue to meet the specified requirements of a job. Also, to ensure proper employee supervision and proper separation of duties, companies must develop and monitor an organizational chart. When one corporation went through this exercise, it found that out of 17,000 employees, there were 400 people who did not report to anyone. The corporation also had 35 people who reported to each other. In addition, if an employee complains of an unfair firing and mentions financial issues at the company, HR must refer the case to the company audit committee and possibly to its legal counsel.

Why would unsupervised employees or employees who report to each other represent potential internal control threats? (See page 374.)

Limitations of Internal Control

Companies generally design their systems of internal control to provide **reasonable assurance** of proper safeguarding of assets and reliability of the accounting records. The concept of reasonable assurance rests on the premise that the costs of establishing control procedures should not exceed their expected benefit.

To illustrate, consider shoplifting losses in retail stores. Stores could eliminate such losses by having a security guard stop and search customers as they leave the store. But, store managers have concluded that the negative effects of such a procedure cannot be justified. Instead, they have attempted to control shoplifting losses by less costly procedures. They post signs saying, “We reserve the right to inspect all packages” and “All shoplifters will be prosecuted.” They use hidden TV cameras and store detectives to monitor customer activity, and they install sensor equipment at exits.

The **human element** is an important factor in every system of internal control. A good system can become ineffective as a result of employee fatigue, carelessness, or indifference. For example, a receiving clerk may not bother to count goods received and may just “fudge” the counts. Occasionally, two or more individuals may work together to get around prescribed controls. Such **collusion** can significantly reduce the effectiveness of a system, eliminating the protection offered by segregation of duties. No system of internal control is perfect.

The size of the business also may impose limitations on internal control. A small company, for example, may find it difficult to segregate duties or to provide for independent internal verification.

Helpful Hint

Controls may vary with the risk level of the activity. For example, management may consider cash to be high risk and maintaining inventories in the stockroom as low risk. Thus, management would have stricter controls for cash.

ETHICS INSIGHT

Big Theft at Small Companies

A study by the Association of Certified Fraud Examiners indicates that businesses with fewer than 100 employees are most at risk for employee theft. In fact, 38% of frauds occurred at companies with fewer than 100 employees. The median loss at small companies was \$200,000, which was higher than the median fraud at companies with more than 10,000 employees (\$147,000). A \$200,000 loss can threaten the very existence of a small company.

Source: 2008 Report to the Nation on Occupational Fraud and Abuse, Association of Certified Fraud Examiners, www.acfe.com/documents/2008-rtnn.pdf, p. 26.

Why are small companies more susceptible to employee theft? (See page 374.)

> DO IT!

Control Activities

Identify which control activity is violated in each of the following situations, and explain how the situation creates an opportunity for a fraud.

1. The person with primary responsibility for reconciling the bank account is also the company's accountant and makes all bank deposits.
2. Wellstone Company's treasurer received an award for distinguished service because he had not taken a vacation in 30 years.
3. In order to save money spent on order slips and to reduce time spent keeping track of order slips, a local bar/restaurant does not buy prenumbered order slips.

Action Plan

- ✓ Familiarize yourself with each of the control activities summarized on page 328.
- ✓ Understand the nature of the frauds that each control activity is intended to address.

Solution

1. Violates the control activity of segregation of duties. Record-keeping should be separate from physical custody. As a consequence, the employee could embezzle cash and make journal entries to hide the theft.
2. Violates the control activity of human resource controls. Key employees must take vacations. Otherwise, the treasurer, who manages the company's cash, might embezzle cash and use his position to conceal the theft.
3. Violates the control activity of documentation procedures. If prenumbered documents are not used, then it is virtually impossible to account for the documents. As a consequence, an employee could write up a dinner sale, receive the cash from the customer, and then throw away the order slip and keep the cash.

Related exercise material: **BE7-1, BE7-2, BE7-3, BE7-4, E7-1, and Do It! 7-1.**

Cash Controls

LEARNING OBJECTIVE 3

Explain the applications of internal control principles to cash receipts.

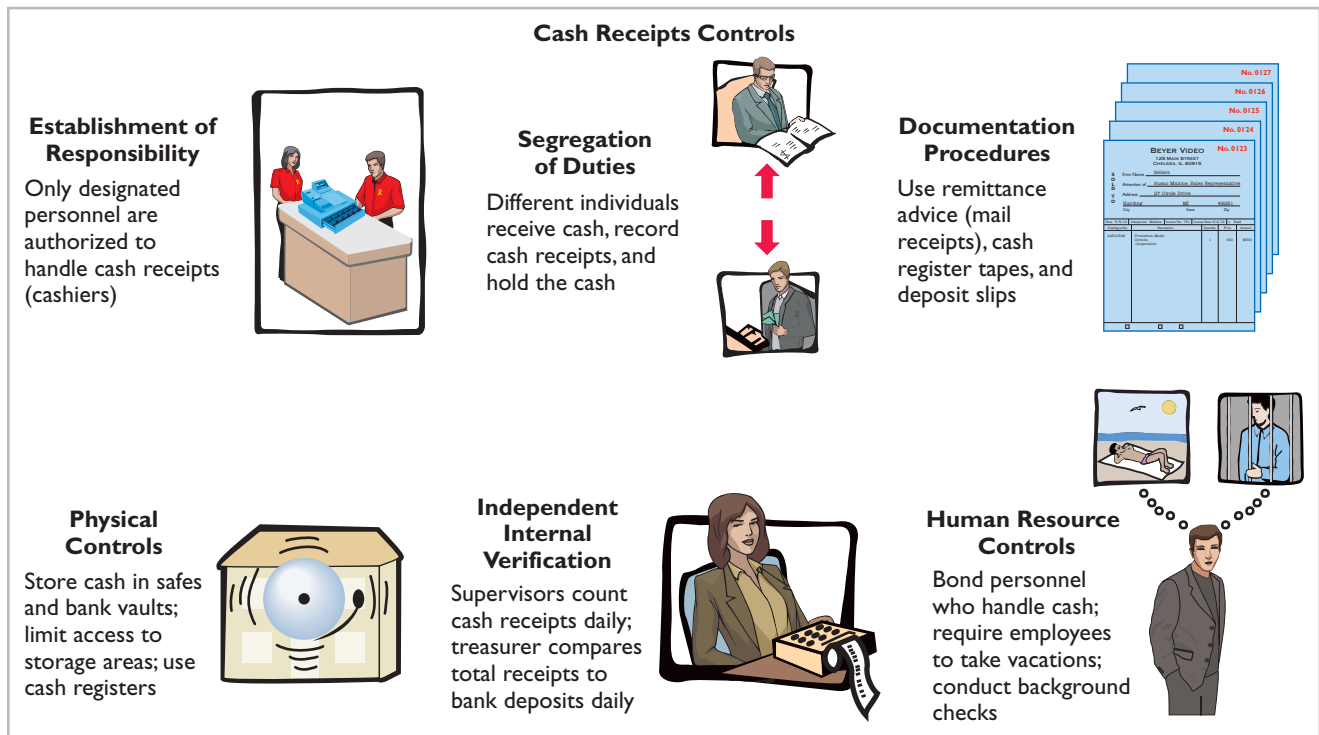

Cash is the one asset that is readily convertible into any other type of asset. It also is easily concealed and transported, and is highly desired. Because of these characteristics, **cash is the asset most susceptible to fraudulent activities.** In addition, because of the large volume of cash transactions, numerous errors may occur in executing and recording them. To safeguard cash and to ensure the accuracy of the accounting records for cash, effective internal control over cash is critical.

Cash Receipts Controls

Illustration 7-4

Application of internal control principles to cash receipts

Illustration 7-4 shows how the internal control principles explained earlier apply to cash receipts transactions. As you might expect, companies vary considerably

in how they apply these principles. To illustrate internal control over cash receipts, we will examine control activities for a retail store with both over-the-counter and mail receipts.

OVER-THE-COUNTER RECEIPTS

In retail businesses, control of over-the-counter receipts centers on cash registers that are visible to customers. A cash sale is rung up on a cash register, with the amount clearly visible to the customer. This activity prevents the cashier from ringing up a lower amount and pocketing the difference. The customer receives an itemized cash register receipt slip and is expected to count the change received. The cash register's tape is locked in the register until a supervisor removes it. This tape accumulates the daily transactions and totals.

At the end of the clerk's shift, the clerk counts the cash and sends the cash and the count to the cashier. The cashier counts the cash, prepares a deposit slip, and deposits the cash at the bank. The cashier also sends a duplicate of the deposit slip to the accounting department to indicate cash received. The supervisor removes the cash register tape and sends it to the accounting department as the basis for a journal entry to record the cash received. Illustration 7-5 summarizes this process.

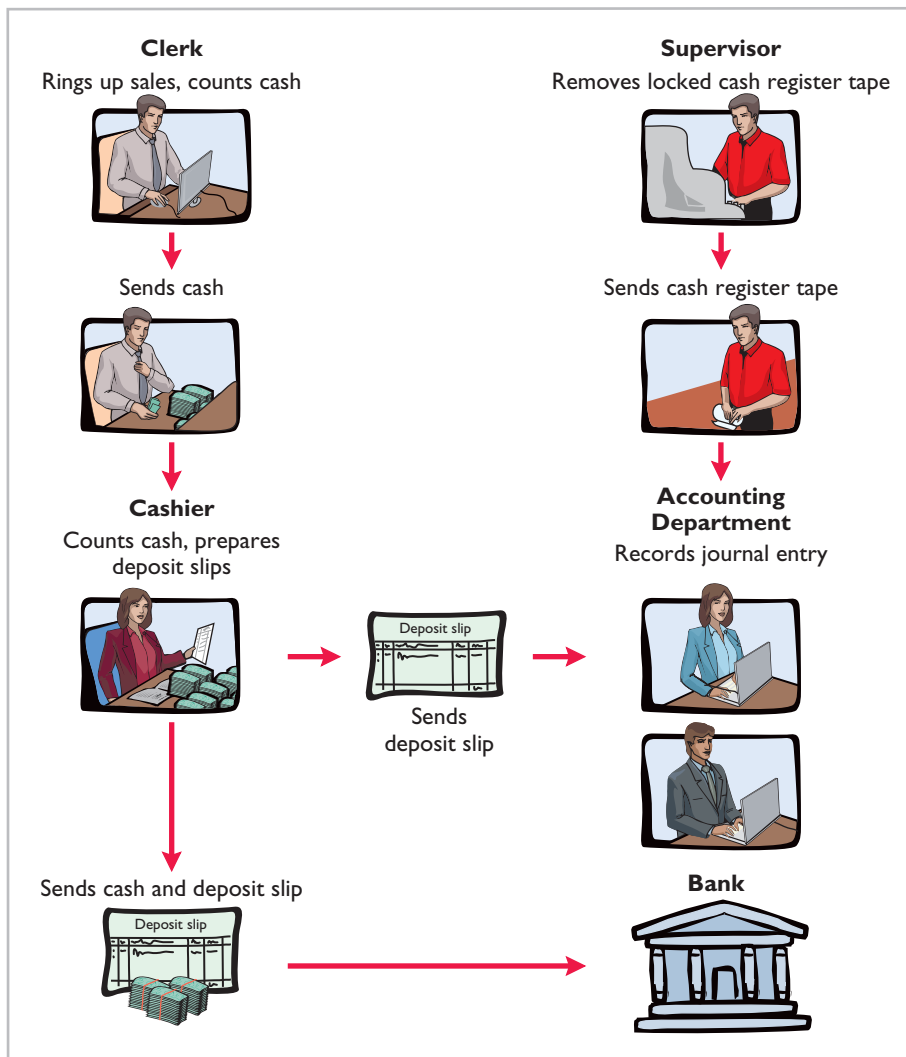

Illustration 7-5

Control of over-the-counter receipts

Helpful Hint

Flowcharts such as this one enhance the understanding of the flow of documents, the processing steps, and the internal control procedures.

This system for handling cash receipts uses an important internal control principle—segregation of record-keeping from physical custody. The supervisor

has access to the cash register tape but **not** to the cash. The clerk and the cashier have access to the cash but **not** to the register tape. In addition, the cash register tape provides documentation and enables independent internal verification. Use of these three principles of internal control (segregation of record-keeping from physical custody, documentation, and independent internal verification) provides an effective system of internal control. Any attempt at fraudulent activity should be detected unless there is collusion among the employees.

In some instances, the amount deposited at the bank will not agree with the cash recorded in the accounting records based on the cash register tape. These differences often result because the clerk hands incorrect change back to the retail customer. In this case, the difference between the actual cash and the amount reported on the cash register tape is reported in a Cash Over and Short account. For example, suppose that the cash register tape indicated sales of \$6,956.20 but the amount of cash was only \$6,946.10. A cash shortfall of \$10.10 exists. To account for this cash shortfall and related cash, the company makes the following entry.

A	=	L	+	SE
+6,946.10				-10.10
				+6,956.20
Cash Flows				
+6,946.10				

Cash	6,946.10	
Cash Over and Short	10.10	
Sales Revenue		6,956.20
(To record cash shortfall)		

Cash Over and Short is an income statement item. It is reported as miscellaneous expense when there is a cash shortfall, and as miscellaneous revenue when there is an overage. Clearly, the amount should be small. Any material amounts in this account should be investigated.

MAIL RECEIPTS

All mail receipts should be opened in the presence of at least two mail clerks. These receipts are generally in the form of checks. A mail clerk should endorse each check “For Deposit Only.” This restrictive endorsement reduces the likelihood that someone could divert the check to personal use. Banks will not give an individual cash when presented with a check that has this type of endorsement.

The mail clerks prepare, in triplicate, a list of the checks received each day. This list shows the name of the check issuer, the purpose of the payment, and the amount of the check. Each mail clerk signs the list to establish responsibility for the data. The original copy of the list, along with the checks, is then sent to the cashier’s department. A copy of the list is sent to the accounting department for recording in the accounting records. The clerks also keep a copy.

This process provides excellent internal control for the company. By employing two clerks, the chance of fraud is reduced. Each clerk knows he or she is being observed by the other clerk(s). To engage in fraud, they would have to collude. The customers who submit payments also provide control because they will contact the company with a complaint if they are not properly credited for payment. Because the cashier has access to cash but not the records, and the accounting department has access to records but not cash, neither can engage in undetected fraud.

> DO IT!

Control over Cash Receipts

L. R. Cortez is concerned about the control over cash receipts in his fast-food restaurant, Big Cheese. The restaurant has two cash registers. At no time do more than two employees take customer orders and ring up sales. Work shifts for employees range from 4 to 8 hours. Cortez asks your help in installing a good system of internal control over cash receipts.

Action Plan

- ✓ Differentiate among the internal control principles of (1) establishing responsibility, (2) using physical controls, and (3) independent internal verification.
- ✓ Design an effective system of internal control over cash receipts.

Solution

Cortez should assign a cash register to each employee at the start of each work shift, with register totals set at zero. Each employee should be instructed to use only the assigned register and to ring up all sales. Each customer should be given a receipt. At the end of the shift, the employee should do a cash count. A separate employee should compare the cash count with the register tape, to be sure they agree. In addition, Cortez should install an automated system that would enable the company to compare orders rung up on the register to orders processed by the kitchen.

Related exercise material: **BE7-5, E7-2, and DO IT! 7-2.**

✓ **The Navigator**

Cash Disbursements Controls

Companies disburse cash for a variety of reasons, such as to pay expenses and liabilities or to purchase assets. **Generally, internal control over cash disbursements is more effective when companies pay by check rather than by cash.** One exception is **for incidental amounts that are paid out of petty cash.**³

Companies generally issue checks only after following specified control procedures. Illustration 7-6 (page 340) shows how principles of internal control apply to cash disbursements.

VOUCHER SYSTEM CONTROLS

Most medium and large companies use vouchers as part of their internal control over cash disbursements. A **voucher system** is a network of approvals by authorized individuals, acting independently, to ensure that all disbursements by check are proper.

The system begins with the authorization to incur a cost or expense. It ends with the issuance of a check for the liability incurred. A **voucher** is an authorization form prepared for each expenditure. Companies require vouchers for all types of cash disbursements except those from petty cash.

The starting point in preparing a voucher is to fill in the appropriate information about the liability on the face of the voucher. The vendor's invoice provides most of the needed information. Then, an employee in accounts payable records the voucher (in a journal called a **voucher register**) and files it according to the date on which it is to be paid. The company issues and sends a check on that date, and stamps the voucher "paid." The paid voucher is sent to the accounting department for recording (in a journal called the **check register**). A voucher system involves two journal entries, one to record the liability when the voucher is issued and a second to pay the liability that relates to the voucher.

The use of a voucher system improves internal control over cash disbursements. First, the authorization process inherent in a voucher system establishes responsibility. Each individual has responsibility to review the underlying documentation to ensure that it is correct. In addition, the voucher system keeps track of the documents that back up each transaction. By keeping these documents in one place, a supervisor can independently verify the authenticity of each transaction. Consider, for example, the case of Aesop University presented on page 330. Aesop did not use a voucher system for transactions under \$2,500. As a consequence,

LEARNING OBJECTIVE 4

Explain the applications of internal control principles to cash disbursements.

³We explain the operation of a petty cash fund on pages 340–342.

Cash Disbursements Controls

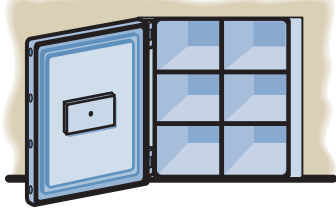

Establishment of Responsibility

Only designated personnel are authorized to sign checks (treasurer) and approve vendors

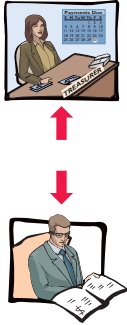

Physical Controls

Store blank checks in safes, with limited access; print check amounts by machine in indelible ink

Segregation of Duties

Different individuals approve and make payments; check signers do not record disbursements

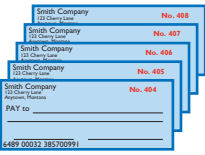

Independent Internal Verification

Compare checks to invoices; reconcile bank statement monthly

Documentation Procedures

Use prenumbered checks and account for them in sequence; each check must have an approved invoice; require employees to use corporate credit cards for reimbursable expenses; stamp invoices "paid"

Human Resource Controls

Bond personnel who handle cash; require employees to take vacations; conduct background checks

Illustration 7-6
Application of internal control principles to cash disbursements

there was no independent verification of the documents, which enabled the employee to submit fake invoices to hide his unauthorized purchases.

PETTY CASH FUND CONTROLS

LEARNING OBJECTIVE 5

Describe the operation of a petty cash fund.

As you learned earlier in the chapter, better internal control over cash disbursements is possible when companies make payments by check. However, using checks to pay small amounts is both impractical and a nuisance. For instance, a company would not want to write checks to pay for postage due, working lunches, or taxi fares. A common way of handling such payments, while maintaining satisfactory control, is to use a **petty cash fund** to pay relatively small amounts. The operation of a petty cash fund, often called an **imprest system**, involves (1) establishing the fund, (2) making payments from the fund, and (3) replenishing the fund.⁴

⁴The term “imprest” means an advance of money for a designated purpose.

ESTABLISHING THE PETTY CASH FUND Two essential steps in establishing a petty cash fund are: (1) appointing a petty cash custodian who will be responsible for the fund, and (2) determining the size of the fund. Ordinarily, a company expects the amount in the fund to cover anticipated disbursements for a three- to four-week period.

To establish the fund, a company issues a check payable to the petty cash custodian for the stipulated amount. For example, if Laird Company decides to establish a \$100 fund on March 1, the general journal entry is:

Mar. 1	Petty Cash	100		
	Cash		100	
	(To establish a petty cash fund)			

A	=	L	+	SE
+100				
-100				
Cash Flows				
no effect				

The fund custodian cashes the check and places the proceeds in a locked petty cash box or drawer. Most petty cash funds are established on a fixed-amount basis. The company will make no additional entries to the Petty Cash account unless management changes the stipulated amount of the fund. For example, if Laird Company decides on July 1 to increase the size of the fund to \$250, it would debit Petty Cash \$150 and credit Cash \$150.

Ethics Note

Petty cash funds are authorized and legitimate. In contrast, "slush" funds are unauthorized and hidden (under the table).

MAKING PAYMENTS FROM THE PETTY CASH FUND The petty cash custodian has the authority to make payments from the fund that conform to prescribed management policies. Usually, management limits the size of expenditures that come from petty cash. Likewise, it may not permit use of the fund for certain types of transactions (such as making short-term loans to employees).

Each payment from the fund must be documented on a prenumbered petty cash receipt (or petty cash voucher), as shown in Illustration 7-7. The signatures of both the fund custodian and the person receiving payment are required on the receipt. If other supporting documents such as a freight bill or invoice are available, they should be attached to the petty cash receipt.

Helpful Hint
The petty cash receipt satisfies two internal control procedures: (1) establishing responsibility (signature of custodian), and (2) documentation procedures.

No. 7 LAIRD COMPANY
Petty Cash Receipt

Date 3/8/14

Paid to Acme Express Agency Amount \$18.00

For Collect Express Charges

CHARGE TO Freight-In

Approved L. A. Bird Custodian Received Payment R. E. Meins

Illustration 7-7
Petty cash receipt

Ethics Note

Internal control over a petty cash fund is strengthened by: (1) having a supervisor make surprise counts of the fund to confirm whether the paid petty cash receipts and fund cash equal the imprest amount, and (2) canceling or mutilating the paid petty cash receipts so they cannot be resubmitted for reimbursement.

The fund custodian keeps the receipts in the petty cash box until the fund is replenished. The sum of the petty cash receipts and the money in the fund should equal the established total at all times. Management can (and should) make surprise counts at any time to determine whether the fund is being maintained correctly.

The company does not make an accounting entry to record a payment when it is made from petty cash. It is considered both inexpedient and unnecessary to do so. Instead, the company recognizes the accounting effects of each payment when it replenishes the fund.

REPLENISHING THE PETTY CASH FUND When the money in the petty cash fund reaches a minimum level, the company replenishes the fund. The petty cash custodian initiates a request for reimbursement. The individual prepares a schedule (or summary) of the payments that have been made and sends the schedule, supported by petty cash receipts and other documentation, to the treasurer’s office. The treasurer’s office examines the receipts and supporting documents to verify that proper payments from the fund were made. The treasurer then approves the request and issues a check to restore the fund to its established amount. At the same time, all supporting documentation is stamped “paid” so that it cannot be submitted again for payment.

To illustrate, assume that on March 15 Laird’s petty cash custodian requests a check for \$87. The fund contains \$13 cash and petty cash receipts for postage \$44, freight-out \$38, and miscellaneous expenses \$5. The general journal entry to record the check is:

A	=	L	+	SE
				-44 Exp
				-38 Exp
				-5 Exp
-87				
Cash Flows				
-87				

Mar. 15	Postage Expense Freight-Out Miscellaneous Expense Cash (To replenish petty cash fund)	44 38 5 87	87
---------	---	-------------------------	----

Note that the reimbursement entry does not affect the Petty Cash account. Replenishment changes the composition of the fund by replacing the petty cash receipts with cash. It does not change the balance in the fund.

Occasionally, in replenishing a petty cash fund, the company may need to recognize a cash shortage or overage. This results when the total of the cash plus receipts in the petty cash box does not equal the established amount of the petty cash fund. To illustrate, assume that Laird’s petty cash custodian has only \$12 in cash in the fund plus the receipts as listed. The request for reimbursement would therefore be for \$88, and Laird would make the following entry.

A	=	L	+	SE
				-44 Exp
				-38 Exp
				-5 Exp
				-1 Exp
-88				
Cash Flows				
-88				

Mar. 15	Postage Expense Freight-Out Miscellaneous Expense Cash Over and Short Cash (To replenish petty cash fund)	44 38 5 1 88	88
---------	--	------------------------------	----

Conversely, if the custodian has \$14 in cash, the reimbursement request would be for \$86, and the company would credit Cash Over and Short for \$1 (overage). A company reports a debit balance in Cash Over and Short in the income statement as miscellaneous expense. It reports a credit balance in the account as miscellaneous revenue. The company closes Cash Over and Short to Income Summary at the end of the year.

Companies should replenish a petty cash fund at the end of the accounting period, regardless of the cash in the fund. Replenishment at this time is necessary in order to recognize the effects of the petty cash payments on the financial statements.

Helpful Hint
Cash over and short situations result from mathematical errors or from failure to keep accurate records.

ETHICS INSIGHT

How Employees Steal

A recent study by the Association of Certified Fraud Examiners found that two-thirds of all employee thefts involved a fraudulent disbursement by an employee. The most common form (28.3% of cases) was fraudulent billing schemes. In these, the employee causes the company to issue a payment to the employee by submitting a bill for nonexistent goods or services, purchases of personal goods by the employee, or inflated invoices. The following graph shows various types of fraudulent disbursements and the median loss from each.

Source: 2008 Report to the Nation on Occupational Fraud and Abuse, Association of Certified Fraud Examiners, www.acfe.com/documents/2008_rtn.pdf, p. 13.

How can companies reduce the likelihood of fraudulent disbursements? (See page 375.)

> DO IT!

Petty Cash Fund

Action Plan

- ✓ To establish the fund, set up a separate general ledger account.
- ✓ Determine how much cash is needed to replenish the fund: subtract the cash remaining from the petty cash fund balance.
- ✓ Total the petty cash receipts. Determine any cash over or short—the difference between the cash needed to replenish the fund and the total of the petty cash receipts.
- ✓ Record the expenses incurred according to the petty cash receipts when replenishing the fund.

Bateer Company established a \$50 petty cash fund on July 1. On July 30, the fund had \$12 cash remaining and petty cash receipts for postage \$14, office supplies \$10, and delivery expense \$15. Prepare journal entries to establish the fund on July 1 and to replenish the fund on July 30.

Solution

July 1	Petty Cash Cash (To establish petty cash fund)	50	50
30	Postage Expense Supplies Delivery Expense Cash Over and Short Cash (\$50 – \$12) (To replenish petty cash)	14 10 15 1 38

Control Features: Use of a Bank

LEARNING OBJECTIVE 6

Indicate the control features of a bank account.

The use of a bank contributes significantly to good internal control over cash. A company can safeguard its cash by using a bank as a depository and as a clearing house for checks received and written. Use of a bank minimizes the amount of currency that a company must keep on hand. Also, use of a bank facilitates the control of cash because it creates a double record of all bank transactions—one by the company and the other by the bank. The asset account Cash maintained by the company should have the same balance as the bank’s liability account for that company. A **bank reconciliation** compares the bank’s balance with the company’s balance and explains any differences to make them agree.

Many companies have more than one bank account. For efficiency of operations and better control, national retailers like **Wal-Mart Stores, Inc.** and **Target** may have regional bank accounts. Large companies, with tens of thousands of employees, may have a payroll bank account, as well as one or more general bank accounts. Also, a company may maintain several bank accounts in order to have more than one source for short-term loans when needed.

Making Bank Deposits

An authorized employee, such as the head cashier, should make a company’s bank deposits. Each deposit must be documented by a deposit slip (ticket), as shown in Illustration 7-8.

Illustration 7-8
Deposit slip

CHECKS	LIST SINGLY	DOLLARS	CENTS

3	19 - 401/710	337	55
4	22 - 815/666	165	72
5	15 - 360/011	145	53
6			
7			
8			
9			
10			
11			
12			
13			
14			
15			
16			
17			
18			
19			
TOTAL		1116	80

Deposit slips are prepared in duplicate. The bank retains the original; the depositor keeps the duplicate, machine-stamped by the bank to establish its authenticity.

Writing Checks

Most of us write checks without thinking very much about them. A **check** is a written order signed by the depositor directing the bank to pay a specified sum of

money to a designated recipient. There are three parties to a check: (1) the **maker** (or drawer) who issues the check, (2) the **bank** (or payer) on which the check is drawn, and (3) the **payee** to whom the check is payable. A check is a **negotiable instrument** that one party can transfer to another party by endorsement. Each check should be accompanied by an explanation of its purpose. In many companies, a remittance advice attached to the check, as shown in Illustration 7-9, explains the check's purpose.

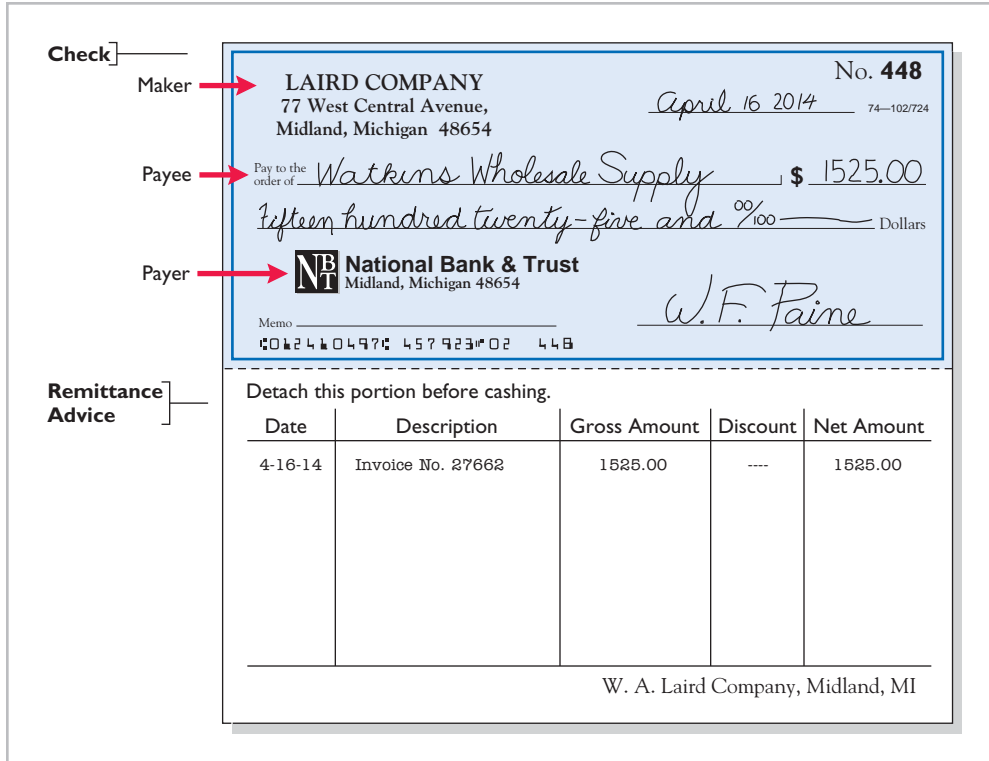

Illustration 7-9
Check with remittance advice

It is important to know the balance in the checking account at all times. To keep the balance current, the depositor should enter each deposit and check on running-balance memo forms (or online statements) provided by the bank or on the check stubs in the checkbook.

Bank Statements

If you have a personal checking account, you are probably familiar with bank statements. A **bank statement** shows the depositor's bank transactions and balances.⁵ Each month, a depositor receives a statement from the bank. Illustration 7-10 (page 346) presents a typical bank statement. It shows (1) checks paid and other debits that reduce the balance in the depositor's account, (2) deposits and other credits that increase the balance in the account, and (3) the account balance after each day's transactions.

The bank statement lists in numerical sequence all "paid" checks, along with the date the check was paid and its amount. Upon paying a check, the bank

Helpful Hint

Essentially, the bank statement is a copy of the bank's records sent to the customer (or available online) for review.

⁵Our presentation assumes that the depositor makes all adjustments at the end of the month. In practice, a company may also make journal entries during the month as it reviews information from the bank regarding its account.

Illustration 7-10
Bank statement

Helpful Hint

The bank *credits* to the customer's account every deposit it receives. The reverse occurs when the bank "pays" a check issued by a company on its checking account balance. Payment reduces the bank's liability. Thus, the bank *debits* check payments to the customer's account with the bank.

Symbols: **CM** Credit Memo **EC** Error Correction **NSF** Not Sufficient Funds Reconcile Your Account Promptly
DM Debit Memo **INT** Interest Earned **SC** Service Charge

stamps the check "paid"; a paid check is sometimes referred to as a **canceled** check. On the statement, the bank also includes memoranda explaining other debits and credits it made to the depositor's account.

DEBIT MEMORANDUM

Some banks charge a monthly fee for their services. Often, they charge this fee only when the average monthly balance in a checking account falls below a specified amount. They identify the fee, called a **bank service charge**, on the bank statement by a symbol such as **SC**. The bank also sends with the statement a debit memorandum explaining the charge noted on the statement. Other debit memoranda may also be issued for other bank services such as the cost of printing checks, issuing traveler's checks, and wiring funds to other locations. The symbol **DM** is often used for such charges.

Banks also use a debit memorandum when a deposited check from a customer "bounces" because of insufficient funds. For example, assume that Scott Company, a customer of Laird Company, sends a check for \$800 to Laird Company for services provided. Unfortunately, Scott does not have sufficient funds at its bank to pay for these services. In such a case, Scott's bank marks the check **NSF** (not sufficient funds) and returns it to Laird's (the depositor's) bank. Laird's bank then debits Laird's account, as shown by the symbol NSF on the bank statement in Illustration 7-10. The bank sends the NSF check and debit memorandum to Laird

as notification of the charge. Laird then records an Account Receivable from Scott Company (the writer of the bad check) and reduces cash for the NSF check.

CREDIT MEMORANDUM

Sometimes a depositor asks the bank to collect its notes receivable. In such a case, the bank will credit the depositor's account for the cash proceeds of the note. This is illustrated by the symbol **CM** on the Laird Company bank statement. The bank issues and sends with the statement a credit memorandum to explain the entry. Many banks also offer interest on checking accounts. The interest earned may be indicated on the bank statement by the symbol **CM** or **INT**.

Reconciling the Bank Account

The bank and the depositor maintain independent records of the depositor's checking account. People tend to assume that the respective balances will always agree. In fact, the two balances are seldom the same at any given time, and both balances differ from the "correct" or "true" balance. Therefore, it is necessary to make the balance per books and the balance per bank agree with the correct or true amount—a process called **reconciling the bank account**. The need for agreement has two causes:

1. **Time lags** that prevent one of the parties from recording the transaction in the same period as the other party.
2. **Errors** by either party in recording transactions.

Time lags occur frequently. For example, several days may elapse between the time a company mails a check to a payee and the date the bank pays the check. Similarly, when the depositor uses the bank's night depository to make its deposits, there will be a difference of at least one day between the time the depositor records the deposit and the time the bank does so. A time lag also occurs whenever the bank mails a debit or credit memorandum to the depositor.

The incidence of errors depends on the effectiveness of the internal controls of the depositor and the bank. Bank errors are infrequent. However, either party could accidentally record a \$450 check as \$45 or \$540. In addition, the bank might mistakenly charge a check to a wrong account by keying in an incorrect account name or number.

RECONCILIATION PROCEDURE

The bank reconciliation should be prepared by an employee who has no other responsibilities pertaining to cash. If a company fails to follow this internal control principle of independent internal verification, cash embezzlements may go unnoticed. For example, a cashier who prepares the reconciliation can embezzle cash and conceal the embezzlement by misstating the reconciliation. Thus, the bank accounts would reconcile, and the embezzlement would not be detected.

In reconciling the bank account, it is customary to reconcile the balance per books and balance per bank to their adjusted (correct or true) cash balances. The starting point in preparing the reconciliation is to enter the balance per bank statement and balance per books on the reconciliation schedule. The company then makes various adjustments, as shown in Illustration 7-11 (page 348).

The following steps should reveal all the reconciling items that cause the difference between the two balances.

Step 1. Deposits in transit. Compare the individual deposits listed on the bank statement with deposits in transit from the preceding bank reconciliation and with the deposits per company records or duplicate deposit slips. Deposits recorded by the depositor that have not been recorded by the bank are the **deposits in transit**. Add these deposits to the balance per bank.

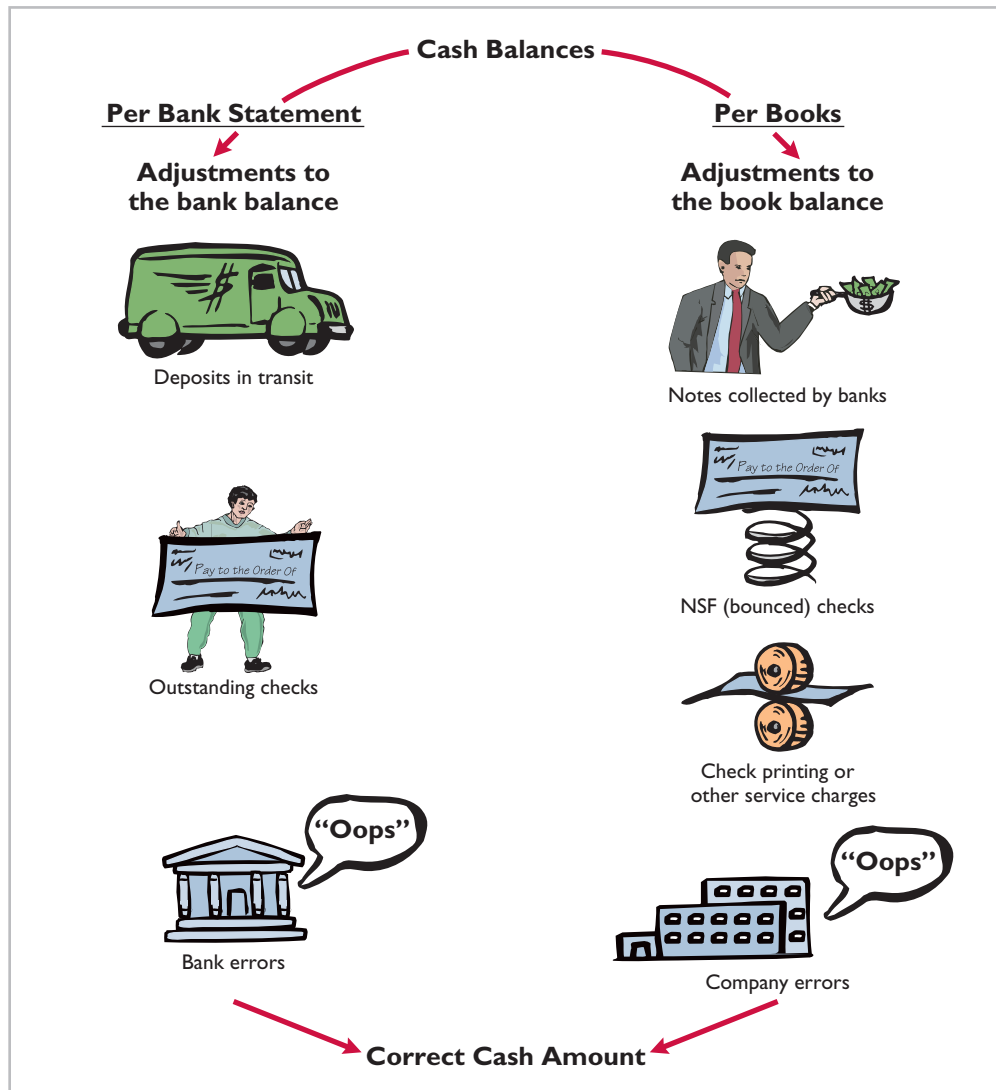

LEARNING OBJECTIVE 7

Prepare a bank reconciliation.

Helpful Hint

Deposits in transit and outstanding checks are reconciling items because of time lags.

Illustration 7-11
Bank reconciliation
adjustments

Step 2. Outstanding checks. Compare the paid checks shown on the bank statement with (a) checks outstanding from the previous bank reconciliation, and (b) checks issued by the company as recorded in the cash payments journal (or in the check register in your personal checkbook). Issued checks recorded by the company but that have not yet been paid by the bank are **outstanding checks**. Deduct outstanding checks from the balance per the bank.

Step 3. Errors. Note any errors discovered in the foregoing steps and list them in the appropriate section of the reconciliation schedule. For example, if the company mistakenly recorded as \$169 a paid check correctly written for \$196, it would deduct the error of \$27 from the balance per books. All errors made by the depositor are reconciling items in determining the adjusted cash balance per books. In contrast, all errors made by the bank are reconciling items in determining the adjusted cash balance per the bank.

Step 4. Bank memoranda. Trace bank memoranda to the depositor's records. List in the appropriate section of the reconciliation schedule any

unrecorded memoranda. For example, the company would deduct from the balance per books a \$5 debit memorandum for bank service charges. Similarly, it would add to the balance per books \$32 of interest earned.

BANK RECONCILIATION ILLUSTRATED

The bank statement for Laird Company, in Illustration 7-10, shows a balance per bank of \$15,907.45 on April 30, 2014. On this date the balance of cash per books is \$11,589.45. Using the four reconciliation steps, Laird determines the following reconciling items.

Step 1. Deposits in transit: April 30 deposit (received by bank on May 1).	\$2,201.40
Step 2. Outstanding checks: No. 453, \$3,000.00; no. 457, \$1,401.30; no. 460, \$1,502.70.	5,904.00
Step 3. Errors: Laird wrote check no. 443 for \$1,226.00 and the bank correctly paid that amount. However, Laird recorded the check as \$1,262.00.	36.00
Step 4. Bank memoranda:	
a. Debit—NSF check from J. R. Baron for \$425.60	425.60
b. Debit—Charge for printing company checks \$30.00	30.00
c. Credit—Collection of note receivable for \$1,000 plus interest earned \$50, less bank collection fee \$15.00	1,035.00

Illustration 7-12 shows Laird’s bank reconciliation.

Helpful Hint

Note in the bank statement on page 346 that checks no. 459 and 461 have been paid but check no. 460 is not listed. Thus, this check is outstanding. If a complete bank statement were provided, checks no. 453 and 457 would also not be listed. The amounts for these three checks are obtained from the company’s cash payments records.

Laird Company Bank Reconciliation April 30, 2014		
Cash balance per bank statement		\$ 15,907.45
Add: Deposits in transit		2,201.40
		18,108.85

		1,071.00
		12,660.45
Less: NSF check	425.60	
Bank service charge	30.00	
		455.60
Adjusted cash balance per books		\$12,204.85

Illustration 7-12
Bank reconciliation

Alternative Terminology

The terms *adjusted cash balance*, *true cash balance*, and *correct cash balance* are used interchangeably.

Helpful Hint

The entries that follow are adjusting entries. In prior chapters, Cash was an account that did not require adjustment. That was a simplifying assumption for learning purposes because we had not yet explained a bank reconciliation.

ENTRIES FROM BANK RECONCILIATION

The company records each reconciling item used to determine the **adjusted cash balance per books**. **If the company does not journalize and post these items, the Cash account will not show the correct balance.** Laird Company would make the following entries on April 30.

A	=	L	+	SE
+1,035				-15 Exp
-1,000				+50 Rev
<hr/>				
Cash Flows				
+1,035				

A	=	L	+	SE
+36				+36
<hr/>				
Cash Flows				
+36				

A	=	L	+	SE
+425.60				
-425.60				
<hr/>				
Cash Flows				
-425.60				

A	=	L	+	SE
				-30 Exp
-30				
<hr/>				
Cash Flows				
-30				

COLLECTION OF NOTE RECEIVABLE This entry involves four accounts. Assuming that the interest of \$50 has not been accrued and the collection fee is charged to Miscellaneous Expense, the entry is:

Apr. 30	Cash	1,035.00		
	Miscellaneous Expense	15.00		
	Notes Receivable		1,000.00	
	Interest Revenue		50.00	
	(To record collection of note receivable by bank)			

BOOK ERROR The cash disbursements journal shows that check no. 443 was a payment on account to Andrea Company, a supplier. The correcting entry is:

Apr. 30	Cash	36.00		
	Accounts Payable—Andrea Company		36.00	
	(To correct error in recording check no. 443)			

NSF CHECK As indicated earlier, an NSF check becomes an account receivable to the depositor. The entry is:

Apr. 30	Accounts Receivable—J. R. Baron	425.60		
	Cash		425.60	
	(To record NSF check)			

BANK SERVICE CHARGES Depositors debit check printing charges (DM) and other bank service charges (SC) to Miscellaneous Expense because they are usually nominal in amount. The entry is:

Apr. 30	Miscellaneous Expense	30.00		
	Cash		30.00	
	(To record charge for printing company checks)			

Instead of making four separate entries, Laird could combine them into one compound entry.

After Laird has posted the entries, the Cash account will show the following.

Illustration 7-13
Adjusted balance in cash account

Cash			
Apr. 30 Bal.	11,589.45	Apr. 30	425.60
30	1,035.00	30	30.00
30	36.00		
<hr/>		<hr/>	
Apr. 30 Bal.	12,204.85		

The adjusted cash balance in the ledger should agree with the adjusted cash balance per books in the bank reconciliation in Illustration 7-12 (page 349).

What entries does the bank make? If the company discovers any bank errors in preparing the reconciliation, it should notify the bank. The bank then can make the necessary corrections in its records. The bank does not make any entries for deposits in transit or outstanding checks. Only when these items reach the bank will the bank record these items.

Electronic Funds Transfer (EFT) System

It is not surprising that companies and banks have developed approaches to transfer funds among parties without the use of paper (deposit tickets, checks, etc.). Such procedures, called **electronic funds transfers (EFT)**, are disbursement systems that use wire, telephone, or computers to transfer cash balances from one

location to another. Use of EFT is quite common. For example, many employees receive no formal payroll checks from their employers. Instead, employers send electronic payroll data to the appropriate banks. Also, individuals now frequently make regular payments such as those for house, car, and utilities by EFT.

EFT transfers normally result in better internal control since no cash or checks are handled by company employees. This does not mean that opportunities for fraud are eliminated. In fact, the same basic principles related to internal control apply to EFT transfers. For example, without proper segregation of duties and authorizations, an employee might be able to redirect electronic payments into a personal bank account and conceal the theft with fraudulent accounting entries.

INVESTOR INSIGHT

Madoff's Ponzi Scheme

No recent fraud has generated more interest and rage than the one perpetrated by Bernard Madoff. Madoff was an elite New York investment fund manager who was highly regarded by securities regulators. Investors flocked to him because he delivered very steady returns of between 10% and 15%, no matter whether the market was going up or going down. However, for many years, Madoff did not actually invest the cash that people gave to him. Instead, he was running a Ponzi scheme: He paid returns to existing investors using cash received from new investors. As long as the size of his investment fund continued to grow from new investments at a rate that exceeded the amounts that he needed to pay out in returns, Madoff was able to operate his fraud smoothly. To conceal his misdeeds, he fabricated false investment statements that were provided to investors. In addition, Madoff hired an auditor that never verified the accuracy of the investment records but automatically issued unqualified opinions each year. Although a competing fund manager warned the SEC a number of times over a nearly 10-year period that he thought Madoff was engaged in fraud, the SEC never aggressively investigated the allegations. Investors, many of which were charitable organizations, lost more than \$18 billion. Madoff was sentenced to a jail term of 150 years.

How was Madoff able to conceal such a giant fraud? (See page 375.)

> DO IT!

Bank Reconciliation

Sally Kist owns Linen Kist Fabrics. Sally asks you to explain how she should treat the following reconciling items when reconciling the company's bank account: (1) a debit memorandum for an NSF check, (2) a credit memorandum for a note collected by the bank, (3) outstanding checks, and (4) a deposit in transit.

Solution

Action Plan

- ✓ Understand the purpose of a bank reconciliation.
- ✓ Identify time lags and explain how they cause reconciling items.

Sally should treat the reconciling items as follows.

- (1) NSF check: Deduct from balance per books.
- (2) Collection of note: Add to balance per books.
- (3) Outstanding checks: Deduct from balance per bank.
- (4) Deposit in transit: Add to balance per bank.

Related exercise material: **BE7-11, BE7-12, BE7-13, BE7-14, E7-9, E7-10, E7-11, E7-12, E7-13,** and **DO IT! 7-4.**

Reporting Cash

LEARNING OBJECTIVE 8

Explain the reporting of cash.

Cash consists of coins, currency (paper money), checks, money orders, and money on hand or on deposit in a bank or similar depository. Companies report cash in two different statements: the balance sheet and the statement of cash flows. The balance sheet reports the amount of cash available at a given point in time. The statement of cash flows shows the sources and uses of cash during a period of time. The statement of cash flows was introduced in Chapter 1 and will be discussed in much detail in Chapter 13. In this section, we discuss some important points regarding the presentation of cash in the balance sheet.

When presented in a balance sheet, cash on hand, cash in banks, and petty cash are often combined and reported simply as **Cash**. Because it is the most liquid asset owned by the company, cash is listed first in the current assets section of the balance sheet.

Cash Equivalents

Many companies use the designation “Cash and cash equivalents” in reporting cash. (See Illustration 7-14 for an example.) **Cash equivalents** are short-term, highly liquid investments that are both:

1. Readily convertible to known amounts of cash, and
2. So near their maturity that their market value is relatively insensitive to changes in interest rates.

Illustration 7-14
Balance sheet presentation of cash

Delta Air Lines, Inc. Balance Sheet (partial) December 31, 2009 (in millions)

Assets

Current assets	
Cash and cash equivalents	\$4,607
Short-term investments	71
Restricted cash	423
Accounts receivable and other net	1,360
Parts inventories	327
Prepaid expenses and other	953
Total current assets	<u>\$ 7,741</u>

Examples of cash equivalents are Treasury bills, commercial paper (short-term corporate notes), and money market funds. All typically are purchased with cash that is in excess of immediate needs.

Occasionally, a company will have a net negative balance in its bank account. In this case, the company should report the negative balance among current liabilities. For example, farm equipment manufacturer **Ag-Chem** recently reported “Checks outstanding in excess of cash balances” of \$2,145,000 among its current liabilities.

Ethics Note

Recently, some companies were forced to restate their financial statements because they had too broadly interpreted which types of investments could be treated as cash equivalents. By reporting these items as cash equivalents, the companies made themselves look more liquid.

Restricted Cash

A company may have **restricted cash**, cash that is not available for general use but rather is restricted for a special purpose. For example, landfill companies are often required to maintain a fund of restricted cash to

ensure they will have adequate resources to cover closing and clean-up costs at the end of a landfill site's useful life. **McKessor Corp.** recently reported restricted cash of \$962 million to be paid out as the result of investor lawsuits.

Cash restricted in use should be reported separately on the balance sheet as restricted cash. If the company expects to use the restricted cash within the next year, it reports the amount as a current asset. When this is not the case, it reports the restricted funds as a noncurrent asset.

Illustration 7-14 shows restricted cash reported in the financial statements of **Delta Air Lines**. The company is required to maintain restricted cash as collateral to support insurance obligations related to workers' compensation claims. Delta does not have access to these funds for general use, and so it must report them separately, rather than as part of cash and cash equivalents.

> Comprehensive DO IT!

Poorten Company's bank statement for May 2014 shows the following data.

Balance 5/1	\$12,650	Balance 5/31	\$14,280
Debit memorandum:		Credit memorandum:	
NSF check	\$175	Collection of note receivable	\$505

The cash balance per books at May 31 is \$13,319. Your review of the data reveals the following.

1. The NSF check was from Copple Co., a customer.
2. The note collected by the bank was a \$500, 3-month, 12% note. The bank charged a \$10 collection fee. No interest has been accrued.
3. Outstanding checks at May 31 total \$2,410.
4. Deposits in transit at May 31 total \$1,752.
5. A Poorten Company check for \$352, dated May 10, cleared the bank on May 25. The company recorded this check, which was a payment on account, for \$325.

Instructions

- (a) Prepare a bank reconciliation at May 31.
- (b) Journalize the entries required by the reconciliation.

Solution to Comprehensive DO IT!

Action Plan

- ✓ Follow the four steps in the reconciliation procedure (pp. 347–349).
- ✓ Work carefully to minimize mathematical errors in the reconciliation.
- ✓ Prepare entries from reconciling items per books.
- ✓ Make sure the cash ledger balance after posting the reconciling entries agrees with the adjusted cash balance per books.

(a)		Poorten Company	
		Bank Reconciliation	
		May 31, 2014	
	Cash balance per bank statement		\$14,280
	Add: Deposits in transit		1,752
			<u>16,032</u>
	Less: Outstanding checks		2,410
	Adjusted cash balance per bank		<u>\$13,622</u>
	Cash balance per books		\$13,319
	Add: Collection of note receivable \$500, plus \$15 interest, less collection fee \$10		505
			<u>13,824</u>
	Less: NSF check	\$175	
	Error in recording check	<u>27</u>	<u>202</u>
	Adjusted cash balance per books		<u>\$13,622</u>

31	Accounts Receivable—Copple Co.	175	
	Cash		175
	(To record NSF check from Copple Co.)		
31	Accounts Payable	27	
	Cash		27
	(To correct error in recording check)		

SUMMARY OF LEARNING OBJECTIVES

- 1 Define fraud and internal control.** A fraud is a dishonest act by an employee that results in personal benefit to the employee at a cost to the employer. The fraud triangle refers to the three factors that contribute to fraudulent activity by employees: opportunity, financial pressure, and rationalization. Internal control consists of all the related methods and measures adopted within an organization to safeguard its assets, enhance the reliability of its accounting records, increase efficiency of operations, and ensure compliance with laws and regulations.
- 2 Identify the principles of internal control activities.** The principles of internal control are establishment of responsibility; segregation of duties; documentation procedures; physical controls; independent internal verification; and human resource controls such as bonding and requiring employees to take vacations.
- 3 Explain the applications of internal control principles to cash receipts.** Internal controls over cash receipts include: (a) designating specific personnel to handle cash; (b) assigning different individuals to receive cash, record cash, and maintain custody of cash; (c) using remittance advices for mail receipts, cash register tapes for over-the-counter receipts, and deposit slips for bank deposits; (d) using company safes and bank vaults to store cash with access limited to authorized personnel, and using cash registers in executing over-the-counter receipts; (e) making independent daily counts of register receipts and daily comparison of total receipts with total deposits; and (f) bonding personnel that handle cash and requiring them to take vacations.
- 4 Explain the applications of internal control principles to cash disbursements.** Internal controls over cash disbursements include: (a) having specific individuals such as the treasurer authorized to sign checks and approve invoices; (b) assigning different individuals to approve items for payment, pay the items, and record the payment; (c) using prenumbered checks and accounting for all checks, with each check supported by an approved invoice (d) storing blank checks in a safe or vault with access restricted to authorized personnel, and using a checkwriting machine to imprint amounts on checks; (e) comparing each check with the approved invoice before issuing the check, and making monthly reconciliations of bank and book balances; and (f) bonding personnel who handle cash, requiring employees to take vacations, and conducting background checks.
- 5 Describe the operation of a petty cash fund.** Companies operate a petty cash fund to pay relatively small amounts of cash. They must establish the fund, make payments from the fund, and replenish the fund when the cash in the fund reaches a minimum level.
- 6 Indicate the control features of a bank account.** A bank account contributes to good internal control by providing physical controls for the storage of cash. It minimizes the amount of currency that a company must keep on hand, and it creates a double record of a depositor's bank transactions.
- 7 Prepare a bank reconciliation.** It is customary to reconcile the balance per books and balance per bank to their adjusted balances. The steps in the reconciling process are to determine deposits in transit, outstanding checks, errors by the depositor or the bank, and unrecorded bank memoranda.
- 8 Explain the reporting of cash.** Companies list cash first in the current assets section of the balance sheet. In some cases, they report cash together with cash equivalents. Cash restricted for a special purpose is reported separately as a current asset or as a noncurrent asset, depending on when the cash is expected to be used.

GLOSSARY

Bank reconciliation The process of comparing the bank's balance of an account with the company's balance and explaining any differences to make them agree. (p. 344).

Bank service charge A fee charged by a bank for the use of its services. (p. 346).

Bank statement A monthly statement from the bank that shows the depositor's bank transactions and balances. (p. 345).

Bonding Obtaining insurance protection against misappropriation of assets by employees. (p. 333).

Cash Resources that consist of coins, currency, checks, money orders, and money on hand or on deposit in a bank or similar depository. (p. 352).

Cash equivalents Short-term, highly liquid investments that can be converted to a specific amount of cash. (p. 352).

Check A written order signed by a bank depositor, directing the bank to pay a specified sum of money to a designated recipient. (p. 344).

Deposits in transit Deposits recorded by the depositor but not yet been recorded by the bank. (p. 347).

Electronic funds transfer (EFT) A disbursement system that uses wire, telephone, or computers to transfer funds from one location to another. (p. 350).

Fraud A dishonest act by an employee that results in personal benefit to the employee at a cost to the employer. (p. 326).

Fraud triangle The three factors that contribute to fraudulent activity by employees: opportunity, financial pressure, and rationalization. (p. 326).

Internal auditors Company employees who continuously evaluate the effectiveness of the company's internal control system. (p. 333).

Internal control All of the related methods and activities adopted within an organization to safeguard its assets and enhance the accuracy and reliability of its accounting records. (p. 327).

NSF check A check that is not paid by a bank because of insufficient funds in a customer's bank account. (p. 346).

Outstanding checks Checks issued and recorded by a company but not yet paid by the bank. (p. 348).

Petty cash fund A cash fund used to pay relatively small amounts. (p. 340).

Restricted cash Cash that must be used for a special purpose. (p. 352).

Sarbanes-Oxley Act (SOX) Regulations passed by Congress to try to reduce unethical corporate behavior. (p. 326).

Voucher An authorization form prepared for each payment in a voucher system. (p. 339).

Voucher system A network of approvals by authorized individuals acting independently to ensure that all disbursements by check are proper. (p. 339).

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more components are available for practice in WileyPLUS.

SELF-TEST QUESTIONS

Answers are on page 375.

- (LO 1) 1. Which of the following is *not* an element of the fraud triangle?
- Rationalization.
 - Financial pressure.
 - Segregation of duties.
 - Opportunity.
- (LO 1) 2. An organization uses internal control to enhance the accuracy and reliability of its accounting records and to:
- safeguard its assets.
 - prevent fraud.
 - produce correct financial statements.
 - deter employee dishonesty.
- (LO 1) 3. Which of the following was *not* a result of the Sarbanes-Oxley Act?
- Companies must file financial statements with the Internal Revenue Service.

- All publicly traded companies must maintain adequate internal controls.
 - The Public Company Accounting Oversight Board was created to establish auditing standards and regulate auditor activity.
 - Corporate executives and board of directors must ensure that controls are reliable and effective, and they can be fined or imprisoned for failure to do so.
4. The principles of internal control do *not* include: (LO 2)
- establishment of responsibility.
 - documentation procedures.
 - management responsibility.
 - independent internal verification.
5. Physical controls do *not* include: (LO 2)
- safes and vaults to store cash.
 - independent bank reconciliations.

- (c) locked warehouses for inventories.
(d) bank safety deposit boxes for important papers.
- (LO 3) 6. Permitting only designated personnel to handle cash receipts is an application of the principle of:
(a) segregation of duties.
(b) establishment of responsibility.
(c) independent check.
(d) human resource controls.
- (LO 3) 7. Which of the following control activities is *not* relevant to when a company uses a computerized (rather than manual) accounting system?
(a) Establishment of responsibility.
(b) Segregation of duties.
(c) Independent internal verification.
(d) All of these control activities are relevant to a computerized system.
- (LO 4) 8. The use of prenumbered checks in disbursing cash is an application of the principle of:
(a) establishment of responsibility.
(b) segregation of duties.
(c) physical controls.
(d) documentation procedures.
- (LO 5) 9. A company writes a check to replenish a \$100 petty cash fund when the fund contains receipts of \$94 and \$4 in cash. In recording the check, the company should:
(a) debit Cash Over and Short for \$2.
(b) debit Petty Cash for \$94.
(c) credit Cash for \$94.
(d) credit Petty Cash for \$2.
10. The control features of a bank account do *not* include: (LO 6)
(a) having bank auditors verify the correctness of the bank balance per books.
(b) minimizing the amount of cash that must be kept on hand.
(c) providing a double record of all bank transactions.
(d) safeguarding cash by using a bank as a depository.
11. In a bank reconciliation, deposits in transit are: (LO 7)
(a) deducted from the book balance.
(b) added to the book balance.
(c) added to the bank balance.
(d) deducted from the bank balance.
12. The reconciling item in a bank reconciliation that will result in an adjusting entry by the depositor is: (LO 7)
(a) outstanding checks.
(b) deposit in transit.
(c) a bank error.
(d) bank service charges.
13. Which of the following items in a cash drawer at November 30 is *not* cash? (LO 8)
(a) Money orders.
(b) Coins and currency.
(c) A customer check dated December 1.
(d) A customer check dated November 28.
14. Which of the following statements correctly describes the reporting of cash? (LO 8)
(a) Cash cannot be combined with cash equivalents.
(b) Restricted cash funds may be combined with cash.
(c) Cash is listed first in the current assets section.
(d) Restricted cash funds cannot be reported as a current asset.

QUESTIONS

- A local bank reported that it lost \$150,000 as the result of an employee fraud. Travis Witt is not clear on what is meant by an "employee fraud." Explain the meaning of fraud to Travis and give an example of frauds that might occur at a bank.
- Fraud experts often say that there are three primary factors that contribute to employee fraud. Identify the three factors and explain what is meant by each.
- Identify and describe the five components of a good internal control system.
- "Internal control is concerned only with enhancing the accuracy of the accounting records." Do you agree? Explain.
- What principles of internal control apply to most organizations?
- At the corner grocery store, all sales clerks make change out of one cash register drawer. Is this a violation of internal control? Why?
- Pam Duffy is reviewing the principle of segregation of duties. What are the two common applications of this principle?
- How do documentation procedures contribute to good internal control?
- What internal control objectives are met by physical controls?
- (a) Explain the control principle of independent internal verification. (b) What practices are important in applying this principle?
- The management of Yaeger Company asks you, as the company accountant, to explain (a) the concept of reasonable assurance in internal control and (b) the importance of the human factor in internal control.
- Yorkville Fertilizer Co. owns the following assets at the balance sheet date.

Cash in bank savings account	\$ 6,000
Cash on hand	850
Cash refund due from the IRS	1,000
Checking account balance	12,000
Postdated checks	500

What amount should Yorkville report as cash in the balance sheet?

13. What principle(s) of internal control is (are) involved in making daily cash counts of over-the-counter receipts?
14. Aurora Department Stores has just installed new electronic cash registers in its stores. How do cash registers improve internal control over cash receipts?
15. At Oswego Wholesale Company, two mail clerks open all mail receipts. How does this strengthen internal control?
16. "To have maximum effective internal control over cash disbursements, all payments should be made by check." Is this true? Explain.
17. Ted Rampolla Company's internal controls over cash disbursements provide for the treasurer to sign checks imprinted by a check-writing machine in indelible ink after comparing the check with the approved invoice. Identify the internal control principles that are present in these controls.
18. How do the principles of (a) physical controls and (b) documentation controls apply to cash disbursements?
19. (a) What is a voucher system? (b) What principles of internal control apply to a voucher system?
20. What is the essential feature of an electronic funds transfer (EFT) procedure?
21. (a) Identify the three activities that pertain to a petty cash fund, and indicate an internal control principle that is applicable to each activity. (b) When are journal entries required in the operation of a petty cash fund?
22. "The use of a bank contributes significantly to good internal control over cash." Is this true? Why or why not?
23. Faye Uhlik is confused about the lack of agreement between the cash balance per books and the balance per bank. Explain the causes for the lack of agreement to Faye, and give an example of each cause.
24. What are the four steps involved in finding differences between the balance per books and balance per bank?
25. Pauline Duche asks your help concerning an NSF check. Explain to Pauline (a) what an NSF check is, (b) how it is treated in a bank reconciliation, and (c) whether it will require an adjusting entry.
26. (a) "Cash equivalents are the same as cash." Do you agree? Explain. (b) How should restricted cash funds be reported on the balance sheet?
27.  **PEPSICO** At what amount does PepsiCo report cash and cash equivalents in its 2010 consolidated balance sheet?

BRIEF EXERCISES

BE7-1 Match each situation with the fraud triangle factor—"opportunity, financial pressure, or rationalization"—that best describes it.

1. An employee's monthly credit card payments are nearly 75% of his or her monthly earnings.
2. An employee earns minimum wage at a firm that has reported record earnings for each of the last five years.
3. An employee has an expensive gambling habit.
4. An employee has check-writing and signing responsibilities for a small company, as well as reconciling the bank account.

Identify fraud triangle concepts.

(LO 1)

BE7-2 Bridget Harrard has prepared the following list of statements about internal control.

1. One of the objectives of internal control is to safeguard assets from employee theft, robbery, and unauthorized use.
2. One of the objectives of internal control is to enhance the accuracy and reliability of the accounting records.
3. No laws require U.S. corporations to maintain an adequate system of internal control.

Indicate internal control concepts.

(LO 1)

Identify each statement as true or false. If false, indicate how to correct the statement.

BE7-3 Emily Cooper is the new owner of Preferred Parking. She has heard about internal control but is not clear about its importance for her business. Explain to Emily the four purposes of internal control and give her one application of each purpose for Preferred Parking.

Explain the importance of internal control.

(LO 1)

BE7-4 The internal control procedures in Naperville Company provide that:

1. Employees who have physical custody of assets do not have access to the accounting records.
2. Each month, the assets on hand are compared to the accounting records by an internal auditor.
3. A prenumbered shipping document is prepared for each shipment of goods to customers.

Identify internal control principles.

(LO 2)

Identify the principles of internal control that are being followed.

BE7-5 Syracuse Company has the following internal control procedures over cash receipts. Identify the internal control principle that is applicable to each procedure.

Identify the internal control principles applicable to cash receipts.

(LO 3)

1. All over-the-counter receipts are entered on cash registers.
2. All cashiers are bonded.
3. Daily cash counts are made by cashier department supervisors.

Make journal entries for cash overage and shortfall.

(LO 3)

Make journal entry using cash count sheet.

(LO 3)

Identify the internal control principles applicable to cash disbursements.

(LO 4)

Prepare entry to replenish a petty cash fund.

(LO 5)

Identify the control features of a bank account.

(LO 6)

Indicate location of reconciling items in a bank reconciliation.

(LO 7)

Identify reconciling items that require adjusting entries.

(LO 7)

Prepare partial bank reconciliation.

(LO 7)

Prepare partial bank reconciliation.

(LO 7)

Explain the statement presentation of cash balances.

(LO 8)

- The duties of receiving cash, recording cash, and custody of cash are assigned to different individuals.
- Only cashiers may operate cash registers.

BE7-6 The cash register tape for Goodmood Industries reported sales of \$6,891.50. Record the journal entry that would be necessary for each of the following situations. (a) Cash to be accounted for exceeds cash on hand by \$46.25. (b) Cash on hand exceeds cash to be accounted for by \$28.32.

BE7-7 While examining cash receipts information, the accounting department determined the following information: opening cash balance \$180, cash on hand \$1,125.74, and cash sales per register tape \$950.83. Prepare the required journal entry based upon the cash count sheet.

BE7-8 Helena Company has the following internal control procedures over cash disbursements. Identify the internal control principle that is applicable to each procedure.

- Company checks are prenumbered.
- The bank statement is reconciled monthly by an internal auditor.
- Blank checks are stored in a safe in the treasurer's office.
- Only the treasurer or assistant treasurer may sign checks.
- Check signers are not allowed to record cash disbursement transactions.

BE7-9 On March 20, Batavia's petty cash fund of \$100 is replenished when the fund contains \$9 in cash and receipts for postage \$52, freight-out \$26, and travel expense \$10. Prepare the journal entry to record the replenishment of the petty cash fund.

BE7-10 Louis Whited is uncertain about the control features of a bank account. Explain the control benefits of (a) a check and (b) a bank statement.

BE7-11 The following reconciling items are applicable to the bank reconciliation for Hinckley Company: (1) outstanding checks, (2) bank debit memorandum for service charge, (3) bank credit memorandum for collecting a note for the depositor, and (4) deposits in transit. Indicate how each item should be shown on a bank reconciliation.

BE7-12 Using the data in BE7-11, indicate (a) the items that will result in an adjustment to the depositor's records and (b) why the other items do not require adjustment.

BE7-13 At July 31, Shabbona Company has the following bank information: cash balance per bank \$7,420, outstanding checks \$762, deposits in transit \$1,620, and a bank service charge \$20. Determine the adjusted cash balance per bank at July 31.

BE7-14 At August 31, DeKalb Company has a cash balance per books of \$8,900 and the following additional data from the bank statement: charge for printing DeKalb Company checks \$35, interest earned on checking account balance \$40, and outstanding checks \$800. Determine the adjusted cash balance per books at August 31.

BE7-15 Plano Company has the following cash balances: Cash in Bank \$15,742, Payroll Bank Account \$5,000, and Plant Expansion Fund Cash \$45,000. Explain how each balance should be reported on the balance sheet.

DO IT! REVIEW

Identify violations of control activities.

(LO 2)

DO IT! 7-1 Identify which control activity is violated in each of the following situations, and explain how the situation creates an opportunity for fraud or inappropriate accounting practices.

- Once a month, the sales department sends sales invoices to the accounting department to be recorded.
- Sam Hustad orders merchandise for Green Lake Company; he also receives merchandise and authorizes payment for merchandise.
- Several clerks at Ralph's Foods use the same cash register drawer.

DO IT! 7-2 Jerry Holman is concerned with control over mail receipts at Midtown Sporting Goods. All mail receipts are opened by Don Judd. Don sends the checks to the accounting department, where they are stamped “For Deposit Only.” The accounting department records and deposits the mail receipts weekly. Jerry asks for your help in installing a good system of internal control over mail receipts.

Design system of internal control over cash receipts.

(LO 3)

DO IT! 7-3 Markee Company established a \$100 petty cash fund on August 1. On August 31, the fund had \$6 cash remaining and petty cash receipts for postage \$31, office supplies \$42, and miscellaneous expense \$16. Prepare journal entries to establish the fund on August 1 and replenish the fund on August 31.

Make journal entries for petty cash fund.

(LO 5)

DO IT! 7-4 Jon Rapp owns Rapp Blankets. Jon asks you to explain how he should treat the following reconciling items when reconciling the company’s bank account.

Explain treatment of items in bank reconciliation.

(LO 7)

1. Outstanding checks.
2. A deposit in transit.
3. The bank charged to our account a check written by another company.
4. A debit memorandum for a bank service charge.

The Navigator

EXERCISES

E7-1 Sue Ernesto is the owner of Ernesto’s Pizza. Ernesto’s is operated strictly on a carryout basis. Customers pick up their orders at a counter where a clerk exchanges the pizza for cash. While at the counter, the customer can see other employees making the pizzas and the large ovens in which the pizzas are baked.

Identify the principles of internal control.

(LO 2)

Instructions

Identify the six principles of internal control and give an example of each principle that you might observe when picking up your pizza. (*Note:* It may not be possible to observe all the principles.)

E7-2 The following control procedures are used at Aldean Company for over-the-counter cash receipts.

Identify internal control weaknesses over cash receipts and suggest improvements.

(LO 2, 3)

1. To minimize the risk of robbery, cash in excess of \$100 is stored in an unlocked attaché case in the stock room until it is deposited in the bank.
2. All over-the-counter receipts are registered by three clerks who use a cash register with a single cash drawer.
3. The company accountant makes the bank deposit and then records the day’s receipts.
4. At the end of each day, the total receipts are counted by the cashier on duty and reconciled to the cash register total.
5. Cashiers are experienced; they are not bonded.

Instructions

- (a) For each procedure, explain the weakness in internal control, and identify the control principle that is violated.
- (b) For each weakness, suggest a change in procedure that will result in good internal control.

E7-3 The following control procedures are used in Morgan’s Boutique Shoppe for cash disbursements.

Identify internal control weaknesses over cash disbursements and suggest improvements.

(LO 2, 4)

1. The company accountant prepares the bank reconciliation and reports any discrepancies to the owner.
2. The store manager personally approves all payments before signing and issuing checks.
3. Each week, 100 company checks are left in an unmarked envelope on a shelf behind the cash register.
4. After payment, bills are filed in a paid invoice folder.
5. The company checks are unnumbered.

Instructions

- (a) For each procedure, explain the weakness in internal control, and identify the internal control principle that is violated.
- (b) For each weakness, suggest a change in the procedure that will result in good internal control.

Identify internal control weaknesses for cash disbursements and suggest improvements.

(LO 4)

E7-4 At Teresa Company, checks are not prenumbered because both the purchasing agent and the treasurer are authorized to issue checks. Each signer has access to unissued checks kept in an unlocked file cabinet. The purchasing agent pays all bills pertaining to goods purchased for resale. Prior to payment, the purchasing agent determines that the goods have been received and verifies the mathematical accuracy of the vendor's invoice. After payment, the invoice is filed by vendor name, and the purchasing agent records the payment in the cash disbursements journal. The treasurer pays all other bills following approval by authorized employees. After payment, the treasurer stamps all bills PAID, files them by payment date, and records the checks in the cash disbursements journal. Teresa Company maintains one checking account that is reconciled by the treasurer.

Instructions

- (a) List the weaknesses in internal control over cash disbursements.
- (b)  Write a memo to the company treasurer indicating your recommendations for improvement.

Indicate whether procedure is good or weak internal control.

(LO 2, 3, 4)

E7-5 Listed below are five procedures followed by Parson Company.

1. Several individuals operate the cash register using the same register drawer.
2. A monthly bank reconciliation is prepared by someone who has no other cash responsibilities.
3. Fran Vorbeck writes checks and also records cash payment journal entries.
4. One individual orders inventory, while a different individual authorizes payments.
5. Unnumbered sales invoices from credit sales are forwarded to the accounting department every four weeks for recording.

Instructions

Indicate whether each procedure is an example of good internal control or of weak internal control. If it is an example of good internal control, indicate which internal control principle is being followed. If it is an example of weak internal control, indicate which internal control principle is violated. Use the table below.

<u>Procedure</u>	<u>IC Good or Weak?</u>	<u>Related Internal Control Principle</u>
1.		
2.		
3.		
4.		
5.		

Indicate whether procedure is good or weak internal control.

(LO 2, 3, 4)

E7-6 Listed below are five procedures followed by Bingham Company.

1. Employees are required to take vacations.
2. Any member of the sales department can approve credit sales.
3. Blake Nayak ships goods to customers, bills customers, and receives payment from customers.
4. Total cash receipts are compared to bank deposits daily by someone who has no other cash responsibilities.
5. Time clocks are used for recording time worked by employees.

Instructions

Indicate whether each procedure is an example of good internal control or of weak internal control. If it is an example of good internal control, indicate which internal control principle is being followed. If it is an example of weak internal control, indicate which internal control principle is violated. Use the table below.

<u>Procedure</u>	<u>IC Good or Weak?</u>	<u>Related Internal Control Principle</u>

2.		
3.		
4.		
5.		

E7-7 LaSalle Company established a petty cash fund on May 1, cashing a check for \$100. The company reimbursed the fund on June 1 and July 1 with the following results.

Prepare journal entries for a petty cash fund.

June 1: Cash in fund \$1.75. Receipts: delivery expense \$31.25; postage expense \$41.00; and miscellaneous expense \$25.00.

(LO 5)

July 1: Cash in fund \$3.25. Receipts: delivery expense \$21.00; entertainment expense \$51.00; and miscellaneous expense \$24.75.

On July 10, LaSalle increased the fund from \$100 to \$150.

Instructions

Prepare journal entries for LaSalle Company for May 1, June 1, July 1, and July 10.

E7-8 Kickapoo Company uses an imprest petty cash system. The fund was established on March 1 with a balance of \$100. During March, the following petty cash receipts were found in the petty cash box.

Prepare journal entries for a petty cash fund.

(LO 5)

<u>Date</u>	<u>Receipt No.</u>	<u>For</u>	<u>Amount</u>
3/5	1	Stamp Inventory	\$39
7	2	Freight-Out	17
9	3	Miscellaneous Expense	6
11	4	Travel Expense	24
14	5	Miscellaneous Expense	7

The fund was replenished on March 15 when the fund contained \$4 in cash. On March 20, the amount in the fund was increased to \$150.

Instructions

Journalize the entries in March that pertain to the operation of the petty cash fund.

E7-9 Lisa Ceja is unable to reconcile the bank balance at January 31. Lisa's reconciliation is as follows.

Prepare bank reconciliation and adjusting entries.

(LO 7)

Cash balance per bank	\$3,660.20
Add: NSF check	590.00
Less: Bank service charge	25.00
Adjusted balance per bank	<u>\$4,225.20</u>
Cash balance per books	\$3,825.20
Less: Deposits in transit	480.00
Add: Outstanding checks	930.00
Adjusted balance per books	<u>\$4,275.20</u>

Instructions

- (a) Prepare a correct bank reconciliation.
- (b) Journalize the entries required by the reconciliation.

E7-10 On April 30, the bank reconciliation of Perrin Company shows three outstanding checks: no. 254, \$650; no. 255, \$720; and no. 257, \$410. The May bank statement and the May cash payments journal show the following.

Determine outstanding checks.

(LO 7)

<u>Bank Statement</u>		
<u>Checks Paid</u>		
<u>Date</u>	<u>Check No.</u>	<u>Amount</u>
5/4	254	650
5/2	257	410
5/17	258	159
5/12	259	275
5/20	261	500
5/29	263	480
5/30	264	560

<u>Cash Payments Journal</u>		
<u>Checks Issued</u>		
<u>Date</u>	<u>Check No.</u>	<u>Amount</u>
5/2	258	159
5/5	259	275
5/10	260	820
5/15	261	500
5/22	262	750
5/24	263	480
5/29	264	560

Prepare bank reconciliation and adjusting entries.

(LO 7)

Prepare bank reconciliation and adjusting entries.

(LO 7)

Compute deposits in transit and outstanding checks for two bank reconciliations.

(LO 7)

Show presentation of cash in financial statements.

(LO 8)

Instructions

Using step 2 in the reconciliation procedure, list the outstanding checks at May 31.

E7-11 The following information pertains to Worthy Video Company.

1. Cash balance per bank, July 31, \$7,293.
2. July bank service charge not recorded by the depositor \$28.
3. Cash balance per books, July 31, \$7,384.
4. Deposits in transit, July 31, \$1,500.
5. Bank collected \$800 note for Worthy in July, plus interest \$36, less fee \$20. The collection has not been recorded by Worthy, and no interest has been accrued.
6. Outstanding checks, July 31, \$621.

Instructions

- (a) Prepare a bank reconciliation at July 31.
- (b) Journalize the adjusting entries at July 31 on the books of Worthy Video Company.

E7-12 The information below relates to the Cash account in the ledger of Wasson Company.

Balance September 1—\$17,150; Cash deposited—\$64,000.

Balance September 30—\$17,404; Checks written—\$63,746.

The September bank statement shows a balance of \$16,122 on September 30 and the following memoranda.

Credits		Debits	
Collection of \$1,500 note plus interest \$30	\$1,530	NSF check: Violet Jones	\$725
Interest earned on checking account	\$45	Safety deposit box rent	\$65

At September 30, deposits in transit were \$4,450, and outstanding checks totaled \$2,383.

Instructions

- (a) Prepare the bank reconciliation at September 30.
- (b) Prepare the adjusting entries at September 30, assuming (1) the NSF check was from a customer on account, and (2) no interest had been accrued on the note.

E7-13 The cash records of Satter Company show the following four situations.

1. The June 30 bank reconciliation indicated that deposits in transit total \$920. During July, the general ledger account Cash shows deposits of \$15,750, but the bank statement indicates that only \$15,600 in deposits were received during the month.
2. The June 30 bank reconciliation also reported outstanding checks of \$880. During the month of July, Satter Company books show that \$17,200 of checks were issued. The bank statement showed that \$16,400 of checks cleared the bank in July.
3. In September, deposits per the bank statement totaled \$26,700, deposits per books were \$25,400, and deposits in transit at September 30 were \$2,600.
4. In September, cash disbursements per books were \$23,700, checks clearing the bank were \$24,000, and outstanding checks at September 30 were \$2,100.

There were no bank debit or credit memoranda. No errors were made by either the bank or Satter Company.

Instructions

Answer the following questions.

- (a) In situation (1), what were the deposits in transit at July 31?
- (b) In situation (2), what were the outstanding checks at July 31?
- (c) In situation (3), what were the deposits in transit at August 31?
- (d) In situation (4), what were the outstanding checks at August 31?

E7-14 Nayak Company has recorded the following items in its financial records.

Cash in bank	\$ 41,000
Cash in plant expansion fund	100,000
Cash on hand	8,000
Highly liquid investments	34,000
Petty cash	500
Receivables from customers	89,000
Stock investments	61,000

The cash in bank is subject to a compensating balance of \$5,000. The highly liquid investments had maturities of 3 months or less when they were purchased. The stock investments will be sold in the next 6 to 12 months. The plant expansion project will begin in 3 years.

Instructions

- (a) What amount should Nayak report as “Cash and cash equivalents” on its balance sheet?
- (b) Where should the items not included in part (a) be reported on the balance sheet?
- (c) What disclosures should Nayak make in its financial statements concerning “cash and cash equivalents”?

EXERCISES: SET B AND CHALLENGE EXERCISES

Visit the book’s companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Exercise Set B and Challenge Exercises.

PROBLEMS: SET A

P7-1A Mainland Supply Company recently changed its system of internal control over cash disbursements. The system includes the following features.

Instead of being unnumbered and manually prepared, all checks must now be pre-numbered and written by using the new checkwriting machine purchased by the company. Before a check can be issued, each invoice must have the approval of Erin McGarry, the purchasing agent, and Barb Speas, the receiving department supervisor. Checks must be signed by either Amaika Blake, the treasurer, or Ken Yost, the assistant treasurer. Before signing a check, the signer is expected to compare the amount of the check with the amount on the invoice.

After signing a check, the signer stamps the invoice PAID and inserts within the stamp, the date, check number, and amount of the check. The “paid” invoice is then sent to the accounting department for recording.

Blank checks are stored in a safe in the treasurer’s office. The combination to the safe is known only by the treasurer and assistant treasurer. Each month, the bank statement is reconciled with the bank balance per books by the assistant chief accountant. All employees who handle or account for cash are bonded.

Instructions

Identify the internal control principles and their application to cash disbursements of Mainland Supply Company.

P7-2A Arial Company maintains a petty cash fund for small expenditures. The following transactions occurred over a 2-month period.

- July 1 Established petty cash fund by writing a check on Coulter Bank for \$200.
- 15 Replenished the petty cash fund by writing a check for \$198.00. On this date the fund consisted of \$2.00 in cash and the following petty cash receipts: freight-out \$87.00, postage expense \$51.40, entertainment expense \$46.60, and miscellaneous expense \$11.20.
- 31 Replenished the petty cash fund by writing a check for \$192.00. At this date, the fund consisted of \$8.00 in cash and the following petty cash receipts: freight-out \$82.10, charitable contributions expense \$45.00, postage expense \$25.50, and miscellaneous expense \$39.40.

Identify internal control principles over cash disbursements.

(LO 2, 4)

Journalize and post petty cash fund transactions.

(LO 5)

- Aug. 15 Replenished the petty cash fund by writing a check for \$187.00. On this date, the fund consisted of \$13.00 in cash and the following petty cash receipts: freight-out \$75.60, entertainment expense \$43.00, postage expense \$33.00, and miscellaneous expense \$37.00.
- 16 Increased the amount of the petty cash fund to \$300 by writing a check for \$100.
- 31 Replenished petty cash fund by writing a check for \$277.00. On this date, the fund consisted of \$23 in cash and the following petty cash receipts: postage expense \$133.00, travel expense \$95.60, and freight-out \$47.10.

Instructions

- (a) July 15, Cash short \$1.80
- (b) Aug. 31 balance \$300

- (a) Journalize the petty cash transactions.
- (b) Post to the Petty Cash account.
- (c) What internal control features exist in a petty cash fund?

Prepare a bank reconciliation and adjusting entries.

(LO 7)

P7-3A On May 31, 2014, Terrell Company had a cash balance per books of \$6,781.50. The bank statement from Home Town State Bank on that date showed a balance of \$6,804.60. A comparison of the statement with the cash account revealed the following facts.

1. The statement included a debit memo of \$40 for the printing of additional company checks.
2. Cash sales of \$836.15 on May 12 were deposited in the bank. The cash receipts journal entry and the deposit slip were incorrectly made for \$886.15. The bank credited Terrell Company for the correct amount.
3. Outstanding checks at May 31 totaled \$276.25. Deposits in transit were \$1,916.15.
4. On May 18, the company issued check No. 1181 for \$685 to Barry Dietz on account. The check, which cleared the bank in May, was incorrectly journalized and posted by Terrell Company for \$658.
5. A \$3,000 note receivable was collected by the bank for Terrell Company on May 31 plus \$80 interest. The bank charged a collection fee of \$20. No interest has been accrued on the note.
6. Included with the cancelled checks was a check issued by Bridges Company to Jon Newton for \$600 that was incorrectly charged to Terrell Company by the bank.
7. On May 31, the bank statement showed an NSF charge of \$680 for a check issued by Sandy Grifton, a customer, to Terrell Company on account.

Instructions

- (a) Adjusted cash balance per bank \$9,044.50

- (a) Prepare the bank reconciliation at May 31, 2014.
- (b) Prepare the necessary adjusting entries for Terrell Company at May 31, 2014.

Prepare a bank reconciliation and adjusting entries from detailed data.

(LO 7)

P7-4A The bank portion of the bank reconciliation for Rintala Company at November 30, 2014, was as follows.

Rintala Company		
Bank Reconciliation		
November 30, 2014		
Cash balance per bank		\$14,367.90
Add: Deposits in transit		<u>2,530.20</u>
		16,898.10
Less: Outstanding checks		
	<u>Check Number</u>	<u>Check Amount</u>
	3451	\$2,260.40
	3470	720.10
	3471	844.50
	3472	1,426.80
	3474	<u>1,050.00</u>
		<u>6,301.80</u>
Adjusted cash balance per bank		<u><u>\$10,596.30</u></u>

The adjusted cash balance per bank agreed with the cash balance per books at November 30.

The December bank statement showed the following checks and deposits.

Bank Statement				
Checks			Deposits	
Date	Number	Amount	Date	Amount
12-1	3451	\$ 2,260.40	12-1	\$ 2,530.20
12-2	3471	844.50	12-4	1,211.60
12-7	3472	1,426.80	12-8	2,365.10
12-4	3475	1,640.70	12-16	2,672.70
12-8	3476	1,300.00	12-21	2,945.00
12-10	3477	2,130.00	12-26	2,567.30
12-15	3479	3,080.00	12-29	2,836.00
12-27	3480	600.00	12-30	1,025.00
12-30	3482	475.50	Total	<u>\$18,152.90</u>
12-29	3483	1,140.00		
12-31	3485	540.80		
	Total	<u>\$15,438.70</u>		

The cash records per books for December showed the following.

Cash Payments Journal						Cash Receipts Journal	
Date	Number	Amount	Date	Number	Amount	Date	Amount
12-1	3475	\$1,640.70	12-20	3482	\$ 475.50	12-3	\$ 1,211.60
12-2	3476	1,300.00	12-22	3483	1,140.00	12-7	2,365.10
12-2	3477	2,130.00	12-23	3484	798.00	12-15	2,672.70
12-4	3478	621.30	12-24	3485	450.80	12-20	2,954.00
12-8	3479	3,080.00	12-30	3486	1,889.50	12-25	2,567.30
12-10	3480	600.00	Total		<u>\$14,933.20</u>	12-28	2,836.00
12-17	3481	807.40				12-30	1,025.00
						12-31	1,190.40
						Total	<u>\$16,822.10</u>

The bank statement contained two memoranda:

1. A credit of \$3,645 for the collection of a \$3,500 note for Rintala Company plus interest of \$160 and less a collection fee of \$15. Rintala Company has not accrued any interest on the note.
2. A debit of \$572.80 for an NSF check written by D. Chagnon, a customer. At December 31, the check had not been redeposited in the bank.

At December 31, the cash balance per books was \$12,485.20, and the cash balance per the bank statement was \$20,154.30. The bank did not make any errors, but two errors were made by Rintala Company.

Instructions

- (a) Using the four steps in the reconciliation procedure, prepare a bank reconciliation at December 31.
- (b) Prepare the adjusting entries based on the reconciliation. (*Hint:* The correction of any errors pertaining to recording checks should be made to Accounts Payable. The correction of any errors relating to recording cash receipts should be made to Accounts Receivable.)

(a) Adjusted balance per books \$15,458.40

Prepare a bank reconciliation and adjusting entries.

(LO 7)

P7-5A Cayemberg Company maintains a checking account at the Commerce Bank. At July 31, selected data from the ledger balance and the bank statement are shown below.

	Cash in Bank	
	Per Books	Per Bank
Balance, July 1	\$17,600	\$16,800
July receipts	81,400	
July credits		82,470
July disbursements	77,150	
July debits		74,756
Balance, July 31	<u>\$21,850</u>	<u>\$24,514</u>

Analysis of the bank data reveals that the credits consist of \$81,000 of July deposits and a credit memorandum of \$1,470 for the collection of a \$1,400 note plus interest revenue of \$70. The July debits per bank consist of checks cleared \$74,700 and a debit memorandum of \$56 for printing additional company checks.

You also discover the following errors involving July checks: (1) A check for \$230 to a creditor on account that cleared the bank in July was journalized and posted as \$320. (2) A salary check to an employee for \$255 was recorded by the bank for \$155.

The June 30 bank reconciliation contained only two reconciling items: deposits in transit \$7,000 and outstanding checks of \$6,200.

Instructions

(a) Adjusted balance per books
\$23,354

(a) Prepare a bank reconciliation at July 31, 2014.

(b) Journalize the adjusting entries to be made by Cayemberg Company. Assume that interest on the note has not been accrued.

Identify internal control weaknesses in cash receipts and cash disbursements.

(LO 2, 3, 4)

P7-6A Nature Hill Middle School wants to raise money for a new sound system for its auditorium. The primary fund-raising event is a dance at which the famous disc jockey Obnoxious Al will play classic and not-so-classic dance tunes. Rob Drexler, the music and theater instructor, has been given the responsibility for coordinating the fund-raising efforts. This is Rob's first experience with fund-raising. He decides to put the eighth-grade choir in charge of the event; he will be a relatively passive observer.

Rob had 500 unnumbered tickets printed for the dance. He left the tickets in a box on his desk and told the choir students to take as many tickets as they thought they could sell for \$5 each. In order to ensure that no extra tickets would be floating around, he told them to dispose of any unsold tickets. When the students received payment for the tickets, they were to bring the cash back to Rob and he would put it in a locked box in his desk drawer.

Some of the students were responsible for decorating the gymnasium for the dance. Rob gave each of them a key to the money box and told them that if they took money out to purchase materials, they should put a note in the box saying how much they took and what it was used for. After 2 weeks the money box appeared to be getting full, so Rob asked Erik Radley to count the money, prepare a deposit slip, and deposit the money in a bank account Rob had opened.

The day of the dance, Rob wrote a check from the account to pay the DJ. Obnoxious Al, however, said that he accepted only cash and did not give receipts. So Rob took \$200 out of the cash box and gave it to Al. At the dance, Rob had Sobia Hamm working at the entrance to the gymnasium, collecting tickets from students, and selling tickets to those who had not pre-purchased them. Rob estimated that 400 students attended the dance.

The following day, Rob closed out the bank account, which had \$250 in it, and gave that amount plus the \$180 in the cash box to Principal Coleman. Principal Coleman seemed surprised that, after generating roughly \$2,000 in sales, the dance netted only \$430 in cash. Rob did not know how to respond.

Instructions

Identify as many internal control weaknesses as you can in this scenario, and suggest how each could be addressed.

PROBLEMS: SET B

P7-1B Orpheum Theater is located in the Brooklyn Mall. A cashier's booth is located near the entrance to the theater. Three cashiers are employed. One works from 1–5 P.M., another from 5–9 P.M. The shifts are rotated among the three cashiers. The cashiers receive cash from customers and operate a machine that ejects serially numbered tickets. The rolls of tickets are inserted and locked into the machine by the theater manager at the beginning of each cashier's shift.

After purchasing a ticket, the customer takes the ticket to an usher stationed at the entrance of the theater lobby some 60 feet from the cashier's booth. The usher tears the ticket in half, admits the customer, and returns the ticket stub to the customer. The other half of the ticket is dropped into a locked box by the usher.

At the end of each cashier's shift, the theater manager removes the ticket rolls from the machine and makes a cash count. The cash count sheet is initialed by the cashier. At the end of the day, the manager deposits the receipts in total in a bank night deposit vault located in the mall. The manager also sends copies of the deposit slip and the initialed cash count sheets to the theater company treasurer for verification and to the company's accounting department. Receipts from the first shift are stored in a safe located in the manager's office.

Instructions

- Identify the internal control principles and their application to the cash receipts transactions of the Orpheum Theater.
- If the usher and cashier decide to collaborate to misappropriate cash, what actions might they take?

P7-2B McArto Company maintains a petty cash fund for small expenditures. The following transactions occurred over a 2-month period.

- July 1 Established petty cash fund by writing a check on Star Bank for \$100.
 15 Replenished the petty cash fund by writing a check for \$94.90. On this date, the fund consisted of \$5.10 in cash and the following petty cash receipts: freight-out \$51.00, postage expense \$20.50, entertainment expense \$23.10, and miscellaneous expense \$4.10.
 31 Replenished the petty cash fund by writing a check for \$92.90. At this date, the fund consisted of \$7.10 in cash and the following petty cash receipts: freight-out \$43.50, charitable contributions expense \$20.00, postage expense \$20.10, and miscellaneous expense \$9.30.
- Aug. 15 Replenished the petty cash fund by writing a check for \$98.00. On this date, the fund consisted of \$2.00 in cash and the following petty cash receipts: freight-out \$40.20, entertainment expense \$21.00, postage expense \$14.00, and miscellaneous expense \$19.80.
 16 Increased the amount of the petty cash fund to \$150 by writing a check for \$50.
 31 Replenished the petty cash fund by writing a check for \$137.00. On this date, the fund consisted of \$13 in cash and the following petty cash receipts: freight-out \$74.00, entertainment expense \$43.20, and postage expense \$17.70.

Instructions

- Journalize the petty cash transactions.
- Post to the Petty Cash account.
- What internal control features exist in a petty cash fund?

P7-3B Aglife Genetics Company of Lancaster, Wisconsin, spreads herbicides and applies liquid fertilizer for local farmers. On May 31, 2014, the company's Cash account per its general ledger showed the following balance.

CASH				NO. 101	
Date	Explanation	Ref.	Debit	Credit	Balance
May 31	Balance				13,287

Identify internal control weaknesses over cash receipts.

(LO 2, 3)

Journalize and post petty cash fund transactions.

(LO 5)

- July 15 Cash over \$3.80
- Aug. 31 balance \$150

Prepare a bank reconciliation and adjusting entries.

(LO 7)

The bank statement from Lancaster State Bank on that date showed the following balance.

<u>Checks and Debits</u>	<u>Lancaster State Bank Deposits and Credits</u>	<u>Daily Balance</u>
XXX	XXX	5/31 12,732

A comparison of the details on the bank statement with the details in the cash account revealed the following facts.

- The statement included a debit memo of \$35 for the printing of additional company checks.
- Cash sales of \$1,720 on May 12 were deposited in the bank. The cash receipts journal entry and the deposit slip were incorrectly made for \$1,820. The bank credited Aglife Genetics Company for the correct amount.
- Outstanding checks at May 31 totaled \$1,425, and deposits in transit were \$2,100.
- On May 18, the company issued check no. 1181 for \$1,102 to M. Datz on account. The check, which cleared the bank in May, was incorrectly journalized and posted by Aglife Genetics Company for \$110.
- A \$4,000 note receivable was collected by the bank for Aglife Genetics Company on May 31 plus \$80 interest. The bank charged a collection fee of \$25. No interest has been accrued on the note.
- Included with the cancelled checks was a check issued by Bohr Company to Carol Mertz for \$900 that was incorrectly charged to Aglife Genetics Company by the bank.
- On May 31, the bank statement showed an NSF charge of \$1,908 for a check issued by Tyler Gricius, a customer, to Aglife Genetics Company on account.

Instructions

(a) Adj. cash bal. \$14,307

- Prepare the bank reconciliation at May 31, 2014.
- Prepare the necessary adjusting entries for Aglife Genetics Company at May 31, 2014.

Prepare a bank reconciliation and adjusting entries from detailed data.

(LO 7)

P7-4B The bank portion of the bank reconciliation for Goulet Company at October 31, 2014, was as follows.

Goulet Company Bank Reconciliation October 31, 2014		
Cash balance per bank		\$6,000
Add: Deposits in transit		<u>842</u>
		6,842
Less: Outstanding checks		
	<u>Check Number</u>	<u>Check Amount</u>

Total	<u>\$9,632</u>

The bank statement contained two bank memoranda:

1. A credit of \$1,375 for the collection of a \$1,300 note for Goulet Company plus interest of \$91 and less a collection fee of \$16. Goulet Company has not accrued any interest on the note.
2. A debit for the printing of additional company checks \$35.

At November 30, the cash balance per books was \$5,969, and the cash balance per the bank statement was \$9,100. The bank did not make any errors, but two errors were made by Goulet Company.

Instructions

- (a) Using the four steps in the reconciliation procedure described on pages 347–349, prepare a bank reconciliation at November 30.
- (b) Prepare the adjusting entries based on the reconciliation. (*Hint:* The correction of any errors pertaining to recording checks should be made to Accounts Payable. The correction of any errors relating to recording cash receipts should be made to Accounts Receivable).

(a) Adjusted cash balance per bank \$7,201

P7-5B Tizani Company's bank statement from Eastern National Bank at August 31, 2014, shows the information below.

Balance, August 1	\$11,284	Bank credit memoranda:	
August deposits	47,521	Collection of note	
Checks cleared in August	46,175	receivable plus \$105	
Balance, August 31	17,146	interest	\$4,505
		Interest earned	41
		Bank debit memorandum:	
		Safety deposit box rent	30

Prepare a bank reconciliation and adjusting entries.

(LO 7)

A summary of the Cash account in the ledger for August shows: Balance, August 1, \$10,559; receipts \$50,050; disbursements \$47,794; and balance, August 31, \$12,815. Analysis reveals that the only reconciling items on the July 31 bank reconciliation were a deposit in transit for \$2,200 and outstanding checks of \$2,925. The deposit in transit was the first deposit recorded by the bank in August. In addition, you determine that there were two errors involving company checks drawn in August: (1) A check for \$340 to a creditor on account that cleared the bank in August was journalized and posted for \$430. (2) A salary check to an employee for \$275 was recorded by the bank for \$277.

Instructions

(a) Adjusted balance per books
\$17,421

- (a) Prepare a bank reconciliation at August 31.
(b) Journalize the adjusting entries to be made by Tizani Company at August 31. Assume that interest on the note has not been accrued by the company.

Prepare a comprehensive bank reconciliation with theft and internal control deficiencies.

(LO 2, 3, 4, 7)

P7-6B Stupendous Company is a very profitable small business. It has not, however, given much consideration to internal control. For example, in an attempt to keep clerical and office expenses to a minimum, the company has combined the jobs of cashier and bookkeeper. As a result, Jake Burnett handles all cash receipts, keeps the accounting records, and prepares the monthly bank reconciliations.

The balance per the bank statement on October 31, 2014, was \$15,313. Outstanding checks were: no. 62 for \$107.74, no. 183 for \$127.50, no. 284 for \$215.26, no. 862 for \$132.10, no. 863 for \$192.78, and no. 864 for \$140.49. Included with the statement was a credit memorandum of \$460 indicating the collection of a note receivable for Stupendous Company by the bank on October 25. This memorandum has not been recorded by Stupendous Company.

The company's ledger showed one cash account with a balance of \$18,608.81. The balance included undeposited cash on hand. Because of the lack of internal controls, Burnett took for personal use all of the undeposited receipts in excess of \$3,226.18. He then prepared the following bank reconciliation in an effort to conceal his theft of cash.

Bank Reconciliation

Cash balance per books, October 31		\$18,608.81
Add: Outstanding checks		
No. 862	\$132.10	
No. 863	192.78	
No. 864	140.49	
		<u>390.37</u>
		18,999.18
Less: Undeposited receipts		<u>3,226.18</u>
Unadjusted balance per bank, October 31		15,773.00
Less: Bank credit memorandum		<u>460.00</u>
Cash balance per bank statement, October 31		<u>\$15,313.00</u>

Instructions

(a) Adjusted balance per books
\$17,623.31

- (a) Prepare a correct bank reconciliation. (*Hint:* Deduct the amount of the theft from the adjusted balance per books.)
(b) Indicate the three ways that Burnett attempted to conceal the theft and the dollar amount pertaining to each method.
(c) What principles of internal control were violated in this case?

PROBLEMS: SET C

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Problem Set C.

COMPREHENSIVE PROBLEM

CP7 On December 1, 2014, Westmoreland Company had the following account balances.

	<u>Debits</u>		<u>Credits</u>
Cash	\$18,200	Accumulated Depreciation—	
Notes Receivable	2,000	Equipment	\$ 3,000
Accounts Receivable	7,500	Accounts Payable	6,100
Inventory	16,000	Common Stock	50,000
Prepaid Insurance	1,600	Retained Earnings	<u>14,200</u>
Equipment	<u>28,000</u>		<u>\$73,300</u>
	<u>\$73,300</u>		

During December, the company completed the following transactions.

- Dec. 7 Received \$3,600 cash from customers in payment of account (no discount allowed).
 12 Purchased merchandise on account from Alice Co. \$12,000, terms 1/10, n/30.
 17 Sold merchandise on account \$16,000, terms 2/10, n/30. The cost of the merchandise sold was \$10,000.
 19 Paid salaries \$2,200.
 22 Paid Alice Co. in full, less discount.
 26 Received collections in full, less discounts, from customers billed on December 17.
 31 Received \$2,700 cash from customers in payment of account (no discount allowed).

Adjustment data:

1. Depreciation \$200 per month.
2. Insurance expired \$400.

Instructions

- (a) Journalize the December transactions. (Assume a perpetual inventory system.)
- (b) Enter the December 1 balances in the ledger T-accounts and post the December transactions. Use Cost of Goods Sold, Depreciation Expense, Insurance Expense, Salaries and Wages Expense, Sales Revenue, and Sales Discounts.
- (c) The statement from Dodge County Bank on December 31 showed a balance of \$25,930. A comparison of the bank statement with the Cash account revealed the following facts.
 1. The bank collected a note receivable of \$2,000 for Westmoreland Company on December 15.
 2. The December 31 receipts were deposited in a night deposit vault on December 31. These deposits were recorded by the bank in January.
 3. Checks outstanding on December 31 totaled \$1,210.
 4. On December 31, the bank statement showed a NSF charge of \$680 for a check received by the company from K. Quinn, a customer, on account.

Prepare a bank reconciliation as of December 31 based on the available information. (*Hint:* The cash balance per books is \$26,100. This can be proven by finding the balance in the Cash account from parts (a) and (b).)
- (d) Journalize the adjusting entries resulting from the bank reconciliation and adjustment data.
- (e) Post the adjusting entries to the ledger T-accounts.
- (f) Prepare an adjusted trial balance.
- (g) Prepare an income statement for December and a classified balance sheet at December 31.

CONTINUING COOKIE CHRONICLE

(*Note:* This is a continuation of the Cookie Chronicle from Chapters 1–6.)

CCC7 Part 1 Natalie is struggling to keep up with the recording of her accounting transactions. She is spending a lot of time marketing and selling mixers and giving her cookie classes. Her friend John is an accounting student who runs his own accounting service. He has asked Natalie if she would like to have him do her accounting. John and Natalie meet and discuss her business.

Part 2 Natalie decides that she cannot afford to hire John to do her accounting. One way that she can ensure that her cash account does not have any errors and is accurate and up-to-date is to prepare a bank reconciliation at the end of each month. Natalie would like you to help her.

Go to the book's companion website, www.wiley.com/college/wegandt, to see the completion of this problem.

Broadening Your PERSPECTIVE

Financial Reporting and Analysis

Financial Reporting Problem: PepsiCo, Inc.

BYP7-1 The financial statements of **PepsiCo, Inc.** are presented in Appendix A at the end of this textbook.

Instructions

- What comments, if any, are made about cash in the report of the independent registered public accounting firm?
- What data about cash and cash equivalents are shown in the consolidated balance sheet?
- In its notes to Consolidated Financial Statements, how does PepsiCo define cash equivalents?
- In the section "Management's Report on Internal Control Over Financial Reporting," what does PepsiCo's management say about internal control? (See page A-35 in Appendix A of the back of the book.)

Comparative Analysis Problem: PepsiCo, Inc. vs. The Coca-Cola Company

BYP7-2 PepsiCo's financial statements are presented in Appendix A. Financial statements of **The Coca-Cola Company** are presented in Appendix B.

Instructions

- Based on the information contained in these financial statements, determine each of the following for each company:
 - Cash and cash equivalents balance at December 25, 2010, for PepsiCo and at December 31, 2010, for Coca-Cola.
 - Increase (decrease) in cash and cash equivalents from 2009 to 2010.
 - Cash provided by operating activities during the year ended December 2010 (from statement of cash flows).
- What conclusions concerning the management of cash can be drawn from these data?

Real-World Focus

BYP7-3 All organizations should have systems of internal control. Universities are no exception. This site discusses the basics of internal control in a university setting.

Address: www.bc.edu/offices/audit/controls, or go to www.wiley.com/college/wegandt

Steps: Go to the site shown above.

Instructions

The front page of this site provides links to pages that answer six critical questions. Use these links to answer the following questions.

- In a university setting, who has responsibility for evaluating the adequacy of the system of internal control?
- What do reconciliations ensure in the university setting? Who should review the reconciliation?
- What are some examples of physical controls?
- What are two ways to accomplish inventory counts?

Critical Thinking

Decision-Making Across the Organization

BYP7-4 The board of trustees of a local church is concerned about the internal accounting controls for the offering collections made at weekly services. The trustees ask you to serve on a three-person audit team with the internal auditor of a local college and a CPA who has just joined the church.

At a meeting of the audit team and the board of trustees, you learn the following.

1. The church's board of trustees has delegated responsibility for the financial management and audit of the financial records to the finance committee. This group prepares the annual budget and approves major disbursements. It is not involved in collections or record-keeping. No audit has been made in recent years because the same trusted employee has kept church records and served as financial secretary for 15 years. The church does not carry any fidelity insurance.
2. The collection at the weekly service is taken by a team of ushers who volunteer to serve one month. The ushers take the collection plates to a basement office at the rear of the church. They hand their plates to the head usher and return to the church service. After all plates have been turned in, the head usher counts the cash received. The head usher then places the cash in the church safe along with a notation of the amount counted. The head usher volunteers to serve for 3 months.
3. The next morning, the financial secretary opens the safe and recounts the collection. The secretary withholds \$150–\$200 in cash, depending on the cash expenditures expected for the week, and deposits the remainder of the collections in the bank. To facilitate the deposit, church members who contribute by check are asked to make their checks payable to "Cash."
4. Each month, the financial secretary reconciles the bank statement and submits a copy of the reconciliation to the board of trustees. The reconciliations have rarely contained any bank errors and have never shown any errors per books.

Instructions

With the class divided into groups, answer the following.

- (a) Indicate the weaknesses in internal accounting control over the handling of collections.
- (b) List the improvements in internal control procedures that you plan to make at the next meeting of the audit team for (1) the ushers, (2) the head usher, (3) the financial secretary, and (4) the finance committee.
- (c) What church policies should be changed to improve internal control?

Communication Activity

BYP7-5 As a new auditor for the CPA firm of Murphy, Mooney, and Feeney, you have been assigned to review the internal controls over mail cash receipts of Stillwater Company. Your review reveals the following: Checks are promptly endorsed "For Deposit Only," but no list of the checks is prepared by the person opening the mail. The mail is opened either by the cashier or by the employee who maintains the accounts receivable records. Mail receipts are deposited in the bank weekly by the cashier.

Instructions

Write a letter to Jack Meyer, owner of Stillwater Company, explaining the weaknesses in internal control and your recommendations for improving the system.

Ethics Case

BYP7-6 You are the assistant controller in charge of general ledger accounting at Springtime Bottling Company. Your company has a large loan from an insurance company. The loan agreement requires that the company's cash account balance be maintained at \$200,000 or more, as reported monthly.

At June 30, the cash balance is \$80,000, which you report to Anne Shirley, the financial vice president. Anne excitedly instructs you to keep the cash receipts book open for one additional day for purposes of the June 30 report to the insurance company. Anne says, "If we don't get that cash balance over \$200,000, we'll default on our loan agreement. They could close us down, put us all out of our jobs!" Anne continues, "I talked to Oconto Distributors (one of Springtime's largest

customers) this morning. They said they sent us a check for \$150,000 yesterday. We should receive it tomorrow. If we include just that one check in our cash balance, we'll be in the clear. It's in the mail!"

Instructions

- (a) Who will suffer negative effects if you do not comply with Anne Shirley's instructions? Who will suffer if you do comply?
- (b) What are the ethical considerations in this case?
- (c) What alternatives do you have?

All About You

BYP7-7 As you may already know, potential security risks may arise from your personal computer. It is important to keep in mind, however, that there are also many other ways that your identity can be stolen other than from your computer. The federal government provides many resources to help protect you from identity thieves.

Instructions

Go to <http://onguardonline.gov/idtheft.html>, and click on **ID Theft Faceoff**. Complete the quiz provided there.

BYP7-8 Identity thieves determine your identity by going through your mail or trash, stealing your credit cards, redirecting mail through change of address forms, or acquiring personal information you share on unsecured sites. In a recent year, more than 7 million people were victims of identity theft.

Do you feel it is safe to store personal financial data (such as Social Security numbers and bank and credit account numbers) on your computer?

YES: I have anti-virus software that will detect and stop any intruder.

NO: Even the best anti-virus software does not detect every kind of intruder.

Instructions

Write a response indicating your position regarding the situation. Provide support for your view.

FASB Codification Activity

BYP7-9 If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following.

- (a) How is cash defined in the Codification?
- (b) How are cash equivalents defined in the Codification?
- (c) What are the disclosure requirements related to cash and cash equivalents?

Answers to Chapter Questions

Answers to Insight and Accounting Across the Organization Questions

p. 327 And the Controls Are... Q: Why is sustainability information important to investors? **A:** Investors, customers, suppliers, and employees want more information about companies' long-term impact on society. There is a growing awareness that sustainability issues can affect a company's financial performance. Proper reporting on sustainability issues develops a solid reputation for transparency and provides confidence to shareholders.

p. 334 SOX Boosts the Role of Human Resources Q: Why would unsupervised employees or employees who report to each other represent potential internal control threats? **A:** An unsupervised employee may have a fraudulent job (or may even be a fictitious person), e.g., a person drawing a paycheck without working. Or, if two employees supervise each other, there is no real separation of duties, and they can conspire to defraud the company.

p. 335 Big Theft at Small Companies Q: Why are small companies more susceptible to employee theft? **A:** The high degree of trust often found in small companies makes them more vulnerable. Also, small companies tend to have less sophisticated systems of internal control, and they usually

lack internal auditors. In addition, it is very hard to achieve some internal control features, such as segregation of duties, when you have very few employees.

p. 343 How Employees Steal Q: How can companies reduce the likelihood of fraudulent disbursements? **A:** To reduce the occurrence of fraudulent disbursements, a company should follow the procedures discussed in this chapter. These include having only designated personnel sign checks; having different personnel approve payments and make payments; ensuring that check signers do not record disbursements; using prenumbered checks and matching each check to an approved invoice; storing blank checks securely; reconciling the bank statement; and stamping invoices PAID.

p. 351 Madoff's Ponzi Scheme Q: How was Madoff able to conceal such a giant fraud? **A:** Madoff fabricated false investment statements that were provided to investors. In addition, his auditor never verified these investment statements even though the auditor gave him an unqualified opinion each year.

A Look at IFRS

Fraud can occur anywhere. And because the three main factors that contribute to fraud are universal in nature, the principles of internal control activities are used globally by companies. While Sarbanes-Oxley (SOX) does not apply to international companies, most large international companies have internal controls similar to those indicated in the chapter. IFRS and GAAP are very similar in accounting for cash. *IAS No. 1 (revised)*, “Presentation of Financial Statements,” is the only standard that discusses issues specifically related to cash.

Key Points

- The fraud triangle discussed in this chapter is applicable to all international companies. Some of the major frauds on an international basis are **Parmalat** (Italy), **Royal Ahold** (the Netherlands), and **Satyam Computer Services** (India).
- Rising economic crime poses a growing threat to companies, with nearly half of all organizations worldwide being victims of fraud in a recent two-year period (*PricewaterhouseCoopers' Global Economic Crime Survey*, 2005). Specifically, 44% of Romanian companies surveyed experienced fraud in the past two years.
- Globally, the number of companies reporting fraud increased from 37% to 45% since 2003, a 22% increase. The cost to companies was an average US\$1.7 million in losses from “tangible frauds,” that is, those that result in an immediate and direct financial loss. These include asset misappropriation, false pretenses, and counterfeiting (*PricewaterhouseCoopers' Global Economic Crime Survey*, 2005).
- Accounting scandals both in the United States and internationally have re-ignited the debate over the relative merits of GAAP, which takes a “rules-based” approach to accounting, versus IFRS, which takes a “principles-based” approach. The FASB announced that it intends to introduce more principles-based standards.
- On a lighter note, at one time Ig Nobel Prize in Economics went to the CEOs of those companies involved in the corporate accounting scandals of that year for “adapting the mathematical concept of imaginary numbers for use in the business world.” A parody of the Nobel Prizes, the Ig Nobel Prizes (read Ignoble, as not noble) are given each year in early October for 10 achievements that “first make people laugh, and then make them think.” Organized by the scientific humor magazine *Annals of Improbable Research (AIR)*, they are presented by a group that includes genuine Nobel laureates at a ceremony at Harvard University's Sanders Theater. (See en.wikipedia.org/wiki/Ig_Nobel_Prize.)

- Internal controls are a system of checks and balances designed to prevent and detect fraud and errors. While most companies have these systems in place, many have never completely documented them, nor had an independent auditor attest to their effectiveness. Both of these actions are required under SOX.
- Companies find that internal control review is a costly process but badly needed. One study estimates the cost of SOX compliance for U.S. companies at over \$35 billion, with audit fees doubling in the first year of compliance. At the same time, examination of internal controls indicates lingering problems in the way companies operate. One study of first compliance with the internal-control testing provisions documented material weaknesses for about 13% of companies reporting in a two-year period (*PricewaterhouseCoopers' Global Economic Crime Survey, 2005*).
- The SOX internal control standards apply only to companies listed on U.S. exchanges. There is continuing debate over whether foreign issuers should have to comply with this extra layer of regulation.
- The accounting and internal control procedures related to cash are essentially the same under both IFRS and this textbook. In addition, the definition used for cash equivalents is the same.
- Most companies report cash and cash equivalents together under IFRS, as shown in this textbook. In addition, IFRS follows the same accounting policies related to the reporting of restricted cash.
- IFRS defines cash and cash equivalents as follows.
 - ◆ **Cash** is comprised of cash on hand and demand deposits.
 - ◆ **Cash equivalents** are short-term, highly liquid investments that are readily convertible to known amounts of cash and which are subject to an insignificant risk of changes in value.
- Under IFRS, cash and cash equivalents are often shown last in the statement of financial position.

Looking to the Future

Ethics has become a very important aspect of reporting. Different cultures have different perspectives on bribery and other questionable activities, and consequently penalties for engaging in such activities vary considerably across countries.

High-quality international accounting requires both high-quality accounting standards and high-quality auditing. Similar to the convergence of GAAP and IFRS, there is movement to improve international auditing standards. The International Auditing and Assurance Standards Board (IAASB) functions as an independent standard-setting body. It works to establish high-quality auditing and assurance and quality-control standards throughout the world. Whether the IAASB adopts internal control provisions similar to those in SOX remains to be seen. You can follow developments in the international audit arena at <http://www.ifac.org/iaasb/>.

Under proposed new standards for financial statements, companies would not be allowed to combine cash equivalents with cash.

IFRS Practice

IFRS Self-Test Questions

1. Non-U.S. companies that follow IFRS:
 - (a) do not normally use the principles of internal control activities described in this textbook.
 - (b) often offset cash with accounts payable on the balance sheet.
 - (c) are not required to follow SOX.
 - (d) None of the above.
2. Which of the following is the correct accounting under IFRS for cash?
 - (a) Cash cannot be combined with cash equivalents.
 - (b) Restricted cash funds may be reported as a current or non-current asset depending on the circumstances.
 - (c) Restricted cash funds cannot be reported as a current asset.
 - (d) Cash on hand is not reported on the balance sheet as Cash.

3. The Sarbanes-Oxley Act applies to:
 - (a) all U.S. companies listed on U.S. exchanges.
 - (b) all companies that list stock on any stock exchange in any country.
 - (c) all European companies listed on European exchanges.
 - (d) Both (a) and (c).
4. High-quality international accounting requires both high-quality accounting standards and:
 - (a) a reconsideration of SOX to make it less onerous.
 - (b) high-quality auditing standards.
 - (c) government intervention to ensure that the public interest is protected.
 - (d) the development of new principles of internal control activities.
5. Cash equivalents under IFRS:
 - (a) are significantly different than the cash equivalents discussed in the textbook.
 - (b) are generally disclosed separately from cash.
 - (c) may be required to be reported separately from cash in the future.
 - (d) None of the above.

IFRS Exercises

IFRS7-1 Some people argue that the internal control requirements of the Sarbanes-Oxley Act (SOX) put U.S. companies at a competitive disadvantage to companies outside the United States. Discuss the competitive implications (both pros and cons) of SOX.

- IFRS7-2** State whether each of the following is true or false. For those that are false, explain why.
- (a) A proposed new financial accounting standard would not allow cash equivalents to be reported in combination with cash.
 - (b) Perspectives on bribery and penalties for engaging in bribery are the same across all countries.
 - (c) Cash equivalents are comprised of cash on hand and demand deposits.
 - (d) SOX was created by the International Accounting Standards Board.

International Financial Reporting Problem: Zetar plc

IFRS7-3 The financial statements of **Zetar plc** are presented in Appendix C. The company's complete annual report, including the notes to its financial statements, is available at www.zetarplc.com.

Instructions

Using the notes to the company's financial statements, answer the following questions.

- (a) Which committee of the board of directors is responsible for considering management's reports on internal control?
- (b) What are the company's key control procedures?
- (c) Does the company have an internal audit department?
- (d) In what section or sections does Zetar report its bank overdrafts?

Chapter 8

Accounting for Receivables

Feature Story

A Dose of Careful Management Keeps Receivables Healthy

“Sometimes you have to know when to be very tough, and sometimes you can give them a bit of a break,” says Vivi Su. She’s not talking about her children, but about the customers of a subsidiary of pharmaceutical company **Whitehall-Robins**, where she works as supervisor of credit and collections.

For example, while the company’s regular terms are 1/15, n/30 (1% discount if paid within 15 days), a customer might ask for and receive a few days of grace and still get the discount. Or a customer might place

orders above its credit limit, in which case, depending on its payment history and the circumstances, Ms. Su might authorize shipment of the goods anyway.

“It’s not about drawing a line in the sand, and that’s all,” she explains. “You want a good relationship with your customers—but you also need to bring in the money.”

“The money,” in Whitehall-Robins’s case, amounts to some \$170 million in sales a year. Nearly all of it comes in through the credit accounts Ms. Su manages. The process starts with the decision to grant a customer an account in the first place, Ms. Su explains. The sales rep gives the customer a credit application. “My

Learning Objectives

After studying this chapter, you should be able to:

- 1** Identify the different types of receivables.
- 2** Explain how companies recognize accounts receivable.
- 3** Distinguish between the methods and bases companies use to value accounts receivable.
- 4** Describe the entries to record the disposition of accounts receivable.
- 5** Compute the maturity date of and interest on notes receivable.
- 6** Explain how companies recognize notes receivable.
- 7** Describe how companies value notes receivable.
- 8** Describe the entries to record the disposition of notes receivable.
- 9** Explain the statement presentation and analysis of receivables.

The Navigator

department reviews this application very carefully; a customer needs to supply three good references, and we also run a check with a credit firm like Equifax. If we accept them, then based on their size and history, we assign a credit limit.”

Once accounts are established, the company supervises them very carefully. “I get an aging report every single day,” says Ms. Su.

“The rule of thumb is that we should always have at least 85% of receivables current—meaning they were billed less than 30 days ago,” she continues. “But we try to do even better than that—I like to see 90%.” Similarly, her guideline is never to have more than 5% of receivables at over 90 days. But long before that figure is reached, “we jump on it,” she says firmly.

At 15 days overdue, Whitehall-Robins phones the client. Often there’s a reasonable explanation for the delay—an invoice may have gone astray, or the payables clerk is away. “But if a customer keeps on delaying, and tells us several times that it’ll

only be a few more days, we know there’s a problem,” says Ms. Su. After 45 days, “I send a letter. Then a second notice is

sent in writing. After the third and final notice, the client has 10 days to pay, and then I hand it over to a collection agency, and it’s out of my hands.”

Ms. Su’s boss, Terry Norton, records an estimate for bad debts every year, based on a percentage of receivables. The percentage depends on the current aging history. He also calculates and monitors the company’s receivables turnover ratio, which the company reports in its financial statements. “I think of it in terms of collection period of DSO—days of sales outstanding,” he explains.

Ms. Su knows that she and Mr. Norton are crucial to the profitability of Whitehall-Robins. “Receivables are generally the second-largest asset of any company (after its capital assets),” she points out. “So it’s no wonder we keep a very close eye on them.”

Preview of Chapter 8

As indicated in the Feature Story, receivables are a significant asset for many pharmaceutical companies. Because a large portion of sales in the United States are done on credit, receivables are important to companies in other industries as well. As a consequence, companies must pay close attention to their receivables and manage them carefully. In this chapter, you will learn what journal entries companies make when they sell products, when they collect cash from those sales, and when they write off accounts they cannot collect.

The content and organization of the chapter are as follows.

ACCOUNTING FOR RECEIVABLES			
Types of Receivables	Accounts Receivable	Notes Receivable	Statement Presentation and Analysis
<ul style="list-style-type: none"> • Accounts receivable • Notes receivable • Other receivables 	<ul style="list-style-type: none"> • Recognizing accounts receivable • Valuing accounts receivable • Disposing of accounts receivable 	<ul style="list-style-type: none"> • Determining maturity date • Computing interest • Recognizing notes receivable • Valuing notes receivable • Disposing of notes receivable 	<ul style="list-style-type: none"> • Presentation • Analysis

Types of Receivables

LEARNING OBJECTIVE 1

Identify the different types of receivables.

The term **receivables** refers to amounts due from individuals and companies. Receivables are claims that are expected to be collected in cash. The management of receivables is a very important activity for any company that sells goods or services on credit.

Receivables are important because they represent one of a company's most liquid assets. For many companies, receivables are also one of the largest assets. For example, receivables represented 21.9% of the current assets of pharmaceutical giant **Rite Aid** in 2011. Illustration 8-1 lists receivables as a percentage of total assets for five other well-known companies in a recent year.

Illustration 8-1

Receivables as a percentage of assets

Company	Receivables as a Percentage of Total Assets
General Electric	52%
Ford Motor Company	42%
Minnesota Mining and Manufacturing Company (3M)	14%
DuPont Co.	17%
Intel Corporation	5%

The relative significance of a company's receivables as a percentage of its assets depends on various factors: its industry, the time of year, whether it extends long-term financing, and its credit policies. To reflect important differences among receivables, they are frequently classified as (1) accounts receivable, (2) notes receivable, and (3) other receivables.

Accounts receivable are amounts customers owe on account. They result from the sale of goods and services. Companies generally expect to collect accounts receivable within 30 to 60 days. They are usually the most significant type of claim held by a company.

Notes receivable are a written promise (as evidenced by a formal instrument) for amounts to be received. The note normally requires the collection of interest and extends for time periods of 60–90 days or longer. Notes and accounts receivable that result from sales transactions are often called **trade receivables**.

Other receivables include nontrade receivables such as interest receivable, loans to company officers, advances to employees, and income taxes refundable. These do not generally result from the operations of the business. Therefore, they are generally classified and reported as separate items in the balance sheet.

Ethics Note

Companies report receivables from employees separately in the financial statements. The reason: Sometimes those assets are not the result of an "arm's-length" transaction.

Accounts Receivable

Three accounting issues associated with accounts receivable are:

1. **Recognizing** accounts receivable.
2. **Valuing** accounts receivable.
3. **Disposing** of accounts receivable.

Recognizing Accounts Receivable

Recognizing accounts receivable is relatively straightforward. A service organization records a receivable when it provides service on account. A merchandiser records accounts receivable at the point of sale of merchandise on account. When a merchandiser sells goods, it increases (debits) Accounts Receivable and increases (credits) Sales Revenue.

The seller may offer terms that encourage early payment by providing a discount. Sales returns also reduce receivables. The buyer might find some of the goods unacceptable and choose to return the unwanted goods.

To review, assume that Jordache Co. on July 1, 2014, sells merchandise on account to Polo Company for \$1,000, terms 2/10, n/30. On July 5, Polo returns merchandise worth \$100 to Jordache Co. On July 11, Jordache receives payment from Polo Company for the balance due. The journal entries to record these transactions on the books of Jordache Co. are as follows. **(Cost of goods sold entries are omitted.)**

July 1	Accounts Receivable—Polo Company Sales Revenue (To record sales on account)	1,000	1,000
July 5	Sales Returns and Allowances Accounts Receivable—Polo Company (To record merchandise returned)	100	100
July 11	Cash (\$900 - \$18) Sales Discounts (\$900 × .02) Accounts Receivable—Polo Company (To record collection of accounts receivable)	882 18	900

Some retailers issue their own credit cards. When you use a retailer’s credit card (JCPenney, for example), the retailer charges interest on the balance due if not paid within a specified period (usually 25–30 days).

To illustrate, assume that you use your JCPenney credit card to purchase clothing with a sales price of \$300 on June 1, 2014. JCPenney will increase (debit) Accounts Receivable for \$300 and increase (credit) Sales Revenue for \$300 (cost of goods sold entry omitted) as follows.

June 1	Accounts Receivable Sales Revenue (To record sales on account)	300	300
--------	--	-----	-----

Assuming that you owe \$300 at the end of the month, and JCPenney charges 1.5% per month on the balance due, the adjusting entry that JCPenney makes to record interest revenue of \$4.50 ($\$300 \times 1.5\%$) on June 30 is as follows.

June 30	Accounts Receivable Interest Revenue (To record interest on amount due)	4.50	4.50
---------	---	------	------

Interest revenue is often substantial for many retailers.

LEARNING OBJECTIVE 2

Explain how companies recognize accounts receivable.

Ethics Note

In exchange for lower interest rates, some companies have eliminated the 25-day grace period before finance charges kick in. Be sure you read the fine print in any credit agreement you sign.

Helpful Hint

These entries are the same as those described in Chapter 5. For simplicity, we have omitted inventory and cost of goods sold from this set of journal entries and from end-of-chapter material.

A	=	L	+	SE
+300				+300 Rev

ANATOMY OF A FRAUD

Tasanee was the accounts receivable clerk for a large non-profit foundation that provided performance and exhibition space for the performing and visual arts. Her responsibilities included activities normally assigned to an accounts receivable clerk, such as recording revenues from various sources that included donations, facility rental fees, ticket revenue, and bar receipts. However, she was also responsible for handling all cash and checks from the time they were received until the time she deposited them, as well as preparing the bank reconciliation. Tasanee took advantage of her situation by falsifying bank deposits and bank reconciliations so that she could steal cash from the bar receipts. Since nobody else logged the donations or matched the donation receipts to pledges prior to Tasanee receiving them, she was able to offset the cash that was stolen against donations that she received but didn't record. Her crime was made easier by the fact that her boss, the company's controller, only did a very superficial review of the bank reconciliation and thus didn't notice that some numbers had been cut out from other documents and taped onto the bank reconciliation.

Total take: \$1.5 million

The Missing Controls

Segregation of duties. The foundation should not have allowed an accounts receivable clerk, whose job was to record receivables, to also handle cash, record cash, make deposits, and especially prepare the bank reconciliation.

Independent internal verification. The controller was supposed to perform a thorough review of the bank reconciliation. Because he did not, he was terminated from his position.

Source: Adapted from Wells, *Fraud Casebook* (2007), pp. 183–194.

LEARNING OBJECTIVE

3

Distinguish between the methods and bases companies use to value accounts receivable.

Alternative Terminology

You will sometimes see *Bad Debt Expense* called *Uncollectible Accounts Expense*.

Valuing Accounts Receivable

Once companies record receivables in the accounts, the next question is: How should they report receivables in the financial statements? Companies report accounts receivable on the balance sheet as an asset. But determining the **amount** to report is sometimes difficult because some receivables will become uncollectible.

Each customer must satisfy the credit requirements of the seller before the credit sale is approved. Inevitably, though, some accounts receivable become uncollectible. For example, a customer may not be able to pay because of a decline in its sales revenue due to a downturn in the economy. Similarly, individuals may be laid off from their jobs or faced with unexpected hospital bills. Companies record credit losses as debits to **Bad Debt Expense** (or Uncollectible Accounts Expense). Such losses are a normal and necessary risk of doing business on a credit basis.

Recently, when U.S. home prices fell, home foreclosures rose, and the economy in general slowed, lenders experienced huge increases in their bad debt expense. For example, during a recent quarter **Wachovia** (a large U.S. bank now owned by **Wells Fargo**) increased bad debt expense from \$108 million to \$408 million. Similarly, **American Express** increased its bad debt expense by 70%.

Two methods are used in accounting for uncollectible accounts: (1) the direct write-off method and (2) the allowance method. The following sections explain these methods.

DIRECT WRITE-OFF METHOD FOR UNCOLLECTIBLE ACCOUNTS

Under the **direct write-off method**, when a company determines a particular account to be uncollectible, it charges the loss to Bad Debt Expense. Assume, for

example, that Warden Co. writes off as uncollectible M. E. Doran’s \$200 balance on December 12. Warden’s entry is:

Dec. 12	Bad Debt Expense	200		
	Accounts Receivable—M. E. Doran		200	
	(To record write-off of M. E. Doran account)			

A	=	L	+	SE
				-200 Exp
-200				
Cash Flows				
no effect				

Under this method, Bad Debt Expense will show only **actual losses** from uncollectibles. The company will report accounts receivable at its gross amount.

Although this method is simple, its use can reduce the usefulness of both the income statement and balance sheet. Consider the following example. Assume that in 2014, Quick Buck Computer Company decided it could increase its revenues by offering computers to college students without requiring any money down and with no credit-approval process. On campuses across the country, it distributed one million computers with a selling price of \$800 each. This increased Quick Buck’s revenues and receivables by \$800 million. The promotion was a huge success! The 2014 balance sheet and income statement looked great. Unfortunately, during 2015, nearly 40% of the customers defaulted on their loans. This made the 2015 income statement and balance sheet look terrible. Illustration 8-2 shows the effect of these events on the financial statements if the direct write-off method is used.

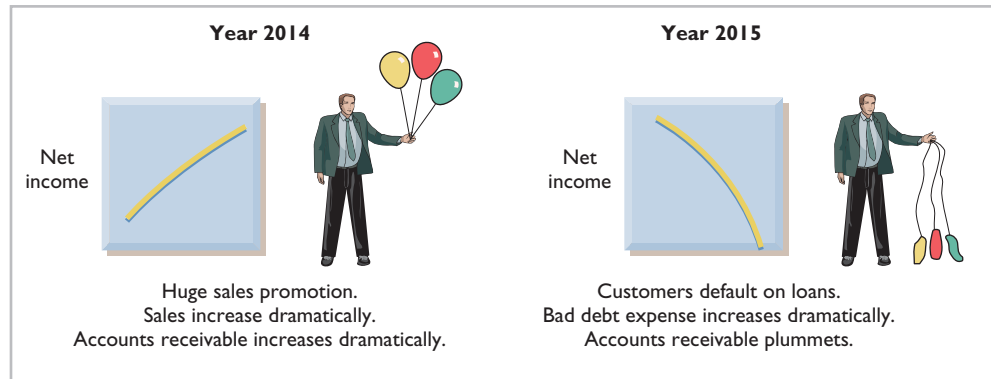

Illustration 8-2
Effects of direct write-off method

Under the direct write-off method, companies often record bad debt expense in a period different from the period in which they record the revenue. The method does not attempt to match bad debt expense to sales revenues in the income statement. Nor does the direct write-off method show accounts receivable in the balance sheet at the amount the company actually expects to receive. **Consequently, unless bad debt losses are insignificant, the direct write-off method is not acceptable for financial reporting purposes.**

ALLOWANCE METHOD FOR UNCOLLECTIBLE ACCOUNTS

The **allowance method** of accounting for bad debts involves estimating uncollectible accounts at the end of each period. This provides better matching on the income statement. It also ensures that companies state receivables on the balance sheet at their cash (net) realizable value. **Cash (net) realizable value** is the net amount the company expects to receive in cash. It excludes amounts that the company estimates it will not collect. Thus, this method reduces receivables in the balance sheet by the amount of estimated uncollectible receivables.

GAAP requires the allowance method for financial reporting purposes when bad debts are material in amount. This method has three essential features:

1. Companies **estimate** uncollectible accounts receivable. They match this estimated expense **against revenues** in the same accounting period in which they record the revenues.

Helpful Hint
In this context, *material* means significant or important to financial statement users.

2. Companies debit estimated uncollectibles to Bad Debt Expense and credit them to Allowance for Doubtful Accounts through an adjusting entry at the end of each period. Allowance for Doubtful Accounts is a contra account to Accounts Receivable.
3. When companies write off a specific account, they debit actual uncollectibles to Allowance for Doubtful Accounts and credit that amount to Accounts Receivable.

RECORDING ESTIMATED UNCOLLECTIBLES To illustrate the allowance method, assume that Hampson Furniture has credit sales of \$1,200,000 in 2014. Of this amount, \$200,000 remains uncollected at December 31. The credit manager estimates that \$12,000 of these sales will be uncollectible. The adjusting entry to record the estimated uncollectibles increases (debits) Bad Debt Expense and increases (credits) Allowance for Doubtful Accounts, as follows.

A	=	L	+	SE
-12,000		-12,000 Exp		
Cash Flows				
no effect				

Dec. 31	Bad Debt Expense Allowance for Doubtful Accounts (To record estimate of uncollectible accounts)	12,000	12,000
---------	---	--------	--------

Hampson reports Bad Debt Expense in the income statement as an operating expense (usually as a selling expense). Thus, the estimated uncollectibles are matched with sales in 2014. Hampson records the expense in the same year it made the sales.

Allowance for Doubtful Accounts shows the estimated amount of claims on customers that the company expects will become uncollectible in the future. Companies use a contra account instead of a direct credit to Accounts Receivable because they do not know *which* customers will not pay. The credit balance in the allowance account will absorb the specific write-offs when they occur. As Illustration 8-3 shows, the company deducts the allowance account from accounts receivable in the current assets section of the balance sheet.

Illustration 8-3
Presentation of allowance for doubtful accounts

Hampson Furniture Balance Sheet (partial)			
Current assets			
Cash			\$ 14,800
Accounts receivable	\$200,000		
Less: Allowance for doubtful accounts	12,000		188,000
Inventory			310,000
Supplies			25,000
Total current assets			\$537,800

Helpful Hint
Cash realizable value is sometimes referred to as *accounts receivable (net)*.

The amount of \$188,000 in Illustration 8-3 represents the expected **cash realizable value** of the accounts receivable at the statement date. **Companies do not close Allowance for Doubtful Accounts at the end of the fiscal year.**

RECORDING THE WRITE-OFF OF AN UNCOLLECTIBLE ACCOUNT As described in the Feature Story, companies use various methods of collecting past-due accounts, such as letters, calls, and legal action. When they have exhausted all means of collecting a past-due account and collection appears impossible, the company should write off the account. In the credit card industry, for example, it is standard practice to write off accounts that are 210 days past due. To prevent

premature or unauthorized write-offs, authorized management personnel should formally approve each write-off. To maintain good internal control, companies should not authorize someone to write off accounts who also has daily responsibilities related to cash or receivables.

To illustrate a receivables write-off, assume that the financial vice president of Hampson Furniture authorizes a write-off of the \$500 balance owed by R. A. Ware on March 1, 2015. The entry to record the write-off is:

Mar. 1	Allowance for Doubtful Accounts Accounts Receivable—R. A. Ware (Write-off of R. A. Ware account)	500 500
--------	--	----------------

A	=	L	+	SE
+500				
-500				
Cash Flows				
no effect				

Bad Debt Expense does not increase when the write-off occurs. **Under the allowance method, companies debit every bad debt write-off to the allowance account rather than to Bad Debt Expense.** A debit to Bad Debt Expense would be incorrect because the company has already recognized the expense when it made the adjusting entry for estimated bad debts. Instead, the entry to record the write-off of an uncollectible account reduces both Accounts Receivable and Allowance for Doubtful Accounts. After posting, the general ledger accounts will appear as in Illustration 8-4.

Accounts Receivable		Allowance for Doubtful Accounts	
Jan. 1 Bal. 200,000	Mar. 1	Mar. 1	Jan. 1 Bal. 12,000
	500	500	Mar. 1 Bal. 11,500
Mar. 1 Bal. 199,500			

Illustration 8-4
General ledger balances after write-off

A write-off affects **only balance sheet accounts**—not income statement accounts. The write-off of the account reduces both Accounts Receivable and Allowance for Doubtful Accounts. Cash realizable value in the balance sheet, therefore, remains the same, as Illustration 8-5 shows.

	Before Write-Off	After Write-Off
Accounts receivable	\$ 200,000	\$ 199,500
Allowance for doubtful accounts	12,000	11,500
Cash realizable value	\$188,000	\$188,000

Illustration 8-5
Cash realizable value comparison

RECOVERY OF AN UNCOLLECTIBLE ACCOUNT Occasionally, a company collects from a customer after it has written off the account as uncollectible. The company makes two entries to record the recovery of a bad debt: (1) It reverses the entry made in writing off the account. This reinstates the customer's account. (2) It journalizes the collection in the usual manner.

To illustrate, assume that on July 1, R. A. Ware pays the \$500 amount that Hampson had written off on March 1. Hampson makes these entries:

(1)		
July 1	Accounts Receivable—R. A. Ware Allowance for Doubtful Accounts (To reverse write-off of R. A. Ware account)	500 500

A	=	L	+	SE
+500				
-500				
Cash Flows				
no effect				

A	=	L	+	SE
+500				
-500				
<hr/>				
Cash Flows				
+500				

				(2)
July 1	Cash		500	
	Accounts Receivable—R. A. Ware			500
	(To record collection from R. A. Ware)			

Note that the recovery of a bad debt, like the write-off of a bad debt, affects **only balance sheet accounts**. The net effect of the two entries above is a debit to Cash and a credit to Allowance for Doubtful Accounts for \$500. Accounts Receivable and the Allowance for Doubtful Accounts both increase in entry (1) for two reasons. First, the company made an error in judgment when it wrote off the account receivable. Second, after R. A. Ware did pay, Accounts Receivable in the general ledger and Ware’s account in the subsidiary ledger should show the collection for possible future credit purposes.

ESTIMATING THE ALLOWANCE For Hampson Furniture in Illustration 8-3, the amount of the expected uncollectibles was given. However, in “real life,” companies must estimate that amount when they use the allowance method. Two bases are used to determine this amount: **(1) percentage of sales**, and **(2) percentage of receivables**. Both bases are generally accepted. The choice is a management decision. It depends on the relative emphasis that management wishes to give to expenses and revenues on the one hand or to cash realizable value of the accounts receivable on the other. The choice is whether to emphasize income statement or balance sheet relationships. Illustration 8-6 compares the two bases.

Illustration 8-6
Comparison of bases for estimating uncollectibles

The percentage-of-sales basis results in a better matching of expenses with revenues—an income statement viewpoint. The percentage-of-receivables basis produces the better estimate of cash realizable value—a balance sheet viewpoint. Under both bases, the company must determine its past experience with bad debt losses.

Percentage-of-Sales. In the **percentage-of-sales basis**, management estimates what percentage of credit sales will be uncollectible. This percentage is based on past experience and anticipated credit policy.

The company applies this percentage to either total credit sales or net credit sales of the current year. To illustrate, assume that Gonzalez Company elects to use the percentage-of-sales basis. It concludes that 1% of net credit sales will become uncollectible. If net credit sales for 2014 are \$800,000, the estimated bad debt expense is \$8,000 (1% × \$800,000). The adjusting entry is:

A	=	L	+	SE
-8,000				-8,000 Exp
<hr/>				
Cash Flows				
no effect				

Dec. 31	Bad Debt Expense		8,000	
	Allowance for Doubtful Accounts			8,000
	(To record estimated bad debts for year)			

After the adjusting entry is posted, assuming the allowance account already has a credit balance of \$1,723, the accounts of Gonzalez Company will show the following:

Bad Debt Expense		Allowance for Doubtful Accounts	
Dec. 31 Adj.	8,000		Jan. 1 Bal. 1,723
			Dec. 31 Adj. 8,000
			Dec. 31 Bal. 9,723

Illustration 8-7
Bad debt accounts after posting

This basis of estimating uncollectibles emphasizes the matching of expenses with revenues. As a result, Bad Debt Expense will show a direct percentage relationship to the sales base on which it is computed. **When the company makes the adjusting entry, it disregards the existing balance in Allowance for Doubtful Accounts.** The adjusted balance in this account should be a reasonable approximation of the realizable value of the receivables. If actual write-offs differ significantly from the amount estimated, the company should modify the percentage for future years.

Percentage-of-Receivables. Under the **percentage-of-receivables basis**, management estimates what percentage of receivables will result in losses from uncollectible accounts. The company prepares an **aging schedule**, in which it classifies customer balances by the length of time they have been unpaid. Because of its emphasis on time, the analysis is often called **aging the accounts receivable**. In the Feature Story, **Whitehall-Robins** prepared an aging report daily.

Helpful Hint
Where appropriate, the percentage-of-receivables basis may use only a single percentage rate.

After the company arranges the accounts by age, it determines the expected bad debt losses. It applies percentages based on past experience to the totals in each category. The longer a receivable is past due, the less likely it is to be collected. Thus, the estimated percentage of uncollectible debts increases as the number of days past due increases. Illustration 8-8 shows an aging schedule for Dart Company. Note that the estimated percentage uncollectible increases from 2% to 40% as the number of days past due increases.

Worksheet.xls							
P18							
	A	B	C	D	E	F	G
1				Number of Days Past Due			
2							
3	Customer	Total	Not Yet Due	1-30	31-60	61-90	Over 90
4	T. E. Adert	\$ 600		\$ 300		\$ 200	\$ 100
5	R. C. Bortz	300	\$ 300				
6	B. A. Carl	450		200	\$ 250		
7	O. L. Diker	700	500			200	
8	T. O. Ebbet	600			300		300
9	Others	36,950	26,200	5,200	2,450	1,600	1,500
10		\$39,600	\$27,000	\$5,700	\$3,000	\$2,000	\$1,900
11	Estimated Percentage Uncollectible		2%	4%	10%	20%	40%
12	Total Estimated Bad Debts	\$ 2,228	\$ 540	\$ 228	\$ 300	\$ 400	\$ 760
13							

Illustration 8-8
Aging schedule

Helpful Hint
The older categories have higher percentages because the longer an account is past due, the less likely it is to be collected.

Total estimated bad debts for Dart Company (\$2,228) represent the amount of existing customer claims the company expects will become uncollectible in the future. This amount represents the **required balance** in Allowance for Doubtful

Accounts at the balance sheet date. **The amount of the bad debt adjusting entry is the difference between the required balance and the existing balance in the allowance account.** If the trial balance shows Allowance for Doubtful Accounts with a credit balance of \$528, the company will make an adjusting entry for \$1,700 (\$2,228 – \$528), as shown here.

A	=	L	+	SE
-1,700		-1,700 Exp		
Cash Flows				
no effect				

Dec. 31	Bad Debt Expense Allowance for Doubtful Accounts (To adjust allowance account to total estimated uncollectibles)	1,700	
			1,700

After Dart posts its adjusting entry, its accounts will appear as follows.

Illustration 8-9

Bad debt accounts after posting

Bad Debt Expense		Allowance for Doubtful Accounts	
Dec. 31 Adj.	1,700		
		Bal.	528
		Dec. 31 Adj.	1,700
		Bal.	2,228

Occasionally, the allowance account will have a **debit balance** prior to adjustment. This occurs when write-offs during the year have exceeded previous provisions for bad debts. In such a case, the company **adds the debit balance to the required balance** when it makes the adjusting entry. Thus, if there had been a \$500 debit balance in the allowance account before adjustment, the adjusting entry would have been for \$2,728 (\$2,228 + \$500) to arrive at a credit balance of \$2,228. The percentage-of-receivables basis will normally result in the better approximation of cash realizable value.

> DO IT!

Uncollectible Accounts Receivable

Brule Co. has been in business five years. The ledger at the end of the current year shows:

Accounts Receivable	\$30,000 Dr.
Sales Revenue	\$180,000 Cr.
Allowance for Doubtful Accounts	\$2,000 Dr.

Bad debts are estimated to be 10% of receivables. Prepare the entry to adjust Allowance for Doubtful Accounts.

Action Plan

- ✓ Report receivables at their cash (net) realizable value.
- ✓ Estimate the amount the company does not expect to collect.
- ✓ Consider the existing balance in the allowance account when using the percentage-of-receivables basis.

Solution

The following entry should be made to bring the balance in Allowance for Doubtful Accounts up to a balance of \$3,000 (10% × \$30,000):

Bad Debt Expense [(10% × \$30,000) + \$2,000]	5,000	
Allowance for Doubtful Accounts (To record estimate of uncollectible accounts)		5,000

Related exercise material: **BE8-3, BE8-6, BE8-7, E8-3, E8-4, E8-5, and DO IT! 8-1.**

LEARNING OBJECTIVE 4

Describe the entries to record the disposition of accounts receivable.

Disposing of Accounts Receivable

In the normal course of events, companies collect accounts receivable in cash and remove the receivables from the books. However, as credit sales and receivables have grown in significance, the “normal course of events” has changed.

Companies now frequently sell their receivables to another company for cash, thereby shortening the cash-to-cash operating cycle.

Companies sell receivables for two major reasons. First, **they may be the only reasonable source of cash**. When money is tight, companies may not be able to borrow money in the usual credit markets. Or, if money is available, the cost of borrowing may be prohibitive.

A second reason for selling receivables is that **billing and collection are often time-consuming and costly**. It is often easier for a retailer to sell the receivables to another party with expertise in billing and collection matters. Credit card companies such as **MasterCard**, **Visa**, and **Discover** specialize in billing and collecting accounts receivable.

SALE OF RECEIVABLES

A common sale of receivables is a sale to a factor. A **factor** is a finance company or bank that buys receivables from businesses and then collects the payments directly from the customers. Factoring is a multibillion dollar business.

Factoring arrangements vary widely. Typically, the factor charges a commission to the company that is selling the receivables. This fee ranges from 1–3% of the amount of receivables purchased. To illustrate, assume that Hendredon Furniture factors \$600,000 of receivables to Federal Factors. Federal Factors assesses a service charge of 2% of the amount of receivables sold. The journal entry to record the sale by Hendredon Furniture is as follows.

Cash	588,000		
Service Charge Expense (2% × \$600,000)	12,000		
Accounts Receivable		600,000	
(To record the sale of accounts receivable)			

If the company often sells its receivables, it records the service charge expense (such as that incurred by Hendredon) as selling expense. If the company infrequently sells receivables, it may report this amount in the “Other expenses and losses” section of the income statement.

CREDIT CARD SALES

Over one billion credit cards are in use in the United States—more than three credit cards for every man, woman, and child in this country. **Visa**, **MasterCard**, and **American Express** are the national credit cards that most individuals use. Three parties are involved when national credit cards are used in retail sales: (1) the credit card issuer, who is independent of the retailer; (2) the retailer; and (3) the customer. A retailer’s acceptance of a national credit card is another form of selling (factoring) the receivable.

Illustration 8-10 (page 390) shows the major advantages of national credit cards to the retailer. In exchange for these advantages, the retailer pays the credit card issuer a fee of 2–6% of the invoice price for its services.

ACCOUNTING FOR CREDIT CARD SALES The retailer generally considers sales from the use of national credit card sales as *cash sales*. The retailer must pay to the bank that issues the card a fee for processing the transactions. The retailer records the credit card slips in a similar manner as checks deposited from a cash sale.

To illustrate, Anita Ferreri purchases \$1,000 of compact discs for her restaurant from Karen Kerr Music Co., using her Visa First Bank Card. First Bank charges a service fee of 3%. The entry to record this transaction by Karen Kerr Music is as follows.

Cash	970		
Service Charge Expense	30		
Sales Revenue		1,000	
(To record Visa credit card sales)			

A	=	L	+	SE
+588,000				-12,000 Exp
-600,000				
Cash Flows				
+588,000

				+1,000 Rev
Cash Flows				
+970				

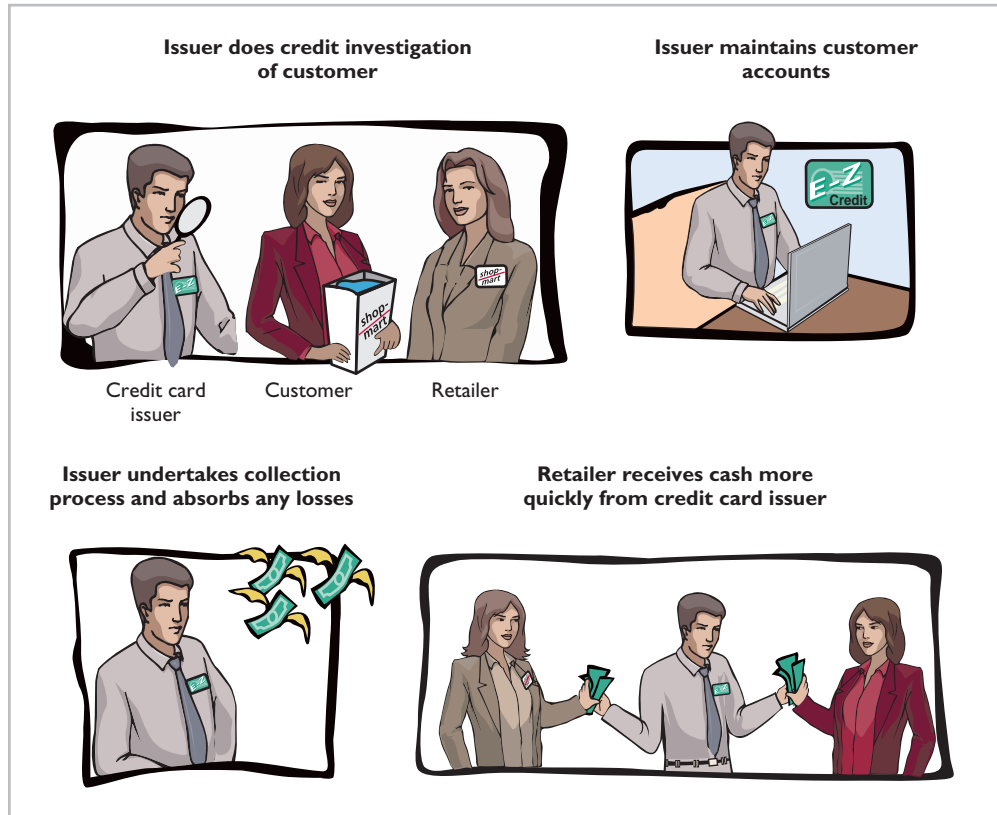

Illustration 8-10
Advantages of credit cards
to the retailer

ACCOUNTING ACROSS THE ORGANIZATION

How Does a Credit Card Work?

Most of you know how to use a credit card, but do you know what happens in the transaction and how the transaction is processed? Suppose that you use a **Visa** card to purchase some new ties at **Nordstrom**. The salesperson swipes your card, which allows the information on the magnetic strip on the back of the card to be read. The salesperson then enters the amount of the purchase. The machine contacts the Visa computer, which routes the call back to the bank that issued your Visa card. The issuing bank verifies that the account exists, that the card is not stolen, and that you have not exceeded your credit limit. At this point, the slip is printed, which you sign.

Visa acts as the clearing agent for the transaction. It transfers funds from the issuing bank to Nordstrom's bank account. Generally this transfer of funds, from sale to the receipt of funds in the merchant's account, takes two to three days.

In the meantime, Visa puts a pending charge on your account for the amount of the tie purchase; that amount counts immediately against your available credit limit. At the end of the billing period, Visa sends you an invoice (your credit card bill) which shows the various charges you made, and the amounts that Visa expended on your behalf, for the month. You then must "pay the piper" for your stylish new ties.

Assume that Nordstrom prepares a bank reconciliation at the end of each month. If some credit card sales have not been processed by the bank, how should Nordstrom treat these transactions on its bank reconciliation? (See page 418.)

> DO IT!

Disposition of Accounts Receivable

Mehl Wholesalers Co. has been expanding faster than it can raise capital. According to its local banker, the company has reached its debt ceiling. Mehl's suppliers (creditors) are demanding payment within 30 days of the invoice date for goods acquired, but Mehl's customers are slow in paying (60–90 days). As a result, Mehl has a cash flow problem.

Mehl needs \$120,000 in cash to safely cover next Friday's payroll. Its balance of outstanding accounts receivables totals \$750,000. What might Mehl do to alleviate this cash crunch? Record the entry that Mehl would make when it raises the needed cash.

Solution

Action Plan

- ✓ To speed up the collection of cash, sell receivables to a factor.
- ✓ Calculate service charge expense as a percentage of the factored receivables.

Assuming that Mehl Wholesalers factors \$125,000 of its accounts receivable at a 1% service charge, it would make the following entry.

Cash	123,750	
Service Charge Expense (1% × \$125,000)	1,250	
Accounts Receivable		125,000
(To record sale of receivables to factor)		

Related exercise material: **BE8-8, E8-7, E8-8, E8-9, and DO IT! 8-2.**

The Navigator

Notes Receivable

Companies may also grant credit in exchange for a formal credit instrument known as a promissory note. A **promissory note** is a written promise to pay a specified amount of money on demand or at a definite time. Promissory notes may be used (1) when individuals and companies lend or borrow money, (2) when the amount of the transaction and the credit period exceed normal limits, or (3) in settlement of accounts receivable.

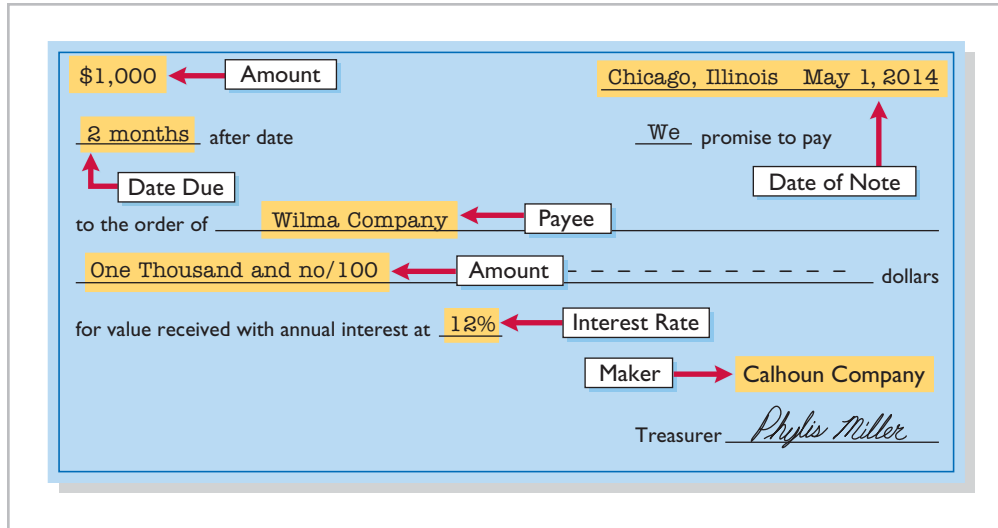

In a promissory note, the party making the promise to pay is called the **maker**. The party to whom payment is to be made is called the **payee**. The note may specifically identify the payee by name or may designate the payee simply as the bearer of the note.

In the note shown in Illustration 8-11 (page 392), Calhoun Company is the maker, and Wilma Company is the payee. To Wilma Company, the promissory note is a note receivable. To Calhoun Company, it is a note payable.

Notes receivable give the holder a stronger legal claim to assets than do accounts receivable. Like accounts receivable, notes receivable can be readily sold to another party. Promissory notes are negotiable instruments (as are checks), which means that they can be transferred to another party by endorsement.

Companies frequently accept notes receivable from customers who need to extend the payment of an outstanding account receivable. They often require such notes from high-risk customers. In some industries (such as the pleasure and sport boat industry), all credit sales are supported by notes. The majority of notes, however, originate from loans.

Illustration 8-11
Promissory note

Helpful Hint

Who are the two key parties to a note, and what entry does each party make when the note is issued?

Answer:

1. The maker, Calhoun Company, credits Notes Payable.
2. The payee, Wilma Company, debits Notes Receivable.

The basic issues in accounting for notes receivable are the same as those for accounts receivable:

1. **Recognizing** notes receivable.
2. **Valuing** notes receivable.
3. **Disposing** of notes receivable.

On the following pages, we will look at these issues. Before we do, we need to consider two issues that do not apply to accounts receivable: maturity date and computing interest.

Determining the Maturity Date

LEARNING OBJECTIVE 5
Compute the maturity date of and interest on notes receivable.

When the life of a note is expressed in terms of months, you find the date when it matures by counting the months from the date of issue. For example, the maturity date of a three-month note dated May 1 is August 1. A note drawn on the last day of a month matures on the last day of a subsequent month. That is, a July 31 note due in two months matures on September 30.

When the due date is stated in terms of days, you need to count the exact number of days to determine the maturity date. In counting, **omit the date the note is issued but include the due date**. For example, the maturity date of a 60-day note dated July 17 is September 15, computed as follows.

Illustration 8-12
Computation of maturity date

Term of note		60 days
July (31–17)	14	
August	31	45
Maturity date: September		<u>15</u>

Illustration 8-13 shows three ways of stating the maturity date of a promissory note.

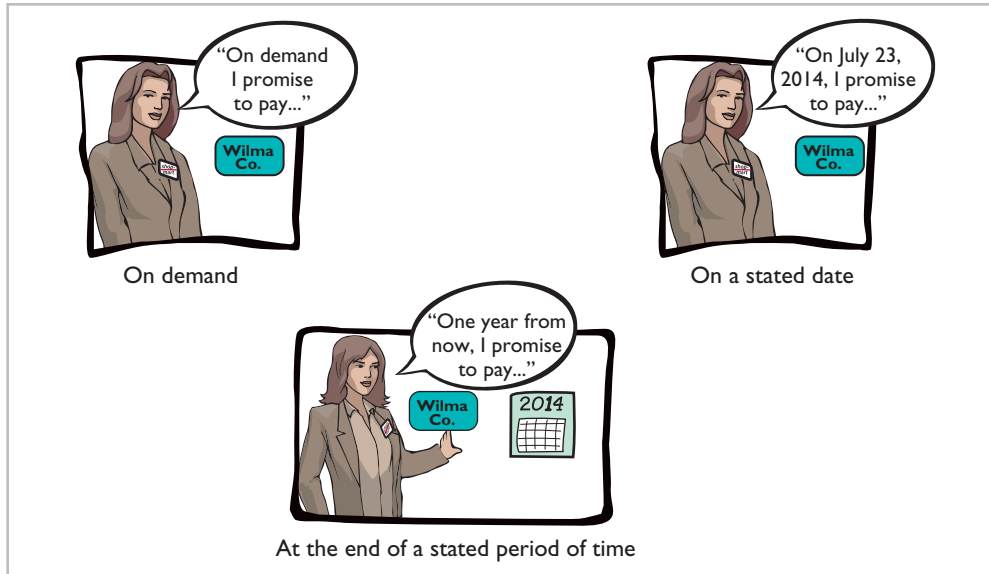

Illustration 8-13
Maturity date of different notes

Computing Interest

Illustration 8-14 gives the basic formula for computing interest on an interest-bearing note.

$$\text{Face Value of Note} \times \text{Annual Interest Rate} \times \text{Time in Terms of One Year} = \text{Interest}$$

Illustration 8-14
Formula for computing interest

The interest rate specified in a note is an **annual** rate of interest. The time factor in the computation in Illustration 8-14 expresses the fraction of a year that the note is outstanding. When the maturity date is stated in days, the time factor is often the number of days divided by 360. When counting days, omit the date that the note is issued but include the due date. When the due date is stated in months, the time factor is the number of months divided by 12. Illustration 8-15 shows computation of interest for various time periods.

Helpful Hint
The interest rate specified is the *annual* rate.

Terms of Note	Interest Computation
	Face × Rate × Time = Interest
\$ 730, 18%, 120 days	\$ 730 × 18% × 120/360 = \$ 43.80
\$1,000, 15%, 6 months	\$1,000 × 15% × 6/12 = \$ 75.00
\$2,000, 12%, 1 year	\$2,000 × 12% × 1/1 = \$240.00

Illustration 8-15
Computation of interest

There are different ways to calculate interest. For example, the computation in Illustration 8-15 assumes 360 days for the length of the year. Most financial instruments use 365 days to compute interest. *For homework problems, assume 360 days to simplify computations.*

LEARNING OBJECTIVE 6

Explain how companies recognize notes receivable.

A	=	L	+	SE
+1,000				
-1,000				
Cash Flows				
no effect				

Recognizing Notes Receivable

To illustrate the basic entry for notes receivable, we will use Calhoun Company's \$1,000, two-month, 12% promissory note dated May 1. Assuming that Calhoun Company wrote the note to settle an open account, Wilma Company makes the following entry for the receipt of the note.

May 1	Notes Receivable	1,000	
	Accounts Receivable—Calhoun Company		1,000
	(To record acceptance of Calhoun Company note)		

The company records the note receivable at its **face value**, the amount shown on the face of the note. No interest revenue is reported when the note is accepted because the revenue recognition principle does not recognize revenue until the performance obligation is satisfied. Interest is earned (accrued) as time passes.

If a company lends money using a note, the entry is a debit to Notes Receivable and a credit to Cash in the amount of the loan.

Valuing Notes Receivable

LEARNING OBJECTIVE 7

Describe how companies value notes receivable.

Valuing short-term notes receivable is the same as valuing accounts receivable. Like accounts receivable, companies report short-term notes receivable at their **cash (net) realizable value**. The notes receivable allowance account is Allowance for Doubtful Accounts. The estimations involved in determining cash realizable value and in recording bad debt expense and the related allowance are done similarly to accounts receivable.

INTERNATIONAL INSIGHT

Can Fair Value Be Unfair?

The FASB and the International Accounting Standards Board (IASB) are considering proposals for how to account for financial instruments. The FASB has proposed that loans and receivables be accounted for at their fair value (the amount they could currently be sold for), as are most investments. The FASB believes that this would provide a more accurate view of a company's financial position. It might be especially useful as an early warning when a bank is in trouble because of poor-quality loans. But, banks argue that fair values are difficult to estimate accurately. They are also concerned that volatile fair values could cause large swings in a bank's reported net income.

Source: David Reilly, "Banks Face a Mark-to-Market Challenge," *Wall Street Journal Online* (March 15, 2010).

What are the arguments in favor of and against fair value accounting for loans and receivables? (See page 418.)

Disposing of Notes Receivable

LEARNING OBJECTIVE 8

Describe the entries to record the disposition of notes receivable.

Notes may be held to their maturity date, at which time the face value plus accrued interest is due. In some situations, the maker of the note defaults, and the payee must make an appropriate adjustment. In other situations, similar to accounts receivable, the holder of the note speeds up the conversion to cash by selling the receivables (described later in this chapter).

HONOR OF NOTES RECEIVABLE

A note is **honored** when its maker pays in full at its maturity date. For each interest-bearing note, the **amount due at maturity** is the face value of the note plus interest for the length of time specified on the note.

To illustrate, assume that Wolder Co. lends Higley Co. \$10,000 on June 1, accepting a five-month, 9% interest note. In this situation, interest is \$375 ($\$10,000 \times 9\% \times \frac{5}{12}$). The amount due, the maturity value, is \$10,375 ($\$10,000 + \375). To obtain payment, Wolder (the payee) must present the note either to Higley Co. (the maker) or to the maker's agent, such as a bank. If Wolder presents the note to Higley Co. on November 1, the maturity date, Wolder's entry to record the collection is:

Nov. 1	Cash	10,375		
	Notes Receivable		10,000	
	Interest Revenue ($\$10,000 \times 9\% \times \frac{5}{12}$)		375	
	(To record collection of Higley note and interest)			

A	=	L	+	SE
+10,375				
-10,000				
				+375 Rev
<hr/>				
Cash Flows				
+10,375				

ACCRUAL OF INTEREST RECEIVABLE

Suppose instead that Wolder Co. prepares financial statements as of September 30. The timeline in Illustration 8-16 presents this situation.

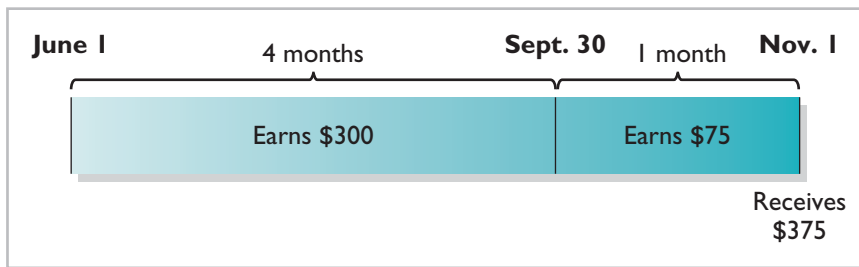

Illustration 8-16
Timeline of interest earned

To reflect interest earned but not yet received, Wolder must accrue interest on September 30. In this case, the adjusting entry by Wolder is for four months of interest, or \$300, as shown below.

Sept. 30	Interest Receivable ($\$10,000 \times 9\% \times \frac{4}{12}$)	300		
	Interest Revenue		300	
	(To accrue 4 months' interest on Higley note)			

A	=	L	+	SE
+300				
				+300 Rev
<hr/>				
Cash Flows				
no effect				

At the note's maturity on November 1, Wolder receives \$10,375. This amount represents repayment of the \$10,000 note as well as five months of interest, or \$375, as shown below. The \$375 is comprised of the \$300 Interest Receivable accrued on September 30 plus \$75 earned during October. Wolder's entry to record the honoring of the Higley note on November 1 is:

Nov. 1	Cash [$\$10,000 + (\$10,000 \times 9\% \times \frac{5}{12})$]	10,375		
	Notes Receivable		10,000	
	Interest Receivable		300	
	Interest Revenue ($\$10,000 \times 9\% \times \frac{1}{12}$)		75	
	(To record collection of Higley note and interest)			

A	=	L	+	SE
+10,375				
-10,000				
				-300
				+75 Rev
<hr/>				
Cash Flows				
+10,375				

In this case, Wolder credits Interest Receivable because the receivable was established in the adjusting entry on September 30.

DISHONOR OF NOTES RECEIVABLE

A **dishonored (defaulted) note** is a note that is not paid in full at maturity. A dishonored note receivable is no longer negotiable. However, the payee still has a claim against the maker of the note for both the note and the interest. Therefore, the note holder usually transfers the Notes Receivable account to an account receivable.

To illustrate, assume that Higley Co. on November 1 indicates that it cannot pay at the present time. The entry to record the dishonor of the note depends on whether Wolder Co. expects eventual collection. If it does expect eventual collection, Wolder Co. debits the amount due (face value and interest) on the note to Accounts Receivable. It would make the following entry at the time the note is dishonored (assuming no previous accrual of interest).

A	=	L	+	SE
+10,375				
-10,000				
				+375 Rev
Cash Flows				
no effect				

Nov. 1	Accounts Receivable—Higley Notes Receivable Interest Revenue (To record the dishonor of Higley note)	10,375 10,000 375
--------	---	---------------------------------

If instead, on November 1, there is no hope of collection, the note holder would write off the face value of the note by debiting Allowance for Doubtful Accounts. No interest revenue would be recorded because collection will not occur.

SALE OF NOTES RECEIVABLE

The accounting for the sale of notes receivable is recorded similarly to the sale of accounts receivable. The accounting entries for the sale of notes receivable are left for a more advanced course.

ACCOUNTING ACROSS THE ORGANIZATION

Bad Information Can Lead to Bad Loans

Many factors have contributed to the recent credit crisis. One significant factor that resulted in many bad loans was a failure by lenders to investigate loan customers sufficiently. For example, **Countrywide Financial Corporation** wrote many loans under its "Fast and Easy" loan program. That program allowed borrowers to provide little or no documentation for their income or their assets. Other lenders had similar programs, which earned the nickname "liars' loans." One study found that in these situations, 60% of applicants overstated their incomes by more than 50% in order to qualify for a loan. Critics of the banking industry say that because loan officers were compensated for loan volume, and because banks were selling the loans to investors rather than holding them, the lenders had little incentive to investigate the borrowers' creditworthiness.

Source: Glenn R. Simpson and James R. Hagerty, "Countrywide Loss Focuses Attention on Underwriting," *Wall Street Journal* (April 30, 2008), p. B1; and Michael Corkery, "Fraud Seen as Driver in Wave of Foreclosures," *Wall Street Journal* (December 21, 2007), p. A1.

? What steps should the banks have taken to ensure the accuracy of financial information provided on loan applications? (See page 418.)

> DO IT!

Notes Receivable

Gambit Stores accepts from Leonard Co. a \$3,400, 90-day, 6% note dated May 10 in settlement of Leonard's overdue account. (a) What is the maturity date of the note? (b) What entry does Gambit make at the maturity date, assuming Leonard pays the note and interest in full at that time?

Solution

Action Plan

- ✓ Count the exact number of days to determine the maturity date. Omit the date the note is issued, but include the due date.
- ✓ Determine whether interest was accrued.
- ✓ Compute the accrued interest.
- ✓ Prepare the entry for payment of the note and interest.
- ✓ The entry to record interest at maturity in this solution assumes no interest has been previously accrued on this note.

(a) The maturity date is August 8, computed as follows.

Term of note:		90 days
May (31 – 10)	21	
June	30	
July	<u>31</u>	<u>82</u>
Maturity date: August		<u>8</u>

(b) The interest payable at the maturity date is \$51, computed as follows.

$$\begin{array}{rcccccc} \text{Face} & \times & \text{Rate} & \times & \text{Time} & = & \text{Interest} \\ \$3,400 & \times & 6\% & \times & 90/360 & = & \$51 \end{array}$$

The entry recorded by Gambit Stores at the maturity date is:

Cash		3,451	
Notes Receivable			3,400
Interest Revenue			51
(To record collection of Leonard note)

Statement Presentation and Analysis

Presentation

Companies should identify in the balance sheet or in the notes to the financial statements each of the major types of receivables. Short-term receivables appear in the current assets section of the balance sheet. Short-term investments appear before short-term receivables because these investments are more liquid (nearer to cash). Companies report both the gross amount of receivables and the allowance for doubtful accounts.

In a multiple-step income statement, companies report bad debt expense and service charge expense as selling expenses in the operating expenses section. Interest revenue appears under "Other revenues and gains" in the nonoperating activities section of the income statement.

Analysis

Investors and corporate managers compute financial ratios to evaluate the liquidity of a company's accounts receivable. They use the **accounts receivable turnover ratio** to assess the liquidity of the receivables. This ratio measures the number of times, on average, the company collects accounts receivable during the period. It is computed by dividing net credit sales (net sales less cash sales) by the average net accounts receivable during the year. Unless seasonal factors are

LEARNING OBJECTIVE 9

Explain the statement presentation and analysis of receivables.

significant, average net accounts receivable outstanding can be computed from the beginning and ending balances of net accounts receivable.

For example, in 2009 **Cisco Systems** had net sales of \$32,420 million for the year. It had a beginning accounts receivable (net) balance of \$3,177 million and an ending accounts receivable (net) balance of \$4,929 million. Assuming that Cisco's sales were all on credit, its accounts receivable turnover ratio is computed as follows.

Illustration 8-17

Accounts receivable turnover ratio and computation

Net Credit Sales	÷	Average Net Accounts Receivable	=	Accounts Receivable Turnover
\$32,420	÷	$\frac{\$3,177 + \$4,929}{2}$	=	8 times

The result indicates an accounts receivable turnover ratio of 8 times per year. The higher the turnover ratio, the more liquid the company's receivables.

A variant of the accounts receivable turnover ratio that makes the liquidity even more evident is its conversion into an **average collection period** in terms of days. This is done by dividing the turnover ratio into 365 days. For example, Cisco's turnover of 8 times is divided into 365 days, as shown in Illustration 8-18, to obtain approximately 46 days. This means that it takes Cisco 46 days to collect its accounts receivable.

Illustration 8-18

Average collection period for receivables formula and computation

Days in Year	÷	Accounts Receivable Turnover	=	Average Collection Period in Days
365 days	÷	8 times	=	46 days

Companies frequently use the average collection period to assess the effectiveness of a company's credit and collection policies. The general rule is that the collection period should not greatly exceed the credit term period (that is, the time allowed for payment).

> DO IT!

Analysis of Receivables

In 2014, Phil Mickelson Company has net credit sales of \$923,795 for the year. It had a beginning accounts receivable (net) balance of \$38,275 and an ending accounts receivable (net) balance of \$35,988. Compute Phil Mickelson Company's (a) accounts receivable turnover and (b) average collection period in days.

Solution

Action Plan

- ✓ Review the formula to compute the accounts receivable turnover.
- ✓ Make sure that both the beginning and ending accounts receivable balances are considered in the computation.
- ✓ Review the formula to compute the average collection period in days.

(a)	Net credit sales	÷	Average net accounts receivable	=	Accounts receivable turnover
	\$923,795	÷	$\frac{38,275 + 35,988}{2}$	=	24.9 times
(b)	Days in year	÷	Accounts receivable turnover	=	Average collection period in days
	365	÷	24.9 times	=	14.7 days

Related exercise material: **BE8-12, E8-14, and DO IT! 8-4.**

> Comprehensive **DO IT!**

The following selected transactions relate to Dylan Company.

- Mar. 1 Sold \$20,000 of merchandise to Potter Company, terms 2/10, n/30.
- 11 Received payment in full from Potter Company for balance due.
- 12 Accepted Juno Company's \$20,000, 6-month, 12% note for balance due on existing accounts receivable.
- 13 Made Dylan Company credit card sales for \$13,200.
- 15 Made Visa credit card sales totaling \$6,700. A 3% service fee is charged by Visa.
- Apr. 11 Sold accounts receivable of \$8,000 to Harcot Factor. Harcot Factor assesses a service charge of 2% of the amount of receivables sold.
- 13 Received collections of \$8,200 on Dylan Company credit card sales and added finance charges of 1.5% to the remaining balances.
- May 10 Wrote off as uncollectible \$16,000 of accounts receivable. Dylan uses the percentage-of-sales basis to estimate bad debts.
- June 30 Credit sales recorded during the first 6 months total \$2,000,000. The bad debt percentage is 1% of credit sales. At June 30, the balance in the allowance account is \$3,500.
- July 16 One of the accounts receivable written off in May was from J. Simon, who pays the amount due, \$4,000, in full.

Instructions

Prepare the journal entries for the transactions.

Solution to Comprehensive DO IT!

Action Plan

- ✓ Generally, record accounts receivable at invoice price.
- ✓ Recognize that sales returns and allowances and cash discounts reduce the amount received on accounts receivable.
- ✓ Record service charge expense on the seller's books when accounts receivable are sold.
- ✓ Prepare an adjusting entry for bad debt expense.
- ✓ Ignore any balance in the allowance account under the percentage-of-sales basis. Recognize the balance in the allowance account under the percentage-of-receivables basis.
- ✓ Record write-offs of accounts receivable only in balance sheet accounts.

Mar.	1	Accounts Receivable—Potter Sales Revenue (To record sales on account)	20,000		20,000

The Navigator

SUMMARY OF LEARNING OBJECTIVES

The Navigator

- 1 Identify the different types of receivables.** Receivables are frequently classified as (1) accounts, (2) notes, and (3) other. Accounts receivable are amounts customers owe on account. Notes receivable are claims for which lenders issue formal instruments of credit as proof of the debt. Other receivables include nontrade receivables such as interest receivable, loans to company officers, advances to employees, and income taxes refundable.
- 2 Explain how companies recognize accounts receivable.** Companies record accounts receivable when they provide a service on account or at the point-of-sale of merchandise on account. Sales revenues are reduced by sales returns and allowances. Cash discounts reduce the amount received on accounts receivable. When interest is charged on a past due receivable, the company adds this interest to the accounts receivable balance and recognizes it as interest revenue.
- 3 Distinguish between the methods and bases companies use to value accounts receivable.** There are two methods of accounting for uncollectible accounts: the allowance method and the direct write-off method. Companies may use either the percentage-of-sales or the percentage-of-receivables basis to estimate uncollectible accounts using the allowance method. The percentage-of-sales basis emphasizes the expense recognition (matching) principle. The percentage-of-receivables basis emphasizes the cash realizable value of the accounts receivable. An aging schedule is often used with this basis.
- 4 Describe the entries to record the disposition of accounts receivable.** When a company collects an account receivable, it credits Accounts Receivable. When a company sells (factors) an account receivable, a service charge expense reduces the amount received.
- 5 Compute the maturity date of and interest on notes receivable.** For a note stated in months, the maturity date is found by counting the months from the date of issue. For a note stated in days, the number of days is counted, omitting the issue date and counting the due date. The formula for computing interest is: Face value \times Interest rate \times Time.
- 6 Explain how companies recognize notes receivable.** Companies record notes receivable at face value. In some cases, it is necessary to accrue interest prior to maturity. In this case, companies debit Interest Receivable and credit Interest Revenue.
- 7 Describe how companies value notes receivable.** As with accounts receivable, companies report notes receivable at their cash (net) realizable value. The notes receivable allowance account is Allowance for Doubtful Accounts. The computation and estimations involved in valuing notes receivable at cash realizable value, and in recording the proper amount of bad debt expense and related allowance, are similar to those for accounts receivable.
- 8 Describe the entries to record the disposition of notes receivable.** Notes can be held to maturity. At that time the face value plus accrued interest is due, and the note is removed from the accounts. In many cases, the holder of the note speeds up the conversion by selling the receivable to another party (a factor). In some situations, the maker of the note dishonors the note (defaults), in which case the company transfers the note and accrued interest to an account receivable or writes off the note.
- 9 Explain the statement presentation and analysis of receivables.** Companies should identify in the balance sheet or in the notes to the financial statements each major type of receivable. Short-term receivables are considered current assets. Companies report the gross amount of receivables and the allowance for doubtful accounts. They report bad debt and service charge expenses in the multiple-step income statement as operating (selling) expenses; interest revenue appears under other revenues and gains in the nonoperating activities section of the statement. Managers and investors evaluate accounts receivable for liquidity by computing a turnover ratio and an average collection period.

GLOSSARY

Accounts receivable Amounts owed by customers on account. (p. 380).

Accounts receivable turnover ratio A measure of the liquidity of accounts receivable; computed by dividing net credit sales by average net accounts receivable. (p. 397).

Aging the accounts receivable The analysis of customer balances by the length of time they have been unpaid. (p. 387).

Allowance method A method of accounting for bad debts that involves estimating uncollectible accounts at the end of each period. (p. 383).

Average collection period The average amount of time that a receivable is outstanding; calculated by dividing 365 days by the accounts receivable turnover ratio. (p. 398).

Bad Debt Expense An expense account to record uncollectible receivables. (p. 382).

Cash (net) realizable value The net amount a company expects to receive in cash. (p. 383).

Direct write-off method A method of accounting for bad debts that involves expensing accounts at the time they are determined to be uncollectible. (p. 382).

Dishonored (defaulted) note A note that is not paid in full at maturity. (p. 396).

Factor A finance company or bank that buys receivables from businesses and then collects the payments directly from the customers. (p. 389).

Maker The party in a promissory note who is making the promise to pay. (p. 391).

Notes receivable Written promise (as evidenced by a formal instrument) for amounts to be received. (p. 380).

Other receivables Various forms of nontrade receivables, such as interest receivable and income taxes refundable. (p. 380).

Payee The party to whom payment of a promissory note is to be made. (p. 391).

Percentage-of-receivables basis Management estimates what percentage of receivables will result in losses from uncollectible accounts. (p. 387).

Percentage-of-sales basis Management estimates what percentage of credit sales will be uncollectible. (p. 386).

Promissory note A written promise to pay a specified amount of money on demand or at a definite time. (p. 391).

Receivables Amounts due from individuals and other companies. (p. 380).

Trade receivables Notes and accounts receivable that result from sales transactions. (p. 380).

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more components are available for practice in WileyPLUS.

SELF-TEST QUESTIONS

Answers are on page 419.

- (LO 1) 1. Receivables are frequently classified as:
- accounts receivable, company receivables, and other receivables.
 - accounts receivable, notes receivable, and employee receivables.
 - accounts receivable and general receivables.
 - accounts receivable, notes receivable, and other receivables.
- (LO 2) 2. Buehler Company on June 15 sells merchandise on account to Chaz Co. for \$1,000, terms 2/10, n/30. On June 20, Chaz Co. returns merchandise worth \$300 to Buehler Company. On June 24, payment is received from Chaz Co. for the balance due. What is the amount of cash received?
- \$700.
 - \$680.
 - \$686.
 - None of the above.
- (LO 3) 3. Which of the following approaches for bad debts is best described as a balance sheet method?
- Percentage-of-receivables basis.
 - Direct write-off method.
 - Percentage-of-sales basis.
 - Both a and b.
4. Hughes Company has a credit balance of \$5,000 in its Allowance for Doubtful Accounts before any adjustments are made at the end of the year. Based on review and aging of its accounts receivable at the end of the year, Hughes estimates that \$60,000 of its receivables are uncollectible. The amount of bad debt expense which should be reported for the year is:
- \$5,000.
 - \$55,000.
 - \$60,000.
 - \$65,000.
5. Use the same information as in question 4, except that Hughes has a debit balance of \$5,000 in its Allowance for Doubtful Accounts before any adjustments are made at the end of the year. In this situation, the amount of bad debt expense that should be reported for the year is:
- \$5,000.
 - \$55,000.
 - \$60,000.
 - \$65,000.
6. Net sales for the month are \$800,000, and bad debts are expected to be 1.5% of net sales. The company uses the percentage-of-sales basis. If Allowance for Doubtful Accounts has a credit balance of \$15,000 before adjustment, what is the balance after adjustment?
- \$15,000.
 - \$27,000.
 - \$23,000.
 - \$31,000.

(LO 3) 7. In 2014, Roso Carlson Company had net credit sales of \$750,000. On January 1, 2014, Allowance for Doubtful Accounts had a credit balance of \$18,000. During 2014, \$30,000 of uncollectible accounts receivable were written off. Past experience indicates that 3% of net credit sales become uncollectible. What should be the adjusted balance of Allowance for Doubtful Accounts at December 31, 2014?

- (a) \$10,050. (c) \$22,500.
 (b) \$10,500. (d) \$40,500.

(LO 3) 8. An analysis and aging of the accounts receivable of Prince Company at December 31 reveals the following data.

Accounts receivable	\$800,000
Allowance for doubtful accounts per books before adjustment	50,000
Amounts expected to become uncollectible	65,000

The cash realizable value of the accounts receivable at December 31, after adjustment, is:

- (a) \$685,000. (c) \$800,000.
 (b) \$750,000. (d) \$735,000.

(LO 6) 9. One of the following statements about promissory notes is incorrect. The *incorrect* statement is:

- (a) The party making the promise to pay is called the maker.
 (b) The party to whom payment is to be made is called the payee.
 (c) A promissory note is not a negotiable instrument.
 (d) A promissory note is often required from high-risk customers.

(LO 4) 10. Which of the following statements about Visa credit card sales is *incorrect*?

- (a) The credit card issuer makes the credit investigation of the customer.
 (b) The retailer is not involved in the collection process.
 (c) Two parties are involved.
 (d) The retailer receives cash more quickly than it would from individual customers on account.

(LO 4) 11. Blinka Retailers accepted \$50,000 of Citibank Visa credit card charges for merchandise sold on July 1. Citibank charges 4% for its credit card use. The entry to record this transaction by Blinka Retailers will include a credit to Sales Revenue of \$50,000 and a debit(s) to:

- (a) Cash \$48,000
 and Service Charge Expense \$2,000
 (b) Accounts Receivable \$48,000
 and Service Charge Expense \$2,000
 (c) Cash \$50,000
 (d) Accounts Receivable \$50,000

12. Foti Co. accepts a \$1,000, 3-month, 6% promissory note in settlement of an account with Bartelt Co. The entry to record this transaction is as follows. **(LO 6)**

- (a) Notes Receivable | 1,015 |
 Accounts Receivable | | 1,015
 (b) Notes Receivable | 1,000 |
 Accounts Receivable | | 1,000
 (c) Notes Receivable | 1,000 |
 Sales Revenue | | 1,000
 (d) Notes Receivable | 1,030 |
 Accounts Receivable | | 1,030

13. Ginter Co. holds Kolar Inc.'s \$10,000, 120-day, 9% note. The entry made by Ginter Co. when the note is collected, assuming no interest has been previously accrued, is: **(LO 8)**

- (a) Cash | 10,300 |
 Notes Receivable | | 10,300
 (b) Cash | 10,000 |
 Notes Receivable | | 10,000
 (c) Accounts Receivable | 10,300 |
 Notes Receivable | | 10,000
 Interest Revenue | | 300
 (d) Cash | 10,300 |
 Notes Receivable | | 10,000
 Interest Revenue | | 300

14. Accounts and notes receivable are reported in the current assets section of the balance sheet at: **(LO 9)**

- (a) cash (net) realizable value
 (b) net book value.
 (c) lower-of-cost-or-market value.
 (d) invoice cost.

15. Oliveras Company had net credit sales during the year of \$800,000 and cost of goods sold of \$500,000. The balance in accounts receivable at the beginning of the year was \$100,000, and the end of the year it was \$150,000. What were the accounts receivable turnover ratio and the average collection period in days? **(LO 9)**

- (a) 4.0 and 91.3 days. (c) 6.4 and 57 days.
 (b) 5.3 and 68.9 days. (d) 8.0 and 45.6 days.

Go to the book's companion website, www.wiley.com/college/weygandt, for additional Self-Test Questions.

QUESTIONS

1. What is the difference between an account receivable and a note receivable?
2. What are some common types of receivables other than accounts receivable and notes receivable?
3. Texaco Oil Company issues its own credit cards. Assume that Texaco charges you \$40 interest on an

unpaid balance. Prepare the journal entry that Texaco makes to record this revenue.

4. What are the essential features of the allowance method of accounting for bad debts?
5. Roger Holloway cannot understand why cash realizable value does not decrease when an uncollectible

account is written off under the allowance method. Clarify this point for Roger Holloway.

6. Distinguish between the two bases that may be used in estimating uncollectible accounts.
7. Borke Company has a credit balance of \$3,200 in Allowance for Doubtful Accounts. The estimated bad debt expense under the percentage-of-sales basis is \$3,700. The total estimated uncollectibles under the percentage-of-receivables basis is \$5,800. Prepare the adjusting entry under each basis.
8. How are bad debts accounted for under the direct write-off method? What are the disadvantages of this method?
9. Freida Company accepts both its own credit cards and national credit cards. What are the advantages of accepting both types of cards?
10. An article recently appeared in the *Wall Street Journal* indicating that companies are selling their receivables at a record rate. Why are companies selling their receivables?
11. WestSide Textiles decides to sell \$800,000 of its accounts receivable to First Factors Inc. First Factors assesses a service charge of 3% of the amount of receivables sold. Prepare the journal entry that WestSide Textiles makes to record this sale.
12. Your roommate is uncertain about the advantages of a promissory note. Compare the advantages of a note receivable with those of an account receivable.
13. How may the maturity date of a promissory note be stated?
14. Indicate the maturity date of each of the following promissory notes:

Date of Note

Terms

- | | |
|--------------|-----------------------------|
| (a) March 13 | one year after date of note |
| (b) May 4 | 3 months after date |
| (c) June 20 | 30 days after date |
| (d) July 1 | 60 days after date |

15. Compute the missing amounts for each of the following notes.

	<u>Principal</u>	<u>Annual Interest Rate</u>	<u>Time</u>	<u>Total Interest</u>
(a)	?	9%	120 days	\$ 450
(b)	\$30,000	10%	3 years	?
(c)	\$60,000	?	5 months	\$3,000
(d)	\$45,000	8%	?	\$1,200

16. In determining interest revenue, some financial institutions use 365 days per year and others use 360 days. Why might a financial institution use 360 days?
17. Jana Company dishonors a note at maturity. What are the options available to the lender?
18. **General Motors Corporation** has accounts receivable and notes receivable. How should the receivables be reported on the balance sheet?
19. The accounts receivable turnover ratio is 8.14, and average net receivables during the period are \$400,000. What is the amount of net credit sales for the period?
20.  **PEPSICO** What percentage does **PepsiCo's** allowance for doubtful accounts represent as a percentage of its gross receivables?

BRIEF EXERCISES

BE8-1 Presented below are three receivables transactions. Indicate whether these receivables are reported as accounts receivable, notes receivable, or other receivables on a balance sheet.

- (a) Sold merchandise on account for \$64,000 to a customer.
- (b) Received a promissory note of \$57,000 for services performed.
- (c) Advanced \$8,000 to an employee.

Identify different types of receivables.

(LO 1)

BE8-2 Record the following transactions on the books of Galaxy Co.

- (a) On July 1, Galaxy Co. sold merchandise on account to Kingston Inc. for \$17,200, terms 2/10, n/30.
- (b) On July 8, Kingston Inc. returned merchandise worth \$3,800 to Galaxy Co.
- (c) On July 11, Kingston Inc. paid for the merchandise.

Record basic accounts receivable transactions.

(LO 2)

BE8-3 During its first year of operations, Energy Company had credit sales of \$3,000,000; \$600,000 remained uncollected at year-end. The credit manager estimates that \$31,000 of these receivables will become uncollectible.

- (a) Prepare the journal entry to record the estimated uncollectibles.
- (b) Prepare the current assets section of the balance sheet for Energy Company. Assume that in addition to the receivables it has cash of \$90,000, inventory of \$118,000, and prepaid insurance of \$7,500.

Prepare entry for allowance method and partial balance sheet.

(LO 3, 9)

BE8-4 At the end of 2014, Endrun Co. has accounts receivable of \$700,000 and an allowance for doubtful accounts of \$54,000. On January 24, 2015, the company learns that its receivable from Marcello is not collectible, and management authorizes a write-off of \$6,200.

- (a) Prepare the journal entry to record the write-off.
- (b) What is the cash realizable value of the accounts receivable (1) before the write-off and (2) after the write-off?

Prepare entry for write-off; determine cash realizable value.

(LO 3)

Prepare entries for collection of bad debt write-off.

(LO 3)

Prepare entry using percentage-of-sales method.

(LO 3)

Prepare entry using percentage-of-receivables method.

(LO 3)

Prepare entries to dispose of accounts receivable.

(LO 4)

Compute interest and determine maturity dates on notes.

(LO 5)

Determine maturity dates and compute interest and rates on notes.

(LO 5)

Prepare entry for notes receivable exchanged for account receivable.

(LO 6)

Compute ratios to analyze receivables.

(LO 9)

BE8-5 Assume the same information as BE8-4. On March 4, 2015, Endrun Co. receives payment of \$6,200 in full from Marcello. Prepare the journal entries to record this transaction.

BE8-6 Hamblin Co. elects to use the percentage-of-sales basis in 2014 to record bad debt expense. It estimates that 2% of net credit sales will become uncollectible. Sales revenues are \$800,000 for 2014, sales returns and allowances are \$38,000, and the allowance for doubtful accounts has a credit balance of \$9,000. Prepare the adjusting entry to record bad debt expense in 2014.

BE8-7 Gleason Co. uses the percentage-of-receivables basis to record bad debt expense. It estimates that 1% of accounts receivable will become uncollectible. Accounts receivable are \$420,000 at the end of the year, and the allowance for doubtful accounts has a credit balance of \$1,500.

- Prepare the adjusting journal entry to record bad debt expense for the year.
- If the allowance for doubtful accounts had a debit balance of \$740 instead of a credit balance of \$1,500, determine the amount to be reported for bad debt expense.

BE8-8 Presented below are two independent transactions.

- Fiesta Restaurant accepted a Visa card in payment of a \$175 lunch bill. The bank charges a 4% fee. What entry should Fiesta make?
- St. Charles Company sold its accounts receivable of \$70,000. What entry should St. Charles make, given a service charge of 3% on the amount of receivables sold?

BE8-9 Compute interest and find the maturity date for the following notes.

	<u>Date of Note</u>	<u>Principal</u>	<u>Interest Rate (%)</u>	<u>Terms</u>
(a)	June 10	\$80,000	6%	60 days
(b)	July 14	\$64,000	7%	90 days
(c)	April 27	\$12,000	8%	75 days

BE8-10 Presented below are data on three promissory notes. Determine the missing amounts.

	<u>Date of Note</u>	<u>Terms</u>	<u>Maturity Date</u>	<u>Principal</u>	<u>Annual Interest Rate</u>	<u>Total Interest</u>
(a)	April 1	60 days	?	\$600,000	5%	?
(b)	July 2	30 days	?	90,000	?	\$600
(c)	March 7	6 months	?	120,000	10%	?

BE8-11 On January 10, 2014, Wilfer Co. sold merchandise on account to Elgin Co. for \$11,600, n/30. On February 9, Elgin Co. gave Wilfer Co. a 9% promissory note in settlement of this account. Prepare the journal entry to record the sale and the settlement of the account receivable.

BE8-12 The financial statements of **Minnesota Mining and Manufacturing Company (3M)** report net sales of \$20.0 billion. Accounts receivable (net) are \$2.7 billion at the beginning of the year and \$2.8 billion at the end of the year. Compute 3M's accounts receivable turnover ratio. Compute 3M's average collection period for accounts receivable in days.

DO IT! REVIEW

Prepare entry for uncollectible accounts.

(LO 3)

DO IT! 8-1 Todd Company has been in business several years. At the end of the current year, the ledger shows:

Accounts Receivable	\$ 310,000 Dr.
Sales Revenue	2,200,000 Cr.
Allowance for Doubtful Accounts	4,700 Cr.

Bad debts are estimated to be 5% of receivables. Prepare the entry to adjust Allowance for Doubtful Accounts.

DO IT! 8-2 Paltrow Distributors is a growing company whose ability to raise capital has not been growing as quickly as its expanding assets and sales. Paltrow's local banker has indicated that the company cannot increase its borrowing for the foreseeable future. Paltrow's suppliers are demanding payment for goods acquired within 30 days of the invoice date, but Paltrow's customers are slow in paying for their purchases (60–90 days). As a result, Paltrow has a cash flow problem.

Paltrow needs \$160,000 to cover next Friday's payroll. Its balance of outstanding accounts receivable totals \$1,000,000. What might Paltrow do to alleviate this cash crunch? Record the entry that Paltrow would make when it raises the needed cash. (Assume a 3% service charge.)

Prepare entry for factored accounts.

(LO 4)

DO IT! 8-3 Karbon Wholesalers accepts from Bazaar Stores a \$6,200, 4-month, 9% note dated May 31 in settlement of Bazaar's overdue account. (a) What is the maturity date of the note? (b) What is the entry made by Karbon at the maturity date, assuming Bazaar pays the note and interest in full at that time?

Prepare entries for notes receivable.

(LO 5, 8)

DO IT! 8-4 In 2014, Lauren Company has net credit sales of \$1,480,000 for the year. It had a beginning accounts receivable (net) balance of \$112,000 and an ending accounts receivable (net) balance of \$108,000. Compute Lauren Company's (a) accounts receivable turnover and (b) average collection period in days.

Compute ratios for receivables.

(LO 9)

The Navigator

EXERCISES

E8-1 Presented below are selected transactions of Menge Company. Menge sells in large quantities to other companies and also sells its product in a small retail outlet.

- March 1 Sold merchandise on account to Lynda Company for \$3,800, terms 2/10, n/30.
 3 Lynda Company returned merchandise worth \$500 to Menge.
 9 Menge collected the amount due from Lynda Company from the March 1 sale.
 15 Menge sold merchandise for \$200 in its retail outlet. The customer used his Menge credit card.
 31 Menge added 1.5% monthly interest to the customer's credit card balance.

Journalize entries related to accounts receivable.

(LO 2)

Instructions

Prepare journal entries for the transactions above.

E8-2 Presented below are two independent situations.

- (a) On January 6, Bennett Co. sells merchandise on account to Jackie Inc. for \$7,000, terms 2/10, n/30. On January 16, Jackie Inc. pays the amount due. Prepare the entries on Bennett's books to record the sale and related collection.
 (b) On January 10, Connor Bybee uses his Sheridan Co. credit card to purchase merchandise from Sheridan Co. for \$9,000. On February 10, Bybee is billed for the amount due of \$9,000. On February 12, Bybee pays \$6,000 on the balance due. On March 10, Bybee is billed for the amount due, including interest at 2% per month on the unpaid balance as of February 12. Prepare the entries on Sheridan Co.'s books related to the transactions that occurred on January 10, February 12, and March 10.

Journalize entries for recognizing accounts receivable.

(LO 2)

E8-3 The ledger of Elburn Company at the end of the current year shows Accounts Receivable \$110,000, Sales Revenue \$840,000, and Sales Returns and Allowances \$28,000.

Journalize entries to record allowance for doubtful accounts using two different bases.

(LO 3)

Instructions

- (a) If Elburn uses the direct write-off method to account for uncollectible accounts, journalize the adjusting entry at December 31, assuming Elburn determines that T. Thum's \$1,400 balance is uncollectible.
 (b) If Allowance for Doubtful Accounts has a credit balance of \$2,100 in the trial balance, journalize the adjusting entry at December 31, assuming bad debts are expected to be (1) 1% of net sales, and (2) 10% of accounts receivable.

- (c) If Allowance for Doubtful Accounts has a debit balance of \$200 in the trial balance, journalize the adjusting entry at December 31, assuming bad debts are expected to be (1) 0.75% of net sales and (2) 6% of accounts receivable.

Determine bad debt expense; prepare the adjusting entry for bad debt expense.

(LO 3)

E8-4 Leland Company has accounts receivable of \$98,100 at March 31. An analysis of the accounts shows the following information.

<u>Month of Sale</u>	<u>Balance, March 31</u>
March	\$65,000
February	17,600
January	8,500
Prior to January	7,000
	<u>\$98,100</u>

Credit terms are 2/10, n/30. At March 31, Allowance for Doubtful Accounts has a credit balance of \$900 prior to adjustment. The company uses the percentage-of-receivables basis for estimating uncollectible accounts. The company's estimate of bad debts is shown below.

<u>Age of Accounts</u>	<u>Estimated Percentage Uncollectible</u>
1–30 days	2.0%
31–60 days	5.0%
61–90 days	30.0%
Over 90 days	50.0%

Instructions

- (a) Determine the total estimated uncollectibles.
 (b) Prepare the adjusting entry at March 31 to record bad debt expense.

Journalize write-off and recovery.

(LO 3)

E8-5 At December 31, 2013, Crawford Company had a balance of \$15,000 in Allowance for Doubtful Accounts. During 2014, Crawford wrote off accounts totaling \$14,100. One of those accounts (\$1,800) was later collected. At December 31, 2014, an aging schedule indicated that the balance in Allowance for Doubtful Accounts should be \$19,000.

Instructions

Prepare journal entries to record the 2014 transactions of Crawford Company.

Journalize percentage-of-sales basis, write-off, recovery.

(LO 3)

E8-6 On December 31, 2013, Russell Co. estimated that 2% of its net sales of \$360,000 will become uncollectible. The company recorded this amount as an addition to Allowance for Doubtful Accounts. On May 11, 2014, Russell Co. determined that the B. Vetter account was uncollectible and wrote off \$1,100. On June 12, 2014, Vetter paid the amount previously written off.

Instructions

Prepare the journal entries on December 31, 2013, May 11, 2014, and June 12, 2014.

Journalize entries for the sale of accounts receivable.

(LO 4)

E8-7 Presented below are two independent situations.

- (a) On March 3, Hinckley Appliances sells \$620,000 of its receivables to Universal Factors Inc. Universal Factors assesses a finance charge of 3% of the amount of receivables sold. Prepare the entry on Hinckley Appliances' books to record the sale of the receivables.
 (b) On May 10, Cody Company sold merchandise for \$3,500 and accepted the customer's America Bank MasterCard. America Bank charges a 5% service charge for credit card sales. Prepare the entry on Cody Company's books to record the sale of merchandise.

Journalize entries for credit card sales.

(LO 4)

E8-8 Presented below are two independent situations.

- (a) On April 2, Julie Keiser uses her JCPenney Company credit card to purchase merchandise from a JCPenney store for \$1,500. On May 1, Keiser is billed for the \$1,500 amount due. Keiser pays \$900 on the balance due on May 3. On June 1, Keiser receives a bill for the amount due, including interest at 1.0% per month on the unpaid balance as of May 3. Prepare the entries on JCPenney Co.'s books related to the transactions that occurred on April 2, May 3, and June 1.
 (b) On July 4, Avalon Restaurant accepts a Visa card for a \$200 dinner bill. Visa charges a 3% service fee. Prepare the entry on Avalon's books related to this transaction.

E8-9 Burtonville Stores accepts both its own and national credit cards. During the year, the following selected summary transactions occurred.

- Jan. 15 Made Burtonville credit card sales totaling \$18,000. (There were no balances prior to January 15.)
 20 Made Visa credit card sales (service charge fee 2%) totaling \$4,800.
 Feb. 10 Collected \$10,000 on Burtonville credit card sales.
 15 Added finance charges of 1.5% to Burtonville credit card account balances.

Journalize credit card sales, and indicate the statement presentation of financing charges and service charge expense.

(LO 4)

Instructions

- (a) Journalize the transactions for Burtonville Stores.
 (b) Indicate the statement presentation of the financing charges and the credit card service charge expense for Burtonville Stores.

E8-10 Reeves Supply Co. has the following transactions related to notes receivable during the last 2 months of 2014.

- Nov. 1 Loaned \$15,000 cash to Norma Jeanne on a 1-year, 9% note.
 Dec. 11 Sold goods to Bob Sharbo, Inc., receiving a \$6,750, 90-day, 8% note.
 16 Received a \$4,400, 6-month, 12% note in exchange for Richard Russo's outstanding accounts receivable.
 31 Accrued interest revenue on all notes receivable.

Journalize entries for notes receivable transactions.

(LO 5, 6)

Instructions

- (a) Journalize the transactions for Reeves Supply Co.
 (b) Record the collection of the Jeanne note at its maturity in 2015.

E8-11 Record the following transactions for Taylor Co. in the general journal.

2014

- May 1 Received a \$7,500, 1-year, 9% note in exchange for Len Monroe's outstanding accounts receivable.
 Dec. 31 Accrued interest on the Monroe note.
 Dec. 31 Closed the interest revenue account.

Journalize entries for notes receivable.

(LO 5, 6)

2015

- May 1 Received principal plus interest on the Monroe note. (No interest has been accrued in 2015.)

E8-12 Bieber Company had the following select transactions.

- May 1, 2014 Accepted Crane Company's 1-year, 12% note in settlement of a \$16,000 account receivable.
 July 1, 2014 Loaned \$25,000 cash to Sam Howard on a 9-month, 10% note.
 Dec. 31, 2014 Accrued interest on all notes receivable.
 Apr. 1, 2015 Sam Howard dishonored its note; Bieber expects it will eventually collect.
 May 1, 2015 Received principal plus interest on the Crane note.

Prepare entries for note receivable transactions.

(LO 5, 6, 8)

Instructions

Prepare journal entries to record the transactions. Bieber prepares adjusting entries once a year on December 31.

E8-13 On May 2, Ottawa Company lends \$7,600 to Cortland, Inc., issuing a 6-month, 8% note. At the maturity date, November 2, Cortland indicates that it cannot pay.

Journalize entries for dishonor of notes receivable.

(LO 5, 8)

Instructions

- (a) Prepare the entry to record the issuance of the note.
 (b) Prepare the entry to record the dishonor of the note, assuming that Ottawa Company expects collection will occur.
 (c) Prepare the entry to record the dishonor of the note, assuming that Ottawa Company does not expect collection in the future.

E8-14 Lashkova Company had accounts receivable of \$100,000 on January 1, 2014. The only transactions that affected accounts receivable during 2014 were net credit sales of \$1,000,000, cash collections of \$920,000, and accounts written off of \$30,000.

Compute accounts receivable turnover and average collection period.

(LO 9)

Instructions

- (a) Compute the ending balance of accounts receivable.
 (b) Compute the accounts receivable turnover ratio for 2014.
 (c) Compute the average collection period in days.

EXERCISES: SET B AND CHALLENGE EXERCISES

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Exercise Set B and Challenge Exercises.

PROBLEMS: SET A

Prepare journal entries related to bad debt expense.

(LO 2, 3, 9)

P8-1A At December 31, 2013, Dean Co. reported the following information on its balance sheet.

Accounts receivable	\$960,000
Less: Allowance for doubtful accounts	70,000

During 2014, the company had the following transactions related to receivables.

1. Sales on account	\$3,315,000
2. Sales returns and allowances	50,000
3. Collections of accounts receivable	2,810,000
4. Write-offs of accounts receivable deemed uncollectible	90,000
5. Recovery of bad debts previously written off as uncollectible	29,000

Instructions

- (b) Accounts receivable
\$1,325,000
ADA \$9,000
- (c) Bad debt expense
\$116,000

- Prepare the journal entries to record each of these five transactions. Assume that no cash discounts were taken on the collections of accounts receivable.
- Enter the January 1, 2014, balances in Accounts Receivable and Allowance for Doubtful Accounts, post the entries to the two accounts (use T-accounts), and determine the balances.
- Prepare the journal entry to record bad debt expense for 2014, assuming that an aging of accounts receivable indicates that expected bad debts are \$125,000.
- Compute the accounts receivable turnover ratio for 2014.

Compute bad debt amounts.

(LO 3)

P8-2A Information related to Hamilton Company for 2014 is summarized below.

Total credit sales	\$2,500,000
Accounts receivable at December 31	970,000
Bad debts written off	66,000

Instructions

- What amount of bad debt expense will Hamilton Company report if it uses the direct write-off method of accounting for bad debts?
- Assume that Hamilton Company estimates its bad debt expense to be 3% of credit sales. What amount of bad debt expense will Hamilton record if it has an Allowance for Doubtful Accounts credit balance of \$4,000?
- Assume that Hamilton Company estimates its bad debt expense based on 7% of accounts receivable. What amount of bad debt expense will Hamilton record if it has an Allowance for Doubtful Accounts credit balance of \$3,000?
- Assume the same facts as in (c), except that there is a \$3,000 debit balance in Allowance for Doubtful Accounts. What amount of bad debt expense will Hamilton record?
-  What is the weakness of the direct write-off method of reporting bad debt expense?

P8-3A Presented below is an aging schedule for Sycamore Company.

Worksheet.xls							
Home Insert Page Layout Formulas Data Review View							
P18 fx							
	A	B	C	D	E	F	G
1				Number of Days Past Due			
2

12							

Journalize entries to record transactions related to bad debts.

(LO 2, 3)

At December 31, 2014, the unadjusted balance in Allowance for Doubtful Accounts is a credit of \$9,000.

Instructions

- (a) Journalize and post the adjusting entry for bad debts at December 31, 2014.
- (b) Journalize and post to the allowance account the following events and transactions in the year 2015.
 - (1) On March 31, a \$1,000 customer balance originating in 2014 is judged uncollectible.
 - (2) On May 31, a check for \$1,000 is received from the customer whose account was written off as uncollectible on March 31.
- (c) Journalize the adjusting entry for bad debts on December 31, 2015, assuming that the unadjusted balance in Allowance for Doubtful Accounts is a debit of \$800 and the aging schedule indicates that total estimated bad debts will be \$31,600.

(a) Bad debt expense \$32,730

(c) Bad debt expense \$32,400

P8-4A Mineo Inc. uses the allowance method to estimate uncollectible accounts receivable. The company produced the following aging of the accounts receivable at year-end.

Journalize transactions related to bad debts.

(LO 2, 3)

Worksheet.xls							
Home Insert Page Layout Formulas Data Review View							
P18 fx							
	A	B	C	D	E	F	G
1				Number of Days Outstanding			
2							
3		Total	0-30	31-60	61-90	91-120	Over 120
4	Accounts receivable	193,000	70,000	46,000	39,000	23,000	\$15,000
5	% uncollectible		1%	3%	5%	8%	10%
6	Estimated bad debts						
7							

Instructions

- (a) Calculate the total estimated bad debts based on the above information.
- (b) Prepare the year-end adjusting journal entry to record the bad debts using the aged uncollectible accounts receivable determined in (a). Assume the current balance in Allowance for Doubtful Accounts is a \$3,000 debit.
- (c) Of the above accounts, \$5,000 is determined to be specifically uncollectible. Prepare the journal entry to write off the uncollectible account.

(a) Tot. est. bad debts \$7,370

- (d) The company collects \$5,000 subsequently on a specific account that had previously been determined to be uncollectible in (c). Prepare the journal entry(ies) necessary to restore the account and record the cash collection.
- (e) Comment on how your answers to (a)–(d) would change if Mineo Inc. used 3% of *total* accounts receivable, rather than aging the accounts receivable. What are the advantages to the company of aging the accounts receivable rather than applying a percentage to total accounts receivable?

Journalize entries to record transactions related to bad debts.

(LO 3)

P8-5A At December 31, 2014, the trial balance of Roberto Company contained the following amounts before adjustment.

	<u>Debits</u>	<u>Credits</u>
Accounts Receivable	\$385,000	
Allowance for Doubtful Accounts		\$ 800
Sales Revenue		918,000

Instructions

(b) (2) \$9,180

- (a) Based on the information given, which method of accounting for bad debts is Roberto Company using—the direct write-off method or the allowance method? How can you tell?
- (b) Prepare the adjusting entry at December 31, 2014, for bad debt expense under each of the following independent assumptions.
 - (1) An aging schedule indicates that \$11,750 of accounts receivable will be uncollectible.
 - (2) The company estimates that 1% of sales will be uncollectible.
- (c) Repeat part (b) assuming that instead of a credit balance there is an \$800 debit balance in Allowance for Doubtful Accounts.
- (d) During the next month, January 2015, a \$3,000 account receivable is written off as uncollectible. Prepare the journal entry to record the write-off.
- (e) Repeat part (d) assuming that Roberto uses the direct write-off method instead of the allowance method in accounting for uncollectible accounts receivable.
- (f)  What type of account is Allowance for Doubtful Accounts? How does it affect how accounts receivable is reported on the balance sheet at the end of the accounting period?

Prepare entries for various notes receivable transactions.

(LO 2, 4, 5, 8, 9)

P8-6A Hilo Company closes its books monthly. On September 30, selected ledger account balances are:

Notes Receivable	\$31,000
Interest Receivable	170

Notes Receivable include the following.

<u>Date</u>	<u>Maker</u>	<u>Face</u>	<u>Term</u>	<u>Interest</u>
Aug. 16	Demaster Inc.	\$ 8,000	60 days	8%
Aug. 25	Skinner Co.	9,000	60 days	10%
Sept. 30	Almer Corp.	14,000	6 months	9%

Interest is computed using a 360-day year. During October, the following transactions were completed.

- Oct. 7 Made sales of \$6,300 on Hilo credit cards.
- 12 Made sales of \$1,200 on MasterCard credit cards. The credit card service charge is 3%.
- 15 Added \$460 to Hilo customer balance for finance charges on unpaid balances.
- 15 Received payment in full from Demaster Inc. on the amount due.
- 24 Received notice that the Skinner note has been dishonored. (Assume that Skinner is expected to pay in the future.)

Instructions

- (b) Accounts receivable \$15,910
- (c) Total receivables \$30,015

- (a) Journalize the October transactions and the October 31 adjusting entry for accrued interest receivable.
- (b) Enter the balances at October 1 in the receivable accounts. Post the entries to all of the receivable accounts.
- (c) Show the balance sheet presentation of the receivable accounts at October 31.

P8-7A On January 1, 2014, Derek Company had Accounts Receivable \$139,000, Notes Receivable \$30,000, and Allowance for Doubtful Accounts \$13,200. The note receivable is from Kaye Noonan Company. It is a 4-month, 12% note dated December 31, 2013. Derek Company prepares financial statements annually. During the year, the following selected transactions occurred.

- Jan. 5 Sold \$24,000 of merchandise to Zwingle Company, terms n/15.
 20 Accepted Zwingle Company's \$24,000, 3-month, 9% note for balance due.
 Feb. 18 Sold \$8,000 of merchandise to Gerard Company and accepted Gerard's \$8,000, 6-month, 8% note for the amount due.
 Apr. 20 Collected Zwingle Company note in full.
 30 Received payment in full from Kaye Noonan Company on the amount due.
 May 25 Accepted Isabella Inc.'s \$4,000, 3-month, 7% note in settlement of a past-due balance on account.
 Aug. 18 Received payment in full from Gerard Company on note due.
 25 The Isabella Inc. note was dishonored. Isabella Inc. is not bankrupt; future payment is anticipated.
 Sept. 1 Sold \$12,000 of merchandise to Fernando Company and accepted a \$12,000, 6-month, 10% note for the amount due.

Instructions

Journalize the transactions.

Prepare entries for various receivable transactions.

(LO 2, 4, 5, 6, 7, 8)

PROBLEMS: SET B

P8-1B At December 31, 2013, Globe Trotter Imports reported the following information on its balance sheet.

Accounts receivable	\$220,000
Less: Allowance for doubtful accounts	15,000

During 2014, the company had the following transactions related to receivables.

- | | |
|--|-------------|
| 1. Sales on account | \$2,400,000 |
| 2. Sales returns and allowances | 45,000 |
| 3. Collections of accounts receivable | 2,250,000 |
| 4. Write-offs of accounts receivable deemed uncollectible | 13,000 |
| 5. Recovery of bad debts previously written off as uncollectible | 2,000 |

Instructions

- (a) Prepare the journal entries to record each of these five transactions. Assume that no cash discounts were taken on the collections of accounts receivable.
 (b) Enter the January 1, 2014, balances in Accounts Receivable and Allowance for Doubtful Accounts. Post the entries to the two accounts (use T-accounts), and determine the balances.
 (c) Prepare the journal entry to record bad debt expense for 2014, assuming that an aging of accounts receivable indicates that estimated bad debts are \$22,000.
 (d) Compute the accounts receivable turnover ratio for the year 2014.

Prepare journal entries related to bad debt expense.

(LO 2, 3, 9)

P8-2B Information related to Shin Company for 2014 is summarized below.

Total credit sales	\$920,000
Accounts receivable at December 31	369,000
Bad debts written off	23,400

Instructions

- (a) What amount of bad debt expense will Shin Company report if it uses the direct write-off method of accounting for bad debts?
 (b) Assume that Shin Company decides to estimate its bad debt expense to be 3% of credit sales. What amount of bad debt expense will Shin record if Allowance for Doubtful Accounts has a credit balance of \$3,000?

Compute bad debt amounts.

(LO 3)

- (b) Accounts receivable
 \$312,000
 ADA \$4,000
 (c) Bad debt expense
 \$18,000

- (c) Assume that Shin Company decides to estimate its bad debt expense based on 7% of accounts receivable. What amount of bad debt expense will Shin Company record if Allowance for Doubtful Accounts has a credit balance of \$4,000?
- (d) Assume the same facts as in (c), except that there is a \$2,000 debit balance in Allowance for Doubtful Accounts. What amount of bad debt expense will Shin record?
- (e)  What is the weakness of the direct write-off method of reporting bad debt expense?

Journalize entries to record transactions related to bad debts.

(LO 2, 3)

P8-3B Presented below is an aging schedule for Garry Owen Company.

Worksheet.xls							
Home Insert Page Layout Formulas Data Review View							
P18 fx							
	A	B	C	D	E	F	G
1				Number of Days Past Due			
2							
3	Customer	Total	Not Yet Due	1-30	31-60	61-90	Over 90
4	Alma	\$ 26,000		\$11,500	\$14,500		
5	Browne	45,000	\$ 45,000				
6	Conlon	75,000	22,500	7,500		\$45,000	
7	Dalton	57,000					\$57,000
8	Others	189,000	138,000	22,500	19,500		9,000
9		<u>\$392,000</u>	<u>\$205,500</u>	<u>\$41,500</u>	<u>\$34,000</u>	<u>\$45,000</u>	<u>\$66,000</u>
10	Estimated percentage uncollectible		2%	6%	10%	25%	50%
11	Total estimated bad debts	<u>\$ 54,250</u>	<u>\$ 4,110</u>	<u>\$ 2,490</u>	<u>\$ 3,400</u>	<u>\$11,250</u>	<u>\$33,000</u>
12							

At December 31, 2014, the unadjusted balance in Allowance for Doubtful Accounts is a credit of \$14,000.

Instructions

- (a) Bad debt expense \$40,250
- (a) Journalize and post the adjusting entry for bad debts at December 31, 2014.
- (b) Journalize and post to the allowance account the following events and transactions in the year 2015.
 - (1) March 1, a \$1,900 customer balance originating in 2014 is judged uncollectible.
 - (2) May 1, a check for \$1,900 is received from the customer whose account was written off as uncollectible on March 1.
- (c) Bad debt expense \$45,700
- (c) Journalize the adjusting entry for bad debts on December 31, 2015. Assume that the unadjusted balance in Allowance for Doubtful Accounts is a debit of \$3,400, and the aging schedule indicates that total estimated bad debts will be \$42,300.

Journalize transactions related to bad debts.

(LO 2, 3)

P8-4B The following represents selected information taken from a company's aging schedule to estimate uncollectible accounts receivable at year-end.

Worksheet.xls							
Home Insert Page Layout Formulas Data Review View							
P18 fx							
	A	B	C	D	E	F	G
1				Number of Days Outstanding			
2							
3		Total	0-30	31-60	61-90	91-120	Over 120
4	Accounts receivable	\$383,000	\$220,000	\$90,000	\$40,000	\$18,000	\$15,000
5	% uncollectible		1%	3%	5%	8%	10%
6	Estimated bad debts						
7							

Instructions

- (a) Calculate the total estimated bad debts based on the above information.
- (b) Prepare the year-end adjusting journal entry to record the bad debts using the allowance method and the aged uncollectible accounts receivable determined in (a). Assume the current balance in Allowance for Doubtful Accounts is a \$1,600 credit.
- (c) Of the above accounts, \$1,100 is determined to be specifically uncollectible. Prepare the journal entry to write off the uncollectible accounts.
- (d) The company subsequently collects \$700 on a specific account that had previously been determined to be uncollectible in (c). Prepare the journal entry(ies) necessary to restore the account and record the cash collection.
- (e) Explain how establishing an allowance account satisfies the expense recognition principle.

(a) Tot. est.
bad debts \$9,840

P8-5B At December 31, 2014, the trial balance of Mariette Company contained the following amounts before adjustment.

	<u>Debits</u>	<u>Credits</u>
Accounts Receivable	\$250,000	
Allowance for Doubtful Accounts		\$ 1,400
Sales Revenue		600,000

Journalize entries to record transactions related to bad debts.

(LO 3)

Instructions

- (a) Prepare the adjusting entry at December 31, 2014, to record bad debt expense under each of the following independent assumptions.
 - (1) An aging schedule indicates that \$13,800 of accounts receivable will be uncollectible.
 - (2) The company estimates that 2% of sales will be uncollectible.
- (b) Repeat part (a) assuming that instead of a credit balance, there is a \$1,400 debit balance in Allowance for Doubtful Accounts.
- (c) During the next month, January 2015, a \$3,200 account receivable is written off as uncollectible. Prepare the journal entry to record the write-off.
- (d) Repeat part (c) assuming that Mariette Company uses the direct write-off method instead of the allowance method in accounting for uncollectible accounts receivable.
- (e)  What are the advantages of using the allowance method in accounting for uncollectible accounts as compared to the direct write-off method?

(a) (2) \$12,000

P8-6B Gehrig Co. closes its books monthly. On June 30, selected ledger account balances are:

Notes Receivable	\$60,000
Interest Receivable	435

Prepare entries for various notes receivable transactions.

(LO 2, 4, 5, 8, 9)

Notes Receivable include the following.

<u>Date</u>	<u>Maker</u>	<u>Face</u>	<u>Term</u>	<u>Interest</u>
May 16	Fulton Inc.	\$12,000	60 days	9%
May 25	Ascot Co.	30,000	60 days	10%
June 30	Trayer Corp.	18,000	6 months	12%

During July, the following transactions were completed.

- July 5 Made sales of \$7,200 on Gehrig Co. credit cards.
- 14 Made sales of \$1,300 on Visa credit cards. The credit card service charge is 3%.
- 14 Added \$510 to Gehrig Co. credit card customer balances for finance charges on unpaid balances.
- 15 Received payment in full from Fulton Inc. on the amount due.
- 24 Received notice that the Ascot Co. note has been dishonored. (Assume that Ascot Co. is expected to pay in the future.)

Instructions

- (a) Journalize the July transactions and the July 31 adjusting entry for accrued interest receivable. (Interest is computed using 360 days.)
- (b) Enter the balances at July 1 in the receivable accounts. Post the entries to all of the receivable accounts.
- (c) Show the balance sheet presentation of the receivable accounts at July 31.

(b) Accounts receivable
\$38,210

(c) Total receivables \$56,390

Prepare entries for various receivable transactions.

(LO 2, 4, 5, 6, 7, 8)

P8-7B On January 1, 2014, Valdez Company had Accounts Receivable \$91,000 and Allowance for Doubtful Accounts \$8,100. Valdez Company prepares financial statements annually. During the year, the following selected transactions occurred.

- Jan. 5 Sold \$8,400 of merchandise to Patrick Company, terms n/30.
 Feb. 2 Accepted a \$8,400, 4-month, 10% promissory note from Patrick Company for the balance due.
 12 Sold \$13,500 of merchandise to Marguerite Company and accepted Marguerite's \$13,500, 2-month, 10% note for the balance due.
 26 Sold \$7,000 of merchandise to Felton Co., terms n/10.
 Apr. 5 Accepted a \$7,000, 3-month, 8% note from Felton Co. for the balance due.
 12 Collected Marguerite Company note in full.
 June 2 Collected Patrick Company note in full.
 July 5 Felton Co. dishonors its note of April 5. It is expected that Felton will eventually pay the amount owed.
 15 Sold \$14,000 of merchandise to Planke Co. and accepted Planke's \$14,000, 3-month, 12% note for the amount due.
 Oct. 15 Planke Co.'s note was dishonored. Planke Co. is bankrupt, and there is no hope of future settlement.

Instructions

Journalize the transactions.

PROBLEMS: SET C

Visit the book's companion website, at www.wiley.com/college/wegandt, and choose the Student Companion site to access Problem Set C.

COMPREHENSIVE PROBLEM

CP8 Victoria Company's balance sheet at December 31, 2013, is presented below.

**Victoria Company
Balance Sheet
December 31, 2013**

Cash	\$13,100	Accounts payable	\$ 8,750
Accounts receivable	19,780	Common stock	20,000
Allowance for doubtful accounts	(800)	Retained earnings	<u>12,730</u>
Inventory	<u>9,400</u>		<u>\$41,480</u>
	<u>\$41,480</u>		

During January 2014, the following transactions occurred. Victoria uses the perpetual inventory method.

- Jan. 1 Victoria accepted a 4-month, 8% note from Leon Company in payment of Leon's \$1,500 account.
 3 Victoria wrote off as uncollectible the accounts of Barker Corporation (\$450) and Elmo Company (\$330).
 8 Victoria purchased \$17,200 of inventory on account.
 11 Victoria sold for \$25,000 on account inventory that cost \$17,500.
 15 Victoria sold inventory that cost \$780 to Joe Haribo for \$1,200. Haribo charged this amount on his Visa First Bank card. The service fee charged Victoria by First Bank is 3%.
 17 Victoria collected \$22,900 from customers on account.
 21 Victoria paid \$16,300 on accounts payable.

- 24 Victoria received payment in full (\$330) from Elmo Company on the account written off on January 3.
- 27 Victoria purchased advertising supplies for \$1,400 cash.
- 31 Victoria paid other operating expenses, \$3,218.

Adjustment data:

- 1. Interest is recorded for the month on the note from January 1.
- 2. Bad debts are expected to be 5% of the January 31, 2014, accounts receivable.
- 3. A count of advertising supplies on January 31, 2014, reveals that \$470 remains unused.

Instructions

(You may want to set up T-accounts to determine ending balances.)

- (a) Prepare journal entries for the transactions listed above and adjusting entries. (Include entries for cost of goods sold using the perpetual system.)
- (b) Prepare an adjusted trial balance at January 31, 2014.
- (c) Prepare an income statement and a retained earnings statement for the month ending January 31, 2014, and a classified balance sheet as of January 31, 2014.

CONTINUING COOKIE CHRONICLE

(Note: This is a continuation of the Cookie Chronicle from Chapters 1–7.)

CCC8 One of Natalie's friends, Curtis Lesperance, runs a coffee shop where he sells specialty coffees and prepares and sells muffins and cookies. He is eager to buy one of Natalie's fine European mixers, which would enable him to make larger batches of muffins and cookies. However, Curtis cannot afford to pay for the mixer for at least 30 days. He asks Natalie if she would be willing to sell him the mixer on credit. Natalie comes to you for advice.

Go to the book's companion website, www.wiley.com/college/weygandt, to see the completion of this problem.

Broadening Your PERSPECTIVE

Financial Reporting and Analysis

Financial Reporting Problem: CAF Company

BYP8-1 CAF Company sells office equipment and supplies to many organizations in the city and surrounding area on contract terms of 2/10, n/30. In the past, over 75% of the credit customers have taken advantage of the discount by paying within 10 days of the invoice date.

The number of customers taking the full 30 days to pay has increased within the last year. Current indications are that less than 60% of the customers are now taking the discount. Bad debts as a percentage of gross credit sales have risen from the 2.5% provided in past years to about 4.5% in the current year.

The company's Finance Committee has requested more information on the collections of accounts receivable. The controller responded to this request with the report reproduced below.

CAF Company
Accounts Receivable Collections
May 31, 2014

The fact that some credit accounts will prove uncollectible is normal. Annual bad debt write-offs have been 2.5% of gross credit sales over the past 5 years. During the last fiscal year, this percentage increased to slightly less than 4.5%. The current Accounts Receivable balance is \$1,400,000. The condition of this balance in terms of age and probability of collection is as follows.

<u>Proportion of Total</u>	<u>Age Categories</u>	<u>Probability of Collection</u>
60%	not yet due	98%
22%	less than 30 days past due	96%
9%	30 to 60 days past due	94%
5%	61 to 120 days past due	91%
2½%	121 to 180 days past due	75%
1½%	over 180 days past due	30%

Allowance for Doubtful Accounts had a credit balance of \$29,500 on June 1, 2013. CAF has provided for a monthly bad debt expense accrual during the current fiscal year based on the assumption that 4.5% of gross credit sales will be uncollectible. Total gross credit sales for the 2013–2014 fiscal year amounted to \$2,800,000. Write-offs of bad accounts during the year totaled \$102,000.

Instructions

- (a) Prepare an accounts receivable aging schedule for CAF Company using the age categories identified in the controller's report to the Finance Committee showing the following.
 - (1) The amount of accounts receivable outstanding for each age category and in total.
 - (2) The estimated amount that is uncollectible for each category and in total.
- (b) Compute the amount of the year-end adjustment necessary to bring Allowance for Doubtful Accounts to the balance indicated by the age analysis. Then prepare the necessary journal entry to adjust the accounting records.
- (c) In a recessionary environment with tight credit and high interest rates:
 - (1) Identify steps CAF Company might consider to improve the accounts receivable situation.
 - (2) Then evaluate each step identified in terms of the risks and costs involved.

Comparative Analysis Problem: PepsiCo, Inc. vs. The Coca-Cola Company

BYP8-2 PepsiCo, Inc.'s financial statements are presented in Appendix A. Financial statements of The Coca-Cola Company are presented in Appendix B.

Instructions

- (a) Based on the information in these financial statements, compute the following 2010 ratios for each company. (Assume all sales are credit sales and that PepsiCo's receivables on its balance sheet are all trade receivables.)
 - (1) Accounts receivable turnover ratio.
 - (2) Average collection period for receivables.
- (b) What conclusions about managing accounts receivable can you draw from these data?

Real-World Focus

BYP8-3 Purpose: To learn more about factoring from websites that provide factoring services.

Address: www.ccapital.net, or go to www.wiley.com/college/weygandt

Steps: Go to the website, click on **invoice Factoring**, and answer the following questions.

- (a) What are some of the benefits of factoring?
- (b) What is the range of the percentages of the typical discount rate?
- (c) If a company factors its receivables, what percentage of the value of the receivables can it expect to receive from the factor in the form of cash, and how quickly will it receive the cash?

Critical Thinking

Decision-Making Across the Organization

BYP8-4 Hilda and Tim Piwek own Campus Fashions. From its inception, Campus Fashions has sold merchandise on either a cash or credit basis, but no credit cards have been accepted. During the past several months, the Piweks have begun to question their sales policies. First, they have lost

some sales because of refusing to accept credit cards. Second, representatives of two metropolitan banks have been persuasive in almost convincing them to accept their national credit cards. One bank, City National Bank, has stated that its credit card fee is 4%.

The Piweks decide that they should determine the cost of carrying their own credit sales. From the accounting records of the past 3 years, they accumulate the following data.

	<u>2014</u>	<u>2013</u>	<u>2012</u>
Net credit sales	\$500,000	\$650,000	\$400,000
Collection agency fees for slow-paying customers	2,450	2,500	2,300
Salary of part-time accounts receivable clerk	4,100	4,100	4,100

Credit and collection expenses as a percentage of net credit sales are uncollectible accounts 1.6%, billing and mailing costs 0.5%, and credit investigation fee on new customers 0.15%.

Hilda and Tim also determine that the average accounts receivable balance outstanding during the year is 5% of net credit sales. The Piweks estimate that they could earn an average of 8% annually on cash invested in other business opportunities.

Instructions

With the class divided into groups, answer the following.

- Prepare a table showing, for each year, total credit and collection expenses in dollars and as a percentage of net credit sales.
- Determine the net credit and collection expense in dollars and as a percentage of sales after considering the revenue not earned from other investment opportunities.
- Discuss both the financial and nonfinancial factors that are relevant to the decision.

Communication Activity

BYP8-5 Lily Pao, a friend of yours, overheard a discussion at work about changes her employer wants to make in accounting for uncollectible accounts. Lily knows little about accounting, and she asks you to help make sense of what she heard. Specifically, she asks you to explain the differences between the percentage-of-sales, percentage-of-receivables, and the direct write-off methods for uncollectible accounts.

Instructions

In a letter of one page (or less), explain to Lily the three methods of accounting for uncollectibles. Be sure to discuss differences among these methods.

Ethics Case

BYP8-6 The controller of Vestin Co. believes that the yearly allowance for doubtful accounts for Vestin Co. should be 2% of net credit sales. The president of Vestin Co., nervous that the stockholders might expect the company to sustain its 10% growth rate, suggests that the controller increase the allowance for doubtful accounts to 4%. The president thinks that the lower net income, which reflects a 6% growth rate, will be a more sustainable rate for Vestin Co.

Instructions

- Who are the stakeholders in this case?
- Does the president's request pose an ethical dilemma for the controller?
- Should the controller be concerned with Vestin Co.'s growth rate? Explain your answer.

All About You

BYP8-7 Credit card usage in the United States is substantial. Many startup companies use credit cards as a way to help meet short-term financial needs. The most common forms of debt for startups are use of credit cards and loans from relatives.

Suppose that you start up Brothers Sandwich Shop. You invested your savings of \$20,000 and borrowed \$70,000 from your relatives. Although sales in the first few months are good, you see

that you may not have sufficient cash to pay expenses and maintain your inventory at acceptable levels, at least in the short term. You decide you may need to use one or more credit cards to fund the possible cash shortfall.

Instructions

- Go to the Internet and find two sources that provide insight into how to compare credit card terms.
- Develop a list, in descending order of importance, as to what features are most important to you in selecting a credit card for your business.
- Examine the features of your present credit card. (If you do not have a credit card, select a likely one online for this exercise.) Given your analysis above, what are the three major disadvantages of your present credit card?

BYP8-8 Individuals need to evaluate their personal credit positions using the same thought processes used by business people. Some of you might consider the idea of not having a credit card a ridiculous proposition. But the reality is that the misuse of credit cards brings financial hardship to millions of Americans each year. Credit card companies aggressively market their cards with images of glamour and happiness. But, there isn't much glamour in paying an 18% to 21% interest rate, and there is very little happiness to be found in filing for personal bankruptcy.

Should you cut up your credit card(s)?

YES: Americans are carrying huge personal debt burdens. Credit cards encourage unnecessary, spontaneous expenditures. The interest rates on credit cards are extremely high, which causes debt problems to escalate exponentially.

NO: Credit cards are a necessity for transactions in today's economy. In fact, many transactions are difficult or impossible to carry out without a credit card. People should learn to use credit cards responsibly.

Instructions

Write a response indicating your position regarding the situation. Provide support for your view.

FASB Codification Activity

BYP8-9 If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following.

- How are receivables defined in the Codification?
- What are the conditions under which losses from uncollectible receivables (Bad Debt Expense) should be reported?

Answers to Chapter Questions

Answers to Insight and Accounting Across the Organization Questions

p. 390 How Does a Credit Card Work? Q: Assume that Nordstrom prepares a bank reconciliation at the end of each month. If some credit card sales have not been processed by the bank, how should Nordstrom treat these transactions on its bank reconciliation? **A:** Nordstrom would treat the credit card receipts as deposits in transit. It has already recorded the receipts as cash. Its bank will increase Nordstrom's cash account when it receives the receipts.

p. 394 Can Fair Value Be Unfair? Q: What are the arguments in favor of and against fair value accounting for loans and receivables? **A:** Arguments in favor of fair value accounting for loans and receivables are that fair value would provide a more accurate view of a company's financial position. This might provide a useful early warning of when a bank or other financial institution was in trouble because its loans were of poor quality. But, banks argue that estimating fair values is very difficult to do accurately. They are also concerned that volatile fair values could cause large swings in a bank's reported net income.

p. 396 Bad Information Can Lead to Bad Loans Q: What steps should the banks have taken to ensure the accuracy of financial information provided on loan applications? **A:** At a minimum,

the bank should have requested copies of recent income tax forms and contacted the supposed employer to verify income. To verify ownership and value of assets, it should have examined bank statements, investment statements, and title documents and should have employed appraisers.

A Look at IFRS

The basic accounting and reporting issues related to recognition and measurement of receivables, such as the use of allowance accounts, how to record discounts, use of the allowance method to account for bad debts, and factoring, are essentially the same between IFRS and GAAP.

Key Points

- IFRS requires that loans and receivables be accounted for at amortized cost, adjusted for allowances for doubtful accounts. IFRS sometimes refers to these allowances as *provisions*. The entry to record the allowance would be:

Bad Debt Expense	xxxxxx	
Allowance for Doubtful Accounts		xxxxxx

- Although IFRS implies that receivables with different characteristics should be reported separately, there is no standard that mandates this segregation.
- The FASB and IASB have worked to implement fair value measurement (the amount they currently could be sold for) for financial instruments. Both Boards have faced bitter opposition from various factions. As a consequence, the Boards have adopted a piecemeal approach; the first step is disclosure of fair value information in the notes. The second step is the fair value option, which permits, but does not require, companies to record some types of financial instruments at fair values in the financial statements.
- IFRS requires a two-tiered approach to test whether the value of loans and receivables are impaired. First, a company should look at specific loans and receivables to determine whether they are impaired. Then, the loans and receivables as a group should be evaluated for impairment. GAAP does not prescribe a similar two-tiered approach.
- IFRS and GAAP differ in the criteria used to determine how to record a factoring transaction. IFRS is a combination of an approach focused on risks and rewards and loss of control. GAAP uses loss of control as the primary criterion. In addition, IFRS permits partial derecognition of receivables; GAAP does not.

Looking to the Future

It appears likely that the question of recording fair values for financial instruments will continue to be an important issue to resolve as the Boards work toward convergence. Both the IASB and the FASB have indicated that they believe that financial statements would be more transparent and understandable if companies recorded and reported all financial instruments at fair value.

That said, in *IFRS 9*, which was issued in 2009, the IASB created a split model, where some financial instruments are recorded at fair value, but other financial assets, such as loans and receivables, can be accounted for at amortized cost if certain criteria are met. Critics say that this can result in two companies with identical securities accounting for those securities in different ways. A proposal by the FASB would require that nearly all financial instruments, including loans and receivables, be accounted for at fair value. It has been suggested that *IFRS 9* will likely be changed or replaced as the FASB and IASB continue to deliberate the best treatment for financial instruments. In fact, one past member of the IASB said that companies should ignore *IFRS 9* and continue to report under the old standard, because in his opinion, it was extremely likely that it would be changed before the mandatory adoption date of the standard arrived in 2013.

IFRS Practice

IFRS Self-Test Questions

1. Under IFRS, loans and receivables are to be reported on the balance sheet at:
 - (a) amortized cost.
 - (b) amortized cost adjusted for estimated loss provisions.
 - (c) historical cost.
 - (d) replacement cost.
2. Which of the following statements is *false*?
 - (a) Loans and receivables include equity securities purchased by the company.
 - (b) Loans and receivables include credit card receivables.
 - (c) Loans and receivables include amounts owed by employees as a result of company loans to employees.
 - (d) Loans and receivables include amounts resulting from transactions with customers.
3. In recording a factoring transaction:
 - (a) IFRS focuses on loss of control.
 - (b) GAAP focuses on loss of control and risks and rewards.
 - (c) IFRS and GAAP allow partial derecognition.
 - (d) IFRS allows partial derecognition
4. Under IFRS:
 - (a) the entry to record estimated uncollected accounts is the same as GAAP.
 - (b) loans and receivables should only be tested for impairment as a group.
 - (c) it is always acceptable to use the direct write-off method.
 - (d) all financial instruments are recorded at fair value.
5. Which of the following statements is *true*?
 - (a) The fair value option requires that some types of financial instruments be recorded at fair value.
 - (b) The fair value option allows, but does not require, that some types of financial instruments be recorded at amortized cost.
 - (c) The fair value option allows, but does not require, that some types of financial instruments be recorded at fair value.
 - (d) The FASB and IASB would like to reduce the reliance on fair value accounting for financial instruments in the future.

IFRS Exercise

IFRS8-1 What are some steps taken by both the FASB and IASB to move to fair value measurement for financial instruments? In what ways have some of the approaches differed?

International Financial Reporting Problem: Zetar plc

IFRS8-2 The financial statements of **Zetar plc** are presented in Appendix C. The company's complete annual report, including the notes to its financial statements, is available at www.zetarplc.com.

Instructions

Use the company's annual report to answer the following questions.

- (a) According to the Operational Review of Financial Performance, what was one reason why the balance in receivables increased relative to the previous year?
- (b) According to the notes to the financial statements, how are loans and receivables defined?
- (c) In the notes to the financial statements, the company reports a "one off item" related to receivables. Explain what this item was.
- (d) Using information in the notes to the financial statements, determine what percentage the provision for impairment of receivables was as a percentage of total trade receivables for 2010 and 2009. How did the ratio change from 2009 to 2010, and what does this suggest about the company's receivables?

Answers to IFRS Self-Test Questions

Chapter 9

Plant Assets, Natural Resources, and Intangible Assets

Feature Story

How Much for a Ride to the Beach?

It's spring break. Your plane has landed, you've finally found your bags, and you're dying to hit the beach—but first you need a “vehicular unit” to get you there. As you turn away from baggage claim, you see a long row of rental agency booths. Many are names you are familiar with—*Hertz*, *Avis*, and *Budget*. But a booth at the far end catches your eye—*Rent-A-Wreck*. Now there's a company making a clear statement!

Any company that relies on equipment to generate revenues must make decisions about what kind of equipment to buy, how long to keep it, and how vigorously to maintain it. Rent-A-Wreck has decided to rent used rather than new cars and trucks. It rents these vehicles across the United States, Europe, and Asia. While the big-name agencies push vehicles with that “new car smell,” Rent-A-Wreck competes on price.

Rent-A-Wreck's message is simple: Rent a used car and save some cash. It's not a message that appeals to everyone. If you're a marketing

Learning Objectives

After studying this chapter, you should be able to:

- 1** Describe how the cost principle applies to plant assets.
- 2** Explain the concept of depreciation and how to compute it.
- 3** Distinguish between revenue and capital expenditures, and explain the entries for each.
- 4** Explain how to account for the disposal of a plant asset.
- 5** Compute periodic depletion of natural resources.
- 6** Explain the basic issues related to accounting for intangible assets.
- 7** Indicate how plant assets, natural resources, and intangible assets are reported.

The Navigator

Read A Look at IFRS p. 470

executive wanting to impress a big client, you probably don't want to pull up in a Rent-A-Wreck car. But if you want to get from point A to point B for the minimum cash per mile, then Rent-A-Wreck is playing your tune. The company's message seems to be getting across to the right clientele. Revenues have increased significantly.

When you rent a car from Rent-A-Wreck, you are renting from an independent business person. This owner has paid a "franchise fee" for the right to use the Rent-A-Wreck

name. In order to gain a franchise, he or she must meet financial and other criteria, and must agree to run the rental agency according to rules prescribed by Rent-A-Wreck. Some of these rules require that each franchise maintain its cars in a reasonable fashion. This ensures that, though you won't be cruising down Daytona Beach's Atlantic Avenue in a Mercedes convertible, you can be reasonably assured that you won't be calling a towtruck.

Preview of Chapter 9

The accounting for long-term assets has important implications for a company's reported results. In this chapter, we explain the application of the cost principle of accounting to property, plant, and equipment, such as **Rent-A-Wreck** vehicles, as well as to natural resources and intangible assets, such as the "Rent-A-Wreck" trademark. We also describe the methods that companies may use to allocate an asset's cost over its useful life. In addition, we discuss the accounting for expenditures incurred during the useful life of assets, such as the cost of replacing tires and brake pads on rental cars.

The content and organization of Chapter 9 are as follows.

PLANT ASSETS, NATURAL RESOURCES, AND INTANGIBLE ASSETS

Plant Assets	Natural Resources	Intangible Assets	Statement Presentation and Analysis

Plant Assets

Plant assets are resources that have three characteristics. They have a physical substance (a definite size and shape), are used in the operations of a business, and are not intended for sale to customers. They are also called **property, plant, and equipment**; **plant and equipment**; and **fixed assets**. These assets are expected to provide services to the company for a number of years. Except for land, plant assets decline in service potential over their useful lives.

Because plant assets play a key role in ongoing operations, companies keep plant assets in good operating condition. They also replace worn-out or outdated plant assets, and expand productive resources as needed. Many companies have substantial investments in plant assets. Illustration 9-1 shows the percentages of plant assets in relation to total assets of companies in a number of industries.

Illustration 9-1

Percentages of plant assets in relation to total assets

Determining the Cost of Plant Assets

The cost principle requires that companies record plant assets at cost. Thus, **Rent-A-Wreck** records its vehicles at cost. **Cost consists of all expenditures necessary to acquire the asset and make it ready for its intended use.** For example, the cost of factory machinery includes the purchase price, freight costs paid by the purchaser, and installation costs. Once cost is established, the company uses that amount as the basis of accounting for the plant asset over its useful life.

In the following sections, we explain the application of the cost principle to each of the major classes of plant assets.

LAND

Companies often use **land** as a building site for a manufacturing plant or office site. The cost of land includes (1) the cash purchase price, (2) closing costs such as title and attorney's fees, (3) real estate brokers' commissions, and (4) accrued property taxes and other liens assumed by the purchaser. For example, if the cash price is \$50,000 and the purchaser agrees to pay accrued taxes of \$5,000, the cost of the land is \$55,000.

Companies record as debits (increases) to the Land account all necessary costs incurred to make land **ready for its intended use**. When a company acquires vacant land, these costs include expenditures for clearing, draining, filling, and grading. Sometimes, the land has a building on it that must be removed before construction of a new building. In this case, the company debits to the

LEARNING OBJECTIVE

1

Describe how the cost principle applies to plant assets.

Helpful Hint

Management's intended use is important in applying the cost principle.

Land account all demolition and removal costs, less any proceeds from salvaged materials.

To illustrate, assume that Hayes Company acquires real estate at a cash cost of \$100,000. The property contains an old warehouse that is razed at a net cost of \$6,000 (\$7,500 in costs less \$1,500 proceeds from salvaged materials). Additional expenditures are the attorney's fee, \$1,000, and the real estate broker's commission, \$8,000. The cost of the land is \$115,000, computed as shown in Illustration 9-2.

<u>Land</u>	
Cash price of property	\$ 100,000
Net removal cost of warehouse	6,000
Attorney's fee	1,000
Real estate broker's commission	<u>8,000</u>
Cost of land	<u><u>\$115,000</u></u>

Illustration 9-2
Computation of cost of land

When Hayes records the acquisition, it debits Land for \$115,000 and credits Cash for \$115,000.

LAND IMPROVEMENTS

Land improvements are structural additions made to land. Examples are drive-ways, parking lots, fences, landscaping, and underground sprinklers. The cost of land improvements includes all expenditures necessary to make the improvements ready for their intended use. For example, the cost of a new parking lot for **Home Depot** includes the amount paid for paving, fencing, and lighting. Thus, Home Depot debits to Land Improvements the total of all of these costs.

Land improvements have limited useful lives, and their maintenance and replacement are the responsibility of the company. As a result, companies expense (depreciate) the cost of land improvements over their useful lives.

BUILDINGS

Buildings are facilities used in operations, such as stores, offices, factories, warehouses, and airplane hangars. Companies debit to the Buildings account all necessary expenditures related to the purchase or construction of a building. When a building is **purchased**, such costs include the purchase price, closing costs (attorney's fees, title insurance, etc.) and real estate broker's commission. Costs to make the building ready for its intended use include expenditures for remodeling and replacing or repairing the roof, floors, electrical wiring, and plumbing. When a new building is **constructed**, cost consists of the contract price plus payments for architects' fees, building permits, and excavation costs.

In addition, companies charge certain interest costs to the Buildings account. Interest costs incurred to finance the project are included in the cost of the building when a significant period of time is required to get the building ready for use. In these circumstances, interest costs are considered as necessary as materials and labor. However, the inclusion of interest costs in the cost of a constructed building is **limited to the construction period**. When construction has been completed, the company records subsequent interest payments on funds borrowed to finance the construction as debits (increases) to Interest Expense.

EQUIPMENT

Equipment includes assets used in operations, such as store check-out counters, office furniture, factory machinery, delivery trucks, and airplanes. The cost of equipment, such as **Rent-A-Wreck** vehicles, consists of the cash purchase

price, sales taxes, freight charges, and insurance during transit paid by the purchaser. It also includes expenditures required in assembling, installing, and testing the unit. However, Rent-A-Wreck does not include motor vehicle licenses and accident insurance on company vehicles in the cost of equipment. These costs represent annual recurring expenditures and do not benefit future periods. Thus, they are treated as expenses as they are incurred.

To illustrate, assume Merten Company purchases factory machinery at a cash price of \$50,000. Related expenditures are for sales taxes \$3,000, insurance during shipping \$500, and installation and testing \$1,000. The cost of the factory machinery is \$54,500, computed in Illustration 9-3.

Illustration 9-3

Computation of cost of factory machinery

<u>Factory Machinery</u>	
Cash price	\$ 50,000
Sales taxes	3,000
Insurance during shipping	500
Installation and testing	<u>1,000</u>
Cost of factory machinery	<u>\$54,500</u>

Merten makes the following summary entry to record the purchase and related expenditures.

A	=	L	+	SE
+54,500				
-54,500				
<hr/>				
Cash Flows				
-54,500				

Equipment	54,500	
Cash		54,500
(To record purchase of factory machine)		

For another example, assume that Lenard Company purchases a delivery truck at a cash price of \$22,000. Related expenditures consist of sales taxes \$1,320, painting and lettering \$500, motor vehicle license \$80, and a three-year accident insurance policy \$1,600. The cost of the delivery truck is \$23,820, computed as follows.

Illustration 9-4

Computation of cost of delivery truck

<u>Delivery Truck</u>	
Cash price	\$ 22,000
Sales taxes	1,320
Painting and lettering	<u>500</u>
Cost of delivery truck	<u>\$23,820</u>

Lenard treats the cost of the motor vehicle license as an expense, and the cost of the insurance policy as a prepaid asset. Thus, Lenard makes the following entry to record the purchase of the truck and related expenditures:

A	=	L	+	SE
+23,820				
				-80 Exp
+1,600				
-25,500				
<hr/>				
Cash Flows				
-25,500				

Equipment	23,820	
License Expense	80	
Prepaid Insurance	1,600	
Cash		25,500
(To record purchase of delivery truck and related expenditures)		

ACCOUNTING ACROSS THE ORGANIZATION

Many U.S. Firms Use Leases

Leasing is big business for U.S. companies. For example, business investment in equipment in a recent year totaled \$709 billion. Leasing accounted for about 31% of all business investment (\$218 billion).

Who does the most leasing? Interestingly, major banks such as **Continental Bank**, **J.P. Morgan Leasing**, and **US Bancorp Equipment Finance** are the major lessors. Also, many companies have established separate leasing companies, such as **Boeing Capital Corporation**, **Dell Financial Services**, and **John Deere Capital Corporation**. And, as an excellent example of the magnitude of leasing, leased planes account for nearly 40% of the U.S. fleet of commercial airlines. In addition, leasing is becoming increasingly common in the hotel industry. **Marriott**, **Hilton**, and **InterContinental** are increasingly choosing to lease hotels that are owned by someone else.

Why might airline managers choose to lease rather than purchase their planes? (See page 469.)

> DO IT!

Cost of Plant Assets

Action Plan

- ✓ Identify expenditures made in order to get delivery equipment ready for its intended use.
- ✓ Treat operating costs as expenses.

Assume that Drummond Heating and Cooling Co. purchases a delivery truck for \$15,000 cash, plus sales taxes of \$900 and delivery costs of \$500. The buyer also pays \$200 for painting and lettering, \$600 for an annual insurance policy, and \$80 for a motor vehicle license. Explain how each of these costs would be accounted for.

Solution

The first four payments (\$15,000, \$900, \$500, and \$200) are expenditures necessary to make the truck ready for its intended use. Thus, the cost of the truck is \$16,600. The payments for insurance and the license are operating costs and therefore are expensed.

Related exercise material: **BE9-1**, **BE9-2**, **E9-1**, **E9-2**, **E9-3**, and **DO IT!** 9-1.

Depreciation

As explained in Chapter 3, **depreciation is the process of allocating to expense the cost of a plant asset over its useful (service) life in a rational and systematic manner.** Cost allocation enables companies to properly match expenses with revenues in accordance with the expense recognition principle (see Illustration 9-5).

LEARNING OBJECTIVE 2

Explain the concept of depreciation and how to compute it.

Illustration 9-5
Depreciation as a cost allocation concept

It is important to understand that **depreciation is a process of cost allocation. It is not a process of asset valuation.** No attempt is made to measure the change in an asset's fair value during ownership. So, the **book value** (cost less accumulated depreciation) of a plant asset may be quite different from its fair value. In fact, if an asset is fully depreciated, it can have a zero book value but still have a significant fair value.

Ethics Note

When a business is acquired, proper allocation of the purchase price to various asset classes is important since different depreciation treatments can materially affect income. For example, buildings are depreciated, but land is not.

Depreciation applies to three classes of plant assets: land improvements, buildings, and equipment. Each asset in these classes is considered to be a **depreciable asset**. Why? Because the usefulness to the company and revenue-producing ability of each asset will decline over the asset's useful life. Depreciation **does not apply to land** because its usefulness and revenue-producing ability generally remain intact over time. In fact, in many cases, the usefulness of land is greater over time because of the scarcity of good land sites. Thus, **land is not a depreciable asset**.

During a depreciable asset's useful life, its revenue-producing ability declines because of **wear and tear**. A delivery truck that has been driven 100,000 miles will be less useful to a company than one driven only 800 miles.

Revenue-producing ability may also decline because of obsolescence. **Obsolescence** is the process of becoming out of date before the asset physically wears out. For example, major airlines moved from Chicago's Midway Airport to Chicago-O'Hare International Airport because Midway's runways were too short for jumbo jets. Similarly, many companies replace their computers long before they originally planned to do so because improvements in new computing technology make the old computers obsolete.

Recognizing depreciation on an asset does not result in an accumulation of cash for replacement of the asset. The balance in Accumulated Depreciation represents the total amount of the asset's cost that the company has charged to expense. It is not a cash fund.

Note that the concept of depreciation is consistent with the going-concern assumption. The **going-concern assumption** states that the company will continue in operation for the foreseeable future. If a company does not use a going-concern assumption, then plant assets should be stated at their fair value. In that case, depreciation of these assets is not needed.

FACTORS IN COMPUTING DEPRECIATION

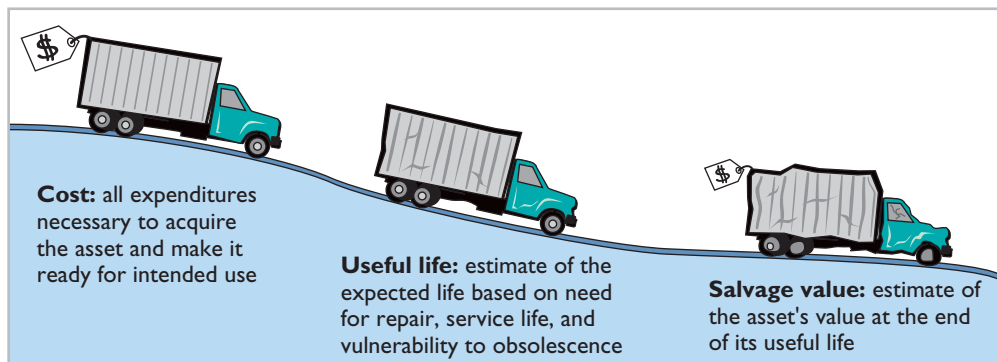

Three factors affect the computation of depreciation, as shown in Illustration 9-6.

Illustration 9-6

Three factors in computing depreciation

Helpful Hint

Depreciation expense is reported on the income statement. Accumulated depreciation is reported on the balance sheet as a deduction from plant assets.

1. **Cost.** Earlier, we explained the issues affecting the cost of a depreciable asset. Recall that companies record plant assets at cost, in accordance with the cost principle.

- Useful life.** **Useful life** is an estimate of the expected *productive life*, also called *service life*, of the asset for its owner. Useful life may be expressed in terms of time, units of activity (such as machine hours), or units of output. Useful life is an estimate. In making the estimate, management considers such factors as the intended use of the asset, its expected repair and maintenance, and its vulnerability to obsolescence. Past experience with similar assets is often helpful in deciding on expected useful life. We might reasonably expect **Rent-A-Wreck** and **Avis** to use different estimated useful lives for their vehicles.
- Salvage value.** **Salvage value** is an estimate of the asset's value at the end of its useful life. This value may be based on the asset's worth as scrap or on its expected trade-in value. Like useful life, salvage value is an estimate. In making the estimate, management considers how it plans to dispose of the asset and its experience with similar assets.

Alternative Terminology

Another term sometimes used for salvage value is *residual value*.

DEPRECIATION METHODS

Depreciation is generally computed using one of the following methods:

1. Straight-line
2. Units-of-activity
3. Declining-balance

Each method is acceptable under generally accepted accounting principles. Management selects the method(s) it believes to be appropriate. The objective is to select the method that best measures an asset's contribution to revenue over its useful life. Once a company chooses a method, it should apply it consistently over the useful life of the asset. Consistency enhances the comparability of financial statements. Depreciation affects the balance sheet through accumulated depreciation and the income statement through depreciation expense.

We will compare the three depreciation methods using the following data for a small delivery truck purchased by Barb's Florists on January 1, 2014.

Cost	\$ 13,000
Expected salvage value	\$ 1,000
Estimated useful life in years	5
Estimated useful life in miles	100,000

Illustration 9-8 (in the margin) shows the use of the primary depreciation methods in 600 of the largest companies in the United States.

STRAIGHT-LINE Under the **straight-line method**, companies expense the same amount of depreciation for each year of the asset's useful life. It is measured solely by the passage of time.

To compute depreciation expense under the straight-line method, companies need to determine depreciable cost. **Depreciable cost** is the cost of the asset less its salvage value. It represents the total amount subject to depreciation. Under the straight-line method, to determine annual depreciation expense, we divide depreciable cost by the asset's useful life. Illustration 9-9 (page 430) shows the computation of the first year's depreciation expense for Barb's Florists.

Illustration 9-7
Delivery truck data

Illustration 9-8
Use of depreciation methods
in 600 large U.S. companies

Illustration 9-9
Formula for straight-line method

Cost	−	Salvage Value	=	Depreciable Cost
\$13,000	−	\$1,000	=	\$12,000
↓				
Depreciable Cost	÷	Useful Life (in years)	=	Annual Depreciation Expense
\$12,000	÷	5	=	\$2,400

Alternatively, we also can compute an annual **rate** of depreciation. In this case, the rate is 20% (100% ÷ 5 years). When a company uses an annual straight-line rate, it applies the percentage rate to the depreciable cost of the asset. Illustration 9-10 shows a **depreciation schedule** using an annual rate.

Illustration 9-10
Straight-line depreciation schedule

Barb's Florists					
Year	Computation		Annual Depreciation Expense	End of Year	
	Depreciable Cost	× Depreciation Rate		Accumulated Depreciation	Book Value
2014	\$12,000	× 20%	\$2,400	\$ 2,400	\$10,600*
2015	12,000	× 20	2,400	4,800	8,200
2016	12,000	× 20	2,400	7,200	5,800
2017	12,000	× 20	2,400	9,600	3,400
2018	12,000	× 20	2,400	12,000	1,000

*Book value = Cost − Accumulated depreciation = (\$13,000 − \$2,400).

Note that the depreciation expense of \$2,400 is the same each year. The book value (computed as cost minus accumulated depreciation) at the end of the useful life is equal to the expected \$1,000 salvage value.

What happens to these computations for an asset purchased **during** the year, rather than on January 1? In that case, it is necessary to **prorate the annual depreciation** on a time basis. If Barb's Florists had purchased the delivery truck on April 1, 2014, the company would own the truck for nine months of the first year (April–December). Thus, depreciation for 2014 would be \$1,800 (\$12,000 × 20% × 9/12 of a year).

The straight-line method predominates in practice. Such large companies as **Campbell Soup**, **Marriott**, and **General Mills** use the straight-line method. It is simple to apply, and it matches expenses with revenues when the use of the asset is reasonably uniform throughout the service life.

Alternative Terminology
Another term often used is the *units-of-production method*.

UNITS-OF-ACTIVITY Under the **units-of-activity method**, useful life is expressed in terms of the total units of production or use expected from the asset, rather than as a time period. The units-of-activity method is ideally suited to factory machinery. Manufacturing companies can measure production in units of output or in machine hours. This method can also be used for such assets as delivery equipment (miles driven) and airplanes (hours in use). The units-of-activity method is generally not suitable for buildings or furniture because depreciation for these assets is more a function of time than of use.

To use this method, companies estimate the total units of activity for the entire useful life, and then divide these units into depreciable cost. The resulting number represents the depreciable cost per unit. The depreciable cost per unit is then applied to the units of activity during the year to determine the annual depreciation expense.

To illustrate, assume that Barb's Florists drives its delivery truck 15,000 miles in the first year. Illustration 9-11 shows the units-of-activity formula and the computation of the first year's depreciation expense.

Depreciable Cost	÷	Total Units of Activity	=	Depreciable Cost per Unit
\$12,000	÷	100,000 miles	=	\$0.12
↓				
Depreciable Cost per Unit	×	Units of Activity during the Year	=	Annual Depreciation Expense
\$0.12	×	15,000 miles	=	\$1,800

Helpful Hint

Under any method, depreciation stops when the asset's book value equals expected salvage value.

Illustration 9-11

Formula for units-of-activity method

The units-of-activity depreciation schedule, using assumed mileage, is as follows.

Barb's Florists						
Year	Computation		=	Annual Depreciation Expense	End of Year	
	Units of Activity	× Depreciation Cost/Unit			Accumulated Depreciation	Book Value
2014	15,000	× \$0.12		\$1,800	\$ 1,800	\$11,200*
2015	30,000	× 0.12		3,600	5,400	7,600
2016	20,000	× 0.12		2,400	7,800	5,200
2017	25,000	× 0.12		3,000	10,800	2,200
2018	10,000	× 0.12		1,200	12,000	1,000

*(\$13,000 - \$1,800).

Illustration 9-12

Units-of-activity depreciation schedule

This method is easy to apply for assets purchased mid-year. In such a case, the company computes the depreciation using the productivity of the asset for the partial year.

The units-of-activity method is not nearly as popular as the straight-line method (see Illustration 9-8, page 429), primarily because it is often difficult for companies to reasonably estimate total activity. However, some very large companies, such as **Chevron** and **Boise Cascade** (a forestry company), do use this method. When the productivity of an asset varies significantly from one period to another, the units-of-activity method results in the best matching of expenses with revenues.

DECLINING-BALANCE The **declining-balance method** produces a decreasing annual depreciation expense over the asset's useful life. The method is so named

because the periodic depreciation is based on a **declining book value** (cost less accumulated depreciation) of the asset. With this method, companies compute annual depreciation expense by multiplying the book value at the beginning of the year by the declining-balance depreciation rate. **The depreciation rate remains constant from year to year, but the book value to which the rate is applied declines each year.**

At the beginning of the first year, book value is the cost of the asset. This is because the balance in accumulated depreciation at the beginning of the asset's useful life is zero. In subsequent years, book value is the difference between cost and accumulated depreciation to date. Unlike the other depreciation methods, the declining-balance method does not use depreciable cost in computing annual depreciation expense. That is, **it ignores salvage value in determining the amount to which the declining-balance rate is applied.** Salvage value, however, does limit the total depreciation that can be taken. Depreciation stops when the asset's book value equals expected salvage value.

A common declining-balance rate is double the straight-line rate. The method is often called the **double-declining-balance method**. If Barb's Florists uses the double-declining-balance method, it uses a depreciation rate of 40% (2 × the straight-line rate of 20%). Illustration 9-13 shows the declining-balance formula and the computation of the first year's depreciation on the delivery truck.

Illustration 9-13
Formula for declining-balance method

Book Value at Beginning of Year	×	Declining-Balance Rate	=	Annual Depreciation Expense
\$13,000	×	40%	=	\$5,200

The depreciation schedule under this method is as follows.

Illustration 9-14
Double-declining-balance depreciation schedule

Barb's Florists						
Year	Computation		=	Annual Depreciation Expense	End of Year	
	Book Value Beginning of Year	Depreciation Rate			Accumulated Depreciation	Book Value
2014	\$13,000	40%		\$5,200	\$ 5,200	\$7,800
2015	7,800	40		3,120	8,320	4,680
2016	4,680	40		1,872	10,192	2,808
2017	2,808	40		1,123	11,315	1,685
2018	1,685	40		685*	12,000	1,000

*Computation of \$674 (\$1,685 × 40%) is adjusted to \$685 in order for book value to equal salvage value.

Helpful Hint
The method recommended for an asset that is expected to be significantly more productive in the first half of its useful life is the declining-balance method.

The delivery equipment is 69% depreciated (\$8,320 ÷ \$12,000) at the end of the second year. Under the straight-line method, the truck would be depreciated 40% (\$4,800 ÷ \$12,000) at that time. Because the declining-balance method produces higher depreciation expense in the early years than in the later years, it is considered an **accelerated-depreciation method**. The declining-balance method is compatible with the expense recognition principle. It matches the higher depreciation expense in early years with the higher benefits received in these years. It also recognizes lower depreciation expense in later years, when the asset's contribution to revenue is less. Some assets lose usefulness rapidly

because of obsolescence. In these cases, the declining-balance method provides the most appropriate depreciation amount.

When a company purchases an asset during the year, it must prorate the first year's declining-balance depreciation on a time basis. For example, if Barb's Florists had purchased the truck on April 1, 2014, depreciation for 2014 would become \$3,900 ($\$13,000 \times 40\% \times 9/12$). The book value at the beginning of 2015 is then \$9,100 ($\$13,000 - \$3,900$), and the 2015 depreciation is \$3,640 ($\$9,100 \times 40\%$). Subsequent computations would follow from those amounts.

> DO IT!

Straight-Line Depreciation

On January 1, 2014, Iron Mountain Ski Corporation purchased a new snow-grooming machine for \$50,000. The machine is estimated to have a 10-year life with a \$2,000 salvage value. What journal entry would Iron Mountain Ski Corporation make at December 31, 2014, if it uses the straight-line method of depreciation?

Solution

Action Plan

- ✓ Calculate depreciable cost (Cost – Salvage value).
- ✓ Divide the depreciable cost by the asset's estimated useful life.

$$\text{Depreciation expense} = \frac{\text{Cost} - \text{Salvage value}}{\text{Useful life}} = \frac{\$50,000 - \$2,000}{10} = \$4,800$$

The entry to record the first year's depreciation would be:

Dec. 31	Depreciation Expense	4,800	
	Accumulated Depreciation—Equipment (To record annual depreciation on snow-grooming machine)		4,800

Related exercise material: **BE9-3**, **BE9-4**, and **DO IT!** 9-2.

COMPARISON OF METHODS Illustration 9-15 compares annual and total depreciation expense under each of the three methods for Barb's Florists.

Year	Straight-Line	Units-of-Activity	Declining-Balance
2014	\$ 2,400	\$ 1,800	\$ 5,200
2015	2,400	3,600	3,120
2016	2,400	2,400	1,872
2017	2,400	3,000	1,123
2018	2,400	1,200	685
	<u>\$12,000</u>	<u>\$12,000</u>	<u>\$12,000</u>

Illustration 9-15
Comparison of depreciation methods

Annual depreciation varies considerably among the methods, but **total depreciation is the same for the five-year period** under all three methods. Each method is acceptable in accounting because each recognizes in a rational and systematic manner the decline in service potential of the asset. Illustration 9-16 (page 434) graphs the depreciation expense pattern under each method.

Illustration 9-16
Patterns of depreciation

DEPRECIATION AND INCOME TAXES

The Internal Revenue Service (IRS) allows taxpayers to deduct depreciation expense when they compute taxable income. However, the IRS does not require taxpayers to use the same depreciation method on the tax return that is used in preparing financial statements.

Many corporations use straight-line in their financial statements to maximize net income. At the same time, they use a special accelerated-depreciation method on their tax returns to minimize their income taxes. Taxpayers must use on their tax returns either the straight-line method or a special accelerated-depreciation method called the **Modified Accelerated Cost Recovery System (MACRS)**.

REVISING PERIODIC DEPRECIATION

Depreciation is one example of the use of estimation in the accounting process. Management should periodically review annual depreciation expense. If wear and tear or obsolescence indicate that annual depreciation estimates are inadequate or excessive, the company should change the amount of depreciation expense.

When a change in an estimate is required, the company makes the change in **current and future years. It does not change depreciation in prior periods.** The rationale is that continual restatement of prior periods would adversely affect confidence in financial statements.

To determine the new annual depreciation expense, the company first computes the asset's depreciable cost at the time of the revision. It then allocates the revised depreciable cost to the remaining useful life.

To illustrate, assume that Barb's Florists decides on January 1, 2017, to extend the useful life of the truck one year (a total life of six years) and increase its salvage value to \$2,200. The company has used the straight-line method to depreciate the asset to date. Depreciation per year was \$2,400 [(\$13,000 - \$1,000) ÷ 5]. Accumulated depreciation after three years (2014–2016) is \$7,200 (\$2,400 × 3), and book value is \$5,800 (\$13,000 - \$7,200). The new annual depreciation is \$1,200, computed as follows.

Helpful Hint

Use a step-by-step approach: (1) determine new depreciable cost; (2) divide by remaining useful life.

Illustration 9-17
Revised depreciation computation

Book value, 1/1/17	\$ 5,800	
Less: Salvage value	<u>2,200</u>	
Depreciable cost	\$ <u>3,600</u>	
Remaining useful life	<u>3 years</u>	(2017–2019)
Revised annual depreciation (\$3,600 ÷ 3)	\$ <u>1,200</u>	

Barb's Florists makes no entry for the change in estimate. On December 31, 2017, during the preparation of adjusting entries, it records depreciation expense of \$1,200. Companies must describe in the financial statements significant changes in estimates.

> DO IT!

Revised Depreciation

Chambers Corporation purchased a piece of equipment for \$36,000. It estimated a 6-year life and \$6,000 salvage value. Thus, straight-line depreciation was \$5,000 per year $[(\$36,000 - \$6,000) \div 6]$. At the end of year three (before the depreciation adjustment), it estimated the new total life to be 10 years and the new salvage value to be \$2,000. Compute the revised depreciation.

Solution

Action Plan

- ✓ Calculate remaining depreciable cost.
- ✓ Divide remaining depreciable cost by new remaining life.

Original depreciation expense = $[(\$36,000 - \$6,000) \div 6] = \$5,000$
 Accumulated depreciation after 2 years = $2 \times \$5,000 = \$10,000$
 Book value = $\$36,000 - \$10,000 = \$26,000$

Book value after 2 years of depreciation	\$26,000
Less: New salvage value	<u>2,000</u>
Depreciable cost	<u>24,000</u>
Remaining useful life	<u>8 years</u>
Revised annual depreciation ($\$24,000 \div 8$)	<u>\$ 3,000</u>

Related exercise material: **BE9-7, E9-8, and DO IT! 9-3.**

Expenditures During Useful Life

During the useful life of a plant asset, a company may incur costs for ordinary repairs, additions, or improvements. **Ordinary repairs** are expenditures to **maintain** the operating efficiency and productive life of the unit. They usually are fairly small amounts that occur frequently. Examples are motor tune-ups and oil changes, the painting of buildings, and the replacing of worn-out gears on machinery. Companies record such repairs as debits to Maintenance and Repairs Expense as they are incurred. Because they are immediately charged as an expense against revenues, these costs are often referred to as **revenue expenditures**.

In contrast, **additions and improvements** are costs incurred to **increase** the operating efficiency, productive capacity, or useful life of a plant asset. They are usually material in amount and occur infrequently. Additions and improvements increase the company's investment in productive facilities. Companies generally debit these amounts to the plant asset affected. They are often referred to as **capital expenditures**.

Companies must use good judgment in deciding between a revenue expenditure and capital expenditure. For example, assume that Rodriguez Co. purchases a number of wastepaper baskets. Although the proper accounting would appear to be to capitalize and then depreciate these wastepaper baskets over their useful life, it would be more usual for Rodriguez to expense them immediately. This practice is justified on the basis of **materiality**. Materiality refers to the impact of an item's size on a company's financial operations. The **materiality concept**

LEARNING OBJECTIVE 3

Distinguish between revenue and capital expenditures, and explain the entries for each.

states that if an item would not make a difference in decision-making, the company does not have to follow GAAP in reporting that item.

ANATOMY OF A FRAUD

Bernie Ebbers was the founder and CEO of the phone company **WorldCom**. The company engaged in a series of increasingly large, debt-financed acquisitions of other companies. These acquisitions made the company grow quickly, which made the stock price increase dramatically. However, because the acquired companies all had different accounting systems, WorldCom's financial records were a mess. When WorldCom's performance started to flatten out, Bernie coerced WorldCom's accountants to engage in a number of fraudulent activities to make net income look better than it really was and thus prop up the stock price. One of these frauds involved treating \$7 billion of line costs as capital expenditures. The line costs, which were rental fees paid to other phone companies to use their phone lines, had always been properly expensed in previous years. Capitalization delayed expense recognition to future periods and thus boosted current-period profits.

Total take: \$7 billion

The Missing Controls

Documentation procedures. The company's accounting system was a disorganized collection of non-integrated systems, which resulted from a series of corporate acquisitions. Top management took advantage of this disorganization to conceal its fraudulent activities.

Independent internal verification. A fraud of this size should have been detected by a routine comparison of the actual physical assets with the list of physical assets shown in the accounting records.

Plant Asset Disposals

LEARNING OBJECTIVE 4

Explain how to account for the disposal of a plant asset.

Companies dispose of plant assets that are no longer useful to them. Illustration 9-18 below shows the three ways in which companies make plant asset disposals.

Whatever the disposal method, the company must determine the book value of the plant asset at the disposal date to determine the gain or loss. Recall that the book value is the difference between the cost of the plant asset and the accumulated depreciation to date. If the disposal occurs at any time during the year, the company must record depreciation for the fraction of the year to the date of disposal. The company then eliminates the book value by reducing (debiting) Accumulated Depreciation for the total depreciation associated with that asset to the date of disposal and reducing (crediting) the asset account for the cost of the asset.

Illustration 9-18

Methods of plant asset disposal

In this chapter, we examine the accounting for the retirement and sale of plant assets. In the appendix to the chapter, we discuss and illustrate the accounting for exchanges of plant assets.

RETIREMENT OF PLANT ASSETS

To illustrate the retirement of plant assets, assume that Hobart Enterprises retires its computer printers, which cost \$32,000. The accumulated depreciation on these printers is \$32,000. The equipment, therefore, is fully depreciated (zero book value). The entry to record this retirement is as follows.

Accumulated Depreciation—Equipment	32,000	
Equipment		32,000
(To record retirement of fully depreciated equipment)		

What happens if a fully depreciated plant asset is still useful to the company? In this case, the asset and its accumulated depreciation continue to be reported on the balance sheet, without further depreciation adjustment, until the company retires the asset. Reporting the asset and related accumulated depreciation on the balance sheet informs the financial statement reader that the asset is still in use. Once fully depreciated, no additional depreciation should be taken, even if an asset is still being used. In no situation can the accumulated depreciation on a plant asset exceed its cost.

If a company retires a plant asset before it is fully depreciated, and no cash is received for scrap or salvage value, a loss on disposal occurs. For example, assume that Sunset Company discards delivery equipment that cost \$18,000 and has accumulated depreciation of \$14,000. The entry is as follows.

Accumulated Depreciation—Equipment	14,000	
Loss on Disposal of Plant Assets	4,000	
Equipment		18,000
(To record retirement of delivery equipment at a loss)		

Companies report a loss on disposal of plant assets in the “Other expenses and losses” section of the income statement.

SALE OF PLANT ASSETS

In a disposal by sale, the company compares the book value of the asset with the proceeds received from the sale. If the proceeds of the sale **exceed** the book value of the plant asset, **a gain on disposal occurs**. If the proceeds of the sale **are less than** the book value of the plant asset sold, **a loss on disposal occurs**.

Only by coincidence will the book value and the fair value of the asset be the same when the asset is sold. Gains and losses on sales of plant assets are therefore quite common. For example, **Delta Airlines** reported a \$94,343,000 gain on the sale of five **Boeing** B727-200 aircraft and five **Lockheed** L-1011-1 aircraft.

GAIN ON SALE To illustrate a gain on sale of plant assets, assume that on July 1, 2014, Wright Company sells office furniture for \$16,000 cash. The office furniture originally cost \$60,000. As of January 1, 2014, it had accumulated depreciation of \$41,000. Depreciation for the first six months of 2014 is \$8,000. Wright records depreciation expense and updates accumulated depreciation to July 1 with the following entry.

July 1	Depreciation Expense	8,000	
	Accumulated Depreciation—Equipment		8,000
	(To record depreciation expense for the first 6 months of 2014)		

After the accumulated depreciation balance is updated, the company computes the gain or loss. The gain or loss is the difference between the proceeds from the sale and the book value at the date of disposal. Illustration 9-19 (page 438) shows this computation for Wright Company, which has a gain on disposal of \$5,000.

A	=	L	+	SE
+32,000

Companies report a loss on disposal of plant assets in the “Other expenses and losses” section of the income statement.

> DO IT!

Plant Asset Disposal

Overland Trucking has an old truck that cost \$30,000, and it has accumulated depreciation of \$16,000 on this truck. Overland has decided to sell the truck. (a) What entry would Overland Trucking make to record the sale of the truck for \$17,000 cash? (b) What entry would Overland Trucking make to record the sale of the truck for \$10,000 cash?

Action Plan

- ✓ At the time of disposal, determine the book value of the asset.
- ✓ Compare the asset's book value with the proceeds received to determine whether a gain or loss has occurred.

Solution

(a) Sale of truck for cash at a gain:			
Cash		17,000	
Accumulated Depreciation—Equipment		16,000	
Equipment			30,000
Gain on Disposal of Plant Assets [\$17,000 - (\$30,000 - \$16,000)]			3,000
(To record sale of truck at a gain)			

(b) Sale of truck for cash at a loss:

Cash	10,000	
Accumulated Depreciation—Equipment	16,000	
Loss on Disposal of Plant Assets [\$10,000 – (\$30,000 – \$16,000)]	4,000	
Equipment		30,000
(To record sale of truck at a loss)		

Related exercise material: **BE9-9, BE9-10, E9-9, E9-10, and DO IT! 9-4.**

Natural Resources

Natural resources consist of standing timber and underground deposits of oil, gas, and minerals. These long-lived productive assets have two distinguishing characteristics: (1) They are physically extracted in operations (such as mining, cutting, or pumping). (2) They are replaceable only by an act of nature.

The acquisition cost of a natural resource is the price needed to acquire the resource **and** prepare it for its intended use. For an already-discovered resource, such as an existing coal mine, cost is the price paid for the property.

The allocation of the cost of natural resources to expense in a rational and systematic manner over the resource’s useful life is called **depletion**. (That is, *depletion* is to natural resources as *depreciation* is to plant assets.) **Companies generally use the units-of-activity method** (learned earlier in the chapter) **to compute depletion**. The reason is that **depletion generally is a function of the units extracted during the year**.

Under the units-of-activity method, companies divide the total cost of the natural resource minus salvage value by the number of units estimated to be in the resource. The result is a **depletion cost per unit of product**. They then multiply the depletion cost per unit by the number of units extracted and sold. The result is the **annual depletion expense**. Illustration 9-21 shows the formula to compute depletion expense.

LEARNING OBJECTIVE 5
Compute periodic depletion of natural resources.

Helpful Hint
 On a balance sheet, natural resources may be described more specifically as *timberlands, mineral deposits, oil reserves, and so on*.

Illustration 9-21
 Formula to compute depletion expense

To illustrate, assume that Lane Coal Company invests \$5 million in a mine estimated to have 10 million tons of coal and no salvage value. In the first year, Lane extracts and sells 800,000 tons of coal. Using the formulas above, Lane computes the depletion expense as follows.

$$\begin{aligned}
 \$5,000,000 \div 10,000,000 &= \$0.50 \text{ depletion cost per ton} \\
 \$0.50 \times 800,000 &= \$400,000 \text{ annual depletion expense}
 \end{aligned}$$

Ethics Note

Investors were stunned at news that **Royal Dutch/Shell Group** had significantly overstated its reported oil reserves—and perhaps had done so intentionally.

A	=	L	+	SE
				-400,000 Exp
-400,000				
Cash Flows				
no effect				

Lane records depletion expense for the first year of operation as follows.

Dec. 31	Depletion Expense	400,000	
	Accumulated Depletion		400,000
	(To record depletion expense on coal deposits)		

The company reports the account Depletion Expense as a part of the cost of producing the product. Accumulated Depletion is a contra-asset account, similar to accumulated depreciation. It is deducted from the cost of the natural resource in the balance sheet, as Illustration 9-22 shows.

Illustration 9-22
Statement presentation of accumulated depletion

Lane Coal Company Balance Sheet (partial)		
Coal mine	\$5,000,000	
Less: Accumulated depletion	400,000	\$4,600,000

Many companies do not use an Accumulated Depletion account. In such cases, the company credits the amount of depletion directly to the natural resources account.

Sometimes, a company will extract natural resources in one accounting period but not sell them until a later period. In this case, the company does not expense the depletion until it sells the resource. It reports the amount not sold as inventory in the current assets section.

PEOPLE, PLANET, AND PROFIT INSIGHT

Sustainability Report Please

Sustainability reports identify how the company is meeting its corporate social responsibilities. Many companies, both large and small, are now issuing these reports. For example, companies such as **Disney**, **Best Buy**, **Microsoft**, **Ford**, and **ConocoPhillips** issue these reports. Presented below is an adapted section of **BHP Billiton's** (a global mining, oil, and gas company) sustainability report on its environmental policies. These policies are to (1) take action to address the challenges of climate change, (2) set and achieve targets that reduce pollution, and (3) enhance biodiversity by assessing and considering ecological values and land-use aspects. Here is how BHP Billiton measures the success or failure of some of these policies:

Environment	Result	Trend	Commentary	Target Date
Aggregate Group target of 6% reduction in greenhouse gas emissions per unit of production	On track	Improvement	Our greenhouse gas emissions intensity index has reduced 7% on our FY2006 baseline year	30 June 2012
Aggregate Group target of 13% reduction in carbon-based energy use per unit of production	On track	Improvement	Our energy intensity index has reduced 6% on our FY2006 baseline year	30 June 2012
Aggregate Group target of a 10% improvement in the ratio of water recycled/reused to high-quality water consumed	On track	Deterioration	Our water use index has improved 7% on our FY2007 baseline year	30 June 2012

In addition to the environment, BHP Billiton has sections in its sustainability report which discuss people, safety, health, and community.

Source: BHP Billiton, 2010 Sustainability Report.

Why do you believe companies issue sustainability reports? (See page 469.)

Intangible Assets

Intangible assets are rights, privileges, and competitive advantages that result from the ownership of long-lived assets that do not possess physical substance. Evidence of intangibles may exist in the form of contracts or licenses. Intangibles may arise from the following sources:

1. Government grants, such as patents, copyrights, licenses, trademarks, and trade names.
2. Acquisition of another business, in which the purchase price includes a payment for *goodwill*.
3. Private monopolistic arrangements arising from contractual agreements, such as franchises and leases.

Some widely known intangibles are **Microsoft's** patents, **McDonald's** franchises, **Apple's** trade name iPod, J.K. Rowling's copyrights on the *Harry Potter* books, and the trademark **Rent-A-Wreck** in the Feature Story.

Accounting for Intangible Assets

Companies record intangible assets at cost. Intangibles are categorized as having either a limited life or an indefinite life. If an intangible has a **limited life**, the company allocates its cost over the asset's useful life using a process similar to depreciation. The process of allocating the cost of intangibles is referred to as **amortization**. The cost of intangible assets with **indefinite lives should not be amortized**.

To record amortization of an intangible asset, a company increases (debits) Amortization Expense and decreases (credits) the specific intangible asset. (Unlike depreciation, no contra account, such as Accumulated Amortization, is usually used.)

Intangible assets are typically amortized on a straight-line basis. For example, the legal life of a patent is 20 years. Companies **amortize the cost of a patent over its 20-year life or its useful life, whichever is shorter**. To illustrate the computation of patent amortization, assume that National Labs purchases a patent at a cost of \$60,000. If National estimates the useful life of the patent to be eight years, the annual amortization expense is \$7,500 ($\$60,000 \div 8$). National records the annual amortization as follows.

Dec. 31	Amortization Expense Patents (To record patent amortization)	7,500	7,500
---------	--	-------	-------

Companies classify Amortization Expense as an operating expense in the income statement.

There is a difference between intangible assets and plant assets in determining cost. For plant assets, cost includes both the purchase price of the asset and the costs incurred in designing and constructing the asset. In contrast, cost for an intangible asset includes **only the purchase price**. Companies expense any costs incurred in developing an intangible asset.

PATENTS

A **patent** is an exclusive right issued by the U.S. Patent Office that enables the recipient to manufacture, sell, or otherwise control an invention for a period of 20 years from the date of the grant. A patent is nonrenewable. But, companies can extend the legal life of a patent by obtaining new patents for improvements or other changes in the basic design. **The initial cost of a patent is the cash or cash equivalent price paid to acquire the patent.**

LEARNING OBJECTIVE 6

Explain the basic issues related to accounting for intangible assets.

Helpful Hint

Amortization is to intangibles what *depreciation* is to plant assets and *depletion* is to natural resources.

A	=	L	+	SE
-7,500				-7,500 Exp

Cash Flows
no effect

The saying, “A patent is only as good as the money you’re prepared to spend defending it,” is very true. Most patents are subject to litigation by competitors. Any legal costs an owner incurs in successfully defending a patent in an infringement suit are considered necessary to establish the patent’s validity. **The owner adds those costs to the Patents account and amortizes them over the remaining life of the patent.**

The patent holder amortizes the cost of a patent over its 20-year legal life or its useful life, whichever is shorter. Companies consider obsolescence and inadequacy in determining useful life. These factors may cause a patent to become economically ineffective before the end of its legal life.

COPYRIGHTS

The federal government grants **copyrights**, which give the owner the exclusive right to reproduce and sell an artistic or published work. Copyrights extend for the life of the creator plus 70 years. The cost of a copyright is the **cost of acquiring and defending it**. The cost may be only the small fee paid to the U.S. Copyright Office. Or, it may amount to much more if an infringement suit is involved.

The useful life of a copyright generally is significantly shorter than its legal life. Therefore, copyrights usually are amortized over a relatively short period of time.

TRADEMARKS AND TRADE NAMES

A **trademark** or **trade name** is a word, phrase, jingle, or symbol that identifies a particular enterprise or product. Trade names like Wheaties, Monopoly, Big Mac, Kleenex, Coca-Cola, and Jeep create immediate product identification. They also generally enhance the sale of the product. The creator or original user may obtain exclusive legal right to the trademark or trade name by registering it with the U.S. Patent Office. Such registration provides 20 years of protection. The registration may be renewed indefinitely as long as the trademark or trade name is in use.

If a company purchases the trademark or trade name, its cost is the purchase price. If a company develops and maintains the trademark or trade name, any costs related to these activities are expensed as incurred. Because trademarks and trade names have indefinite lives, they are not amortized.

FRANCHISES AND LICENSES

When you fill up your tank at the corner **Shell** station, eat lunch at **Subway**, or rent a car from **Rent-A-Wreck**, you are dealing with franchises. A **franchise** is a contractual arrangement between a franchisor and a franchisee. The franchisor grants the franchisee the right to sell certain products, provide specific services, or use certain trademarks or trade names, usually within a designated geographic area.

Another type of franchise is that entered into between a governmental body (commonly municipalities) and a company. This franchise permits the company to use public property in performing its services. Examples are the use of city streets for a bus line or taxi service, use of public land for telephone and electric lines, and the use of airwaves for radio or TV broadcasting. Such operating rights are referred to as **licenses**. Franchises and licenses may be granted for a definite period of time, an indefinite period, or perpetually.

When a company can identify costs with the purchase of a franchise or license, it should recognize an intangible asset. Companies should amortize the cost of a limited-life franchise (or license) over its useful life. If the life is indefinite, the cost is not amortized. Annual payments made under a franchise agreement are recorded as **operating expenses** in the period in which they are incurred.

GOODWILL

Usually, the largest intangible asset that appears on a company's balance sheet is goodwill. **Goodwill** represents the value of all favorable attributes that relate to a company that are not attributable to any other specific asset. These include exceptional management, desirable location, good customer relations, skilled employees, high-quality products, and harmonious relations with labor unions. Goodwill is unique: Unlike assets such as investments and plant assets, which can be sold *individually* in the marketplace, goodwill can be identified only with the business as a whole.

If goodwill can be identified only with the business as a whole, how can its amount be determined? One could try to put a dollar value on the factors listed above (exceptional management, desirable location, and so on). But, the results would be very subjective, and such subjective valuations would not contribute to the reliability of financial statements. **Therefore, companies record goodwill only when an entire business is purchased. In that case, goodwill is the excess of cost over the fair value of the net assets (assets less liabilities) acquired.**

In recording the purchase of a business, the company debits (increases) the identifiable acquired assets, credits liabilities at their fair values, credits cash for the purchase price, and records the difference as goodwill. **Goodwill is not amortized** because it is considered to have an indefinite life. Companies report goodwill in the balance sheet under intangible assets.

INTERNATIONAL INSIGHT

Should Companies Write Up Goodwill?

Softbank Corp. is Japan's biggest Internet company. At one time, it boosted the profit margin of its mobile-phone unit from 3.2% to 11.2% through what appeared to some as accounting tricks. What did it do? It wrote down the value of its mobile-phone-unit assets by half. This would normally result in a huge loss. But rather than take a loss, the company wrote up goodwill by the same amount. How did this move increase earnings? The assets were being depreciated over 10 years, but the company amortizes goodwill over 20 years. (Amortization of goodwill was allowed under the accounting standards it followed at that time.) While the new treatment did not break any rules, the company was criticized by investors for not providing sufficient justification or a detailed explanation for the sudden shift in policy.

Source: Andrew Morse and Yukari Iwatani Kane, "Softbank's Accounting Shift Raises Eyebrows," *Wall Street Journal* (August 28, 2007), p. C1.

Do you think that this treatment would be allowed under U.S. GAAP? (See page 469.)

Research and Development Costs

Research and development costs are expenditures that may lead to patents, copyrights, new processes, and new products. Many companies spend considerable sums of money on research and development (R&D). For example, in a recent year, **IBM** spent over \$5.1 billion on R&D.

Research and development costs present accounting problems. For one thing, it is sometimes difficult to assign the costs to specific projects. Also, there are uncertainties in identifying the extent and timing of future benefits. As a result,

Helpful Hint

Research and development (R&D) costs are not intangible assets. But because they may lead to patents and copyrights, we discuss them in this section.

companies usually record R&D costs **as an expense when incurred**, whether the research and development is successful or not.

To illustrate, assume that Laser Scanner Company spent \$3 million on R&D that resulted in two highly successful patents. It spent \$20,000 on legal fees for the patents. The company would add the lawyers' fees to the patent account. The R&D costs, however, cannot be included in the cost of the patent. Instead, the company would record the R&D costs as an expense when incurred.

Many disagree with this accounting approach. They argue that expensing R&D costs leads to understated assets and net income. Others, however, argue that capitalizing these costs will lead to highly speculative assets on the balance sheet. Who is right is difficult to determine.

> DO IT!

Classification Concepts

Match the statement with the term most directly associated with it.

Copyrights	Depletion
Intangible assets	Franchises
Research and development costs	

- _____ The allocation of the cost of a natural resource to expense in a rational and systematic manner.
- _____ Rights, privileges, and competitive advantages that result from the ownership of long-lived assets that do not possess physical substance.
- _____ An exclusive right granted by the federal government to reproduce and sell an artistic or published work.
- _____ A right to sell certain products or services or to use certain trademarks or trade names within a designated geographic area.
- _____ Costs incurred by a company that often lead to patents or new products. These costs must be expensed as incurred.

Action Plan

- ✓ Know that the accounting for intangibles often depends on whether the item has a finite or indefinite life.
- ✓ Recognize the many similarities and differences between the accounting for natural resources, plant assets, and intangible assets.

Solution

1. Depletion
2. Intangible assets
3. Copyrights
4. Franchises
5. Research and development costs

Statement Presentation and Analysis

LEARNING OBJECTIVE 7

Indicate how plant assets, natural resources, and intangible assets are reported.

Presentation

Usually, companies combine plant assets and natural resources under "Property, plant, and equipment" in the balance sheet. They show intangibles separately. Companies disclose either in the balance sheet or the notes the balances of the major classes of assets, such as land, buildings, and equipment, and accumulated depreciation by major classes or in total. In addition, they should describe the

depreciation and amortization methods that were used, as well as disclose the amount of depreciation and amortization expense for the period.

Illustration 9-23 shows a typical financial statement presentation of property, plant, and equipment and intangibles for **The Procter & Gamble Company (P&G)** in its 2010 balance sheet. The notes to P&G's financial statements present greater details about the accounting for its long-term tangible and intangible assets.

The Procter & Gamble Company
Balance Sheet (partial)
(in millions)

	June 30	
	2010	2009
Property, plant, and equipment		
Buildings	\$ 6,868	\$ 6,724
Machinery and equipment	29,294	29,042
Land	850	885
	<u>37,012</u>	<u>36,651</u>
Accumulated depreciation	(17,768)	(17,189)
Net property, plant, and equipment	19,244	19,462
Goodwill and other intangible assets		
Goodwill	54,012	56,512
Trademarks and other intangible assets, net	31,636	32,606
Net goodwill and other intangible assets	<u>\$85,648</u>	<u>\$89,118</u>

Illustration 9-23

P&G's presentation of property, plant, and equipment, and intangible assets

Illustration 9-24 shows another comprehensive presentation of property, plant, and equipment from the balance sheet of **Owens-Illinois, Inc.** The notes to the financial statements of Owens-Illinois identify the major classes of property, plant, and equipment. They also indicate that depreciation and amortization are by the straight-line method, and depletion is by the units-of-activity method.

Owens-Illinois, Inc.
Balance Sheet (partial)
(in millions)

Property, plant, and equipment			
Timberlands, at cost, less accumulated depletion		\$ 95.4	
Buildings and equipment, at cost	\$2,207.1		
Less: Accumulated depreciation	<u>1,229.0</u>	<u>978.1</u>	
Total property, plant, and equipment			\$1,073.5
Intangibles			
Patents			<u>410.0</u>
Total			\$1,483.5

Illustration 9-24

Owens-Illinois' presentation of property, plant, and equipment, and intangible assets

Analysis

Using ratios, we can analyze how efficiently a company uses its assets to generate sales. The **asset turnover ratio** analyzes the productivity of a company's assets. It tells us how many dollars of sales a company generates for each dollar invested in assets. This ratio is computed by dividing net sales by average total assets for

the period. The formula in Illustration 9-25 shows the computation of the asset turnover ratio for **The Procter & Gamble Company**. P&G’s net sales for 2010 were \$78,938 million. Its total ending assets were \$128,172 million, and beginning assets were \$134,833 million.

Illustration 9-25
Asset turnover formula and computation

Net Sales	÷	Average Total Assets	=	Asset Turnover Ratio
\$78,938	÷	$\frac{\$128,172 + \$134,833}{2}$	=	.60 times

Thus, each dollar invested in assets produced \$0.60 in sales for P&G. If a company is using its assets efficiently, each dollar of assets will create a high amount of sales. This ratio varies greatly among different industries—from those that are asset-intensive (utilities) to those that are not (services).

> **Comprehensive DO IT! 1**

DuPage Company purchases a factory machine at a cost of \$18,000 on January 1, 2014. DuPage expects the machine to have a salvage value of \$2,000 at the end of its 4-year useful life.

During its useful life, the machine is expected to be used 160,000 hours. Actual annual hourly use was 2014, 40,000; 2015, 60,000; 2016, 35,000; and 2017, 25,000.

Instructions

Prepare depreciation schedules for the following methods: (a) straight-line, (b) units-of-activity, and (c) declining-balance using double the straight-line rate.

Solution to Comprehensive DO IT! 1

Action Plan

- ✓ Under the straight-line method, apply the depreciation rate to depreciable cost.
- ✓ Under the units-of-activity method, compute the depreciable cost per unit by dividing depreciable cost by total units of activity.
- ✓ Under the declining-balance method, apply the depreciation rate to **book value** at the beginning of the year.

(a)							
Straight-Line Method							
	Computation				End of Year		
Year	Depreciable Cost*	×	Depreciation Rate	=	Annual Depreciation Expense	Accumulated Depreciation	Book Value
2014	\$16,000		25%		\$4,000	\$ 4,000	\$14,000**
2015	16,000		25%		4,000	8,000	10,000
2016	16,000		25%		4,000	12,000	6,000
2017	16,000		25%		4,000	16,000	2,000
	*\$18,000 – \$2,000.						
	**\$18,000 – \$4,000.						
(b)							
Units-of-Activity Method							
	Computation				End of Year		
Year	Units of Activity	×	Depreciable Cost/Unit	=	Annual Depreciation Expense	Accumulated Depreciation	Book Value
2014	40,000		\$0.10*		\$4,000	\$ 4,000	\$14,000
2015	60,000		0.10		6,000	10,000	8,000
2016	35,000		0.10		3,500	13,500	4,500
2017	25,000		0.10		2,500	16,000	2,000
	*(\$18,000 – \$2,000) ÷ 160,000.						

(c)

Declining-Balance Method

Year	Computation			End of Year			
	Book Value Beginning of Year	×	Depreciation Rate*	=	Annual Depreciation Expense	Accumulated Depreciation	Book Value
2014	\$18,000		50%		\$9,000	\$ 9,000	\$9,000
2015	9,000		50%		4,500	13,500	4,500
2016	4,500		50%		2,250	15,750	2,250
2017	2,250		50%		250**	16,000	2,000

* $\frac{1}{4} \times 2$.

**Adjusted to \$250 because ending book value should not be less than expected salvage value.

> Comprehensive DO IT! 2

On January 1, 2014, Skyline Limousine Co. purchased a limo at an acquisition cost of \$28,000. The vehicle has been depreciated by the straight-line method using a 4-year service life and a \$4,000 salvage value. The company's fiscal year ends on December 31.

Instructions

Prepare the journal entry or entries to record the disposal of the limousine assuming that it was:

- (a) Retired and scrapped with no salvage value on January 1, 2018.
- (b) Sold for \$5,000 on July 1, 2017.

Solution to Comprehensive DO IT! 2

Action Plan

- ✓ At the time of disposal, determine the book value of the asset.
- ✓ Recognize any gain or loss from disposal of the asset.
- ✓ Remove the book value of the asset from the records by debiting Accumulated Depreciation for the total depreciation to date of disposal and crediting the asset account for the cost of the asset.

(a) 1/1/18	Accumulated Depreciation—Equipment	24,000	28,000
	Loss on Disposal of Plant Assets—Equipment (To record retirement of limousine)	4,000	
(b) 7/1/17	Depreciation Expense	3,000	3,000
	Accumulated Depreciation—Equipment (To record depreciation to date of disposal)		
	Cash	5,000	
	Accumulated Depreciation—Equipment	21,000	28,000
	Loss on Disposal of Plant Assets—Equipment (To record sale of limousine)	2,000	

SUMMARY OF LEARNING OBJECTIVES

**1 Describe how the cost principle applies to plant assets.**

The cost of plant assets includes all expenditures necessary to acquire the asset and make it ready for its intended use. Once cost is established, a company uses that amount as the basis of accounting for the plant asset over its useful life.

2 Explain the concept of depreciation and how to compute it. Depreciation is the allocation of the cost of a plant asset to expense over its useful (service) life in a rational and systematic manner. Depreciation is not a process of valuation, nor is it a process that results in an accumulation of cash.

Three depreciation methods are:

Method	Effect on Annual Depreciation	Formula
Straight-line	Constant amount	Depreciable cost ÷ Useful life (in years)
Units-of-activity	Varying amount	Depreciable cost per unit × Units of activity during the year
Declining-balance	Decreasing amount	Book value at beginning of year × Declining-balance rate

Companies make revisions of periodic depreciation in present and future periods, not retroactively. They determine the new annual depreciation by dividing the depreciable cost at the time of the revision by the remaining useful life.

3 Distinguish between revenue and capital expenditures, and explain the entries for each. Companies incur revenue expenditures to maintain the operating efficiency and productive life of an asset. They debit these expenditures to Maintenance and Repairs Expense as incurred. Capital expenditures increase the operating efficiency, productive capacity, or expected useful life of

the asset. Companies generally debit these expenditures to the plant asset affected.

4 Explain how to account for the disposal of a plant asset. The accounting for disposal of a plant asset through retirement or sale is as follows.

- Eliminate the book value of the plant asset at the date of disposal.
- Record cash proceeds, if any.
- Account for the difference between the book value and the cash proceeds as a gain or loss on disposal.

5 Compute periodic depletion of natural resources. Companies compute depletion cost per unit by dividing the total cost of the natural resource minus salvage value by the number of units estimated to be in the resource. They then multiply the depletion cost per unit by the number of units extracted and sold.**6 Explain the basic issues related to accounting for intangible assets.** The process of allocating the cost of an intangible asset is referred to as amortization. The cost of intangible assets with indefinite lives are not amortized. Companies normally use the straight-line method for amortizing intangible assets.**7 Indicate how plant assets, natural resources, and intangible assets are reported.** Companies usually combine plant assets and natural resources under property, plant, and equipment; they show intangibles separately under intangible assets. Either within the balance sheet or in the notes, companies should disclose the balances of the major classes of assets, such as land, buildings, and equipment, and accumulated depreciation by major classes or in total. They also should describe the depreciation and amortization methods used, and should disclose the amount of depreciation and amortization expense for the period. The asset turnover ratio measures the productivity of a company's assets in generating sales.

GLOSSARY

Accelerated-depreciation method Depreciation method that produces higher depreciation expense in the early years than in the later years. (p. 432).

Additions and improvements Costs incurred to increase the operating efficiency, productive capacity, or useful life of a plant asset. (p. 435).

Amortization The allocation of the cost of an intangible asset to expense over its useful life in a systematic and rational manner. (p. 441).

Asset turnover ratio A measure of how efficiently a company uses its assets to generate sales; calculated as net sales divided by average total assets. (p. 445).

Capital expenditures Expenditures that increase the company's investment in productive facilities. (p. 435).

Copyrights Exclusive grant from the federal government that allows the owner to reproduce and sell an artistic or published work. (p. 442).

Declining-balance method Depreciation method that applies a constant rate to the declining book value of the asset and produces a decreasing annual depreciation expense over the useful life of the asset. (p. 431).

Depletion The allocation of the cost of a natural resource to expense in a rational and systematic manner over the resource's useful life. (p. 439).

Depreciation The process of allocating to expense the cost of a plant asset over its useful (service) life in a rational and systematic manner. (p. 427).

Depreciable cost The cost of a plant asset less its salvage value. (p. 429).

Franchise (license) A contractual arrangement under which the franchisor grants the franchisee the right to sell certain products, provide specific services, or use certain trademarks or trade names, usually within a designated geographic area. (p. 442).

Going-concern assumption States that the company will continue in operation for the foreseeable future. (p. 428).

Goodwill The value of all favorable attributes that relate to a company that is not attributable to any other specific asset. (p. 443).

Intangible assets Rights, privileges, and competitive advantages that result from the ownership of long-lived assets that do not possess physical substance. (p. 441).

Licenses Operating rights to use public property, granted to a business by a governmental agency. (p. 442).

Materiality concept If an item would not make a difference in decision-making, a company does not have to follow GAAP in reporting it. (p. 435).

Natural resources Assets that consist of standing timber and underground deposits of oil, gas, or minerals. (p. 439).

Ordinary repairs Expenditures to maintain the operating efficiency and productive life of the plant asset. (p. 435).

Patent An exclusive right issued by the U.S. Patent Office that enables the recipient to manufacture, sell, or otherwise control an invention for a period of 20 years from the date of the grant. (p. 441).

Plant assets Tangible resources that are used in the operations of the business and are not intended for sale to customers. (p. 424).

Research and development (R&D) costs Expenditures that may lead to patents, copyrights, new processes, or new products. (p. 443).

Revenue expenditures Expenditures that are immediately charged against revenues as an expense. (p. 435).

Salvage value An estimate of an asset's value at the end of its useful life. (p. 429).

Straight-line method Depreciation method in which periodic depreciation is the same for each year of the asset's useful life. (p. 429).

Trademark (trade name) A word, phrase, jingle, or symbol that identifies a particular enterprise or product. (p. 442).

Units-of-activity method Depreciation method in which useful life is expressed in terms of the total units of production or use expected from an asset. (p. 430).

Useful life An estimate of the expected productive life, also called service life, of an asset. (p. 429).

APPENDIX 9A EXCHANGE OF PLANT ASSETS

Ordinarily, companies record a gain or loss on the exchange of plant assets. The rationale for recognizing a gain or loss is that most exchanges have **commercial substance**. An exchange has commercial substance if the future cash flows change as a result of the exchange.

To illustrate, Ramos Co. exchanges some of its equipment for land held by Brodhead Inc. It is likely that the timing and amount of the cash flows arising from the land will differ significantly from the cash flows arising from the equipment. As a result, both Ramos and Brodhead are in different economic positions. Therefore, **the exchange has commercial substance**, and the companies recognize a gain or loss in the exchange. Because most exchanges have commercial substance (even when similar assets are exchanged), we illustrate only this type of situation, for both a loss and a gain.

Loss Treatment

To illustrate an exchange that results in a loss, assume that Roland Company exchanged a set of used trucks plus cash for a new semi-truck. The used trucks have a combined book value of \$42,000 (cost \$64,000 less \$22,000 accumulated depreciation). Roland's purchasing agent, experienced in the second-hand market, indicates that the used trucks have a fair value of \$26,000. In addition to the trucks, Roland must pay \$17,000 for the semi-truck. Roland computes the cost of the semi-truck as follows.

LEARNING OBJECTIVE 8

Explain how to account for the exchange of plant assets.

Illustration 9A-1
Cost of semi-truck

Fair value of used trucks	\$26,000
Cash paid	<u>17,000</u>
Cost of semi-truck	<u>\$43,000</u>

Roland incurs a loss on disposal of plant assets of \$16,000 on this exchange. The reason is that the book value of the used trucks is greater than the fair value of these trucks. The computation is as follows.

Illustration 9A-2
Computation of loss on disposal

Book value of used trucks (\$64,000 – \$22,000)	\$ 42,000
Fair value of used trucks	<u>26,000</u>
Loss on disposal of plant assets	<u>\$16,000</u>

In recording an exchange at a loss, three steps are required: (1) eliminate the book value of the asset given up, (2) record the cost of the asset acquired, and (3) recognize the loss on disposal of plant assets. Roland Company thus records the exchange on the loss as follows.

A	=	L	+	SE
+43,000				
+22,000				
				-16,000 Exp
-64,000				
-17,000				
<hr style="border: 0.5px solid black;"/>				
Cash Flows				
-17,000				

Equipment (new)	43,000		
Accumulated Depreciation—Equipment	22,000		
Loss on Disposal of Plant Assets	16,000		
Equipment (old)			64,000
Cash			<u>17,000</u>
(To record exchange of used trucks for semi-truck)			

Gain Treatment

To illustrate a gain situation, assume that Mark Express Delivery decides to exchange its old delivery equipment plus cash of \$3,000 for new delivery equipment. The book value of the old delivery equipment is \$12,000 (cost \$40,000 less accumulated depreciation \$28,000). The fair value of the old delivery equipment is \$19,000.

The cost of the new asset is the fair value of the old asset exchanged plus any cash paid (or other consideration given up). The cost of the new delivery equipment is \$22,000, computed as follows.

Illustration 9A-3
Cost of new delivery equipment

Fair value of old delivery equipment	\$ 19,000
Cash paid	<u>3,000</u>
Cost of new delivery equipment	<u>\$22,000</u>

A gain results when the fair value of the old delivery equipment is greater than its book value. For Mark Express, there is a gain of \$7,000 on disposal of plant assets, computed as follows.

Illustration 9A-4
Computation of gain on disposal

Fair value of old delivery equipment	\$19,000
Book value of old delivery equipment (\$40,000 – \$28,000)	<u>12,000</u>
Gain on disposal of plant assets	<u>\$ 7,000</u>

Mark Express Delivery records the exchange as follows.

Equipment (new)	22,000		A	=	L	+	SE	
Accumulated Depreciation—Equipment (old)	28,000		+22,000					
Equipment (old)		40,000	+28,000					
Gain on Disposal of Plant Assets		7,000	-40,000					
Cash		3,000						+7,000 Rev
(To record exchange of old delivery equipment for new delivery equipment)			-3,000					
			Cash Flows					
			-3,000					

In recording an exchange at a gain, the following three steps are involved: (1) eliminate the book value of the asset given up, (2) record the cost of the asset acquired, and (3) recognize the gain on disposal of plant assets. Accounting for exchanges of plant assets becomes more complex if the transaction does not have commercial substance. This issue is discussed in more advanced accounting classes.

SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 9A

8 Explain how to account for the exchange of plant assets.

Ordinarily, companies record a gain or loss on the exchange of plant assets. The rationale for recognizing a

gain or loss is that most exchanges have commercial substance. An exchange has commercial substance if the future cash flows change as a result of the exchange.

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more components are available for practice in WileyPLUS.

*Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

SELF-TEST QUESTIONS

Answers are on page 469.

- (LO 1) 1. Erin Danielle Company purchased equipment and incurred the following costs.
- | | |
|--------------------------|-----------------|
| Cash price | \$24,000 |
| Sales taxes | 1,200 |
| Insurance during transit | 200 |
| Installation and testing | 400 |
| Total costs | <u>\$25,800</u> |
- What amount should be recorded as the cost of the equipment?
- (a) \$24,000. (c) \$25,400.
(b) \$25,200. (d) \$25,800.
- (LO 2) 2. Depreciation is a process of:
- (a) valuation. (c) cash accumulation.
(b) cost allocation. (d) appraisal.
- (LO 2) 3. Micah Bartlett Company purchased equipment on January 1, 2013, at a total invoice cost of \$400,000. The equipment has an estimated salvage value of \$10,000 and an estimated useful life of 5 years. The amount of accumulated depreciation at December 31, 2014, if the straight-line method of depreciation is used, is:
- (a) \$80,000. (c) \$78,000.
(b) \$160,000. (d) \$156,000.
4. Ann Torbert purchased a truck for \$11,000 on January 1, 2013. The truck will have an estimated salvage value of \$1,000 at the end of 5 years. Using the units-of-activity method, the balance in accumulated depreciation at December 31, 2014, can be computed by the following formula:
- (a) $(\$11,000 \div \text{Total estimated activity}) \times \text{Units of activity for 2014}$.
(b) $(\$10,000 \div \text{Total estimated activity}) \times \text{Units of activity for 2014}$.
(c) $(\$11,000 \div \text{Total estimated activity}) \times \text{Units of activity for 2013 and 2014}$.
(d) $(\$10,000 \div \text{Total estimated activity}) \times \text{Units of activity for 2013 and 2014}$.
5. Jefferson Company purchased a piece of equipment on January 1, 2014. The equipment cost \$60,000 and has an estimated life of 8 years and a salvage value of \$8,000. What was the depreciation expense for the asset for 2015 under the double-declining-balance method?
- (a) \$6,500. (c) \$15,000.
(b) \$11,250. (d) \$6,562.
6. When there is a change in estimated depreciation:
- (a) previous depreciation should be corrected.

- (b) current and future years' depreciation should be revised.
 (c) only future years' depreciation should be revised.
 (d) None of the above.
- (LO 2) 7. Able Towing Company purchased a tow truck for \$60,000 on January 1, 2012. It was originally depreciated on a straight-line basis over 10 years with an assumed salvage value of \$12,000. On December 31, 2014, before adjusting entries had been made, the company decided to change the remaining estimated life to 4 years (including 2014) and the salvage value to \$2,000. What was the depreciation expense for 2014?
 (a) \$6,000. (c) \$15,000.
 (b) \$4,800. (d) \$12,100.
- (LO 3) 8. Additions to plant assets are:
 (a) revenue expenditures.
 (b) debited to the Maintenance and Repairs Expense account.
 (c) debited to the Purchases account.
 (d) capital expenditures.
- (LO 4) 9. Bennie Razor Company has decided to sell one of its old manufacturing machines on June 30, 2014. The machine was purchased for \$80,000 on January 1, 2010, and was depreciated on a straight-line basis for 10 years assuming no salvage value. If the machine was sold for \$26,000, what was the amount of the gain or loss recorded at the time of the sale?
 (a) \$18,000. (c) \$22,000.
 (b) \$54,000. (d) \$46,000.
- (LO 5) 10. Maggie Sharrer Company expects to extract 20 million tons of coal from a mine that cost \$12 million. If no salvage value is expected and 2 million tons are mined and sold in the first year, the entry to record depletion will include a:
 (a) debit to Accumulated Depletion of \$2,000,000.
 (b) credit to Depletion Expense of \$1,200,000.
 (c) debit to Depletion Expense of \$1,200,000.
 (d) credit to Accumulated Depletion of \$2,000,000.
- (LO 6) 11. Which of the following statements is *false*?
 (a) If an intangible asset has a finite life, it should be amortized.
 (b) The amortization period of an intangible asset can exceed 20 years.
 (c) Goodwill is recorded only when a business is purchased.
 (d) Research and development costs are expensed when incurred, except when the research and development expenditures result in a successful patent.
12. Martha Beyerlein Company incurred \$150,000 of research and development costs in its laboratory to develop a patent granted on January 2, 2014. On July 31, 2014, Beyerlein paid \$35,000 for legal fees in a successful defense of the patent. The total amount debited to Patents through July 31, 2014, should be:
 (a) \$150,000. (c) \$185,000.
 (b) \$35,000. (d) \$170,000.
13. Indicate which of the following statements is true. (LO 7)
 (a) Since intangible assets lack physical substance, they need be disclosed only in the notes to the financial statements.
 (b) Goodwill should be reported as a contra-account in the stockholders' equity section.
 (c) Totals of major classes of assets can be shown in the balance sheet, with asset details disclosed in the notes to the financial statements.
 (d) Intangible assets are typically combined with plant assets and natural resources and shown in the property, plant, and equipment section.
14. Lake Coffee Company reported net sales of \$180,000, net income of \$54,000, beginning total assets of \$200,000, and ending total assets of \$300,000. What was the company's asset turnover ratio? (LO 7)
 (a) 0.90 (c) 0.72
 (b) 0.20 (d) 1.39
- *15. Schopenhauer Company exchanged an old machine, with a book value of \$39,000 and a fair value of \$35,000, and paid \$10,000 cash for a similar new machine. The transaction has commercial substance. At what amount should the machine acquired in the exchange be recorded on Schopenhauer's books? (LO 8)
 (a) \$45,000. (c) \$49,000.
 (b) \$46,000. (d) \$50,000.
- *16. In exchanges of assets in which the exchange has commercial substance: (LO 8)
 (a) neither gains nor losses are recognized immediately.
 (b) gains, but not losses, are recognized immediately.
 (c) losses, but not gains, are recognized immediately.
 (d) both gains and losses are recognized immediately.

Go to the book's companion website, www.wiley.com/college/weygandt, for additional Self-Test Questions.

QUESTIONS

- Rick Baden is uncertain about the applicability of the cost principle to plant assets. Explain the principle to Rick.
- What are some examples of land improvements?
- Lexa Company acquires the land and building owned by Malta Company. What types of costs may be incurred to make the asset ready for its intended use if Lexa Company wants to use (a) only the land, and (b) both the land and the building?
- In a recent newspaper release, the president of Wanzo Company asserted that something has to be done about depreciation. The president said, "Depreciation

- does not come close to accumulating the cash needed to replace the asset at the end of its useful life.” What is your response to the president?
5. Jeremy is studying for the next accounting examination. He asks your help on two questions: (a) What is salvage value? (b) Is salvage value used in determining periodic depreciation under each depreciation method? Answer Jeremy’s questions.
 6. Contrast the straight-line method and the units-of-activity method as to (a) useful life, and (b) the pattern of periodic depreciation over useful life.
 7. Contrast the effects of the three depreciation methods on annual depreciation expense.
 8. In the fourth year of an asset’s 5-year useful life, the company decides that the asset will have a 6-year service life. How should the revision of depreciation be recorded? Why?
 9. Distinguish between revenue expenditures and capital expenditures during useful life.
 10. How is a gain or loss on the sale of a plant asset computed?
 11. Luis Corporation owns a machine that is fully depreciated but is still being used. How should Luis account for this asset and report it in the financial statements?
 12. What are natural resources, and what are their distinguishing characteristics?
 13. Explain what depletion is and how it is computed.
 14. What are the similarities and differences between the terms depreciation, depletion, and amortization?
 15. Spectrum Company hires an accounting intern who says that intangible assets should always be amortized over their legal lives. Is the intern correct? Explain.
 16. Goodwill has been defined as the value of all favorable attributes that relate to a business. What types of attributes could result in goodwill?
 17. Mark Gannon, a business major, is working on a case problem for one of his classes. In the case problem, the company needs to raise cash to market a new product it developed. Sara Bates, an engineering major, takes one look at the company’s balance sheet and says, “This company has an awful lot of goodwill. Why don’t you recommend that they sell some of it to raise cash?” How should Mark respond to Sara?
 18. Under what conditions is goodwill recorded?
 19. Often, research and development costs provide companies with benefits that last a number of years. (For example, these costs can lead to the development of a patent that will increase the company’s income for many years.) However, generally accepted accounting principles require that such costs be recorded as an expense when incurred. Why?
 20. **McDonald’s Corporation** reports total average assets of \$28.9 billion and net sales of \$20.5 billion. What is the company’s asset turnover ratio?
 21. Alpha Corporation and Zito Corporation operate in the same industry. Alpha uses the straight-line method to account for depreciation; Zito uses an accelerated method. Explain what complications might arise in trying to compare the results of these two companies.
 22. Wanzo Corporation uses straight-line depreciation for financial reporting purposes but an accelerated method for tax purposes. Is it acceptable to use different methods for the two purposes? What is Wanzo’s motivation for doing this?
 23. You are comparing two companies in the same industry. You have determined that Lam Corp. depreciates its plant assets over a 40-year life, whereas Shuey Corp. depreciates its plant assets over a 20-year life. Discuss the implications this has for comparing the results of the two companies.
 24. Zelm Company is doing significant work to revitalize its warehouses. It is not sure whether it should capitalize these costs or expense them. What are the implications for current-year net income and future net income of expensing versus capitalizing these costs?
 25.  **PEPSICO** What classifications and amounts are shown in **PepsiCo’s** Note 4 to explain its total property, plant, and equipment (net) of \$19,058 million?
 26. When assets are exchanged in a transaction involving commercial substance, how is the gain or loss on disposal of plant assets computed?
 - *27. Morris Refrigeration Company trades in an old machine on a new model when the fair value of the old machine is greater than its book value. The transaction has commercial substance. Should Morris recognize a gain on disposal of plant assets? If the fair value of the old machine is less than its book value, should Morris recognize a loss on disposal of plant assets?

BRIEF EXERCISES

BE9-1 The following expenditures were incurred by Rosenberg Company in purchasing land: cash price \$64,000, accrued taxes \$3,000, attorneys’ fees \$2,500, real estate broker’s commission \$2,000, and clearing and grading \$3,800. What is the cost of the land?

Determine the cost of land.
(LO 1)

BE9-2 Jawson Company incurs the following expenditures in purchasing a truck: cash price \$30,000, accident insurance \$2,000, sales taxes \$1,800, motor vehicle license \$160, and painting and lettering \$400. What is the cost of the truck?

Determine the cost of a truck.
(LO 1)

Compute straight-line depreciation.

(LO 2)

Compute depreciation and evaluate treatment.

(LO 2)

Compute declining-balance depreciation.

(LO 2)

Compute depreciation using the units-of-activity method.

(LO 2)

Compute revised depreciation.

(LO 2)

Prepare entries for delivery truck costs.

(LO 3)

Prepare entries for disposal by retirement.

(LO 4)

Prepare entries for disposal by sale.

(LO 4)

Prepare depletion expense entry and balance sheet presentation for natural resources.

(LO 5)

Prepare amortization expense entry and balance sheet presentation for intangibles.

(LO 6)

Classify long-lived assets on balance sheet.

(LO 7)

Analyze long-lived assets.

(LO 7)

Prepare entry for disposal by exchange.

(LO 8)

Prepare entry for disposal by exchange.

(LO 8)

BE9-3 Weller Company acquires a delivery truck at a cost of \$42,000. The truck is expected to have a salvage value of \$9,000 at the end of its 4-year useful life. Compute annual depreciation for the first and second years using the straight-line method.

BE9-4 Pioneer Company purchased land and a building on January 1, 2014. Management's best estimate of the value of the land was \$100,000 and of the building \$200,000. But management told the accounting department to record the land at \$225,000 and the building at \$75,000. The building is being depreciated on a straight-line basis over 20 years with no salvage value. Why do you suppose management requested this accounting treatment? Is it ethical?

BE9-5 Depreciation information for Weller Company is given in BE9-3. Assuming the declining-balance depreciation rate is double the straight-line rate, compute annual depreciation for the first and second years under the declining-balance method.

BE9-6 Freemont Taxi Service uses the units-of-activity method in computing depreciation on its taxicabs. Each cab is expected to be driven 150,000 miles. Taxi no. 10 cost \$33,500 and is expected to have a salvage value of \$500. Taxi no. 10 is driven 36,000 miles in year 1 and 22,000 miles in year 2. Compute the depreciation for each year.

BE9-7 On January 1, 2014, the Vasquez Company ledger shows Equipment \$32,000 and Accumulated Depreciation—Equipment \$9,000. The depreciation resulted from using the straight-line method with a useful life of 10 years and salvage value of \$2,000. On this date, the company concludes that the equipment has a remaining useful life of only 4 years with the same salvage value. Compute the revised annual depreciation.

BE9-8 Tong Company had the following two transactions related to its delivery truck.

1. Paid \$45 for an oil change.
2. Paid \$580 to install special gear unit, which increases the operating efficiency of the truck.

Prepare Tong's journal entries to record these two transactions.

BE9-9 Prepare journal entries to record the following.

- (a) Perez Company retires its delivery equipment, which cost \$44,000. Accumulated depreciation is also \$44,000 on this delivery equipment. No salvage value is received.
- (b) Assume the same information as (a), except that accumulated depreciation is \$39,000, instead of \$44,000, on the delivery equipment.

BE9-10 Arma Company sells equipment on September 30, 2014, for \$20,000 cash. The equipment originally cost \$72,000 and as of January 1, 2014, had accumulated depreciation of \$42,000. Depreciation for the first 9 months of 2014 is \$4,800. Prepare the journal entries to (a) update depreciation to September 30, 2014, and (b) record the sale of the equipment.

BE9-11 Midwest Mining Co. purchased for \$7 million a mine that is estimated to have 28 million tons of ore and no salvage value. In the first year, 5 million tons of ore are extracted and sold.

- (a) Prepare the journal entry to record depletion expense for the first year.
- (b) Show how this mine is reported on the balance sheet at the end of the first year.

BE9-12 Felipe Company purchases a patent for \$120,000 on January 2, 2014. Its estimated useful life is 8 years.

- (a) Prepare the journal entry to record amortization expense for the first year.
- (b) Show how this patent is reported on the balance sheet at the end of the first year.

BE9-13 Information related to plant assets, natural resources, and intangibles at the end of 2014 for Loomis Company is as follows: buildings \$1,300,000; accumulated depreciation—buildings \$650,000; goodwill \$410,000; coal mine \$500,000; accumulated depletion—coal mine \$122,000. Prepare a partial balance sheet of Loomis Company for these items.

BE9-14 In its 2010 annual report, Target reported beginning total assets of \$44.5 billion; ending total assets of \$43.7 billion; and net sales of \$65.8 billion. Compute Target's asset turnover ratio.

***BE9-15** Cordero Company exchanges old delivery equipment for new delivery equipment. The book value of the old delivery equipment is \$33,000 (cost \$61,000 less accumulated depreciation \$28,000). Its fair value is \$19,000, and cash of \$5,000 is paid. Prepare the entry to record the exchange, assuming the transaction has commercial substance.

***BE9-16** Assume the same information as BE9-15, except that the fair value of the old delivery equipment is \$36,000. Prepare the entry to record the exchange.

> DO IT! REVIEW

DO IT! 9-1 Yockey Company purchased a delivery truck. The total cash payment was \$27,820 including the following items.

Negotiated purchase price	\$24,000
Installation of special shelving	1,100
Painting and lettering	780
Motor vehicle license	140
Annual insurance policy	500
Sales tax	1,300
Total paid	<u>\$27,820</u>

Explain accounting for cost of plant assets.

(LO 1)

Explain how each of these costs would be accounted for.

DO IT! 9-2 On January 1, 2014, Rolling Hills Country Club purchased a new riding mower for \$18,000. The mower is expected to have an 8-year life with a \$2,000 salvage value. What journal entry would Rolling Hills make at December 31, 2014, if it uses straight-line depreciation?

Calculate depreciation expense and make journal entry.

(LO 2)

DO IT! 9-3 Savin Corporation purchased a piece of equipment for \$50,000. It estimated a 6-year life and \$2,000 salvage value. At the end of year four (before the depreciation adjustment), it estimated the new total life to be 8 years and the new salvage value to be \$4,000. Compute the revised depreciation.

Calculate revised depreciation.

(LO 2)

DO IT! 9-4 Forgetta Manufacturing has old equipment that cost \$48,000. The equipment has accumulated depreciation of \$28,000 and a fair value of \$26,000. Forgetta has decided to sell the equipment.

Make journal entries to record plant asset disposal.

- (a) What entry would Forgetta make to record the sale of the equipment for \$26,000 cash?
 (b) What entry would Forgetta make to record the sale of the equipment for \$15,000 cash?

(LO 4)

DO IT! 9-5 Match the statement with the term most directly associated with it.

Goodwill	Amortization
Intangible assets	Franchises
Research and development costs	

Match intangibles classifications concepts.

(LO 5, 6)

- _____ Rights, privileges, and competitive advantages that result from the ownership of long-lived assets that do not possess physical substance.
- _____ The allocation of the cost of an intangible asset to expense in a rational and systematic manner.
- _____ A right to sell certain products or services, or use certain trademarks or trade names within a designated geographic area.
- _____ Costs incurred by a company that often lead to patents or new products. These costs must be expensed as incurred.
- _____ The excess of the cost of a company over the fair value of the net assets acquired.

The Navigator

EXERCISES

E9-1 The following expenditures relating to plant assets were made by Devereaux Company during the first 2 months of 2014.

Determine cost of plant acquisitions.

- Paid \$5,000 of accrued taxes at time plant site was acquired.
- Paid \$400 insurance to cover possible accident loss on new factory machinery while the machinery was in transit.
- Paid \$850 sales taxes on new delivery truck.

(LO 1)

4. Paid \$17,500 for parking lots and driveways on new plant site.
5. Paid \$310 to have company name and advertising slogan painted on new delivery truck.
6. Paid \$8,000 for installation of new factory machinery.
7. Paid \$900 for one-year accident insurance policy on new delivery truck.
8. Paid \$90 motor vehicle license fee on the new truck.

Instructions

- (a)  Explain the application of the cost principle in determining the acquisition cost of plant assets.
- (b) List the numbers of the foregoing transactions, and opposite each indicate the account title to which each expenditure should be debited.

Determine property, plant, and equipment costs.

(LO 1)

E9-2 Bliesmer Company incurred the following costs.

1. Sales tax on factory machinery purchased	\$ 5,000
2. Painting of and lettering on truck immediately upon purchase	700
3. Installation and testing of factory machinery	2,000
4. Real estate broker's commission on land purchased	3,500
5. Insurance premium paid for first year's insurance on new truck	1,100
6. Cost of landscaping on property purchased	7,200
7. Cost of paving parking lot for new building constructed	17,900
8. Cost of clearing, draining, and filling land	12,600
9. Architect's fees on self-constructed building	10,000

Instructions

Indicate to which account Bliesmer would debit each of the costs.

Determine acquisition costs of land.

(LO 1)

E9-3 On March 1, 2014, Rollinger Company acquired real estate on which it planned to construct a small office building. The company paid \$80,000 in cash. An old warehouse on the property was razed at a cost of \$9,400; the salvaged materials were sold for \$1,700. Additional expenditures before construction began included \$1,100 attorney's fee for work concerning the land purchase, \$5,000 real estate broker's fee, \$7,800 architect's fee, and \$12,700 to put in driveways and a parking lot.

Instructions

- (a) Determine the amount to be reported as the cost of the land.
- (b) For each cost not used in part (a), indicate the account to be debited.

Understand depreciation concepts.

(LO 2)

E9-4 Ann Tremel has prepared the following list of statements about depreciation.

1. Depreciation is a process of asset valuation, not cost allocation.
2. Depreciation provides for the proper matching of expenses with revenues.
3. The book value of a plant asset should approximate its fair value.
4. Depreciation applies to three classes of plant assets: land, buildings, and equipment.
5. Depreciation does not apply to a building because its usefulness and revenue-producing ability generally remain intact over time.
6. The revenue-producing ability of a depreciable asset will decline due to wear and tear and to obsolescence.
7. Recognizing depreciation on an asset results in an accumulation of cash for replacement of the asset.
8. The balance in accumulated depreciation represents the total cost that has been charged to expense.
9. Depreciation expense and accumulated depreciation are reported on the income statement.
10. Four factors affect the computation of depreciation: cost, useful life, salvage value, and residual value.

Instructions

Identify each statement as true or false. If false, indicate how to correct the statement.

Compute depreciation under units-of-activity method.

(LO 2)

E9-5 Wheeler Bus Lines uses the units-of-activity method in depreciating its buses. One bus was purchased on January 1, 2014, at a cost of \$145,000. Over its 4-year useful life, the bus is expected to be driven 100,000 miles. Salvage value is expected to be \$15,000.

Instructions

- (a) Compute the depreciable cost per unit.
- (b) Prepare a depreciation schedule assuming actual mileage was: 2014, 26,000; 2015, 32,000; 2016, 25,000; and 2017, 17,000.

E9-6 Xanadu Company purchased a new machine on October 1, 2014, at a cost of \$96,000. The company estimated that the machine will have a salvage value of \$12,000. The machine is expected to be used for 10,000 working hours during its 5-year life.

Determine depreciation for partial periods.

(LO 2)

Instructions

Compute the depreciation expense under the following methods for the year indicated.

- Straight-line for 2014.
- Units-of-activity for 2014, assuming machine usage was 1,700 hours.
- Declining-balance using double the straight-line rate for 2014 and 2015.

E9-7 Tanger Company purchased a delivery truck for \$36,000 on January 1, 2014. The truck has an expected salvage value of \$6,000, and is expected to be driven 100,000 miles over its estimated useful life of 8 years. Actual miles driven were 15,000 in 2014 and 12,000 in 2015.

Compute depreciation using different methods.

(LO 2)

Instructions

- Compute depreciation expense for 2014 and 2015 using (1) the straight-line method, (2) the units-of-activity method, and (3) the double-declining-balance method.
- Assume that Tanger uses the straight-line method.
 - Prepare the journal entry to record 2014 depreciation.
 - Show how the truck would be reported in the December 31, 2014, balance sheet.

E9-8 Steve Grant, the new controller of Greenbriar Company, has reviewed the expected useful lives and salvage values of selected depreciable assets at the beginning of 2014. His findings are as follows.

Compute revised annual depreciation.

(LO 2)

Type of Asset	Date Acquired	Cost	Accumulated Depreciation	Useful Life in Years		Salvage Value	
			1/1/14	Old	Proposed	Old	Proposed
Building	1/1/06	\$800,000	\$152,000	40	50	\$40,000	\$18,000
Warehouse	1/1/09	100,000	18,000	25	20	10,000	3,700

All assets are depreciated by the straight-line method. Greenbriar Company uses a calendar year in preparing annual financial statements. After discussion, management has agreed to accept Grant's proposed changes.

Instructions

- Compute the revised annual depreciation on each asset in 2014. (Show computations.)
- Prepare the entry (or entries) to record depreciation on the building in 2014.

E9-9 Presented below are selected transactions at Tomas Company for 2014.

Journalize entries for disposal of plant assets.

(LO 4)

- Jan. 1 Retired a piece of machinery that was purchased on January 1, 2004. The machine cost \$58,000 on that date. It had a useful life of 10 years with no salvage value.
- June 30 Sold a computer that was purchased on January 1, 2011. The computer cost \$40,000. It had a useful life of 5 years with no salvage value. The computer was sold for \$14,000.
- Dec. 31 Discarded a delivery truck that was purchased on January 1, 2010. The truck cost \$33,000. It was depreciated based on a 6-year useful life with a \$3,000 salvage value.

Instructions

Journalize all entries required on the above dates, including entries to update depreciation, where applicable, on assets disposed of. Tomas Company uses straight-line depreciation. (Assume depreciation is up to date as of December 31, 2013.)

E9-10 Francis Company owns equipment that cost \$50,000 when purchased on January 1, 2011. It has been depreciated using the straight-line method based on estimated salvage value of \$8,000 and an estimated useful life of 5 years.

Journalize entries for disposal of equipment.

(LO 4)

Instructions

Prepare Francis Company's journal entries to record the sale of the equipment in these four independent situations.

- Sold for \$28,000 on January 1, 2014.
- Sold for \$28,000 on May 1, 2014.
- Sold for \$11,000 on January 1, 2014.
- Sold for \$11,000 on October 1, 2014.

Journalize entries for natural resources depletion.

(LO 5)

E9-11 On July 1, 2014, Sutton Inc. invested \$720,000 in a mine estimated to have 800,000 tons of ore of uniform grade. During the last 6 months of 2014, 120,000 tons of ore were mined and sold.

Instructions

- Prepare the journal entry to record depletion expense.
- Assume that the 120,000 tons of ore were mined, but only 90,000 units were sold. How are the costs applicable to the 30,000 unsold units reported?

Prepare adjusting entries for amortization.

(LO 6)

E9-12 The following are selected 2014 transactions of Yosuke Corporation.

- Jan. 1 Purchased a small company and recorded goodwill of \$150,000. Its useful life is indefinite.
- May 1 Purchased for \$84,000 a patent with an estimated useful life of 5 years and a legal life of 20 years.

Instructions

Prepare necessary adjusting entries at December 31 to record amortization required by the events above.

Prepare entries to set up appropriate accounts for different intangibles; amortize intangible assets.

(LO 6)

E9-13 Nelson Company, organized in 2014, has the following transactions related to intangible assets.

1/2/14	Purchased patent (8-year life)	\$560,000
4/1/14	Goodwill purchased (indefinite life)	360,000
7/1/14	10-year franchise; expiration date 7/1/2024	440,000
9/1/14	Research and development costs	223,000

Instructions

Prepare the necessary entries to record these intangibles. All costs incurred were for cash. Make the adjusting entries as of December 31, 2014, recording any necessary amortization and reflecting all balances accurately as of that date.

Calculate asset turnover ratio.

(LO 7)

E9-14 During 2014, Otaki Corporation reported net sales of \$5,200,000 and net income of \$1,500,000. Its balance sheet reported average total assets of \$1,600,000.

Instructions

Calculate the asset turnover ratio.

Journalize entries for exchanges.

(LO 8)

***E9-15** Presented below are two independent transactions. Both transactions have commercial substance.

- Global Co. exchanged old trucks (cost \$64,000 less \$22,000 accumulated depreciation) plus cash of \$17,000 for new trucks. The old trucks had a fair value of \$38,000.
- Rijo Inc. trades its used machine (cost \$12,000 less \$4,000 accumulated depreciation) for a new machine. In addition to exchanging the old machine (which had a fair value of \$9,000), Rijo also paid cash of \$2,700.

Instructions

- Prepare the entry to record the exchange of assets by Global Co.
- Prepare the entry to record the exchange of assets by Rijo Inc.

Journalize entries for the exchange of plant assets.

(LO 8)

***E9-16** Jay's Delivery Company and Astro's Express Delivery exchanged delivery trucks on January 1, 2014. Jay's truck cost \$22,000. It has accumulated depreciation of \$16,000 and a fair value of \$4,000. Astro's truck cost \$10,000. It has accumulated depreciation of \$7,000 and a fair value of \$4,000. The transaction has commercial substance.

Instructions

- Journalize the exchange for Jay's Delivery Company.
- Journalize the exchange for Astro's Express Delivery.

EXERCISES: SET B AND CHALLENGE EXERCISES

Visit the book's companion website, at www.wiley.com/college/veygandt, and choose the Student Companion site to access Exercise Set B and Challenge Exercises.

PROBLEMS: SET A

P9-1A Ripley Company was organized on January 1. During the first year of operations, the following plant asset expenditures and receipts were recorded in random order.

Determine acquisition costs of land and building.

(LO 1)

<u>Debits</u>	
1. Cost of filling and grading the land	\$ 6,000
2. Full payment to building contractor	780,000
3. Real estate taxes on land paid for the current year	5,000
4. Cost of real estate purchased as a plant site (land \$100,000 and building \$45,000)	145,000
5. Excavation costs for new building	35,000
6. Architect's fees on building plans	10,000
7. Accrued real estate taxes paid at time of purchase of real estate	2,000
8. Cost of parking lots and driveways	14,000
9. Cost of demolishing building to make land suitable for construction of new building	15,000
	<u>\$1,012,000</u>
<u>Credit</u>	
10. Proceeds from salvage of demolished building	\$ 3,600

Instructions

Analyze the foregoing transactions using the following column headings. Insert the number of each transaction in the Item column, and insert the amounts in the appropriate columns. For amounts entered in the Other Accounts column, also indicate the account titles.

Totals
Land \$164,400
Buildings \$825,000

<u>Item</u>	<u>Land</u>	<u>Buildings</u>	<u>Other Accounts</u>
-------------	-------------	------------------	-----------------------

P9-2A In recent years, Freeman Transportation purchased three used buses. Because of frequent turnover in the accounting department, a different accountant selected the depreciation method for each bus, and various methods were selected. Information concerning the buses is summarized below.

Compute depreciation under different methods.

(LO 2)

<u>Bus</u>	<u>Acquired</u>	<u>Cost</u>	<u>Salvage Value</u>	<u>Useful Life in Years</u>	<u>Depreciation Method</u>
1	1/1/12	\$ 96,000	\$ 6,000	5	Straight-line
2	1/1/12	140,000	10,000	4	Declining-balance
3	1/1/13	92,000	8,000	5	Units-of-activity

For the declining-balance method, the company uses the double-declining rate. For the units-of-activity method, total miles are expected to be 120,000. Actual miles of use in the first 3 years were 2013, 24,000; 2014, 36,000; and 2015, 31,000.

Instructions

- (a) Compute the amount of accumulated depreciation on each bus at December 31, 2014.
 (b) If Bus 2 was purchased on April 1 instead of January 1, what is the depreciation expense for this bus in (1) 2012 and (2) 2013?

(a) Bus 2, 2013, \$105,000

P9-3A On January 1, 2014, Thao Company purchased the following two machines for use in its production process.

Compute depreciation under different methods.

(LO 2)

Machine A: The cash price of this machine was \$35,000. Related expenditures included: sales tax \$1,700, shipping costs \$150, insurance during shipping \$80, installation and testing costs \$70, and \$100 of oil and lubricants to be used with the machinery during its first year of operations. Thao estimates that the useful life of the machine is 5 years with a \$5,000 salvage value remaining at the end of that time period. Assume that the straight-line method of depreciation is used.

Machine B: The recorded cost of this machine was \$80,000. Thao estimates that the useful life of the machine is 4 years with a \$5,000 salvage value remaining at the end of that time period.

Instructions

- (a) Prepare the following for Machine A.
 - (1) The journal entry to record its purchase on January 1, 2014.
 - (2) The journal entry to record annual depreciation at December 31, 2014.
- (b) Calculate the amount of depreciation expense that Thao should record for Machine B each year of its useful life under the following assumptions.
 - (1) Thao uses the straight-line method of depreciation.
 - (2) Thao uses the declining-balance method. The rate used is twice the straight-line rate.
 - (3) Thao uses the units-of-activity method and estimates that the useful life of the machine is 125,000 units. Actual usage is as follows: 2014, 42,000 units; 2015, 35,000 units; 2016, 28,000 units; 2017, 20,000 units.
- (c) Which method used to calculate depreciation on Machine B reports the highest amount of depreciation expense in year 1 (2014)? The highest amount in year 4 (2017)? The highest total amount over the 4-year period?

(b) (2) 2014 DDB depreciation \$40,000

Calculate revisions to depreciation expense.

(LO 2)

P9-4A At the beginning of 2012, Mansen Company acquired equipment costing \$80,000. It was estimated that this equipment would have a useful life of 6 years and a residual value of \$8,000 at that time. The straight-line method of depreciation was considered the most appropriate to use with this type of equipment. Depreciation is to be recorded at the end of each year.

During 2014 (the third year of the equipment's life), the company's engineers reconsidered their expectations, and estimated that the equipment's useful life would probably be 7 years (in total) instead of 6 years. The estimated residual value was not changed at that time. However, during 2017 the estimated residual value was reduced to \$4,400.

Instructions

Indicate how much depreciation expense should be recorded each year for this equipment, by completing the following table.

Year	<u>Depreciation Expense</u>	<u>Accumulated Depreciation</u>
2012		
2013		
2014		
2015		
2016		
2017		
2018		

2018 depreciation expense, \$11,400

Journalize a series of equipment transactions related to purchase, sale, retirement, and depreciation.

(LO 2, 4, 7)

P9-5A At December 31, 2013, Walton Company reported the following as plant assets.

Land		\$ 3,000,000
Buildings	\$26,500,000	
Less: Accumulated depreciation—buildings	<u>12,100,000</u>	14,400,000
Equipment	40,000,000	
Less: Accumulated depreciation—equipment	<u>5,000,000</u>	<u>35,000,000</u>
Total plant assets		<u>\$52,400,000</u>

During 2014, the following selected cash transactions occurred.

- April 1 Purchased land for \$2,200,000.
- May 1 Sold equipment that cost \$750,000 when purchased on January 1, 2010. The equipment was sold for \$460,000.
- June 1 Sold land purchased on June 1, 2004 for \$1,800,000. The land cost \$300,000.
- July 1 Purchased equipment for \$2,400,000.
- Dec. 31 Retired equipment that cost \$500,000 when purchased on December 31, 2004. No salvage value was received.

Instructions

- (a) Journalize the above transactions. The company uses straight-line depreciation for buildings and equipment. The buildings are estimated to have a 50-year life and no salvage value. The equipment is estimated to have a 10-year useful life and no salvage value. Update depreciation on assets disposed of at the time of sale or retirement.
- (b) Record adjusting entries for depreciation for 2014.
- (c) Prepare the plant assets section of Walton's balance sheet at December 31, 2014.

(b) Depreciation Expense—
Buildings \$530,000;
Equipment \$3,995,000
(c) Total plant assets
\$51,675,000

P9-6A Yount Co. has equipment that cost \$50,000 and that has been depreciated \$22,000. Record the disposal under the following assumptions.

- (a) It was scrapped as having no value.
- (b) It was sold for \$25,000.
- (c) It was sold for \$31,000.

Record disposals
(LO 4)

P9-7A The intangible assets section of Glover Company at December 31, 2013, is presented below.

Patents (\$60,000 cost less \$6,000 amortization)	\$54,000
Franchises (\$48,000 cost less \$19,200 amortization)	28,800
Total	\$82,800

Prepare entries to record transactions related to acquisition and amortization of intangibles; prepare the intangible assets section.
(LO 6, 7)

The patent was acquired in January 2013 and has a useful life of 10 years. The franchise was acquired in January 2010 and also has a useful life of 10 years. The following cash transactions may have affected intangible assets during 2014.

- Jan. 2 Paid \$36,000 legal costs to successfully defend the patent against infringement by another company.
- Jan.–June Developed a new product, incurring \$140,000 in research and development costs. A patent was granted for the product on July 1. Its useful life is equal to its legal life.
- Sept. 1 Paid \$58,000 to an extremely large defensive lineman to appear in commercials advertising the company's products. The commercials will air in September and October.
- Oct. 1 Acquired a franchise for \$100,000. The franchise has a useful life of 50 years.

Instructions

- (a) Prepare journal entries to record the transactions above.
- (b) Prepare journal entries to record the 2014 amortization expense.
- (c) Prepare the intangible assets section of the balance sheet at December 31, 2014.

(b) Amortization Expense (patents) \$10,000
Amortization Expense (franchises) \$5,300
(c) Total intangible assets \$203,500

P9-8A Due to rapid turnover in the accounting department, a number of transactions involving intangible assets were improperly recorded by the Buek Company in 2014.

1. Buek developed a new manufacturing process, incurring research and development costs of \$147,000. The company also purchased a patent for \$60,000. In early January, Buek capitalized \$207,000 as the cost of the patents. Patent amortization expense of \$10,350 was recorded based on a 20-year useful life.
2. On July 1, 2014, Buek purchased a small company and as a result acquired goodwill of \$80,000. Buek recorded a half-year's amortization in 2014, based on a 50-year life (\$800 amortization). The goodwill has an indefinite life.

Prepare entries to correct errors made in recording and amortizing intangible assets.
(LO 6)

Instructions

Prepare all journal entries necessary to correct any errors made during 2014. Assume the books have not yet been closed for 2014.

R&D Exp. \$147,000

P9-9A Dirkson Company and Hawkins Corporation, two corporations of roughly the same size, are both involved in the manufacture of in-line skates. Each company depreciates its plant assets using the straight-line approach. An investigation of their financial statements reveals the following information.

Calculate and comment on asset turnover ratio.
(LO 7)

	Dirkson Co.	Hawkins Corp.
Net income	\$ 400,000	\$ 450,000
Sales revenue	1,200,000	1,140,000
Average total assets	2,000,000	1,500,000
Average plant assets	1,500,000	800,000

Instructions

- (a) For each company, calculate the asset turnover ratio.
- (b) Based on your calculations in part (a), comment on the relative effectiveness of the two companies in using their assets to generate sales and produce net income.

PROBLEMS: SET B

Determine acquisition costs of land and building.

(LO 1)

P9-1B Foxx Company was organized on January 1. During the first year of operations, the following plant asset expenditures and receipts were recorded in random order.

Debits

1. Accrued real estate taxes paid at time of purchase of real estate	\$ 9,000
2. Real estate taxes on land paid for the current year	6,500
3. Full payment to building contractor	500,000
4. Excavation costs for new building	19,000
5. Cost of real estate purchased as a plant site (land \$75,000 and building \$25,000)	100,000
6. Cost of parking lots and driveways	18,000
7. Architect's fees on building plans	9,000
8. Installation cost of fences around property	6,000
9. Cost of demolishing building to make land suitable for construction of new building	19,000
	\$686,500

Credit

10. Proceeds from salvage of demolished building	\$ 3,800
	\$ 3,800

Instructions

Analyze the foregoing transactions using the following column headings. Insert the number of each transaction in the Item column, and insert the amounts in the appropriate columns. For amounts entered in the Other Accounts column, also indicate the account title.

<u>Item</u>	<u>Land</u>	<u>Buildings</u>	<u>Other Accounts</u>
-------------	-------------	------------------	-----------------------

P9-2B In recent years, Hrubeck Company purchased three machines. Because of heavy turnover in the accounting department, a different accountant was in charge of selecting the depreciation method for each machine, and each selected a different method. Information concerning the machines is summarized below.

<u>Machine</u>	<u>Acquired</u>	<u>Cost</u>	<u>Salvage Value</u>	<u>Useful Life in Years</u>	<u>Depreciation Method</u>
1	1/1/11	\$105,000	\$ 5,000	8	Straight-line
2	1/1/12	150,000	10,000	10	Declining-balance
3	11/1/14	100,000	15,000	6	Units-of-activity

For the declining-balance method, the company uses the double-declining rate. For the units-of-activity method, total machine hours are expected to be 25,000. Actual hours of use in the first 3 years were 2014, 1,300; 2015, 4,100; and 2016, 5,500.

Instructions

- (a) Compute the amount of accumulated depreciation on each machine at December 31, 2014.
 (b) If Machine 2 had been purchased on May 1 instead of January 1, what would be the depreciation expense for this machine in (1) 2012 and (2) 2013?

P9-3B On January 1, 2014, Abraham Company purchased the following two machines for use in its production process.

Machine A: The cash price of this machine was \$55,000. Related expenditures included: sales tax \$2,750, shipping costs \$100, insurance during shipping \$75, installation and testing costs \$75, and \$90 of oil and lubricants to be used with the machinery during its first year of operation. Abraham estimates that the useful life of the machine is 4 years with a \$6,000 salvage value remaining at the end of that time period.

Machine B: The recorded cost of this machine was \$130,000. Abraham estimates that the useful life of the machine is 5 years with a \$10,000 salvage value remaining at the end of that time period.

Totals

Land \$124,200
Buildings \$528,000

Compute depreciation under different methods.

(LO 2)

(a) Machine 2, 2013, \$24,000

Compute depreciation under different methods.

(LO 2)

Instructions

- (a) Prepare the following for Machine A.
 - (1) The journal entry to record its purchase on January 1, 2014.
 - (2) The journal entry to record annual depreciation at December 31, 2014, assuming the straight-line method of depreciation is used. (a) (2) \$13,000
- (b) Calculate the amount of depreciation expense that Abraham should record for Machine B each year of its useful life under the following assumption.
 - (1) Abraham uses the straight-line method of depreciation.
 - (2) Abraham uses the declining-balance method. The rate used is twice the straight-line rate.
 - (3) Abraham uses the units-of-activity method and estimates the useful life of the machine is 24,000 units. Actual usage is as follows: 2014, 4,700 units; 2015, 7,000 units; 2016, 8,000 units; 2017, 2,500 units; 2018, 1,800 units.
- (c) Which method used to calculate depreciation on Machine B reports the lowest amount of depreciation expense in year 1 (2014)? The lowest amount in year 5 (2018)? The lowest total amount over the 5-year period?

P9-4B At the beginning of 2012, Bellamy Company acquired equipment costing \$60,000. It was estimated that this equipment would have a useful life of 6 years and a residual value of \$6,000 at that time. The straight-line method of depreciation was considered the most appropriate to use with this type of equipment. Depreciation is to be recorded at the end of each year.

Calculate revisions to depreciation expense.
(LO 2)

During 2014 (the third year of the equipment's life), the company's engineers reconsidered their expectations, and estimated that the equipment's useful life would probably be 7 years (in total) instead of 6 years. The estimated residual value was not changed at that time. However, during 2017 the estimated residual value was reduced to \$3,000.

Instructions

Indicate how much depreciation expense should be recorded for this equipment each year by completing the following table.

<u>Year</u>	<u>Depreciation Expense</u>	<u>Accumulated Depreciation</u>
2012		
2013		
2014		
2015		
2016		
2017		
2018		

2018 depreciation expense, \$8,700

P9-5B At December 31, 2013, Durango Company reported the following as plant assets.

Land		\$ 2,000,000
Buildings	\$28,500,000	
Less: Accumulated depreciation—buildings	<u>12,100,000</u>	16,400,000
Equipment	30,000,000	
Less: Accumulated depreciation—equipment	<u>4,000,000</u>	<u>26,000,000</u>
Total plant assets		<u><u>\$44,400,000</u></u>

Journalize a series of equipment transactions related to purchase, sale, retirement, and depreciation.

(LO 2, 4, 7)

During 2014, the following selected cash transactions occurred.

- April 1 Purchased land for \$1,200,000.
- May 1 Sold equipment that cost \$420,000 when purchased on January 1, 2010. The equipment was sold for \$246,000.
- June 1 Sold land purchased on June 1, 2004, for \$1,000,000. The land cost \$310,000.
- Oct. 1 Purchased equipment for \$1,280,000.
- Dec. 31 Retired equipment that cost \$300,000 when purchased on December 31, 2004. No salvage value was received.

Instructions

- (a) Journalize the above transactions. Durango uses straight-line depreciation for buildings and equipment. The buildings are estimated to have a 50-year useful life and no salvage value. The equipment is estimated to have a 10-year useful life and no salvage value. Update depreciation on assets disposed of at the time of sale or retirement.

(b) Depreciation Expense—Buildings \$570,000; Equipment \$2,960,000

(c) Total plant assets
\$42,758,000

Record disposals.

(LO 4)

Prepare entries to record transactions related to acquisition and amortization of intangibles; prepare the intangible assets section.

(LO 6, 7)

- (b) Record adjusting entries for depreciation for 2014.
- (c) Prepare the plant assets section of Durango's balance sheet at December 31, 2014.

P9-6B Kellogg's has equipment that cost \$40,000 and that has been depreciated \$29,000. Record the disposal under the following assumptions.

- (a) It was scrapped as having no value.
- (b) It was sold for \$24,000.
- (c) It was sold for \$10,000.

P9-7B The intangible assets section of Whitley Company at December 31, 2013, is presented below.

Patents (\$100,000 cost less \$10,000 amortization)	\$ 90,000
Copyrights (\$80,000 cost less \$32,000 amortization)	48,000
Total	\$138,000

The patent was acquired in January 2013 and has a useful life of 10 years. The copyright was acquired in January 2010 and also has a useful life of 10 years. The following cash transactions may have affected intangible assets during 2014.

- Jan. 2 Paid \$54,000 legal costs to successfully defend the patent against infringement by another company.
- Jan.–June Developed a new product, incurring \$230,000 in research and development costs. A patent was granted for the product on July 1. Its useful life is equal to its legal life.
- Sept. 1 Paid \$125,000 to an Xgames star to appear in commercials advertising the company's products. The commercials will air in September and October.
- Nov. 1 Acquired a copyright for \$180,000. The copyright has a useful life of 40 years.

(b) Amortization Expense
(patents) \$16,000;
Amortization Expense
(copyrights) \$8,750

(c) Total intangible assets,
\$347,250

Prepare entries to correct errors made in recording and amortizing intangible assets.

(LO 6)

Instructions

- (a) Prepare journal entries to record the transactions above.
- (b) Prepare journal entries to record the 2014 amortization expense for intangible assets.
- (c) Prepare the intangible assets section of the balance sheet at December 31, 2014.
- (d) Prepare the note to the financials on Whitley's intangibles as of December 31, 2014.

P9-8B Due to rapid turnover in the accounting department, a number of transactions involving intangible assets were improperly recorded by Goslin Company in 2014.

1. Goslin developed a new manufacturing process, incurring research and development costs of \$110,000. The company also purchased a patent for \$70,000. In early January, Goslin capitalized \$180,000 as the cost of the patents. Patent amortization expense of \$9,000 was recorded based on a 20-year useful life.
2. On July 1, 2014, Goslin purchased a small company and as a result acquired goodwill of \$200,000. Goslin recorded a half-year's amortization in 2014, based on a 40-year life (\$2,500 amortization). The goodwill has an indefinite life.

Instructions

Prepare all journal entries necessary to correct any errors made during 2014. Assume the books have not yet been closed for 2014.

R&D Exp. \$110,000

Calculate and comment on asset turnover ratio.

(LO 7)

P9-9B Nina Corporation and Vernon Corporation, two corporations of roughly the same size, are both involved in the manufacture of canoes and sea kayaks. Each company depreciates its plant assets using the straight-line approach. An investigation of their financial statements reveals the following information.

	Nina Corp.	Vernon Corp.
Net income	\$ 300,000	\$ 325,000
Sales revenue	1,100,000	930,000
Average total assets	1,000,000	1,020,000
Average plant assets	750,000	770,000

Instructions

- (a) For each company, calculate the asset turnover ratio.
- (b) Based on your calculations in part (a), comment on the relative effectiveness of the two companies in using their assets to generate sales and produce net income.

PROBLEMS: SET C

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Problem Set C.

COMPREHENSIVE PROBLEM:
CHAPTERS 3 TO 9

CP9 Raymond Company's trial balance at December 31, 2014, is presented below. All 2014 transactions have been recorded except for the items described below and on page 466.

	<u>Debit</u>	<u>Credit</u>
Cash	\$ 28,000

Unrecorded transactions:

- On May 1, 2014, Raymond purchased equipment for \$13,000 plus sales taxes of \$780 (all paid in cash).
- On July 1, 2014, Raymond sold for \$3,500 equipment which originally cost \$5,000. Accumulated depreciation on this equipment at January 1, 2014, was \$1,800; 2014 depreciation prior to the sale of the equipment was \$450.

3. On December 31, 2014, Raymond sold for \$9,400 on account inventory that cost \$6,600.
4. Raymond estimates that uncollectible accounts receivable at year-end is \$4,000.
5. The note receivable is a one-year, 8% note dated April 1, 2014. No interest has been recorded.
6. The balance in prepaid insurance represents payment of a \$4,400 6-month premium on October 1, 2014.
7. The building is being depreciated using the straight-line method over 40 years. The salvage value is \$20,000.
8. The equipment owned prior to this year is being depreciated using the straight-line method over 5 years. The salvage value is 10% of cost.
9. The equipment purchased on May 1, 2014, is being depreciated using the straight-line method over 5 years, with a salvage value of \$1,000.
10. The patent was acquired on January 1, 2014, and has a useful life of 10 years from that date.
11. Unpaid salaries and wages at December 31, 2014, total \$2,200.
12. The unearned rent revenue of \$6,000 was received on December 1, 2014, for 4 months rent.
13. Both the short-term and long-term notes payable are dated January 1, 2014, and carry a 9% interest rate. All interest is payable in the next 12 months.
14. Income tax expense was \$17,000. It was unpaid at December 31.

Instructions

- (a) Prepare journal entries for the transactions listed above.
- (b) Prepare an updated December 31, 2014, trial balance.
- (c) Prepare a 2014 income statement and a 2014 retained earnings statement.
- (d) Prepare a December 31, 2014, classified balance sheet.

- (b) Totals \$1,228,294
 (c) Net income \$68,256
 (d) Total assets \$271,996

CONTINUING COOKIE CHRONICLE

(Note: This is a continuation of the Cookie Chronicle from Chapters 1–8.)

CCC9 Natalie is also thinking of buying a van that will be used only for business. Natalie is concerned about the impact of the van's cost on her income statement and balance sheet. She has come to you for advice on calculating the van's depreciation.

Go to the book's companion website, www.wiley.com/college/weygandt, to see the completion of this problem.

Broadening Your PERSPECTIVE**Financial Reporting and Analysis****Financial Reporting Problem: PepsiCo, Inc.**

BYP9-1 The financial statements and the Notes to Consolidated Financial Statements of **PepsiCo, Inc.** are presented in Appendix A.

Instructions

Refer to PepsiCo's financial statements and answer the following questions.

- (a) What was the total cost and book value of property, plant, and equipment at December 25, 2010?
- (b) What method or methods of depreciation are used by the company for financial reporting purposes?

- (c) What was the amount of depreciation and amortization expense for each of the three years 2008–2010?
- (d) Using the statement of cash flows, what is the amount of capital spending in 2010 and 2009?
- (e) Where does the company disclose its intangible assets, and what types of intangibles did it have at December 25, 2010?

Comparative Analysis Problem: PepsiCo, Inc. vs. The Coca-Cola Company

BYP9-2 PepsiCo's financial statements are presented in Appendix A. Financial statements of The Coca-Cola Company are presented in Appendix B. 

Instructions

- (a) Compute the asset turnover ratio for each company for 2010.
- (b) What conclusions concerning the efficiency of assets can be drawn from these data?

Real-World Focus

BYP9-3 Purpose: Use an annual report to identify a company's plant assets and the depreciation method used.

Address: www.annualreports.com, or go to www.wiley.com/college/weygandt

Steps

1. Select a particular company.
2. Search by company name.
3. Follow instructions below.

Instructions

Answer the following questions.

- (a) What is the name of the company?
- (b) What is the Internet address of the annual report?
- (c) At fiscal year-end, what is the net amount of its plant assets?
- (d) What is the accumulated depreciation?
- (e) Which method of depreciation does the company use?

Critical Thinking

Decision-Making Across the Organization

BYP9-4 Givens Company and Runge Company are two companies that are similar in many respects. One difference is that Givens Company uses the straight-line method and Runge Company uses the declining-balance method at double the straight-line rate. On January 2, 2012, both companies acquired the depreciable assets shown below. 

<u>Asset</u>	<u>Cost</u>	<u>Salvage Value</u>	<u>Useful Life</u>
Buildings	\$320,000	\$20,000	40 years
Equipment	125,000	10,000	10 years

Including the appropriate depreciation charges, annual net income for the companies in the years 2012, 2013, and 2014 and total income for the 3 years were as follows.

	<u>2012</u>	<u>2013</u>	<u>2014</u>	<u>Total</u>
Givens Company	\$84,000	\$88,400	\$90,000	\$262,400
Runge Company	68,000	76,000	85,000	229,000

At December 31, 2014, the balance sheets of the two companies are similar except that Runge Company has more cash than Givens Company.

Linda Yanik is interested in buying one of the companies. She comes to you for advice.

Instructions

With the class divided into groups, answer the following.

- Determine the annual and total depreciation recorded by each company during the 3 years.
- Assuming that Runge Company also uses the straight-line method of depreciation instead of the declining-balance method as in (a), prepare comparative income data for the 3 years.
- Which company should Linda Yanik buy? Why?

Communication Activity

BYP9-5 The following was published with the financial statements to **American Exploration Company**.

American Exploration Company
Notes to the Financial Statements

Property, Plant, and Equipment—The Company accounts for its oil and gas exploration and production activities using the successful efforts method of accounting. Under this method, acquisition costs for proved and unproved properties are capitalized when incurred. . . . The costs of drilling exploratory wells are capitalized pending determination of whether each well has discovered proved reserves. If proved reserves are not discovered, such drilling costs are charged to expense. . . . Depletion of the cost of producing oil and gas properties is computed on the units- of-activity method.

Instructions

Write a brief memo to your instructor discussing American Exploration Company's note regarding property, plant, and equipment. Your memo should address what is meant by the "successful efforts method" and "units-of-activity method."

Ethics Case

BYP9-6 Dieker Container Company is suffering declining sales of its principal product, nonbiodegradable plastic cartons. The president, Edward Mohling, instructs his controller, Betty Fetters, to lengthen asset lives to reduce depreciation expense. A processing line of automated plastic extruding equipment, purchased for \$3.1 million in January 2014, was originally estimated to have a useful life of 8 years and a salvage value of \$300,000. Depreciation has been recorded for 2 years on that basis. Edward wants the estimated life changed to 12 years total, and the straight-line method continued. Betty is hesitant to make the change, believing it is unethical to increase net income in this manner. Edward says, "Hey, the life is only an estimate, and I've heard that our competition uses a 12-year life on their production equipment."

Instructions

- Who are the stakeholders in this situation?
- Is the change in asset life unethical, or is it simply a good business practice by an astute president?
- What is the effect of Edward Mohling's proposed change on income before taxes in the year of change?

All About You

BYP9-7 The Feature Story at the beginning of the chapter discussed the company **Rent-A-Wreck**. Note that the trade name Rent-A-Wreck is a very important asset to the company, as it creates immediate product identification. As indicated in the chapter, companies invest substantial sums to ensure that their product is well-known to the consumer. Test your knowledge of who owns some famous brands and their impact on the financial statements.

Instructions

- (a) Provide an answer to the five multiple-choice questions below.
- (1) Which company owns both Taco Bell and Pizza Hut?
 - (a) McDonald's.
 - (b) CKE.
 - (c) Yum Brands.
 - (d) Wendy's.
 - (2) Dairy Queen belongs to:
 - (a) Breyer.
 - (b) Berkshire Hathaway.
 - (c) GE.
 - (d) The Coca-Cola Company.
 - (3) Phillip Morris, the cigarette maker, is owned by:
 - (a) Altria.
 - (b) GE.
 - (c) Boeing.
 - (d) ExxonMobil.
 - (4) AOL, a major Internet provider, belongs to:
 - (a) Microsoft.
 - (b) Cisco.
 - (c) NBC.
 - (d) Time Warner.
 - (5) ESPN, the sports broadcasting network, is owned by:
 - (a) Procter & Gamble.
 - (b) Altria.
 - (c) Walt Disney.
 - (d) The Coca-Cola Company.
- (b) How do you think the value of these brands is reported on the appropriate company's balance sheet?

FASB Codification Activity

BYP9-8 If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following.

- (a) What does it mean to capitalize an item?
- (b) What is the definition provided for an intangible asset?
- (c) Your great-uncle, who is a CPA, is impressed that you are taking an accounting class. Based on his experience, he believes that depreciation is something that companies do based on past practice, not on the basis of authoritative guidance. Provide the authoritative literature to support the practice of fixed-asset depreciation.

Answers to Chapter Questions**Answers to Insight and Accounting Across the Organization Questions**

p. 427 Many U.S. Firms Use Leases Q: Why might airline managers choose to lease rather than purchase their planes? **A:** The reasons for leasing include favorable tax treatment, better financing options, increased flexibility, reduced risk of obsolescence, and often less debt shown on the balance sheet.

p. 440 Sustainability Report Please Q: Why do you believe companies issue sustainability reports? **A:** It is important that companies clearly describe the things they value in addition to overall profitability. Most companies recognize that the health, safety, and environmental protections of their workforce and community are important components in developing strategies for continued growth and longevity. Without a strong commitment to the principles of corporate social responsibility, it is unlikely that a company will be able to maintain long-term stability and profitability. The development of a sustainability report helps companies to consider these issues and develop measures to assess whether they are meeting their goals in this area.

p. 443 Should Companies Write Up Goodwill? Q: Do you think that this treatment would be allowed under U.S. GAAP? **A:** The write-down of assets would have been allowed if it could be shown that the assets had declined in value (an impairment). However, the creation of goodwill to offset the write-down would not have been allowed. Goodwill can be recorded only when it results from the acquisition of a business. It cannot be recorded as the result of being created internally.

Answers to Self-Test Questions

1. d $(\$24,000 + \$1,200 + \$200 + \$400)$ 2. b 3. d $[(\$400,000 - \$10,000) \div 5] \times 2$ 4. d 5. b $\$60,000 \times 25\% = \$15,000; (\$60,000 - \$15,000) \times 25\% = \$11,250$ 6. b 7. d $[(\$60,000 - \$12,000) \div 10] \times 2 = \$9,600; (\$60,000 - \$9,600 - \$2,000) \div 4$ 8. d 9. a $[(\$80,000 \div 10) \times 4.5] = \$36,000; (\$80,000 - \$36,000) - \$26,000$ 10. c $(\$12 \text{ million} \div 20 \text{ million}) \times 2 \text{ million}$ 11. d 12. b 13. c 14. c $\$180,000 \div [(\$200,000 + \$300,000) \div 2]$ *15. a $(\$35,000 + \$10,000)$ *16. d

A Look at IFRS

IFRS follows most of the same principles as GAAP in the accounting for property, plant, and equipment. There are, however, some significant differences in the implementation: IFRS allows the use of revaluation of property, plant, and equipment, and it also requires the use of component depreciation. In addition, there are some significant differences in the accounting for both intangible assets and impairments.

Key Points

- The definition for plant assets for both IFRS and GAAP is essentially the same.
- Both international standards and GAAP follow the cost principle when accounting for property, plant, and equipment at date of acquisition. Cost consists of all expenditures necessary to acquire the asset and make it ready for its intended use.
- Under both IFRS and GAAP, interest costs incurred during construction are capitalized. Recently, IFRS converged to GAAP requirements in this area.
- IFRS, like GAAP, capitalizes all direct costs in self-constructed assets such as raw materials and labor. IFRS does not address the capitalization of fixed overhead, although in practice these costs are generally capitalized.
- IFRS also views depreciation as an allocation of cost over an asset's useful life. IFRS permits the same depreciation methods (e.g., straight-line, accelerated, and units-of-activity) as GAAP. However, a major difference is that IFRS requires component depreciation. *Component depreciation* specifies that any significant parts of a depreciable asset that have different estimated useful lives should be separately depreciated. Component depreciation is allowed under GAAP but is seldom used.

To illustrate, assume that Lexure Construction builds an office building for \$4,000,000, not including the cost of the land. If the \$4,000,000 is allocated over the 40-year useful life of the building, Lexure reports \$100,000 of depreciation per year, assuming straight-line depreciation and no disposal value. However, assume that \$320,000 of the cost of the building relates to personal property and \$600,000 relates to land improvements. The personal property has a depreciable life of 5 years, and the land improvements have a depreciable life of 10 years. In accordance with IFRS, Lexure must use component depreciation. It must reclassify \$320,000 of the cost of the building to personal property and \$600,000 to the cost of land improvements. Assuming that Lexure uses straight-line depreciation, component depreciation for the first year of the office building is computed as follows.

Building cost adjusted (\$4,000,000 – \$320,000 – \$600,000)	<u>\$3,080,000</u>
Building cost depreciation per year (\$3,080,000/40)	\$ 77,000
Personal property depreciation (\$320,000/5)	64,000
Land improvements depreciation (\$600,000/10)	<u>60,000</u>
Total component depreciation in first year	<u>\$ 201,000</u>

- IFRS uses the term *residual value*, rather than salvage value, to refer to an owner's estimate of an asset's value at the end of its useful life for that owner.
- IFRS allows companies to revalue plant assets to fair value at the reporting date. Companies that choose to use the revaluation framework must follow revaluation procedures. If revaluation is used, it must be applied to all assets in a class of assets. Assets that are experiencing rapid price changes must be revalued on an annual basis, otherwise less frequent revaluation is acceptable.

To illustrate asset revaluation accounting, assume that Pernice Company applies revaluation to plant assets with a carrying value of \$1,000,000, a useful life of 5 years, and no residual value. Pernice makes the following journal entries in year 1, assuming straight-line depreciation.

Depreciation Expense	200,000	
Accumulated Depreciation—Plant Assets		200,000
(To record depreciation expense in year 1)		

After this entry, Pernice's plant assets have a carrying amount of \$800,000 (\$1,000,000 – \$200,000). At the end of year 1, independent appraisers determine that the asset has a fair value of \$850,000. To report the plant assets at fair value, or \$850,000, Pernice eliminates the Accumulated Depreciation—Plant Assets account, reduces Plant Assets to its fair value of \$850,000, and records Revaluation Surplus of \$50,000. The entry to record the revaluation is as follows.

Accumulated Depreciation—Plant Assets	200,000	
Plant Assets		150,000
Revaluation Surplus		50,000
(To record adjusting the plant assets to fair value)		

Thus, Pernice follows a two-step process. First, Pernice records depreciation based on the cost basis of \$1,000,000. As a result, it reports depreciation expense of \$200,000 on the income statement. Second, it records the revaluation. It does this by eliminating any accumulated depreciation, adjusting the recorded value of the plant assets to fair value, and debiting or crediting the Revaluation Surplus account. In this example, the revaluation surplus is \$50,000, which is the difference between the fair value of \$850,000 and the book value of \$800,000. Revaluation surplus is an example of an item reported as other comprehensive income, as discussed in the A Look at IFRS section of Chapter 5. Pernice now reports the following information in its statement of financial position at the end of year 1.

Plant assets (\$1,000,000 – \$150,000)	\$850,000
Accumulated depreciation—plant assets	<u>0</u>
	<u>\$850,000</u>
Revaluation surplus (equity)	<u>\$ 50,000</u>

As indicated, \$850,000 is the new basis of the asset. Pernice reports depreciation expense of \$200,000 in the income statement and \$50,000 in other comprehensive income. Assuming no change in the total useful life, depreciation in year 2 will be \$212,500 (\$850,000 ÷ 4).

- Under both GAAP and IFRS, changes in the depreciation method used and changes in useful life are handled in current and future periods. Prior periods are not affected. GAAP recently conformed to international standards in the accounting for changes in depreciation methods.
- The accounting for subsequent expenditures, such as ordinary repairs and additions, are essentially the same under IFRS and GAAP.
- The accounting for plant asset disposals is essentially the same under IFRS and GAAP.
- Initial costs to acquire natural resources are essentially the same under IFRS and GAAP.
- The definition of intangible assets is essentially the same under IFRS and GAAP.
- As in GAAP, under IFRS the costs associated with research and development are segregated into the two components. Costs in the research phase are always expensed under both IFRS and GAAP. Under IFRS, however, costs in the development phase are capitalized as Development Costs once technological feasibility is achieved.

To illustrate, assume that Laser Scanner Company spent \$1 million on research and \$2 million on development of new products. Of the \$2 million in development costs, \$500,000 was incurred prior to technological feasibility and \$1,500,000 was incurred after technological feasibility had been demonstrated. The company would record these costs as follows.

Research Expense	1,000,000	
Development Expense	500,000	
Development Costs	1,500,000	
Cash		3,000,000
(To record research and development costs)		

- IFRS permits revaluation of intangible assets (except for goodwill). GAAP prohibits revaluation of intangible assets.
- IFRS requires an impairment test at each reporting date for plant assets and intangibles and records an impairment if the asset's carrying amount exceeds its recoverable amount. The recoverable amount is the higher of the asset's fair value less costs to sell or its value-in-use. Value-in-use is the future cash flows to be derived from the particular asset, discounted to present value. Under GAAP, impairment loss is measured as the excess of the carrying amount over the asset's fair value.

- IFRS allows reversal of impairment losses when there has been a change in economic conditions or in the expected use of the asset. Under GAAP, impairment losses cannot be reversed for assets to be held and used; the impairment loss results in a new cost basis for the asset. IFRS and GAAP are similar in the accounting for impairments of assets held for disposal.
- The accounting for exchanges of nonmonetary assets has recently converged between IFRS and GAAP. GAAP now requires that gains on exchanges of nonmonetary assets be recognized if the exchange has commercial substance. This is the same framework used in IFRS.

Looking to the Future

With respect to revaluations, as part of the conceptual framework project, the Boards will examine the measurement bases used in accounting. It is too early to say whether a converged conceptual framework will recommend fair value measurement (and revaluation accounting) for plant assets and intangibles. However, this is likely to be one of the more contentious issues, given the long-standing use of historical cost as a measurement basis in GAAP.

The IASB and FASB have identified a project that would consider expanded recognition of internally generated intangible assets. IFRS permits more recognition of intangibles compared to GAAP. Thus, it will be challenging to develop converged standards for intangible assets, given the long-standing prohibition on capitalizing internally generated intangible assets and research and development costs in GAAP.

IFRS Practice

IFRS Self-Test Questions

- Which of the following statements is *correct*?
 - Both IFRS and GAAP permit revaluation of property, plant, and equipment and intangible assets (except for goodwill).
 - IFRS permits revaluation of property, plant, and equipment and intangible assets (except for goodwill).
 - Both IFRS and GAAP permit revaluation of property, plant, and equipment but not intangible assets.
 - GAAP permits revaluation of property, plant, and equipment but not intangible assets.
- International Company has land that cost \$450,000 but now has a fair value of \$600,000. International Company decides to use the revaluation method specified in IFRS to account for the land. Which of the following statements is *correct*?
 - International Company must continue to report the land at \$450,000.
 - International Company would report a net income increase of \$150,000 due to an increase in the value of the land.
 - International Company would debit Revaluation Surplus for \$150,000.
 - International Company would credit Revaluation Surplus by \$150,000.
- Francisco Corporation is constructing a new building at a total initial cost of \$10,000,000. The building is expected to have a useful life of 50 years with no residual value. The building's finished surfaces (e.g., roof cover and floor cover) are 5% of this cost and have a useful life of 20 years. Building services systems (e.g., electric, heating, and plumbing) are 20% of the cost and have a useful life of 25 years. The depreciation in the first year using component depreciation, assuming straight-line depreciation with no residual value, is:

(a) \$200,000.	(c) \$255,000.
(b) \$215,000.	(d) None of the above.
- Research and development costs are:

(a) expensed under GAAP.	(c) expensed under both GAAP and IFRS.
(b) expensed under IFRS.	(d) None of the above.
- Under IFRS, value-in-use is defined as:

(a) net realizable value.	(c) future cash flows discounted to present value.
(b) fair value.	(d) total future undiscounted cash flows.

IFRS Exercises

IFRS9-1 What is component depreciation, and when must it be used?

IFRS9-2 What is revaluation of plant assets? When should revaluation be applied?

IFRS9-3 Some product development expenditures are recorded as development expenses and others as development costs. Explain the difference between these accounts and how a company decides which classification is appropriate.

IFRS9-4 Mandall Company constructed a warehouse for \$280,000. Mandall estimates that the warehouse has a useful life of 20 years and no residual value. Construction records indicate that \$40,000 of the cost of the warehouse relates to its heating, ventilation, and air conditioning (HVAC) system, which has an estimated useful life of only 10 years. Compute the first year of depreciation expense using straight-line component depreciation.

IFRS9-5 At the end of its first year of operations, Brianna Company chose to use the revaluation framework allowed under IFRS. Brianna's ledger shows Plant Assets \$480,000 and Accumulated Depreciation—Plant Assets \$60,000. Prepare journal entries to record the following.

- (a) Independent appraisers determine that the plant assets have a fair value of \$460,000.
- (b) Independent appraisers determine that the plant assets have a fair value of \$400,000.

IFRS9-6 Newell Industries spent \$300,000 on research and \$600,000 on development of a new product. Of the \$600,000 in development costs, \$400,000 was incurred prior to technological feasibility and \$200,000 after technological feasibility had been demonstrated. Prepare the journal entry to record research and development costs.

International Financial Statement Analysis: Zetar plc

IFRS9-7 The financial statements of *Zetar plc* are presented in Appendix C.

Instructions

Use the company's annual report, available at www.zetarplc.com, to answer the following questions.

- (a) According to the notes to the financial statements, what method or methods does the company use to depreciate "plant and equipment?" What rate does it use to depreciate plant and equipment?
- (b) According to the notes to the financial statements, how often is goodwill tested for impairment?
- (c) Using the notes to the financial statements, as well as information from the statement of cash flows, prepare the journal entry to record the disposal of property, plant, and equipment during 2010. (Round your amounts to the nearest thousand.)

Answers to IFRS Self-Test Questions

1. b 2. d 3. c $(\$10,000,000 \times .05/20) + (\$10,000,000 \times .20/25) + (\$10,000,000 \times .75/50)$ 4. a 5. c

The Navigator

Feature Story

Financing His Dreams

What would you do if you had a great idea for a new product but couldn't come up with the cash to get the business off the ground? Small businesses often cannot attract investors. Nor can they obtain traditional debt financing through bank loans or bond issuances. Instead, they often resort to unusual, and costly, forms of nontraditional financing.

Such was the case for Wilbert Murdock. Murdock grew up in a New York housing project, and always had great ambitions. This ambitious spirit led him into some business ventures

that failed: a medical diagnostic tool, a device to eliminate carpal tunnel syndrome, custom-designed sneakers, and a device to keep people from falling asleep while driving.

Another idea was computerized golf clubs that analyze a golfer's swing and provide immediate feedback. Murdock saw great potential in the idea: Many golfers are willing to shell out considerable sums of money for devices that might improve their game. But Murdock had no cash to develop his product, and banks and other lenders had shied away. Rather than give up, Murdock resorted to credit cards—in a big way. He quickly owed \$25,000 to credit card companies.

Read A Look at IFRS p. 533

Learning Objectives

After studying this chapter, you should be able to:

- 1** Explain a current liability, and identify the major types of current liabilities.
- 2** Describe the accounting for notes payable.
- 3** Explain the accounting for other current liabilities.
- 4** Explain why bonds are issued, and identify the types of bonds.
- 5** Prepare the entries for the issuance of bonds and interest expense.
- 6** Describe the entries when bonds are redeemed or converted.
- 7** Describe the accounting for long-term notes payable.
- 8** Identify the methods for the presentation and analysis of long-term liabilities.

The Navigator

While funding a business with credit cards might sound unusual, it isn't. A recent study found that one-third of businesses with fewer than 20 employees financed at least part of their operations with credit cards. As Murdock explained, credit cards are an appealing way to finance a start-up because "credit-card companies don't care how the money is spent." However, they do care how they are paid. And so Murdock faced high interest charges and a barrage of credit card collection letters.

Murdock's debt forced him to sacrifice nearly everything in order to keep his business afloat. His car stopped running, he barely had enough money to buy food, and he lived and worked out of a dimly lit apartment in his mother's basement. Through it all he tried to maintain a positive spirit, joking that, if he becomes successful, he might some day get to appear in an American Express commercial.

Source: Rodney Ho, "Banking on Plastic: To Finance a Dream, Many Entrepreneurs Binge on Credit Cards," *Wall Street Journal* (March 9, 1998), p. A1.

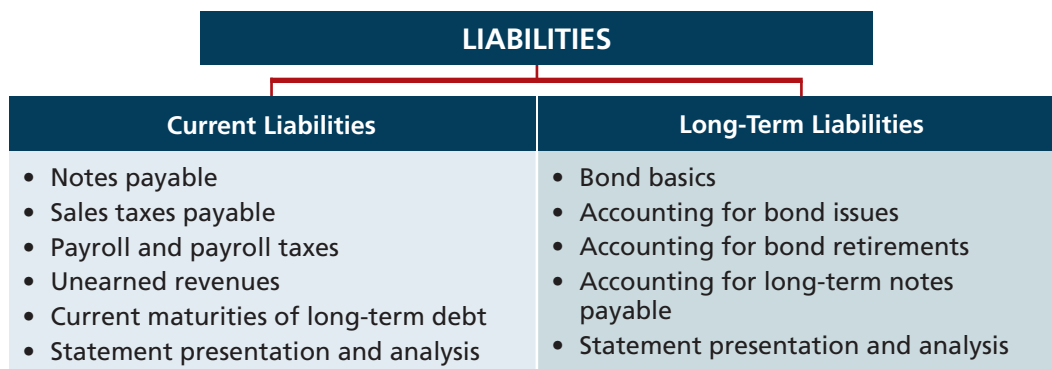

Preview of Chapter 10

Inventor-entrepreneur Wilbert Murdock, as you can tell from the Feature Story, had to use multiple credit cards to finance his business ventures. Murdock's credit card debts would be classified as *current liabilities* because they are due every month. Yet, by making minimal payments and paying high interest each month, Murdock used this credit source long-term. Some credit card balances remain outstanding for years as they accumulate interest.

Earlier, we defined liabilities as creditors' claims on total assets and as existing debts and obligations. These claims, debts, and obligations must be settled or paid at some time **in the future** by the transfer of assets or services. The future date on which they are due or payable (maturity date) is a significant feature of liabilities. This "future date" feature gives rise to two basic classifications of liabilities: (1) current liabilities and (2) long-term liabilities. Our discussion in this chapter is divided into these two classifications.

The content and organization of Chapter 10 are as follows.

Current Liabilities

LEARNING OBJECTIVE 1
Explain a current liability, and identify the major types of current liabilities.

As explained in Chapter 4, a **current liability** is a debt with two key features: (1) The company reasonably expects to pay the debt from existing current assets or through the creation of other current liabilities. (2) The company will pay the debt within one year or the operating cycle, whichever is longer. Debts that do not meet **both criteria** are classified as long-term liabilities.

Companies must carefully monitor the relationship of current liabilities to current assets. This relationship is critical in evaluating a company's short-term debt-paying ability. A company that has more current liabilities than current assets may not be able to meet its current obligations when they become due.

Current liabilities include notes payable, accounts payable, and unearned revenues. They also include accrued liabilities such as taxes, salaries and wages, and interest payable. In the sections that follow, we discuss a few of the common types of current liabilities.

Notes Payable

LEARNING OBJECTIVE 2
Describe the accounting for notes payable.

Companies record obligations in the form of written notes as **notes payable**. Notes payable are often used instead of accounts payable because they give the lender formal proof of the obligation in case legal remedies are needed to collect the debt. Companies frequently issue notes payable to meet short-term financing needs. Notes payable usually require the borrower to pay interest.

Notes are issued for varying periods of time. **Those due for payment within one year of the balance sheet date are usually classified as current liabilities.**

To illustrate the accounting for notes payable, assume that First National Bank agrees to lend \$100,000 on September 1, 2014, if Cole Williams Co. signs a \$100,000, 12%, four-month note maturing on January 1. When a company issues an interest-bearing note, the amount of assets it receives upon issuance of the note generally equals the note's face value. Cole Williams Co. therefore will receive \$100,000 cash and will make the following journal entry.

A	=	L	+	SE
+100,000		+100,000		
<hr style="border: 0; border-top: 1px solid black;"/>				
Cash Flows				
+100,000				

Sept. 1		Cash	100,000	
		Notes Payable		100,000
		(To record issuance of 12%, 4-month note to First National Bank)		

Interest accrues over the life of the note, and the company must periodically record that accrual. If Cole Williams Co. prepares financial statements annually, it makes an adjusting entry at December 31 to recognize interest expense and interest payable of \$4,000 ($\$100,000 \times 12\% \times 4/12$). Illustration 10-1 shows the formula for computing interest and its application to Cole Williams Co.'s note.

Illustration 10-1
 Formula for computing interest

Face Value of Note	×	Annual Interest Rate	×	Time in Terms of One Year	=	Interest
\$100,000	×	12%	×	4/12	=	\$4,000

A	=	L	+	SE
		-4,000 Exp		
		+4,000		
<hr style="border: 0; border-top: 1px solid black;"/>				
Cash Flows				
no effect				

Cole Williams makes an adjusting entry as follows.

Dec. 31		Interest Expense	4,000	
		Interest Payable		4,000
		(To accrue interest for 4 months on First National Bank note)		

In the December 31 financial statements, the current liabilities section of the balance sheet will show notes payable \$100,000 and interest payable \$4,000. In addition, the company will report interest expense of \$4,000 under “Other expenses and losses” in the income statement. If Cole Williams Co. prepared financial statements monthly, the adjusting entry at the end of each month would have been \$1,000 ($\$100,000 \times 12\% \times 1/12$).

At maturity (January 1, 2015), Cole Williams Co. must pay the face value of the note (\$100,000) plus \$4,000 interest ($\$100,000 \times 12\% \times 4/12$). It records payment of the note and accrued interest as follows.

Jan. 1	Notes Payable	100,000	
	Interest Payable	4,000	
	Cash		104,000
	(To record payment of First National Bank interest-bearing note and accrued interest at maturity)		

A	=	L	+	SE
		-100,000		-4,000
		<hr/>		
		-104,000		
Cash Flows				
		-104,000		

Sales Taxes Payable

As a consumer, you know that many of the products you purchase at retail stores are subject to sales taxes. Many states also are now collecting sales taxes on purchases made on the Internet as well. Sales taxes are expressed as a percentage of the sales price. The selling company collects the tax from the customer when the sale occurs. Periodically (usually monthly), the retailer remits the collections to the state’s department of revenue.

Under most state sales tax laws, the selling company must enter separately on the cash register the amount of the sale and the amount of the sales tax collected. (Gasoline sales are a major exception.) The company then uses the cash register readings to credit Sales Revenue and Sales Taxes Payable. For example, if the March 25 cash register reading for Cooley Grocery shows sales of \$10,000 and sales taxes of \$600 (sales tax rate of 6%), the journal entry is:

Mar. 25	Cash	10,600	
	Sales Revenue		10,000
	Sales Taxes Payable		600
	(To record daily sales and sales taxes)		

A	=	L	+	SE
+10,600				+10,000 Rev
				+600
<hr/>				
Cash Flows				
		+10,600		

When the company remits the taxes to the taxing agency, it debits Sales Taxes Payable and credits Cash. The company does not report sales taxes as an expense. It simply forwards to the government the amount paid by the customers. Thus, Cooley Grocery serves only as a **collection agent** for the taxing authority.

Sometimes, companies do not enter sales taxes separately on the cash register. To determine the amount of sales in such cases, divide total receipts by 100% plus the sales tax percentage. To illustrate, assume that in the above example Cooley Grocery enters total receipts of \$10,600. The receipts from the sales are equal to the sales price (100%) plus the tax percentage (6% of sales), or 1.06 times the sales total. We can compute the sales amount as follows.

$$\$10,600 \div 1.06 = \$10,000$$

Thus, Cooley Grocery could find the sales tax amount it must remit to the state (\$600) by subtracting sales from total receipts ($\$10,600 - \$10,000$).

Payroll and Payroll Taxes Payable

Every employer incurs liabilities relating to employees’ salaries and wages. One is the amount of salaries and wages owed to employees—**salaries and wages payable**. Another is the amount required by law to be withheld from employees’

LEARNING OBJECTIVE 3

Explain the accounting for other current liabilities.

Helpful Hint
Alternatively, Cooley could find the tax by multiplying sales by the sales tax rate ($\$10,000 \times .06$).

gross pay. Until a company remits these **withholding taxes** (federal and state income taxes, and Social Security taxes) to the governmental taxing authorities, they are credited to appropriate liability accounts. For example, if a corporation withholds taxes from its employees' wages and salaries, it would record accrual and payment of a \$100,000 payroll, as shown below.

A	=	L	+	SE
		-100,000		
		+7,650

Illustration 10-2 summarizes the types of payroll deductions.

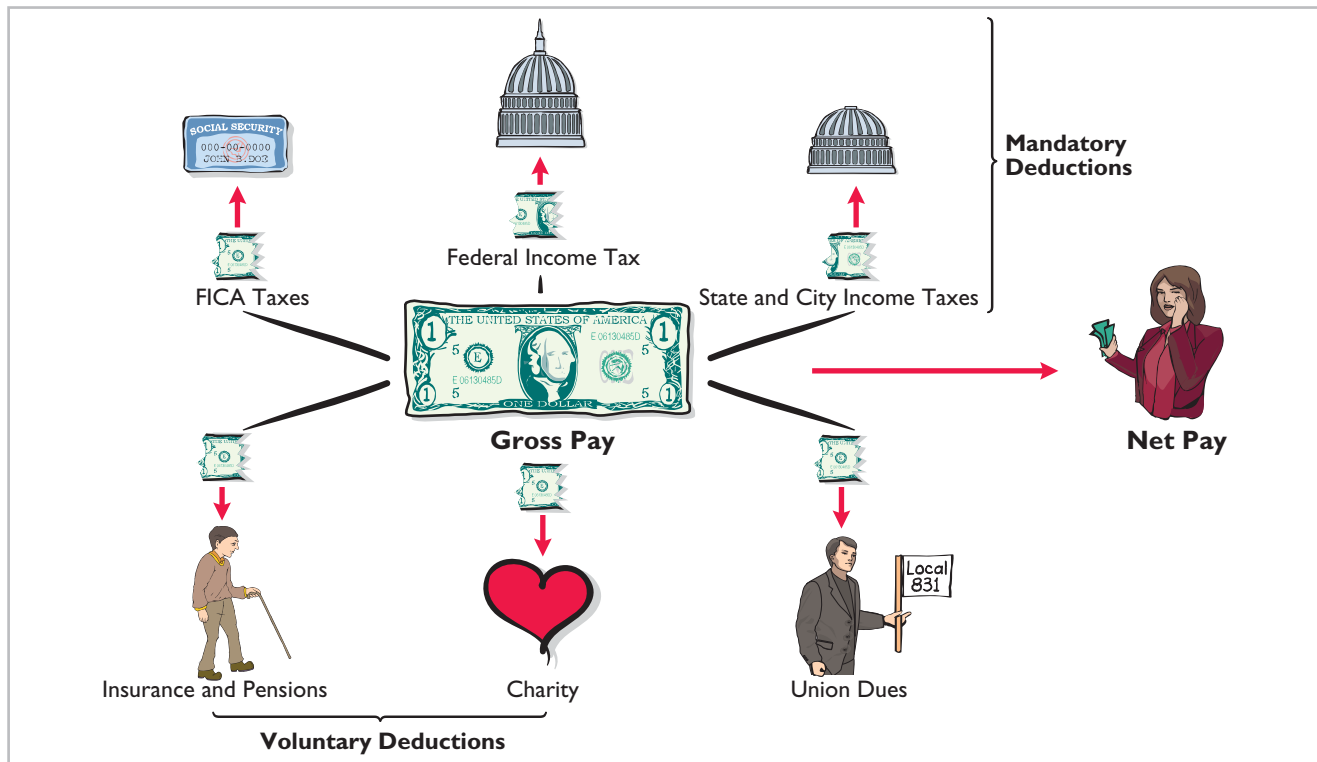

Illustration 10-2
Payroll deductions

Also, with every payroll, the employer incurs liabilities to pay various **payroll taxes** levied upon the employer. These payroll taxes include the employer's share of Social Security taxes and the state and federal unemployment taxes. Based on the \$100,000 payroll in the previous example, the company would make the following entry to record the employer's expense and liability for these payroll taxes.

¹Recently, FICA taxes include 6.2% of the first \$106,800 for Old-Age, Survivors, and Disability Insurance (OASDI) and 1.45% of all wages for Medicare (HI).

Illustration 10-3 shows the types of taxes levied on employers.

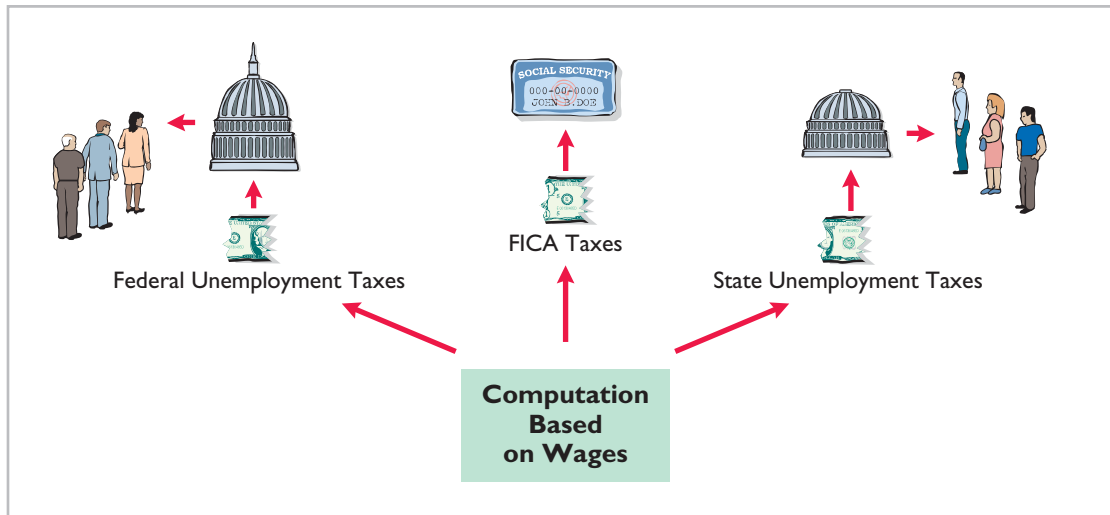

Illustration 10-3
Employer payroll taxes

Companies classify the payroll and payroll tax liability accounts as current liabilities because these amounts must be paid to employees or remitted to taxing authorities in the near term. Taxing authorities impose substantial fines and penalties on employers if the withholding and payroll taxes are not computed correctly and paid on time.

ACCOUNTING ACROSS THE ORGANIZATION

It Costs \$74,000 to Put \$44,000 in Sally's Pocket

Sally works for **Bogan Communications**, a small company in New Jersey that provides audio systems. She makes \$59,000 a year but only nets \$44,000. What happened to the other \$15,000? Well, \$2,376 goes for Sally's share of the medical and dental insurance that Bogan provides, \$126 for state unemployment insurance, \$149 for disability insurance, and \$856 for Medicare. New Jersey takes \$1,893 in income taxes, and the federal government gets \$3,658 for Social Security and another \$6,250 for income tax withholding. All of this adds up to some 22% of Sally's gross pay going to Washington or Trenton.

Employing Sally costs Bogan plenty too. Bogan has to write checks for \$74,000 so Sally can receive her \$59,000 in base pay. Health insurance is the biggest cost: While Sally pays nearly \$2,400 for coverage, Bogan pays the rest—\$9,561. Then, the federal and state governments take \$56 for federal unemployment coverage, \$149 for disability insurance, \$300 for workers' comp, and \$505 for state unemployment insurance. Finally, the government requires Bogan to pay \$856 for Sally's Medicare and \$3,658 for her Social Security.

When you add it all up, it costs \$74,000 to put \$44,000 in Sally's pocket and to give her \$12,000 in benefits.

Pension TD (Inc AVC)	
Net P	

How are the Social Security and Medicare taxes computed for Sally's salary? (See page 533.)

Unearned Revenues

A magazine publisher, such as **Sports Illustrated**, receives customers' checks when they order magazines. An airline company, such as **American Airlines**, often receives cash when it sells tickets for future flights. Season tickets for concerts, sporting events, and theater programs are also paid for in advance. How do companies account for unearned revenues that are received before goods are delivered or services are provided?

1. When a company receives the advance payment, it debits Cash and credits a current liability account identifying the source of the unearned revenue.
2. When the company recognizes revenue, it debits an unearned revenue account and credits a revenue account.

To illustrate, assume that Superior University sells 10,000 season football tickets at \$50 each for its five-game home schedule. The university makes the following entry for the sale of season tickets.

A	=	L	+	SE
+500,000				
		+500,000		
<hr/>				
Cash Flows				
+500,000				
				
<hr/>				
A	=	L	+	SE
-100,000				
		+100,000 Rev		
<hr/>				
Cash Flows				
no effect				

Aug. 6	Cash	500,000		
	Unearned Ticket Revenue			500,000
	(To record sale of 10,000 season tickets)			

As each game is completed, Superior records the recognition of revenue with the following entry.

Sept. 7	Unearned Ticket Revenue	100,000		
	Ticket Revenue			100,000
	(To record football ticket revenue)			

The account Unearned Ticket Revenue represents unearned revenue, and Superior reports it as a current liability. As the school recognizes revenue, it reclassifies the amount from unearned revenue to Ticket Revenue. Unearned revenue is material for some companies. In the airline industry, for example, tickets sold for future flights represent almost 50% of total current liabilities. At **United Air Lines**, unearned ticket revenue was its largest current liability, recently amounting to over \$1 billion.

Illustration 10-4 shows specific unearned revenue and revenue accounts used in selected types of businesses.

Illustration 10-4
Unearned revenue and revenue accounts

Type of Business	Account Title	
	Unearned Revenue	Revenue Recognized
Airline	Unearned Ticket Revenue	Ticket Revenue
Magazine publisher	Unearned Subscription Revenue	Subscription Revenue
Hotel	Unearned Rent Revenue	Rent Revenue

Current Maturities of Long-Term Debt

Companies often have a portion of long-term debt that comes due in the current year. That amount is considered a current liability. As an example, assume that Wendy Construction issues a five-year interest-bearing \$25,000 note on January 1, 2013. This note specifies that each January 1, starting January 1, 2014, Wendy should pay \$5,000 of the note. When the company prepares financial statements on December 31, 2013, it should report \$5,000 as a current liability and \$20,000 as a long-term liability. (The \$5,000 amount is the portion of the note that is due to be paid within the next 12 months.) Companies often

identify current maturities of long-term debt on the balance sheet as **long-term debt due within one year**.

It is not necessary to prepare an adjusting entry to recognize the current maturity of long-term debt. At the balance sheet date, all obligations due within one year are classified as current, and all other obligations as long-term.

> DO IT!

Current Liabilities

You and several classmates are studying for the next accounting examination. They ask you to answer the following questions.

1. If cash is borrowed on a \$50,000, 6-month, 12% note on September 1, how much interest expense would be incurred by December 31?
2. How is the sales tax amount determined when the cash register total includes sales taxes?
3. If \$15,000 is collected in advance on November 1 for 3 months' rent, what amount of rent revenue is recognized by December 31?

Action Plan

- ✓ Use the interest formula:
Face value of note \times
Annual interest rate \times
Time in terms of one
year.
- ✓ Divide total receipts by
100% plus the tax rate
to determine sales; then
subtract sales from the
total receipts.
- ✓ Determine what fraction
of the total unearned
rent was recognized this
year.

Solution

1. $\$50,000 \times 12\% \times 4/12 = \$2,000$
2. First, divide the total cash register receipts by 100% plus the sales tax percentage to find the sales amount. Second, subtract the sales amount from the total cash register receipts to determine the sales taxes.
3. $\$15,000 \times 2/3 = \$10,000$

Statement Presentation and Analysis

PRESENTATION

As indicated in Chapter 4, current liabilities are the first category under liabilities on the balance sheet. Each of the principal types of current liabilities is listed separately. In addition, companies disclose the terms of notes payable and other key information about the individual items in the notes to the financial statements.

Companies seldom list current liabilities in the order of liquidity. The reason is that varying maturity dates may exist for specific obligations such as notes payable. A more common method of presenting current liabilities is to list them by **order of magnitude**, with the largest ones first. Or, as a matter of custom, many companies show notes payable first and then accounts payable, regardless of amount. Then, the remaining current liabilities are listed by magnitude. (*Use this approach in your homework.*) Illustration 10-5 (page 482) provides an adapted excerpt from **Caterpillar Inc.**'s balance sheet, which indicates its order of presentation.

ANALYSIS

Use of current and noncurrent classifications makes it possible to analyze a company's liquidity. **Liquidity** refers to the ability to pay maturing obligations and meet unexpected needs for cash. The relationship of current assets to current liabilities is critical in analyzing liquidity. We can express this relationship as a dollar amount (working capital) and as a ratio (the current ratio).

Illustration 10-5
Balance sheet presentation
of current liabilities

Caterpillar Inc.
Balance Sheet
December 31, 2010
(in millions)

<u>Assets</u>	
Current assets	\$31,810
Property, plant and equipment (net)	12,539
Other long-term assets	<u>19,671</u>
Total assets	<u>\$64,020</u>
<u>Liabilities and Stockholders' Equity</u>	
Current liabilities	
Short-term borrowings (notes payable)	\$ 4,056
Accounts payable	5,856
Accrued expenses	2,880
Accrued wages, salaries, and employee benefits	1,670
Customer advances	1,831
Dividends payable	281
Other current liabilities	1,521
Long-term debt due within one year	<u>3,925</u>
Total current liabilities	22,020
Noncurrent liabilities	<u>30,675</u>
Total liabilities	52,695
Stockholders' equity	<u>11,325</u>
Total liabilities and stockholders' equity	<u>\$64,020</u>

Helpful Hint

For other examples of current liabilities sections, refer to the **PepsiCo** and **Coca-Cola** balance sheets in Appendices A and B.

The excess of current assets over current liabilities is **working capital**. Illustration 10-6 shows the formula for the computation of Caterpillar's working capital (dollar amounts in millions).

Illustration 10-6
Working capital formula and
computation

Current Assets	–	Current Liabilities	=	Working Capital
\$31,810	–	\$22,020	=	\$9,790

As an absolute dollar amount, working capital offers limited informational value. For example, \$1 million of working capital may be far more than needed for a small company but inadequate for a large corporation. Also, \$1 million of working capital may be adequate for a company at one time but inadequate at another time.

The **current ratio** permits us to compare the liquidity of different-sized companies and of a single company at different times. The current ratio is calculated as current assets divided by current liabilities. The formula for this ratio is illustrated below, along with its computation using Caterpillar's current asset and current liability data (dollar amounts in millions).

Illustration 10-7
Current ratio formula and
computation

Current Assets	÷	Current Liabilities	=	Current Ratio
\$31,810	÷	\$22,020	=	1.44:1

Historically, companies and analysts considered a current ratio of 2:1 to be the standard for a good credit rating. In recent years, however, many healthy companies have maintained ratios well below 2:1 by improving management of their current assets and liabilities. Caterpillar's ratio of 1.44:1 is adequate but certainly below the standard of 2:1.

ANATOMY OF A FRAUD

Art was a custodial supervisor for a large school district. The district was supposed to employ between 35 and 40 regular custodians, as well as 3 or 4 substitute custodians to fill in when regular custodians were missing. Instead, in addition to the regular custodians, Art "hired" 77 substitutes. In fact, almost none of these people worked for the district. Instead, Art submitted time cards for these people, collected their checks at the district office, and personally distributed the checks to the "employees." If a substitute's check was for \$1,200, that person would cash the check, keep \$200, and pay Art \$1,000.

Total take: \$150,000

The Missing Controls

Human resource controls. Thorough background checks should be performed. No employees should begin work until they have been approved by the Board of Education and entered into the payroll system. No employees should be entered into the payroll system until they have been approved by a supervisor. All paychecks should be distributed directly to employees at the official school locations by designated employees.

Independent internal verification. Budgets should be reviewed monthly to identify situations where actual costs significantly exceed budgeted amounts.

Source: Adapted from Wells, *Fraud Casebook* (2007), pp. 164–171.

Long-Term Liabilities

Long-term liabilities are obligations that are expected to be paid after one year. In this section, we will explain the accounting for the principal types of obligations reported in the long-term liability section of the balance sheet. These obligations often are in the form of bonds or long-term notes.

Bond Basics

Bonds are a form of interest-bearing notes payable. To obtain **large amounts of long-term capital**, corporate management usually must decide whether to issue common stock (equity financing) or bonds. Bonds offer three advantages over common stock, as shown in Illustration 10-8 (page 484).

As the illustration shows, one reason to issue bonds is that they do not affect stockholder control. Because bondholders do not have voting rights, owners can raise capital with bonds and still maintain corporate control. In addition, bonds are attractive to corporations because the cost of bond interest is tax-deductible. As a result of this tax treatment, which stock dividends do not offer, bonds may result in lower cost of capital than equity financing.

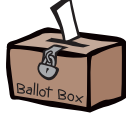

To illustrate the third advantage, on earnings per share, assume that Microsystems, Inc. is considering two plans for financing the construction of a new

LEARNING OBJECTIVE

4

Explain why bonds are issued, and identify the types of bonds.

Illustration 10-8
Advantages of bond financing over common stock

Bond Financing	Advantages
	<p>1. Stockholder control is not affected. Bondholders do not have voting rights, so current owners (stockholders) retain full control of the company.</p>
	<p>2. Tax savings result. Bond interest is deductible for tax purposes; dividends on stock are not.</p>
	<p>3. Earnings per share may be higher. Although bond interest expense reduces net income, earnings per share on common stock often is higher under bond financing because no additional shares of common stock are issued.</p>

\$5 million plant. Plan A involves issuance of 200,000 shares of common stock at the current market price of \$25 per share. Plan B involves issuance of \$5 million, 8% bonds at face value. Income before interest and taxes on the new plant will be \$1.5 million. Income taxes are expected to be 30%. Microsystems currently has 100,000 shares of common stock outstanding. Illustration 10-9 shows the alternative effects on earnings per share.

Illustration 10-9
Effects on earnings per share—stocks vs. bonds

	Plan A Issue Stock	Plan B Issue Bonds
Income before interest and taxes	\$1,500,000	\$1,500,000
Interest (8% × \$5,000,000)	—	400,000
Income before income taxes	1,500,000	1,100,000
Income tax expense (30%)	450,000	330,000
Net income	<u>\$1,050,000</u>	<u>\$ 770,000</u>
Outstanding shares	300,000	100,000
Earnings per share	<u>\$3.50</u>	<u>\$7.70</u>

Note that net income is \$280,000 less (\$1,050,000 – \$770,000) with long-term debt financing (bonds). However, earnings per share is higher because there are 200,000 fewer shares of common stock outstanding.

One disadvantage in using bonds is that the company must **pay interest** on a periodic basis. In addition, the company must also **repay the principal** at the due date. A company with fluctuating earnings and a relatively weak cash position may have great difficulty making interest payments when earnings are low.

A corporation may also obtain long-term financing from notes payable and leasing. However, notes payable and leasing are seldom sufficient to furnish the amount of funds needed for plant expansion and major projects like new buildings.

Bonds are sold in relatively small denominations (usually \$1,000 multiples). As a result of their size and the variety of their features, bonds attract many investors.

TYPES OF BONDS

Bonds may have many different features. In the following sections, we describe the types of bonds commonly issued.

Helpful Hint
Besides corporations, governmental agencies and universities also issue bonds to raise capital.

SECURED AND UNSECURED BONDS **Secured bonds** have specific assets of the issuer pledged as collateral for the bonds. A bond secured by real estate, for example, is called a **mortgage bond**. A bond secured by specific assets set aside to retire the bonds is called a **sinking fund bond**.

Unsecured bonds, also called **debenture bonds**, are issued against the general credit of the borrower. Companies with good credit ratings use these bonds extensively. For example, at one time, **DuPont** reported over \$2 billion of debenture bonds outstanding.

TERM AND SERIAL BONDS Bonds that mature—are due for payment—at a single specified future date are **term bonds**. In contrast, bonds that mature in installments are **serial bonds**.

REGISTERED AND BEARER BONDS Bonds issued in the name of the owner are **registered bonds**. Interest payments on registered bonds are made by check to bondholders of record. Bonds not registered are **bearer** (or **coupon**) **bonds**. Holders of bearer bonds must send in coupons to receive interest payments. Most bonds issued today are registered bonds.

CONVERTIBLE AND CALLABLE BONDS Bonds that can be converted into common stock at the bondholder's option are **convertible bonds**. The conversion feature generally is attractive to bond buyers. Bonds that the issuing company can retire at a stated dollar amount prior to maturity are **callable bonds**. A call feature is included in nearly all corporate bond issues.

ISSUING PROCEDURES

State laws grant corporations the power to issue bonds. Both the board of directors and stockholders usually must approve bond issues. **In authorizing the bond issue, the board of directors must stipulate the number of bonds to be authorized, total face value, and contractual interest rate.** The total bond authorization often exceeds the number of bonds the company originally issues. This gives the corporation the flexibility to issue more bonds, if needed, to meet future cash requirements.

The **face value** is the amount of principal the issuing company must pay at the maturity date. The **maturity date** is the date that the final payment is due to the investor from the issuing company. The **contractual interest rate**, often referred to as the **stated rate**, is the rate used to determine the amount of cash interest the borrower pays and the investor receives. Usually the contractual rate is stated as an annual rate. Interest is generally paid semiannually.

The terms of the bond issue are set forth in a legal document called a **bond indenture**. The indenture shows the terms and summarizes the rights of the bondholders and their trustees, and the obligations of the issuing company. The **trustee** (usually a financial institution) keeps records of each bondholder, maintains custody of unissued bonds, and holds conditional title to pledged property.

In addition, the issuing company arranges for the printing of **bond certificates**. The indenture and the certificate are separate documents. As shown in Illustration 10-10 (page 486), a bond certificate provides the following information: name of the issuer, face value, contractual interest rate, and maturity date. An investment company that specializes in selling securities generally sells the bonds for the issuing company.

BOND TRADING

Bondholders have the opportunity to convert their holdings into cash at any time by selling the bonds at the current market price on national securities exchanges.

Ethics Note

Some companies try to minimize the amount of debt reported on their balance sheet by not reporting certain types of commitments as liabilities. This subject is of intense interest in the financial community.

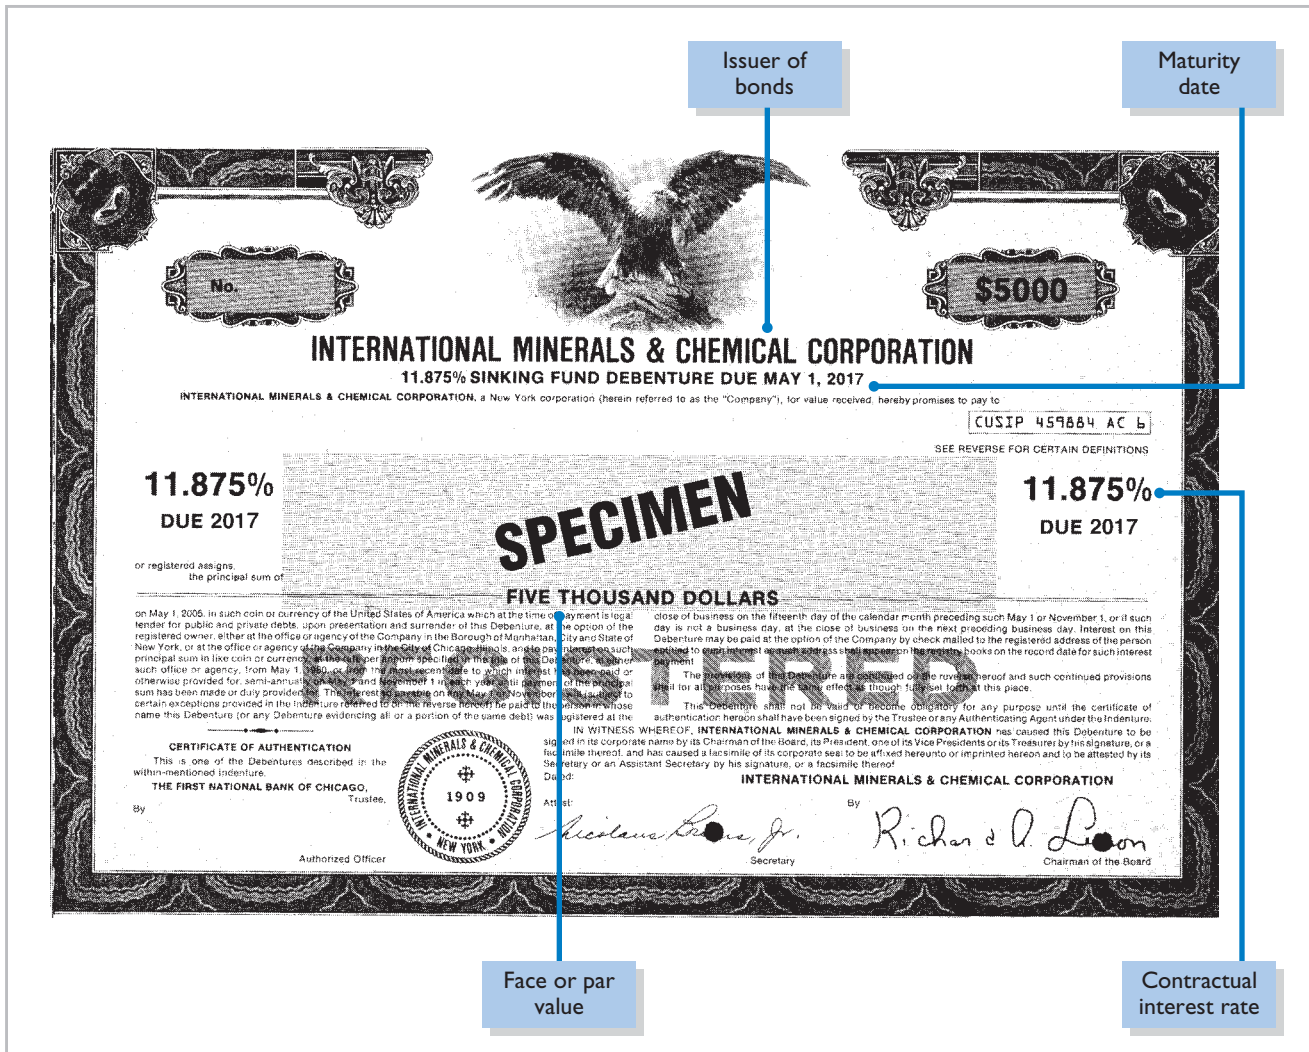

Illustration 10-10
Bond certificate

Bond prices are quoted as a percentage of the face value of the bond, which is usually \$1,000. A \$1,000 bond with a quoted price of 97 means that the selling price of the bond is 97% of face value, or \$970. Newspapers and the financial press publish bond prices and trading activity daily as shown in Illustration 10-11.

Illustration 10-11
Market information for bonds

Bonds	Maturity	Close	Yield	Est. Volume (000)
Boeing Co. 5.125	Feb. 15, 2014	96.595	5.747	33,965

Helpful Hint

- (1) What is the price of a \$1,000 bond trading at 95¼%?
- (2) What is the price of a \$1,000 bond trading at 101⅞%?

Answers: (1) \$952.50.
(2) \$1,018.75.

This bond listing indicates that **Boeing Co.** has outstanding 5.125%, \$1,000 bonds that mature in 2014. They currently yield a 5.747% return. On this day, \$33,965,000 of these bonds were traded. At the close of trading, the price was 96.595% of face value, or \$965.95.

A corporation makes journal entries **only when it issues or buys back bonds**, or when bondholders convert bonds into common stock. For example, **DuPont does not journalize** transactions between its bondholders and other investors. If Tom Smith sells his DuPont bonds to Faith Jones, DuPont does not

journalize the transaction. (DuPont or its trustee does, however, keep records of the names of bondholders in the case of registered bonds.)

DETERMINING THE MARKET PRICE OF BONDS

If you were an investor wanting to purchase a bond, how would you determine how much to pay? To be more specific, assume that Coronet, Inc. issues a **zero-interest bond** (pays no interest) with a face value of \$1,000,000 due in 20 years. For this bond, the only cash you receive is a million dollars at the end of 20 years. Would you pay a million dollars for this bond? We hope not! A million dollars received 20 years from now is not the same as a million dollars received today.

The term **time value of money** is used to indicate the relationship between time and money—that a dollar received today is worth more than a dollar promised at some time in the future. If you had a million dollars today, you would invest it. From that investment, you would earn interest such that at the end of 20 years, you would have much more than a million dollars. If someone is going to pay you a million dollars 20 years from now, you would want to find its equivalent today. In other words, you would want to determine how much you must invest today at current interest rates to have a million dollars in 20 years. The amount that must be invested today at a given rate of interest over a specified time is called **present value**.

The present value of a bond is the value at which it should sell in the marketplace. Market price therefore is a function of the three factors that determine present value: (1) the dollar amounts to be received, (2) the length of time until the amounts are received, and (3) the market rate of interest. The **market interest rate** is the rate investors demand for loaning funds. Appendix 10A discusses the process of finding the present value for bonds. Appendix D also provides additional material for time value of money computations.

ACCOUNTING ACROSS THE ORGANIZATION

When to Go Long-Term

A decision that all companies must make is to what extent to rely on short-term versus long-term financing. The critical nature of this decision was highlighted in the fall of 2001, after the World Trade Center disaster. Prior to September 11, short-term interest rates had been extremely low relative to long-term rates. In order to minimize interest costs, many companies were relying very heavily on short-term financing to purchase things they normally would have used long-term debt for. The problem with short-term financing is that it requires companies to continually find new financing as each loan comes due. This makes them vulnerable to sudden changes in the economy.

After September 11, lenders and short-term investors became very reluctant to loan money. This put the squeeze on many companies: As short-term loans came due, they were unable to refinance. Some were able to get other financing but at extremely high rates (for example, 12% as compared to 3%). Others were unable to get loans and instead had to sell assets to generate cash for their immediate needs.

Source: Henny Sender, "Firms Feel Consequences of Short-Term Borrowing," *Wall Street Journal Online* (October 12, 2001).

Based on this story, what is a good general rule to use in choosing between short-term and long-term financing? (See page 533.)

> **DO IT!**

Bond Terminology

State whether each of the following statements is true or false.

- _____ 1. Mortgage bonds and sinking fund bonds are both examples of secured bonds.
- _____ 2. Unsecured bonds are also known as debenture bonds.
- _____ 3. The stated rate is the rate investors demand for loaning funds.
- _____ 4. The face value is the amount of principal the issuing company must pay at the maturity date.
- _____ 5. The bond issuer must make journal entries to record transfers of its bonds among investors.

Solution

- 1. True.
- 2. True.
- 3. False. The stated rate is the contractual interest rate used to determine the amount of cash interest the borrower pays.
- 4. True.
- 5. False. The bond issuer makes journal entries only when it issues or buys back bonds, when it records interest, and when bonds are converted.

Action Plan

- ✓ Review the types of bonds and the basic terms associated with bonds.

Related exercise material: **BE10-7, E10-8, E10-9, and DO IT! 10-2.**

Accounting for Bond Issues

LEARNING OBJECTIVE 5

Prepare the entries for the issuance of bonds and interest expense.

As indicated earlier, a corporation records bond transactions when it issues (sells) or retires (buys back) bonds and when bondholders convert bonds into common stock. If bondholders sell their bond investments to other investors, the issuing firm receives no further money on the transaction, **nor does the issuing corporation journalize the transaction** (although it does keep records of the names of bondholders in some cases).

Bonds may be issued at face value, below face value (discount), or above face value (premium). Bond prices for both new issues and existing bonds are quoted as a **percentage of the face value of the bond**. **Face value is usually \$1,000**. Thus, a \$1,000 bond with a quoted price of 97 means that the selling price of the bond is 97% of face value, or \$970.

ISSUING BONDS AT FACE VALUE

To illustrate the accounting for bonds issued at face value, assume that on January 1, 2014, Candlestick, Inc. issues \$100,000, five-year, 10% bonds at 100 (100% of face value). The entry to record the sale is:

A	=	L	+	SE
+100,000		+100,000		
Cash Flows				
+100,000				

Jan. 1	Cash	100,000	
	Bonds Payable		100,000
	(To record sale of bonds at face value)		

Candlestick reports bonds payable in the long-term liabilities section of the balance sheet because the maturity date is January 1, 2019 (more than one year away).

Over the term (life) of the bonds, companies make entries to record bond interest. Interest on bonds payable is computed in the same manner as interest on notes payable, as explained on page 476. Assume that interest is payable semi-annually on January 1 and July 1 on the Candlestick bonds. In that case, Candlestick must pay interest of \$5,000 ($\$100,000 \times 10\% \times 6/12$) on July 1, 2014. The entry for the payment, assuming no previous accrual of interest, is:

July 1	Interest Expense	5,000	
	Cash		5,000
	(To record payment of bond interest)		

At December 31, Candlestick recognizes the \$5,000 of interest expense incurred since July 1 with the following adjusting entry:

Dec. 31	Interest Expense	5,000	
	Interest Payable		5,000
	(To accrue bond interest)		

Companies classify interest payable as a current liability because it is scheduled for payment within the next year. When Candlestick pays the interest on January 1, 2015, it debits (decreases) Interest Payable and credits (decreases) Cash for \$5,000.

Candlestick records the payment on January 1 as follows.

Jan. 1	Interest Payable	5,000	
	Cash		5,000
	(To record payment of bond interest)		

DISCOUNT OR PREMIUM ON BONDS

In the Candlestick illustrations above, we assumed that the contractual (stated) interest rate and the market (effective) interest rate paid on the bonds were the same. Recall that the **contractual interest rate** is the rate applied to the face (par) value to arrive at the interest paid in a year. The **market interest rate** is the rate investors demand for loaning funds to the corporation. When the contractual interest rate and the market interest rate are the same, bonds sell **at face value (par value)**.

However, market interest rates change daily. The type of bond issued, the state of the economy, current industry conditions, and the company's performance all affect market interest rates. As a result, contractual and market interest rates often differ. To make bonds salable when the two rates differ, bonds sell below or above face value.

To illustrate, suppose that a company issues 10% bonds at a time when other bonds of similar risk are paying 12%. Investors will not be interested in buying the 10% bonds, so their value will fall below their face value. When a bond is sold for less than its face value, the difference between the face value of a bond and its selling price is called a **discount**. As a result of the decline in the bonds' selling price, the actual interest rate incurred by the company increases to the level of the current market interest rate.

Conversely, if the market rate of interest is **lower than** the contractual interest rate, investors will have to pay more than face value for the bonds. That is, if the market rate of interest is 8% but the contractual interest rate on the bonds is 10%, the price of the bonds will be bid up. When a bond is sold for more than its face value, the difference between the face value and its selling price is called a **premium**. Illustration 10-12 (page 490) shows these relationships graphically.

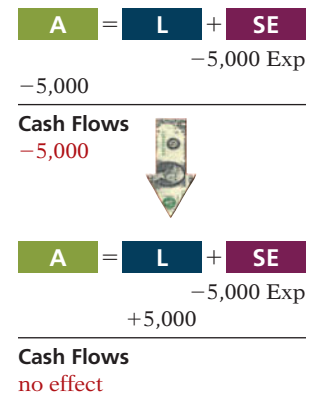

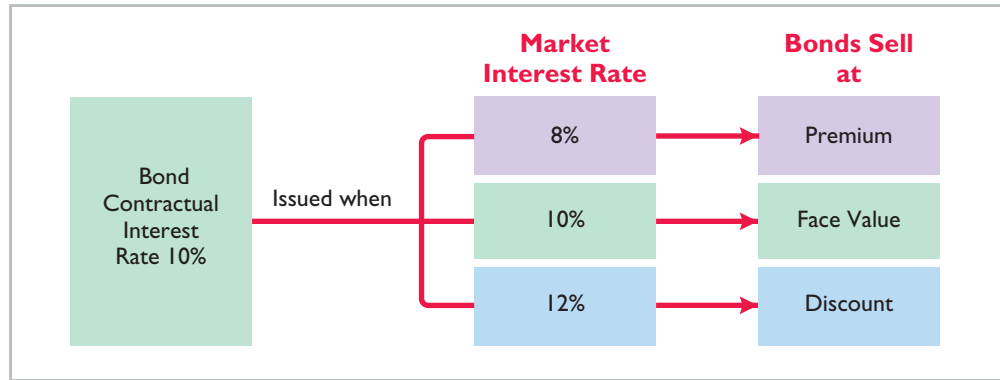

Illustration 10-12
Interest rates and bond prices

Helpful Hint

Discount on Bonds Payable	
Increase Debit	Decrease Credit
↓	
Normal Balance	

Issuance of bonds at an amount different from face value is quite common. By the time a company prints the bond certificates and markets the bonds, it will be a coincidence if the market rate and the contractual rate are the same. Thus, the issuance of bonds at a discount does not mean that the issuer’s financial strength is suspect. Conversely, the sale of bonds at a premium does not indicate that the financial strength of the issuer is exceptional.

ISSUING BONDS AT A DISCOUNT

To illustrate issuance of bonds at a discount, assume that on January 1, 2014, Candlestick, Inc. sells \$100,000, five-year, 10% bonds for \$92,639 (92.639% of face value). Interest is payable on July 1 and January 1. The entry to record the issuance is:

A	=	L	+	SE
+92,639		-7,361		+100,000
Cash Flows				
+92,639				

Jan. 1	Cash	92,639	
	Discount on Bonds Payable	7,361	
	Bonds Payable		100,000
	(To record sale of bonds at a discount)		

Although Discount on Bonds Payable has a debit balance, **it is not an asset**. Rather, it is a **contra account**. This account is **deducted from bonds payable** on the balance sheet, as shown in Illustration 10-13.

Illustration 10-13
Statement presentation of discount on bonds payable

Candlestick, Inc. Balance Sheet (partial)		
Long-term liabilities		
Bonds payable	\$100,000	
Less: Discount on bonds payable	7,361	\$92,639

Helpful Hint

Carrying value (book value) of bonds issued at a discount is determined by subtracting the balance of the discount account from the balance of the Bonds Payable account.

The \$92,639 represents the **carrying (or book) value** of the bonds. On the date of issue, this amount equals the market price of the bonds.

The issuance of bonds below face value—at a discount—causes the total cost of borrowing to differ from the bond interest paid. That is, the issuing corporation must pay not only the contractual interest rate over the term of the bonds, but also the face value (rather than the issuance price) at maturity. Therefore, the difference between the issuance price and face value of the bonds—the discount—is an **additional cost of borrowing**. The company records this additional cost as **interest expense** over the life of the bonds. Appendices 10B and 10C show the procedures for recording this additional cost.

The total cost of borrowing \$92,639 for Candlestick, Inc. is \$57,361, computed as follows.

<u>Bonds Issued at a Discount</u>	
Semiannual interest payments (\$100,000 × 10% × ½ = \$5,000; \$5,000 × 10)	\$ 50,000
Add: Bond discount (\$100,000 – \$92,639)	<u>7,361</u>
Total cost of borrowing	<u>\$57,361</u>

Illustration 10-14
Total cost of borrowing—
bonds issued at a discount

Alternatively, we can compute the total cost of borrowing as follows.

<u>Bonds Issued at a Discount</u>	
Principal at maturity	\$100,000
Semiannual interest payments (\$5,000 × 10)	<u>50,000</u>
Cash to be paid to bondholders	150,000
Cash received from bondholders	<u>92,639</u>
Total cost of borrowing	<u>\$ 57,361</u>

Illustration 10-15
Alternative computation of
total cost of borrowing—bonds
issued at a discount

ISSUING BONDS AT A PREMIUM

To illustrate the issuance of bonds at a premium, we now assume the Candlestick, Inc. bonds described above sell for \$108,111 (108.111% of face value) rather than for \$92,639. The entry to record the sale is:

Jan. 1	Cash	108,111		
	Bonds Payable		100,000	
	Premium on Bonds Payable		8,111	
	(To record sale of bonds at a premium)			

Candlestick adds the premium on bonds payable **to the bonds payable amount** on the balance sheet, as shown in Illustration 10-16.

Candlestick, Inc. Balance Sheet (partial)		
Long-term liabilities		
Bonds payable	\$100,000	
Add: Premium on bonds payable	<u>8,111</u>	\$108,111

Illustration 10-16
Statement presentation
of bond premium

The sale of bonds above face value causes the total cost of borrowing to be **less than the bond interest paid**. The reason: The borrower is not required to pay the bond premium at the maturity date of the bonds. Thus, the bond premium is considered to be **a reduction in the cost of borrowing**. The company credits the bond premium to Interest Expense over the life of the bonds. Appendices 10B and 10C show the procedures for recording this reduction in the cost of borrowing. The total cost of borrowing \$108,111 for Candlestick, Inc. is computed as follows.

Illustration 10-17

Total cost of borrowing—
bonds issued at a premium

<u>Bonds Issued at a Premium</u>		
Semiannual interest payments		
$(\$100,000 \times 10\% \times \frac{1}{2} = \$5,000; \$5,000 \times 10)$		\$ 50,000
Less: Bond premium $(\$108,111 - \$100,000)$		<u>8,111</u>
Total cost of borrowing		<u>\$41,889</u>

Alternatively, we can compute the cost of borrowing as follows.

Illustration 10-18

Alternative computation of
total cost of borrowing—bonds
issued at a premium

<u>Bonds Issued at a Premium</u>		
Principal at maturity		\$100,000
Semiannual interest payments $(\$5,000 \times 10)$		<u>50,000</u>
Cash to be paid to bondholders		150,000
Cash received from bondholders		<u>108,111</u>
Total cost of borrowing		<u>\$ 41,889</u>

> DO IT!

Bond Issuance

Giant Corporation issues \$200,000 of bonds for \$189,000. (a) Prepare the journal entry to record the issuance of the bonds, and (b) show how the bonds would be reported on the balance sheet at the date of issuance.

Solution

Action Plan

- ✓ Record cash received, bonds payable at face value, and the difference as a discount or premium.
- ✓ Report discount as a deduction from bonds payable and premium as an addition to bonds payable.

(a)		
Cash	189,000	
Discount on Bonds Payable	11,000	
Bonds Payable		200,000
(To record sale of bonds at a discount)		
(b)		
Long-term liabilities		
Bonds payable	\$200,000	
Less: Discount on bonds payable	<u>11,000</u>	<u>\$189,000</u>

✓ The Navigator

Accounting for Bond Retirements

An issuing corporation retires bonds either when it buys back (redeems) the bonds or when bondholders convert them into common stock. We explain the entries for these transactions in the following sections.

REDEEMING BONDS AT MATURITY

Regardless of the issue price of bonds, the book value of the bonds at maturity will equal their face value. Assuming that the company pays and records separately

LEARNING OBJECTIVE 6

Describe the entries when bonds are redeemed or converted.

the interest for the last interest period, Candlestick records the redemption of its bonds at maturity as follows.

Jan. 1	Bonds Payable	100,000	
	Cash		100,000
	(To record redemption of bonds at maturity)		

A	=	L	+	SE
		-100,000		
		-100,000		
<hr/>				
Cash Flows				
		-100,000		

REDEEMING BONDS BEFORE MATURITY

Bonds also may be redeemed before maturity. A company may decide to retire bonds before maturity to reduce interest cost and to remove debt from its balance sheet. A company should retire debt early only if it has sufficient cash resources.

When a company retires bonds before maturity, it is necessary to (1) eliminate the carrying value of the bonds at the redemption date; (2) record the cash paid; and (3) recognize the gain or loss on redemption. The **carrying value** of the bonds is the face value of the bonds less any remaining bond discount or plus any remaining bond premium at the redemption date.

To illustrate, assume that Candlestick, Inc. has sold its bonds at a premium. At the end of the eighth period, Candlestick retires these bonds at 103 after paying the semiannual interest. Assume also that the carrying value of the bonds at the redemption date is \$101,623. Candlestick makes the following entry to record the redemption at the end of the eighth interest period (January 1, 2018):

Jan. 1	Bonds Payable	100,000	
	Premium on Bonds Payable	1,623	
	Loss on Bond Redemption	1,377	
	Cash		103,000
	(To record redemption of bonds at 103)		

A	=	L	+	SE
		-100,000		
		-1,623		
				-1,377 Exp
		-103,000		
<hr/>				
Cash Flows				
		-103,000		

Note that the loss of \$1,377 is the difference between the cash paid of \$103,000 and the carrying value of the bonds of \$101,623.

CONVERTING BONDS INTO COMMON STOCK

Convertible bonds have features that are attractive both to bondholders and to the issuer. The conversion often gives bondholders an opportunity to benefit if the market price of the common stock increases substantially. Until conversion, though, the bondholder receives interest on the bond. For the issuer of convertible bonds, the bonds sell at a higher price and pay a lower rate of interest than comparable debt securities without the conversion option. Many corporations, such as **Intel**, **Ford**, and **Wells Fargo**, have convertible bonds outstanding.

When the issuing company records a conversion, the company ignores the current market prices of the bonds and stock. Instead, the company transfers the **carrying value** of the bonds to paid-in capital accounts. **No gain or loss is recognized.**

To illustrate, assume that on July 1 Saunders Associates converts \$100,000 bonds sold at face value into 2,000 shares of \$10 par value common stock. Both the bonds and the common stock have a market value of \$130,000. Saunders makes the following entry to record the conversion:

July 1	Bonds Payable	100,000	
	Common Stock		20,000
	Paid-in Capital in Excess of Par—		
	Common Stock		80,000
	(To record bond conversion)		

A	=	L	+	SE
		-100,000		
				+20,000 CS
				+80,000 CS
<hr/>				
Cash Flows				
				no effect

Helpful Hint

Question: A bond is redeemed prior to its maturity date. Its carrying value exceeds its redemption price. Will the retirement result in a gain or a loss on redemption?
Answer: Gain.

Note that the company does not consider the current market value of the bonds and stock (\$130,000) in making the entry. This method of recording the bond conversion is often referred to as the **carrying (or book) value method**.

> DO IT!

Bond Redemption

R & B Inc. issued \$500,000, 10-year bonds at a premium. Prior to maturity, when the carrying value of the bonds is \$508,000, the company retires the bonds at 102. Prepare the entry to record the redemption of the bonds.

Action Plan

- ✓ Determine and eliminate the carrying value of the bonds.
- ✓ Record the cash paid.
- ✓ Compute and record the gain or loss (the difference between the first two items).

Solution

There is a loss on redemption: The cash paid, \$510,000 ($\$500,000 \times 102\%$), is greater than the carrying value of \$508,000. The entry is:

Bonds Payable	500,000	
Premium on Bonds Payable	8,000	
Loss on Bond Redemption	2,000	
Cash		510,000
(To record redemption of bonds at 102)		

Related exercise material: **BE10-11, E10-13, E10-14, and Do It! 10-4.**

The Navigator

LEARNING OBJECTIVE 7

Describe the accounting for long-term notes payable.

Accounting for Long-Term Notes Payable

The use of notes payable in long-term debt financing is quite common. **Long-term notes payable** are similar to short-term interest-bearing notes payable except that the term of the notes exceeds one year. In periods of unstable interest rates, lenders may tie the interest rate on long-term notes to changes in the market rate for comparable loans. Examples are the 8.03% adjustable rate notes issued by **General Motors** and the floating-rate notes issued by **American Express Company**.

A long-term note may be secured by a **mortgage** that pledges title to specific assets as security for a loan. Individuals widely use **mortgage notes payable** to purchase homes, and many small and some large companies use them to acquire plant assets. At one time, approximately 18% of **McDonald's** long-term debt related to mortgage notes on land, buildings, and improvements.

Like other long-term notes payable, the mortgage loan terms may stipulate either a **fixed** or an **adjustable** interest rate. The interest rate on a fixed-rate mortgage remains the same over the life of the mortgage. The interest rate on an adjustable-rate mortgage is adjusted periodically to reflect changes in the market rate of interest. Typically, the terms require the borrower to make equal installment payments over the term of the loan. Each payment consists of (1) interest on the unpaid balance of the loan and (2) a reduction of loan principal. While the total amount of the payment remains constant, the interest decreases each period, while the portion applied to the loan principal increases.

Companies initially record mortgage notes payable at face value. They subsequently make entries for each installment payment. To illustrate, assume that Porter Technology Inc. issues a \$500,000, 12%, 20-year mortgage note on December 31, 2014, to obtain needed financing for a new research laboratory. The terms provide for semiannual installment payments of \$33,231 (not including real estate

taxes and insurance). The installment payment schedule for the first two years is as follows.

Semiannual Interest Period	(A) Cash Payment	(B) Interest Expense (D) × 6%	(C) Reduction of Principal (A) – (B)	(D) Principal Balance (D) – (C)
12/31/14				\$500,000
06/30/15	\$33,231	\$30,000	\$3,231	496,769
12/31/15	33,231	29,806	3,425	493,344
06/30/16	33,231	29,601	3,630	489,714
12/31/16	33,231	29,383	3,848	485,866

Illustration 10-19
Mortgage installment payment schedule

Porter records the mortgage loan on December 31, 2014, as follows.

Dec. 31	Cash	500,000	
	Mortgage Payable		500,000
	(To record mortgage loan)		

A	=	L	+	SE
+500,000				
				+500,000

Cash Flows
+500,000 

On June 30, 2015, Porter records the first installment payment as follows.

June 30	Interest Expense	30,000	
	Mortgage Payable	3,231	
	Cash		33,231
	(To record semiannual payment on mortgage)		

A	=	L	+	SE
				-30,000 Exp
				-3,231
-33,231				

Cash Flows
-33,231 

In the balance sheet, the company reports the reduction in principal for the next year as a current liability, and it classifies the remaining unpaid principal balance as a long-term liability. At December 31, 2015, the total liability is \$493,344. Of that amount, \$7,478 (\$3,630 + \$3,848) is current, and \$485,866 (\$493,344 – \$7,478) is long-term.

> DO IT!

Long-Term Note

Cole Research issues a \$250,000, 8%, 20-year mortgage note to obtain needed financing for a new lab. The terms call for semiannual payments of \$12,631 each. Prepare the entries to record the mortgage loan and the first installment payment.

Solution

Action Plan

- ✓ Record the issuance of the note as a cash receipt and a liability.
- ✓ Each installment payment consists of interest and payment of principal.

Cash	250,000	
Mortgage Payable		250,000
(To record mortgage loan)		
Interest Expense	10,000*	
Mortgage Payable	2,361	
Cash		12,361
(To record semiannual payment on mortgage)		

*Interest expense = \$250,000 × 8% × 6/12.

Related exercise material: **BE10-12, E10-15, and DO IT! 10-5.**

ACCOUNTING ACROSS THE ORGANIZATION

Bonds versus Notes?

Companies have a choice in the form of long-term borrowing they undertake—issue bonds or issue notes. Notes are generally issued to a single lender (usually through a loan from a bank). Bonds, on the other hand, allow the company to divide the borrowing into many small investing units, thereby enabling more than one investor to participate in the borrowing. As indicated in the graph to the left, companies are recently borrowing more from bond investors than from banks and other loan providers in a bid to lock in cheap, long-term funding.

Why this trend? For one thing, low interest rates and rising inflows into fixed-income funds have triggered record bond issuances as banks cut back lending. In addition, for some high-rated companies, it can be riskier to borrow from a bank than the bond markets. The reason: High-rated companies tended to rely on short-term financing to fund working capital but were left stranded when these markets froze up. Some are now financing themselves with longer-term bonds instead.

Source: A. Sakoui and N. Bullock, "Companies Choose Bonds for Cheap Funds," *Financial Times* (October 12, 2009).

Why might companies prefer bond financing instead of short-term financing? (See page 533.)

Statement Presentation and Analysis

LEARNING OBJECTIVE 8

Identify the methods for the presentation and analysis of long-term liabilities.

PRESENTATION

Companies report long-term liabilities in a separate section of the balance sheet immediately following current liabilities, as shown in Illustration 10-20. Alternatively, companies may present summary data in the balance sheet, with detailed data (interest rates, maturity dates, conversion privileges, and assets pledged as collateral) shown in a supporting schedule.

Illustration 10-20
Balance sheet presentation of long-term liabilities

Lax Corporation Balance Sheet (partial)		
Long-term liabilities		
Bonds payable 10% due in 2017	\$1,000,000	
Less: Discount on bonds payable	<u>80,000</u>	\$ 920,000
Mortgage payable, 11%, due in 2023 and secured by plant assets		500,000
Lease liability		<u>440,000</u>
Total long-term liabilities		\$1,860,000

Companies report the current maturities of long-term debt under current liabilities if they are to be paid from current assets.

ANALYSIS

Long-term creditors and stockholders are interested in a company's long-run solvency. Of particular interest is the company's ability to pay interest as it comes

due and to repay the face value of the debt at maturity. Here we look at two ratios that provide information about debt-paying ability and long-run solvency.

The **debt to total assets ratio** measures the percentage of the total assets provided by creditors. As shown in the formula in Illustration 10-21, it is computed by dividing total debt (both current and long-term liabilities) by total assets. The higher the percentage of debt to total assets, the greater the risk that the company may be unable to meet its maturing obligations.

The **times interest earned ratio** indicates the company's ability to meet interest payments as they come due. It is computed by dividing income before income taxes and interest expense by interest expense.

To illustrate these ratios, we will use data from **Kellogg Company's** recent annual report. The company had total liabilities of \$8,925 million, total assets of \$11,200 million, interest expense of \$295 million, income taxes of \$476 million, and net income of \$1,208 million. Kellogg's debt to total assets ratio and times interest earned ratio are shown below.

Total Debt	÷	Total Assets	=	Debt to Total Assets
\$8,925	÷	\$11,200	=	79.7%
Income before Income Taxes and Interest Expense	÷	Interest Expense	=	Times Interest Earned
\$1,208 + \$476 + \$295	÷	\$295	=	6.71 times

Illustration 10-21

Debt to total assets and times interest earned ratios, with computations

Kellogg has a relatively high debt to total assets percentage of 79.7%. Its interest coverage of 6.71 times is considered safe.

INVESTOR INSIGHT

"Covenant-Lite" Debt

In many corporate loans and bond issuances, the lending agreement specifies debt covenants. These covenants typically are specific financial measures, such as minimum levels of retained earnings, cash flows, times interest earned ratios, or other measures that a company must maintain during the life of the loan. If the company violates a covenant, it is considered to have violated the loan agreement. The creditors can then demand immediate repayment, or they can renegotiate the loan's terms. Covenants protect lenders because they enable lenders to step in and try to get their money back before the borrower gets too deep into trouble.

During the 1990s, most traditional loans specified between three to six covenants or "triggers." In more recent years, when lots of cash was available, lenders began reducing or completely eliminating covenants from loan agreements in order to be more competitive with other lenders. When the economy declined, lenders lost big money when companies defaulted.

How can financial ratios such as those covered in this chapter provide protection for creditors? (See page 533.)

> Comprehensive DO IT!

Snyder Software Inc. has successfully developed a new spreadsheet program. To produce and market the program, the company needed \$2 million of additional financing. On January 1, 2014, Snyder borrowed money as follows.

1. Snyder issued \$500,000, 11%, 10-year convertible bonds. The bonds sold at face value and pay semiannual interest on January 1 and July 1. Each \$1,000 bond is convertible into 30 shares of Snyder's \$20 par value common stock.
2. Snyder issued \$1 million, 10%, 10-year bonds at face value. Interest is payable semiannually on January 1 and July 1.
3. Snyder also issued a \$500,000, 12%, 15-year mortgage payable. The terms provide for semiannual installment payments of \$36,324 on June 30 and December 31.

Instructions

1. For the convertible bonds, prepare journal entries for:
 - (a) The issuance of the bonds on January 1, 2014.
 - (b) Interest expense on July 1 and December 31, 2014.
 - (c) The payment of interest on January 1, 2015.
 - (d) The conversion of all bonds into common stock on January 1, 2015, when the market price of the common stock was \$67 per share.
2. For the 10-year, 10% bonds:
 - (a) Journalize the issuance of the bonds on January 1, 2014.
 - (b) Prepare the journal entries for interest expense in 2014. Assume no accrual of interest on July 1.
 - (c) Prepare the entry for the redemption of the bonds at 101 on January 1, 2017, after paying the interest due on this date.
3. For the mortgage payable:
 - (a) Prepare the entry for the issuance of the note on January 1, 2014.
 - (b) Prepare a payment schedule for the first four installment payments.
 - (c) Indicate the current and noncurrent amounts for the mortgage payable at December 31, 2014.

Solution to Comprehensive DO IT!

Action Plan

- ✓ Compute interest semiannually (six months).
- ✓ Record the accrual and payment of interest on appropriate dates.
- ✓ Record the conversion of the bonds into common stock by removing the book (carrying) value of the bonds from the liability account.

1. (a) 2014				
Jan. 1	Cash	500,000		
	Bonds Payable		500,000	
	(To record issue of 11%, 10-year convertible bonds at face value)			
(b) 2014				
July 1	Interest Expense	27,500		
	Cash (\$500,000 × 0.055)		27,500	
	(To record payment of semiannual interest)			
Dec. 31	Interest Expense	27,500		
	Interest Payable		27,500	
	(To record accrual of semiannual bond interest)			
(c) 2015				
Jan. 1	Interest Payable	27,500		
	Cash		27,500	
	(To record payment of accrued interest)			

Action Plan

- ✓ Record the issuance of the bonds.
- ✓ Compute interest expense for each period.
- ✓ Compute the loss on bond redemption as the excess of the cash paid over the carrying value of the redeemed bonds.

Action Plan

- ✓ Compute periodic interest expense on a mortgage payable, recognizing that as the principal amount decreases, so does the interest expense.
- ✓ Record mortgage payments, recognizing that each payment consists of (1) interest on the unpaid loan balance and (2) a reduction of the loan principal.

(d) 2015					
Jan. 1	Bonds Payable	500,000

	Long-term liability	\$472,335			

SUMMARY OF LEARNING OBJECTIVES

1 Explain a current liability, and identify the major types of current liabilities. A current liability is a debt that a company can reasonably expect to pay (1) from existing current assets or through the creation of other current liabilities, and (2) within one year or the operating cycle,

whichever is longer. The major types of current liabilities are notes payable, accounts payable, sales taxes payable, unearned revenues, and accrued liabilities such as taxes, salaries and wages, and interest payable.

2 Describe the accounting for notes payable. When a promissory note is interest-bearing, the amount of assets received upon the issuance of the note is generally equal to the face value of the note. Interest expense accrues over the life of the note. At maturity, the amount paid equals the face value of the note plus accrued interest.

3 Explain the accounting for other current liabilities. Companies record sales taxes payable at the time the related sales occur. The company serves as a collection agent for the taxing authority. Sales taxes are not an expense to the company. Companies initially record unearned revenues in an Unearned Revenue account. As a company recognizes revenue, a transfer from unearned revenue to revenue occurs. Companies report the current maturities of long-term debt as a current liability in the balance sheet.

4 Explain why bonds are issued, and identify the types of bonds. Companies may sell bonds to investors to raise long-term capital. Bonds offer the following advantages over common stock: (a) stockholder control is not affected, (b) tax savings result, and (c) earnings per share of common stock may be higher. The following types of bonds may be issued: secured and unsecured, term and serial bonds, registered and bearer bonds, and convertible and callable bonds.

5 Prepare the entries for the issuance of bonds and interest expense. When companies issue bonds, they debit Cash for the cash proceeds and credit Bonds Payable for the face value of the bonds. The account

Premium on Bonds Payable shows a bond premium; Discount on Bonds Payable shows a bond discount.

6 Describe the entries when bonds are redeemed or converted. When bondholders redeem bonds at maturity, the issuing company credits Cash and debits Bonds Payable for the face value of the bonds. When bonds are redeemed before maturity, the issuing company (a) eliminates the carrying value of the bonds at the redemption date, (b) records the cash paid, and (c) recognizes the gain or loss on redemption. When bonds are converted to common stock, the issuing company transfers the carrying (or book) value of the bonds to appropriate paid-in capital accounts; no gain or loss is recognized.

7 Describe the accounting for long-term notes payable. Each payment consists of (1) interest on the unpaid balance of the loan and (2) a reduction of loan principal. The interest decreases each period, while the portion applied to the loan principal increases.

8 Identify the methods for the presentation and analysis of long-term liabilities. Companies should report the nature and amount of each long-term debt in the balance sheet or in the notes accompanying the financial statements. Stockholders and long-term creditors are interested in a company's long-run solvency. Debt to total assets and times interest earned are two ratios that provide information about debt-paying ability and long-run solvency.

GLOSSARY

Bearer (coupon) bonds Bonds not registered in the name of the owner. (p. 485).

Bond certificate A legal document that indicates the name of the issuer, the face value of the bonds, the contractual interest rate and maturity date of the bonds. (p. 485).

Bond indenture A legal document that sets forth the terms of the bond issue. (p. 485).

Bonds A form of interest-bearing notes payable issued by corporations, universities, and governmental entities. (p. 483).

Callable bonds Bonds that are subject to retirement at a stated dollar amount prior to maturity at the option of the issuer. (p. 485).

Contractual interest rate Rate used to determine the amount of cash interest the borrower pays and the investor receives. (p. 485).

Convertible bonds Bonds that permit bondholders to convert them into common stock at the bondholders' option. (p. 485).

Current ratio A measure of a company's liquidity; computed as current assets divided by current liabilities. (p. 482).

Debenture bonds Bonds issued against the general credit of the borrower. Also called unsecured bonds. (p. 485).

Debt to total assets ratio A solvency measure that indicates the percentage of total assets provided by creditors; computed as total debt divided by total assets. (p. 497).

Discount (on a bond) The difference between the face value of a bond and its selling price, when the bond is sold for less than its face value. (p. 489).

Face value Amount of principal the issuer must pay at the maturity date of the bond. (p. 485).

Long-term liabilities Obligations expected to be paid after one year. (p. 483).

Market interest rate The rate investors demand for loaning funds to the corporation. (p. 487).

Maturity date The date on which the final payment on the bond is due from the bond issuer to the investor. (p. 485).

Mortgage bond A bond secured by real estate. (p. 485).

Mortgage notes payable A long-term note secured by a mortgage that pledges title to specific assets as security for a loan. (p. 494).

Notes payable Obligations in the form of written notes. (p. 476).

Premium (on a bond) The difference between the selling price and the face value of a bond, when the bond is sold for more than its face value. (p. 489).

- Registered bonds** Bonds issued in the name of the owner. (p. 485).
- Secured bonds** Bonds that have specific assets of the issuer pledged as collateral. (p. 485).
- Serial bonds** Bonds that mature in installments. (p. 485).
- Sinking fund bonds** Bonds secured by specific assets set aside to retire them. (p. 485).
- Term bonds** Bonds that mature at a single specified future date. (p. 485).
- Times interest earned ratio** A solvency measure that indicates a company's ability to meet interest payments;

computed by dividing income before income taxes and interest expense by interest expense. (p. 497).

Time value of money The relationship between time and money. A dollar received today is worth more than a dollar promised at some time in the future. (p. 487).

Unsecured bonds Bonds issued against the general credit of the borrower. Also called debenture bonds. (p. 485).

Working capital A measure of a company's liquidity; computed as current assets minus current liabilities. (p. 482).

APPENDIX 10A PRESENT VALUE CONCEPTS RELATED TO BOND PRICING

Congratulations! You have a winning lottery ticket, and the state has provided you with three possible options for payment. They are:

1. Receive \$10,000,000 in three years.
2. Receive \$7,000,000 immediately.
3. Receive \$3,500,000 at the end of each year for three years.

Which of these options would you select? The answer is not easy to determine at a glance. To make a dollar-maximizing choice, you must perform present value computations. A present value computation is based on the concept of time value of money. Time value of money concepts are useful for the lottery situation and for pricing other amounts to be received in the future. This appendix discusses how to use present value concepts to price bonds. It also will tell you how to determine what option you should take as a lottery winner.

LEARNING OBJECTIVE 9

Compute the market price of a bond.

Present Value of Face Value

To illustrate present value concepts, assume that you are willing to invest a sum of money that will yield \$1,000 at the end of one year. In other words, what amount would you need to invest today to have \$1,000 one year from now? If you want to earn 10%, the investment (or present value) is \$909.09 (\$1,000 ÷ 1.10). Illustration 10A-1 shows the computation.

Present value	×	(1 + Interest rate)	=	Future amount
Present value	×	(1 + 10%)	=	\$1,000
Present value			=	\$1,000 ÷ 1.10
Present value			=	\$909.09

Illustration 10A-1
Present value computation—\$1,000 discounted at 10% for one year

The future amount (\$1,000), the interest rate (10%), and the number of periods (1) are known. We can depict the variables in this situation as shown in the time diagram in Illustration 10A-2.

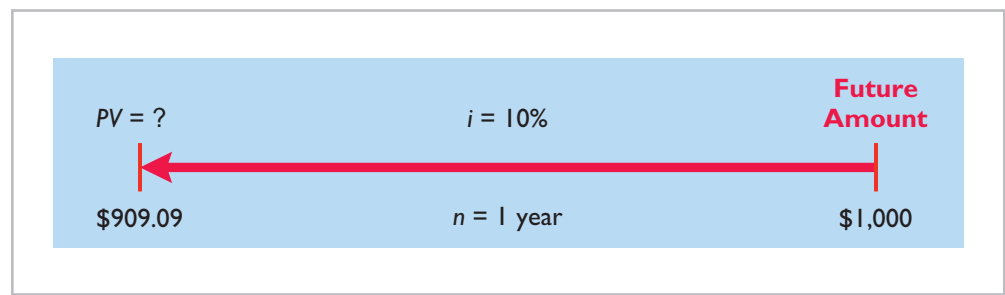

Illustration 10A-2
Finding present value if discounted for one period

If you are to receive the single future amount of \$1,000 in two years, discounted at 10%, its present value is \$826.45 [$(\$1,000 \div 1.10) \div 1.10$], depicted as follows.

Illustration 10A-3
Finding present value if discounted for two periods

We also can determine the present value of 1 through tables that show the present value of 1 for n periods. In Table 10A-1, n is the number of discounting periods involved. The percentages are the periodic interest rates, and the 5-digit decimal numbers in the respective columns are the factors for the present value of 1.

When using Table 10A-1, we multiply the future amount by the present value factor specified at the intersection of the number of periods and the interest rate. For example, the present value factor for 1 period at an interest rate of 10% is .90909, which equals the \$909.09 ($\$1,000 \times .90909$) computed in Illustration 10A-1.

Table 10A-1 Present Value of 1										
(n) Periods	4%	5%	6%	7%	8%	9%	10%	11%	12%	15%
1	.96154	.95238	.94340	.93458	.92593	.91743	.90909	.90090	.89286	.86957
2	.92456	.90703	.89000	.87344	.85734	.84168	.82645	.81162	.79719	.75614
3	.88900	.86384	.83962	.81630	.79383	.77218	.75132	.73119	.71178	.65752
4	.85480	.82270	.79209	.76290	.73503	.70843	.68301	.65873	.63552	.57175
5	.82193	.78353	.74726	.71299	.68058	.64993	.62092	.59345	.56743	.49718
6	.79031	.74622	.70496	.66634	.63017	.59627	.56447	.53464	.50663	.43233
7	.75992	.71068	.66506	.62275	.58349	.54703	.51316	.48166	.45235	.37594
8	.73069	.67684	.62741	.58201	.54027	.50187	.46651	.43393	.40388	.32690
9	.70259	.64461	.59190	.54393	.50025	.46043	.42410	.39092	.36061	.28426
10	.67556	.61391	.55839	.50835	.46319	.42241	.38554	.35218	.32197	.24719

For two periods at an interest rate of 10%, the present value factor is .82645, which equals the \$826.45 ($\$1,000 \times .82645$) computed previously.

Let's now go back to our lottery example. Given the present value concepts just learned, we can determine whether receiving \$10,000,000 in three years is better than receiving \$7,000,000 today, assuming the appropriate discount rate is 9%. The computation is as follows.

Illustration 10A-4
Present value of \$10,000,000 to be received in three years

$\$10,000,000 \times \text{PV of 1 due in 3 years at } 9\% =$	
$\$10,000,000 \times .77218$ (Table 10A-1)	\$7,721,800
Amount to be received from state immediately	<u>7,000,000</u>
Difference	<u>\$ 721,800</u>

What this computation shows you is that you would be \$721,800 better off receiving the \$10,000,000 at the end of three years rather than taking \$7,000,000 immediately.

Present Value of Interest Payments (Annuities)

In addition to receiving the face value of a bond at maturity, an investor also receives periodic interest payments over the life of the bonds. These periodic payments are called **annuities**.

In order to compute the present value of an annuity, we need to know (1) the interest rate, (2) the number of interest payments, and (3) the amount of the periodic receipts or payments. To illustrate the computation of the present value of an annuity, assume that you will receive \$1,000 cash annually for three years and the interest rate is 10%. The time diagram in Illustration 10A-5 depicts this situation.

Illustration 10A-5
Time diagram for a three-year annuity

The present value in this situation may be computed as follows.

<u>Future Amount</u>	×	<u>Present Value of 1 Factor at 10%</u>	=	<u>Present Value</u>
\$1,000 (1 year away)		.90909		\$ 909.09
1,000 (2 years away)		.82645		826.45
1,000 (3 years away)		.75132		751.32
		<u>2.48686</u>		<u>\$2,486.86</u>

Illustration 10A-6
Present value of a series of future amounts computation

We also can use annuity tables to value annuities. As illustrated in Table 10A-2 below, these tables show the present value of 1 to be received periodically for a given number of payments.

Table 10A-2 Present Value of an Annuity of 1										
(n) Payments	4%	5%	6%	7%	8%	9%	10%	11%	12%	15%
1	.96154	.95238	.94340	.93458	.92593	.91743	.90909	.90090	.89286	.86957
2	1.88609	1.85941	1.83339	1.80802	1.78326	1.75911	1.73554	1.71252	1.69005	1.62571
3	2.77509	2.72325	2.67301	2.62432	2.57710	2.53130	2.48685	2.44371	2.40183	2.28323
4	3.62990	3.54595	3.46511	3.38721	3.31213	3.23972	3.16986	3.10245	3.03735	2.85498
5	4.45182	4.32948	4.21236	4.10020	3.99271	3.88965	3.79079	3.69590	3.60478	3.35216
6	5.24214	5.07569	4.91732	4.76654	4.62288	4.48592	4.35526	4.23054	4.11141	3.78448
7	6.00205	5.78637	5.58238	5.38929	5.20637	5.03295	4.86842	4.71220	4.56376	4.16042
8	6.73274	6.46321	6.20979	5.97130	5.74664	5.53482	5.33493	5.14612	4.96764	4.48732
9	7.43533	7.10782	6.80169	6.51523	6.24689	5.99525	5.75902	5.53705	5.32825	4.77158
10	8.11090	7.72173	7.36009	7.02358	6.71008	6.41766	6.14457	5.88923	5.65022	5.01877

From Table 10A-2, you can see that the present value factor of an annuity of 1 for three payments at 10% is 2.48685.² This present value factor is the total of the three individual present value factors as shown in Illustration 10A-6. Applying this amount to the annual cash flow of \$1,000 produces a present value of \$2,486.85.

Let's now go back to our lottery example. We determined that you would get more money if you wait and take the \$10,000,000 in three years rather than take \$7,000,000 immediately. But, there is still another option—to receive \$3,500,000 at the end of **each year** for three years (an annuity). The computation to evaluate this option (again assuming a 9% discount rate) is as follows.

Illustration 10A-7

Present value of lottery payments to be received over three years

$\$3,500,000 \times \text{PV of 1 due yearly for 3 years at } 9\% =$	
$\$3,500,000 \times 2.53130 \text{ (Table 10A-2)}$	\$8,859,550
Present value of \$10,000,000 to be received in 3 years	<u>7,721,800</u>
Difference	<u>\$1,137,750</u>

If you take the annuity of \$3,500,000 for each of 3 years, you will be \$1,137,750 richer as a result.

Time Periods and Discounting

We have used an **annual** interest rate to determine present value. Present value computations may also be done over shorter periods of time, such as monthly, quarterly, or semiannually. When the time frame is less than one year, it is necessary to convert the annual interest rate to the shorter time frame.

Assume, for example, that the investor in Illustration 10A-6 received \$500 **semiannually** for three years instead of \$1,000 annually. In this case, the number of payments becomes 6 (3×2), the interest rate is 5% ($10\% \div 2$), the present value factor from Table 10A-2 is 5.07569, and the present value of the future cash flows is \$2,537.85 ($5.07569 \times \500). This amount is slightly higher than the \$2,486.86 computed in Illustration 10A-6 because interest is computed twice during the same year. That is, interest is earned on the first half year's interest.

Computing the Market Price of a Bond

The present value (or market price) of a bond is a function of three variables: (1) the payment amounts, (2) the length of time until the amounts are paid, and (3) the interest (discount) rate.

The first variable (dollars to be paid) is made up of two elements: (1) a series of interest payments (an annuity), and (2) the principal amount (a single sum). To compute the present value of the bond, we must discount both the interest payments and the principal amount.

When the investor's interest (discount) rate is equal to the bond's contractual interest rate, the present value of the bonds will equal the face value of the bonds. To illustrate, assume a bond issue of 10%, five-year bonds with a face value of \$100,000 with interest payable **semiannually** on January 1 and July 1. If the discount rate is the same as the contractual rate, the bonds will sell **at face value**. In this case, the investor will receive: (1) \$100,000 at maturity and (2) a series of ten \$5,000 interest payments [$\$100,000 \times (10\% \div 2)$] over the term of the bonds. The length of time is expressed in terms of interest periods (in this case, 10) and the discount rate per interest period (5%). The time diagram in Illustration 10A-8 depicts the variables involved in this discounting situation.

²The difference of .00001 between 2.48686 and 2.48685 is due to rounding.

The computation of the present value of Candlestick's bonds, assuming they were issued at face value (page 488), is shown below.

Illustration 10A-8

Time diagram for the present value of a 10%, five-year bond paying interest semiannually

10% Contractual Rate—10% Discount Rate
Present value of principal to be received at maturity

$\$100,000 \times \text{PV of 1 due in 10 periods at 5\%}$

$\$100,000 \times .61391$ (Table 10A-1)

\$ 61,391

Present value of interest to be received periodically over the term of the bonds

$\$5,000 \times \text{PV of 1 due periodically for 10 periods at 5\%}$

$\$5,000 \times 7.72173$ (Table 10A-2)

38,609*

Present value of bonds

\$100,000

*Rounded.

Illustration 10A-9

Present value of principal and interest (face value)

Now assume that the investor's required rate of return is 12%, not 10%. The future amounts are again \$100,000 and \$5,000, respectively. But now we must use a discount rate of 6% ($12\% \div 2$). The present value of Candlestick's bonds issued at a discount (page 490) is \$92,639 as computed below.

10% Contractual Rate—12% Discount Rate
Present value of principal to be received at maturity

$\$100,000 \times .55839$ (Table 10A-1)

\$ 55,839

Present value of interest to be received periodically over the term of the bonds

$\$5,000 \times 7.36009$ (Table 10A-2)

36,800

Present value of bonds

\$92,639

Illustration 10A-10

Present value of principal and interest (discount)

If the discount rate is 8% and the contractual rate is 10%, the present value of Candlestick's bonds issued at a premium (page 491) is \$108,111, computed as shown in Illustration 10A-11 (page 506).

Illustration 10A-11

Present value of principal and interest (premium)

<u>10% Contractual Rate—8% Discount Rate</u>	
Present value of principal to be received at maturity \$100,000 × .67556 (Table 10A-1)	\$ 67,556
Present value of interest to be received periodically over the term of the bonds \$5,000 × 8.11090 (Table 10A-2)	40,555
Present value of bonds	<u><u>\$108,111</u></u>

SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 10A

9 Compute the market price of a bond. Time value of money concepts are useful for pricing bonds. The present value (or market price) of a bond is a function of

three variables: (1) the payment amounts, (2) the length of time until the amounts are paid, and (3) the interest rate.

APPENDIX 10B EFFECTIVE-INTEREST METHOD OF BOND AMORTIZATION

LEARNING OBJECTIVE 10

Apply the effective-interest method of amortizing bond discount and bond premium.

Under the **effective-interest method**, the amortization of bond discount or bond premium results in periodic interest expense equal to a **constant percentage** of the carrying value of the bonds. The effective-interest method results in varying amounts of amortization and interest expense per period but a **constant percentage rate**.

The following steps are required under the effective-interest method.

1. Compute the **bond interest expense**. To do so, multiply the carrying value of the bonds at the beginning of the interest period by the effective-interest rate.
2. Compute the **bond interest paid** (or accrued). To do so, multiply the face value of the bonds by the contractual interest rate.
3. Compute the **amortization amount**. To do so, determine the difference between the amounts computed in steps (1) and (2).

Illustration 10B-1 depicts these steps.

Illustration 10B-1

Computation of amortization—effective-interest method

	(1)	(2)	(3)
	Bond Interest Expense	Bond Interest Paid	
	$\left(\begin{array}{l} \text{Carrying Value} \\ \text{of Bonds at} \\ \text{Beginning of} \\ \text{Period} \end{array} \times \begin{array}{l} \text{Effective-} \\ \text{Interest} \\ \text{Rate} \end{array} \right) - \left(\begin{array}{l} \text{Face} \\ \text{Amount of} \\ \text{Bonds} \end{array} \times \begin{array}{l} \text{Contractual} \\ \text{Interest} \\ \text{Rate} \end{array} \right) =$		Amortization Amount

When the difference between the straight-line method of amortization (Appendix 10C) and the effective-interest method is material, GAAP requires the use of the effective-interest method.

Amortizing Bond Discount

To illustrate the effective-interest method of bond discount amortization, assume that Candlestick, Inc. issues \$100,000 of 10%, five-year bonds on January 1, 2014, with interest payable each July 1 and January 1 (pages 490–491). The bonds sell for \$92,639 (92.639% of face value). This sales price results in a bond discount of \$7,361 (\$100,000 – \$92,639) and an effective-interest rate of 12%. A bond discount amortization schedule, as shown in Illustration 10B-2, facilitates the recording of interest expense and the discount amortization. Note that interest expense as a percentage of carrying value remains constant at 6%.

17	6	5,000	5,747 (6% × \$95,786)	747	3,467	96,533
18	7	5,000	5,792 (6% × \$96,533)	792	2,675	97,325
19	8	5,000	5,840 (6% × \$97,325)	840	1,835	98,165
20	9	5,000	5,890 (6% × \$98,165)	890	945	99,055
21	10	5,000	5,945* (6% × \$99,055)	945	–0–	100,000
22		<u>\$50,000</u>	<u>\$57,361</u>	<u>\$7,361</u>		
23	Column (A) remains constant because the face value of the bonds (\$100,000) is multiplied by the semiannual contractual interest rate (5%) each period.					
24	Column (B) is computed as the preceding bond carrying value times the semiannual effective-interest rate (6%).					
25	Column (C) indicates the discount amortization each period.					
26	Column (D) decreases each period until it reaches zero at maturity.					
27	Column (E) increases each period until it equals face value at maturity.					
28	*\$2 difference due to rounding.					

We have highlighted columns (A), (B), and (C) in the amortization schedule to emphasize their importance. These three columns provide the numbers for each period's journal entries. They are the primary reason for preparing the schedule.

For the first interest period, the computations of interest expense and the bond discount amortization are:

Interest expense (\$92,639 × 6%)	\$5,558
Contractual interest (\$100,000 × 5%)	<u>5,000</u>
Bond discount amortization	<u>\$ 558</u>

Illustration 10B-2

Bond discount amortization schedule

Illustration 10B-3

Computation of bond discount amortization

Candlestick records the payment of interest and amortization of bond discount on July 1, 2014, as follows.

July 1	Interest Expense	5,558	
	Discount on Bonds Payable		558
	Cash		5,000
	(To record payment of bond interest and amortization of bond discount)		

For the second interest period, bond interest expense will be \$5,592 ($\$93,197 \times 6\%$), and the discount amortization will be \$592. At December 31, Candlestick makes the following adjusting entry.

A	=	L	+	SE
				-5,592 Exp
				+592
				+5,000

Cash Flows
no effect

Dec. 31	Interest Expense	5,592	
	Discount on Bonds Payable		592
	Interest Payable		5,000
	(To record accrued interest and amortization of bond discount)		

Helpful Hint

When a bond sells for \$108,111, it is quoted as 108.111% of face value. Note that \$108,111 can be proven as shown in Appendix 10A.

Total interest expense for 2014 is \$11,150 ($\$5,558 + \$5,592$). On January 1, Candlestick records payment of the interest by a debit to Interest Payable and a credit to Cash.

Amortizing Bond Premium

The amortization of bond premium by the effective-interest method is similar to the procedures described for bond discount. For example, assume that Candlestick, Inc. issues \$100,000, 10%, five-year bonds on January 1, 2014, with interest payable on July 1 and January 1 (pages 491–492). In this case, the bonds sell for \$108,111. This sales price results in bond premium of \$8,111 and an effective-interest rate of 8%. Illustration 10B-4 shows the bond premium amortization schedule.

Illustration 10B-4

Bond premium amortization schedule

Candlestick Inc.xls

23						
24						
25						
26						
27						
28						
29						

Column (A) remains constant because the face value of the bonds (\$100,000) is multiplied by the semiannual contractual interest rate (5%) each period.
 Column (B) is computed as the carrying value of the bonds times the semiannual effective-interest rate (4%).
 Column (C) indicates the premium amortization each period.
 Column (D) decreases each period until it reaches zero at maturity.
 Column (E) decreases each period until it equals face value at maturity.
 *\$2 difference due to rounding.

For the first interest period, the computations of interest expense and the bond premium amortization are:

Interest expense ($\$108,111 \times 4\%$)	\$4,324
Contractual interest ($\$100,000 \times 5\%$)	<u>5,000</u>
Bond premium amortization	<u>\$ 676</u>

Illustration 10B-5
Computation of bond premium amortization

Candlestick records payments on the first interest date as follows.

July 1	Interest Expense	4,324	
	Premium on Bonds Payable	676	
	Cash		5,000
	(To record payment of bond interest and amortization of bond premium)		

For the second interest period, interest expense will be \$4,297, and the premium amortization will be \$703. Total bond interest expense for 2014 is \$8,621 ($\$4,324 + \$4,297$).

> DO IT!

Action Plan

- ✓ Compute interest expense by multiplying bond carrying value at the beginning of the period by the effective-interest rate.
- ✓ Compute credit to cash (or interest payable) by multiplying the face value of the bonds by the contractual interest rate.
- ✓ Compute bond premium or discount amortization, which is the difference between interest expense and cash paid.
- ✓ Interest expense decreases when the effective-interest method is used for bonds issued at a premium. The reason is that a constant percentage is applied to a decreasing book value to compute interest expense.

Gardner Corporation issues \$1,750,000, 10-year, 12% bonds on January 1, 2014, at \$1,968,090, to yield 10%. The bonds pay semiannual interest July 1 and January 1. Gardner uses the effective-interest method of amortization.

Instructions

- (a) Prepare the journal entry to record the issuance of the bonds.
- (b) Prepare the journal entry to record the payment of interest on July 1, 2014.

Solution to Comprehensive DO IT! for Appendix 10B

*($\$1,968,090 \times 5\%$)

**($\$105,000 - \$98,405$)

SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 10B

10 Apply the effective-interest method of amortizing bond discount and bond premium. The effective-interest method results in varying amounts of amortization and interest expense per period but a *constant*

percentage rate of interest. When the difference between the straight-line and effective-interest method is material, GAAP requires the use of the effective-interest method.

GLOSSARY FOR APPENDIX 10B

Effective-interest method of amortization A method of amortizing bond discount or bond premium that re-

sults in periodic interest expense equal to a constant percentage of the carrying value of the bonds. (p. 506).

APPENDIX 10C STRAIGHT-LINE AMORTIZATION

LEARNING OBJECTIVE 11

Apply the straight-line method of amortizing bond discount and bond premium.

Amortizing Bond Discount

Under the **straight-line method of amortization**, the amortization of bond discount or bond premium results in periodic interest expense of the same amount in each interest period. In other words, the straight-line method results in a constant amount of amortization and interest expense per period. The amount is determined using the formula in Illustration 10C-1.

Illustration 10C-1

Formula for straight-line method of bond discount amortization

$$\text{Bond Discount} \div \text{Number of Interest Periods} = \text{Bond Discount Amortization}$$

In the Candlestick, Inc. example (pages 490–491), the company sold \$100,000, five-year, 10% bonds on January 1, 2014, for \$92,639. This price resulted in a \$7,361 bond discount (\$100,000 – \$92,639). Interest is payable on July 1 and January 1. The bond discount amortization for each interest period is \$736 (\$7,361 ÷ 10). Candlestick records the payment of bond interest and the amortization of bond discount on the first interest date (July 1, 2014) as follows.

$$\begin{array}{r} \text{A} = \text{L} + \text{SE} \\ \quad \quad \quad -5,736 \text{ Exp} \\ \quad \quad \quad +736 \\ \hline -5,000 \end{array}$$

Cash Flows
-5,000

$$\begin{array}{r} \text{A} = \text{L} + \text{SE} \\ \quad \quad \quad -5,736 \text{ Exp} \\ \quad \quad \quad +736 \\ \quad \quad \quad +5,000 \\ \hline \end{array}$$

Cash Flows
no effect

July 1	Interest Expense	5,736	
	Discount on Bonds Payable		736
	Cash		5,000
	(To record payment of bond interest and amortization of bond discount)		

At December 31, Candlestick makes the following adjusting entry.

Dec. 31	Interest Expense	5,736	
	Discount on Bonds Payable		736
	Interest Payable		5,000
	(To record accrued bond interest and amortization of bond discount)		

Over the term of the bonds, the balance in Discount on Bonds Payable will decrease annually by the **same amount** until it has a zero balance at the maturity date of the bonds. Thus, the carrying value of the bonds at maturity will be equal to the face value.

It is useful to prepare a bond discount amortization schedule as shown in Illustration 10C-2. The schedule shows interest expense, discount amortization, and the carrying value of the bond for each interest period. As indicated, the interest expense recorded **each period** for the Candlestick bond is \$5,736. Also note that the carrying value of the bond increases \$736 each period until it reaches its face value \$100,000 at the end of period 10.

Candlestick, Inc. Bond Discount Amortization Straight-Line Method—Semiannual Interest Payments					
Semiannual Interest Periods	(A) Interest to Be Paid (5% × \$100,000)	(B) Interest Expense to Be Recorded (A) + (C)	(C) Discount Amortization (\$7,361 ÷ 10)	(D) Unamortized Discount (D) – (C)	(E) Bond Carrying Value (\$100,000 – D)
Issue date				\$7,361	\$92,639
1	\$ 5,000	\$ 5,736	\$ 736	6,625	93,375
2	5,000	5,736	736	5,889	94,111
3	5,000	5,736	736	5,153	94,847
4	5,000	5,736	736	4,417	95,583
5	5,000	5,736	736	3,681	96,319
6	5,000	5,736	736	2,945	97,055
7	5,000	5,736	736	2,209	97,791
8	5,000	5,736	736	1,473	98,527
9	5,000	5,736	736	737	99,263
10	5,000	5,737*	737*	–0–	100,000
	<u>\$50,000</u>	<u>\$57,361</u>	<u>\$7,361</u>		
21	Column (A) remains constant because the face value of the bonds (\$100,000) is multiplied by the semiannual contractual interest rate (5%) each period.				
22	Column (B) is computed as the interest paid (Column A) plus the discount amortization (Column C).				
23	Column (C) indicates the discount amortization each period.				
24	Column (D) decreases each period by the same amount until it reaches zero at maturity.				
25	Column (E) increases each period by the same amount of discount amortization until it equals the face value at maturity.				
26					
27	*One dollar difference due to rounding.				

Illustration 10C-2
Bond discount amortization schedule

We have highlighted columns (A), (B), and (C) in the amortization schedule to emphasize their importance. These three columns provide the numbers for each period's journal entries. They are the primary reason for preparing the schedule.

Amortizing Bond Premium

The amortization of bond premium parallels that of bond discount. Illustration 10C-3 presents the formula for determining bond premium amortization under the straight-line method.

$$\text{Bond Premium} \div \text{Number of Interest Periods} = \text{Bond Premium Amortization}$$

Illustration 10C-3
Formula for straight-line method of bond premium amortization

Continuing our example, assume that Candlestick sells the bonds for \$108,111 rather than \$92,639 (pages 491–492). This sale price results in a bond premium of \$8,111 (\$108,111 – \$100,000). The bond premium amortization for each interest period is \$811 (\$8,111 ÷ 10). Candlestick records the first payment of interest on July 1 as follows.

A	=	L	+	SE
				-4,189 Exp
				-811
				-5,000

Cash Flows
-5,000

A	=	L	+	SE
				-4,189 Exp
				-811
				+5,000

Cash Flows
no effect

July 1	Interest Expense	4,189	
	Premium on Bonds Payable	811	
	Cash		5,000
	(To record payment of bond interest and amortization of bond premium)		

At December 31, the company makes the following adjusting entry.

Dec. 31	Interest Expense	4,189	
	Premium on Bonds Payable	811	
	Interest Payable		5,000
	(To record accrued bond interest and amortization of bond premium)		

Over the term of the bonds, the balance in Premium on Bonds Payable will decrease annually **by the same amount** until it has a zero balance at maturity.

It is useful to prepare a bond premium amortization schedule as shown in Illustration 10C-4. It shows interest expense, premium amortization, and the carrying

Illustration 10C-4
Bond premium amortization schedule

21	Column (A) remains constant because the face value of the bonds (\$100,000) is multiplied by the semiannual contractual interest rate (5%) each period.				
22	Column (B) is computed as the interest paid (Column A) less the premium amortization (Column C).				
23	Column (C) indicates the premium amortization each period.				
24	Column (D) decreases each period by the same amount until it reaches zero at maturity.				
25	Column (E) decreases each period by the amount of premium amortization until it equals the face value at maturity.				
26					
27	*One dollar difference due to rounding.				

value of the bond. The interest expense recorded each period for the Candlestick bond is \$4,189. Also note that the carrying value of the bond decreases \$811 each period until it reaches its face value of \$100,000 at the end of period 10.

> DO IT!

Action Plan

- ✓ Compute credit to cash (or interest payable) by multiplying the face value of the bonds by the contractual interest rate.
- ✓ Compute bond premium or discount amortization by dividing bond premium or discount by the total number of periods.
- ✓ Understand that interest expense decreases when bonds are issued at a premium. The reason is that the amortization of premium reduces the total cost of borrowing.

Glenda Corporation issues \$1,750,000, 10-year, 12% bonds on January 1, 2014, for \$1,968,090 to yield 10%. The bonds pay semiannual interest July 1 and January 1. Glenda uses the straight-line method of amortization.

Instructions

- (a) Prepare the journal entry to record the issuance of the bonds.
- (b) Prepare the journal entry to record the payment of interest on July 1, 2014.

11 Apply the straight-line method of amortizing bond discount and bond premium. The straight-line method

of amortization results in a *constant amount* of amortization and interest expense per period.

GLOSSARY FOR APPENDIX 10C

Straight-line method of amortization A method of amortizing bond discount or bond premium that results

in allocating the same amount to interest expense in each interest period. (p. 510).

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more components are available for practice in WileyPLUS.

*Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

SELF-TEST QUESTIONS

Answers are on page 533.

- (LO 1) 1. The time period for classifying a liability as current is one year or the operating cycle, whichever is:
 (a) longer. (c) probable.
 (b) shorter. (d) possible.
- (LO 1) 2. To be classified as a current liability, a debt must be expected to be paid:
 (a) out of existing current assets.
 (b) by creating other current liabilities.
 (c) within 2 years.
 (d) Both (a) and (b).
- (LO 2) 3. Maggie Sharrer Company borrows \$88,500 on September 1, 2014, from Sandwich State Bank by signing an \$88,500, 12%, one-year note. What is the accrued interest at December 31, 2014?
 (a) \$2,655. (c) \$4,425.
 (b) \$3,540. (d) \$10,620.
- (LO 3) 4. Becky Sherrick Company has total proceeds from sales of \$4,515. If the proceeds include sales taxes of 5%, the amount to be credited to Sales Revenue is:
 (a) \$4,000. (c) \$4,289.25.
 (b) \$4,300. (d) No correct answer given.
- (LO 3) 5. Employer payroll taxes do *not* include:
 (a) federal unemployment taxes.
 (b) state unemployment taxes.
 (c) federal income taxes.
 (d) FICA taxes.
- (LO 3) 6. Sensible Insurance Company collected a premium of \$18,000 for a 1-year insurance policy on April 1. What amount should Sensible report as a current liability for Unearned Insurance Premiums at December 31?
 (a) \$0. (c) \$13,500.
 (b) \$4,500. (d) \$18,000.
- (LO 4) 7. The term used for bonds that are unsecured is:
 (a) callable bonds. (c) debenture bonds.
 (b) indenture bonds. (d) bearer bonds.
- (LO 5) 8. Karson Inc. issues 10-year bonds with a maturity value of \$200,000. If the bonds are issued at a premium, this indicates that:
 (a) the contractual interest rate exceeds the market interest rate.
 (b) the market interest rate exceeds the contractual interest rate.
 (c) the contractual interest rate and the market interest rate are the same.
 (d) no relationship exists between the two rates.
- (LO 6) 9. Gester Corporation retires its \$100,000 face value bonds at 105 on January 1, following the payment of semiannual interest. The carrying value of the bonds at the redemption date is \$103,745. The entry to record the redemption will include a:
 (a) credit of \$3,745 to Loss on Bond Redemption.
 (b) debit of \$3,745 to Premium on Bonds Payable.
 (c) credit of \$1,255 to Gain on Bond Redemption.
 (d) debit of \$5,000 to Premium on Bonds Payable.
10. Colson Inc. converts \$600,000 of bonds sold at face value into 10,000 shares of common stock, par value \$1. Both the bonds and the stock have a market value of \$760,000. What amount should be credited to Paid-in Capital in Excess of Par—Common Stock as a result of the conversion?
 (a) \$10,000. (c) \$600,000.
 (b) \$160,000. (d) \$590,000.
11. Andrews Inc. issues a \$497,000, 10%, 3-year mortgage note on January 1. The note will be paid in three annual installments of \$200,000, each payable at the end of the year. What is the amount of interest expense that should be recognized by Andrews Inc. in the second year?
 (a) \$16,567. (c) \$34,670.
 (b) \$49,700. (d) \$346,700.
12. Howard Corporation issued a 20-year mortgage note payable on January 1, 2014. At December 31, 2014, the unpaid principal balance will be reported as:
 (a) a current liability.
 (b) a long-term liability.
 (c) part current and part long-term liability.
 (d) interest payable.
13. For 2014, Corn Flake Corporation reported net income of \$300,000. Interest expense was \$40,000 and income taxes were \$100,000. The times interest earned ratio was:
 (a) 3 times. (c) 7.5 times.
 (b) 4.4 times. (d) 11 times.
- *14. The market price of a bond is dependent on:
 (a) the payment amounts.
 (b) the length of time until the amounts are paid.
 (c) the interest rate.
 (d) All of the above.
- *15. On January 1, Besalium Inc. issued \$1,000,000, 9% bonds for \$938,554. The market rate of interest for these bonds is 10%. Interest is payable annually on December 31. Besalium uses the effective-interest method of amortizing bond discount. At the end of the first year, Besalium should report unamortized bond discount of:
 (a) \$54,900. (c) \$51,610.
 (b) \$57,591. (d) \$51,000.
- *16. On January 1, Dias Corporation issued \$1,000,000, 10%, 5-year bonds with interest payable on July 1 and January 1. The bonds sold for \$1,081,105. The market rate of interest for these bonds was 8%. On the first interest date, using the effective-interest method, the debit entry to Interest Expense is for:
 (a) \$50,000. (c) \$43,244.
 (b) \$54,055. (d) \$100,811.

- (LO 11) *17. On January 1, Hurley Corporation issues \$500,000, 5-year, 12% bonds at 96 with interest payable on July 1 and January 1. The entry on July 1 to record payment of bond interest and the amortization of bond discount using the straight-line method will include a:
- (a) debit to Interest Expense \$30,000.
 - (b) debit to Interest Expense \$60,000.
 - (c) credit to Discount on Bonds Payable \$4,000.
 - (d) credit to Discount on Bonds Payable \$2,000.
- *18. For the bonds issued in Question 17 above, what is the carrying value of the bonds at the end of the third interest period? (LO 11)
- (a) \$486,000.
 - (b) \$488,000.
 - (c) \$472,000.
 - (d) \$464,000.

Go to the book's companion website, www.wiley.com/college/weygandt, for additional Self-Test Questions.

QUESTIONS

1. Brenda Gable believes a current liability is a debt that can be expected to be paid in one year. Is Brenda correct? Explain.
2. McGuire Company obtains \$30,000 in cash by signing a 9%, 6-month, \$30,000 note payable to First Bank on July 1. McGuire's fiscal year ends on September 30. What information should be reported for the note payable in the annual financial statements?
3. (a) Your roommate says, "Sales taxes are reported as an expense in the income statement." Do you agree? Explain.
(b) Planet Hollywood has cash proceeds from sales of \$7,400. This amount includes \$400 of sales taxes. Give the entry to record the proceeds.
4. Ottawa University sold 10,000 season football tickets at \$90 each for its five-game home schedule. What entries should be made (a) when the tickets were sold, and (b) after each game?
5. What is liquidity? What are two measures of liquidity?
6. Identify three taxes commonly withheld by the employer from an employee's gross pay.
7. (a) What are long-term liabilities? Give three examples.
(b) What is a bond?
8. (a) As a source of long-term financing, what are the major advantages of bonds over common stock?
(b) What are the major disadvantages in using bonds for long-term financing?
9. Contrast the following types of bonds: (a) secured and unsecured, (b) term and serial, (c) registered and bearer, and (d) convertible and callable.
10. The following terms are important in issuing bonds: (a) face value, (b) contractual interest rate, (c) bond indenture, and (d) bond certificate. Explain each of these terms.
11. Describe the two major obligations incurred by a company when bonds are issued.
12. Assume that Bedazzled Inc. sold bonds with a face value of \$100,000 for \$104,000. Was the market interest rate equal to, less than, or greater than the bonds' contractual interest rate? Explain.
13. If a 6%, 10-year, \$800,000 bond is issued at face value and interest is paid semiannually, what is the amount of the interest payment at the end of the first semiannual period?
14. If the Bonds Payable account has a balance of \$900,000 and the Discount on Bonds Payable account has a balance of \$60,000, what is the carrying value of the bonds?
15. Which accounts are debited and which are credited if a bond issue originally sold at a premium is redeemed before maturity at 97 immediately following the payment of interest?
16. Karistad Corporation is considering issuing a convertible bond. What is a convertible bond? Discuss the advantages of a convertible bond from the standpoint of (a) the bondholders and (b) the issuing corporation.
17. Roy Toth, a friend of yours, has recently purchased a home for \$125,000, paying \$25,000 down and the remainder financed by a 6.5%, 20-year mortgage, payable at \$745.57 per month. At the end of the first month, Roy receives a statement from the bank indicating that only \$203.90 of principal was paid during the month. At this rate, he calculates that it will take over 40 years to pay off the mortgage. Is he right? Discuss.
18. In general, what are the requirements for the financial statement presentation of long-term liabilities?
- *19. Ginny Bellis is discussing the advantages of the effective-interest method of bond amortization with her accounting staff. What do you think Ginny is saying?
- *20. Redbone Corporation issues \$500,000 of 8%, 5-year bonds on January 1, 2014, at 104. If Redbone uses the effective-interest method in amortizing the premium, will the annual interest expense increase or decrease over the life of the bonds? Explain.
- *21. Vera Cruz and Sven Varberg are discussing how the market price of a bond is determined. Vera believes that the market price of a bond is solely a function of the amount of the principal payment at the end of the term of a bond. Is she right? Discuss.
- *22. Explain the straight-line method of amortizing discount and premium on bonds payable.
- *23. Fleming Corporation issues \$400,000 of 7%, 5-year bonds on January 1, 2014, at 105. Assuming that the straight-line method is used to amortize the premium, what is the total amount of interest expense for 2014?

BRIEF EXERCISES

Identify whether obligations are current liabilities.

(LO 1)

BE10-1 Cardinal Company has the following obligations at December 31: (a) a note payable for \$100,000 due in 2 years, (b) a 10-year mortgage payable of \$300,000 payable in ten \$30,000 annual payments, (c) interest payable of \$12,000 on the mortgage, and (d) accounts payable of \$60,000. For each obligation, indicate whether it should be classified as a current liability. (Assume an operating cycle of less than one year.)

Prepare entries for an interest-bearing note payable.

(LO 2)

BE10-2 Becky Company borrows \$60,000 on July 1 from the bank by signing a \$60,000, 10%, one-year note payable.

- Prepare the journal entry to record the proceeds of the note.
- Prepare the journal entry to record accrued interest at December 31, assuming adjusting entries are made only at the end of the year.

Compute and record sales taxes payable.

(LO 3)

BE10-3 Goodwin Auto Supply does not segregate sales and sales taxes at the time of sale. The register total for March 16 is \$13,440. All sales are subject to a 5% sales tax. Compute sales taxes payable, and make the entry to record sales taxes payable and sales.

Prepare entries for unearned revenues.

(LO 3)

BE10-4 Wichita University sells 4,000 season basketball tickets at \$180 each for its 10-game home schedule. Give the entry to record (a) the sale of the season tickets and (b) the revenue recognized for playing the first home game.

Compute gross earnings and net pay.

(LO 3)

BE10-5 Sandi Teter's regular hourly wage rate is \$14, and she receives an hourly rate of \$21 for work in excess of 40 hours. During a January pay period, Sandi works 47 hours. Sandi's federal income tax withholding is \$95, and she has no voluntary deductions. Compute Sandi Teter's gross earnings and net pay for the pay period.

Record a payroll and the payment of wages.

(LO 3)

BE10-6 Data for Sandi Teter are presented in BE10-5. Prepare the journal entries to record (a) Sandi's pay for the period and (b) the payment of Sandi's wages. Use January 15 for the end of the pay period and the payment date.

Compare bond versus stock financing.

(LO 4)

BE10-7 Shaffer Inc. is considering two alternatives to finance its construction of a new \$2 million plant.

- Issuance of 200,000 shares of common stock at the market price of \$10 per share.
- Issuance of \$2 million, 7% bonds at face value.

Complete the following table, and indicate which alternative is preferable.

	<u>Issue Stock</u>	<u>Issue Bond</u>
Income before interest and taxes	\$700,000	\$700,000
Interest expense from bonds	_____	_____
Income before income taxes	_____	_____
Income tax expense (30%)	_____	_____
Net income	<u>\$ _____</u>	<u>\$ _____</u>
Outstanding shares	_____	500,000
Earnings per share	_____	_____

Prepare entries for bonds issued at face value.

(LO 5)

BE10-8 Quincey Corporation issued 4,000, 6%, 5-year, \$1,000 bonds dated January 1, 2014, at 100.

- Prepare the journal entry to record the sale of these bonds on January 1, 2014.
- Prepare the journal entry to record the first interest payment on July 1, 2014 (interest payable semiannually), assuming no previous accrual of interest.
- Prepare the adjusting journal entry on December 31, 2014, to record interest expense.

Prepare entries for bonds sold at a discount and a premium.

(LO 5)

BE10-9 Sandstone Company issues \$1 million, 10-year, 5% bonds at 97, with interest payable on July 1 and January 1.

- Prepare the journal entry to record the sale of these bonds on January 1, 2014.
- Assuming instead that the above bonds sold for 104, prepare the journal entry to record the sale of these bonds on January 1, 2014.

BE10-10 Carrola Company has issued three different bonds during 2014. Interest is payable semiannually on each of these bonds.

1. On January 1, 2014, 1,000, 8%, 5-year, \$1,000 bonds dated January 1, 2014, were issued at face value.
 2. On July 1, \$800,000, 9%, 5-year bonds dated July 1, 2014, were issued at 102.
 3. On September 1, \$200,000, 7%, 5-year bonds dated September 1, 2014, were issued at 97.
- Prepare the journal entry to record each bond transaction at the date of issuance.

Prepare entries for bonds issued.

(LO 5)

BE10-11 The balance sheet for Prism Consulting reports the following information on July 1, 2014.

Long-term liabilities			
Bonds payable	\$1,000,000		
Less: Discount on bonds payable	40,000	\$960,000	

Prepare entry for redemption of bonds.

(LO 6)

Prism decides to redeem these bonds at 101 after paying semiannual interest. Prepare the journal entry to record the redemption on July 1, 2014.

BE10-12 McEntire Inc. issues a \$400,000, 10%, 10-year mortgage note on December 31, 2014, to obtain financing for a new building. The terms provide for semiannual installment payments of \$32,097. Prepare the entry to record the mortgage loan on December 31, 2014, and the first installment payment.

Prepare entries for long-term notes payable.

(LO 7)

BE10-13 Presented below are long-term liability items for Suarez Company at December 31, 2014. Prepare the long-term liabilities section of the balance sheet for Suarez Company.

Prepare statement presentation of long-term liabilities.

(LO 8)

Bonds payable, due 2016	\$500,000
Lease liability	60,000
Notes payable, due 2019	80,000
Discount on bonds payable	42,000

- *BE10-14** (a) What is the present value of \$10,000 due 8 periods from now, discounted at 8%?
 (b) What is the present value of \$20,000 to be received at the end of each of 6 periods, discounted at 10%?

Determine present value.

(LO 9)

***BE10-15** Presented below is the partial bond discount amortization schedule for Cardosa Corp. Cardosa uses the effective-interest method of amortization.

Use effective-interest method of bond amortization.

(LO 10)

Semiannual Interest Periods	Interest to Be Paid	Interest Expense to Be Recorded	Discount Amortization	Unamortized Discount	Bond Carrying Value
Issue date				\$71,062	\$928,938
1	\$30,000	\$32,513	\$2,513	68,549	931,451
2	30,000	32,601	2,601	65,948	934,052

- (a) Prepare the journal entry to record the payment of interest and the discount amortization at the end of period 1.
- (b) Explain why interest expense is greater than interest paid.
- (c) Explain why interest expense will increase each period.

***BE10-16** Stella Company issues \$3 million, 10-year, 9% bonds at 96, with interest payable on July 1 and January 1. The straight-line method is used to amortize bond discount.

Prepare entries for bonds issued at a discount.

(LO 11)

- (a) Prepare the journal entry to record the sale of these bonds on January 1, 2014.
- (b) Prepare the journal entry to record interest expense and bond discount amortization on July 1, 2014, assuming no previous accrual of interest.

***BE10-17** Allman Inc. issues \$2 million, 5-year, 10% bonds at 102, with interest payable on July 1 and January 1. The straight-line method is used to amortize bond premium.

Prepare entries for bonds issued at a premium.

(LO 11)

- (a) Prepare the journal entry to record the sale of these bonds on January 1, 2014.
- (b) Prepare the journal entry to record interest expense and bond premium amortization on July 1, 2014, assuming no previous accrual of interest.

> DO IT! REVIEW

Answer questions about current liabilities.

(LO 2, 3)

DO IT! 10-1 You and several classmates are studying for the next accounting examination. They ask you to answer the following questions:

1. If cash is borrowed on a \$70,000, 9-month, 9% note on August 1, how much interest expense would be incurred by December 31?
2. The cash register total including sales taxes is \$42,000, and the sales tax rate is 5%. What is the sales taxes payable?
3. If \$42,000 is collected in advance on December 1 for 6-month magazine subscriptions, what amount of subscription revenue is recognized by December 31?

Evaluate statements about bonds.

(LO 4)

DO IT! 10-2 State whether each of the following statements is true or false.

- _____ 1. Mortgage bonds and sinking fund bonds are both examples of debenture bonds.
- _____ 2. Convertible bonds are also known as callable bonds.
- _____ 3. The market rate is the rate investors demand for loaning funds.
- _____ 4. Semiannual interest on bonds is equal to the face value times the stated rate times 6/12.
- _____ 5. The present value of a bond is the value at which it should sell in the market.

Prepare journal entry for bond issuance and show balance sheet presentation.

(LO 5)

DO IT! 10-3 Ellis Corporation issues \$300,000 of bonds for \$308,000. (a) Prepare the journal entry to record the issuance of the bonds, and (b) show how the bonds would be reported on the balance sheet at the date of issuance.

Prepare entry for bond redemption.

(LO 6)

DO IT! 10-4 Jeske Corporation issued \$400,000 of 10-year bonds at a discount. Prior to maturity, when the carrying value of the bonds was \$390,000, the company retired the bonds at 98. Prepare the entry to record the redemption of the bonds.

Prepare entries for mortgage note and installment payment on note.

(LO 7)

DO IT! 10-5 Mattsen Orchard issues a \$390,000, 5%, 15-year mortgage note to obtain needed financing for a new lab. The terms call for semiannual payments of \$18,633 each. Prepare the entries to record the mortgage loan and the first installment payment.

The Navigator

EXERCISES

Prepare entries for interest-bearing notes.

(LO 2)

E10-1 Padillio Company had the following transactions involving notes payable.

- | | |
|---------------|--|
| July 1, 2014 | Borrows \$60,000 from Fourth National Bank by signing a 9-month, 8% note. |
| Nov. 1, 2014 | Borrows \$50,000 from Livingston State Bank by signing a 3-month, 9% note. |
| Dec. 31, 2014 | Prepares adjusting entries. |
| Feb. 1, 2015 | Pays principal and interest to Livingston State Bank. |
| Apr. 1, 2015 | Pays principal and interest to Fourth National Bank. |

Instructions

Prepare journal entries for each of the transactions.

Prepare entries for interest-bearing notes.

(LO 2)

E10-2 On June 1, Yoon Company borrows \$70,000 from First Bank on a 6-month, \$70,000, 9% note.

Instructions

- Prepare the entry on June 1.
- Prepare the adjusting entry on June 30.
- Prepare the entry at maturity (December 1), assuming monthly adjusting entries have been made through November 30.
- What was the total financing cost (interest expense)?

E10-3 In providing accounting services to small businesses, you encounter the following situations pertaining to cash sales.

1. Jackson Company enters sales and sales taxes separately on its cash register. On April 10, the register totals are sales \$30,000 and sales taxes \$1,650.
2. Pearson Company does not segregate sales and sales taxes. Its register total for April 15 is \$20,330, which includes a 7% sales tax.

Journalize sales and related taxes.

(LO 3)

Instructions

Prepare the entry to record the sales transactions and related taxes for each client.

E10-4 Nevin Company publishes a monthly sports magazine, *Fishing Preview*. Subscriptions to the magazine cost \$18 per year. During November 2014, Nevin sells 12,000 subscriptions beginning with the December issue. Nevin prepares financial statements quarterly and recognizes subscription revenue at the end of the quarter. The company uses the accounts Unearned Subscription Revenue and Subscription Revenue.

Journalize unearned subscription revenue.

(LO 3)

Instructions

- (a) Prepare the entry in November for the receipt of the subscriptions.
- (b) Prepare the adjusting entry at December 31, 2014, to record sales revenue recognized in December 2014.
- (c) Prepare the adjusting entry at March 31, 2015, to record sales revenue recognized in the first quarter of 2015.

E10-5 Dan Noll's gross earnings for the week were \$1,780, his federal income tax withholding was \$303, and his FICA total was \$136.

Calculate and record net pay.

(LO 3)

Instructions

- (a) What was Noll's net pay for the week?
- (b) Journalize the entry for the recording of his pay in the general journal. (*Note:* Use Salaries and Wages Payable; not Cash.)
- (c) Record the issuing of the check for Noll's pay in the general journal.

E10-6 According to the accountant of Ulster Inc., its payroll taxes for the week were as follows: \$137.68 for FICA taxes, \$13.77 for federal unemployment taxes, and \$92.93 for state unemployment taxes.

Record accrual of payroll taxes.

(LO 3)

Instructions

Journalize the entry to record the accrual of the payroll taxes.

E10-7 The following financial data were reported by **3M Company** for 2009 and 2010 (dollars in millions).

Calculate current ratio and working capital before and after paying accounts payable.

(LO 3)

3M Company Balance Sheets (partial)		
	2010	2009
Current assets		
Cash and cash equivalents	\$ 3,377	\$ 3,040
Accounts receivable, net	3,615	3,250
Inventories	3,155	2,639
Other current assets	2,068	1,866
Total current assets	\$12,215	\$10,795
Current liabilities	\$ 6,089	\$ 4,897

Instructions

- (a) Calculate the current ratio and working capital for 3M for 2009 and 2010.
- (b) Suppose that at the end of 2010, 3M management used \$200 million cash to pay off \$200 million of accounts payable. How would its current ratio and working capital have changed?

E10-8 Liane Hansen has prepared the following list of statements about bonds.

Evaluate statements about bonds.

1. Bonds are a form of interest-bearing notes payable.
2. When seeking long-term financing, an advantage of issuing bonds over issuing common stock is that stockholder control is not affected.
3. When seeking long-term financing, an advantage of issuing common stock over issuing bonds is that tax savings result.

(LO 4)

4. Secured bonds have specific assets of the issuer pledged as collateral for the bonds.
5. Secured bonds are also known as debenture bonds.
6. Bonds that mature in installments are called term bonds.
7. A conversion feature may be added to bonds to make them more attractive to bond buyers.
8. The rate used to determine the amount of cash interest the borrower pays is called the stated rate.
9. Bond prices are usually quoted as a percentage of the face value of the bond.
10. The present value of a bond is the value at which it should sell in the marketplace.

Instructions

Identify each statement as true or false. If false, indicate how to correct the statement.

Compare two alternatives of financing—issuance of common stock vs. issuance of bonds.

(LO 4)

E10-9 Global Airlines is considering two alternatives for the financing of a purchase of a fleet of airplanes. These two alternatives are:

1. Issue 60,000 shares of common stock at \$40 per share. (Cash dividends have not been paid nor is the payment of any contemplated.)
2. Issue 10%, 10-year bonds at face value for \$2,400,000.

It is estimated that the company will earn \$800,000 before interest and taxes as a result of this purchase. The company has an estimated tax rate of 30% and has 90,000 shares of common stock outstanding prior to the new financing.

Instructions

Determine the effect on net income and earnings per share for these two methods of financing.

Prepare entries for issuance of bonds, and payment and accrual of bond interest.

(LO 5)

E10-10 On January 1, Payne Company issued \$200,000, 8%, 10-year bonds at face value. Interest is payable semiannually on July 1 and January 1.

Instructions

Prepare journal entries to record the following.

- (a) The issuance of the bonds.
- (b) The payment of interest on July 1, assuming that interest was not accrued on June 30.
- (c) The accrual of interest on December 31.

Prepare entries for bonds issued at face value.

(LO 5)

E10-11 On January 1, Disch Company issued \$400,000, 7%, 5-year bonds at face value. Interest is payable semiannually on July 1 and January 1.

Instructions

Prepare journal entries to record the following events.

- (a) The issuance of the bonds.
- (b) The payment of interest on July 1, assuming no previous accrual of interest.
- (c) The accrual of interest on December 31.

Prepare entries to record issuance of bonds at discount and premium.

(LO 5)

E10-12 Pueblo Company issued \$300,000 of 5-year, 8% bonds at 98 on January 1, 2014. The bonds pay interest twice a year.

Instructions

- (a) (1) Prepare the journal entry to record the issuance of the bonds.
(2) Compute the total cost of borrowing for these bonds.
- (b) Repeat the requirements from part (a), assuming the bonds were issued at 104.

Prepare entries for bond interest and redemption.

(LO 5, 6)

E10-13 The following section is taken from Barton Corp.'s balance sheet at December 31, 2013.

Current liabilities	
Interest payable	\$ 56,000
Long-term liabilities	
Bonds payable, 7%, due January 1, 2018	1,600,000

Bond interest is payable semiannually on January 1 and July 1. The bonds are callable on any interest date.

Instructions

- (a) Journalize the payment of the bond interest on January 1, 2014.
- (b) Assume that on January 1, 2014, after paying interest, Barton calls bonds having a face value of \$600,000. The call price is 104. Record the redemption of the bonds.
- (c) Prepare the entry to record the payment of interest on July 1, 2014, assuming no previous accrual of interest on the remaining bonds.

E10-14 Presented below are three independent situations.

1. Voris Corporation retired \$130,000 face value, 12% bonds on June 30, 2014, at 102. The carrying value of the bonds at the redemption date was \$117,500. The bonds pay semiannual interest, and the interest payment due on June 30, 2014, has been made and recorded.
2. Lampe Inc. retired \$150,000 face value, 12.5% bonds on June 30, 2014, at 97. The carrying value of the bonds at the redemption date was \$151,000. The bonds pay semiannual interest, and the interest payment due on June 30, 2014, has been made and recorded.
3. Keho Company has \$80,000, 8%, 12-year convertible bonds outstanding. These bonds were sold at face value and pay semiannual interest on June 30 and December 31 of each year. The bonds are convertible into 30 shares of Keho \$5 par value common stock for each \$1,000 worth of bonds. On December 31, 2014, after the bond interest has been paid, \$40,000 face value bonds were converted. The market price of Keho common stock was \$44 per share on December 31, 2014.

Instructions

For each independent situation above, prepare the appropriate journal entry for the redemption or conversion of the bonds.

Prepare entries for redemption of bonds and conversion of bonds into common stock.

(LO 6)

E10-15 Tucki Co. receives \$240,000 when it issues a \$240,000, 8%, mortgage note payable to finance the construction of a building at December 31, 2014. The terms provide for semiannual installment payments of \$17,660 on June 30 and December 31.

Instructions

Prepare the journal entries to record the mortgage loan and the first two installment payments.

Prepare entries to record mortgage note and installment payments.

(LO 7)

E10-16 The adjusted trial balance for Matthews Corporation at the end of the current year contained the following accounts.

Interest Payable	\$ 9,000
Lease Liability	59,500
Bonds Payable, due 2019	180,000
Premium on Bonds Payable	24,000

Instructions

Prepare the long-term liabilities section of the balance sheet.

Prepare long-term liabilities section.

(LO 8)

***E10-17** Styx Corporation is issuing \$250,000 of 8%, 5-year bonds when potential bond investors want a return of 10%. Interest is payable semiannually.

Instructions

Compute the market price (present value) of the bonds.

Compute market price of bonds.

(LO 9)

***E10-18** Grande Corporation issued \$500,000, 9%, 10-year bonds on January 1, 2014, for \$468,844. This price resulted in an effective-interest rate of 10% on the bonds. Interest is payable semiannually on July 1 and January 1. Grande uses the effective-interest method to amortize bond premium or discount.

Instructions

Prepare the journal entries to record the following. (Round to the nearest dollar.)

- (a) The issuance of the bonds.
- (b) The payment of interest and the discount amortization on July 1, 2014, assuming that interest was not accrued on June 30.
- (c) The accrual of interest and the discount amortization on December 31, 2014.

Prepare entries for issuance of bonds, payment of interest, and amortization of discount using effective-interest method.

(LO 5, 10)

***E10-19** Evelyn Company issued \$300,000, 8%, 10-year bonds on January 1, 2014, for \$321,319. This price resulted in an effective-interest rate of 7% on the bonds. Interest is payable semiannually on July 1 and January 1. Evelyn uses the effective-interest method to amortize bond premium or discount.

Instructions

Prepare the journal entries to record the following. (Round to the nearest dollar.)

- (a) The issuance of the bonds.
- (b) The payment of interest and the premium amortization on July 1, 2014, assuming that interest was not accrued on June 30.
- (c) The accrual of interest and the premium amortization on December 31, 2014.

Prepare entries for issuance of bonds, payment of interest, and amortization of premium using effective-interest method.

(LO 5, 10)

Prepare entries to record issuance of bonds, payment of interest, amortization of premium, and redemption at maturity.

(LO 5, 11)

Prepare entries to record issuance of bonds, payment of interest, amortization of discount, and redemption at maturity.

(LO 5, 11)

***E10-20** Manilow Company issued \$700,000, 9%, 20-year bonds on January 1, 2014, at 103. Interest is payable semiannually on July 1 and January 1. Manilow uses straight-line amortization for bond premium or discount.

Instructions

Prepare the journal entries to record the following.

- The issuance of the bonds.
- The payment of interest and the premium amortization on July 1, 2014, assuming that interest was not accrued on June 30.
- The accrual of interest and the premium amortization on December 31, 2014.
- The redemption of the bonds at maturity, assuming interest for the last interest period has been paid and recorded.

***E10-21** Newton Company issued \$600,000, 7%, 10-year bonds on December 31, 2013, for \$575,000. Interest is payable semiannually on June 30 and December 31. Newton Company uses the straight-line method to amortize bond premium or discount.

Instructions

Prepare the journal entries to record the following.

- The issuance of the bonds.
- The payment of interest and the discount amortization on June 30, 2014.
- The payment of interest and the discount amortization on December 31, 2014.
- The redemption of the bonds at maturity, assuming interest for the last interest period has been paid and recorded.

EXERCISES: SET B AND CHALLENGE EXERCISES

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Exercise Set B and Challenge Exercises.

PROBLEMS: SET A

Prepare current liability entries, adjusting entries, and current liabilities section.

(LO 1, 2, 3)

P10-1A On January 1, 2014, the ledger of Shumway Company contains the following liability accounts.

Accounts Payable	\$52,000
Sales Taxes Payable	5,800
Unearned Service Revenue	14,000

During January, the following selected transactions occurred.

- Jan. 5 Sold merchandise for cash totaling \$22,470, which includes 7% sales taxes.
 12 Provided services for customers who had made advance payments of \$10,000. (Credit Service Revenue.)
 14 Paid state revenue department for sales taxes collected in December 2013 (\$5,800).
 20 Sold 600 units of a new product on credit at \$50 per unit, plus 7% sales tax.
 21 Borrowed \$14,000 from DeKalb Bank on a 3-month, 8%, \$14,000 note.
 25 Sold merchandise for cash totaling \$12,947, which includes 7% sales taxes.

Instructions

- Journalize the January transactions.
- Journalize the adjusting entries at January 31 for the outstanding notes payable. (*Hint:* Use one-third of a month for the DeKalb Bank note.)
- Prepare the current liabilities section of the balance sheet at January 31, 2014. Assume no change in accounts payable.

(c) Current liability total
\$74,448

P10-2A The following are selected transactions of Graves Company. Graves prepares financial statements quarterly.

- Jan. 2 Purchased merchandise on account from Ally Company, \$30,000, terms 2/10, n/30. (Graves uses the perpetual inventory system.)
 Feb. 1 Issued a 6%, 2-month, \$30,000 note to Ally in payment of account.
 Mar. 31 Accrued interest for 2 months on Ally note.
 Apr. 1 Paid face value and interest on Ally note.
 July 1 Purchased equipment from Clark Equipment paying \$8,000 in cash and signing a 7%, 3-month, \$40,000 note.
 Sept. 30 Accrued interest for 3 months on Clark note.
 Oct. 1 Paid face value and interest on Clark note.
 Dec. 1 Borrowed \$15,000 from the Jonas Bank by issuing a 3-month, 6% note with a face value of \$15,000.
 Dec. 31 Recognized interest expense for 1 month on Jonas Bank note.

Instructions

- (a) Prepare journal entries for the listed transactions and events.
 (b) Post to the accounts Notes Payable, Interest Payable, and Interest Expense.
 (c) Show the balance sheet presentation of notes and interest payable at December 31.
 (d) What is total interest expense for the year?

Journalize and post note transactions; show balance sheet presentation.

(LO 2)

(d) \$1,075

P10-3A On May 1, 2014, Hopkins Corp. issued \$720,000, 7%, 5-year bonds at face value. The bonds were dated May 1, 2014, and pay interest semiannually on May 1 and November 1. Financial statements are prepared annually on December 31.

Instructions

- (a) Prepare the journal entry to record the issuance of the bonds.
 (b) Prepare the adjusting entry to record the accrual of interest on December 31, 2014.
 (c) Show the balance sheet presentation on December 31, 2014.
 (d) Prepare the journal entry to record payment of interest on May 1, 2015, assuming no accrual of interest from January 1, 2015, to May 1, 2015.
 (e) Prepare the journal entry to record payment of interest on November 1, 2015.
 (f) Assume that on November 1, 2015, Hopkins calls the bonds at 102. Record the redemption of the bonds.

Prepare entries to record issuance of bonds, interest accrual, and bond redemption.

(LO 5, 6, 8)

(d) Int. exp. \$16,800

(f) Loss \$14,400

P10-4A Formosa Electric sold \$400,000, 9%, 10-year bonds on January 1, 2014. The bonds were dated January 1 and paid interest on January 1 and July 1. The bonds were sold at 105.

Instructions

- (a) Prepare the journal entry to record the issuance of the bonds on January 1, 2014.
 (b) At December 31, 2014, the balance in the Premium on Bonds Payable account is \$18,000. Show the balance sheet presentation of accrued interest and the bond liability at December 31, 2014.
 (c) On January 1, 2016, when the carrying value of the bonds was \$416,000, the company redeemed the bonds at 105. Record the redemption of the bonds assuming that interest for the period has already been paid.

Prepare entries to record issuance of bonds, interest accrual, and bond redemption.

(LO 5, 6, 8)

(c) Loss \$4,000

P10-5A Otto Electronics issues a \$800,000, 8%, 10-year mortgage note on December 31, 2013. The proceeds from the note are to be used in financing a new research laboratory. The terms of the note provide for semiannual installment payments, exclusive of real estate taxes and insurance, of \$58,865. Payments are due June 30 and December 31.

Instructions

- (a) Prepare an installment payments schedule for the first 2 years.
 (b) Prepare the entries for (1) the loan and (2) the first two installment payments.
 (c) Show how the total mortgage liability should be reported on the balance sheet at December 31, 2014.

Prepare installment payments schedule and journal entries for a mortgage note payable.

(LO 7)

(b) June 30 Mortgage Payable debit \$26,865
 (c) Current liability—2014 \$59,276

***P10-6A** On July 1, 2014, Strigel Corporation issued \$5,000,000, 10%, 10-year bonds at \$5,679,533. This price resulted in an effective-interest rate of 8% on the bonds. Strigel uses the effective-interest method to amortize bond premium or discount. The bonds pay semiannual interest July 1 and January 1.

Prepare entries to record issuance of bonds, payment of interest, and amortization of bond premium using effective-interest method.

(LO 5, 10)

(c) Amortization \$22,819

(d) Amortization \$23,731

(e) Amortization \$24,681

Prepare entries to record issuance of bonds, payment of interest, and amortization of discount using effective-interest method. In addition, answer questions.

(LO 5, 10)

(a) (3) Amortization \$7,123

(a) (4) Amortization \$7,479

(b) Bond carrying value
\$3,397,066

Prepare entries to record issuance of bonds, interest accrual, and straight-line amortization for 2 years.

(LO 5, 11)

(b) Amortization \$4,000

(d) Premium on bonds
payable \$64,000

Prepare entries to record issuance of bonds, interest, and straight-line amortization of bond premium and discount.

(LO 5, 11)

(a) Amortization \$4,500

(b) Amortization \$6,000

(c) Premium on bonds payable
\$85,500
Discount on bonds payable
\$114,000**Instructions**

(Round all computations to the nearest dollar.)

- (a) Prepare the journal entry to record the issuance of the bonds on July 1, 2014.
- (b) Prepare an amortization table through December 31, 2015 (3 interest periods) for this bond issue.
- (c) Prepare the journal entry to record the accrual of interest and the amortization of the premium on December 31, 2014.
- (d) Prepare the journal entry to record the payment of interest and the amortization of the premium on July 1, 2015, assuming no accrual of interest on June 30.
- (e) Prepare the journal entry to record the accrual of interest and the amortization of the premium on December 31, 2015.

***P10-7A** On July 1, 2014, Kingston Company issued \$3,600,000, 9%, 10-year bonds at \$3,375,680. This price resulted in an effective-interest rate of 10% on the bonds. Kingston uses the effective-interest method to amortize bond premium or discount. The bonds pay semiannual interest July 1 and January 1.

Instructions

(Round all computations to the nearest dollar.)

- (a) Prepare the journal entries to record the following transactions.
 - (1) The issuance of the bonds on July 1, 2014.
 - (2) The accrual of interest and the amortization of the discount on December 31, 2014.
 - (3) The payment of interest and the amortization of the discount on July 1, 2015, assuming no accrual of interest on June 30.
 - (4) The accrual of interest and the amortization of the discount on December 31, 2015.
- (b) Show the proper balance sheet presentation for the liability for bonds payable on the December 31, 2015, balance sheet.
- (c) Provide the answers to the following questions in letter form.
 - (1) What amount of interest expense is reported for 2015?
 - (2) Would the bond interest expense reported in 2015 be the same as, greater than, or less than the amount that would be reported if the straight-line method of amortization were used?
 - (3) Determine the total cost of borrowing over the life of the bond.
 - (4) Would the total bond interest expense be greater than, the same as, or less than the total interest expense that would be reported if the straight-line method of amortization were used?

***P10-8A** Guehler Electric sold \$2,000,000, 9%, 10-year bonds on January 1, 2014. The bonds were dated January 1 and pay interest July 1 and January 1. Guehler Electric uses the straight-line method to amortize bond premium or discount. The bonds were sold at 104. Assume no interest is accrued on June 30.

Instructions

- (a) Prepare the journal entry to record the issuance of the bonds on January 1, 2014.
- (b) Prepare a bond premium amortization schedule for the first 4 interest periods.
- (c) Prepare the journal entries for interest and the amortization of the premium in 2014 and 2015.
- (d) Show the balance sheet presentation of the bond liability at December 31, 2015.

***P10-9A** Jaggar Company sold \$3,000,000, 8%, 10-year bonds on July 1, 2014. The bonds were dated July 1, 2014, and pay interest July 1 and January 1. Jaggar Company uses the straight-line method to amortize bond premium or discount. Assume no interest is accrued on June 30.

Instructions

- (a) Prepare all the necessary journal entries to record the issuance of the bonds and bond interest expense for 2014, assuming that the bonds sold at 103.
- (b) Prepare journal entries as in part (a) assuming that the bonds sold at 96.
- (c) Show balance sheet presentation for each bond issue at December 31, 2014.

***P10-10A** The following is taken from the Millette Company balance sheet.

**Millette Company
Balance Sheet (partial)
December 31, 2013**

Current liabilities		
Interest payable (for 6 months from July 1 to December 31)		\$ 90,000
Long-term liabilities		
Bonds payable, 6% due January 1, 2024	\$3,000,000	
Add: Premium on bonds payable	180,000	3,180,000

Interest is payable semiannually on January 1 and July 1. The bonds are callable on any semiannual interest date. Millette uses straight-line amortization for any bond premium or discount. From December 31, 2013, the bonds will be outstanding for an additional 10 years (120 months).

Instructions

- | | |
|---|--|
| <p>(a) Journalize the payment of bond interest on January 1, 2014.</p> <p>(b) Prepare the entry to amortize bond premium and to pay the interest due on July 1, 2014, assuming no accrual of interest on June 30.</p> <p>(c) Assume that on July 1, 2014, after paying interest, Millette Company calls bonds having a face value of \$1,200,000. The call price is 101. Record the redemption of the bonds.</p> <p>(d) Prepare the adjusting entry at December 31, 2014, to amortize bond premium and to accrue interest on the remaining bonds.</p> | <p>(b) Amortization \$9,000</p> <p>(c) Gain \$56,400</p> <p>(d) Amortization \$5,400</p> |
|---|--|

PROBLEMS: SET B

P10-1B On January 1, 2014, the ledger of Zaur Company contains the following liability accounts.

Accounts Payable	\$42,500
Sales Taxes Payable	5,800
Unearned Service Revenue	15,000

During January, the following selected transactions occurred.

- Jan. 1 Borrowed \$15,000 in cash from Platteville Bank on a 4-month, 6%, \$15,000 note.
- 5 Sold merchandise for cash totaling \$9,434, which includes 6% sales taxes.
- 12 Provided services for customers who had made advance payments of \$9,000. (Credit Service Revenue.)
- 14 Paid state treasurer's department for sales taxes collected in December 2013, \$5,800.
- 20 Sold 700 units of a new product on credit at \$44 per unit, plus 6% sales tax.
- 25 Sold merchandise for cash totaling \$16,536, which includes 6% sales taxes.

Instructions

- | | |
|---|---|
| <p>(a) Journalize the January transactions.</p> <p>(b) Journalize the adjusting entries at January 31 for the outstanding notes payable.</p> <p>(c) Prepare the current liabilities section of the balance sheet at January 31, 2014. Assume no change in accounts payable.</p> | <p>(c) Current liability total \$66,893</p> |
|---|---|

P10-2B On June 1, 2014, Sator Corp. issued \$1,200,000, 8%, 5-year bonds at face value. The bonds were dated June 1, 2014, and pay interest semiannually on June 1 and December 1. Financial statements are prepared annually on December 31.

Instructions

- | | |
|--|-------------------------------|
| <p>(a) Prepare the journal entry to record the issuance of the bonds.</p> <p>(b) Prepare the adjusting entry to record the accrual of interest on December 31, 2014.</p> <p>(c) Show the balance sheet presentation on December 31, 2014.</p> <p>(d) Prepare the journal entry to record payment of interest on June 1, 2015, assuming no accrual of interest from January 1, 2015, to June 1, 2015.</p> | <p>(d) Int. exp. \$40,000</p> |
|--|-------------------------------|

Prepare entries to record interest payments, straight-line premium amortization, and redemption of bonds.

(LO 6, 11)

Prepare current liability entries, adjusting entries, and current liabilities section.

(LO 1, 2, 3)

Prepare entries to record issuance of bonds, interest accrual, and bond redemption.

(LO 5, 6, 8)

(f) Loss \$12,000

Prepare entries to record issuance of bonds, interest accrual, and bond redemption.

(LO 5, 6, 8)

(c) Loss \$5,400

Prepare installment payments schedule and journal entries for a mortgage note payable.

(LO 7, 8)

(b) June 30 Mortgage Payable debit \$12,761

(c) Current liability—2014: \$28,156

Prepare entries to record issuance of bonds, payment of interest, and amortization of bond discount using effective-interest method.

(LO 5, 10)

(c) Amortization \$10,269

(d) Amortization \$10,679

(e) Amortization \$11,107

Prepare entries to record issuance of bonds, payment of interest, and amortization of premium using effective-interest method. In addition, answer questions.

(LO 5, 10)

(a) (2) Amortization \$12,205

(a) (3) Amortization \$12,511

(a) (4) Amortization \$12,823

(b) Bond carrying value \$4,274,244

(e) Prepare the journal entry to record payment of interest on December 1, 2015.

(f) Assume that on December 1, 2015, Sator calls the bonds at 101. Record the redemption of the bonds.

P10-3B Booker Co. sold \$300,000, 10%, 10-year bonds on January 1, 2014. The bonds were dated January 1, and interest is paid on January 1 and July 1. The bonds were sold at 104.

Instructions

(a) Prepare the journal entry to record the issuance of the bonds on January 1, 2014.

(b) At December 31, 2014, the balance in the Premium on Bonds Payable account is \$10,800. Show the balance sheet presentation of accrued interest and the bond liability at December 31, 2014.

(c) On January 1, 2016, when the carrying value of the bonds was \$309,600, the company redeemed the bonds at 105. Record the redemption of the bonds assuming that interest for the period has already been paid.

P10-4B Hamilton's Electronics issues a \$380,000, 8%, 10-year mortgage note on December 31, 2013, to help finance a plant expansion program. The terms provide for semiannual installment payments, not including real estate taxes and insurance, of \$27,961. Payments are due June 30 and December 31.

Instructions

(a) Prepare an installment payments schedule for the first 2 years.

(b) Prepare the entries for (1) the mortgage loan and (2) the first two installment payments.

(c) Show how the total mortgage liability should be reported on the balance sheet at December 31, 2014.

***P10-5B** On July 1, 2014, Visnak Satellites issued \$4,500,000, 7%, 10-year bonds at \$4,194,218. This price resulted in an effective-interest rate of 8% on the bonds. Visnak uses the effective-interest method to amortize bond premium or discount. The bonds pay semiannual interest July 1 and January 1.

Instructions

(Round all computations to the nearest dollar.)

(a) Prepare the journal entry to record the issuance of the bonds on July 1, 2014.

(b) Prepare an amortization table through December 31, 2015 (3 interest periods) for this bond issue.

(c) Prepare the journal entry to record the accrual of interest and the amortization of the discount on December 31, 2014.

(d) Prepare the journal entry to record the payment of interest and the amortization of the discount on July 1, 2015, assuming that interest was not accrued on June 30.

(e) Prepare the journal entry to record the accrual of interest and the amortization of the discount on December 31, 2015.

***P10-6B** On July 1, 2014, Keokuk Chemical Company issued \$4,000,000, 6%, 10-year bonds at \$4,311,783. This price resulted in a 5% effective-interest rate on the bonds. Keokuk uses the effective-interest method to amortize bond premium or discount. The bonds pay semiannual interest on each July 1 and January 1.

Instructions

(Round all computations to the nearest dollar.)

(a) Prepare the journal entries to record the following transactions.

(1) The issuance of the bonds on July 1, 2014.

(2) The accrual of interest and the amortization of the premium on December 31, 2014.

(3) The payment of interest and the amortization of the premium on July 1, 2015, assuming no accrual of interest on June 30.

(4) The accrual of interest and the amortization of the premium on December 31, 2015.

(b) Show the proper balance sheet presentation for the liability for bonds payable on the December 31, 2015, balance sheet.

(c) Provide the answers to the following questions in letter form.

(1) What amount of interest expense is reported for 2015?

(2) Would the bond interest expense reported in 2015 be the same as, greater than, or less than the amount that would be reported if the straight-line method of amortization were used?

- (3) Determine the total cost of borrowing over the life of the bond.
 (4) Would the total bond interest expense be greater than, the same as, or less than the total interest expense if the straight-line method of amortization were used?

***P10-7B** Wilkowski Company sold \$5,000,000, 8%, 20-year bonds on January 1, 2014. The bonds were dated January 1, 2014, and pay interest on January 1 and July 1. Wilkowski Company uses the straight-line method to amortize bond premium or discount. The bonds were sold at 97. Assume no interest is accrued on June 30.

Instructions

- (a) Prepare the journal entry to record the issuance of the bonds on January 1, 2014.
 (b) Prepare a bond discount amortization schedule for the first 4 interest periods.
 (c) Prepare the journal entries for interest and the amortization of the discount in 2014 and 2015.
 (d) Show the balance sheet presentation of the bond liability at December 31, 2015.

***P10-8B** McLain Corporation sold \$6,000,000, 9%, 10-year bonds on January 1, 2014. The bonds were dated January 1, 2014, and pay interest on July 1 and January 1. McLain Corporation uses the straight-line method to amortize bond premium or discount. Assume no interest is accrued on June 30.

Instructions

- (a) Prepare all the necessary journal entries to record the issuance of the bonds and bond interest expense for 2014, assuming that the bonds sold at 102.
 (b) Prepare journal entries as in part (a) assuming that the bonds sold at 96.
 (c) Show balance sheet presentation for each bond issue at December 31, 2014.

***P10-9B** The following is taken from the Plankton Corporation balance sheet.

**Plankton Corporation
 Balance Sheet (partial)
 December 31, 2013**

Current liabilities		
Interest payable (for 6 months from July 1 to December 31)	\$	84,000
Long-term liabilities		
Bonds payable, 7%, due January 1, 2024	\$2,400,000	
Less: Discount on bonds payable	90,000	2,310,000

Interest is payable semiannually on January 1 and July 1. The bonds are callable on any semiannual interest date. Plankton uses straight-line amortization for any bond premium or discount. From December 31, 2013, the bonds will be outstanding for an additional 10 years (120 months).

Instructions

(Round all computations to the nearest dollar).

- (a) Journalize the payment of bond interest on January 1, 2014.
 (b) Prepare the entry to amortize bond discount and to pay the interest due on July 1, 2014, assuming that interest was not accrued on June 30.
 (c) Assume that on July 1, 2014, after paying interest, Plankton Corp. calls bonds having a face value of \$800,000. The call price is 103. Record the redemption of the bonds.
 (d) Prepare the adjusting entry at December 31, 2014, to amortize bond discount and to accrue interest on the remaining bonds.

Prepare entries to record issuance of bonds, interest accrual, and straight-line amortization for 2 years.

(LO 5, 11)

- (b) Amortization \$3,750
 (d) Discount on bonds payable \$135,000

Prepare entries to record issuance of bonds, interest, and straight-line amortization of bond premium and discount.

(LO 5, 11)

- (a) Amortization \$6,000
 (b) Amortization \$12,000
 (c) Premium on bonds payable \$108,000; Discount on bonds payable \$216,000

Prepare entries to record interest payments, straight-line discount amortization, and redemption of bonds.

(LO 5, 6, 11)

- (b) Amortization \$4,500
 (c) Loss \$52,500
 (d) Amortization \$3,000

CP10-1 James Corporation's balance sheet at December 31, 2013, is presented below.

James Corporation			
Balance Sheet			
December 31, 2013			
Cash	\$ 30,500	Accounts payable	\$ 13,750
Inventory	25,750	Interest payable	2,500
Prepaid insurance	5,600	Bonds payable	50,000
Equipment	43,000	Common stock	20,000
	<u>\$104,850</u>	Retained earnings	18,600
			<u>\$104,850</u>

During 2014, the following transactions occurred.

1. James paid \$2,500 interest on the bonds on January 1, 2014.
2. James purchased \$241,100 of inventory on account.
3. James sold for \$450,000 cash inventory which cost \$250,000. James also collected \$31,500 sales taxes.
4. James paid \$230,000 on accounts payable.
5. James paid \$2,500 interest on the bonds on July 1, 2014.
6. The prepaid insurance (\$5,600) expired on July 31.
7. On August 1, James paid \$12,000 for insurance coverage from August 1, 2014, through July 31, 2015.
8. James paid \$24,000 sales taxes to the state.
9. Paid other operating expenses, \$91,000.
10. Retired the bonds on December 31, 2014, by paying \$47,000 plus \$2,500 interest.
11. Issued \$90,000 of 8% bonds on December 31, 2014, at 104. The bonds pay interest every June 30 and December 31.

Adjustment data:

1. Recorded the insurance expired from item 7.
2. The equipment was acquired on December 31, 2013, and will be depreciated on a straight-line basis over 5 years with a \$3,000 salvage value.
3. The income tax rate is 30%. (*Hint:* Prepare the income statement up to income before taxes and multiply by 30% to compute the amount.)

Instructions

(You may want to set up T-accounts to determine ending balances.)

- (a) Prepare journal entries for the transactions listed above and adjusting entries.
- (b) Prepare an adjusted trial balance at December 31, 2014.
- (c) Prepare an income statement and a retained earnings statement for the year ending December 31, 2014, and a classified balance sheet as of December 31, 2014.

(b) Totals \$652,070

(c) N.I. \$61,880

CP10-2 Eastland Company and Westside Company are competing businesses. Both began operations 6 years ago and are quite similar in most respects. The current balance sheet data for the two companies are shown below.

	Eastland Company	Westside Company
Cash	\$ 63,300	\$ 48,400
Accounts receivable	304,700	302,500
Allowance for doubtful accounts	(13,600)	-0-
Inventory	463,900	515,200
Plant and equipment	255,300	257,300
Accumulated depreciation, plant and equipment	(112,650)	(189,850)
Total assets	<u>\$960,950</u>	<u>\$933,550</u>

	Eastland Company	Westside Company
Current liabilities	\$440,200	\$431,500
Long-term liabilities	<u>78,000</u>	<u>82,000</u>
Total liabilities	518,200	513,500
Stockholders' equity	<u>442,750</u>	<u>420,050</u>
Total liabilities and stockholders' equity	<u>\$960,950</u>	<u>\$933,550</u>

You have been engaged as a consultant to conduct a review of the two companies. Your goal is to determine which of them is in the stronger financial position.

Your review of their financial statements quickly reveals that the two companies have not followed the same accounting practices. The differences and your conclusions regarding them are summarized below.

1. Eastland Company has used the allowance method of accounting for bad debts. A review shows that the amount of its write-offs each year has been quite close to the allowances that have been provided. It therefore seems reasonable to have confidence in its current estimate of bad debts.

Westside Company has used the direct write-off method for bad debts, and it has been somewhat slow to write off its uncollectible accounts. Based upon an aging analysis and review of its accounts receivable, it is estimated that \$18,000 of its existing accounts will probably prove to be uncollectible.

2. Eastland Company has determined the cost of its merchandise inventory on a LIFO basis. The result is that its inventory appears on the balance sheet at an amount that is below its current replacement cost. Based upon a detailed physical examination of its merchandise on hand, the current replacement cost of its inventory is estimated at \$513,000.

Westside Company has used the FIFO method of valuing its merchandise inventory. Its ending inventory appears on the balance sheet at an amount that quite closely approximates its current replacement cost.

3. Eastland Company estimated a useful life of 12 years and a salvage value of \$30,000 for its plant and equipment. It has been depreciating them on a straight-line basis.

Westside Company has the same type of plant and equipment. However, it estimated a useful life of 10 years and a salvage value of \$10,000. It has been depreciating its plant and equipment using the double-declining-balance method.

Based upon engineering studies of these types of plant and equipment, you conclude that Westside's estimates and method for calculating depreciation are the more appropriate.

4. Among its current liabilities, Eastland has included the portions of long-term liabilities that become due within the next year. Westside has not done so.

You find that \$16,000 of Westside's \$82,000 of long-term liabilities are due to be repaid in the current year.

Instructions

- (a) Revise the balance sheets presented above so that the data are comparable and reflect the current financial position for each of the two companies.

- (b)  Prepare a brief report to your client stating your conclusions.

- (a) Total assets:
Eastland \$934,325
Westside \$915,550

CONTINUING COOKIE CHRONICLE

(Note: This is a continuation of the Cookie Chronicle from Chapters 1–9.)

CCC10 Recall that Cookie Creations sells fine European mixers that it purchases from Kzinski Supply Co. Kzinski warrants the mixers to be free of defects in material and workmanship for a period of one year from the date of original purchase. If the mixer has such a defect, Kzinski will repair or replace the mixer free of charge for parts and labor.

Go to the book's companion website, www.wiley.com/college/weygandt, to see the completion of this problem.

Broadening Your PERSPECTIVE

Financial Reporting and Analysis

Financial Reporting Problem: PepsiCo, Inc.

BYP10-1 The financial statements of **PepsiCo, Inc.** and the notes to consolidated financial statements appear in Appendix A.

Instructions

Refer to PepsiCo's financial statements and answer the following questions about current and contingent liabilities and payroll costs.

- What were PepsiCo's total current liabilities at December 25, 2010? What was the increase/decrease in PepsiCo's total current liabilities from the prior year?
- In PepsiCo's Note 2 ("Our Significant Accounting Policies"), the company explains the nature of its contingencies. Under what conditions does PepsiCo recognize (record and report) liabilities for contingencies?
- What were the components of total current liabilities on December 25, 2010?
- What was PepsiCo's total long-term debt at December 25, 2010? What was the increase/decrease in total long-term debt from the prior year? What does Note 9 to the financial statements indicate about the composition of PepsiCo's long-term debt obligation?
- What are the total long-term contractual commitments that PepsiCo reports as of December 25, 2010? (See Note 9.)

Comparative Analysis Problem: PepsiCo, Inc. vs. The Coca-Cola Company

BYP10-2 **PepsiCo, Inc.**'s financial statements are presented in Appendix A. Financial statements of **The Coca-Cola Company** are presented in Appendix B.

Instructions

- At December 25, 2010, what was PepsiCo's largest current liability account? What were its total current liabilities? At December 31, 2010, what was Coca-Cola's largest current liability account? What were its total current liabilities?
- Based on information contained in those financial statements, compute the following 2010 values for each company.
 - Working capital.
 - Current ratio.
- What conclusions concerning the relative liquidity of these companies can be drawn from these data?
- Based on the information contained in these financial statements, compute the following 2010 ratios for each company.
 - Debt to total assets.
 - Times interest earned.
- What conclusions concerning the companies' long-run solvency can be drawn from these ratios?

Real-World Focus

BYP10-3 Purpose: Bond or debt securities pay a stated rate of interest. This rate of interest is dependent on the risk associated with the investment. Fitch Ratings provides ratings for companies that issue debt securities.

Address: www.fitchratings.com, or go to www.wiley.com/college/weygandt

Instructions

Answer the following questions.

- In what year did Fitch introduce its bond rating scale? (See **History** in **About Us**.)
- What letter values are assigned to debt investments that are considered “investment grade” and “speculative grade”? (See **Ratings Definitions**.)
- Search the Internet to identify two other major credit rating agencies.

Critical Thinking

Decision-Making Across the Organization

***BYP10-4** On January 1, 2012, Fleming Corporation issued \$2,400,000 of 5-year, 7% bonds at 96; the bonds pay interest semiannually on July 1 and January 1. By January 1, 2014, the market rate of interest for bonds of risk similar to those of Fleming Corporation had risen. As a result, the market value of these bonds was \$2,000,000 on January 1, 2014—below their carrying value. Debra Fleming, president of the company, suggests repurchasing all of these bonds in the open market at the \$2,000,000 price. To do so the company will have to issue \$2,000,000 (face value) of new 10-year, 10% bonds at par. The president asks you, as controller, “What is the feasibility of my proposed repurchase plan?”

**Instructions**

With the class divided into groups, answer the following.

- What is the carrying value of the outstanding Fleming Corporation 5-year bonds on January 1, 2014? (Assume straight-line amortization.)
- Prepare the journal entry to retire the 5-year bonds on January 1, 2014. Prepare the journal entry to issue the new 10-year bonds.
- Prepare a short memo to the president in response to her request for advice. List the economic factors that you believe should be considered for her repurchase proposal.

Communication Activity

BYP10-5 Ron Seiser, president of Seiser Corporation, is considering the issuance of bonds to finance an expansion of his business. He has asked you to (1) discuss the advantages of bonds over common stock financing, (2) indicate the types of bonds he might issue, and (3) explain the issuing procedures used in bond transactions.

Instructions

Write a memo to the president, answering his request.

Ethics Case

BYP10-6 Dylan Horn is the president, founder, and majority owner of Wesley Medical Corporation, an emerging medical technology products company. Wesley is in dire need of additional capital to keep operating and to bring several promising products to final development, testing, and production. Dylan, as owner of 51% of the outstanding stock, manages the company’s operations. He places heavy emphasis on research and development and on long-term growth. The other principal stockholder is Mary Sommers who, as a nonemployee investor, owns 40% of the stock. Mary would like to deemphasize the R&D functions and emphasize the marketing function, to maximize short-run sales and profits from existing products. She believes this strategy would raise the market price of Wesley’s stock.

All of Dylan’s personal capital and borrowing power is tied up in his 51% stock ownership. He knows that any offering of additional shares of stock will dilute his controlling interest because he won’t be able to participate in such an issuance. But, Mary has money and would likely buy enough shares to gain control of Wesley. She then would dictate the company’s future direction, even if it meant replacing Dylan as president and CEO.

The company already has considerable debt. Raising additional debt will be costly, will adversely affect Wesley’s credit rating, and will increase the company’s reported losses due to the

growth in interest expense. Mary and the other minority stockholders express opposition to the assumption of additional debt, fearing the company will be pushed to the brink of bankruptcy. Wanting to maintain his control and to preserve the direction of “his” company, Dylan is doing everything to avoid a stock issuance. He is contemplating a large issuance of bonds, even if it means the bonds are issued with a high effective-interest rate.

Instructions

- Who are the stakeholders in this situation?
- What are the ethical issues in this case?
- What would you do if you were Dylan?

All About You

BYP10-7 Medical costs are substantial and rising. But, will they be the most substantial expense over your lifetime? Not likely. Will it be housing or food? Again, not likely. The answer is taxes. On average, Americans work 99 days to afford their taxes. Companies, too, have large tax burdens. They look very hard at tax issues in deciding where to build their plants and where to locate their administrative headquarters.

Instructions

- Determine what your state income taxes are if your taxable income is \$60,000 and you file as a single taxpayer in the state in which you live.
- Assume that you own a home worth \$200,000 in your community and the tax rate is 2.1%. Compute the property taxes you would pay.
- Assume that the total gasoline bill for your automobile is \$1,200 a year (300 gallons at \$4 per gallon). What are the amounts of state and federal taxes that you pay on the \$1,200?
- Assume that your purchases for the year total \$9,000. Of this amount, \$5,000 was for food and prescription drugs. What is the amount of sales tax you would pay on these purchases? (Many states do not levy a sales tax on food or prescription drugs. Does yours?)
- Determine what your Social Security taxes are if your income is \$60,000.
- Determine what your federal income taxes are if your taxable income is \$60,000 and you file as a single taxpayer.
- Determine your total taxes paid based on the above calculations, and determine the percentage of income that you would pay in taxes based on the following formula: Total taxes paid ÷ Total income.

BYP10-8 Some employees are encouraging and setting up preventive health-care programs. Here are the percentages for five unhealthy behaviors for individuals with some college education: current cigarette smoker (22.9%), five or more alcoholic drinks at one sitting during at least once in the past year (30%), physically inactive (30%), obese (25.2%), or sleep less than 6 hours per day (30.3%).

Suppose you own a business. About a quarter of your employees smoke, and an even higher percentage are overweight. You decide to implement a mandatory health program that requires employees to quit smoking and to exercise regularly, with regular monitoring. If employees do not participate in the program, they will have to pay their own insurance premiums. Is this fair?

YES: It is the responsibility of management to try to maximize a company’s profit. Employees with unhealthy habits drive up the cost of health insurance because they require more frequent and more costly medical attention.

NO: What people do on their own time is their own business. This represents an invasion of privacy, and is a form of discrimination.

Instructions

Write a response indicating your position regarding the situation. Provide support for your view.

FASB Codification Activity

BYP10-9 If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following.

- What is the definition of current liabilities?
- What is the long-term obligation?
- What guidance does the Codification provide for the disclosure of long-term obligations?

Answers to Chapter Questions

Answers to Insight and Accounting Across the Organization Questions

p. 479 It Costs \$74,000 to Put \$44,000 in Sally's Pocket Q: How are the Social Security and Medicare taxes computed for Sally's salary? **A:** As indicated in the story, Sally's gross earnings were \$59,000. The Social Security tax is 6.2% for both employee and employer up to gross earnings of \$106,800 (2010 guidelines). As shown, both Sally and Bogan pay \$3,661, which is $6.2\% \times \$59,000$. In addition, the Medicare tax is 1.45% on all gross earnings for both employee and employer. As shown, both Sally and Bogan pay \$856, which is $1.45\% \times \$59,000$.

p. 487 When to Go Long-Term Q: Based on this story, what is a good general rule to use in choosing between short-term and long-term financing? **A:** In general, it is best to finance short-term assets with short-term liabilities and long-term assets with long-term liabilities, in order to reduce the likelihood of a liquidity crunch such as this.

p. 496 Bonds versus Notes? Q: Why might companies prefer bond financing instead of short-term financing? **A:** In some cases, it is difficult to get loans from banks. In addition, low interest rates have encouraged companies to go more long-term and fix their rate. Recently, short-term loans suddenly froze, leading to liquidity problems for certain companies.

p. 497 "Covenant-Lite" Debt Q: How can financial ratios such as those covered in this chapter provide protection for creditors? **A:** Financial ratios such as the current ratio, debt to total assets ratio, and the times interest earned ratio provide indications of a company's liquidity and solvency. By specifying minimum levels of liquidity and solvency, as measured by these ratios, a creditor creates triggers that enable it to step in before a company's financial situation becomes too dire.

 *18. a $(500,000 \times .96) = 480,000$; $(\$480,000 + \$2,000 + \$2,000 + \$2,000)$

A Look at IFRS

IFRS and GAAP have similar definitions of liabilities. IFRS related to reporting and recognition of liabilities are found in *IAS 1 (revised)* ("Presentation of Financial Statements") and *IAS 37* ("Provisions, Contingent Liabilities, and Contingent Assets"). The general recording procedures for payroll are similar although differences occur depending on the types of benefits that are provided in different countries. For example, companies in other countries often have different forms of pensions, unemployment benefits, welfare payments, and so on. The accounting for various forms of compensation plans under IFRS is found in *IAS 19* ("Employee Benefits") and *IFRS 2* ("Share-based Payments"). *IAS 19* addresses the accounting for a wide range of compensation elements, including wages, bonuses, post-employment benefits, and compensated absences. Both of these standards were recently amended, resulting in significant convergence between IFRS and GAAP.

Key Points

- The basic definition of a liability under GAAP and IFRS is very similar. In a more technical way, liabilities are defined by the IASB as a present obligation of the entity arising from past events, the settlement of which is expected to result in an outflow from the entity of resources embodying economic benefits. Liabilities may be legally enforceable via a contract or law but need not be; that is, they can arise due to normal business practice or customs.

- IFRS requires that companies classify liabilities as current or noncurrent on the face of the statement of financial position (balance sheet), except in industries where a *presentation* based on liquidity would be considered to provide more useful information (such as financial institutions). When current liabilities (also called short-term liabilities) are presented, they are generally presented in order of liquidity.
- Under IFRS, liabilities are classified as current if they are expected to be paid within 12 months.
- Similar to GAAP, items are normally reported in order of liquidity. Companies sometimes show liabilities before assets. Also, they will sometimes show long-term liabilities before current liabilities.
- Under IFRS, companies sometimes will net current liabilities against current assets to show working capital on the face of the statement of financial position. (This is evident in the Zetar financial statements in Appendix C.)
- The basic calculation for bond valuation is the same under GAAP and IFRS. In addition, the accounting for bond liability transactions is essentially the same between GAAP and IFRS.
- IFRS requires use of the effective-interest method for amortization of bond discounts and premiums. GAAP also requires the effective-interest method, except that it allows use of the straight-line method where the difference is not material. Under IFRS, companies do not use a premium or discount account but instead show the bond at its net amount. For example, if a \$100,000 bond was issued at 97, under IFRS a company would record:

Cash	97,000	
Bonds Payable		97,000

- The accounting for convertible bonds differs between IFRS and GAAP. GAAP requires that the proceeds from the issuance of convertible debt be shown solely as debt. Unlike GAAP, IFRS splits the proceeds from the convertible bond between an equity component and a debt component. The equity conversion rights are reported in equity.

To illustrate, assume that Harris Corp. issues convertible 7% bonds with a face value of \$1,000,000 and receives \$1,000,000. Comparable bonds without a conversion feature would have required a 9% rate of interest. To determine how much of the proceeds would be allocated to debt and how much to equity, the promised payments of the bond obligation would be discounted at the market rate of 9%. Suppose that this results in a present value of \$850,000. The entry to record the issuance would be:

Cash	1,000,000	
Bonds Payable		850,000
Share Premium—Conversion Equity		150,000

Looking to the Future

The FASB and IASB are currently involved in two projects, each of which has implications for the accounting for liabilities. One project is investigating approaches to differentiate between debt and equity instruments. The other project, the elements phase of the conceptual framework project, will evaluate the definitions of the fundamental building blocks of accounting. The results of these projects could change the classification of many debt and equity securities.

IFRS Practice

IFRS Self-Test Questions

1. Which of the following is *false*?
 - (a) Under IFRS, current liabilities must always be presented before noncurrent liabilities.
 - (b) Under IFRS, an item is a current liability if it will be paid within the next 12 months.
 - (c) Under IFRS, current liabilities are shown in order of liquidity.
 - (d) Under IFRS, a liability is only recognized if it is a present obligation.
2. The accounting for bonds payable is:
 - (a) essentially the same under IFRS and GAAP.
 - (b) differs in that GAAP requires use of the straight-line method for amortization of bond premium and discount.

- (c) the same except that market prices may be different because the present value calculations are different between IFRS and GAAP.
- (d) not covered by IFRS.
3. Stevens Corporation issued 5% convertible bonds with a total face value of \$3,000,000 for \$3,000,000. If the bonds had not had a conversion feature, they would have sold for \$2,600,000. Under IFRS, the entry to record the transaction would require a credit to:
- (a) Bonds Payable for \$3,000,000.
- (b) Bonds Payable for \$400,000.
- (c) Share Premium—Conversion Equity for \$400,000.
- (d) Discount on Bonds Payable for \$400,000.
4. Which of the following is *true* regarding accounting for amortization of bond discount and premium?
- (a) Both IFRS and GAAP must use the effective-interest method.
- (b) GAAP must use the effective-interest method, but IFRS may use either the effective-interest method or the straight-line method.
- (c) IFRS is required to use the effective-interest method.
- (d) GAAP is required to use the straight-line method.
5. The joint projects of the FASB and IASB could potentially:
- (a) change the definition of liabilities.
- (b) change the definition of equity.
- (c) change the definition of assets.
- (d) All of the above.

IFRS Exercises

IFRS10-1 Briefly describe some of the similarities and differences between GAAP and IFRS with respect to the accounting for liabilities.

IFRS10-2 Ratzlaff Company issues (in euros) €2 million, 10-year, 8% bonds at 97, with interest payable on July 1 and January 1.

Instructions

- (a) Prepare the journal entry to record the sale of these bonds on January 1, 2014.
- (b) Assuming instead that the above bonds sold for 104, prepare the journal entry to record the sale of these bonds on January 1, 2014.

IFRS10-3 Archer Company issued (in pounds) £4,000,000 par value, 7% convertible bonds at 99 for cash. The net present value of the debt without the conversion feature is £3,800,000. Prepare the journal entry to record the issuance of the convertible bonds.

International Financial Statement Analysis: Zetar plc

IFRS10-4 The financial statements of *Zetar plc* are presented on Appendix C. The company's complete annual report, including the notes to its financial statements, is available at www.zetarplc.com.

Instructions

Use the company's annual report to answer the following questions.

- (a) According to the notes to the financial statements, what types of transactions do trade payables relate to? What was the average amount of time it took the company to pay its payables?
- (b) Note 2 (B) discusses provisions that the company records for certain types of activities. What do the provisions relate to, what are the estimates based on, and what could cause those estimates to change in subsequent periods?
- (c) What was the average interest rate paid on bank loans and overdrafts?

Corporations: Organization, Stock Transactions, Dividends, and Retained Earnings

Chapter 11

Feature Story

What's Cooking?

What major U.S. corporation got its start 41 years ago with a waffle iron? *Hint:* It doesn't sell food. *Another hint:* Swoosh. *Another hint:* "Just do it." That's right, **Nike**. In 1971, Nike co-founder Bill Bowerman put a piece of rubber into a kitchen waffle iron, and the trademark waffle sole was born. It seems fair to say that at Nike, "They don't make 'em like they used to."

Nike was co-founded by Bowerman and Phil Knight, a member of Bowerman's University of Oregon track team. Each began in the shoe business independently during the early 1960s. Bowerman got his start by making hand-crafted running shoes for his University of Oregon track team. Knight, after completing graduate school, started a small business importing low-cost, high-quality shoes from Japan. In 1964, the two joined

Learning Objectives

After studying this chapter, you should be able to:

- 1** Identify the major characteristics of a corporation.
- 2** Record the issuance of common stock.
- 3** Explain the accounting for treasury stock.
- 4** Differentiate preferred stock from common stock.
- 5** Prepare the entries for cash dividends and stock dividends.
- 6** Identify the items reported in a retained earnings statement.
- 7** Prepare and analyze a comprehensive stockholders' equity section.

The Navigator

Read A Look at IFRS p. 597

forces, each contributing \$500, and formed Blue Ribbon Sports, a partnership that marketed Japanese shoes.

It wasn't until 1971 that the company began manufacturing its own line of shoes. With the new shoes came a new corporate name—Nike—the Greek goddess of victory. It is hard to imagine that the company that now boasts a stable full of world-class athletes as promoters at one time had part-time employees selling shoes out of car trunks at track meets. Nike has achieved its success through relentless innovation combined with unbridled promotion.

By 1980, Nike was sufficiently established and issued its first stock to the public. That same year, it created a stock ownership program for its employees, allowing them to share in the company's success. Since then,

Nike has enjoyed phenomenal growth, with 2011 sales reaching \$20.7 billion and total dividends paid of \$569 million.

Nike is not alone in its quest for the top of the sport shoe world. Reebok used to be Nike's arch rival (get it? "arch"), but then Reebok was acquired by the German company adidas. Now adidas pushes Nike every step of the way.

The shoe market is fickle, with new styles becoming popular almost daily and vast international markets still lying untapped. Whether one of these two giants does eventually take control of the pedi-planet remains

to be seen. Meanwhile, the shareholders sit anxiously in the stands as this Olympic-size drama unfolds.

Preview of Chapter 11

Corporations like Nike and adidas have substantial resources at their disposal. In fact, the corporation is the dominant form of business organization in the United States in terms of sales, earnings, and number of employees. All of the 500 largest companies in the United States are corporations. In this chapter, we will explain the essential features of a corporation and the accounting for a corporation's capital stock transactions.

The content and organization of Chapter 11 are as follows.

CORPORATIONS: ORGANIZATION, STOCK TRANSACTIONS, DIVIDENDS, AND RETAINED EARNINGS

The Corporate Form of Organization	Accounting for Stock Transactions	Dividends	Retained Earnings	Statement Presentation and Analysis

The Corporate Form of Organization

LEARNING OBJECTIVE

1

Identify the major characteristics of a corporation.

In 1819, Chief Justice John Marshall defined a corporation as “an artificial being, invisible, intangible, and existing only in contemplation of law.” This definition is the foundation for the prevailing legal interpretation that a **corporation** is an **entity separate and distinct from its owners**.

A corporation is created by law, and its continued existence depends upon the statutes of the state in which it is incorporated. As a legal entity, a corporation has most of the rights and privileges of a person. The major exceptions relate to privileges that only a living person can exercise, such as the right to vote or to hold public office. A corporation is subject to the same duties and responsibilities as a person. For example, it must abide by the laws, and it must pay taxes.

Two common ways to classify corporations are by **purpose** and by **ownership**. A corporation may be organized for the purpose of making a profit, or it may be not-for-profit. For-profit corporations include such well-known companies as **McDonald's**, **Nike**, **PepsiCo**, and **Google**. Not-for-profit corporations are organized for charitable, medical, or educational purposes. Examples are the **Salvation Army** and the **American Cancer Society**.

Classification by ownership differentiates publicly held and privately held corporations. A **publicly held corporation** may have thousands of stockholders. Its stock is regularly traded on a national securities exchange such as the New York Stock Exchange. Examples are **IBM**, **Caterpillar**, and **General Electric**.

In contrast, a **privately held corporation** usually has only a few stockholders, and does not offer its stock for sale to the general public. Privately held companies are generally much smaller than publicly held companies, although some notable exceptions exist. **Cargill Inc.**, a private corporation that trades in grain and other commodities, is one of the largest companies in the United States.

Alternative Terminology

Privately held corporations are also referred to as *closely held corporations*.

Characteristics of a Corporation

In 1964, when **Nike's** founders, Knight and Bowerman, were just getting started in the running shoe business, they formed their original organization as a partnership. In 1968, they reorganized the company as a corporation. A number of characteristics distinguish corporations from proprietorships and partnerships. We explain the most important of these characteristics below.

SEPARATE LEGAL EXISTENCE

As an entity separate and distinct from its owners, the corporation acts under its own name rather than in the name of its stockholders. **Nike** may buy, own, and sell property. It may borrow money, and may enter into legally binding contracts in its own name. It may also sue or be sued, and it pays its own taxes.

In a partnership, the acts of the owners (partners) bind the partnership. In contrast, the acts of its owners (stockholders) do not bind the corporation unless such owners are **agents** of the corporation. For example, if you owned shares of Nike stock, you would not have the right to purchase inventory for the company unless you were designated as an agent of the corporation.

LIMITED LIABILITY OF STOCKHOLDERS

Since a corporation is a separate legal entity, creditors have recourse only to corporate assets to satisfy their claims. The liability of stockholders is normally limited to their investment in the corporation. Creditors have no legal claim on the personal assets of the owners unless fraud has occurred. Even in the event of bankruptcy, stockholders' losses are generally limited to their capital investment in the corporation.

TRANSFERABLE OWNERSHIP RIGHTS

Shares of capital stock give ownership in a corporation. These shares are transferable units. Stockholders may dispose of part or all of their interest in a corporation simply by selling their stock. The transfer of an ownership interest in a partnership requires the consent of each owner. In contrast, the transfer of stock is entirely at the discretion of the stockholder. It does not require the approval of either the corporation or other stockholders.

The transfer of ownership rights between stockholders normally has no effect on the daily operating activities of the corporation. Nor does it affect the corporation's assets, liabilities, and total ownership equity. The transfer of these ownership rights is a transaction between individual owners. After it first issues the capital stock, the company does not participate in such transfers.

ABILITY TO ACQUIRE CAPITAL

It is relatively easy for a corporation to obtain capital through the issuance of stock. Investors buy stock in a corporation to earn money over time as the share price grows, and because a stockholder has limited liability and shares of stock are readily transferable. Also, individuals can become stockholders by investing relatively small amounts of money. In sum, the ability of a successful corporation to obtain capital is virtually unlimited.

CONTINUOUS LIFE

The life of a corporation is stated in its charter. The life may be perpetual, or it may be limited to a specific number of years. If it is limited, the company can extend the life through renewal of the charter. Since a corporation is a separate legal entity, its continuance as a going concern is not affected by the withdrawal, death, or incapacity of a stockholder, employee, or officer. As a result, a successful company can have a continuous and perpetual life.

CORPORATION MANAGEMENT

Stockholders legally own the corporation. However, they manage the corporation indirectly through a board of directors they elect. Philip Knight is the chairman of **Nike**. The board, in turn, formulates the operating policies for the company. The board also selects officers, such as a president and one or more vice presidents, to execute policy and to perform daily management functions. As a result of the Sarbanes-Oxley Act, the board is now required to monitor management's actions more closely. Many feel that the failures of **Enron** and **WorldCom** could have been avoided by more diligent boards.

Illustration 11-1 (page 540) presents a typical organization chart showing the delegation of responsibility. The chief executive officer (CEO) has overall responsibility for managing the business. As the organization chart shows, the CEO delegates responsibility to other officers. The chief accounting officer is the **controller**. The controller's responsibilities include (1) maintaining the accounting records, (2) maintaining an adequate system of internal control, and (3) preparing financial statements, tax returns, and internal reports. The **treasurer** has custody of the corporation's funds and is responsible for maintaining the company's cash position.

The organizational structure of a corporation enables a company to hire professional managers to run the business. On the other hand, the separation of ownership and management often reduces an owner's ability to actively manage the company.

GOVERNMENT REGULATIONS

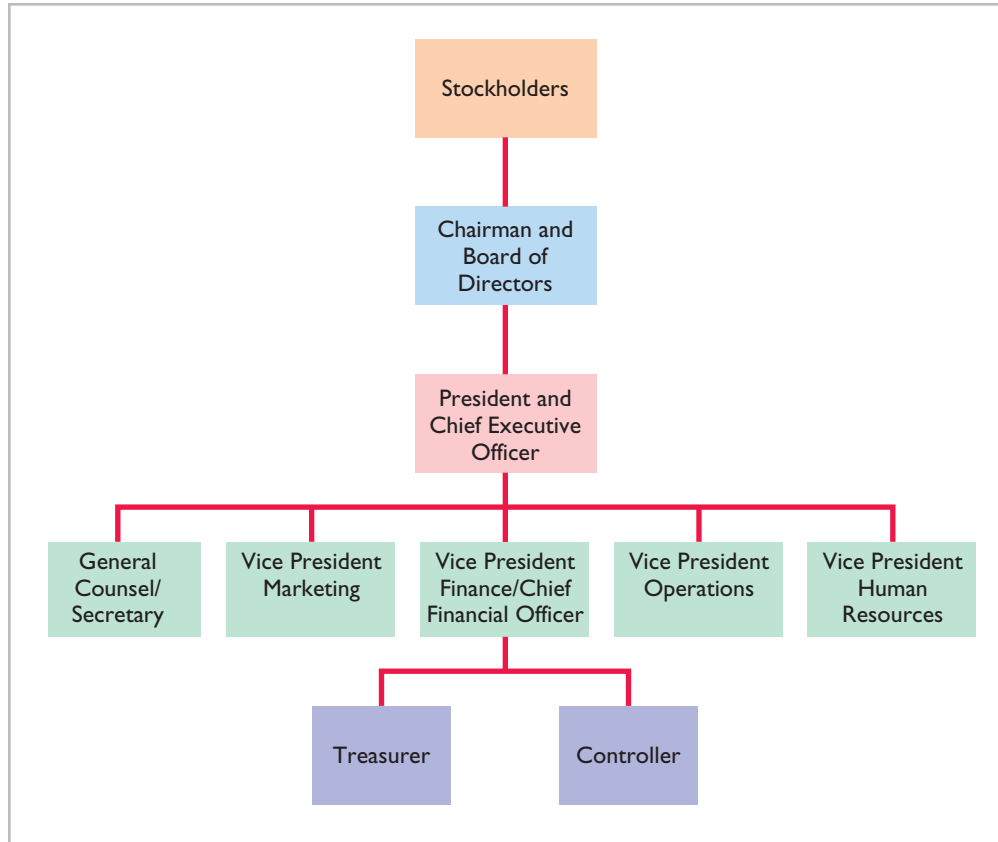

A corporation is subject to numerous state and federal regulations. For example, state laws usually prescribe the requirements for issuing stock, the distributions of

Ethics Note

Managers who are not owners are often compensated based on the performance of the firm. They thus may be tempted to exaggerate firm performance by inflating income figures.

Illustration 11-1
Corporation organization chart

earnings permitted to stockholders, and the effects of retiring stock. Federal securities laws govern the sale of capital stock to the general public. Also, most publicly held corporations are required to make extensive disclosure of their financial affairs to the Securities and Exchange Commission (SEC) through quarterly and annual reports. In addition, when a corporation lists its stock on organized securities exchanges, it must comply with the reporting requirements of these exchanges. Government regulations are designed to protect the owners of the corporation.

ADDITIONAL TAXES

Owners of proprietorships and partnerships report their share of earnings on their personal income tax returns. The individual owner then pays taxes on this amount. Corporations, on the other hand, must pay federal and state income taxes **as a separate legal entity**. These taxes are substantial.

In addition, stockholders must pay taxes on cash dividends (pro rata distributions of net income). Thus, many argue that the government taxes corporate income **twice (double taxation)**—once at the corporate level, and again at the individual level.

In summary, Illustration 11-2 shows the advantages and disadvantages of a corporation compared to a proprietorship and a partnership.

Illustration 11-2
Advantages and disadvantages of a corporation

Advantages	Disadvantages
Separate legal existence	Corporation management—separation of ownership and management
Limited liability of stockholders	Government regulations
Transferable ownership rights	Additional taxes
Ability to acquire capital	
Continuous life	
Corporation management—professional managers	

Forming a Corporation

A corporation is formed by grant of a state **charter**. The charter is a document that describes the name and purpose of the corporation, the types and number of shares of stock that are authorized to be issued, the names of the individuals that formed the company, and the number of shares that these individuals agreed to purchase. Regardless of the number of states in which a corporation has operating divisions, it is incorporated in only one state.

It is to the company's advantage to incorporate in a state whose laws are favorable to the corporate form of business organization. For example, although **General Motors** has its headquarters in Michigan, it is incorporated in New Jersey. In fact, more and more corporations have been incorporating in states with rules that favor existing management. For example, **Gulf Oil** changed its state of incorporation to Delaware to thwart possible unfriendly takeovers. There, certain defensive tactics against takeovers can be approved by the board of directors alone, without a vote by shareholders.

Upon receipt of its charter from the state of incorporation, the corporation establishes **by-laws**. The by-laws establish the internal rules and procedures for conducting the affairs of the corporation. Corporations engaged in interstate commerce must also obtain a **license** from each state in which they do business. The license subjects the corporation's operating activities to the general corporation laws of the state.

Costs incurred in the formation of a corporation are called **organization costs**. These costs include legal and state fees, and promotional expenditures involved in the organization of the business. **Corporations expense organization costs as incurred**. To determine the amount and timing of future benefits is so difficult that it is standard procedure to take a conservative approach of expensing these costs immediately.

Alternative Terminology

The charter is often referred to as the *articles of incorporation*.

ACCOUNTING ACROSS THE ORGANIZATION

Wall Street No Friend of Facebook

In the 1990s, it was the dream of every young technology entrepreneur to start a company and do an initial public offering (IPO), that is, list company shares on a stock exchange. It seemed like there was a never-ending supply of 20-something-year-old technology entrepreneurs that made millions doing IPOs of companies that never made a profit and eventually failed. In sharp contrast to this is Mark Zuckerberg, the 27-year-old founder and CEO of **Facebook**. If Facebook did an IPO, he would make billions of dollars. But, he is in no hurry to go public. Because his company doesn't need to invest in factories, distribution systems, or even marketing, it doesn't need to raise a lot of cash. Also, by not going public, Zuckerberg has more control over the direction of the company. Right now, he and the other founders don't have to answer to outside shareholders, who might be more concerned about short-term investment horizons rather than long-term goals. In addition, publicly traded companies face many more financial reporting disclosure requirements.

Source: Jessica E. Vascellaro, "Facebook CEO in No Rush to 'Friend' Wall Street," *Wall Street Journal Online* (March 4, 2010).

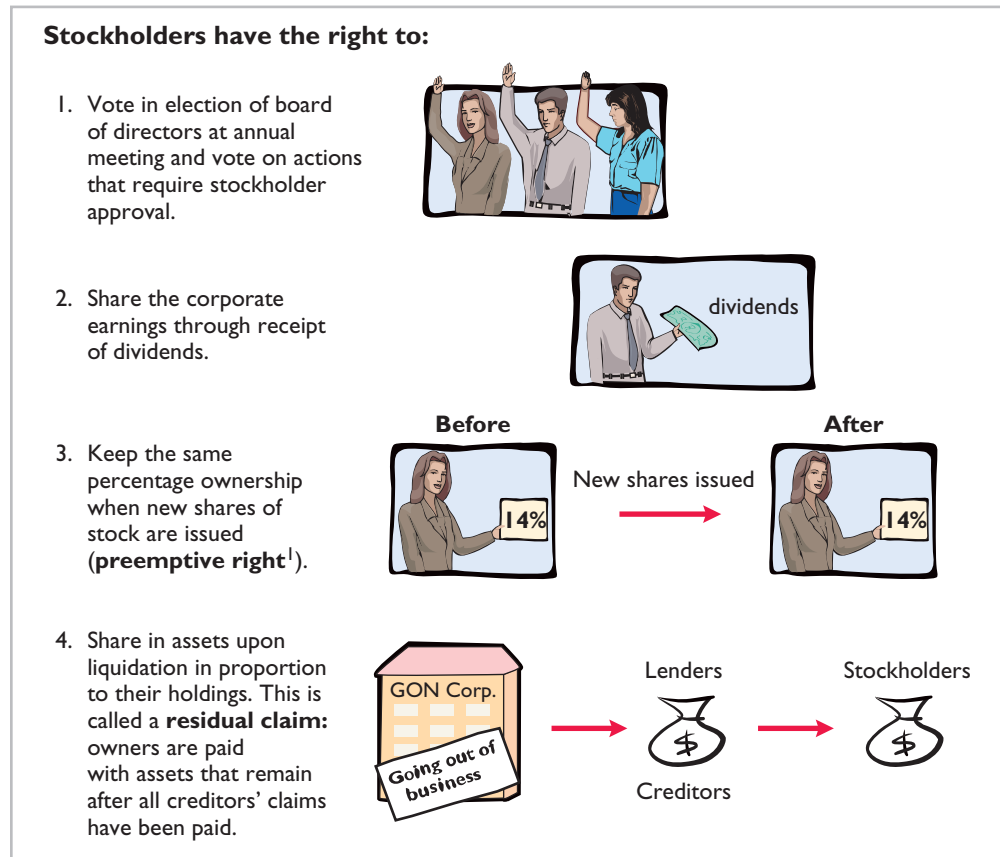

Why has Mark Zuckerberg, the CEO and founder of Facebook, delayed taking his company's shares public through an initial public offering (IPO)? (See page 596.)

Ownership Rights of Stockholders

When chartered, the corporation may begin selling ownership rights in the form of shares of stock. When a corporation has only one class of stock, it is **common stock**. Each share of common stock gives the stockholder the ownership rights pictured in Illustration 11-3. The articles of incorporation or the by-laws state the ownership rights of a share of stock.

Illustration 11-3
Ownership rights of stockholders

Proof of stock ownership is evidenced by a form known as a **stock certificate**. As Illustration 11-4 shows, the face of the certificate shows the name of the corporation, the stockholder's name, the class and special features of the stock, the number of shares owned, and the signatures of authorized corporate officials. Prenumbered certificates facilitate accountability. They may be issued for any quantity of shares.

Stock Issue Considerations

In considering the issuance of stock, a corporation must resolve a number of basic questions: How many shares should it authorize for sale? How should it

¹A number of companies have eliminated the preemptive right because they believe it makes an unnecessary and cumbersome demand on management. For example, by stockholder approval, **IBM** has dropped its preemptive right for stockholders.

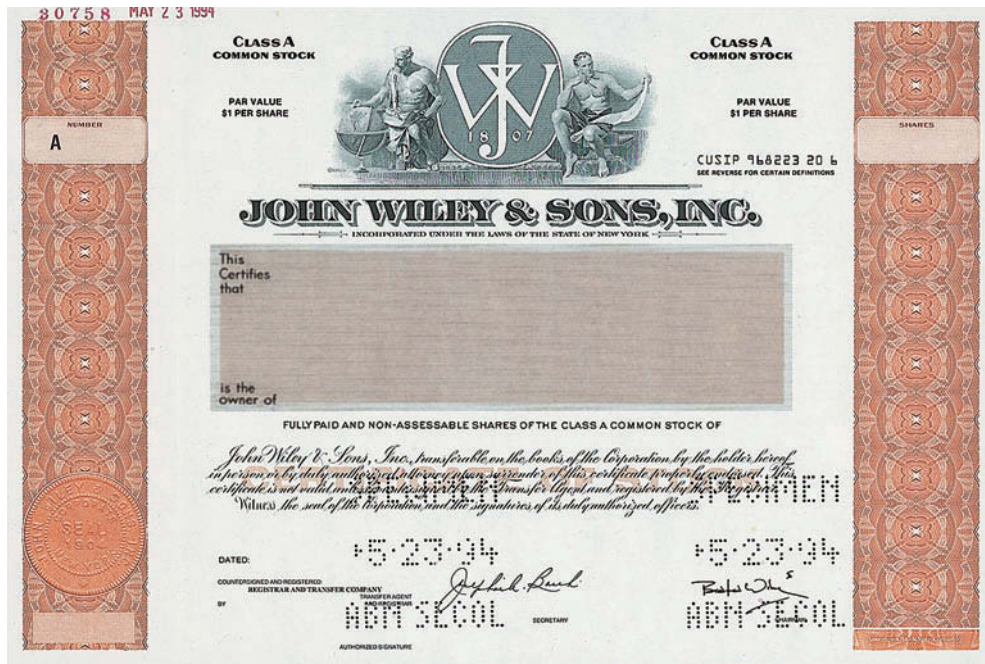

Illustration 11-4
A stock certificate

issue the stock? At what price should it issue the shares? What value should the corporation assign to the stock? These questions are addressed in the following sections.

AUTHORIZED STOCK

The charter indicates the amount of stock that a corporation is **authorized** to sell. The total amount of **authorized stock** at the time of incorporation normally anticipates both initial and subsequent capital needs. As a result, the number of shares authorized generally exceeds the number initially sold. If it sells all authorized stock, a corporation must obtain consent of the state to amend its charter before it can issue additional shares.

The authorization of capital stock does not result in a formal accounting entry. This event has no immediate effect on either corporate assets or stockholders' equity. However, the number of authorized shares is often reported in the stockholders' equity section. It is then simple to determine the number of unissued shares that the corporation can issue without amending the charter: subtract the total shares issued from the total authorized. For example, if **Advanced Micro** was authorized to sell 100,000 shares of common stock and issued 80,000 shares, 20,000 shares would remain unissued.

ISSUANCE OF STOCK

A corporation can issue common stock **directly** to investors. Or, it can issue the stock **indirectly** through an investment banking firm that specializes in bringing securities to the attention of prospective investors. Direct issue is typical in closely held companies. Indirect issue is customary for a publicly held corporation.

In an indirect issue, the investment banking firm may agree to **underwrite** the entire stock issue. In this arrangement, the investment banker buys the stock from the corporation at a stipulated price and resells the shares to investors.

The corporation thus avoids any risk of being unable to sell the shares. Also, it obtains immediate use of the cash received from the underwriter. The investment banking firm, in turn, assumes the risk of reselling the shares, in return for an underwriting fee.² For example, Google (the world's number-one Internet search engine) used underwriters when it issued a highly successful initial public offering, raising \$1.67 billion. The underwriters charged a 3% underwriting fee (approximately \$50 million) on Google's stock offering.

How does a corporation set the price for a new issue of stock? Among the factors to be considered are (1) the company's anticipated future earnings, (2) its expected dividend rate per share, (3) its current financial position, (4) the current state of the economy, and (5) the current state of the securities market. The calculation can be complex and is properly the subject of a finance course.

MARKET PRICE OF STOCK

The stock of publicly held companies is traded on organized exchanges. The interaction between buyers and sellers determines the prices per share. In general, the prices set by the marketplace tend to follow the trend of a company's earnings and dividends. But, factors beyond a company's control, such as an oil embargo, changes in interest rates, and the outcome of a presidential election, may cause day-to-day fluctuations in market prices.

The trading of capital stock on securities exchanges involves the transfer of **already issued shares** from an existing stockholder to another investor. These transactions have **no impact** on a corporation's stockholders' equity.

INVESTOR INSIGHT

How to Read Stock Quotes

Organized exchanges trade the stock of publicly held companies at dollar prices per share established by the interaction between buyers and sellers. For each listed security, the financial press reports the high and low prices of the stock during the year, the total volume of stock traded on a given day, the high and low prices for the day, and the closing market price, with the net change for the day. Nike is listed on the New York Stock Exchange. Here is a listing for Nike:

Stock	52 Weeks		Volume	High	Low	Close	Net Change
	High	Low					
Nike	78.55	48.76	5,375,651	72.44	69.78	70.61	-1.69

These numbers indicate the following. The high and low market prices for the last 52 weeks have been \$78.55 and \$48.76. The trading volume for the day was 5,375,651 shares. The high, low, and closing prices for that date were \$72.44, \$69.78, and \$70.61, respectively. The net change for the day was a decrease of \$1.69 per share.

For stocks traded on organized exchanges, how are the dollar prices per share established? What factors might influence the price of shares in the marketplace? (See page 596.)

²Alternatively, the investment banking firm may agree only to enter into a **best-efforts** contract with the corporation. In such cases, the banker agrees to sell as many shares as possible at a specified price. The corporation bears the risk of unsold stock. Under a best-efforts arrangement, the banking firm is paid a fee or commission for its services.

PAR AND NO-PAR VALUE STOCKS

Par value stock is capital stock to which the charter has assigned a value per share. Years ago, par value determined the **legal capital** per share that a company must retain in the business for the protection of corporate creditors; that amount was not available for withdrawal by stockholders. Thus, in the past, most states required the corporation to sell its shares at par or above.

However, par value was often immaterial relative to the value of the company's stock—even at the time of issue. Thus, its usefulness as a protective device to creditors was questionable. For example, **Loews Corporation's** par value is \$0.01 per share, yet a new issue in 2010 would have sold at a **market price** in the \$35 per share range. Thus, par has no relationship with market price; in the vast majority of cases, it is an immaterial amount. As a consequence, today many states do not require a par value. Instead, they use other means to protect creditors.

No-par value stock is capital stock to which the charter has not assigned a value. No-par value stock is fairly common today. For example, **Nike** and **Procter & Gamble** both have no-par stock. In many states, the board of directors assigns a **stated value** to no-par shares.

> DO IT!

Corporate Organization

Indicate whether each of the following statements is true or false.

- _____ 1. Similar to partners in a partnership, stockholders of a corporation have unlimited liability.
- _____ 2. It is relatively easy for a corporation to obtain capital through the issuance of stock.
- _____ 3. The separation of ownership and management is an advantage of the corporate form of business.
- _____ 4. The journal entry to record the authorization of capital stock includes a credit to the appropriate capital stock account.
- _____ 5. All states require a par value per share for capital stock.

Solution

Action Plan

- ✓ Review the characteristics of a corporation and understand which are advantages and which are disadvantages.
- ✓ Understand that corporations raise capital through the issuance of stock, which can be par or no-par.

1. False. The liability of stockholders is normally limited to their investment in the corporation.
2. True.
3. False. The separation of ownership and management is a disadvantage of the corporate form of business.
4. False. The authorization of capital stock does not result in a formal accounting entry.
5. False. Many states do not require a par value.

Related exercise material: **BE11-1, E11-1, E11-2, and DO IT! 11-1.**

Corporate Capital

Owners' equity is identified by various names: **stockholders' equity**, **shareholders' equity**, or **corporate capital**. The stockholders' equity section of a corporation's balance sheet consists of two parts: (1) paid-in (contributed) capital and (2) retained earnings (earned capital).

The distinction between **paid-in capital** and **retained earnings** is important from both a legal and a financial point of view. Legally, corporations can make distributions of earnings (declare dividends) out of retained earnings in all states. However, in many states they cannot declare dividends out of paid-in capital. Management, stockholders, and others often look to retained earnings for the continued existence and growth of the corporation.

PAID-IN CAPITAL

Paid-in capital is the total amount of cash and other assets paid in to the corporation by stockholders in exchange for capital stock. As noted earlier, when a corporation has only one class of stock, it is **common stock**.

RETAINED EARNINGS

Retained earnings is net income that a corporation retains for future use. Net income is recorded in Retained Earnings by a closing entry that debits Income Summary and credits Retained Earnings. For example, assuming that net income for Delta Robotics in its first year of operations is \$130,000, the closing entry is:

A	=	L	+	SE
				-130,000 Inc
				+130,000 RE
Cash Flows				
no effect				

Income Summary	130,000	
Retained Earnings		130,000
(To close Income Summary and transfer net income to retained earnings)		

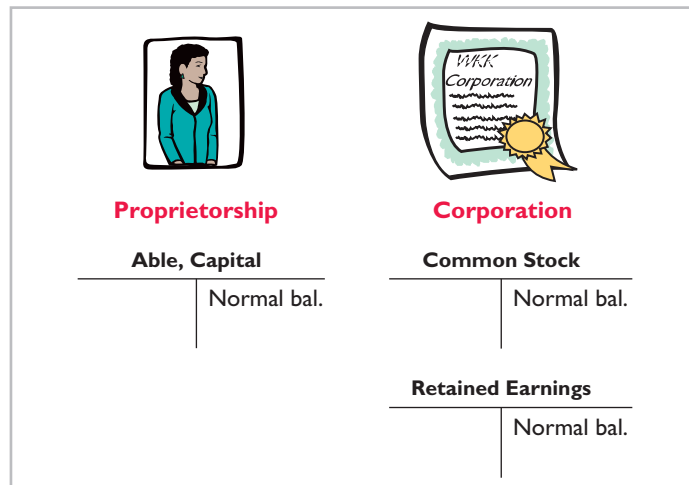

If Delta Robotics has a balance of \$800,000 in common stock at the end of its first year, its stockholders' equity section is as follows.

Illustration 11-5
Stockholders' equity section

Delta Robotics		
Balance Sheet (partial)		
Stockholders' equity		
Paid-in capital		
Common stock	\$800,000	
Retained earnings	<u>130,000</u>	
Total stockholders' equity		<u>\$930,000</u>

Illustration 11-6 compares the owners' equity (stockholders' equity) accounts reported on a balance sheet for a proprietorship and a corporation.

Illustration 11-6
Comparison of owners' equity accounts

> **DO IT!**

Corporate Capital

At the end of its first year of operation, Doral Corporation has \$750,000 of common stock and net income of \$122,000. Prepare (a) the closing entry for net income and (b) the stockholders' equity section at year-end.

Solution

Action Plan

- ✓ Record net income in Retained Earnings by a closing entry in which Income Summary is debited and Retained Earnings is credited.
- ✓ In the stockholders' equity section, show (1) paid-in capital and (2) retained earnings.

(a) Income Summary	122,000	
Retained Earnings		122,000
(To close Income Summary and transfer net income to retained earnings)		
(b) Stockholders' equity		
Paid-in capital		
Common stock	\$750,000	
Retained earnings	122,000	
Total stockholders' equity		<u>\$872,000</u>

Related exercise material: **Do It!** 11-2.

PEOPLE, PLANET, AND PROFIT INSIGHT

The Impact of Corporate Social Responsibility

A 2010 survey conducted by Institutional Shareholder Services, a proxy advisory firm, shows that 83% of investors now believe environmental and social factors can have a significant impact on shareholder value over the long term. This belief is clearly visible in the rising level of support for shareholder proposals requesting action related to social and environmental issues.

The following table shows that the number of corporate social responsibility (CSR) related shareholder proposals rose from 150 in 2000 to 191 in 2010. Moreover, those proposals garnered average voting support of 18.4% of votes cast versus just 7.5% a decade earlier.

Trends in Shareholder Proposals on Corporate Responsibility

	<u>2000</u>	<u>2005</u>	<u>2010</u>
Number of proposals voted	150	155	191
Average voting support	7.5%	9.9%	18.4%
Percent proposals receiving > 10% support	16.7%	31.2%	52.1%

Source: Investor Responsibility Research Center, Ernst & Young, *Seven Questions CEOs and Boards Should Ask About: "Triple Bottom Line" Reporting*.

Why are CSR-related shareholder proposals increasing? (See page 596.)

Accounting for Stock Transactions

LEARNING OBJECTIVE 2

Record the issuance of common stock.

Accounting for Common Stock Issues

Let’s now look at how to account for issues of common stock. The primary objectives in accounting for the issuance of common stock are (1) to identify the specific sources of paid-in capital, and (2) to maintain the distinction between paid-in capital and retained earnings. **The issuance of common stock affects only paid-in capital accounts.**

ISSUING PAR VALUE COMMON STOCK FOR CASH

As discussed earlier, par value does not indicate a stock’s market price. Therefore, the cash proceeds from issuing par value stock may be equal to, greater than, or less than par value. When the company records issuance of common stock for cash, it credits to Common Stock the par value of the shares. It records in a separate paid-in capital account the portion of the proceeds that is above or below par value.

To illustrate, assume that Hydro-Slide, Inc. issues 1,000 shares of \$1 par value common stock at par for cash. The entry to record this transaction is:

A	=	L + SE
+1,000		+1,000 CS
Cash Flows		
+1,000		

Cash	1,000	
Common Stock		1,000
(To record issuance of 1,000 shares of \$1 par common stock at par)		

Now assume that Hydro-Slide issues an additional 1,000 shares of the \$1 par value common stock for cash at \$5 per share. The amount received above the par value, in this case \$4 (\$5 – \$1), is credited to Paid-in Capital in Excess of Par—Common Stock. The entry is:

A	=	L + SE
+5,000		+1,000 CS
		+4,000 CS
Cash Flows		
+5,000		

Cash	5,000	
Common Stock		1,000
Paid-in Capital in Excess of Par—Common Stock		4,000
(To record issuance of 1,000 shares of \$1 par common stock)		

The total paid-in capital from these two transactions is \$6,000, and the legal capital is \$2,000. Assuming Hydro-Slide, Inc. has retained earnings of \$27,000, Illustration 11-7 shows the company’s stockholders’ equity section.

Illustration 11-7
Stockholders’ equity—paid-in capital in excess of par

Alternative Terminology
Paid-in Capital in Excess of Par is also called *Premium on Stock*.

Hydro-Slide, Inc. Balance Sheet (partial)	
Stockholders’ equity	
Paid-in capital	
Common stock	\$ 2,000
Paid-in capital in excess of par— common stock	4,000
Total paid-in capital	6,000
Retained earnings	27,000
Total stockholders’ equity	\$33,000

When a corporation issues stock for less than par value, it debits the account Paid-in Capital in Excess of Par—Common Stock if a credit balance exists in this account. If a credit balance does not exist, then the corporation debits to Retained Earnings the amount less than par. This situation occurs only rarely:

Most states do not permit the sale of common stock below par value because stockholders may be held personally liable for the difference between the price paid upon original sale and par value.

ISSUING NO-PAR COMMON STOCK FOR CASH

When no-par common stock has a stated value, the entries are similar to those illustrated for par value stock. The corporation credits the stated value to Common Stock. Also, when the selling price of no-par stock exceeds stated value, the corporation credits the excess to Paid-in Capital in Excess of Stated Value—Common Stock.

For example, assume that instead of \$1 par value stock, Hydro-Slide, Inc. has \$5 stated value no-par stock and the company issues 5,000 shares at \$8 per share for cash. The entry is:

Cash	40,000	
Common Stock		25,000
Paid-in Capital in Excess of Stated Value—Common Stock (To record issue of 5,000 shares of \$5 stated value no-par stock)		15,000

Hydro-Slide, Inc. reports Paid-in Capital in Excess of Stated Value—Common Stock as part of paid-in capital in the stockholders' equity section.

What happens when no-par stock does not have a stated value? In that case, the corporation credits the entire proceeds to Common Stock. Thus, if Hydro-Slide does not assign a stated value to its no-par stock, it records the issuance of the 5,000 shares at \$8 per share for cash as follows.

Cash	40,000	
Common Stock (To record issue of 5,000 shares of no-par stock)		40,000

ISSUING COMMON STOCK FOR SERVICES OR NONCASH ASSETS

Corporations also may issue stock for services (compensation to attorneys or consultants) or for noncash assets (land, buildings, and equipment). In such cases, what cost should be recognized in the exchange transaction? To comply with the **cost principle**, in a noncash transaction **cost is the cash equivalent price**. Thus, **cost is either the fair value of the consideration given up, or the fair value of the consideration received**, whichever is more clearly determinable.

To illustrate, assume that attorneys have helped Jordan Company incorporate. They have billed the company \$5,000 for their services. They agree to accept 4,000 shares of \$1 par value common stock in payment of their bill. At the time of the exchange, there is no established market price for the stock. In this case, the fair value of the consideration received, \$5,000, is more clearly evident. Accordingly, Jordan Company makes the following entry.

Organization Expense	5,000	
Common Stock		4,000
Paid-in Capital in Excess of Par—Common Stock (To record issuance of 4,000 shares of \$1 par value stock to attorneys)		1,000

As explained on page 541, organization costs are expensed as incurred.

In contrast, assume that Athletic Research Inc. is an existing publicly held corporation. Its \$5 par value stock is actively traded at \$8 per share. The company issues 10,000 shares of stock to acquire land recently advertised for sale at \$90,000. The most clearly evident value in this noncash transaction is

A	=	L	+	SE
+40,000				+25,000 CS +15,000 CS

Cash Flows
+40,000

A	=	L	+	SE
+40,000				+40,000 CS

Cash Flows
+40,000

A	=	L	+	SE
				-5,000 Exp +4,000 CS +1,000 CS

Cash Flows
no effect

A	=	L	+	SE
+80,000				
		+50,000 CS		
		+30,000 CS		
<hr/>				
Cash Flows				
no effect				

the market price of the consideration given, \$80,000. The company records the transaction as follows.

Land	80,000	
Common Stock		50,000
Paid-in Capital in Excess of Par—Common Stock		30,000
(To record issuance of 10,000 shares of \$5 par value stock for land)		

As illustrated in these examples, **the par value of the stock is never a factor in determining the cost of the assets received.** This is also true of the stated value of no-par stock.

ANATOMY OF A FRAUD

The president, chief operating officer, and chief financial officer of **SafeNet**, a software encryption company, were each awarded employee stock options by the company's board of directors as part of their compensation package. Stock options enable an employee to buy a company's stock sometime in the future at the price that existed when the stock option was awarded. For example, suppose that you received stock options today, when the stock price of your company was \$30. Three years later, if the stock price rose to \$100, you could "exercise" your options and buy the stock for \$30 per share, thereby making \$70 per share. After being awarded their stock options, the three employees changed the award dates in the company's records to dates in the past, when the company's stock was trading at historical lows. For example, using the previous example, they would choose a past date when the stock was selling for \$10 per share, rather than the \$30 price on the actual award date. In our example, this would increase the profit from exercising the options to \$90 per share.

Total take: \$1.7 million

The Missing Control

Independent internal verification. The company's board of directors should have ensured that the awards were properly administered. For example, the date on the minutes from the board meeting could be compared to the dates that were recorded for the awards. In addition, the dates should again be confirmed upon exercise.

> DO IT!

Issuance of Stock

Action Plan

- ✓ In issuing shares for cash, credit Common Stock for par value per share.
- ✓ Credit any additional proceeds in excess of par to a separate paid-in capital account.
- ✓ When stock is issued for services, use the cash equivalent price.
- ✓ For the cash equivalent price, use either the fair value of what is given up or the fair value of what is received, whichever is more clearly determinable.

Cayman Corporation begins operations on March 1 by issuing 100,000 shares of \$10 par value common stock for cash at \$12 per share. On March 15, it issues 5,000 shares of common stock to attorneys in settlement of their bill of \$50,000 for organization costs. Journalize the issuance of the shares, assuming the stock is not publicly traded.

Solution

Mar. 1	Cash	1,200,000	
	Common Stock		1,000,000
	Paid-in Capital in Excess of Par—Common Stock		200,000
	(To record issuance of 100,000 shares at \$12 per share)		
Mar. 15	Organization Expense	50,000	
	Common Stock		50,000
	(To record issuance of 5,000 shares for attorneys' fees)

Accounting for Treasury Stock

Treasury stock is a corporation's own stock that it has issued and subsequently reacquired from shareholders, but not retired. A corporation may acquire treasury stock for various reasons:

1. To reissue the shares to officers and employees under bonus and stock compensation plans.
2. To signal to the stock market that management believes the stock is underpriced, in the hope of enhancing its market price.
3. To have additional shares available for use in the acquisition of other companies.
4. To reduce the number of shares outstanding and thereby increase earnings per share.

Another infrequent reason for purchasing shares is that management may want to eliminate hostile shareholders by buying them out.

Many corporations have treasury stock. For example, approximately 70% of U.S. companies have treasury stock.³ In a recent year, Nike purchased more than 6 million treasury shares.

PURCHASE OF TREASURY STOCK

Companies generally account for treasury stock by **the cost method**. This method uses the cost of the shares purchased to value the treasury stock. Under the cost method, the company debits **Treasury Stock** for the **price paid to reacquire the shares**. When the company disposes of the shares, it credits to Treasury Stock **the same amount** it paid to reacquire the shares.

To illustrate, assume that on January 1, 2014, the stockholders' equity section of Mead, Inc. has 100,000 shares of \$5 par value common stock outstanding (all issued at par value) and Retained Earnings of \$200,000. The stockholders' equity section before purchase of treasury stock is as follows.

Mead, Inc. Balance Sheet (partial)	
Stockholders' equity	
Paid-in capital	
Common stock, \$5 par value, 100,000 shares issued and outstanding	\$500,000
Retained earnings	200,000
Total stockholders' equity	<u>\$700,000</u>

On February 1, 2014, Mead acquires 4,000 shares of its stock at \$8 per share. The entry is:

Feb. 1	Treasury Stock	32,000		
	Cash		32,000	
	(To record purchase of 4,000 shares of treasury stock at \$8 per share)			

Note that Mead debits Treasury Stock for the cost of the shares purchased. Is the original paid-in capital account, Common Stock, affected? No, because the number of issued shares does not change. In the stockholders' equity section of

LEARNING OBJECTIVE 3

Explain the accounting for treasury stock.

Helpful Hint

Treasury shares do not have dividend rights or voting rights.

Illustration 11-8
Stockholders' equity with no treasury stock

A	=	L	+	SE
				-32,000 TS
-32,000				
<hr/>				
Cash Flows

³Accounting Trends & Techniques 2010 (New York: American Institute of Certified Public Accountants).

the balance sheet, Mead deducts treasury stock from total paid-in capital and retained earnings. Treasury Stock is a **contra stockholders' equity account**. Thus, the acquisition of treasury stock reduces stockholders' equity.

The stockholders' equity section of Mead, Inc. after purchase of treasury stock is as follows.

Illustration 11-9
Stockholders' equity
with treasury stock

Mead, Inc. Balance Sheet (partial)	
Stockholders' equity	
Paid-in capital	
Common stock, \$5 par value, 100,000 shares issued and 96,000 shares outstanding	\$500,000
Retained earnings	200,000
Total paid-in capital and retained earnings	700,000
Less: Treasury stock (4,000 shares)	32,000
Total stockholders' equity	\$668,000

Ethics Note

The purchase of treasury stock reduces the cushion for creditors and preferred stockholders. A restriction for the cost of treasury stock purchased is often required. The restriction is usually applied to retained earnings.

Mead discloses in the balance sheet both the number of shares issued (100,000) and the number in the treasury (4,000). The difference is the number of shares of stock outstanding (96,000). The term **outstanding stock** means the number of shares of issued stock that are being held by stockholders.

Some maintain that companies should report treasury stock as an asset because it can be sold for cash. Under this reasoning, companies should also show unissued stock as an asset, clearly an erroneous conclusion. Rather than being an asset, treasury stock reduces stockholder claims on corporate assets. This effect is correctly shown by reporting treasury stock as a deduction from total paid-in capital and retained earnings.

ACCOUNTING ACROSS THE ORGANIZATION

Why Did Reebok Buy Its Own Stock?

In a bold (and some would say risky) move, **Reebok** at one time bought back nearly a *third* of its shares. This repurchase of shares dramatically reduced Reebok's available cash. In fact, the company borrowed significant funds to accomplish the repurchase. In a press release, management stated that it was repurchasing the shares because it believed its stock was severely underpriced. The repurchase of so many shares was meant to signal management's belief in good future earnings.

Skeptics, however, suggested that Reebok's management was repurchasing shares to make it less likely that another company would acquire Reebok (in which case Reebok's top managers would likely lose their jobs). By depleting its cash, Reebok became a less likely acquisition target. Acquiring companies like to purchase companies with large cash balances so they can pay off debt used in the acquisition.

What signal might a large stock repurchase send to investors regarding management's belief about the company's growth opportunities? (See page 596.)

DISPOSAL OF TREASURY STOCK

Treasury stock is usually sold or retired. The accounting for its sale differs when treasury stock is sold above cost than when it is sold below cost.

SALE OF TREASURY STOCK ABOVE COST If the selling price of the treasury shares is equal to their cost, the company records the sale of the shares by a debit to Cash and a credit to Treasury Stock. When the selling price of the shares is greater than their cost, the company credits the difference to Paid-in Capital from Treasury Stock.

To illustrate, assume that on July 1, Mead, Inc. sells for \$10 per share the 1,000 shares of its treasury stock, previously acquired at \$8 per share. The entry is as follows.

July 1	Cash	10,000	
	Treasury Stock		8,000
	Paid-in Capital from Treasury Stock		2,000
	(To record sale of 1,000 shares of treasury stock above cost)		

Mead does not record a \$2,000 gain on sale of treasury stock for two reasons: (1) Gains on sales occur when **assets** are sold, and treasury stock is not an asset. (2) A corporation does not realize a gain or suffer a loss from stock transactions with its own stockholders. Thus, companies should not include in net income any paid-in capital arising from the sale of treasury stock. Instead, they report Paid-in Capital from Treasury Stock separately on the balance sheet, as a part of paid-in capital.

SALE OF TREASURY STOCK BELOW COST When a company sells treasury stock below its cost, it usually debits to Paid-in Capital from Treasury Stock the excess of cost over selling price. Thus, if Mead, Inc. sells an additional 800 shares of treasury stock on October 1 at \$7 per share, it makes the following entry.

Oct. 1	Cash	5,600	
	Paid-in Capital from Treasury Stock	800	
	Treasury Stock		6,400
	(To record sale of 800 shares of treasury stock below cost)		

Observe the following from the two sales entries: (1) Mead credits Treasury Stock at cost in each entry. (2) Mead uses Paid-in Capital from Treasury Stock for the difference between cost and the resale price of the shares. (3) The original paid-in capital account, Common Stock, is not affected. **The sale of treasury stock increases both total assets and total stockholders' equity.**

After posting the foregoing entries, the treasury stock accounts will show the following balances on October 1.

Treasury Stock		Paid-in Capital from Treasury Stock	
Feb. 1	32,000	July 1	8,000
		Oct. 1	6,400
Oct. 1 Bal.	17,600	Oct. 1	800
		July 1	2,000
		Oct. 1 Bal.	1,200

When a company fully depletes the credit balance in Paid-in Capital from Treasury Stock, it debits to Retained Earnings any additional excess of cost over selling price. To illustrate, assume that Mead, Inc. sells its remaining 2,200 shares at \$7 per share on December 1. The excess of cost over selling price is \$2,200

Helpful Hint

Treasury stock transactions are classified as capital stock transactions. As in the case when stock is issued, the income statement is not involved.

A	=	L	+	SE
+10,000				+8,000 TS +2,000 TS

Cash Flows
+10,000

A	=	L	+	SE

		-1,200 TS		
		-1,000 RE		
		+17,600 TS		
<hr/>				
Cash Flows				
+15,400				

[2,200 × (\$8 – \$7)]. In this case, Mead debits \$1,200 of the excess to Paid-in Capital from Treasury Stock. It debits the remainder to Retained Earnings. The entry is:

Dec. 1	Cash	15,400	
	Paid-in Capital from Treasury Stock	1,200	
	Retained Earnings	1,000	
	Treasury Stock		17,600
	(To record sale of 2,200 shares of treasury stock at \$7 per share)		

> DO IT!

Treasury Stock

Action Plan

- ✓ Record the purchase of treasury stock at cost.
- ✓ When treasury stock is sold above its cost, credit the excess of the selling price over cost to Paid-in Capital from Treasury Stock.
- ✓ When treasury stock is sold below its cost, debit the excess of cost over selling price to Paid-in Capital from Treasury Stock.

Santa Anita Inc. purchases 3,000 shares of its \$50 par value common stock for \$180,000 cash on July 1. It will hold the shares in the treasury until resold. On November 1, the corporation sells 1,000 shares of treasury stock for cash at \$70 per share. Journalize the treasury stock transactions.

Solution

July 1	Treasury Stock	180,000	
	Cash		180,000
	(To record the purchase of 3,000 shares at \$60 per share)		
Nov. 1	Cash	70,000	
	Treasury Stock		60,000
	Paid-in Capital from Treasury Stock		10,000
	(To record the sale of 1,000 shares at \$70 per share)

Accounting for Preferred Stock

LEARNING OBJECTIVE 4

Differentiate preferred stock from common stock.

To appeal to more investors, a corporation may issue an additional class of stock, called preferred stock. **Preferred stock** has contractual provisions that give it some preference or priority over common stock. Typically, preferred stockholders have a priority as to (1) distributions of earnings (dividends) and (2) assets in the event of liquidation. However, they generally do not have voting rights.

Like common stock, corporations may issue preferred stock for cash or for noncash assets. The entries for these transactions are similar to the entries for common stock. When a corporation has more than one class of stock, each paid-in capital account title should identify the stock to which it relates. A company might have the following accounts: Preferred Stock, Common Stock, Paid-in Capital in Excess of Par—Preferred Stock, and Paid-in Capital in Excess of Par—Common Stock. For example, if Stine Corporation issues 10,000 shares of \$10 par value preferred stock for \$12 cash per share, the entry to record the issuance is:

A	=	L	+	SE
+120,000				
		+100,000 PS		
		+20,000 PS		
<hr/>				
Cash Flows				
+120,000				

Cash	120,000	
Preferred Stock		100,000
Paid-in Capital in Excess of Par—Preferred Stock		20,000
(To record the issuance of 10,000 shares of \$10 par value preferred stock)		

Preferred stock may have either a par value or no-par value. In the stockholders' equity section of the balance sheet, companies list preferred stock first because of its dividend and liquidation preferences over common stock.

We discuss various features associated with the issuance of preferred stock on the following pages.

DIVIDEND PREFERENCES

As indicated above, **preferred stockholders have the right to receive dividends before common stockholders**. For example, if the dividend rate on preferred stock is \$5 per share, common shareholders will not receive any dividends in the current year until preferred stockholders have received \$5 per share. The first claim to dividends does not, however, guarantee the payment of dividends. Dividends depend on many factors, such as adequate retained earnings and availability of cash. If a company does not pay dividends to preferred stockholders, it cannot of course pay dividends to common stockholders.

For preferred stock, companies state the per share dividend amount as a percentage of the par value or as a specified amount. For example, **Earthlink** specifies a 3% dividend on its \$100 par value preferred, whereas **PepsiCo** pays \$4.56 per share on its no-par value stock.

CUMULATIVE DIVIDEND Preferred stock often contains a **cumulative dividend** feature. This means that preferred stockholders must be paid both current-year dividends and any unpaid prior-year dividends before common stockholders receive dividends. When preferred stock is cumulative, preferred dividends not declared in a given period are called **dividends in arrears**.

To illustrate, assume that Scientific Leasing has 5,000 shares of 7%, \$100 par value, cumulative preferred stock outstanding. Each \$100 share pays a \$7 dividend ($.07 \times \$100$). The annual dividend is \$35,000 ($5,000 \times \7 per share). If dividends are two years in arrears, preferred stockholders are entitled to receive the following dividends in the current year.

Dividends in arrears ($\$35,000 \times 2$)	\$ 70,000
Current-year dividends	35,000
Total preferred dividends	<u>\$105,000</u>

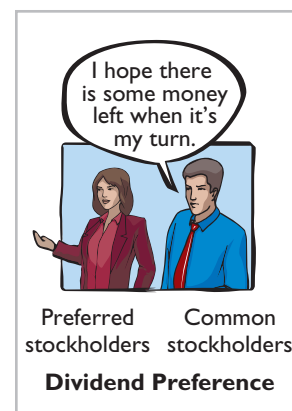

Illustration 11-11
Computation of total dividends to preferred stock

The company cannot pay dividends to common stockholders until it pays the entire preferred dividend. In other words, companies cannot pay dividends to common stockholders while any preferred dividends are in arrears.

Are dividends in arrears considered a liability? **No—no payment obligation exists until the board of directors declares a dividend.** However, companies should disclose in the notes to the financial statements the amount of dividends in arrears. Doing so enables investors to assess the potential impact of this commitment on the corporation's financial position.

Companies that are unable to meet their dividend obligations are not looked upon favorably by the investment community. As a financial officer noted in discussing one company's failure to pay its cumulative preferred dividend for a period of time, "Not meeting your obligations on something like that is a major black mark on your record." The accounting entries for preferred stock dividends are explained later in this chapter.

LIQUIDATION PREFERENCE

Most preferred stocks also have a preference on corporate assets if the corporation fails. This feature provides security for the preferred stockholder. The preference to assets may be for the par value of the shares or for a specified liquidating value. For example, **Commonwealth Edison's** preferred stock entitles its holders

to receive \$31.80 per share, plus accrued and unpaid dividends, in the event of liquidation. The liquidation preference establishes the respective claims of creditors and preferred stockholders in litigation involving bankruptcy lawsuits.

Dividends

LEARNING OBJECTIVE 5

Prepare the entries for cash dividends and stock dividends.

A **dividend** is a corporation's distribution of cash or stock to its stockholders on a **pro rata (proportional to ownership)** basis. Pro rata means that if you own 10% of the common shares, you will receive 10% of the dividend. Dividends can take four forms: cash, property, scrip (a promissory note to pay cash), or stock. Cash dividends predominate in practice. Also, companies declare stock dividends with some frequency. These two forms of dividends will be the focus of discussion in this chapter.

Investors are very interested in a company's dividend practices. In the financial press, **dividends are generally reported quarterly as a dollar amount per share.** (Sometimes they are reported on an annual basis.) For example, Nike's **quarterly** dividend rate in the fourth quarter of 2010 was 27 cents per share. The dividend rate for the fourth quarter of 2010 for GE was 12 cents, and for ConAgra Foods it was 28 cents.

Cash Dividends

A **cash dividend** is a pro rata distribution of cash to stockholders. For a corporation to pay a cash dividend, it must have:

1. Retained earnings. The legality of a cash dividend depends on the laws of the state in which the company is incorporated. Payment of cash dividends from retained earnings is legal in all states. In general, cash dividend distributions from only the balance in common stock (legal capital) are illegal.

A dividend declared out of paid-in capital is termed a **liquidating dividend.** Such a dividend reduces or "liquidates" the amount originally paid in by stockholders. Statutes vary considerably with respect to cash dividends based on paid-in capital in excess of par or stated value. Many states permit such dividends.

2. Adequate cash. The legality of a dividend and the ability to pay a dividend are two different things. For example, Nike, with retained earnings of over \$4.8 billion, could legally declare a dividend of at least \$4.8 billion. But Nike's cash balance is only \$1.8 billion.

Before declaring a cash dividend, a company's board of directors must carefully consider both current and future demands on the company's cash resources. In some cases, current liabilities may make a cash dividend inappropriate. In other cases, a major plant expansion program may warrant only a relatively small dividend.

3. A declaration of dividends. A company does not pay dividends unless its board of directors decides to do so, at which point the board "declares" the dividend. The board of directors has full authority to determine the amount of income to distribute in the form of a dividend and the amount to retain in the business. Dividends do not accrue like interest on a note payable, and they are not a liability until declared.

The amount and timing of a dividend are important issues for management to consider. The payment of a large cash dividend could lead to liquidity problems for the company. On the other hand, a small dividend or a missed dividend

may cause unhappiness among stockholders. Many stockholders expect to receive a reasonable cash payment from the company on a periodic basis. Many companies declare and pay cash dividends quarterly. On the other hand, a number of high-growth companies pay no dividends, preferring to conserve cash to finance future capital expenditures.

ENTRIES FOR CASH DIVIDENDS

Three dates are important in connection with dividends: (1) the declaration date, (2) the record date, and (3) the payment date. Normally, there are two to four weeks between each date. Companies make accounting entries on the declaration date and the payment date.

On the **declaration date**, the board of directors formally declares (authorizes) the cash dividend and announces it to stockholders. Declaration of a cash dividend **commits the corporation to a legal obligation**. The obligation is binding and cannot be rescinded. The company makes an entry to recognize the increase in Cash Dividends and the increase in the liability Dividends Payable.

To illustrate, assume that on December 1, 2014, the directors of Media General declare a 50¢ per share cash dividend on 100,000 shares of \$10 par value common stock. The dividend is \$50,000 ($100,000 \times 50¢$). The entry to record the declaration is:

Declaration Date			
Dec. 1	Cash Dividends Dividends Payable (To record declaration of cash dividend)	50,000	50,000

Media General debits the account Cash Dividends. Cash dividends decrease retained earnings. We use the specific title Cash Dividends to differentiate it from other types of dividends, such as stock dividends. Dividends Payable is a current liability: It will normally be paid within the next several months.

When using a dividend account, the company transfers the balance of that account to Retained Earnings at the end of the year by a closing entry. Whichever account is used for the dividend declaration, the effect is the same: Retained earnings decreases, and a current liability increases. *For homework problems, you should use the Cash Dividends account for recording dividend declarations.*

At the **record date**, the company determines ownership of the outstanding shares for dividend purposes. The stockholders' records maintained by the corporation supply this information. In the interval between the declaration date and the record date, the corporation updates its stock ownership records. For Media General, the record date is December 22. No entry is required on this date because the corporation's liability recognized on the declaration date is unchanged.

Record Date			
Dec. 22	No entry necessary		

On the **payment date**, the company makes cash dividend payments to the stockholders of record (as of December 22) and records the payment of the dividend. If January 20 is the payment date for Media General, the entry on that date is:

Payment Date			
Jan. 20	Dividends Payable Cash (To record payment of cash dividend)	50,000	50,000

Note that payment of the dividend reduces both current assets and current liabilities. It has no effect on stockholders' equity. The **cumulative effect** of the **declaration and payment** of a cash dividend is to **decrease both stockholders'**

A	=	L	+	SE
<div style="display: flex; justify-content: space-between; align-items: center;"> -50,000 Div +50,000 </div>				

Cash Flows
no effect

Helpful Hint

The purpose of the record date is to identify the persons or entities that will receive the dividend, not to determine the amount of the dividend liability.

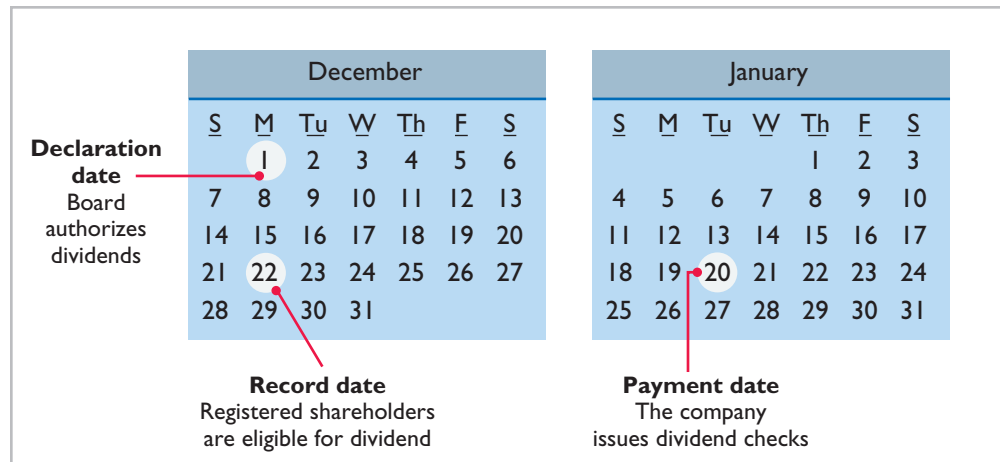

A	=	L	+	SE
<div style="display: flex; justify-content: space-between; align-items: center;"> -50,000 -50,000 </div>				

Cash Flows
-50,000

equity and total assets. Illustration 11-12 summarizes the three important dates associated with dividends for Media General.

Illustration 11-12
Key dividend dates

ALLOCATING CASH DIVIDENDS BETWEEN PREFERRED AND COMMON STOCK

As explained earlier in the chapter, preferred stock has priority over common stock in regard to dividends. Holders of cumulative preferred stock must be paid any unpaid prior-year dividends and its current year’s dividend before common stockholders receive dividends.

To illustrate, assume that at December 31, 2014, IBR Inc. has 1,000 shares of 8%, \$100 par value cumulative preferred stock. It also has 50,000 shares of \$10 par value common stock outstanding. The dividend per share for preferred stock is \$8 (\$100 par value × 8%). The required annual dividend for preferred stock is therefore \$8,000 (1,000 × \$8). At December 31, 2014, the directors declare a \$6,000 cash dividend. In this case, the entire dividend amount goes to preferred stockholders because of their dividend preference. The entry to record the declaration of the dividend is:

A	=	L	+	SE
				-6,000 Div
				+6,000
<hr style="border: 0.5px solid black;"/>				
Cash Flows				
no effect				

Dec. 31	Cash Dividends	6,000	
	Dividends Payable		6,000
	(To record \$6 per share cash dividend to preferred stockholders)		

Because of the cumulative feature, dividends of \$2 (\$8 – \$6) per share are in arrears on preferred stock for 2014. IBR must pay these dividends to preferred stockholders before it can pay any future dividends to common stockholders. IBR should disclose dividends in arrears in the financial statements.

At December 31, 2015, IBR declares a \$50,000 cash dividend. The allocation of the dividend to the two classes of stock is as follows.

Illustration 11-13
Allocating dividends to preferred and common stock

Total dividend		\$50,000
Allocated to preferred stock		
Dividends in arrears, 2014 (1,000 × \$2)	\$2,000	
2015 dividend (1,000 × \$8)	8,000	10,000
Remainder allocated to common stock		\$40,000

The entry to record the declaration of the dividend is:

Dec. 31	Cash Dividends	50,000		
	Dividends Payable		50,000	
	(To record declaration of cash dividends of \$10,000 to preferred stock and \$40,000 to common stock)			

A	=	L	+	SE
				-50,000 Div
				+50,000
<hr/>				
Cash Flows				
no effect				

If IBR's preferred stock is not cumulative, preferred stockholders receive only \$8,000 in dividends in 2015. Common stockholders receive \$42,000.

ACCOUNTING ACROSS THE ORGANIZATION

Up, Down, and ??

The decision whether to pay a dividend, and how much to pay, is a very important management decision. As the chart below shows, from 2002 to 2007, many companies substantially increased their dividends, and total dividends paid by U.S. companies hit record levels. One reason for the increase is that Congress lowered, from 39% to 15%, the tax rate paid by investors on dividends received, making dividends more attractive to investors.

Then the financial crisis of 2008 occurred. As result, in 2009, 804 companies cut their dividends (see chart), the highest level since the S&P started collecting data in 1995. In 2010, more companies started to increase their dividends. However, potential higher taxes on dividends coming in the future and the possibility of a low-growth economy may stall any significant increase.

Source: Matt Phillips and Jay Miller, "Last Year's Dividend Slash Was \$58 Billion," *Wall Street Journal* (January 8, 2010), p. C5.

What factors must management consider in deciding how large a dividend to pay? (See page 596.)

> DO IT!**Dividends on Preferred and Common Stock**

MasterMind Corporation has 2,000 shares of 6%, \$100 par value preferred stock outstanding at December 31, 2014. At December 31, 2014, the company declared a \$60,000 cash dividend. Determine the dividend paid to preferred stockholders and common stockholders under each of the following scenarios.

1. The preferred stock is noncumulative, and the company has not missed any dividends in previous years.
2. The preferred stock is noncumulative, and the company did not pay a dividend in each of the two previous years.
3. The preferred stock is cumulative, and the company did not pay a dividend in each of the two previous years.

Action Plan

- ✓ Determine dividends on preferred shares by multiplying the dividend rate times the par value of the stock times the number of preferred shares.
- ✓ Understand the cumulative feature: If preferred stock is cumulative, then any missed dividends (dividends in arrears) and the current year's dividend must be paid to preferred stockholders before dividends are paid to common stockholders.

Solution

1. The company has not missed past dividends and the preferred stock is noncumulative. Thus, the preferred stockholders are paid only this year's dividend. The dividend paid to preferred stockholders would be \$12,000 ($2,000 \times .06 \times \100). The dividend paid to common stockholders would be \$48,000 ($\$60,000 - \$12,000$).
2. The preferred stock is noncumulative; thus, past unpaid dividends do not have to be paid. The dividend paid to preferred stockholders would be \$12,000 ($2,000 \times .06 \times \100). The dividend paid to common stockholders would be \$48,000 ($\$60,000 - \$12,000$).
3. The preferred stock is cumulative; thus, dividends that have been missed (dividends in arrears) must be paid. The dividend paid to preferred stockholders would be \$36,000 ($3 \times 2,000 \times .06 \times \100). The dividend paid to common stockholders would be \$24,000 ($\$60,000 - \$36,000$).

The Navigator

Stock Dividends

A **stock dividend** is a pro rata distribution to stockholders of the corporation's own stock. Whereas a company pays cash in a cash dividend, a company issues shares of stock in a stock dividend. **A stock dividend results in a decrease in retained earnings and an increase in paid-in capital.** Unlike a cash dividend, a stock dividend does not decrease total stockholders' equity or total assets.

To illustrate, assume that you have a 2% ownership interest in Cetus Inc.; you own 20 of its 1,000 shares of common stock. If Cetus declares a 10% stock dividend, it would issue 100 shares ($1,000 \times 10\%$) of stock. You would receive two shares ($2\% \times 100$). Would your ownership interest change? No, it would remain at 2% ($22 \div 1,100$). **You now own more shares of stock, but your ownership interest has not changed.** Illustration 11-14 shows the effect of a stock dividend for stockholders.

Cetus has disbursed no cash, and has assumed no liabilities. What, then, are the purposes and benefits of a stock dividend? Corporations issue stock dividends generally for one or more of the following reasons.

1. To satisfy stockholders' dividend expectations without spending cash.
2. To increase the marketability of the corporation's stock. When the number of shares outstanding increases, the market price per share decreases. Decreasing

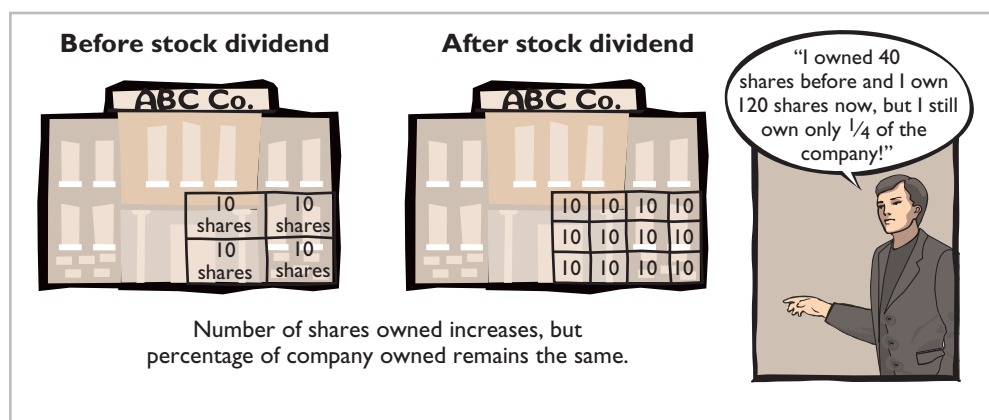

Illustration 11-14
Effect of stock dividend for stockholders

the market price of the stock makes it easier for smaller investors to purchase the shares.

- To emphasize that a portion of stockholders' equity has been permanently reinvested in the business (and is unavailable for cash dividends).

When the dividend is declared, the board of directors determines the size of the stock dividend and the value assigned to each dividend.

Generally, if the company issues a **small stock dividend** (less than 20–25% of the corporation's issued stock), the value assigned to the dividend is the fair value per share. This treatment is based on the assumption that a small stock dividend will have little effect on the market price of the shares previously outstanding. Thus, many stockholders consider small stock dividends to be distributions of earnings equal to the fair market value of the shares distributed. If a company issues a **large stock dividend** (greater than 20–25%), the value assigned to the dividend is the par or stated value. Small stock dividends predominate in practice. Thus, we will illustrate only entries for small stock dividends.

ENTRIES FOR STOCK DIVIDENDS

To illustrate the accounting for small stock dividends, assume that Medland Corporation has a balance of \$300,000 in retained earnings. It declares a 10% stock dividend on its 50,000 shares of \$10 par value common stock. The current fair market value of its stock is \$15 per share. The number of shares to be issued is 5,000 ($10\% \times 50,000$). Therefore the total amount to be debited to Stock Dividends is \$75,000 ($5,000 \times \15). The entry to record the declaration of the stock dividend is as follows.

Stock Dividends	75,000	
Common Stock Dividends Distributable		50,000
Paid-in Capital in Excess of Par—Common Stock		25,000
(To record declaration of 10% stock dividend)		

A	=	L	+	SE
				–75,000 Div
				+50,000 CS
				+25,000 CS

Cash Flows
no effect

Medland debits Stock Dividends for the fair market value of the stock issued ($\$15 \times 5,000$). (Similar to Cash Dividends, Stock Dividends decrease retained earnings.) Medland also credits Common Stock Dividends Distributable for the par value of the dividend shares ($\$10 \times 5,000$), and credits Paid-in Capital in Excess of Par—Common Stock for the excess over par ($\$5 \times 5,000$).

Common Stock Dividends Distributable is a **stockholders' equity account**. It is not a liability because assets will not be used to pay the dividend. If the company prepares a balance sheet before it issues the dividend shares, it reports the distributable account under paid-in capital as shown in Illustration 11-15 (page 562).

Illustration 11-15

Statement presentation of common stock dividends distributable

Paid-in capital		
Common stock	\$500,000	
Common stock dividends distributable	<u>50,000</u>	\$550,000

When Medland issues the dividend shares, it debits Common Stock Dividends Distributable and credits Common Stock, as follows.

A	=	L	+	SE
				- 50,000 CS
				+ 50,000 CS
<hr/>				
Cash Flows				
no effect				

Common Stock Dividends Distributable	50,000	
Common Stock		50,000
(To record issuance of 5,000 shares in a stock dividend)		

EFFECTS OF STOCK DIVIDENDS

How do stock dividends affect stockholders' equity? They **change the composition of stockholders' equity** because they transfer to paid-in capital a portion of retained earnings. However, **total stockholders' equity remains the same**. Stock dividends also have no effect on the par or stated value per share. But, the number of shares outstanding increases. Illustration 11-16 shows these effects for Medland Corporation.

Illustration 11-16

Stock dividend effects

	<u>Before Dividend</u>	<u>After Dividend</u>
Stockholders' equity		
Paid-in capital		
Common stock, \$10 par	\$ 500,000	\$ 550,000
Paid-in capital in excess of par—common stock	—	25,000
Total paid-in capital	500,000	575,000
Retained earnings	300,000	225,000
Total stockholders' equity	<u>\$800,000</u>	<u>\$800,000</u>
Outstanding shares	<u>50,000</u>	<u>55,000</u>
Par value per share	<u>\$10.00</u>	<u>\$10.00</u>

In this example, total paid-in capital increases by \$75,000 (50,000 shares \times 10% \times \$15) and retained earnings decreases by the same amount. Note also that total stockholders' equity remains unchanged at \$800,000. The number of shares increases by 5,000 (50,000 \times 10%).

Stock Splits

A **stock split**, like a stock dividend, involves issuance of additional shares to stockholders according to their percentage ownership. **However, a stock split results in a reduction in the par or stated value per share.** The purpose of a stock split is to increase the marketability of the stock by lowering its market price per share. This, in turn, makes it easier for the corporation to issue additional stock.

The effect of a split on market price is generally *inversely proportional* to the size of the split. For example, after a recent 2-for-1 stock split, the market price of Nike's stock fell from \$111 to approximately \$55. The lower market price stimulated market activity, and within one year the stock was trading above \$100 again.

In a stock split, the number of shares increases in the same proportion that par or stated value per share decreases. For example, in a 2-for-1 split, one share of \$10 par value stock is exchanged for two shares of \$5 par value stock. **A stock split does not have any effect on total paid-in capital, retained earnings, or total stockholders' equity.** But, the number of shares outstanding increases, and par value per

Helpful Hint

A stock split changes the par value per share but does not affect any balances in stockholders' equity.

share decreases. Illustration 11-17 shows these effects for Medland Corporation, assuming that it splits its 50,000 shares of common stock on a 2-for-1 basis.

	<u>Before Stock Split</u>	<u>After Stock Split</u>
Stockholders' equity		
Paid-in capital		
Common stock	\$ 500,000	\$ 500,000
Paid-in capital in excess of par— common stock	—0—	—0—
Total paid-in capital	500,000	500,000
Retained earnings	300,000	300,000
Total stockholders' equity	\$800,000	\$800,000
Outstanding shares	50,000	100,000
Par value per share	\$10.00	\$5.00

Illustration 11-17
Stock split effects

A stock split does not affect the balances in any stockholders' equity accounts. Therefore **it is not necessary to journalize a stock split**.

Illustration 11-18 summarizes the differences between stock splits and stock dividends.

<u>Item</u>	<u>Stock Split</u>	<u>Stock Dividend</u>
Total paid-in capital	No change	Increase
Total retained earnings	No change	Decrease
Total par value (common stock)	No change	Increase
Par value per share	Decrease	No change
Total stockholders' equity	No change	No change

Illustration 11-18
Differences between the
effects of stock splits and
stock dividends

INVESTOR INSIGHT

A No-Split Philosophy

Warren Buffett's company, **Berkshire Hathaway**, has two classes of shares. Until recently, the company had never split either class of stock. As a result, the class A stock had a market price of \$97,000 and the class B sold for about \$3,200 per share. Because the price per share is so high, the stock does not trade as frequently as the stock of other companies. Mr. Buffett has always opposed stock splits because he feels that a lower stock price attracts short-term investors. He appears to be correct. For example, while more than 6 million shares of IBM are exchanged on the average day, only about 1,000 class A shares of Berkshire are traded. Despite Mr. Buffett's aversion to splits, in order to accomplish a recent acquisition, Berkshire decided to split its class B shares 50 to 1.

Source: Scott Patterson, "Berkshire Nears Smaller Baby B's," *Wall Street Journal Online* (January 19, 2010).

Why does Warren Buffett usually oppose stock splits? (See page 596.)

> DO IT!

Stock Dividends and Stock Splits

Sing CD Company has had five years of record earnings. Due to this success, the market price of its 500,000 shares of \$2 par value common stock has tripled from \$15 per share to \$45. During this period, paid-in capital remained the same at \$2,000,000. Retained earnings increased from \$1,500,000 to \$10,000,000. President Joan Elbert is considering either

Action Plan

- ✓ Calculate the stock dividend's effect on retained earnings by multiplying the number of new shares times the market price of the stock (or par value for a large stock dividend).
- ✓ Recall that a stock dividend increases the number of shares without affecting total stockholders' equity.
- ✓ Recall that a stock split only increases the number of shares outstanding and decreases the par value per share.

a 10% stock dividend or a 2-for-1 stock split. She asks you to show the before-and-after effects of each option on retained earnings and total stockholders' equity.

Solution

The stock dividend amount is \$2,250,000 $[(500,000 \times 10\%) \times \$45]$. The new balance in retained earnings is \$7,750,000 $(\$10,000,000 - \$2,250,000)$. The retained earnings balance after the stock split is the same as it was before the split: \$10,000,000. Total stockholders' equity does not change. The effects on the stockholders' equity accounts are as follows.

	<u>Original Balances</u>	<u>After Dividend</u>	<u>After Split</u>
Paid-in capital	\$ 2,000,000	\$ 4,250,000	\$ 2,000,000
Retained earnings	10,000,000	7,750,000	10,000,000
Total stockholders' equity	<u>\$12,000,000</u>	<u>\$12,000,000</u>	<u>\$12,000,000</u>
Shares outstanding	<u>500,000</u>	<u>550,000</u>	<u>1,000,000</u>

Retained Earnings

LEARNING OBJECTIVE 6

Identify the items reported in a retained earnings statement.

Recall that **retained earnings** is net income that a company retains in the business. The balance in retained earnings is part of the stockholders' claim on the total assets of the corporation. It does not, though, represent a claim on any specific asset. Nor can the amount of retained earnings be associated with the balance of any asset account. For example, a \$100,000 balance in retained earnings does not mean that there should be \$100,000 in cash. The reason is that the company may have used the cash resulting from the excess of revenues over expenses to purchase buildings, equipment, and other assets.

To demonstrate that retained earnings and cash may be quite different, Illustration 11-19 shows recent amounts of retained earnings and cash in selected companies.

Illustration 11-19

Retained earnings and cash balances

<u>Company</u>	(in millions)	
	<u>Retained Earnings</u>	<u>Cash</u>
Disney Co.	\$24,207	\$3,670
Intel Corp.	28,984	6,598
Kellogg Co.	4,217	1,026
Amazon.com	(1,837)	1,022

Helpful Hint

Remember that Retained Earnings is a stockholders' equity account, whose normal balance is a credit.

Remember that when a company has net income, it closes net income to retained earnings. The closing entry is a debit to Income Summary and a credit to Retained Earnings.

When a company has a **net loss** (expenses exceed revenues), it also closes this amount to retained earnings. The closing entry in this case is a debit to Retained Earnings and a credit to Income Summary. This is done even if it results

in a debit balance in Retained Earnings. **Companies do not debit net losses to paid-in capital accounts.** To do so would destroy the distinction between paid-in and earned capital. If cumulative losses exceed cumulative income over a company's life, a debit balance in Retained Earnings results. A debit balance in Retained Earnings is identified as a **deficit**. A company reports a deficit as a deduction in the stockholders' equity section, as shown below.

<u>Balance Sheet (partial)</u>	
Stockholders' equity	
Paid-in capital	
Common stock	\$800,000
Retained earnings (deficit)	<u>(50,000)</u>
Total stockholders' equity	<u><u>\$750,000</u></u>

Illustration 11-20
Stockholders' equity with deficit

Retained Earnings Restrictions

The balance in retained earnings is generally available for dividend declarations. Some companies state this fact. For example, **Lockheed Martin Corporation** states the following in the notes to its financial statements.

Lockheed Martin Corporation Notes to the Financial Statements

At December 31, retained earnings were unrestricted and available for dividend payments.

Illustration 11-21
Disclosure of unrestricted retained earnings

In some cases, there may be **retained earnings restrictions**. These make a portion of the retained earnings balance currently unavailable for dividends. Restrictions result from one or more of the following causes.

- 1. Legal restrictions.** Many states require a corporation to restrict retained earnings for the cost of treasury stock purchased. The restriction keeps intact the corporation's legal capital that is being temporarily held as treasury stock. When the company sells the treasury stock, the restriction is lifted.
- 2. Contractual restrictions.** Long-term debt contracts may restrict retained earnings as a condition for the loan. The restriction limits the use of corporate assets for payment of dividends. Thus, it increases the likelihood that the corporation will be able to meet required loan payments.
- 3. Voluntary restrictions.** The board of directors may voluntarily create retained earnings restrictions for specific purposes. For example, the board may authorize a restriction for future plant expansion. By reducing the amount of retained earnings available for dividends, the company makes more cash available for the planned expansion.

Companies generally disclose **retained earnings restrictions** in the notes to the financial statements. For example, as shown in Illustration 11-22 (page 566), **Tektronix Inc.**, a manufacturer of electronic measurement devices, had total retained earnings of \$774 million, but the unrestricted portion was only \$223.8 million.

Illustration 11-22
Disclosure of restriction

Tektronix Inc.
Notes to the Financial Statements

Certain of the Company's debt agreements require compliance with debt covenants. Management believes that the Company is in compliance with such requirements. The Company had unrestricted retained earnings of \$223.8 million after meeting those requirements.

Prior Period Adjustments

Suppose that a corporation has closed its books and issued financial statements. The corporation then discovers that it made a material error in reporting net income of a prior year. How should the company record this situation in the accounts and report it in the financial statements?

The correction of an error in previously issued financial statements is known as a **prior period adjustment**. The company makes the correction directly to Retained Earnings, because the effect of the error is now in this account. The net income for the prior period has been recorded in retained earnings through the journalizing and posting of closing entries.

To illustrate, assume that General Microwave discovers in 2014 that it understated depreciation expense on equipment in 2013 by \$300,000 due to computational errors. These errors overstated both net income for 2013 and the current balance in retained earnings. The entry for the prior period adjustment, ignoring all tax effects, is as follows.

A	=	L	+	SE
-300,000				-300,000 RE
Cash Flows				
no effect				

Retained Earnings	300,000	
Accumulated Depreciation—Equipment (To adjust for understatement of depreciation in a prior period)		300,000

A debit to an income statement account in 2014 is incorrect because the error pertains to a prior year.

Companies report prior period adjustments in the retained earnings statement.⁴ They add (or deduct, as the case may be) these adjustments from the beginning retained earnings balance. This results in an adjusted beginning balance. For example, assuming a beginning balance of \$800,000 in retained earnings, General Microwave reports the prior period adjustment as follows.

Illustration 11-23
Statement presentation of
prior period adjustments

General Microwave Retained Earnings Statement (partial)	
Balance, January 1, as reported	\$ 800,000
Correction for overstatement of net income in prior period (depreciation error)	<u>(300,000)</u>
Balance, January 1, as adjusted	\$ 500,000

Again, reporting the correction in the current year's income statement would be incorrect because it applies to a prior year's income statement.

⁴A complete retained earnings statement is shown in Illustration 11-25 on the next page.

Retained Earnings Statement

The **retained earnings statement** shows the changes in retained earnings during the year. The company prepares the statement from the Retained Earnings account. Illustration 11-24 shows (in account form) transactions that affect retained earnings.

Retained Earnings	
1. Net loss	1. Net income
2. Prior period adjustments for overstatement of net income	2. Prior period adjustments for understatement of net income
3. Cash dividends and stock dividends	
4. Some disposals of treasury stock	

Illustration 11-24

Debits and credits to retained earnings

As indicated, net income increases retained earnings, and a net loss decreases retained earnings. Prior period adjustments may either increase or decrease retained earnings. Both cash dividends and stock dividends decrease retained earnings. The circumstances under which treasury stock transactions decrease retained earnings are explained on page 565.

A complete retained earnings statement for Graber Inc., based on assumed data, is as follows.

Graber Inc. Retained Earnings Statement For the Year Ended December 31, 2014	
Balance, January 1, as reported	\$1,050,000
Correction for understatement of net income in prior period (inventory error)	50,000
Balance, January 1, as adjusted	1,100,000
Add: Net income	360,000
	1,460,000
Less: Cash dividends	\$100,000
Stock dividends	200,000
	300,000
Balance, December 31	<u>\$1,160,000</u>

Illustration 11-25

Retained earnings statement

> DO IT!

Retained Earnings Statement

Vega Corporation has retained earnings of \$5,130,000 on January 1, 2014. During the year, Vega earned \$2,000,000 of net income. It declared and paid a \$250,000 cash dividend. In 2014, Vega recorded an adjustment of \$180,000 due to the understatement (from a mathematical error) of 2013 depreciation expense. Prepare a retained earnings statement for 2014.

Action Plan

- ✓ Recall that a retained earnings statement begins with retained earnings, as reported at the end of the previous year.
- ✓ Add or subtract any prior period adjustments to arrive at the adjusted beginning figure.
- ✓ Add net income and subtract dividends declared to arrive at the ending balance in retained earnings.

Solution

Vega Corporation	
Retained Earnings Statement	
For the Year Ended December 31, 2014	
Balance, January 1, as reported	\$5,130,000
Correction for overstatement of net income in prior period (depreciation error)	(180,000)
Balance, January 1, as adjusted	4,950,000
Add: Net income	2,000,000
	6,950,000
Less: Cash dividends	250,000
Balance, December 31	\$6,700,000

Statement Presentation and Analysis

LEARNING OBJECTIVE 7

Prepare and analyze a comprehensive stockholders' equity section.

In the stockholders' equity section of the balance sheet, paid-in capital and retained earnings are reported. The specific sources of paid-in capital are identified. Within paid-in capital, two classifications are recognized:

- 1. Capital stock.** This category consists of preferred and common stock. Preferred stock is shown before common stock because of its preferential rights. Par value, shares authorized, shares issued, and shares outstanding are reported for each class of stock.
- 2. Additional paid-in capital.** This includes the excess of amounts paid over par or stated value and paid-in capital from treasury stock.

Presentation

Illustration 11-26 presents the stockholders' equity section of Graber Inc.'s balance sheet. Note the following: (1) "Common stock dividends distributable" is shown under "Capital stock," in "Paid-in capital." (2) A note (Note R) discloses a retained earnings restriction.

Illustration 11-26

Comprehensive stockholders' equity section

Graber Inc.	
Balance Sheet (partial)	
Stockholders' equity	
Paid-in capital	
Capital stock	
9% Preferred stock, \$100 par value, cumulative, callable at \$120, 10,000 shares authorized, 6,000 shares issued and outstanding	\$ 600,000
Common stock, no par, \$5 stated value, 500,000 shares authorized, 400,000 shares issued and 390,000 outstanding	\$2,000,000
Common stock dividends distributable	50,000
Total capital stock	2,650,000

Additional paid-in capital		
In excess of par—preferred stock	30,000	
In excess of stated value—common stock	<u>1,050,000</u>	
Total additional paid-in capital		<u>1,080,000</u>
Total paid-in capital		3,730,000
Retained earnings (see Note R)		<u>1,160,000</u>
Total paid-in capital and retained earnings		4,890,000
Less: Treasury stock (10,000 common shares)		<u>80,000</u>
Total stockholders' equity		<u><u>\$4,810,000</u></u>

Illustration 11-26
(cont'd.)

Note R: Retained earnings is restricted for the cost of treasury stock, \$80,000.

The stockholders' equity section of Graber Inc. in Illustration 11-26 includes most of the accounts discussed in this chapter. The disclosures pertaining to Graber's common stock indicate that the company issued 400,000 shares; 100,000 shares are unissued (500,000 authorized less 400,000 issued); and 390,000 shares are outstanding (400,000 issued less 10,000 shares in treasury).

Published annual reports often combine and report as a single amount the individual sources of additional paid-in capital, as shown in Illustration 11-27. In addition, authorized shares are sometimes not reported.

Kellogg Company
Balance Sheet (partial)
(\$ in millions)

Stockholders' equity	
Common stock, \$0.25 par value, 1,000,000,000 shares authorized	
Issued: 418,669,193 shares	\$ 105
Capital in excess of par value	388
Retained earnings	4,217
Treasury stock, at cost 28,618,052 shares	(1,357)
Accumulated other comprehensive income (loss)	<u>(827)</u>
Total stockholders' equity	<u><u>\$ 2,526</u></u>

Illustration 11-27
Published stockholders'
equity section

In practice, companies sometimes use the term "Capital surplus" in place of "Additional paid-in capital," and "Earned surplus" in place of "Retained earnings." The use of the term "surplus" suggests that the company has available an excess amount of funds. Such is not necessarily the case. Therefore, **the term "surplus" should not be employed in accounting.** Unfortunately, a number of companies still do use it.

Instead of presenting a detailed stockholders' equity section in the balance sheet and a retained earnings statement, many companies prepare a **stockholders' equity statement**. This statement shows the changes (1) in each stockholders' equity account and (2) in total that occurred during the year. An example of a stockholders' equity statement appears in PepsiCo's financial statements in Appendix A (page A-7) and in an appendix to this chapter (Illustration 11A-1).

Analysis

Investors and analysts can measure profitability from the viewpoint of the common stockholder by the **return on common stockholders' equity**. This ratio shows how many dollars of net income the company earned for each dollar invested by the common stockholders. It is computed by dividing **net income available to**

common stockholders (which is net income minus preferred stock dividends) by average common stockholders' equity.

To illustrate, **Walt Disney Company's** beginning-of-the-year and end-of-the-year common stockholders' equity were \$31,820 and \$30,753 million, respectively. Its net income was \$4,687 million, and no preferred stock was outstanding. The return on common stockholders' equity ratio is computed as follows.

Illustration 11-28

Return on common stockholders' equity ratio and computation

Net Income Available to Common Stockholders	\div	Average Common Stockholders' Equity	$=$	Return on Common Stockholders' Equity
(\$4,687 - \$0)	\div	$\frac{(\$31,820 + \$30,753)}{2}$	$=$	15.0%

As shown above, if a company has preferred stock, we would deduct the amount of **preferred dividends** from the company's net income to compute income available to common stockholders. Also, the par value of preferred stock is deducted from total average stockholders' equity to arrive at the amount of common stockholders' equity.

> DO IT!

Stockholders' Equity and EPS

On January 1, 2014, Siena Corporation purchased 2,000 shares of treasury stock. Other information regarding Siena Corporation is provided below.

	2013	2014
Net income	\$110,000	\$110,000
Dividends on preferred stock	\$10,000	\$10,000
Dividends on common stock	\$2,000	\$1,600
Weighted-average number of shares outstanding	10,000	8,000*
Common stockholders' equity, beginning of year	\$500,000	\$400,000*
Common stockholders' equity, end of year	\$500,000	\$400,000

*Adjusted for purchase of treasury stock.

Compute (a) return on common stockholders' equity for each year and (b) earnings per share for each year, and (c) discuss the changes in each.

Solution

Action Plan

- ✓ Determine return on common stockholders' equity by dividing net income available to common stockholders by the average common stockholders' equity.
- ✓ Determine earnings per share by dividing net income available to common stockholders by the weighted-average number of common shares outstanding.

(a)	<table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 30%;"></td> <td style="text-align: center; border-bottom: 1px solid black;">2013</td> <td style="width: 10%;"></td> <td style="text-align: center; border-bottom: 1px solid black;">2014</td> </tr> <tr> <td>Return on common stockholders' equity</td> <td style="text-align: center;">$\frac{(\\$110,000 - \\$10,000)}{(\\$500,000 + \\$500,000)/2}$</td> <td style="text-align: center;">$= 20\%$</td> <td style="text-align: center;">$\frac{(\\$110,000 - \\$10,000)}{(\\$400,000 + \\$400,000)/2}$</td> </tr> </table>		2013		2014	Return on common stockholders' equity	$\frac{(\$110,000 - \$10,000)}{(\$500,000 + \$500,000)/2}$	$= 20\%$	$\frac{(\$110,000 - \$10,000)}{(\$400,000 + \$400,000)/2}$	
	2013		2014							
Return on common stockholders' equity	$\frac{(\$110,000 - \$10,000)}{(\$500,000 + \$500,000)/2}$	$= 20\%$	$\frac{(\$110,000 - \$10,000)}{(\$400,000 + \$400,000)/2}$							
(b)	<table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 30%;"></td> <td style="text-align: center; border-bottom: 1px solid black;">2013</td> <td style="width: 10%;"></td> <td style="text-align: center; border-bottom: 1px solid black;">2014</td> </tr> <tr> <td>Earnings per share</td> <td style="text-align: center;">$\frac{(\\$110,000 - \\$10,000)}{10,000}$</td> <td style="text-align: center;">$= \\$10$</td> <td style="text-align: center;">$\frac{(\\$110,000 - \\$10,000)}{8,000}$</td> </tr> </table>		2013		2014	Earnings per share	$\frac{(\$110,000 - \$10,000)}{10,000}$	$= \$10$	$\frac{(\$110,000 - \$10,000)}{8,000}$	$= \$12.50$
	2013		2014							
Earnings per share	$\frac{(\$110,000 - \$10,000)}{10,000}$	$= \$10$	$\frac{(\$110,000 - \$10,000)}{8,000}$							
(c)	<p>Between 2013 and 2014, return on common stockholders' equity improved from 20% to 25%. Earnings per share increased from \$10 to \$12.50. While this would appear to be good news for the company's common stockholders, these increases should be carefully evaluated. It is important to note that net income did not change during this period. The increase in both ratios was due to the purchase of treasury shares, which reduced the denominator of each ratio. As the company repurchases its own shares, it becomes more reliant on debt and thus increases its risk.</p>

> Comprehensive DO IT!

Rolman Corporation is authorized to issue 1,000,000 shares of \$5 par value common stock. In its first year, the company has the following stock transactions.

- Jan. 10 Issued 400,000 shares of stock at \$8 per share.
 July 1 Issued 100,000 shares of stock for land. The land had an asking price of \$900,000. The stock is currently selling on a national exchange at \$8.25 per share.
 Sept. 1 Purchased 10,000 shares of common stock for the treasury at \$9 per share.
 Dec. 1 Sold 4,000 shares of the treasury stock at \$10 per share.

Instructions

- (a) Journalize the transactions.
 (b) Prepare the stockholders' equity section assuming the company had retained earnings of \$200,000 at December 31.

Solution to Comprehensive DO IT!

Action Plan

- ✓ When common stock has a par value, credit Common Stock for par value.
- ✓ Use fair value in a noncash transaction.
- ✓ Debit and credit the Treasury Stock account at cost.
- ✓ Record differences between the cost and selling price of treasury stock in stockholders' equity accounts, not as gains or losses.

(a) Jan. 10	Cash	3,200,000	
	Common Stock		2,000,000
	Paid-in Capital in Excess of Par— Common Stock		1,200,000
	(To record issuance of 400,000 shares of \$5 par value stock)		
July 1	Land	825,000	
	Common Stock		500,000
	Paid-in Capital in Excess of Par— Common Stock		325,000
	(To record issuance of 100,000 shares of \$5 par value stock for land)		
Sept. 1	Treasury Stock	90,000	
	Cash		90,000
	(To record purchase of 10,000 shares of treasury stock at cost)		
Dec. 1	Cash	40,000	
	Treasury Stock		36,000
	Paid-in Capital from Treasury Stock		4,000
	(To record sale of 4,000 shares of treasury stock above cost)		

(b)

Rolman Corporation Balance Sheet (partial)

Stockholders' equity		
Paid-in capital		
Capital stock		
Common stock, \$5 par value, 1,000,000 shares authorized, 500,000 shares issued, 494,000 shares outstanding		\$2,500,000
Additional paid-in capital		
In excess of par—common stock	\$1,525,000	
From treasury stock	4,000	
Total additional paid-in capital		1,529,000
Total paid-in capital		4,029,000
Retained earnings		200,000
Total paid-in capital and retained earnings		4,229,000
Less: Treasury stock (6,000 shares)		(54,000)
Total stockholders' equity		\$4,175,000

SUMMARY OF LEARNING OBJECTIVES

- 1 Identify the major characteristics of a corporation.** The major characteristics of a corporation are separate legal existence, limited liability of stockholders, transferable ownership rights, ability to acquire capital, continuous life, corporation management, government regulations, and additional taxes.
- 2 Record the issuance of common stock.** When the issuance of common stock for cash is recorded, the par value of the shares is credited to Common Stock. The portion of the proceeds that is above or below par value is recorded in a separate paid-in capital account. When no-par common stock has a stated value, the entries are similar to those for par value stock. When no-par stock does not have a stated value, the entire proceeds are credited to Common Stock.
- 3 Explain the accounting for treasury stock.** The cost method is generally used in accounting for treasury stock. Under this approach, Treasury Stock is debited at the price paid to reacquire the shares. The same amount is credited to Treasury Stock when the shares are sold. The difference between the sales price and cost is recorded in stockholders' equity accounts, not in income statement accounts.
- 4 Differentiate preferred stock from common stock.** Preferred stock has contractual provisions that give it priority over common stock in certain areas. Typically, preferred stockholders have a preference to (1) dividends and (2) assets in liquidation. They usually do not have voting rights.
- 5 Prepare the entries for cash dividends and stock dividends.** Entries for both cash and stock dividends are

required on the declaration date and the payment date. At the *declaration date* the entries are cash dividend—debit Cash Dividends and credit Dividends Payable; small stock dividend—debit Stock Dividends, credit Paid-in Capital in Excess of Par (or Stated Value) and credit Common Stock Dividends Distributable. On the *payment date*, the entries for cash and stock dividends are cash dividend—debit Dividends Payable and credit Cash; small stock dividend—debit Common Stock Dividends Distributable and credit Common Stock.

- 6 Identify the items that are reported in a retained earnings statement.** Each of the individual debits and credits to retained earnings should be reported in the retained earnings statement. Additions consist of net income and prior period adjustments to correct understatements of prior years' net income. Deductions consist of net loss, adjustments to correct overstatements of prior years' net income, cash and stock dividends, and some disposals of treasury stock.
- 7 Prepare and analyze a comprehensive stockholders' equity section.** In the stockholders' equity section, paid-in capital and retained earnings are reported and specific sources of paid-in capital are identified. Within paid-in capital, two classifications are shown: capital stock and additional paid-in capital. If a corporation has treasury stock, the cost of treasury stock is deducted from total paid-in capital and retained earnings to obtain total stockholders' equity. One measure of profitability is the return on common stockholders' equity. It is calculated by dividing net income minus preferred stock dividends by average common stockholders' equity.

GLOSSARY

Authorized stock The amount of stock that a corporation is authorized to sell as indicated in its charter. (p. 543).

Cash dividend A pro rata distribution of cash to stockholders. (p. 556).

Charter A document that is issued by a state to set forth important terms and features regarding the creation of a corporation. (p. 541).

Corporation A business organized as a legal entity separate and distinct from its owners under state corporation law. (p. 538).

Cumulative dividend A feature of preferred stock entitling the stockholder to receive current and unpaid prior-year dividends before common stockholders receive any dividends. (p. 555).

Declaration date The date the board of directors formally declares the dividend and announces it to stockholders. (p. 557).

Deficit A debit balance in retained earnings. (p. 565).

Dividend A corporation's distribution of cash or stock to its stockholders on a pro rata (proportional) basis. (p. 556).

Liquidating dividend A dividend declared out of paid-in capital. (p. 556).

No-par value stock Capital stock that has not been assigned a value in the corporate charter. (p. 545).

Organization costs Costs incurred in the formation of a corporation. (p. 541).

Outstanding stock Capital stock that has been issued and is being held by stockholders. (p. 552).

Paid-in capital Total amount of cash and other assets paid in to the corporation by stockholders in exchange for capital stock. (p. 546).

Par value stock Capital stock that has been assigned a value per share in the corporate charter. (p. 545).

Payment date The date dividend checks are mailed to stockholders. (p. 557).

Preferred stock Capital stock that has some contractual preferences over common stock. (p. 554).

Prior period adjustment The correction of an error in previously issued financial statements. (p. 566).

Privately held corporation A corporation that has only a few stockholders and whose stock is not available for sale to the general public. (p. 538).

Publicly held corporation A corporation that may have thousands of stockholders and whose stock is regularly traded on a national securities exchange. (p. 538).

Record date The date when ownership of outstanding shares is determined for dividend purposes. (p. 557).

Retained earnings Net income that a corporation retains for future use. (p. 546).

Retained earnings restrictions Circumstances that make a portion of retained earnings currently unavailable for dividends. (p. 565).

Retained earnings statement A financial statement that shows the changes in retained earnings during the year. (p. 567).

Return on common stockholders' equity ratio A ratio that measures profitability from the stockholders' point of view. It is computed by dividing net income available to common stockholders by average common stockholders' equity. (p. 569).

Stated value The amount per share assigned by the board of directors to no-par stock that becomes legal capital per share. (p. 545).

Stock dividend A pro rata distribution of the corporation's own stock to stockholders. (p. 560).

Stockholders' equity statement A statement that shows the changes in each stockholders' equity account and in total stockholders' equity during the year. (p. 569).

Stock split The issuance of additional shares of stock to stockholders accompanied by a reduction in the par or stated value per share. (p. 562).

Treasury stock A corporation's own stock that the corporation has issued and reacquired but not retired. (p. 551).

APPENDIX 11A STOCKHOLDERS' EQUITY STATEMENT

When balance sheets and income statements are presented by a corporation, changes in the separate accounts comprising stockholders' equity should also be disclosed. Disclosure of such changes is necessary to make the financial statements sufficiently informative for users. The disclosures may be made in an additional statement or in the notes to the financial statements.

Many corporations make the disclosures in a **stockholders' equity statement**. The statement shows the changes in **each** stockholders' equity account and in **total** stockholders' equity during the year. As shown in Illustration 11A-1, the stockholders' equity statement is prepared in columnar form. It contains columns for each account and for total stockholders' equity. The transactions are then identified and their effects are shown in the appropriate columns.

LEARNING OBJECTIVE 8

Describe the use and content of the stockholders' equity statement.

Illustration 11A-1
Stockholders' equity statement

Hampton Corporation					
Stockholders' Equity Statement					
For the Year Ended December 31, 2014					
	Common Stock (\$5 Par)	Paid-in Capital in Excess of Par—Common Stock	Retained Earnings	Treasury Stock	Total
Balance January 1	\$300,000	\$200,000	\$650,000	\$(34,000)	\$1,116,000
Issued 5,000 shares of common stock at \$15	25,000	50,000			75,000
Declared a \$40,000 cash dividend			(40,000)		(40,000)
Purchased 2,000 shares for treasury at \$16				(32,000)	(32,000)
Net income for year			240,000		240,000
Balance December 31	<u>\$325,000</u>	<u>\$250,000</u>	<u>\$850,000</u>	<u>\$(66,000)</u>	<u>\$1,359,000</u>

In practice, additional columns are usually provided to show the number of shares of issued stock and treasury stock. The stockholders' equity statement for **PepsiCo**, for a three-year period, is shown in Appendix A. **When a stockholders' equity statement is presented, a retained earnings statement is not necessary** because the retained earnings column explains the changes in this account.

SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 11A

8 Describe the use and content of the stockholders' equity statement. Corporations must disclose changes in stockholders' equity accounts and may choose to do so by issuing a separate stockholders' equity statement. This

statement, prepared in columnar form, shows changes in each stockholders' equity account and in total stockholders' equity during the accounting period. When this statement is presented, a retained earnings statement is not necessary.

APPENDIX 11B BOOK VALUE—ANOTHER PER SHARE AMOUNT

LEARNING OBJECTIVE 9

Compute book value per share.

Book Value per Share

You have learned about a number of per share amounts in this chapter. Another per share amount of some importance is **book value per share**. It represents **the equity a common stockholder has in the net assets of the corporation** from owning one share of stock. Remember that the net assets (total assets minus total liabilities) of a corporation must be equal to total stockholders' equity. Therefore, the formula for computing book value per share when a company has only one class of stock outstanding is:

Illustration 11B-1
Book value per share formula

$$\frac{\text{Total Stockholders' Equity}}{\text{Number of Common Shares Outstanding}} = \text{Book Value per Share}$$

Thus, if Marlo Corporation has total stockholders' equity of \$1,500,000 (common stock \$1,000,000 and retained earnings \$500,000) and 50,000 shares of common stock outstanding, book value per share is \$30 (\$1,500,000 ÷ 50,000).

When a company has both preferred and common stock, the computation of book value is more complex. Since preferred stockholders have a prior claim on net assets over common stockholders, their equity must be deducted from total stockholders' equity. Then we can determine the stockholders' equity that applies to the common stock. The computation of book value per share involves the following steps.

- 1. Compute the preferred stock equity.** This equity is equal to the sum of the call price of preferred stock plus any cumulative dividends in arrears. If the preferred stock does not have a call price, the par value of the stock is used.
- 2. Determine the common stock equity.** Subtract the preferred stock equity from total stockholders' equity.
- 3. Determine book value per share.** Divide common stock equity by shares of common stock outstanding.

EXAMPLE

We will use the stockholders' equity section of Graber Inc. shown in Illustration 11-26. Graber's preferred stock is callable at \$120 per share and is cumulative. Assume that dividends on Graber's preferred stock were in arrears for one year, \$54,000 (6,000 × \$9). The computation of preferred stock equity (Step 1 in the preceding list) is:

Call price (6,000 shares × \$120)	\$720,000
Dividends in arrears (6,000 shares × \$9)	54,000
Preferred stock equity	<u>\$774,000</u>

Illustration 11B-2

Computation of preferred stock equity—Step 1

The computation of book value (Steps 2 and 3) is as follows.

Total stockholders' equity	\$4,810,000
Less: Preferred stock equity	<u>774,000</u>
Common stock equity	<u>\$4,036,000</u>
Shares of common stock outstanding	<u>390,000</u>
Book value per share (\$4,036,000 ÷ 390,000)	<u>\$10.35</u>

Illustration 11B-3

Computation of book value per share with preferred stock—Steps 2 and 3

Note that we used the call price of \$120 instead of the par value of \$100. Note also that the paid-in capital in excess of par value of preferred stock, \$30,000, **is not assigned to the preferred stock equity**. Preferred stockholders ordinarily do not have a right to amounts paid-in in excess of par value. Therefore, such amounts are assigned to the common stock equity in computing book value.

Book Value versus Market Value

Be sure you understand that **book value per share may not equal market value per share**. Book value generally is based on recorded costs. Market value reflects the subjective judgments of thousands of stockholders and prospective investors about a company's potential for future earnings and dividends. Market value per share may exceed book value per share, but that fact does not necessarily mean that the stock is overpriced. The correlation between book value and the annual range of a company's market value per share is often remote, as indicated by the following recent data.

<u>Company</u>	<u>Book Value (year-end)</u>	<u>Market Range (for the year)</u>
The Limited, Inc.	\$13.38	\$31.03–\$22.89
H. J. Heinz Company	\$ 7.48	\$40.61–\$34.53
Cisco Systems	\$ 3.66	\$21.24–\$17.01
Wal-Mart Stores	\$12.79	\$50.87–\$42.31

Illustration 11B-4

Book and market values compared

Book value per share **is useful** in determining the trend of a stockholder's per share equity in a corporation. It is also significant in many contracts and in court cases where the rights of individual parties are based on cost information.

SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 11B

9 Compute book value per share. Book value per share represents the equity a common stockholder has in the net assets of a corporation from owning one share of stock. When there is only common stock outstanding,

the formula for computing book value is: Total stockholders' equity \div Number of common shares outstanding = Book value per share.

GLOSSARY FOR APPENDIX 11B

Book value per share The equity a common stockholder has in the net assets of the corporation from owning one share of stock. (p. 574).

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more components are available for practice in WileyPLUS.

*Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

SELF-TEST QUESTIONS

Answers are on page 596.

- (LO 1) 1. Which of the following is *not* a major advantage of a corporation?
- Separate legal existence.
 - Continuous life.
 - Government regulations.
 - Transferable ownership rights.
- (LO 1) 2. A major disadvantage of a corporation is:
- limited liability of stockholders.
 - additional taxes.
 - transferable ownership rights.
 - None of the above.
- (LO 2) 3. Which of the following statements is *false*?
- Ownership of common stock gives the owner a voting right.
 - The stockholders' equity section begins with paid-in capital.
 - The authorization of capital stock does not result in a formal accounting entry.
 - Legal capital per share applies to par value stock but not to no-par value stock.
- (LO 2) 4. ABC Corporation issues 1,000 shares of \$10 par value common stock at \$12 per share. In recording the transaction, credits are made to:
- Common Stock \$10,000 and Paid-in Capital in Excess of Stated Value \$2,000.
 - Common Stock \$12,000.
 - Common Stock \$10,000 and Paid-in Capital in Excess of Par \$2,000.
 - Common Stock \$10,000 and Retained Earnings \$2,000.
5. XYZ, Inc. sells 100 shares of \$5 par value treasury stock at \$13 per share. If the cost of acquiring the shares was \$10 per share, the entry for the sale should include credits to:
- Treasury Stock \$1,000 and Paid-in Capital from Treasury Stock \$300.
 - Treasury Stock \$500 and Paid-in Capital from Treasury Stock \$800.
 - Treasury Stock \$1,000 and Retained Earnings \$300.
 - Treasury Stock \$500 and Paid-in Capital in Excess of Par \$800.
6. In the stockholders' equity section, the cost of treasury stock is deducted from:
- total paid-in capital and retained earnings.
 - retained earnings.
 - total stockholders' equity.
 - common stock in paid-in capital.
7. Preferred stock may have priority over common stock *except* in:
- dividends.
 - assets in the event of liquidation.
 - cumulative dividend features.
 - voting.
8. M-Bot Corporation has 10,000 shares of 8%, \$100 par value, cumulative preferred stock outstanding at December 31, 2014. No dividends were declared in 2012 or 2013. If M-Bot wants to pay \$375,000 of dividends in 2014, common stockholders will receive:
- | | |
|----------------|----------------|
| (a) \$0. | (c) \$215,000. |
| (b) \$295,000. | (d) \$135,000. |

- (LO 5) 9. Entries for cash dividends are required on the:
 (a) declaration date and the payment date.
 (b) record date and the payment date.
 (c) declaration date, record date, and payment date.
 (d) declaration date and the record date.
- (LO 5) 10. Which of the following statements about small stock dividends is *true*?
 (a) A debit to Retained Earnings for the par value of the shares issued should be made.
 (b) A small stock dividend decreases total stockholders' equity.
 (c) Market price per share should be assigned to the dividend shares.
 (d) A small stock dividend ordinarily will have an effect on par value per share of stock.
- (LO 6) 11. All *but one* of the following is reported in a retained earnings statement. The exception is:
 (a) cash and stock dividends.
 (b) net income and net loss.
 (c) sales revenue.
 (d) prior period adjustments.
- (LO 6) 12. A prior period adjustment is:
 (a) reported in the income statement as a nontypical item.
 (b) a correction of an error that is recorded directly to retained earnings.
 (c) reported directly in the stockholders' equity section.
 (d) reported in the retained earnings statement as an adjustment of the ending balance of retained earnings.
- (LO 7) 13. In the stockholders' equity section of the balance sheet, common stock:
 (a) is listed before preferred stock.
 (b) is added to total capital stock.
 (c) is part of paid-in capital.
 (d) is part of additional paid-in capital.
14. Which of the following is *not* reported under additional paid-in capital? (LO 7)
 (a) Paid-in capital in excess of par value.
 (b) Common stock.
 (c) Paid-in capital in excess of stated value.
 (d) Paid-in capital from treasury stock.
15. Katie Inc. reported net income of \$186,000 during 2014 and paid dividends of \$26,000 on common stock. It also has 10,000 shares of 6%, \$100 par value, non-cumulative preferred stock outstanding. Common stockholders' equity was \$1,200,000 on January 1, 2014, and \$1,600,000 on December 31, 2014. The company's return on common stockholders' equity for 2014 is: (LO 7)
 (a) 10.0% (c) 7.1%.
 (b) 9.0% (d) 13.3%.
- *16. When a stockholders' equity statement is presented, it is not necessary to prepare a (an): (LO 8)
 (a) retained earnings statement.
 (b) balance sheet.
 (c) income statement.
 (d) None of the above.
- *17. The ledger of JFK, Inc. shows common stock, common treasury stock, and no preferred stock. For this company, the formula for computing book value per share is: (LO 9)
 (a) total paid-in capital and retained earnings divided by the number of shares of common stock issued.
 (b) common stock divided by the number of shares of common stock issued.
 (c) total stockholders' equity divided by the number of shares of common stock outstanding.
 (d) total stockholders' equity divided by the number of shares of common stock issued.

Go to the book's companion website, www.wiley.com/college/weygandt, for additional Self-Test Questions.

QUESTIONS

- Mark Adler, a student, asks your help in understanding the following characteristics of a corporation: (a) separate legal existence, (b) limited liability of stockholders, and (c) transferable ownership rights. Explain these characteristics to Mark.
- (a) Your friend Paula Leuck cannot understand how the characteristic of corporation management is both an advantage and a disadvantage. Clarify this problem for Paula.
 (b) Identify and explain two other disadvantages of a corporation.
- (a) The following terms pertain to the forming of a corporation: (1) charter, (2) by-laws, and (3) organization costs. Explain the terms.
 (b) Lisa Bast believes a corporation must be incorporated in the state in which its headquarters' office is located. Is Lisa correct? Explain.
- What are the basic ownership rights of common stockholders in the absence of restrictive provisions?
- A corporation has been defined as an entity separate and distinct from its owners. In what ways is a corporation a separate legal entity?
- (a) What are the two principal components of stockholders' equity?
 (b) What is paid-in capital? Give three examples.
- The corporate charter of Keller Corporation allows the issuance of a maximum of 100,000 shares of common stock. During its first two years of operations, Keller

- sold 70,000 shares to shareholders and reacquired 7,000 of these shares. After these transactions, how many shares are authorized, issued, and outstanding?
8. Which is the better investment—common stock with a par value of \$5 per share, or common stock with a par value of \$20 per share? Why?
 9. What factors help determine the market value of stock?
 10. Why is common stock usually not issued at a price that is less than par value?
 11. Land appraised at \$84,000 is purchased by issuing 1,000 shares of \$10 par value common stock. The market price of the shares at the time of the exchange, based on active trading in the securities market, is \$95 per share. Should the land be recorded at \$10,000, \$84,000, or \$95,000? Explain.
 12. For what reasons might a company like IBM repurchase some of its stock (treasury stock)?
 13. Luz, Inc. purchases 1,000 shares of its own previously issued \$5 par common stock for \$9,000. Assuming the shares are held in the treasury, what effect does this transaction have on (a) net income, (b) total assets, (c) total paid-in capital, and (d) total stockholders' equity?
 14. The treasury stock purchased in Question 13 is resold by Luz, Inc. for \$13,000. What effect does this transaction have on (a) net income, (b) total assets, (c) total paid-in capital, and (d) total stockholders' equity?
 15. (a) What are the principal differences between common stock and preferred stock?
(b) Preferred stock may be cumulative. Discuss this feature.
(c) How are dividends in arrears presented in the financial statements?
 16. Identify the events that result in credits and debits to retained earnings.
 17. Indicate how each of the following accounts should be classified in the stockholders' equity section.
 - (a) Common stock
 - (b) Paid-in capital in excess of par—common stock
 - (c) Retained earnings
 - (d) Treasury stock
 - (e) Paid-in capital from treasury stock
 - (f) Paid-in capital in excess of stated value—common stock
 - (g) Preferred stock
 18. Tim Miotke maintains that adequate cash is the only requirement for the declaration of a cash dividend. Is Tim correct? Explain.
 19. (a) Three dates are important in connection with cash dividends. Identify these dates, and explain their significance to the corporation and its stockholders.
(b) Identify the accounting entries that are made for a cash dividend and the date of each entry.
 20. Contrast the effects of a cash dividend and a stock dividend on a corporation's balance sheet.
 21. Travis Plum asks, "Since stock dividends don't change anything, why declare them?" What is your answer to Travis?
 22. Meloy Corporation has 30,000 shares of \$9 par value common stock outstanding when it announces a 3-for-1 stock split. Before the split, the stock had a market price of \$120 per share. After the split, how many shares of stock will be outstanding? What will be the approximate market price per share?
 23. The board of directors is considering either a stock split or a stock dividend. They understand that total stockholders' equity will remain the same under either action. However, they are not sure of the different effects of the two types of actions on other aspects of stockholders' equity. Explain the differences to the directors.
 24. What is a prior period adjustment, and how is it reported in the financial statements?
 25. What is the purpose of a retained earnings restriction? Identify the possible causes of retained earnings restrictions.
 - *26. What is the formula for computing book value per share when a corporation has only common stock?
 - *27. Emko Inc.'s common stock has a par value of \$1, a book value of \$24, and a current market price of \$18. Explain why these amounts are all different.

BRIEF EXERCISES

List the advantages and disadvantages of a corporation.

(LO 1)

Prepare entries for issuance of par value common stock.

(LO 2)

Prepare entries for issuance of no-par value common stock.

(LO 2)

Prepare entries for issuance of stock in a noncash transaction.

(LO 2)

BE11-1 Kari Home is studying for her accounting midterm examination. Identify for Kari the advantages and disadvantages of the corporate form of business organization.

BE11-2 On May 10, Chen Corporation issues 2,000 shares of \$6 par value common stock for cash at \$13 per share. Journalize the issuance of the stock.

BE11-3 On June 1, Federia Inc. issues 4,000 shares of no-par common stock at a cash price of \$6 per share. Journalize the issuance of the shares assuming the stock has a stated value of \$2 per share.

BE11-4 Alou Inc.'s \$10 par value common stock is actively traded at a market price of \$15 per share. Alou issues 5,000 shares to purchase land advertised for sale at \$81,000. Journalize the issuance of the stock in acquiring the land.

BE11-5 On July 1, Naperville Corporation purchases 500 shares of its \$2 par value common stock for the treasury at a cash price of \$8 per share. On September 1, it sells 300 shares of the treasury stock for cash at \$9 per share. Journalize the two treasury stock transactions.

Prepare entries for treasury stock transactions.

(LO 3)

BE11-6 Chard Inc. issues 5,000 shares of \$100 par value preferred stock for cash at \$118 per share. Journalize the issuance of the preferred stock.

Prepare entries for issuance of preferred stock.

(LO 4)

BE11-7 Fields Corporation has 80,000 shares of common stock outstanding. It declares a \$2 per share cash dividend on November 1 to stockholders of record on December 1. The dividend is paid on December 31. Prepare the entries on the appropriate dates to record the declaration and payment of the cash dividend.

Prepare entries for a cash dividend.

(LO 5)

BE11-8 Valiant Corporation has 56,000 shares of \$10 par value common stock outstanding. It declares a 10% stock dividend on December 1 when the market price per share is \$16. The dividend shares are issued on December 31. Prepare the entries for the declaration and payment of the stock dividend.

Prepare entries for a stock dividend.

(LO 5)

BE11-9 The stockholders' equity section of Neely Corporation consists of common stock (\$10 par) \$2,000,000 and retained earnings \$500,000. A 15% stock dividend (30,000 shares) is declared when the market price per share is \$14. Show the before-and-after effects of the dividend on the following.

Show before-and-after effects of a stock dividend.

(LO 5)

- The components of stockholders' equity.
- Shares outstanding.
- Par value per share.

BE11-10 For the year ending December 31, 2014, Abbott Inc. reports net income \$140,000 and dividends \$55,000. Prepare the retained earnings statement for the year assuming the balance in retained earnings on January 1, 2014, was \$220,000.

Prepare a retained earnings statement.

(LO 6)

BE11-11 The balance in retained earnings on January 1, 2014, for Sandra Inc. was \$800,000. During the year, the corporation paid cash dividends of \$60,000 and distributed a stock dividend of \$8,000. In addition, the company determined that it had understated its depreciation expense in prior years by \$44,000. Net income for 2014 was \$120,000. Prepare the retained earnings statement for 2014.

Prepare a retained earnings statement.

(LO 6)

BE11-12 Garcia Corporation has the following accounts at December 31: Common Stock, \$10 par, 5,000 shares issued, \$50,000; Paid-in Capital in Excess of Par—Common Stock \$32,000; Retained Earnings \$45,000; and Treasury Stock, 500 shares, \$9,000. Prepare the stockholders' equity section of the balance sheet.

Prepare stockholders' equity section.

(LO 7)

***BE11-13** The balance sheet for Lauren Inc. shows the following: total paid-in capital and retained earnings \$877,000, total stockholders' equity \$817,000, common stock issued 44,000 shares, and common stock outstanding 38,000 shares. Compute the book value per share. (No preferred stock is outstanding.)

Compute book value per share.

(LO 9)

> DO IT! REVIEW

DO IT! 11-1 Indicate whether each of the following statements is true or false.

Analyze statements about corporate organization.

1. The corporation is an entity separate and distinct from its owners.
2. The liability of stockholders is normally limited to their investment in the corporation.
3. The relative lack of government regulation is an advantage of the corporate form of business.
4. There is no journal entry to record the authorization of capital stock.
5. No-par value stock is quite rare today.

(LO 1)

DO IT! 11-2 At the end of its first year of operation, Jaeger Corporation has \$1,000,000 of common stock and net income of \$228,000. Prepare (a) the closing entry for net income and (b) the stockholders' equity section at year-end.

Close net income and prepare stockholders' equity section.

(LO 1)

DO IT! 11-3 Walton Corporation began operations on April 1 by issuing 50,000 shares of \$2 par value common stock for cash at \$13 per share. On April 19, it issued 2,000 shares of common stock to attorneys in settlement of their bill of \$27,500 for organization costs. Journalize both issuances, assuming the stock is not publicly traded.

Journalize issuance of stock.

(LO 2)

Journalize treasury stock transactions.

(LO 3)

Determine dividends paid to preferred and common stockholders.

(LO 5)

Determine effects of stock dividend and stock split.

(LO 5)

Prepare a retained earnings statement.

(LO 6)

Compute return on stockholders' equity and discuss changes.

(LO 7)

DO IT! 11-4 Delsman Corporation purchased 2,000 shares of its \$5 par value common stock for \$128,000 on August 1. It will hold these shares in the treasury until resold. On December 1, the corporation sold 1,200 shares of treasury stock for cash at \$72 per share. Journalize the treasury stock transactions.

DO IT! 11-5 Inmann Corporation has 4,000 shares of 7%, \$100 par value preferred stock outstanding at December 31, 2014. At December 31, 2014, the company declared a \$110,000 cash dividend. Determine the dividend paid to preferred stockholders and common stockholders under each of the following scenarios.

1. The preferred stock is noncumulative, and the company has not missed any dividends in previous years.
2. The preferred stock is noncumulative, and the company did not pay a dividend in each of the two previous years.
3. The preferred stock is cumulative, and the company did not pay a dividend in each of the two previous years.

DO IT! 11-6 Sentry Company has had 4 years of net income. Due to this success, the market price of its 400,000 shares of \$2 par value common stock has increased from \$12 per share to \$49. During this period, paid-in capital remained the same at \$2,400,000. Retained earnings increased from \$1,800,000 to \$12,000,000. President T. Boldt is considering either a 15% stock dividend or a 2-for-1 stock split. He asks you to show the before-and-after effects of each option on (a) retained earnings and (b) total stockholders' equity.

DO IT! 11-7 Raymond Corporation has retained earnings of \$3,100,000 on January 1, 2014. During the year, Raymond earned \$1,200,000 of net income. It declared and paid a \$150,000 cash dividend. In 2014, Raymond recorded an adjustment of \$86,000 due to the overstatement (from mathematical error) of 2013 depreciation expense. Prepare a retained earnings statement for 2014.

DO IT! 11-8 On January 1, 2014, Leonard Corporation purchased 1,000 shares of treasury stock. Other information regarding Leonard Corporation is provided below.

	2013	2014
Net income	\$200,000	\$210,000
Dividends on preferred stock	\$30,000	\$30,000
Dividends on common stock	\$20,000	\$25,000
Weighted-average number of common shares outstanding	10,000	9,000
Common stockholders' equity beginning of year	\$600,000	\$760,000
Common stockholders' equity end of year	\$760,000	\$830,000

Compute (a) return on common stockholders' equity for each year and (b) discuss the changes in each.

EXERCISES

Identify characteristics of a corporation.

(LO 1)

E11-1 Victoria has prepared the following list of statements about corporations.

1. A corporation is an entity separate and distinct from its owners.
2. As a legal entity, a corporation has most of the rights and privileges of a person.
3. Most of the largest U.S. corporations are privately held corporations.
4. Corporations may buy, own, and sell property; borrow money; enter into legally binding contracts; and sue and be sued.
5. The net income of a corporation is not taxed as a separate entity.
6. Creditors have a legal claim on the personal assets of the owners of a corporation if the corporation does not pay its debts.
7. The transfer of stock from one owner to another requires the approval of either the corporation or other stockholders.

8. The board of directors of a corporation legally owns the corporation.
9. The chief accounting officer of a corporation is the controller.
10. Corporations are subject to fewer state and federal regulations than partnerships or proprietorships.

Instructions

Identify each statement as true or false. If false, indicate how to correct the statement.

E11-2 Victoria (see E11-1) has studied the information you gave her in that exercise and has come to you with more statements about corporations.

Identify characteristics of a corporation.

1. Corporation management is both an advantage and a disadvantage of a corporation compared to a proprietorship or a partnership.
2. Limited liability of stockholders, government regulations, and additional taxes are the major disadvantages of a corporation.
3. When a corporation is formed, organization costs are recorded as an asset.
4. Each share of common stock gives the stockholder the ownership rights to vote at stockholder meetings, share in corporate earnings, keep the same percentage ownership when new shares of stock are issued, and share in assets upon liquidation.
5. The number of issued shares is always greater than or equal to the number of authorized shares.
6. A journal entry is required for the authorization of capital stock.
7. Publicly held corporations usually issue stock directly to investors.
8. The trading of capital stock on a securities exchange involves the transfer of already issued shares from an existing stockholder to another investor.
9. The market price of common stock is usually the same as its par value.
10. Retained earnings is the total amount of cash and other assets paid in to the corporation by stockholders in exchange for capital stock.

(LO 1, 2)

Instructions

Identify each statement as true or false. If false, indicate how to correct the statement.

E11-3 During its first year of operations, Branden Corporation had the following transactions pertaining to its common stock.

Journalize issuance of common stock.

Jan. 10 Issued 70,000 shares for cash at \$4 per share.

July 1 Issued 30,000 shares for cash at \$7 per share.

(LO 2)

Instructions

- (a) Journalize the transactions, assuming that the common stock has a par value of \$4 per share.
- (b) Journalize the transactions, assuming that the common stock is no-par with a stated value of \$1 per share.

E11-4 Luis Corporation issued 1,000 shares of stock.

Journalize issuance of common stock.

Instructions

Prepare the entry for the issuance under the following assumptions.

- (a) The stock had a par value of \$5 per share and was issued for a total of \$48,000.
- (b) The stock had a stated value of \$5 per share and was issued for a total of \$48,000.
- (c) The stock had no par or stated value and was issued for a total of \$48,000.
- (d) The stock had a par value of \$5 per share and was issued to attorneys for services during incorporation valued at \$48,000.
- (e) The stock had a par value of \$5 per share and was issued for land worth \$48,000.

(LO 2)

E11-5 Kathleen Corporation purchased from its stockholders 5,000 shares of its own previously issued stock for \$250,000. It later resold 1,500 shares for \$54 per share, then 2,000 more shares for \$49 per share, and finally 1,500 shares for \$40 per share.

Journalize treasury stock transactions.

(LO 3)

Instructions

Prepare journal entries for the purchase of the treasury stock and the three sales of treasury stock.

E11-6 Robydek Corporation issued 100,000 shares of \$20 par value, cumulative, 9% preferred stock on January 1, 2012, for \$2,080,000. In December 2014, Robydek declared its first dividend of \$550,000.

Differentiate between preferred and common stock.

(LO 4)

Instructions

- (a) Prepare Robydek's journal entry to record the issuance of the preferred stock.

- (b) If the preferred stock is *not* cumulative, how much of the \$550,000 would be paid to **common** stockholders?
- (c) If the preferred stock is cumulative, how much of the \$550,000 would be paid to **common** stockholders?

Journalize issuance of common and preferred stock and purchase of treasury stock.

(LO 2, 3, 4)

E11-7 Fallow Co. had the following transactions during the current period.

- Mar. 2 Issued 5,000 shares of \$1 par value common stock to attorneys in payment of a bill for \$38,000 for services provided in helping the company to incorporate.
- June 12 Issued 60,000 shares of \$1 par value common stock for cash of \$475,000.
- July 11 Issued 1,000 shares of \$100 par value preferred stock for cash at \$110 per share.
- Nov. 28 Purchased 2,000 shares of treasury stock for \$18,000.

Instructions

Journalize the transactions.

Journalize noncash common stock transactions.

(LO 2)

E11-8 As an auditor for the CPA firm of Gratis and Goode, you encounter the following situations in auditing different clients.

- JR Corporation is a closely held corporation whose stock is not publicly traded. On December 5, the corporation acquired land by issuing 5,000 shares of its \$10 par value common stock. The owners' asking price for the land was \$138,000, and the fair value of the land was \$124,000.
- Novak Corporation is a publicly held corporation whose common stock is traded on the securities markets. On June 1, it acquired land by issuing 20,000 shares of its \$10 par value stock. At the time of the exchange, the land was advertised for sale at \$250,000. The stock was selling at \$11 per share.

Instructions

Prepare the journal entries for each of the situations above.

Journalize treasury stock transactions.

(LO 3)

E11-9 On January 1, 2014, the stockholders' equity section of Bergin Corporation shows common stock (\$5 par value) \$1,500,000; paid-in capital in excess of par \$1,000,000; and retained earnings \$1,200,000. During the year, the following treasury stock transactions occurred.

- Mar. 1 Purchased 50,000 shares for cash at \$12 per share.
- July 1 Sold 10,000 treasury shares for cash at \$14 per share.
- Sept. 1 Sold 8,000 treasury shares for cash at \$11 per share.

Instructions

- Journalize the treasury stock transactions.
- Restate the entry for September 1, assuming the treasury shares were sold at \$9 per share.

Journalize preferred stock transactions and indicate statement presentation.

(LO 4, 7)

E11-10 Suliman Corporation is authorized to issue both preferred and common stock. The par value of the preferred is \$50. During the first year of operations, the company had the following events and transactions pertaining to its preferred stock.

- Feb. 1 Issued 12,000 shares for cash at \$53 per share.
- July 1 Issued 23,000 shares for cash at \$57 per share.

Instructions

- Journalize the transactions.
- Post to the stockholders' equity accounts.
- Indicate the financial statement presentation of the related accounts.

Answer questions about stockholders' equity section.

(LO 2, 3, 4, 7)

E11-11 The stockholders' equity section of Ahab Corporation at December 31 is as follows.

**Ahab Corporation
Balance Sheet (partial)**

Paid-in capital	
Preferred stock, cumulative, 10,000 shares authorized, 5,000 shares issued and outstanding	\$ 300,000
Common stock, no par, 750,000 shares authorized, 600,000 shares issued	1,200,000
Total paid-in capital	1,500,000
Retained earnings	1,858,000
Total paid-in capital and retained earnings	3,358,000
Less: Treasury stock (75,000 common shares)	75,000
Total stockholders' equity	\$3,283,000

Instructions

 From a review of the stockholders' equity section, as chief accountant, write a memo to the president of the company answering the following questions.

- How many shares of common stock are outstanding?
- Assuming there is a stated value, what is the stated value of the common stock?
- What is the par value of the preferred stock?
- If the annual dividend on preferred stock is \$30,000, what is the dividend rate on preferred stock?
- If dividends of \$60,000 were in arrears on preferred stock, what would be the balance in Retained Earnings?

E11-12 Anya Corporation recently hired a new accountant with extensive experience in accounting for partnerships. Because of the pressure of the new job, the accountant was unable to review his textbooks on the topic of corporation accounting. During the first month, the accountant made the following entries for the corporation's capital stock.

Prepare correct entries for capital stock transactions.
(LO 2, 3, 4)

May 2	Cash	130,000	
	Capital Stock		130,000
	(Issued 10,000 shares of \$10 par value common stock at \$13 per share)		
10	Cash	580,000	
	Capital Stock		580,000
	(Issued 10,000 shares of \$50 par value preferred stock at \$58 per share)		
15	Capital Stock	18,000	
	Cash		18,000
	(Purchased 1,200 shares of common stock for the treasury at \$15 per share)		
31	Cash	8,000	
	Capital Stock		5,000
	Gain on Sale of Stock		3,000
	(Sold 500 shares of treasury stock at \$16 per share)		

Instructions

On the basis of the explanation for each entry, prepare the entry that should have been made for the capital stock transactions.

E11-13 On January 1, Chevron Corporation had 98,000 shares of no-par common stock issued and outstanding. The stock has a stated value of \$4 per share. During the year, the following occurred.

Journalize cash dividends; indicate statement presentation.

- Apr. 1 Issued 25,000 additional shares of common stock for \$17 per share.
 June 15 Declared a cash dividend of \$1 per share to stockholders of record on June 30.
 July 10 Paid the \$1 cash dividend.
 Dec. 1 Issued 2,000 additional shares of common stock for \$19 per share.
 15 Declared a cash dividend on outstanding shares of \$1.20 per share to stockholders of record on December 31.

(LO 5)

Instructions

- Prepare the entries, if any, on each of the three dividend dates.
- How are dividends and dividends payable reported in the financial statements prepared at December 31?

E11-14 On January 1, 2014, Lanie Corporation had \$1,000,000 of common stock outstanding that was issued at par. It also had retained earnings of \$750,000. The company issued 40,000 shares of common stock at par on July 1 and earned net income of \$400,000 for the year.

Journalize stock dividends.
(LO 5)

Instructions

Journalize the declaration of a 15% stock dividend on December 10, 2014, for the following independent assumptions.

- Par value is \$8, and market price is \$18.
- Par value is \$5, and market price is \$20.

Compare effects of a stock dividend and a stock split.

(LO 5)

E11-15 On October 31, the stockholders' equity section of Hillman Company consists of common stock \$300,000 and retained earnings \$900,000. Hillman is considering the following two courses of action: (1) declaring a 5% stock dividend on the 50,000, \$6 par value shares outstanding, or (2) effecting a 2-for-1 stock split that will reduce par value to \$3 per share. The current market price is \$13 per share.

Instructions

Prepare a tabular summary of the effects of the alternative actions on the components of stockholders' equity, outstanding shares, and par value per share. Use the following column headings: Before Action, After Stock Dividend, and After Stock Split.

Prepare correcting entries for dividends and a stock split.

(LO 5)

E11-16 Before preparing financial statements for the current year, the chief accountant for Paul Company discovered the following errors in the accounts.

1. The declaration and payment of \$50,000 cash dividend was recorded as a debit to Interest Expense \$50,000 and a credit to Cash \$50,000.
2. A 10% stock dividend (1,200 shares) was declared on the \$10 par value stock when the market price per share was \$17. The only entry made was Stock Dividends (Dr.) \$12,000 and Dividend Payable (Cr.) \$12,000. The shares have not been issued.
3. A 4-for-1 stock split involving the issue of 400,000 shares of \$5 par value common stock for 100,000 shares of \$20 par value common stock was recorded as a debit to Retained Earnings \$2,000,000 and a credit to Common Stock \$2,000,000.

Instructions

Prepare the correcting entries at December 31.

Prepare a retained earnings statement.

(LO 6)

E11-17 On January 1, 2014, Richard Corporation had retained earnings of \$550,000. During the year, Richard had the following selected transactions.

1. Declared cash dividends \$96,000.
2. Corrected overstatement of 2013 net income because of depreciation error \$40,000.
3. Earned net income \$350,000.
4. Declared stock dividends \$80,000.

Instructions

Prepare a retained earnings statement for the year.

Prepare a retained earnings statement.

(LO 6)

E11-18 Bindra Company reported retained earnings at December 31, 2013, of \$340,000. Bindra had 200,000 shares of common stock outstanding throughout 2014.

The following transactions occurred during 2014.

1. An error was discovered: in 2012, depreciation expense was recorded at \$66,000, but the correct amount was \$50,000.
2. A cash dividend of \$0.50 per share was declared and paid.
3. A 5% stock dividend was declared and distributed when the market price per share was \$14 per share.
4. Net income was \$285,000.

Instructions

Prepare a retained earnings statement for 2014.

Classify stockholders' equity accounts.

(LO 7)

E11-19 The ledger of Summit Corporation contains the following accounts: Common Stock, Preferred Stock, Treasury Stock, Paid-in Capital in Excess of Par—Preferred Stock, Paid-in Capital in Excess of Stated Value—Common Stock, Paid-in Capital from Treasury Stock, and Retained Earnings.

Instructions

Classify each account using the following table headings.

<u>Account</u>	<u>Paid-in Capital</u>		<u>Retained Earnings</u>	<u>Other</u>
	<u>Capital Stock</u>	<u>Additional</u>		

Prepare a stockholders' equity section.

(LO 7)

E11-20 The following accounts appear in the ledger of Alexis Inc. after the books are closed at December 31.

Common Stock, no par, \$1 stated value, 400,000 shares authorized; 300,000 shares issued	\$ 300,000
Common Stock Dividends Distributable	30,000
Paid-in Capital in Excess of Stated Value—Common Stock	1,200,000
Preferred Stock, \$5 par value, 8%, 40,000 shares authorized; 30,000 shares issued	150,000
Retained Earnings	800,000
Treasury Stock (10,000 common shares)	65,000
Paid-in Capital in Excess of Par—Preferred Stock	50,000

Instructions

Prepare the stockholders' equity section at December 31, assuming retained earnings is restricted for plant expansion in the amount of \$150,000.

E11-21 Perrin Company reported the following balances at December 31, 2013: common stock \$400,000; paid-in capital in excess of par—common stock \$220,000; and retained earnings \$250,000. During 2014, the following transactions affected stockholder's equity.

Prepare stockholders' equity section.

(LO 7)

1. Issued preferred stock with a par value of \$125,000 for \$165,000.
2. Purchased treasury stock (common) for \$40,000.
3. Earned net income of \$140,000.
4. Declared and paid cash dividends of \$48,000.

Instructions

Prepare the stockholders' equity section of Perrin Company's December 31, 2014, balance sheet.

E11-22 In 2014, Reliant Corporation had net sales of \$600,000 and cost of goods sold of \$360,000. Operating expenses were \$153,000, and interest expense was \$7,500. The corporation's tax rate is 25%. The corporation declared preferred dividends of \$12,000 in 2014, and its average common stockholders' equity during the year was \$180,000.

Prepare an income statement and compute return on equity.

(LO 7)

Instructions

- (a) Prepare an income statement for Reliant Corporation.
- (b) Compute Reliant Corporation's return on common stockholders' equity for 2014.

***E11-23** In a recent year, the stockholders' equity section of **Aluminum Company of America (Alcoa)** showed the following (in alphabetical order): additional paid-in capital \$6,101, common stock \$925, preferred stock \$56, retained earnings \$7,428, and treasury stock 2,828. All dollar data are in millions.

Prepare a stockholders' equity section.

(LO 7, 9)

The preferred stock has 557,740 shares authorized, with a par value of \$100 and an annual \$3.75 per share cumulative dividend preference. At December 31, 557,649 shares of preferred are issued and 546,024 shares are outstanding. There are 1.8 billion shares of \$1 par value common stock authorized, of which 924.6 million are issued and 844.8 million are outstanding at December 31.

Instructions

- (a) Prepare the stockholders' equity section, including disclosure of all relevant data.
- (b) Compute the book value per share of common stock, assuming there are no preferred dividends in arrears. (Round to two decimals.)

***E11-24** At December 31, Gorden Corporation has total stockholders' equity of \$3,200,000. Included in this total are preferred stock \$500,000 and paid-in capital in excess of par—preferred stock \$50,000. There are 10,000 shares of \$50 par value, 8% cumulative preferred stock outstanding. At year-end, 200,000 shares of common stock are outstanding.

Compute book value per share with preferred stock.

(LO 4, 9)

Instructions

Compute the book value per share of common stock, under each of the following assumptions.

- (a) There are no preferred dividends in arrears, and the preferred stock does not have a call price.
- (b) Preferred dividends are one year in arrears, and the preferred stock has a call price of \$60 per share.

Compute book value per share; indicate account balances after a stock dividend.

(LO 5, 7, 9)

***E11-25** On October 1, Venden Corporation's stockholders' equity is as follows.

Common stock, \$5 par value	\$400,000
Paid-in capital in excess of par—common stock	25,000
Retained earnings	<u>225,000</u>
Total stockholders' equity	<u>\$650,000</u>

On October 1, Venden declares and distributes a 15% stock dividend when the market price of the stock is \$15 per share.

Instructions

- Compute the book value per share (1) before the stock dividend and (2) after the stock dividend. (Round to two decimals)
- Indicate the balances in the three stockholders' equity accounts after the stock dividend shares have been distributed.

EXERCISES: SET B AND CHALLENGE EXERCISES

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Exercise Set B and Challenge Exercises.

PROBLEMS: SET A

Journalize stock transactions, post, and prepare paid-in capital section.

(LO 2, 4, 7)

P11-1A Burke Corporation was organized on January 1, 2014. It is authorized to issue 10,000 shares of 8%, \$100 par value preferred stock, and 500,000 shares of no-par common stock with a stated value of \$2 per share. The following stock transactions were completed during the first year.

- Jan. 10 Issued 100,000 shares of common stock for cash at \$5 per share.
- Mar. 1 Issued 5,000 shares of preferred stock for cash at \$105 per share.
- Apr. 1 Issued 18,000 shares of common stock for land. The asking price of the land was \$98,000. The fair value of the land was \$92,000.
- May 1 Issued 80,000 shares of common stock for cash at \$4.50 per share.
- Aug. 1 Issued 10,000 shares of common stock to attorneys in payment of their bill of \$30,000 for services provided in helping the company organize.
- Sept. 1 Issued 10,000 shares of common stock for cash at \$5 per share.
- Nov. 1 Issued 1,000 shares of preferred stock for cash at \$108 per share.

Instructions

- Journalize the transactions.
- Post to the stockholders' equity accounts. (Use J5 as the posting reference.)
- Prepare the paid-in capital section of stockholders' equity at December 31, 2014.

(c) Total paid-in capital
\$1,665,000

Journalize and post treasury stock transactions, and prepare stockholders' equity section.

(LO 3, 7)

P11-2A Elston Corporation had the following stockholders' equity accounts on January 1, 2014: Common Stock (\$5 par) \$400,000, Paid-in Capital in Excess of Par—Common Stock \$200,000, and Retained Earnings \$100,000. In 2014, the company had the following treasury stock transactions.

- Mar. 1 Purchased 5,000 shares at \$9 per share.
- June 1 Sold 500 shares at \$12 per share.
- Sept. 1 Sold 2,500 shares at \$10 per share.
- Dec. 1 Sold 1,000 shares at \$6 per share.

Elston Corporation uses the cost method of accounting for treasury stock. In 2014, the company reported net income of \$34,000.

Instructions

- Journalize the treasury stock transactions, and prepare the closing entry at December 31, 2014, for net income.

- (b) Open accounts for (1) Paid-in Capital from Treasury Stock, (2) Treasury Stock, and (3) Retained Earnings. Post to these accounts using J10 as the posting reference.
 (c) Prepare the stockholders' equity section for Elston Corporation at December 31, 2014.

P11-3A The stockholders' equity accounts of Terrell Corporation on January 1, 2014, were as follows.

Preferred Stock (9%, \$50 par, cumulative, 10,000 shares authorized)	\$ 400,000
Common Stock (\$1 stated value, 2,000,000 shares authorized)	1,000,000
Paid-in Capital in Excess of Par—Preferred Stock	100,000
Paid-in Capital in Excess of Stated Value—Common Stock	1,450,000
Retained Earnings	1,816,000
Treasury Stock (20,000 common shares)	50,000

During 2014, the corporation had the following transactions and events pertaining to its stockholders' equity.

- Feb. 1 Issued 25,000 shares of common stock for \$120,000.
 Apr. 14 Sold 9,000 shares of treasury stock—common for \$46,000.
 Sept. 3 Issued 7,000 shares of common stock for a patent valued at \$42,000.
 Nov. 10 Purchased 1,000 shares of common stock for the treasury at a cost of \$6,000.
 Dec. 31 Determined that net income for the year was \$452,000.

No dividends were declared during the year.

Instructions

- (a) Journalize the transactions and the closing entry for net income.
 (b) Enter the beginning balances in the accounts, and post the journal entries to the stockholders' equity accounts. (Use J5 for the posting reference.)
 (c) Prepare a stockholders' equity section at December 31, 2014, including the disclosure of the preferred dividends in arrears.

P11-4A On January 1, 2014, Prasad Corporation had the following stockholders' equity accounts.

Common Stock (\$25 par value, 48,000 shares issued and outstanding)	\$1,200,000
Paid-in Capital in Excess of Par—Common Stock	200,000
Retained Earnings	600,000

During the year, the following transactions occurred.

- Feb. 1 Declared a \$1 cash dividend per share to stockholders of record on February 15, payable March 1.
 Mar. 1 Paid the dividend declared in February.
 Apr. 1 Announced a 5-for-1 stock split. Prior to the split, the market price per share was \$36.
 July 1 Declared a 10% stock dividend to stockholders of record on July 15, distributable July 31. On July 1, the market price of the stock was \$7 per share.
 31 Issued the shares for the stock dividend.
 Dec. 1 Declared a \$0.40 per share dividend to stockholders of record on December 15, payable January 5, 2015.
 31 Determined that net income for the year was \$350,000.

Instructions

- (a) Journalize the transactions and the closing entries for net income and dividends.
 (b) Enter the beginning balances, and post the entries to the stockholders' equity accounts. (Note: Open additional stockholders' equity accounts as needed.)
 (c) Prepare a stockholders' equity section at December 31.

P11-5A The post-closing trial balance of Russo Corporation at December 31, 2014, contains the following stockholders' equity accounts.

Preferred Stock (15,000 shares issued)	\$ 750,000
Common Stock (250,000 shares issued)	2,500,000
Paid-in Capital in Excess of Par—Preferred Stock	250,000
Paid-in Capital in Excess of Par—Common Stock	425,000
Common Stock Dividends Distributable	250,000
Retained Earnings	1,054,000

- (b) Treasury Stock \$9,000
 (c) Total stockholders' equity \$726,000

Journalize and post transactions, prepare stockholders' equity section.

(LO 2, 3, 4, 7)

- (c) Total stockholders' equity \$5,370,000

Prepare dividend entries and stockholders' equity section.

(LO 5, 7)

- (c) Total stockholders' equity \$2,196,400

Prepare retained earnings statement and stockholders' equity section, and compute earnings per share.

(LO 5, 6, 7)

A review of the accounting records reveals the following.

1. No errors have been made in recording 2014 transactions or in preparing the closing entry for net income.
2. Preferred stock is \$50 par, 7%, and cumulative; 15,000 shares have been outstanding since January 1, 2013.
3. Authorized stock is 20,000 shares of preferred, 500,000 shares of common with a \$10 par value.
4. The January 1 balance in Retained Earnings was \$1,200,000.
5. On July 1, 20,000 shares of common stock were issued for cash at \$16 per share.
6. On September 1, the company discovered an understatement error of \$80,000 in computing depreciation in 2013. The net of tax effect of \$56,000 was properly debited directly to Retained Earnings.
7. A cash dividend of \$250,000 was declared and properly allocated to preferred and common stock on October 1. No dividends were paid to preferred stockholders in 2013.
8. On December 31, a 10% common stock dividend was declared out of retained earnings on common stock when the market price per share was \$17.
9. Net income for the year was \$585,000.
10. On December 31, 2014, the directors authorized disclosure of a \$200,000 restriction of retained earnings for plant expansion. (Use Note X.)

Instructions

- (a) Reproduce the Retained Earnings account for 2014.
- (b) Prepare a retained earnings statement for 2014.
- (c) Prepare a stockholders' equity section at December 31, 2014.
- (d) Compute the allocation of the cash dividend to preferred and common stock.

(c) Total stockholders' equity,
\$5,229,000

Prepare entries for stock transactions and prepare stockholders' equity section.

(LO 2, 3, 4, 7)

P11-6A Jude Corporation has been authorized to issue 20,000 shares of \$100 par value, 10%, noncumulative preferred stock and 1,000,000 shares of no-par common stock. The corporation assigned a \$2.50 stated value to the common stock. At December 31, 2014, the ledger contained the following balances pertaining to stockholders' equity.

Preferred Stock	\$ 120,000
Paid-in Capital in Excess of Par—Preferred Stock	12,000
Common Stock	1,000,000
Paid-in Capital in Excess of Stated Value—Common Stock	1,600,000
Treasury Stock (1,000 common shares)	9,000
Paid-in Capital from Treasury Stock	1,000
Retained Earnings	82,000

The preferred stock was issued for land having a fair value of \$132,000. All common stock issued was for cash. In November, 1,500 shares of common stock were purchased for the treasury at a per share cost of \$9. In December, 500 shares of treasury stock were sold for \$11 per share. No dividends were declared in 2014.

Instructions

- (a) Prepare the journal entries for the:
 - (1) Issuance of preferred stock for land.
 - (2) Issuance of common stock for cash.
 - (3) Purchase of common treasury stock for cash.
 - (4) Sale of treasury stock for cash.
- (b) Prepare the stockholders' equity section at December 31, 2014.

(b) Total stockholders' equity
\$2,806,000

Prepare dividend entries and stockholders' equity section.

(LO 5, 7)

P11-7A On January 1, 2014, Primo Corporation had the following stockholders' equity accounts.

Common Stock (\$10 par value, 75,000 shares issued and outstanding)	\$750,000
Paid-in Capital in Excess of Par—Common Stock	200,000
Retained Earnings	540,000

During the year, the following transactions occurred.

- Jan. 15 Declared a \$1 cash dividend per share to stockholders of record on January 31, payable February 15.
- Feb. 15 Paid the dividend declared in January.

- Apr. 15 Declared a 10% stock dividend to stockholders of record on April 30, distributable May 15. On April 15, the market price of the stock was \$14 per share.
- May 15 Issued the shares for the stock dividend.
- July 1 Announced a 2-for-1 stock split. The market price per share prior to the announcement was \$15. (The new par value is \$5.)
- Dec. 1 Declared a \$0.60 per share cash dividend to stockholders of record on December 15, payable January 10, 2015.
- 31 Determined that net income for the year was \$250,000.

Instructions

- (a) Journalize the transactions and the closing entries for net income and dividends.
- (b) Enter the beginning balances, and post the entries to the stockholders' equity accounts. (Note: Open additional stockholders' equity accounts as needed.)
- (c) Prepare a stockholders' equity section at December 31.

(c) Total stockholders' equity
\$1,566,000

- *P11-8A** The following stockholders' equity accounts arranged alphabetically are in the ledger of Westin Corporation at December 31, 2014.

Common Stock (\$10 stated value)	\$1,500,000
Paid-in Capital from Treasury Stock	6,000
Paid-in Capital in Excess of Stated Value—Common Stock	690,000
Paid-in Capital in Excess of Par—Preferred Stock	42,400
Preferred Stock (8%, \$100 par, noncumulative)	360,000
Retained Earnings	776,000
Treasury Stock—Common (7,000 shares)	92,000

Prepare stockholders' equity section; compute book value per share.

(LO 7, 9)

Instructions

- (a) Prepare a stockholders' equity section at December 31, 2014.
- (b) Compute the book value per share of the common stock, assuming the preferred stock has a call price of \$110 per share.

Total stockholders' equity
\$3,282,400

- *P11-9A** On January 1, 2014, Goodhue Inc. had the following stockholders' equity balances.

Common Stock (400,000 shares issued)	\$800,000
Paid-in Capital in Excess of Par—Common Stock	500,000
Common Stock Dividends Distributable	120,000
Retained Earnings	600,000

Prepare stockholders' equity statement.

(LO 7, 8)

During 2014, the following transactions and events occurred.

1. Issued 60,000 shares of \$2 par value common stock as a result of 15% stock dividend declared on December 15, 2013.
2. Issued 30,000 shares of common stock for cash at \$4 per share.

4. Declared and paid a cash dividend of \$111,000.
5. Sold 8,000 shares of treasury stock for cash at \$5 per share.
6. Earned net income of \$360,000.

Instructions

Prepare a stockholders' equity statement for the year.

Total stockholders' equity
\$2,304,000

PROBLEMS: SET B

- P11-1B** Welles Corporation was organized on January 1, 2014. It is authorized to issue 20,000 shares of 6%, \$40 par value preferred stock, and 500,000 shares of no-par common stock with a stated value of \$1 per share. The following stock transactions were completed during the first year.

Journalize stock transactions, post, and prepare paid-in capital section.

(LO 2, 4, 7)

- Jan. 10 Issued 80,000 shares of common stock for cash at \$3 per share.
- Mar. 1 Issued 10,000 shares of preferred stock for cash at \$45 per share.
- Apr. 1 Issued 25,000 shares of common stock for land. The asking price of the land was \$90,000. The company's estimate of fair value of the land was \$75,000.
- May 1 Issued 75,000 shares of common stock for cash at \$4 per share.
- Aug. 1 Issued 10,000 shares of common stock to attorneys in payment of their bill for \$44,000 for services provided in helping the company organize.

- Sept. 1 Issued 5,000 shares of common stock for cash at \$6 per share.
- Nov. 1 Issued 2,000 shares of preferred stock for cash at \$48 per share.

Instructions

- (a) Journalize the transactions.
- (b) Post to the stockholders' equity accounts. (Use J1 as the posting reference.)
- (c) Prepare the paid-in capital section of stockholders' equity at December 31, 2014.

P11-2B Plover Corporation had the following stockholders' equity accounts on January 1, 2014: Common Stock (\$1 par) \$400,000, Paid-in Capital in Excess of Par—Common Stock \$500,000, and Retained Earnings \$100,000. In 2014, the company had the following treasury stock transactions.

- Mar. 1 Purchased 5,000 shares at \$7 per share.
- June 1 Sold 800 shares at \$10 per share.
- Sept. 1 Sold 1,700 shares at \$9 per share.
- Dec. 1 Sold 1,000 shares at \$5 per share.

Plover Corporation uses the cost method of accounting for treasury stock. In 2014, the company reported net income of \$80,000.

Instructions

- (a) Journalize the treasury stock transactions, and prepare the closing entry at December 31, 2014, for net income.
- (b) Open accounts for (1) Paid-in Capital from Treasury Stock, (2) Treasury Stock, and (3) Retained Earnings. Post to these accounts using J12 as the posting reference.
- (c) Prepare the stockholders' equity section for Plover Corporation at December 31, 2014.

P11-3B The stockholders' equity accounts of Marya Corporation on January 1, 2014, were as follows.

Preferred Stock (9%, \$100 par, cumulative, 5,000 shares authorized)	\$300,000
Common Stock (\$3 stated value, 300,000 shares authorized)	660,000
Paid-in Capital in Excess of Par—Preferred Stock	20,000
Paid-in Capital in Excess of Stated Value—Common Stock	396,000
Retained Earnings	488,000
Treasury Stock (5,000 common shares)	30,000

During 2014, the corporation had the following transactions and events pertaining to its stockholders' equity.

- Feb. 1 Issued 3,000 shares of common stock for \$19,500.
- Mar. 20 Purchased 1,500 additional shares of common treasury stock at \$6 per share.
- June 14 Sold 4,000 shares of treasury stock—common for \$26,000.
- Sept. 3 Issued 2,000 shares of common stock for a patent valued at \$14,000.
- Dec. 31 Determined that net income for the year was \$350,000.

No dividends were declared during the year.

Instructions

- (a) Journalize the transactions and the closing entry for net income.
- (b) Enter the beginning balances in the accounts and post the journal entries to the stockholders' equity accounts. (Use J1 as the posting reference.)
- (c) Prepare a stockholders' equity section at December 31, 2014, including the disclosure of the preferred dividends in arrears.

P11-4B On January 1, 2014, Dixon Corporation had the following stockholders' equity accounts.

Common Stock (\$4 par value, 250,000 shares issued and outstanding)	\$1,000,000
Paid-in Capital in Excess of Par—Common Stock	200,000
Retained Earnings	840,000

During the year, the following transactions occurred.

- Jan. 15 Declared a \$1 cash dividend per share to stockholders of record on January 31, payable February 15.
- Feb. 15 Paid the dividend declared in January.
- Apr. 15 Declared a 10% stock dividend to stockholders of record on April 30, distributable May 15. On April 15, the market price of the stock was \$11 per share.

(c) Total paid-in capital
\$1,235,000

Journalize and post treasury stock transactions, and prepare stockholders' equity section.

(LO 3, 7)

(b) Treasury Stock \$10,500
(c) Total stockholders' equity
\$1,073,300

Journalize and post transactions, prepare stockholders' equity section.

(LO 2, 3, 4, 7)

(c) Total stockholders' equity
\$2,234,500

Prepare dividend entries and stockholders' equity section.

(LO 5, 7)

- May 15 Issued the shares for the stock dividend.
 July 1 Announced a 2-for-1 stock split. The market price per share prior to the announcement was \$12. (The new par value is \$2.00.)
 Dec. 1 Declared a \$0.50 per share cash dividend to stockholders of record on December 15, payable January 10, 2015.
 31 Determined that net income for the year was \$264,000.

Instructions

- (a) Journalize the transactions and the closing entries for net income and dividends.
 (b) Enter the beginning balances, and post the entries to the stockholders' equity accounts. (Note: Open additional stockholders' equity accounts as needed.)
 (c) Prepare a stockholders' equity section at December 31.

(c) Total stockholders' equity
\$1,779,000

P11-5B On December 31, 2013, Andes Company had 1,500,000 shares of \$10 par common stock issued and outstanding. The stockholders' equity accounts at December 31, 2013, had the following balances.

Common Stock	\$15,000,000
Additional Paid-in Capital	1,500,000
Retained Earnings	900,000

Prepare retained earnings statement and stockholders' equity section.

(LO 6, 7)

Transactions during 2014 and other information related to stockholders' equity accounts were as follows.

- On January 10, 2014, Andes issued at \$105 per share 100,000 shares of \$100 par value, 8% cumulative preferred stock.
- On February 8, 2014, Andes reacquired 20,000 shares of its common stock for \$14 per share.
- On June 8, 2014, Andes declared a cash dividend of \$1 per share on the common stock outstanding, payable on July 10, 2014, to stockholders of record on July 1, 2014.
- On December 15, 2014, Andes declared the yearly cash dividend on preferred stock, payable January 10, 2015, to stockholders of record on December 15, 2014.
- Net income for the year is \$3,600,000.
- It was discovered that depreciation expense had been understated in 2013 by \$65,000.

Instructions

- (a) Prepare a retained earnings statement for the year ended December 31, 2014.
 (b) Prepare the stockholders' equity section of Andes's balance sheet at December 31, 2014.

(b) Total stockholders' equity
\$28,875,000

P11-6B The ledger of Paisley Corporation at December 31, 2014, after the books have been closed, contains the following stockholders' equity accounts.

Preferred Stock (8,000 shares issued)	\$ 800,000
Common Stock (400,000 shares issued)	2,000,000
Paid-in Capital in Excess of Par—Preferred Stock	100,000
Paid-in Capital in Excess of Stated—Common Stock	1,220,000
Common Stock Dividends Distributable	200,000
Retained Earnings	2,520,000

Prepare retained earnings statement and stockholders' equity section, and compute earnings per share.

(LO 5, 6, 7)

A review of the accounting records reveals the following.

- No errors have been made in recording 2014 transactions or in preparing the closing entry for net income.
- Preferred stock is 8%, \$100 par value, noncumulative, and callable at \$125. Since January 1, 2013, 8,000 shares have been outstanding; 20,000 shares are authorized.
- Common stock is no-par with a stated value of \$5 per share; 600,000 shares are authorized.
- The January 1 balance in Retained Earnings was \$2,450,000.
- On October 1, 100,000 shares of common stock were sold for cash at \$8 per share.
- A cash dividend of \$500,000 was declared and properly allocated to preferred and common stock on November 1. No dividends were paid to preferred stockholders in 2013.
- On December 31, a 10% common stock dividend was declared out of retained earnings on common stock when the market price per share was \$10.
- Net income for the year was \$970,000.
- On December 31, 2014, the directors authorized disclosure of a \$100,000 restriction of retained earnings for plant expansion. (Use Note A.)

Instructions

- (a) Reproduce the Retained Earnings account (T-account) for 2014.
 (b) Prepare a retained earnings statement for 2014.
 (c) Prepare a stockholders' equity section at December 31, 2014.
 (d) Compute the allocation of the cash dividend to preferred and common stock.

(c) Total stockholders' equity
\$6,840,000

Prepare stockholders' equity section; compute book value per share.

(LO 7, 9)

***P11-7B** The following stockholders' equity accounts arranged alphabetically are in the ledger of Crivello Corporation at December 31, 2014.

Common Stock (\$3 stated value)	\$2,400,000
Paid-in Capital from Treasury Stock	10,000
Paid-in Capital in Excess of Stated Value—Common Stock	1,600,000
Paid-in Capital in Excess of Par—Preferred Stock	220,000
Preferred Stock (8%, \$50 par, noncumulative)	800,000
Retained Earnings	1,448,000
Treasury Stock—Common (10,000 shares)	75,000

Instructions

- (a) Prepare a stockholders' equity section at December 31, 2014.
 (b) Compute the book value per share of the common stock, assuming the preferred stock has a call price of \$60 per share.

Total stockholders' equity
\$6,403,000

PROBLEMS: SET C

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Problem Set C.

COMPREHENSIVE PROBLEM

CP11-1 Voltaire Corporation's balance sheet at December 31, 2013, is presented below.

Voltaire Corporation
Balance Sheet
December 31, 2013

Cash	\$ 24,600	Accounts payable	\$ 25,600
Accounts receivable	45,500	Common stock (\$1 par)	50,000
Allowance for doubtful accounts	(1,500)	Retained earnings	147,400
Supplies	4,400		<u>\$223,000</u>
Land	40,000		
Buildings	130,000		
Accumulated depreciation—buildings	(20,000)		
	<u>\$223,000</u>		

During 2014, the following transactions occurred.

- On January 1, 2014, Voltaire issued 1,500 shares of \$20 par, 6% preferred stock for \$33,000.
- On January 1, 2014, Voltaire also issued 900 shares of the \$1 par value common stock for \$6,300.
- Voltaire performed services for \$276,000 on account.
- On April 1, 2014, Voltaire collected fees of \$36,000 in advance for services to be performed from April 1, 2014, to March 31, 2015.
- Voltaire collected \$267,000 from customers on account.
- Voltaire bought \$26,100 of supplies on account.
- Voltaire paid \$32,200 on accounts payable.

8. Voltaire reacquired 400 shares of its common stock on June 1, 2014, for \$8 per share.
9. Paid other operating expenses of \$188,200.
10. On December 31, 2014, Voltaire declared the annual preferred stock dividend and a \$.50 per share dividend on the outstanding common stock, all payable on January 15, 2015.
11. An account receivable of \$1,300 which originated in 2013 is written off as uncollectible.

Adjustment data:

1. A count of supplies indicates that \$5,900 of supplies remain unused at year-end.
2. Recorded revenue recognized from item 4 above.
3. The allowance for doubtful accounts should have a balance of \$3,500 at year end.
4. Depreciation is recorded on the building on a straight-line basis based on a 30-year life and a salvage value of \$10,000.
5. The income tax rate is 30%. (*Hint:* Prepare the income statement up to income before taxes and multiply by 30% to compute the amount.)

Instructions

(You may want to set up T-accounts to determine ending balances.)

- (a) Prepare journal entries for the transactions listed above and adjusting entries.
- (b) Prepare an adjusted trial balance at December 31, 2014.
- (c) Prepare an income statement and a retained earnings statement for the year ending December 31, 2014, and a classified balance sheet as of December 31, 2014.

(b) Totals \$647,620
(c) Net income \$58,030
Tot. assets \$344,900

CONTINUING COOKIE CHRONICLE

(*Note:* This is a continuation of the Cookie Chronicle from Chapters 1–10.)

CCC11 Natalie and her friend Curtis Lesperance decide that they can benefit from joining Cookie Creations and Curtis's coffee shop. In the first part of this problem, they come to you with questions about setting up a corporation for their new business. In the second part of the problem, they want your help in preparing financial information following the first year of operations of their new business, Cookie & Coffee Creations.

Go to the book's companion website, www.wiley.com/college/weygandt, to see the completion of this problem.

Broadening Your PERSPECTIVE

Financial Reporting and Analysis

Financial Reporting Problem: PepsiCo, Inc.

BYP11-1 The stockholders' equity section for **PepsiCo, Inc.** is shown in Appendix A. You will also find data relative to this problem on other pages of the appendix.

Instructions

- (a) What is the par or stated value per share of PepsiCo's common stock?
- (b) What percentage of PepsiCo's authorized common stock was issued at December 25, 2010?
- (c) How many shares of common stock were outstanding at December 25, 2010, and at December 26, 2009?
- *(d) What was the book value per share at December 25, 2010, and at December 26, 2009?
- (e) What were the high and low market prices per share in the fourth quarter of fiscal 2010, as reported under Selected Financial Data?

Comparative Analysis Problem: PepsiCo, Inc. vs. The Coca-Cola Company

BYP11-2 PepsiCo's financial statements are presented in Appendix A. Financial statements of The Coca-Cola Company are presented in Appendix B.

Instructions

- Based on the information contained in these financial statements, compute the 2010 book value per share for each company. (*Hint:* Use the value reported for "common shareholders' equity" as the numerator for PepsiCo.)
- Compare the market value per share for each company to the book value per share at year-end 2010. Assume that the market value of Coca-Cola's stock was \$65.77 at year-end 2010.
- Why are book value and market value per share different?
- Compute earnings per share and return on common stockholders' equity for both companies for 2010. Assume PepsiCo's weighted-average shares were 1,590 million and Coca-Cola's weighted-average shares were 2,308 million. Can these measures be used to compare the profitability of the two companies? Why or why not?
- What was the total amount of dividends paid by each company in 2010?

Real-World Focus

BYP11-3 Use the stockholders' equity section of an annual report and identify the major components.

Address: www.annualreports.com, or go to www.wiley.com/college/weygandt

Steps

- From Annual Reports Homepage, choose **Search by Alphabet**, and choose a letter.
- Select a particular company.
- Choose Annual Report.
- Follow instructions below.

Instructions

Answer the following questions.

- What is the company's name?
- What classes of capital stock has the company issued?
- For each class of stock:
 - How many shares are authorized, issued, and/or outstanding?
 - What is the par value?
- What are the company's retained earnings?
- Has the company acquired treasury stock? How many shares?

Critical Thinking

Decision-Making Across the Organization

BYP11-4 The stockholders' meeting for Kissinger Corporation has been in progress for some time. The chief financial officer for Kissinger is presently reviewing the company's financial statements and is explaining the items that comprise the stockholders' equity section of the balance sheet for the current year. The stockholders' equity section of Kissinger Corporation at December 31, 2014, is as follows.

**Kissinger Corporation
Balance Sheet (partial)
December 31, 2014**

Paid-in capital	
Capital stock	
Preferred stock, authorized 1,000,000 shares cumulative, \$100 par value, \$8 per share, 6,000 shares issued and outstanding	\$ 600,000
Common stock, authorized 5,000,000 shares, \$1 par value, 3,000,000 shares issued, and 2,700,000 outstanding	3,000,000
Total capital stock	3,600,000

Additional paid-in capital		
In excess of par—preferred stock	\$ 50,000	
In excess of par—common stock	<u>25,000,000</u>	
Total additional paid-in capital		<u>25,050,000</u>
Total paid-in capital		28,650,000
Retained earnings		<u>900,000</u>
Total paid-in capital and retained earnings		29,550,000
Less: Treasury stock (300,000 common shares)		<u>9,300,000</u>
Total stockholders' equity		<u>\$20,250,000</u>

At the meeting, stockholders have raised a number of questions regarding the stockholders' equity section.

Instructions

With the class divided into groups, answer the following questions as if you were the chief financial officer for Kissinger Corporation.

- “What does the cumulative provision related to the preferred stock mean?”
- “I thought the common stock was presently selling at \$29.75, but the company has the stock stated at \$1 per share. How can that be?”
- “Why is the company buying back its common stock? Furthermore, the treasury stock has a debit balance because it is subtracted from stockholders' equity. Why is treasury stock not reported as an asset if it has a debit balance?”

Communication Activity

BYP11-5 Jerrod Platt, your uncle, is an inventor who has decided to incorporate. Uncle Jerrod knows that you are an accounting major at U.N.O. In a recent letter to you, he ends with the question, “I'm filling out a state incorporation application. Can you tell me the difference in the following terms: (1) authorized stock, (2) issued stock, (3) outstanding stock, and (4) preferred stock?”

Instructions

In a brief note, differentiate for Uncle Jerrod among the four different stock terms. Write the letter to be friendly, yet professional.

Ethics Case

BYP11-6 The R&D division of Hancock Chemical Corp. has just developed a chemical for sterilizing the vicious Brazilian “killer bees” which are invading Mexico and the southern states of the United States. The president of Hancock is anxious to get the chemical on the market to boost the company's profits. He believes his job is in jeopardy because of decreasing sales and profits. Hancock has an opportunity to sell this chemical in Central American countries, where the laws are much more relaxed than in the United States.

The director of Hancock's R&D division strongly recommends further testing in the laboratory for side-effects of this chemical on other insects, birds, animals, plants, and even humans. He cautions the president, “We could be sued from all sides if the chemical has tragic side-effects that we didn't even test for in the labs.” The president answers, “We can't wait an additional year for your lab tests. We can avoid losses from such lawsuits by establishing a separate wholly owned corporation to shield Hancock Corp. from such lawsuits. We can't lose any more than our investment in the new corporation, and we'll invest in just the patent covering this chemical. We'll reap the benefits if the chemical works and is safe, and avoid the losses from lawsuits if it's a disaster.” The following week, Hancock creates a new wholly owned corporation called Badell Inc., sells the chemical patent to it for \$10, and watches the spraying begin.

Instructions

- Who are the stakeholders in this situation?
- Are the president's motives and actions ethical?
- Can Hancock shield itself against losses of Badell Inc.?

All About You

BYP11-7 A high percentage of Americans own stock in corporations. As a shareholder in a corporation, you will receive an annual report. One of the goals of this course is for you to learn how to navigate your way around an annual report.

Instructions

Use **PepsiCo Inc.**'s annual report provided in Appendix A to answer the following questions.

- What CPA firm performed the audit of PepsiCo's financial statements?
- What was the amount of PepsiCo's earnings per share in 2010?
- What was net revenue in 2010?
- How many shares of treasury stock did the company have at the end of 2010?
- How much cash did PepsiCo spend on capital expenditures in 2010?
- Over what life does the company depreciate its buildings?
- What was the total amount of dividends paid in 2010?

FASB Codification Activity

BYP11-8 If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following.

- What is the stock dividend?
- What is a stock split?
- At what percentage point does the issuance of additional shares qualify as a stock dividend, as opposed to a stock split?

Answers to Chapter Questions**Answers to Insight and Accounting Across the Organization Questions**

p. 541 Wall Street No Friend of Facebook Q: Why has Mark Zuckerberg, the CEO and founder of Facebook, delayed taking his company's shares public through an initial public offering (IPO)?

A: Facebook doesn't need to invest in factories, distribution systems, or even marketing, so it doesn't need to raise a lot of cash. Also, by not going public, Zuckerberg has more control over the direction of the company. In addition, publicly traded companies face many more financial reporting disclosure requirements.

p. 544 How to Read Stock Quotes Q: For stocks traded on organized stock exchanges, how are the dollar prices per share established? **A:** The dollar prices per share are established by the interaction between buyers and sellers of the shares. **Q:** What factors might influence the price of shares in the marketplace? **A:** The price of shares is influenced by a company's earnings and dividends as well as by factors beyond a company's control, such as changes in interest rates, labor strikes, scarcity of supplies or resources, and politics. The number of willing buyers and sellers (demand and supply) also plays a part in the price of shares.

p. 547 The Impact of Corporate Social Responsibility Q: Why are CSR-related shareholder proposals increasing? **A:** The increase in shareholder proposals reflect a growing belief that a company's social and environmental policies correlate strongly with its risk-management strategy and ultimately its financial performance.

p. 552 Why Did Reebok Buy Its Own Stock? Q: What signal might a large stock repurchase send to investors regarding management's belief about the company's growth opportunities? **A:** When a company has many growth opportunities it will normally conserve its cash in order to be better able to fund expansion. A large use of cash to buy back stock (and essentially shrink the company) would suggest that management was not optimistic about its growth opportunities.

p. 559 Up, Down, and ?? Q: What factors must management consider in deciding how large a dividend to pay? **A:** Management must consider the size of the company's retained earnings balance, the amount of available cash, the company's expected near-term cash needs, the company's growth opportunities, and what level of dividend the company will be able to sustain based upon its expected future earnings.

p. 563 A No-Split Philosophy Q: Why does Warren Buffett usually oppose stock splits? **A:** Mr. Buffett prefers to attract shareholders that make a long-term commitment to his company, as opposed to traders that only hold their investment for a short period of time. He believes that a high stock price discourages short-term investment.

A Look at IFRS

The accounting for transactions related to stockholders' equity, such as issuance of shares and purchase of treasury stock, are similar under both IFRS and GAAP. Major differences relate to terminology used, introduction of items such as revaluation surplus, and presentation of stockholders' equity information. The basic accounting for cash and stock dividends is essentially the same under both GAAP and IFRS although IFRS terminology may differ.

Key Points

- Under IFRS, the term *reserves* is used to describe all equity accounts other than those arising from contributed (paid-in) capital. This would include, for example, reserves related to retained earnings, asset revaluations, and fair value differences.
- Many countries have a different mix of investor groups than in the United States. For example, in Germany, financial institutions like banks are not only major creditors of corporations but often are the largest corporate stockholders as well. In the United States, Asia, and the United Kingdom, many companies rely on substantial investment from private investors.
- There are often terminology differences for equity accounts. The following summarizes some of the common differences in terminology.

GAAP	IFRS
Common stock	Share capital—ordinary
Stockholders	Shareholders
Par value	Nominal or face value
Authorized stock	Authorized share capital
Preferred stock	Share capital—preference
Paid-in capital	Issued/allocated share capital
Paid-in capital in excess of par—common stock	Share premium—ordinary
Paid-in capital in excess of par—preferred stock	Share premium—preference
Retained earnings	Retained earnings or Retained profits
Retained earnings deficit	Accumulated losses
Accumulated other comprehensive income	General reserve and other reserve accounts

As an example of how similar transactions use different terminology under IFRS, consider the accounting for the issuance of 1,000 shares of \$1 par value common stock for \$5 per share. Under IFRS, the entry is as follows.

Cash	5,000	
Share Capital—Ordinary		1,000
Share Premium—Ordinary		4,000

- The accounting for treasury stock differs somewhat between IFRS and GAAP. (However, many of the differences are beyond the scope of this course.) Like GAAP, IFRS does not allow a company to record gains or losses on purchases of its own shares. One difference worth noting is that, when a company purchases its own shares, IFRS treats it as a reduction of stockholders' equity, but it does not specify which particular stockholders' equity accounts are to be affected. Therefore, it could be shown as an increase to a contra-equity account (Treasury Stock) or a decrease to retained earnings or share capital.
- A major difference between IFRS and GAAP relates to the account Revaluation Surplus. Revaluation surplus arises under IFRS because companies are permitted to revalue their property, plant, and equipment to fair value under certain circumstances. This account is part of general reserves under IFRS and is not considered contributed capital.
- IFRS often uses terms such as *retained profits* or *accumulated profit or loss* to describe retained earnings. The term *retained earnings* is also often used.
- The accounting related to prior period adjustment is essentially the same under IFRS and GAAP. IFRS addresses the accounting for errors in IAS 8 ("Accounting Policies, Changes in Accounting Estimates, and Errors"). One area where IFRS and GAAP differ in reporting relates to error corrections in previously issued financial statements. While IFRS requires restatement with some exceptions, GAAP does not permit any exceptions.

- Equity is given various descriptions under IFRS, such as shareholder's equity, owners' equity, capital and reserves, and shareholders' funds.
- The income statement using IFRS is called the *statement of comprehensive income*. A statement of comprehensive income is presented in a one- or two-statement format. The single-statement approach includes all items of income and expense, as well as each component of other comprehensive income or loss by its individual characteristic. In the two-statement approach, a traditional income statement is prepared. It is then followed by a statement of comprehensive income, which starts with net income or loss and then adds other comprehensive income or loss items. Regardless of which approach is reported, income tax expense is required to be reported.
- The computations related to earnings per share are essentially the same under IFRS and GAAP.

Looking to the Future

The IASB and the FASB are currently working on a project related to financial statement presentation. An important part of this study is to determine whether certain line items, subtotals, and totals should be clearly defined and required to be displayed in the financial statements. For example, it is likely that the statement of stockholders' equity and its presentation will be examined closely.

Both the IASB and FASB are working toward convergence of any remaining differences related to earnings per share computations. This convergence will deal with highly technical changes beyond the scope of this textbook.

IFRS Practice

IFRS Self-Test Questions

- Under IFRS, a purchase by a company of its own shares is recorded by:
 - an increase in Treasury Stock.
 - a decrease in contributed capital.
 - a decrease in share capital.
 - All of these are acceptable treatments.
- Which of the following is *true*?
 - In the United States, the primary corporate stockholders are financial institutions.
 - Share capital means total assets under IFRS.
 - The IASB and FASB are presently studying how financial statement information should be presented.
 - The accounting for treasury stock differs extensively between GAAP and IFRS.
- Under IFRS, the amount of capital received in excess of par value would be credited to:

(a) Retained Earnings.	(c) Share Premium.
(b) Contributed Capital.	(d) Par value is not used under IFRS.
- Which of the following is *false*?
 - Under GAAP, companies cannot record gains on transactions involving their own shares.
 - Under IFRS, companies cannot record gains on transactions involving their own shares.
 - Under IFRS, the statement of stockholders' equity is a required statement.
 - Under IFRS, a company records a revaluation surplus when it experiences an increase in the price of its common stock.
- Which of the following does *not* represent a pair of GAAP/IFRS-comparable terms?
 - Additional paid-in capital/Share premium.
 - Treasury stock/Repurchase reserve.
 - Common stock/Share capital.
 - Preferred stock/Preference shares.
- The basic accounting for cash dividends and stock dividends:
 - is different under IFRS versus GAAP.
 - is the same under IFRS and GAAP.
 - differs only for the accounting for cash dividends between GAAP and IFRS.
 - differs only for the accounting for stock dividends between GAAP and IFRS.
- Which item is *not* considered part of reserves?

(a) Accumulated other comprehensive income.	(c) Retained earnings.
(b) Revaluation surplus.	(d) Issued shares.

8. Under IFRS, a statement of comprehensive income must include:
 - (a) accounts payable.
 - (b) retained earnings.
 - (c) income tax expense.
 - (d) preference stock.
9. Which set of terms can be used to describe total stockholders' equity under IFRS?
 - (a) Shareholders' equity, capital and reserves, other comprehensive income.
 - (b) Capital and reserves, shareholders' equity, shareholders' funds.
 - (c) Capital and reserves, retained earnings, shareholders' equity.
 - (d) All of the above.
10. Earnings per share computations related to IFRS and GAAP:
 - (a) are essentially similar.
 - (b) result in an amount referred to as earnings per share.
 - (c) must deduct preferred (preference) dividends when computing earnings per share.
 - (d) All of the above.

IFRS Exercises

IFRS11-1 On May 10, Romano Corporation issues 1,000 shares of \$10 par value ordinary shares for cash at \$18 per share. Journalize the issuance of the shares.

IFRS11-2 Ingram Corporation has the following accounts (in euros) at December 31: Share Capital—Ordinary, €10 par, 5,000 shares issued, €50,000; Share Premium—Ordinary €10,000; Retained Earnings €45,000; and Treasury Shares—Ordinary, 500 shares, €11,000. Prepare the equity section of the statement of financial position.

IFRS11-3 Sorocaba Co. had the following transactions during the current period.

- Mar. 2 Issued 5,000 shares of \$1 par value ordinary shares to attorneys in payment of a bill for \$30,000 for services provided in helping the company to incorporate.
- June 12 Issued 60,000 shares of \$1 par value ordinary shares for cash of \$375,000.
- July 11 Issued 1,000 shares of \$100 par value preference shares for cash at \$110 per share.
- Nov. 28 Purchased 2,000 treasury shares for \$80,000.

Instructions

Journalize the above transactions.

International Financial Reporting Problem: Zetar plc

IFRS11-4 The financial statements of **Zetar plc** are presented in Appendix C. The company's complete annual report, including the notes to its financial statements, is available at www.zetarplc.com.

Instructions

Use the company's annual report to answer the following questions.

- (a) Using the information in the statement of changes in equity, prepare the journal entry to record the issuance of ordinary shares during the year ended April 30, 2010.
- (b) Examine the equity section of the company's balance sheet. For each item in the equity section, provide the comparable label that would be used under GAAP.
- (c) Did the company declare and pay any dividends for the year ended April 30, 2010?
- (d) Compute the company's return on ordinary shareholders' equity for the year ended April 30, 2010.
- (e) What was Zetar's earnings per share for the year ended April 30, 2010?

Chapter 12

Investments

Feature Story

“Is There Anything Else We Can Buy?”

In a rapidly changing world, you must change rapidly or suffer the consequences. In business, change requires investment.

A case in point is found in the entertainment industry. Technology is bringing about innovations so quickly that it is nearly impossible to guess which technologies will last and which will soon fade away. For example, will both satellite TV and cable TV survive, or will just one succeed? Or, will both be replaced by something else?

Consider the publishing industry as well. Will paper newspapers and

magazines be replaced completely by online news? If you are a publisher, you have to make your best guess about what the future holds and invest accordingly.

Time Warner, Inc. lives at the center of this arena. It is not an environment for the timid, and Time Warner's philosophy is anything but that. Instead, it might be characterized as, “If we can't beat you, we will buy you.” Its mantra is “invest, invest, invest.” A list of Time Warner's holdings gives an idea of its reach:

Magazines: *People, Time, Life, Sports Illustrated, Fortune.*

Book publishers: Time-Life Books, Book-of-the-Month Club, Little, Brown & Co, Sunset Books.

Learning Objectives

After studying this chapter, you should be able to:

- 1** Discuss why corporations invest in debt and stock securities.
- 2** Explain the accounting for debt investments.
- 3** Explain the accounting for stock investments.
- 4** Describe the use of consolidated financial statements.
- 5** Indicate how debt and stock investments are reported in financial statements.
- 6** Distinguish between short-term and long-term investments.

The Navigator

Television and movies: Warner Bros. (“ER,” “Without a Trace,” the WB Network), HBO, and movies like *Harry Potter and the Deathly Hollows: Part 2* and *Batman Begins*.

Broadcasting: TNT, CNN news, and Turner’s library of thousands of classic movies.

Internet: America Online and AOL Anywhere.

Time Warner owns more information and entertainment copyrights and brands than any other company in the world.

The merger of **America Online (AOL)** with Time Warner, one of the biggest mergers ever, was originally perceived by many

as the gateway to the future. In actuality, it was a financial disaster. It is largely responsible for much of the decline in

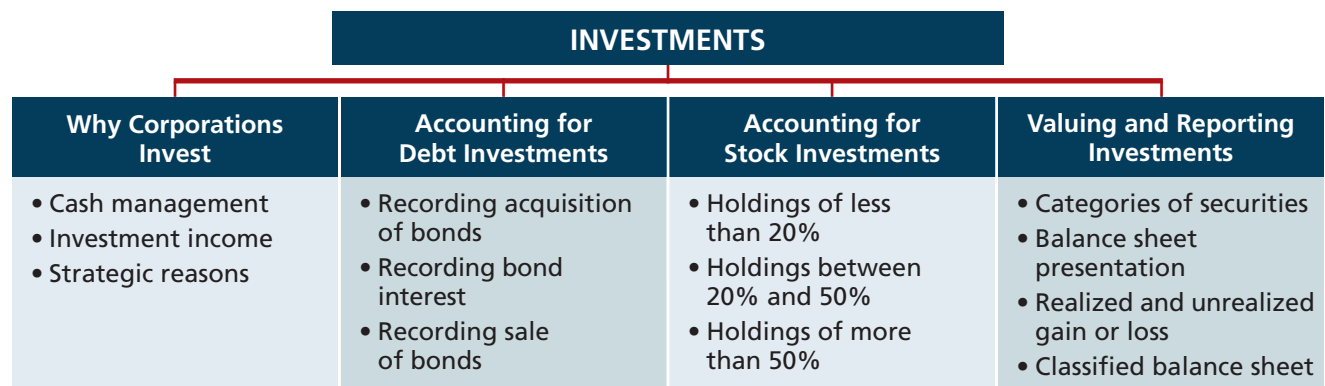

Time Warner’s stock price, from a high of \$95.80 to a recent level of \$32. Ted Turner, who was at one time Time Warner’s largest shareholder, lost billions of dollars on the deal and eventually sold most of his shares. In 2009, Time Warner completed a spin-off of AOL after years of trying to integrate the two companies. One analyst called the failed deal “a nine-year adventure akin to a marathon through mud.”

Preview of Chapter 12

Time Warner’s management believes in aggressive growth through investing in the stock of existing companies. Besides purchasing stock, companies also purchase other securities such as bonds issued by corporations or by governments. Companies can make investments for a short or long period of time, as a passive investment, or with the intent to control another company. As you will see in this chapter, the way in which a company accounts for its investments is determined by a number of factors.

The content and organization of Chapter 12 are as follows.

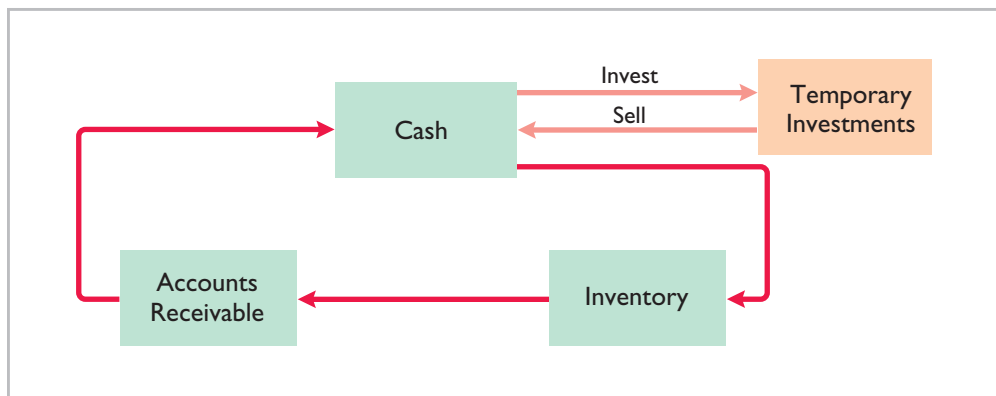

Why Corporations Invest

LEARNING OBJECTIVE 1

Discuss why corporations invest in debt and stock securities.

Corporations purchase investments in debt or stock securities generally for one of three reasons. First, a corporation may **have excess cash** that it does not need for the immediate purchase of operating assets. For example, many companies experience seasonal fluctuations in sales. A Cape Cod marina has more sales in the spring and summer than in the fall and winter. (The reverse is true for an Aspen ski shop.) At the end of an operating cycle, the marina may have cash on hand that is temporarily idle until the start of another operating cycle. It may invest the excess funds to earn a greater return—interest and dividends—than it would get by just holding the funds in the bank. Illustration 12-1 depicts the role that such temporary investments play in the operating cycle.

Illustration 12-1
Temporary investments and the operating cycle

Excess cash may also result from economic cycles. For example, when the economy is booming, **General Electric** generates considerable excess cash. It uses some of this cash to purchase new plant and equipment, and pays out some of the cash in dividends. But, it may also invest excess cash in liquid assets in anticipation of a future downturn in the economy. It can then liquidate these investments during a recession, when sales slow and cash is scarce.

When investing excess cash for short periods of time, corporations invest in low-risk, highly liquid securities—most often short-term government securities. It is generally not wise to invest short-term excess cash in shares of common stock because stock investments can experience rapid price changes. If you did invest your short-term excess cash in stock and the price of the stock declined significantly just before you needed cash again, you would be forced to sell your stock investment at a loss.

A second reason some companies purchase investments is to generate **earnings from investment income**. For example, banks make most of their earnings by lending money, but they also generate earnings by investing in debt. Conversely, mutual stock funds invest primarily in equity securities in order to benefit from stock-price appreciation and dividend revenue.

Third, companies also invest for **strategic reasons**. A company can exercise some influence over a customer or supplier by purchasing a significant, but not controlling, interest in that company. Or, a company may purchase a noncontrolling interest in another company in a related industry in which it wishes to establish a presence. For example, **Time Warner** initially purchased an interest of less

than 20% in **Turner Broadcasting** to have a stake in Turner’s expanding business opportunities. At a later date, Time Warner acquired the remaining 80%. Subsequently, Time Warner merged with **AOL** and became **AOL Time Warner, Inc.** Now, it is again just **Time Warner, Inc.**, as indicated in the Feature Story.

A corporation may also choose to purchase a controlling interest in another company. For example, as the *Accounting Across the Organization* box on page 608 shows, **Procter & Gamble** purchased **Gillette**. Such purchases might be done to enter a new industry without incurring the tremendous costs and risks associated with starting from scratch. Or, a company might purchase another company in its same industry.

In summary, businesses invest in other companies for the reasons shown in Illustration 12-2.

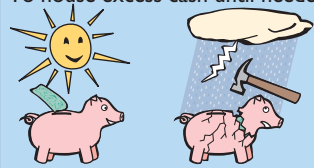

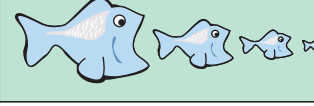

Reason	Typical Investment
 <p>To house excess cash until needed</p>	Low-risk, high-liquidity, short-term securities such as government-issued securities
 <p>To generate earnings</p>	Debt securities (banks and other financial institutions) and stock securities (mutual funds and pension funds)
 <p>To meet strategic goals</p>	Stocks of companies in a related industry or in an unrelated industry that the company wishes to enter

Illustration 12-2
Why corporations invest

Accounting for Debt Investments

Debt investments are investments in government and corporation bonds. In accounting for debt investments, companies make entries to record (1) the acquisition, (2) the interest revenue, and (3) the sale.

LEARNING OBJECTIVE 2

Explain the accounting for debt investments.

Recording Acquisition of Bonds

At acquisition, the cost principle applies. Cost includes all expenditures necessary to acquire these investments, such as the price paid plus brokerage fees (commissions), if any.

Assume, for example, that Kuhl Corporation acquires 50 Doan Inc. 8%, 10-year, \$1,000 bonds on January 1, 2014, for \$54,000, including brokerage fees of \$1,000. The entry to record the investment is:

Jan. 1	Debt Investments Cash (To record purchase of 50 Doan Inc. bonds)	54,000	54,000
--------	--	--------	--------

	A	=	L	+	SE	
	+54,000					
	-54,000					
Cash Flows	-54,000					

Recording Bond Interest

The Doan, Inc. bonds pay interest of \$2,000 semiannually on July 1 and January 1 (\$50,000 × 8% × 1/2). The entry for the receipt of interest on July 1 is:

A	=	L	+	SE	
+2,000				+2,000 Rev	
<hr/>					
Cash Flows					+2,000

July 1	Cash	2,000	
	Interest Revenue		2,000
	(To record receipt of interest on Doan Inc. bonds)		

If Kuhl Corporation’s fiscal year ends on December 31, it accrues the interest of \$2,000 earned since July 1. The adjusting entry is:

A	=	L	+	SE	
+2,000				+2,000 Rev	
<hr/>					
Cash Flows					no effect

Dec. 31	Interest Receivable	2,000	
	Interest Revenue		2,000
	(To accrue interest on Doan Inc. bonds)		

Kuhl reports Interest Receivable as a current asset in the balance sheet. It reports Interest Revenue under “Other revenues and gains” in the income statement.

Kuhl reports receipt of the interest on January 1 as follows.

A	=	L	+	SE	
+2,000					
-2,000					
<hr/>					
Cash Flows					+2,000

Jan. 1	Cash	2,000	
	Interest Receivable		2,000
	(To record receipt of accrued interest)		

A credit to Interest Revenue at this time is incorrect because the company earned and accrued interest revenue in the *preceding* accounting period.

Recording Sale of Bonds

When Kuhl sells the bonds, it credits the investment account for the cost of the bonds. Kuhl records as a gain or loss any difference between the net proceeds from the sale (sales price less brokerage fees) and the cost of the bonds.

Assume, for example, that Kuhl Corporation receives net proceeds of \$58,000 on the sale of the Doan Inc. bonds on January 1, 2015, after receiving the interest due. Since the securities cost \$54,000, the company realizes a gain of \$4,000. It records the sale as:

A	=	L	+	SE	
+58,000					
-54,000					
<hr/>					
Cash Flows					+4,000 Rev

Jan. 1	Cash	58,000	
	Debt Investments		54,000
	Gain on Sale of Debt Investments		4,000
	(To record sale of Doan Inc. bonds)		

Kuhl reports the gain on sale of debt investments under “Other revenues and gains” in the income statement and reports losses under “Other expenses and losses.”

> DO IT!

Debt Investments

Waldo Corporation had the following transactions pertaining to debt investments.

Jan. 1 Purchased 30, \$1,000 Hillary Co. 10% bonds for \$30,000, plus brokerage fees of \$900. Interest is payable semiannually on July 1 and January 1.

July 1 Received semiannual interest on Hillary Co. bonds.

July 1 Sold 15 Hillary Co. bonds for \$15,000, less \$400 brokerage fees.

(a) Journalize the transactions, and (b) prepare the adjusting entry for the accrual of interest on December 31.

Action Plan

- ✓ Record bond investments at cost.
- ✓ Record interest when received and/or accrued.
- ✓ When bonds are sold, credit the investment account for the cost of the bonds.
- ✓ Record any difference between the cost and the net proceeds as a gain or loss.

Solution

(a)	Jan. 1	Debt Investments	30,900	
		Cash		30,900
		(To record purchase of 30 Hillary Co. bonds)		
July 1		Cash	1,500	
		Interest Revenue ($\$30,000 \times .10 \times 6/12$) (To record receipt of interest on Hillary Co. bonds)		1,500
July 1		Cash	14,600	
		Loss on Sale of Debt Investments	850	
		Debt Investments ($\$30,900 \times 15/30$) (To record sale of 15 Hillary Co. bonds)		15,450
(b)	Dec. 31	Interest Receivable	750	
		Interest Revenue ($\$15,000 \times .10 \times 6/12$)		750
		(To accrue interest on Hillary Co. bonds)		

Related exercise material: **BE12-1, E12-2, E12-3, and DO IT! 12-1.**

Accounting for Stock Investments

Stock investments are investments in the capital stock of other corporations. When a company holds stock (and/or debt) of several different corporations, the group of securities is identified as an **investment portfolio**.

The accounting for investments in common stock depends on the extent of the investor's influence over the operating and financial affairs of the issuing corporation (the **investee**). Illustration 12-3 shows the general guidelines.

LEARNING OBJECTIVE 3

Explain the accounting for stock investments.

Investor's Ownership Interest in Investee's Common Stock	Presumed Influence on Investee	Accounting Guidelines
 Less than 20%	Insignificant	Cost method
 Between 20% and 50%	Significant	Equity method
 More than 50%	Controlling	Consolidated financial statements

Illustration 12-3
Accounting guidelines for stock investments

Companies are required to use judgment instead of blindly following the guidelines.¹ On the following pages, we will explain the application of each guideline.

¹Among the questions that are considered in determining an investor's influence are these: (1) Does the investor have representation on the investee's board? (2) Does the investor participate in the investee's policy-making process? (3) Are there material transactions between the investor and investee? (4) Is the common stock held by other stockholders concentrated or dispersed?

Helpful Hint

The entries for investments in common stock also apply to investments in preferred stock.

Holdings of Less than 20%

In accounting for stock investments of less than 20%, companies use the cost method. Under the **cost method**, companies record the investment at cost, and recognize revenue only when cash dividends are received.

RECORDING ACQUISITION OF STOCK INVESTMENTS

At acquisition, the cost principle applies. Cost includes all expenditures necessary to acquire these investments, such as the price paid plus any brokerage fees (commissions).

Assume, for example, that on July 1, 2014, Sanchez Corporation acquires 1,000 shares (10% ownership) of Beal Corporation common stock. Sanchez pays \$40 per share plus brokerage fees of \$500. The entry for the purchase is:

A	=	L	+	SE
+40,500				
-40,500				
Cash Flows				
-40,500				

July 1	Stock Investments Cash (To record purchase of 1,000 shares of Beal Corporation common stock)	40,500 40,500	40,500
--------	---	--------------------------	--------

RECORDING DIVIDENDS

During the time Sanchez owns the stock, it makes entries for any cash dividends received. If Sanchez receives a \$2 per share dividend on December 31, the entry is:

A	=	L	+	SE
+2,000				
				+2,000 Rev
Cash Flows				
+2,000				

Dec. 31	Cash (1,000 × \$2) Dividend Revenue (To record receipt of a cash dividend)	2,000 2,000	2,000
---------	--	------------------------	-------

Sanchez reports Dividend Revenue under “Other revenues and gains” in the income statement. Unlike interest on notes and bonds, dividends do not accrue. Therefore, companies do not make adjusting entries to accrue dividends.

RECORDING SALE OF STOCK

When a company sells a stock investment, it recognizes as a gain or a loss the difference between the net proceeds from the sale (sales price less brokerage fees) and the cost of the stock.

Assume that Sanchez Corporation receives net proceeds of \$39,500 on the sale of its Beal stock on February 10, 2015. Because the stock cost \$40,500, Sanchez incurred a loss of \$1,000. The entry to record the sale is:

A	=	L	+	SE
+39,500				
				-1,000 Exp
-40,500				
Cash Flows				
+39,500				

Feb. 10	Cash Loss on Sale of Stock Investments Stock Investments (To record sale of Beal common stock)	39,500 1,000 40,500	40,500
---------	---	-------------------------------	--------

Sanchez reports the loss under “Other expenses and losses” in the income statement. It would show a gain on sale under “Other revenues and gains.”

Holdings Between 20% and 50%

When an investor company owns only a small portion of the shares of stock of another company, the investor cannot exercise control over the investee. But, when an investor owns between 20% and 50% of the common stock of a corporation, it is presumed that the investor has significant influence over the financial and operating activities of the investee. The investor probably has a representative on the investee’s board of directors and, through that representative, may exercise some control over the investee. The investee company in some sense becomes part of the investor company.

For example, even prior to purchasing all of **Turner Broadcasting, Time Warner** owned 20% of Turner. Because it exercised significant control over major decisions made by Turner, Time Warner used an approach called the equity method. Under the **equity method, the investor records its share of the net income of the investee in the year when it is earned.** An alternative might be to delay recognizing the investor's share of net income until the investee declares a cash dividend. But, that approach would ignore the fact that the investor and investee are, in some sense, one company, making the investor better off by the investee's earned income.

Under the equity method, the investor company initially records the investment in common stock at cost. After that, it **adjusts** the investment account annually to show the investor's equity in the investee. Each year, the investor does the following. (1) It increases (debits) the investment account and increases (credits) revenue for its share of the investee's net income.² (2) The investor also decreases (credits) the investment account for the amount of dividends received. The investment account is reduced for dividends received because payment of a dividend decreases the net assets of the investee.

Helpful Hint

Under the equity method, the investor recognizes revenue on the accrual basis—i.e., when it is earned by the investee.

RECORDING ACQUISITION OF STOCK INVESTMENTS

Assume that Milar Corporation acquires 30% of the common stock of Beck Company for \$120,000 on January 1, 2014. The entry to record this transaction is:

Jan. 1	Stock Investments	120,000	
	Cash		120,000
	(To record purchase of Beck common stock)		

A	=	L	+	SE
+120,000				
-120,000				
<hr/>				
Cash Flows				
-120,000				

RECORDING REVENUE AND DIVIDENDS

For 2014, Beck reports net income of \$100,000. It declares and pays a \$40,000 cash dividend. Milar records (1) its share of Beck's income, \$30,000 (30% × \$100,000) and (2) the reduction in the investment account for the dividends received, \$12,000 (\$40,000 × 30%). The entries are:

(1)			
Dec. 31	Stock Investments	30,000	
	Revenue from Stock Investments		30,000
	(To record 30% equity in Beck's 2014 net income)		
(2)			
Dec. 31	Cash	12,000	
	Stock Investments		12,000
	(To record dividends received)		

A	=	L	+	SE
+30,000				
				+30,000 Rev
<hr/>				
Cash Flows				
no effect				

A	=	L	+	SE
+12,000				
-12,000				
<hr/>				
Cash Flows				
+12,000				

After Milar posts the transactions for the year, its investment and revenue accounts will show the following.

Stock Investments		Revenue from Stock Investments	
Jan. 1	120,000	Dec. 31	12,000
Dec. 31	30,000	Dec. 31	30,000
Dec. 31 Bal.	138,000		

Illustration 12-4
Investment and revenue accounts after posting

During the year, the net increase in the investment account was \$18,000. As indicated above, the investment account increased by \$30,000 due to Milar's share of

²Or, the investor increases (debits) a loss account and decreases (credits) the investment account for its share of the investee's net loss.

Beck's income, and it decreased by \$12,000 due to dividends received from Beck. In addition, Milar reports \$30,000 of revenue from its investment, which is 30% of Beck's net income of \$100,000.

Note that the difference between reported revenue under the cost method and reported revenue under the equity method can be significant. For example, Milar would report only \$12,000 ($30\% \times \$40,000$) of dividend revenue if it used the cost method.

Holdings of More than 50%

LEARNING OBJECTIVE 4

Describe the use of consolidated financial statements.

Helpful Hint

If parent (A) has three wholly owned subsidiaries (B, C, & D), there are four separate legal entities. From the viewpoint of the shareholders of the parent company, there is only one economic entity.

A company that owns more than 50% of the common stock of another entity is known as the **parent company**. The entity whose stock the parent company owns is called the **subsidiary (affiliated) company**. Because of its stock ownership, the parent company has a **controlling interest** in the subsidiary.

When a company owns more than 50% of the common stock of another company, it usually prepares **consolidated financial statements**. These statements present the total assets and liabilities controlled by the parent company. They also present the total revenues and expenses of the subsidiary companies. Companies prepare consolidated statements **in addition to** the financial statements for the parent and individual subsidiary companies.

As noted earlier, when Time Warner had a 20% investment in Turner, it reported this investment in a single line item—Other Investments. After the merger, Time Warner instead consolidated Turner's results with its own. Under this approach, Time Warner included Turner's individual assets and liabilities with its own: its plant and equipment were added to Time Warner's plant and equipment, its receivables were added to Time Warner's receivables, and so on.

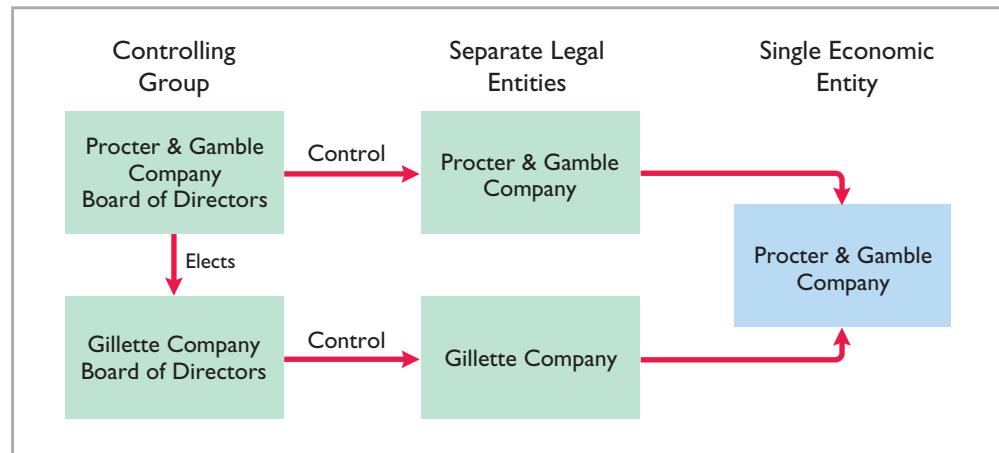

ACCOUNTING ACROSS THE ORGANIZATION

How Procter & Gamble Accounts for Gillette

Recently, **Procter & Gamble Company** acquired **Gillette Company** for \$53.4 billion. The common stockholders of Procter & Gamble elect the board of directors of the company, who, in turn, select the officers and managers of the company. Procter & Gamble's board of directors controls the property owned by the corporation, which includes the common stock of Gillette. Thus, they are in a position to elect the board of directors of Gillette and, in effect, control its operations. These relationships are graphically illustrated here.

Where on Procter & Gamble's balance sheet will you find its investment in Gillette Company? (See page 641.)

Consolidated statements are useful to the stockholders, board of directors, and managers of the parent company. These statements indicate the magnitude and scope of operations of the companies under common control. For example, regulators and the courts undoubtedly used the consolidated statements of **AT&T** to determine whether a breakup of the company was in the public interest. Listed below are three companies that prepare consolidated statements and some of the companies they have owned. One, **Disney**, is Time Warner's arch rival.

PepsiCo	Cendant	The Disney Company
Frito-Lay	Howard Johnson	Capital Cities/ABC, Inc.
Tropicana	Ramada Inn	Disneyland, Disney World
Quaker Oats	Century 21	Mighty Ducks
Pepsi-Cola	Coldwell Banker	Anaheim Angels
Gatorade	Avis	ESPN

Illustration 12-5

Examples of consolidated companies and their subsidiaries

> DO IT!**Stock Investments**

Presented below are two independent situations.

- Rho Jean Inc. acquired 5% of the 400,000 shares of common stock of Stillwater Corp. at a total cost of \$6 per share on May 18, 2014. On August 30, Stillwater declared and paid a \$75,000 dividend. On December 31, Stillwater reported net income of \$244,000 for the year.
- Debbie, Inc. obtained significant influence over North Sails by buying 40% of North Sails' 60,000 outstanding shares of common stock at a cost of \$12 per share on January 1, 2014. On April 15, North Sails declared and paid a cash dividend of \$45,000. On December 31, North Sails reported net income of \$120,000 for the year.

Prepare all necessary journal entries for 2014 for (1) Rho Jean Inc. and (2) Debbie, Inc.

Solution**Action Plan**

✓ Presume that the investor has relatively little influence over the investee when an investor owns less than 20% of the common stock of another corporation. In this case, net income earned by the investee is not considered a proper basis for recognizing income from the investment by the investor.

✓ Presume significant influence for investments of 20%–50%. Therefore, record the investor's share of the net income of the investee.

(1) May 18	Stock Investments (20,000 × \$6) Cash (To record purchase of 20,000 shares of Stillwater Co. stock)	120,000	120,000
Aug. 30	Cash Dividend Revenue (\$75,000 × 5%) (To record receipt of cash dividend)	3,750	3,750
(2) Jan. 1	Stock Investments (60,000 × 40% × \$12) Cash (To record purchase of 24,000 shares of North Sails' stock)	288,000	288,000
Apr. 15	Cash Stock Investments (\$45,000 × 40%) (To record receipt of cash dividend)	18,000	18,000
Dec. 31	Stock Investments (\$120,000 × 40%) Revenue from Stock Investments (To record 40% equity in North Sails' net income)	48,000	48,000

Valuing and Reporting Investments

LEARNING OBJECTIVE 5

Indicate how debt and stock investments are reported in financial statements.

The value of debt and stock investments may fluctuate greatly during the time they are held. For example, in one 12-month period, the stock price of **Time Warner** hit a high of \$58.50 and a low of \$9. In light of such price fluctuations, how should companies value investments at the balance sheet date? Valuation could be at cost, at fair value, or at the lower-of-cost-or-market value.

Many people argue that fair value offers the best approach because it represents the expected cash realizable value of securities. **Fair value** is the amount for which a security could be sold in a normal market. Others counter that, unless a security is going to be sold soon, the fair value is not relevant because the price of the security will likely change again.

Categories of Securities

For purposes of valuation and reporting at a financial statement date, companies classify debt investments into two categories:

1. **Trading securities** are bought and held primarily for sale in the near term to generate income on short-term price differences.
2. **Held-for-collection securities** are debt securities that the investor has the intent and ability to hold to maturity.³

Stock investments are also classified into two categories:

1. **Trading securities** (as defined above).
2. **Non-trading securities** are held for purposes other than trading. For example, a company may hold a stock investment to sell a product in a particular area.

Stock investments have no maturity date and therefore are never classified as held-for-collection securities.

Illustration 12-6 shows the valuation guidelines for these securities. **These guidelines apply to all debt securities and to those stock investments in which the holdings are less than 20%.**

Illustration 12-6
Valuation guidelines

³This category is provided for completeness. The accounting and valuation issues related to held-for-collection securities are discussed in more advanced accounting courses. The discussion in valuing and reporting investments is based on the revised exposure draft issued by the FASB.

TRADING SECURITIES

Companies hold trading securities with the intention of selling them in a short period (generally less than a month). *Trading* means frequent buying and selling. As indicated in Illustration 12-7, companies adjust trading securities to fair value at the end of each period, and report changes from cost as part of net income. The changes are reported as **unrealized gains or losses** because the securities have not been sold. The unrealized gain or loss is the difference between the **total cost** of trading securities and their **total fair value**. Companies classify trading securities as current assets.

Illustration 12-7 shows the cost and fair values for investments Pace Corporation classified as trading securities on December 31, 2014. Pace has an unrealized gain of \$7,000 because total fair value of \$147,000 is \$7,000 greater than total cost of \$140,000.

Trading Securities, December 31, 2014			
Investments	Cost	Fair Value	Unrealized Gain (Loss)
Yorkville Company bonds	\$ 50,000	\$ 48,000	\$(2,000)
Kodak Company stock	90,000	99,000	9,000
Total	<u>\$140,000</u>	<u>\$147,000</u>	<u>\$ 7,000</u>

Helpful Hint

The fact that trading securities are short-term investments increases the likelihood that they will be sold at fair value (the company may not be able to time their sale) and the likelihood that there will be realized gains or losses.

Illustration 12-7

Valuation of trading securities

Pace records fair value and unrealized gain or loss through an adjusting entry at the time it prepares financial statements. In this entry, the company uses a valuation allowance account, Fair Value Adjustment—Trading, to record the difference between the total cost and the total fair value of the securities. The adjusting entry for Pace Corporation is:

Dec. 31	Fair Value Adjustment—Trading	7,000	
	Unrealized Gain—Income		7,000
	(To record unrealized gain on trading securities)		

A	=	L	+	SE
+7,000				+7,000 Rev
Cash Flows				
no effect				

The use of a Fair Value Adjustment—Trading account enables Pace to maintain a record of the investment cost. It needs actual cost to determine the gain or loss realized when it sells the securities. Pace adds the debit balance (or subtracts a credit balance) of the Fair Value Adjustment—Trading account to the cost of the investments to arrive at a fair value for the trading securities.

The fair value of the securities is the amount Pace reports on its balance sheet. It reports the unrealized gain in the income statement in the “Other revenues and gains” section. The term “Income” in the account title indicates that the gain affects net income.

If the total cost of the trading securities is greater than total fair value, an unrealized loss has occurred. In such a case, the adjusting entry is a debit to Unrealized Loss—Income and a credit to Fair Value Adjustment—Trading. Companies report the unrealized loss under “Other expenses and losses” in the income statement.

The Fair Value Adjustment—Trading account is carried forward into future accounting periods. The company does not make any entry to the account until the end of each reporting period. At that time, the company adjusts the balance in the account to the difference between cost and fair value. For trading securities, it closes the Unrealized Gain (Loss)—Income account at the end of the reporting period.

ACCOUNTING ACROSS THE ORGANIZATION

And the Correct Way to Report Investments Is...?

The accompanying graph presents an estimate of the percentage of companies on the major exchanges that have investments in the equity of other entities.

As the graph indicates, many companies have equity investments of some type. These investments can be substantial. For example, the total amount of equity-method investments appearing on company balance sheets is approximately \$403 billion, and the amount shown in the income statements in any one year for all companies is approximately \$38 billion.

Source: "Report and Recommendations Pursuant to Section 401(c) of the Sarbanes-Oxley Act of 2002 on Arrangements with Off-Balance Sheet Implications, Special Purpose Entities, and Transparency of Filings by Issuers," United States Securities and Exchange Commission—Office of Chief Accountant, Office of Economic Analyses, Division of Corporation Finance (June 2005), pp. 36–39.

? Why might the use of the equity method not lead to full disclosure in the financial statements? (See page 641.)

NON-TRADING SECURITIES

As indicated earlier, debt investments are classified either as trading or held-for-collection securities. Stock investments are classified either as trading or non-trading. **Non-trading securities** are stock investments that are held for purposes other than trading. If the intent is to sell the securities within the next year or operating cycle, the investor classifies the securities as current assets in the balance sheet. Otherwise, it classifies them as long-term assets in the investments section of the balance sheet.

Companies report non-trading securities at fair value. The procedure for determining fair value and the unrealized gain or loss for these securities is the same as for trading securities. To illustrate, assume that Ingrao Corporation has two securities that it classifies as non-trading. Illustration 12-8 provides information on the cost, fair value, and amount of the unrealized gain or loss on December 31, 2014. There is an unrealized loss of \$9,537 because total cost of \$293,537 is \$9,537 more than total fair value of \$284,000.

Ethics Note

Some managers seem to hold their non-trading securities that have experienced losses, while selling those that have gains, thus increasing income. Do you think this is ethical?

Illustration 12-8
Valuation of non-trading securities

Non-Trading Securities, December 31, 2014			
Investments	Cost	Fair Value	Unrealized Gain (Loss)
Campbell Soup Corporation stock	\$ 93,537	\$103,600	\$10,063
Hershey Company stock	200,000	180,400	(19,600)
Total	\$293,537	\$284,000	\$ (9,537)

Both the adjusting entry and the reporting of the unrealized gain or loss for Ingrao’s non-trading securities differ from those illustrated for trading securities. The differences result because Ingrao does not expect to sell these securities in the near term. Thus, prior to actual sale, it is more likely that changes in fair value may change either unrealized gains or losses. Therefore, Ingrao does not report an unrealized gain or loss in the income statement. Instead, it reports it as a **separate component of stockholders’ equity**.

In the adjusting entry, Ingrao identifies the fair value adjustment account with non-trading securities, and it identifies the unrealized gain or loss account with stockholders’ equity. Ingrao records the unrealized loss of \$9,537 as follows.

Dec. 31	Unrealized Gain or Loss—Equity	9,537		
	Fair Value Adjustment—Non-Trading (To record unrealized loss on non-trading securities)		9,537	

Ethics Note

At one time, the SEC accused investment bank **Morgan Stanley** of overstating the value of certain bond investments by \$75 million. The SEC stated that, in applying market value accounting, Morgan Stanley used its own more-optimistic assumptions rather than relying on external pricing sources.

A	=	L	+	SE	
					-9,537 Exp
					-9,537
Cash Flows					
					no effect

If total fair value exceeds total cost, Ingrao debits Fair Value Adjustment—Non-Trading and credits Unrealized Gain or Loss—Equity.

For non-trading securities, the company carries forward the Unrealized Gain or Loss—Equity account to future periods. At each future balance sheet date, Ingrao adjusts the Fair Value Adjustment—Non-Trading and the Unrealized Gain or Loss—Equity accounts to show the difference between cost and fair value at that time.

> DO IT!

Trading and Non-Trading Securities

Some of Powderhorn Corporation’s investment securities are classified as trading securities and some are classified as non-trading. The cost and fair value of each category at December 31, 2014, are shown below.

	Cost	Fair Value	Unrealized Gain (Loss)
Trading securities	\$93,600	\$94,900	\$1,300
Non-trading securities	\$48,800	\$51,400	\$2,600

At December 31, 2013, the Fair Value Adjustment—Trading account had a debit balance of \$9,200, and the Fair Value Adjustment—Non-Trading account had a credit balance of \$5,750. Prepare the required journal entries for each group of securities for December 31, 2014.

Solution

Action Plan

- ✓ Mark trading securities to fair value and report the adjustment in current-period income.
- ✓ Mark non-trading securities to fair value and report the adjustment as a separate component of stockholders’ equity.

Trading securities:

Unrealized Loss—Income	7,900*	
Fair Value Adjustment—Trading (To record unrealized loss on trading securities)		7,900

*\$9,200 - \$1,300

Non-trading securities:

Fair Value Adjustment—Non-Trading	8,350**	
Unrealized Gain or Loss—Equity (To record unrealized gain on non-trading securities)		8,350

**\$5,750 + \$2,600

Related exercise material: **BE12-4, BE12-5, BE12-6, BE12-7, E12-10, E12-11, E12-12, and DO IT! 12-3.**

LEARNING OBJECTIVE 6

Distinguish between short-term and long-term investments.

Helpful Hint

Trading securities are always classified as short-term. Non-trading securities can be either short-term or long-term.

Balance Sheet Presentation

In the balance sheet, companies classify investments as either short-term or long-term.

SHORT-TERM INVESTMENTS

Short-term investments (also called **marketable securities**) are securities held by a company that are (1) **readily marketable** and (2) **intended to be converted into cash** within the next year or operating cycle, whichever is longer. Investments that do not meet **both criteria** are classified as **long-term investments**.

READILY MARKETABLE An investment is readily marketable when it can be sold easily whenever the need for cash arises. Short-term paper⁴ meets this criterion. It can be readily sold to other investors. Stocks and bonds traded on organized securities exchanges, such as the New York Stock Exchange, are readily marketable. They can be bought and sold daily. In contrast, there may be only a limited market for the securities issued by small corporations, and no market for the securities of a privately held company.

INTENT TO CONVERT Intent to convert means that management intends to sell the investment within the next year or operating cycle, whichever is longer. Generally, this criterion is satisfied when the investment is considered a resource that the investor will use whenever the need for cash arises. For example, a ski resort may invest idle cash during the summer months with the intent to sell the securities to buy supplies and equipment shortly before the winter season. This investment is considered short-term even if lack of snow cancels the next ski season and eliminates the need to convert the securities into cash as intended.

Because of their high liquidity, short-term investments appear immediately below Cash in the “Current assets” section of the balance sheet. They are reported at fair value. For example, Pace Corporation would report its trading securities as shown in Illustration 12-9.

Illustration 12-9

Presentation of short-term investments

Pace Corporation Balance Sheet (partial)	
Current assets	
Cash	\$ 21,000
Short-term investments, at fair value	147,000

LONG-TERM INVESTMENTS

Companies generally report long-term investments in a separate section of the balance sheet immediately below “Current assets,” as shown later in Illustration 12-12 (page 616). Long-term investments in non-trading securities are reported at fair value. Investments in common stock accounted for under the equity method are reported at equity.

Presentation of Realized and Unrealized Gain or Loss

Companies must present in the financial statements gains and losses on investments, whether realized or unrealized. In the income statement, companies

⁴**Short-term paper** includes (1) certificates of deposit (CDs) issued by banks, (2) money market certificates issued by banks and savings and loan associations, (3) Treasury bills issued by the U.S. government, and (4) commercial paper (notes) issued by corporations with good credit ratings.

report gains and losses in the nonoperating activities section under the categories listed in Illustration 12-10. Interest and dividend revenue are also reported in that section.

<u>Other Revenue and Gains</u>	<u>Other Expenses and Losses</u>
Interest Revenue	Loss on Sale of Investments
Dividend Revenue	Unrealized Loss—Income
Gain on Sale of Investments	
Unrealized Gain—Income	

Illustration 12-10
Nonoperating items related to investments

As indicated earlier, companies report an unrealized gain or loss on non-trading securities as a separate component of stockholders' equity. To illustrate, assume that Dawson Inc. has common stock of \$3,000,000, retained earnings of \$1,500,000, and an unrealized loss on non-trading securities of \$100,000. Illustration 12-11 shows the balance sheet presentation of the unrealized loss.

Dawson Inc. Balance Sheet (partial)		
Stockholders' equity		
Common stock		\$3,000,000
Retained earnings		<u>1,500,000</u>
Total paid-in capital and retained earnings		4,500,000
Less: Unrealized loss on non-trading securities		<u>100,000</u>
Total stockholders' equity		<u><u>\$4,400,000</u></u>

Illustration 12-11
Unrealized loss in stockholders' equity section

Note that the loss decreases stockholders' equity. An unrealized gain is added to stockholders' equity. Reporting the unrealized gain or loss in the stockholders' equity section serves two purposes: (1) It reduces the volatility of net income due to fluctuations in fair value. (2) It informs the financial statement user of the gain or loss that would occur if the securities were sold at fair value.

Companies must report items such as this, which affect stockholders' equity but are not included in the calculation of net income, as part of a more inclusive measure called *comprehensive income*. We discuss comprehensive income more fully in Chapter 14.

Classified Balance Sheet

We have presented many sections of classified balance sheets in this and preceding chapters. The classified balance sheet in Illustration 12-12 (page 616) includes, in one place, key topics from previous chapters: the issuance of par value common stock, restrictions of retained earnings, and issuance of long-term bonds. From this chapter, the statement includes (highlighted in red) short-term and long-term investments. The investments in short-term securities are considered trading securities. The long-term investments in stock of less than 20% owned companies are considered non-trading securities. Illustration 12-12 also includes a long-term investment reported at equity and descriptive notations within the statement, such as the basis for valuing inventory and one note to the statement.

Illustration 12-12

Total paid-in capital	900,000
Retained earnings (Note 1)	<u>255,000</u>
Total paid-in capital and retained earnings	1,155,000
Add: Unrealized gain on non-trading securities	<u>10,000</u>
Total stockholders' equity	1,165,000
Total liabilities and stockholders' equity	<u><u>\$1,710,000</u></u>
Note 1. Retained earnings of \$100,000 is restricted for plant expansion.	

> DO IT!

Financial Statement Presentation of Investments

Identify where each of the following items would be reported in the financial statements.

1. Interest earned on investments in bonds.
2. Fair value adjustment—non-trading.
3. Unrealized loss on non-trading securities.
4. Gain on sale of investments in stock.
5. Unrealized gain on trading securities.

Use the following possible categories:

Balance sheet:

- | | |
|--------------------------------|-----------------------|
| Current assets | Current liabilities |
| Investments | Long-term liabilities |
| Property, plant, and equipment | Stockholders' equity |
| Intangible assets | |

Income statement:

- | | |
|--------------------------|---------------------------|
| Other revenues and gains | Other expenses and losses |
|--------------------------|---------------------------|

Action Plan

- ✓ Classify investments as current assets if they will be held for less than one year.
- ✓ Report unrealized gains or losses on trading securities in income.
- ✓ Report unrealized gains or losses on non-trading securities in equity.
- ✓ Report realized earnings on investments in the income statement as "Other revenues and gains" or as "Other expenses and losses."

Solution

Item	Financial Statement	Category
1. Interest earned on investments in bonds.	Income statement	Other revenues and gains
2. Fair value adjustment—non-trading	Balance sheet	Investments
3. Unrealized loss on non-trading securities	Balance sheet	Stockholders' equity
4. Gain on sale of investments in stock	Income statement	Other revenues and gains
5. Unrealized gain on trading securities	Income statement	Other revenues and gains

> Comprehensive DO IT!

In its first year of operations, DeMarco Company had the following selected transactions in stock investments that are considered trading securities.

- June 1 Purchased for cash 600 shares of Sanburg common stock at \$24 per share, plus \$300 brokerage fees.
- July 1 Purchased for cash 800 shares of Cey Corporation common stock at \$33 per share, plus \$600 brokerage fees.
- Sept. 1 Received a \$1 per share cash dividend from Cey Corporation.
- Nov. 1 Sold 200 shares of Sanburg common stock for cash at \$27 per share, less \$150 brokerage fees.
- Dec. 15 Received a \$0.50 per share cash dividend on Sanburg common stock.

At December 31, the fair values per share were Sanburg \$25 and Cey \$30.

Instructions

- (a) Journalize the transactions.
- (b) Prepare the adjusting entry at December 31 to report the securities at fair value.

Solution to Comprehensive **DO IT!****Action Plan**

- ✓ Include the price paid plus brokerage fees in the cost of the investment.
- ✓ Compute the gain or loss on sales as the difference between net selling price and the cost of the securities.
- ✓ Base the adjustment to fair value on the total difference between the cost and the fair value of the securities.

(a) June 1	Stock Investments Cash [(600 × \$24) + \$300] (To record purchase of 600 shares of Sanburg common stock)	14,700	
			14,700
July 1	Stock Investments Cash [(800 × \$33) + \$600] (To record purchase of 800 shares of Cey common stock)	27,000	
			27,000
Sept. 1	Cash (800 × \$1.00) Dividend Revenue (To record receipt of \$1 per share cash dividend from Cey Corporation)	800	
			800
Nov. 1	Cash [(200 × \$27) – \$150] Stock Investments (\$14,700 × 200/600) Gain on Sale of Stock Investments (To record sale of 200 shares of Sanburg common stock)	5,250	
			4,900 350
Dec. 15	Cash [(600 – 200) × \$0.50] Dividend Revenue (To record receipt of \$0.50 per share dividend from Sanburg)	200	
			200
(b) Dec. 31	Unrealized Loss—Income Fair Value Adjustment—Trading (To record unrealized loss on trading securities)	2,800	
			2,800
	Investment	Cost	Fair Value
	Sanburg common stock	\$ 9,800	\$10,000
	Cey common stock	27,000	24,000
	Totals	<u>\$36,800</u>	<u>\$34,000</u>
			<u>\$ 200</u> <u>(3,000)</u> <u>\$(2,800)</u>

The Navigator
SUMMARY OF LEARNING OBJECTIVES
The Navigator

- 1 Discuss why corporations invest in debt and stock securities.** Corporations invest for three primary reasons: (a) They have excess cash. (b) They view investments as a significant revenue source. (c) They have strategic goals such as gaining control of a competitor or moving into a new line of business.
- 2 Explain the accounting for debt investments.** Companies record investments in debt securities when they purchase bonds, receive or accrue interest, and sell the bonds. They report gains or losses on the sale of bonds in the “Other revenues and gains” or “Other expenses and losses” sections of the income statement.
- 3 Explain the accounting for stock investments.** Companies record investments in common stock when

they purchase the stock, receive dividends, and sell the stock. When ownership is less than 20%, the cost method is used. When ownership is between 20% and 50%, the equity method should be used. When ownership is more than 50%, companies prepare consolidated financial statements.

- 4 Describe the use of consolidated financial statements.** When a company owns more than 50% of the common stock of another company, it usually prepares consolidated financial statements. These statements indicate the magnitude and scope of operations of the companies under common control.
- 5 Indicate how debt and stock investments are reported in financial statements.** Investments in debt securities

are classified as trading or held-for-collection securities for valuation and reporting purposes. Stock investments are classified either as trading or non-trading. Stock investments have no maturity date and therefore are never classified as held-for-collection. Trading securities are reported as current assets at fair value, with changes from cost reported in net income. Non-trading securities are also reported at fair value, with the changes from cost reported in stockholders' equity. Non-trading securities

are classified as short-term or long-term, depending on their expected future sale date.

- 6 Distinguish between short-term and long-term investments.** Short-term investments are securities that are (a) readily marketable and (b) intended to be converted to cash within the next year or operating cycle, whichever is longer. Investments that do not meet both criteria are classified as long-term investments.

GLOSSARY

Consolidated financial statements Financial statements that present the assets and liabilities controlled by the parent company and the total revenues and expenses of the subsidiary companies. (p. 608).

Controlling interest Ownership of more than 50% of the common stock of another entity. (p. 608).

Cost method An accounting method in which the investment in common stock is recorded at cost, and revenue is recognized only when cash dividends are received. (p. 606).

Debt investments Investments in government and corporation bonds. (p. 603).

Equity method An accounting method in which the investment in common stock is initially recorded at cost, and the investment account is then adjusted annually to show the investor's equity in the investee. (p. 607).

Fair value Amount for which a security could be sold in a normal market. (p. 610).

Held-for-collection securities Debt securities that the investor has the intent and ability to hold to maturity (p. 610).

Investment portfolio A group of stocks and/or debt securities in different corporations held for investment purposes. (p. 605).

Long-term investments Investments that are not readily marketable or that management does not intend to convert into cash within the next year or operating cycle, whichever is longer. (p. 614).

Non-trading securities Stock investments that are held for purposes other than trading. (p. 610).

Parent company A company that owns more than 50% of the common stock of another entity. (p. 608).

Short-term investments Investments that are readily marketable and intended to be converted into cash within the next year or operating cycle, whichever is longer. (p. 614).

Stock investments Investments in the capital stock of other corporations. (p. 605).

Subsidiary (affiliated) company A company in which more than 50% of its stock is owned by another company. (p. 608).

Trading securities Securities bought and held primarily for sale in the near term to generate income on short-term price differences. (p. 610).

APPENDIX 12A PREPARING CONSOLIDATED FINANCIAL STATEMENTS

Most of the large U.S. corporations are holding companies that own other corporations. They therefore prepare **consolidated** financial statements that combine the separate companies.

Consolidated Balance Sheet

Companies prepare consolidated balance sheets from the individual balance sheets of their affiliated companies. They do not prepare consolidated statements from ledger accounts kept by the consolidated entity because only the separate legal entities maintain accounting records.

All items in the individual balance sheets are included in the consolidated balance sheet except amounts that pertain to transactions between the affiliated companies. Transactions between the affiliated companies are identified as

LEARNING OBJECTIVE 7

Describe the form and content of consolidated financial statements as well as how to prepare them.

intercompany transactions. The process of excluding these transactions in preparing consolidated statements is referred to as **intercompany eliminations.** These eliminations are necessary to avoid overstating assets, liabilities, and stockholders' equity in the consolidated balance sheet. For example, amounts owed by a subsidiary to a parent company and the related receivable reported by the parent company would be eliminated. The objective in a consolidated balance sheet is to show only obligations to and receivables from parties who are not part of the affiliated group of companies.

To illustrate, assume that on January 1, 2014, Powers Construction Company pays \$150,000 in cash for 100% of Serto Brick Company's common stock. Powers Company records the investment at cost, as required by the cost principle. Illustration 12A-1 presents the separate balance sheets of the two companies immediately after the purchase, together with combined and consolidated data.⁵ Powers obtains the balances in the "combined" column by adding the items in the separate balance sheets of the affiliated companies. The combined totals do not represent a consolidated balance sheet because there has been a double-counting of assets and stockholders' equity in the amount of \$150,000.

Helpful Hint

Eliminations are aptly named because they eliminate duplicate data. They are not adjustments.

Illustration 12A-1

Combined and consolidated data

Powers Company and Serto Company				
Balance Sheet				
January 1, 2014				
<u>Assets</u>	<u>Powers Company</u>	<u>Serto Company</u>	<u>Combined Data</u>	<u>Consolidated Data</u>
Current assets	\$ 50,000	\$ 80,000	\$130,000	\$130,000
Investment in Serto Company				
common stock	150,000		150,000	-0-
Plant and equipment (net)	325,000	145,000	470,000	470,000
Total assets	<u>\$525,000</u>	<u>\$225,000</u>	<u>\$750,000</u>	<u>\$600,000</u>
<u>Liabilities and Stockholders' Equity</u>				
Current liabilities	\$ 50,000	\$ 75,000	\$125,000	\$125,000
Common stock	300,000	100,000	400,000	300,000
Retained earnings	175,000	50,000	225,000	175,000
Total liabilities and stockholders' equity	<u>\$525,000</u>	<u>\$225,000</u>	<u>\$750,000</u>	<u>\$600,000</u>

The Investment in Serto Company common stock that appears on the balance sheet of Powers Company represents an interest in the net assets of Serto. As a result, there has been a double-counting of assets. Similarly, there has been a double-counting in stockholders' equity because the common stock of Serto Company is completely owned by the stockholders of Powers Company.

The balances in the consolidated data column are the amounts that should appear in the consolidated balance sheet. The double-counting has been eliminated by showing Investment in Serto Company at zero and by reporting only the common stock and retained earnings of Powers Company as stockholders' equity.

USE OF A WORKSHEET—COST EQUAL TO BOOK VALUE

The preparation of consolidated balance sheets is usually facilitated by the use of a worksheet. As shown in Illustration 12A-2, the worksheet for a consolidated balance sheet contains columns for (1) the balance sheet data for the separate

⁵We use condensed data throughout this material to keep details at a minimum.

legal entities, (2) intercompany eliminations, and (3) consolidated data. All data in the worksheet relate to the preceding example in which Powers Company acquires 100% ownership of Serto Company for \$150,000. In this case, the cost of the investment, \$150,000, is equal to the book value [\$150,000 (\$225,000 – \$75,000)] of the subsidiary's net assets. The intercompany elimination results in a credit to the investment account maintained by Powers Company for its balance, \$150,000, and debits to the Common Stock and Retained Earnings accounts of Serto Company for their respective balances, \$100,000 and \$50,000.

Powers Company and Subsidiary Worksheet—Consolidated Balance Sheet January 1, 2014 (Acquisition Date)					
Assets	Powers Company	Serto Company	Eliminations		Consolidated Data
			Dr.	Cr.	
Current assets	50,000	80,000			130,000
Investment in Serto Company common stock	150,000			150,000	–0–
Plant and equipment (net)	325,000	145,000			470,000
Totals	525,000	225,000			600,000
Liabilities and Stockholders' Equity					
Current liabilities	50,000	75,000			125,000
Common stock—Powers Company	300,000				300,000
Common stock—Serto Company		100,000	100,000		–0–
Retained earnings—Powers Company	175,000				175,000
Retained earnings—Serto Company		50,000	50,000		–0–
Totals	525,000	225,000	150,000	150,000	600,000

Illustration 12A-2
Worksheet—Cost equal to book value

It is important to recognize that companies make intercompany eliminations solely on the worksheet to present correct consolidated data. Neither of the affiliated companies journalizes or posts the eliminations. Therefore, eliminations do not affect the ledger accounts. Powers Company's investment account and Serto Company's common stock and retained earnings accounts are reported by the separate entities in preparing their own financial statements.

USE OF A WORKSHEET—COST ABOVE BOOK VALUE

The cost of acquiring the common stock of another company may be above or below its book value. The management of the parent company may pay more than book value for the stock. Why? Because it believes the fair values of identifiable assets such as land, buildings, and equipment are higher than their recorded book values. Or, it may believe the subsidiary's future earnings prospects warrant a payment for goodwill.

To illustrate, assume the same data used above, except that Powers Company pays \$165,000 in cash for 100% of Serto's common stock. The excess of cost over book value is \$15,000 (\$165,000 – \$150,000). Powers recognizes this amount separately in eliminating the parent company's investment account, as shown in

Helpful Hint

As in the case of the worksheets explained earlier in this textbook, consolidated worksheets are also optional.

Helpful Hint

The consolidated worksheet is another useful spreadsheet application. This is an easier worksheet to attempt since the required instructions are very straightforward.

Illustration 12A-3. Total assets and total liabilities and stockholders' equity are the same as in the preceding example (\$600,000). However, in this case, total assets include \$15,000 of Excess of Cost Over Book Value of Subsidiary. The disposition of the excess is explained in the next section.

Illustration 12A-3
Worksheet—Cost above
book value

Powers Company and Subsidiary						
Worksheet—Consolidated Balance Sheet						
January 1, 2014 (Acquisition Date)						
	Powers Company	Serto Company	Eliminations		Consolidated Data	
			Dr.	Cr.		
Assets						
Current assets	35,000	80,000			115,000	
Investment in Serto Company common stock	165,000			165,000	—0—	
Plant and equipment (net)	325,000	145,000			470,000	
Excess of cost over book value of subsidiary			15,000		15,000	
Totals	525,000	225,000			600,000	
Liabilities and Stockholders' Equity						
Current liabilities	50,000	75,000			125,000	
Common stock—Powers Company	300,000				300,000	
Common stock—Serto Company		100,000	100,000		—0—	
Retained earnings—Powers Company	175,000				175,000	
Retained earnings—Serto Company		50,000	50,000		—0—	
Totals	525,000	225,000	165,000	165,000	600,000	
Note that a separate line is added to the worksheet for the excess of cost over book value of subsidiary.						

CONTENT OF A CONSOLIDATED BALANCE SHEET

To illustrate a consolidated balance sheet, we will use the worksheet shown in Illustration 12A-3. This worksheet shows an excess of cost over book value of \$15,000. In the consolidated balance sheet, Powers first allocates this amount to specific assets, such as plant and equipment and inventory, if their fair values on the acquisition date exceed their book values. Any remainder is considered to be goodwill. For Serto Company, assume that the fair value of the plant and equipment is \$155,000. Thus, Powers allocates \$10,000 of the excess of cost over book value to property and equipment, and the remainder, \$5,000, to goodwill. Illustration 12A-4 shows the condensed consolidated balance sheet of Powers Company.

Through innovative financial restructuring, **The Coca-Cola Company** at one time eliminated a substantial amount of non-intercompany debt. It sold to the public 51% of two bottling companies. The “49% solution,” as insiders call the strategy, enabled Coca-Cola to keep effective control over the businesses, and it swept \$3 billion of debt from its consolidated balance sheet. (It no longer consolidated the two bottling companies.) At the same time the new companies obtained independent access to equity markets to satisfy their own large appetites for capital.

Powers Company		
Consolidated Balance Sheet		
January 1, 2014

Illustration 12A-4
Consolidated balance sheet

Consolidated Income Statement

Affiliated companies also prepare a consolidated income statement. This statement shows the results of operations of affiliated companies as though they are one economic unit. This means that the statement shows only revenue and expense transactions between the consolidated entity and companies and individuals who are outside the affiliated group.

Consequently, all intercompany revenue and expense transactions must be eliminated. Intercompany transactions such as sales between affiliates and interest on loans charged by one affiliate to another must be eliminated. A worksheet facilitates the preparation of consolidated income statements in the same manner as it does for the balance sheet.

SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 12A

The Navigator

7 Describe the form and content of consolidated financial statements as well as how to prepare them. Consolidated financial statements are similar in form and content to the financial statements of an individual corporation. A consolidated balance sheet shows the assets and liabilities controlled by the parent company. A consolidated

income statement shows the results of operations of affiliated companies as though they are one economic unit. The worksheet for a consolidated balance sheet contains columns for (a) the balance sheet data for the separate entities, (b) intercompany eliminations, and (c) consolidated data.

GLOSSARY FOR APPENDIX 12A

Intercompany eliminations Eliminations made to exclude the effects of intercompany transactions in preparing consolidated statements. (p. 620).

Intercompany transactions Transactions between affiliated companies. (p. 620).

*Note: All Questions, Exercises, and Problems marked with an asterisk relate to material in the appendix to the chapter.

SELF-TEST QUESTIONS

Answers are on page 641.

- (LO 1) 1. Which of the following is *not* a primary reason why corporations invest in debt and equity securities?
 (a) They wish to gain control of a competitor.
 (b) They have excess cash.
 (c) They wish to move into a new line of business.
 (d) They are required to by law.
- (LO 2) 2. Debt investments are initially recorded at:
 (a) cost.
 (b) cost plus accrued interest.
 (c) fair value.
 (d) None of the above.
- (LO 2) 3. Hanes Company sells debt investments costing \$26,000 for \$28,000, plus accrued interest that has been recorded. In journalizing the sale, credits are to:
 (a) Debt Investments and Loss on Sale of Debt Investments.
 (b) Debt Investments, Gain on Sale of Debt Investments, and Interest Receivable.
 (c) Stock Investments and Interest Receivable.
 (d) No correct answer is given.
- (LO 3) 4. Pryor Company receives net proceeds of \$42,000 on the sale of stock investments that cost \$39,500. This transaction will result in reporting in the income statement a:
 (a) loss of \$2,500 under "Other expenses and losses."
 (b) loss of \$2,500 under "Operating expenses."
 (c) gain of \$2,500 under "Other revenues and gains."
 (d) gain of \$2,500 under "Operating revenues."
- (LO 3) 5. The equity method of accounting for long-term investments in stock should be used when the investor has significant influence over an investee and owns:
 (a) between 20% and 50% of the investee's common stock.
 (b) 20% or more of the investee's common stock.
 (c) more than 50% of the investee's common stock.
 (d) less than 20% of the investee's common stock.
- (LO 3) 6. Assume that Horicon Corp acquired 25% of the common stock of Sheboygan Corp. on January 1, 2014, for \$300,000. During 2014 Sheboygan Corp. reported net income of \$160,000 and paid total dividends of \$60,000. If Horicon uses the equity method to account for its investment, the balance in the investment account on December 31, 2014, will be:
 (a) \$300,000. (c) \$400,000.
 (b) \$325,000. (d) \$340,000.
- (LO 3) 7. Using the information in Self-Test Question 6, what entry would Horicon make to record the receipt of the dividend from Sheboygan?
 (a) Debit Cash and credit Revenue from Stock Investments.
 (b) Debit Cash Dividends and credit Revenue from Stock Investments.
 (c) Debit Cash and credit Stock Investments.
 (d) Debit Cash and credit Dividend Revenue.
8. You have a controlling interest if: (LO 3)
 (a) you own more than 20% of a company's stock.
 (b) you are the president of the company.
 (c) you use the equity method.
 (d) you own more than 50% of a company's stock.
9. Which of the following statements is *not true*? Consolidated financial statements are useful to: (LO 4)
 (a) determine the profitability of specific subsidiaries.
 (b) determine the total profitability of companies under common control.
 (c) determine the breadth of a parent company's operations.
 (d) determine the full extent of total obligations of companies under common control.
10. At the end of the first year of operations, the total cost of the trading securities portfolio is \$120,000. Total fair value is \$115,000. The financial statements should show: (LO 5)
 (a) a reduction of an asset of \$5,000 and a realized loss of \$5,000.
 (b) a reduction of an asset of \$5,000 and an unrealized loss of \$5,000 in the stockholders' equity section.
 (c) a reduction of an asset of \$5,000 in the current assets section and an unrealized loss of \$5,000 in "Other expenses and losses."
 (d) a reduction of an asset of \$5,000 in the current assets section and a realized loss of \$5,000 in "Other expenses and losses."
11. At December 31, 2014, the fair value of non-trading securities is \$41,300 and the cost is \$39,800. At January 1, 2014, there was a credit balance of \$900 in the Fair Value Adjustment—Non-Trading account. The required adjusting entry would be: (LO 5)
 (a) Debit Fair Value Adjustment—Non-Trading for \$1,500 and credit Unrealized Gain or Loss—Equity for \$1,500.
 (b) Debit Fair Value Adjustment—Non-Trading for \$600 and credit Unrealized Gain or Loss—Equity for \$600.
 (c) Debit Fair Value Adjustment—Non-Trading for \$2,400 and credit Unrealized Gain or Loss—Equity for \$2,400.
 (d) Debit Unrealized Gain or Loss—Equity for \$2,400 and credit Fair Value Adjustment—Non-Trading for \$2,400.
12. In the balance sheet, a debit balance in Unrealized Gain or Loss—Equity is reported as a(n): (LO 5)
 (a) increase to stockholders' equity.
 (b) decrease to stockholders' equity.
 (c) loss in the income statement.
 (d) loss in the retained earnings statement.
13. Short-term debt investments must be readily marketable and expected to be sold within: (LO 6)
 (a) 3 months from the date of purchase.
 (b) the next year or operating cycle, whichever is shorter.

- (c) the next year or operating cycle, whichever is longer.
- (d) the operating cycle.
- (LO 7) *14. Pate Company pays \$175,000 for 100% of Sinko's common stock when Sinko's stockholders' equity consists of Common Stock \$100,000 and Retained Earnings \$60,000. In the worksheet for the consolidated balance sheet, the eliminations will include a:
 - (a) credit to Investment in Sinko Common Stock \$160,000.
 - (b) credit to Excess of Book Value over Cost of Subsidiary \$15,000.
 - (c) debit to Retained Earnings \$75,000.
 - (d) debit to Excess of Cost over Book Value of Subsidiary \$15,000.
- (LO 7) *15. Which of the following statements about intercompany eliminations is *true*?
 - (a) They are not journalized or posted by any of the subsidiaries.
 - (b) They do not affect the ledger accounts of any of the subsidiaries.
 - (c) They are made solely on the worksheet to arrive at correct consolidated data.
 - (d) All of these statements are true.
- *16. Which one of the following statements about consolidated income statements is *false*? (LO 7)
 - (a) A worksheet facilitates the preparation of the statement.
 - (b) The consolidated income statement shows the results of operations of affiliated companies as a single economic unit.
 - (c) All revenue and expense transactions between parent and subsidiary companies are eliminated.
 - (d) When a subsidiary is wholly owned, the form and content of the statement will differ from the income statement of an individual corporation.

QUESTIONS

1. What are the reasons that corporations invest in securities?
2. (a) What is the cost of an investment in bonds? (b) When is interest on bonds recorded?
3. Tino Martinez is confused about losses and gains on the sale of debt investments. Explain to Tino (a) how the gain or loss is computed, and (b) the statement presentation of the gains and losses.
4. Olindo Company sells Gish's bonds costing \$40,000 for \$45,000, including \$500 of accrued interest. In recording the sale, Olindo books a \$5,000 gain. Is this correct? Explain.
5. What is the cost of an investment in stock?
6. To acquire Kinston Corporation stock, R. Neal pays \$62,000 in cash, plus \$1,200 broker's fees. What entry should be made for this investment?
7. (a) When should a long-term investment in common stock be accounted for by the equity method? (b) When is revenue recognized under this method?
8. Rijo Corporation uses the equity method to account for its ownership of 30% of the common stock of Pippen Packing. During 2014, Pippen reported a net income of \$80,000 and declares and pays cash dividends of \$10,000. What recognition should Rijo Corporation give to these events?
9. What constitutes "significant influence" when an investor's financial interest is below the 50% level?
10. Distinguish between the cost and equity methods of accounting for investments in stocks.
11. What are consolidated financial statements?
12. What are the classification guidelines for investments at a balance sheet date?
13. Tina Eddings is the controller of Mendez Inc. At December 31, the company's investments in trading securities cost \$74,000. They have a fair value of \$70,000. Indicate how Tina would report these data in the financial statements prepared on December 31.
14. Using the data in Question 13, how would Tina report the data if the investment were long-term and the securities were classified as non-trading?
15. Hashmi Company's investments in non-trading securities at December 31 show total cost of \$195,000 and total fair value of \$205,000. Prepare the adjusting entry.
16. Using the data in Question 15, prepare the adjusting entry assuming the securities are classified as trading securities.
17. What is the proper statement presentation of the account Unrealized Loss—Equity?
18. What purposes are served by reporting Unrealized Gain or Loss—Equity in the stockholders' equity section?
19. Altoona Wholesale Supply owns stock in Key Corporation. Altoona intends to hold the stock indefinitely because of some negative tax consequences if sold. Should the investment in Key be classified as a short-term investment? Why or why not?
20.  PEPSICO What does PepsiCo state regarding its accounting policy involving consolidated financial statements?
- *21. (a) What asset and stockholders' equity balances are eliminated in preparing a consolidated balance sheet for a parent and a wholly owned subsidiary? (b) Why are they eliminated?
- *22. Roscoe Company pays \$318,000 to purchase all the outstanding common stock of Lia Corporation. At the date of purchase, the net assets of Lia have a book value of \$290,000. Roscoe's management allocates \$20,000 of the excess cost to undervalued land on the books of Lia. What should be done with the rest of the excess?

BRIEF EXERCISES

Journalize entries for debt investments.

(LO 2)

Journalize entries for stock investments.

(LO 3)

Record transactions under the equity method of accounting.

(LO 3)

Prepare adjusting entry using fair value.

(LO 5)

Indicate statement presentation using fair value.

(LO 5, 6)

Prepare adjusting entry using fair value.

(LO 5)

Indicate statements presentation using fair value.

(LO 5, 6)

Prepare investments section of balance sheet.

(LO 5, 6)

Prepare partial consolidated worksheet when cost equals book value.

(LO 7)

Prepare partial consolidated worksheet when cost exceeds book value.

(LO 7)

BE12-1 Kimmel Corporation purchased debt investments for \$52,000 on January 1, 2014. On July 1, 2014, Kimmel received cash interest of \$2,340. Journalize the purchase and the receipt of interest. Assume that no interest has been accrued.

BE12-2 On August 1, Paul Company buys 1,000 shares of Merlynn common stock for \$35,000 cash, plus brokerage fees of \$700. On December 1, Paul sells the stock investments for \$40,000 in cash. Journalize the purchase and sale of the common stock.

BE12-3 Texas Company owns 25% of Plano Company. For the current year, Plano reports net income of \$180,000 and declares and pays a \$50,000 cash dividend. Record Texas's equity in Plano's net income and the receipt of dividends from Plano.

BE12-4 The cost of the trading securities of Hardy Company at December 31, 2014, is \$62,000. At December 31, 2014, the fair value of the securities is \$59,000. Prepare the adjusting entry to record the securities at fair value.

BE12-5 For the data presented in BE12-4, show the financial statement presentation of the trading securities and related accounts.

BE12-6 Latrobe Corporation holds as a long-term investment non-trading stock securities costing \$72,000. At December 31, 2014, the fair value of the securities is \$66,000. Prepare the adjusting entry to record the securities at fair value.

BE12-7 For the data presented in BE12-6, show the financial statement presentation of the non-trading securities and related accounts. Assume the non-trading securities are noncurrent.

BE12-8 Gurnee Corporation has the following long-term investments: (1) Common stock of Kornas Co. (10% ownership) held as non-trading securities, cost \$108,000, fair value \$115,000. (2) Common stock of Kozanecki Inc. (30% ownership), cost \$210,000, equity \$270,000. Prepare the investments section of the balance sheet.

***BE12-9** Paula Company acquires 100% of the common stock of Shannon Company for \$190,000 cash. On the acquisition date, Shannon's ledger shows Common Stock \$120,000 and Retained Earnings \$70,000. Complete the worksheet for the following accounts: Paula—Investment in Shannon Common Stock, Shannon—Common Stock, and Shannon—Retained Earnings.

***BE12-10** Data for the Paula and Shannon companies are given in BE12-9. Instead of paying \$190,000, assume that Paula pays \$200,000 to acquire the 100% interest in Shannon Company. Complete the worksheet for the accounts identified in BE12-9 and for the excess of cost over book value.

> DO IT! REVIEW

Make journal entry for bond purchase and adjusting entry for interest accrual.

(LO 2)

Make journal entries for stock investments.

(LO 3)

DO IT! 12-1 Kurtyka Corporation had the following transactions relating to debt investments:

- Jan. 1 Purchased 50, \$1,000, 12% Nordica Company bonds for \$50,000 plus broker's fees of \$1,500. Interest is payable semiannually on January 1 and July 1.
- July 1 Received semiannual interest from Nordica Company bonds.
- July 1 Sold 30 Nordica Company bonds for \$30,000, less \$800 broker's fees.

(a) Journalize the transactions, and (b) prepare the adjusting entry for the accrual of interest on December 31.

DO IT! 12-2 Presented below are two independent situations:

1. Lorfeld Inc. acquired 10% of the 500,000 shares of common stock of Northbrook Corporation at a total cost of \$11 per share on June 17, 2014. On September 3, Northbrook declared and paid a \$160,000 dividend. On December 31, Northbrook reported net income of \$550,000 for the year.

2. Saa Corporation obtained significant influence over McCarthy Company by buying 30% of McCarthy's 100,000 outstanding shares of common stock at a cost of \$18 per share on January 1, 2014. On May 15, McCarthy declared and paid a cash dividend of \$150,000. On December 31, McCarthy reported net income of \$270,000 for the year.

Prepare all necessary journal entries for 2014 for (a) McCarthy and (b) Saa.

DO IT! 12-3 Some of McEleven Corporation's investment securities are classified as trading securities and some are classified as non-trading. The cost and fair value of each category at December 31, 2014, were as follows.

Make journal entries for trading and non-trading securities.

(LO 5)

	<u>Cost</u>	<u>Fair Value</u>	<u>Unrealized Gain (Loss)</u>
Trading securities	\$96,300	\$84,900	\$(11,400)
Non-trading securities	\$59,000	\$63,200	\$ 4,200

At December 31, 2013, the Fair Value Adjustment—Trading account had a debit balance of \$2,200, and the Fair Value Adjustment—Non-Trading account had a credit balance of \$7,750. Prepare the required journal entries for each group of securities for December 31, 2014.

DO IT! 12-4 Identify where each of the following items would be reported in the financial statements.

Indicate financial statement presentation of investments.

(LO 6)

1. Loss on sale of investments in stock.
2. Unrealized gain on non-trading securities.
3. Fair value adjustment—trading.
4. Interest earned on investments in bonds.
5. Unrealized loss on trading securities.

Use the following possible categories:

Balance sheet:

Current assets	Current liabilities
Investments	Long-term liabilities
Property, plant, and equipment	Stockholders' equity
Intangible assets	

Income statement:

Other revenues and gains	Other expenses and losses

The Navigator

EXERCISES

E12-1 Mr. Wellington is studying for an accounting test and has developed the following questions about investments.

Understand debt and stock investments.

1. What are three reasons why companies purchase investments in debt or stock securities?
2. Why would a corporation have excess cash that it does not need for operations?
3. What is the typical investment when investing cash for short periods of time?
4. What are the typical investments when investing cash to generate earnings?
5. Why would a company invest in securities that provide no current cash flows?
6. What is the typical stock investment when investing cash for strategic reasons?

(LO 1)

Instructions

Provide answers for Mr. Wellington.

E12-2 Floyd Corporation had the following transactions pertaining to debt investments.

Journalize debt investment transactions and accrue interest.

- Jan. 1 Purchased 50 8%, \$1,000 Petal Co. bonds for \$50,000 cash plus brokerage fees of \$900. Interest is payable semiannually on July 1 and January 1.
- July 1 Received semiannual interest on Petal Co. bonds.
- July 1 Sold 30 Petal Co. bonds for \$34,000 less \$500 brokerage fees.

(LO 2)

Journalize debt investment transactions, accrue interest, and record sale.

(LO 2)

Journalize stock investment transactions.

(LO 3)

Journalize transactions for investments in stocks.

(LO 3)

Journalize transactions for investments in stocks.

(LO 3)

Journalize and post transactions under the equity method.

(LO 3)

Journalize entries under cost and equity methods.

(LO 3, 5)

Understand the usefulness of consolidated statements.

(LO 4)

Instructions

- Journalize the transactions.
- Prepare the adjusting entry for the accrual of interest at December 31.

E12-3 Brook Company purchased 70 Meissner Company 12%, 10-year, \$1,000 bonds on January 1, 2014, for \$73,000. Brook Company also had to pay \$500 of broker's fees. The bonds pay interest semiannually on July 1 and January 1. On January 1, 2015, after receipt of interest, Brook Company sold 40 of the bonds for \$40,100.

Instructions

Prepare the journal entries to record the transactions described above.

E12-4 Diann Company had the following transactions pertaining to stock investments.

- Feb. 1 Purchased 600 shares of Ronn common stock (2%) for \$6,000 cash, plus broker-
age fees of \$200.
- July 1 Received cash dividends of \$1 per share on Ronn common stock.
- Sept. 1 Sold 300 shares of Ronn common stock for \$4,400, less brokerage fees of \$100.
- Dec. 1 Received cash dividends of \$1 per share on Ronn common stock.

Instructions

- Journalize the transactions.
- Explain how dividend revenue and the gain (loss) on sale should be reported in the income statement.

E12-5 Spring Inc. had the following transactions pertaining to investments in common stock.

- Jan. 1 Purchased 2,500 shares of Angeltide Corporation common stock (5%) for
\$140,000 cash plus \$2,100 broker's commission.
- July 1 Received a cash dividend of \$3 per share.
- Dec. 1 Sold 500 shares of Angeltide Corporation common stock for \$32,000 cash, less
\$800 broker's commission.
- Dec. 31 Received a cash dividend of \$3 per share.

Instructions

Journalize the transactions.

E12-6 On February 1, Minitori Company purchased 500 shares (2% ownership) of Becker Company common stock for \$30 per share plus brokerage fees of \$400. On March 20, Minitori Company sold 100 shares of Becker stock for \$2,900, less a \$50 brokerage fee. Minitori received a dividend of \$1.00 per share on April 25. On June 15, Minitori sold 200 shares of Becker stock for \$7,400, less a \$90 brokerage fee. On July 28, Minitori received a dividend of \$1.25 per share.

Instructions

Prepare the journal entries to record the transactions described above.

E12-7 On January 1, Vince Corporation purchased a 25% equity in Morelli Corporation for \$180,000. At December 31, Morelli declared and paid a \$60,000 cash dividend and reported net income of \$200,000.

Instructions

- Journalize the transactions.
- Determine the amount to be reported as an investment in Morelli stock at December 31.

E12-8 Presented below are two independent situations.

- Chicory Cosmetics acquired 15% of the 200,000 shares of common stock of Racine Fashion at a total cost of \$13 per share on March 18, 2014. On June 30, Racine declared and paid a \$60,000 dividend. On December 31, Racine reported net income of \$122,000 for the year. At December 31, the market price of Racine Fashion was \$15 per share. The stock is classified as non-trading.
- Frank, Inc., obtained significant influence over Nowak Corporation by buying 30% of Nowak's 30,000 outstanding shares of common stock at a total cost of \$9 per share on January 1, 2014. On June 15, Nowak declared and paid a cash dividend of \$30,000. On December 31, Nowak reported a net income of \$80,000 for the year.

Instructions

Prepare all the necessary journal entries for 2014 for (a) Chicory Cosmetics and (b) Frank, Inc.

E12-9 Edna Company purchased 70% of the outstanding common stock of Damen Corporation.

Instructions

- (a) Explain the relationship between Edna Company and Damen Corporation.
- (b) How should Edna account for its investment in Damen?
- (c) Why is the accounting treatment described in (b) useful?

E12-10 At December 31, 2014, the trading securities for Oglesbee, Inc. are as follows.

<u>Security</u>	<u>Cost</u>	<u>Fair Value</u>
A	\$17,500	\$16,000
B	12,500	14,000
C	23,000	19,000
	<u>\$53,000</u>	<u>\$49,000</u>

Prepare adjusting entry to record fair value, and indicate statement presentation.

(LO 5, 6)

Instructions

- (a) Prepare the adjusting entry at December 31, 2014, to report the securities at fair value.
- (b) Show the balance sheet and income statement presentation at December 31, 2014, after adjustment to fair value.

E12-11 Data for investments in stock classified as trading securities are presented in E12-10. Assume instead that the investments are classified as non-trading securities. They have the same cost and fair value. The securities are considered to be a long-term investment.

Prepare adjusting entry to record fair value, and indicate statement presentation.

(LO 5, 6)

Instructions

- (a) Prepare the adjusting entry at December 31, 2014, to report the securities at fair value.
- (b) Show the statement presentation at December 31, 2014, after adjustment to fair value.
- (c) E. Devonshire, a member of the board of directors, does not understand the reporting of the unrealized gains or losses. Write a letter to Ms. Devonshire explaining the reporting and the purposes that it serves.

E12-12 Zippydah Company has the following data at December 31, 2014.

<u>Securities</u>	<u>Cost</u>	<u>Fair Value</u>
Trading	\$120,000	\$124,000
Non-trading	100,000	94,000

Prepare adjusting entries for fair value, and indicate statement presentation for two classes of securities.

(LO 5, 6)

The non-trading securities are held as a long-term investment.

Instructions

- (a) Prepare the adjusting entries to report each class of securities at fair value.
- (b) Indicate the statement presentation of each class of securities and the related unrealized gain (loss) accounts.

***E12-13** On January 1, 2014, Lennon Corporation acquires 100% of Ono Inc. for \$220,000 in cash. The condensed balance sheets of the two corporations immediately following the acquisition are as follows.

Prepare consolidated worksheet when cost equals book value.

(LO 7)

	<u>Lennon Corporation</u>	<u>Ono Inc.</u>
Current assets	\$ 60,000	\$ 50,000
Investment in Ono Inc. common stock	220,000	
Plant and equipment (net)	300,000	220,000
	<u>\$580,000</u>	<u>\$270,000</u>
Current liabilities	\$180,000	\$ 50,000
Common stock	230,000	80,000
Retained earnings	170,000	140,000
	<u>\$580,000</u>	<u>\$270,000</u>

Instructions

Prepare a worksheet for a consolidated balance sheet.

***E12-14** Data for the Lennon and Ono corporations are presented in E12-13. Assume that instead of paying \$220,000 in cash for Ono Inc., Lennon Corporation pays \$225,000 in cash. Thus, at the acquisition date, the assets of Lennon Corporation are current assets \$55,000, investment in Ono Inc. common stock \$225,000, and plant and equipment (net) \$300,000.

Prepare consolidated worksheet when cost exceeds book value.

(LO 7)

Instructions

Prepare a worksheet for a consolidated balance sheet.

EXERCISES: SET B AND CHALLENGE EXERCISES

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Exercise Set B and Challenge Exercises.

PROBLEMS: SET A

Journalize debt investment transactions and show financial statement presentation.

(LO 2, 5, 6)

P12-1A Pagnucci Carecenters Inc. provides financing and capital to the health-care industry, with a particular focus on nursing homes for the elderly. The following selected transactions relate to bonds acquired as an investment by Pagnucci, whose fiscal year ends on December 31.

2014

- Jan. 1 Purchased at face value \$2,000,000 of Franco Nursing Centers, Inc., 10-year, 8% bonds dated January 1, 2014, directly from Franco.
- July 1 Received the semiannual interest on the Franco bonds.
- Dec. 31 Accrual of interest at year-end on the Franco bonds.

(Assume that all intervening transactions and adjustments have been properly recorded and that the number of bonds owned has not changed from December 31, 2014, to December 31, 2016.)

2017

- Jan. 1 Received the semiannual interest on the Franco bonds.
- Jan. 1 Sold \$1,000,000 Franco bonds at 106. The broker deducted \$6,000 for commissions and fees on the sale.
- July 1 Received the semiannual interest on the Franco bonds.
- Dec. 31 Accrual of interest at year-end on the Franco bonds.

Instructions

- (a) Journalize the listed transactions for the years 2014 and 2017.
- (b) Show the balance sheet presentation of the bonds and interest receivable at December 31, 2014. Assume the investments are considered long-term.

(a) Gain on sale of debt investments \$54,000

Journalize investment transactions, prepare adjusting entry, and show statement presentation.

(LO 2, 3, 5, 6)

P12-2A In January 2014, the management of Stefan Company concludes that it has sufficient cash to permit some short-term investments in debt and stock securities. During the year, the following transactions occurred.

- Feb. 1 Purchased 600 shares of Superior common stock for \$31,800, plus brokerage fees of \$600.
- Mar. 1 Purchased 800 shares of Pawlik common stock for \$20,000, plus brokerage fees of \$400.
- Apr. 1 Purchased 50 \$1,000, 7% Venice bonds for \$50,000, plus \$1,000 brokerage fees. Interest is payable semiannually on April 1 and October 1.
- July 1 Received a cash dividend of \$0.60 per share on the Superior common stock.
- Aug. 1 Sold 200 shares of Superior common stock at \$58 per share less brokerage fees of \$200.
- Sept. 1 Received a \$1 per share cash dividend on the Pawlik common stock.
- Oct. 1 Received the semiannual interest on the Venice bonds.
- Oct. 1 Sold the Venice bonds for \$50,000 less \$1,000 brokerage fees.

At December 31, the fair value of the Superior common stock was \$55 per share. The fair value of the Pawlik common stock was \$24 per share.

Instructions

- (a) Journalize the transactions and post to the accounts Debt Investments and Stock Investments. (Use the T-account form.)
- (b) Prepare the adjusting entry at December 31, 2014, to report the investment securities at fair value. All securities are considered to be trading securities.

(a) Gain on sale of stock investments \$600

- (c) Show the balance sheet presentation of investment securities at December 31, 2014.
 (d) Identify the income statement accounts and give the statement classification of each account.

P12-3A On December 31, 2013, Ogallala Associates owned the following securities, held as a long-term investment. The securities are not held for influence or control of the investee.

<u>Common Stock</u>	<u>Shares</u>	<u>Cost</u>
Carlene Co.	2,000	\$60,000
Riverdale Co.	5,000	45,000
Raczynski Co.	1,500	30,000

Journalize transactions and adjusting entry for stock investments.

(LO 3, 5, 6)

On December 31, 2013, the total fair value of the securities was equal to its cost. In 2014, the following transactions occurred.

- July 1 Received \$1 per share semiannual cash dividend on Riverdale Co. common stock.
 Aug. 1 Received \$0.50 per share cash dividend on Carlene Co. common stock.
 Sept. 1 Sold 1,500 shares of Riverdale Co. common stock for cash at \$8 per share, less brokerage fees of \$300.
 Oct. 1 Sold 800 shares of Carlene Co. common stock for cash at \$33 per share, less brokerage fees of \$500.
 Nov. 1 Received \$1 per share cash dividend on Raczynski Co. common stock.
 Dec. 15 Received \$0.50 per share cash dividend on Carlene Co. common stock.
 31 Received \$1 per share semiannual cash dividend on Riverdale Co. common stock.

At December 31, the fair values per share of the common stocks were Carlene Co. \$32, Riverdale Co. \$8, and Raczynski Co. \$18.

Instructions

- (a) Journalize the 2014 transactions and post to the account Stock Investments. (Use the T-account form.)
 (b) Prepare the adjusting entry at December 31, 2014, to show the securities at fair value. The stock should be classified as non-trading securities.
 (c) Show the balance sheet presentation of the investments at December 31, 2014. At this date, Ogallala Associates has common stock \$1,500,000 and retained earnings \$1,000,000.

(b) Unrealized loss \$4,100

P12-4A Control Alt Design acquired 30% of the outstanding common stock of Walter Company on January 1, 2014, by paying \$800,000 for the 45,000 shares. Walter declared and paid \$0.30 per share cash dividends on March 15, June 15, September 15, and December 15, 2014. Walter reported net income of \$320,000 for the year. At December 31, 2014, the market price of Walter common stock was \$24 per share.

Prepare entries under the cost and equity methods, and tabulate differences.

(LO 3)

Instructions

- (a) Prepare the journal entries for Control Alt Design for 2014 assuming Control Alt Design cannot exercise significant influence over Walter. Use the cost method and assume that Walter common stock should be classified as a trading security.
 (b) Prepare the journal entries for Control Alt Design for 2014, assuming Control Alt Design can exercise significant influence over Walter. Use the equity method.
 (c) Indicate the balance sheet and income statement account balances at December 31, 2014, under each method of accounting.

(a) Total dividend revenue
\$54,000

(b) Revenue from investments
\$96,000

P12-5A The following securities are in Amberwood Company's portfolio of long-term non-trading securities at December 31, 2013.

Journalize stock investment transactions and show statement presentation.

(LO 3, 5, 6)

	<u>Cost</u>
1,000 shares of Reginald Corporation common stock	\$52,000
1,400 shares of Elderberry Corporation common stock	84,000
1,200 shares of Mattoon Corporation preferred stock	33,600

On December 31, 2013, the total cost of the portfolio equaled total fair value. Amberwood had the following transactions related to the securities during 2014.

- Jan. 20 Sold all 1,000 shares of Reginald Corporation common stock at \$55 per share less brokerage fees of \$600.
 28 Purchased 400 shares of \$70 par value common stock of Hachito Corporation at \$78 per share, plus brokerage fees of \$480.
 30 Received a cash dividend of \$1.15 per share on Elderberry Corp. common stock.
- Feb. 8 Received cash dividends of \$0.40 per share on Mattoon Corp. preferred stock.
 18 Sold all 1,200 shares of Mattoon Corp. preferred stock at \$27 per share less brokerage fees of \$360.
- July 30 Received a cash dividend of \$1.00 per share on Elderberry Corp. common stock.
- Sept. 6 Purchased an additional 900 shares of \$10 par value common stock of Hachito Corporation at \$82 per share, plus brokerage fees of \$1,200.
- Dec. 1 Received a cash dividend of \$1.50 per share on Hachito Corporation common stock.

At December 31, 2014, the fair values of the securities were:

Elderberry Corporation common stock	\$64 per share
Hachito Corporation common stock	\$72 per share

Instructions

- (a) Gain on sale of stock investments \$2,400
 (c) Unrealized loss \$7,480
- (a) Prepare journal entries to record the transactions.
 (b) Post to the investment accounts. (Use T-accounts.)
 (c) Prepare the adjusting entry at December 31, 2014 to report the portfolio at fair value.
 (d) Show the balance sheet presentation at December 31, 2014, for the investment-related accounts.

Prepare a balance sheet.

(LO 5, 6)

P12-6A The following data, presented in alphabetical order, are taken from the records of Radar Corporation.

Accounts payable	\$ 240,000
Accounts receivable	140,000
Accumulated depreciation—buildings	180,000
Accumulated depreciation—equipment	52,000
Allowance for doubtful accounts	6,000
Bonds payable (10%, due 2020)	500,000
Buildings	950,000
Cash	42,000
Common stock (\$10 par value; 500,000 shares authorized, 150,000 shares issued)	1,500,000
Dividends payable	80,000
Equipment	275,000
Fair value adjustment—non-trading securities (Dr)	8,000
Goodwill	200,000
Income taxes payable	120,000
Inventory	170,000
Investment in Mara common stock (30% ownership), at equity	380,000
Investment in Sasse common stock (10% ownership), at cost	278,000
Land	390,000
Notes payable (due 2015)	70,000
Paid-in capital in excess of par—common stock	130,000
Premium on bonds payable	40,000
Prepaid insurance	16,000
Retained earnings	103,000
Short-term investments, at fair value (and cost)	180,000
Unrealized gain—non-trading securities	8,000

The investment in Sasse common stock is considered to be a long-term non-trading security.

Instructions

Prepare a classified balance sheet at December 31, 2014.

Total assets \$2,791,000

***P12-7A** Robinson Corporation purchased all the outstanding common stock of Hoffman Plastics, Inc. on December 31, 2014. Just before the purchase, the condensed balance sheets of the two companies appeared as follows.

	<u>Robinson Corporation</u>	<u>Hoffman Plastics, Inc.</u>
Current assets	\$1,480,000	\$ 435,500
Plant and equipment (net)	2,100,000	676,000
	<u>\$3,580,000</u>	<u>\$1,111,500</u>
Current liabilities	\$ 578,000	\$ 92,500
Common stock	1,950,000	525,000
Retained earnings	1,052,000	494,000
	<u>\$3,580,000</u>	<u>\$1,111,500</u>

Prepare consolidated worksheet and balance sheet when cost exceeds book value.

(LO 7)

Robinson used current assets of \$1,225,000 to acquire the stock of Hoffman Plastics. The excess of this purchase price over the book value of Hoffman Plastics' net assets is determined to be attributable \$86,000 to Hoffman Plastics' plant and equipment and the remainder to goodwill.

Instructions

- Prepare the entry for Robinson's acquisition of Hoffman Plastics, Inc. stock.
- Prepare a consolidated worksheet at December 31, 2014.
- Prepare a consolidated balance sheet at December 31, 2014.

Excess of cost over book value
\$120,000

PROBLEMS: SET B

P12-1B Cheese Farms is a grower of hybrid seed corn for Steenbergen Genetics Corporation. It has had two exceptionally good years and has elected to invest its excess funds in bonds. The selected transactions, shown below, relate to bonds acquired as an investment by Cheese Farms, whose fiscal year ends on December 31.

Journalize debt investment transactions and show financial statement presentation.

(LO 2, 5, 6)

2014

- Jan. 1 Purchased at face value \$400,000 of Stombaugh Corporation 10-year, 9% bonds dated January 1, 2014, directly from the issuing corporation.
- July 1 Received the semiannual interest on the Stombaugh bonds.
- Dec. 31 Accrual of interest at year-end on the Stombaugh bonds.

(Assume that all intervening transactions and adjustments have been properly recorded and the number of bonds owned has not changed from December 31, 2014, to December 31, 2016.)

2017

- Jan. 1 Received the semiannual interest on the Stombaugh bonds.
- Jan. 1 Sold \$200,000 of Stombaugh bonds at 114. The broker deducted \$7,000 for commissions and fees on the sale.
- July 1 Received the semiannual interest on the Stombaugh bonds.
- Dec. 31 Accrual of interest at year-end on the Stombaugh bonds.

Instructions

- Journalize the listed transactions for the years 2014 and 2017.
- Show the balance sheet presentation of the bonds and interest receivable at December 31, 2014. Assume the investments are considered long-term.

(a) Gain on sale of debt investments \$21,000

P12-2B In January 2014, the management of Gina Company concludes that it has sufficient cash to purchase some short-term investments in debt and stock securities. During the year, the following transactions occurred.

- Feb. 1 Purchased 500 shares of Joy common stock for \$30,000, plus brokerage fees of \$800.
- Mar. 1 Purchased 600 shares of Aurelius common stock for \$20,000, plus brokerage fees of \$300.

Journalize investment transactions, prepare adjusting entry, and show statement presentation.

(LO 2, 3, 5, 6)

- Apr. 1 Purchased 40 \$1,000, 9% Sikich bonds for \$40,000, plus \$1,200 brokerage fees. Interest is payable semiannually on April 1 and October 1.
- July 1 Received a cash dividend of \$0.60 per share on the Joy common stock.
- Aug. 1 Sold 300 shares of Joy common stock at \$69 per share, less brokerage fees of \$350.
- Sept. 1 Received a \$1 per share cash dividend on the Aurelius common stock.
- Oct. 1 Received the semiannual interest on the Sikich bonds.
- Oct. 1 Sold the Sikich bonds for \$45,000, less \$1,000 brokerage fees.

At December 31, the fair value of the Joy common stock was \$66 per share. The fair value of the Aurelius common stock was \$29 per share.

Instructions

(b) Unrealized loss \$2,020

- (a) Journalize the transactions and post to the accounts Debt Investments and Stock Investments. (Use the T-account form.)
- (b) Prepare the adjusting entry at December 31, 2014, to report the investments at fair value. All securities are considered to be trading securities.
- (c) Show the balance sheet presentation of investment securities at December 31, 2014.
- (d) Identify the income statement accounts and give the statement classification of each account.

Journalize transactions and adjusting entry for stock investments.

(LO 3, 5, 6)

P12-3B On December 31, 2013, Eli Associates owned the following securities, held as long-term investments.

Common Stock	Shares	Cost
Trowbridge Co.	4,000	\$100,000
Holly Co.	5,000	30,000
Oriental Motors Co.	3,000	60,000

On this date, the total fair value of the securities was equal to its cost. The securities are not held for influence or control over the investees. In 2014, the following transactions occurred.

- July 1 Received \$1 per share semiannual cash dividend on Holly Co. common stock.
- Aug. 1 Received \$0.50 per share cash dividend on Trowbridge Co. common stock.
- Sept. 1 Sold 1,500 shares of Holly Co. common stock for cash at \$8 per share, less brokerage fees of \$300.
- Oct. 1 Sold 600 shares of Trowbridge Co. common stock for cash at \$30 per share, less brokerage fees of \$600.
- Nov. 1 Received \$1 per share cash dividend on Oriental Motor Co. common stock.
- Dec. 15 Received \$0.50 per share cash dividend on Trowbridge Co. common stock.
- 31 Received \$1 per share semiannual cash dividend on Holly Co. common stock.

At December 31, the fair values per share of the common stocks were Trowbridge Co. \$23, Holly Co. \$7, and Oriental Motors Co. \$19.

Instructions

(a) Gain on sale, \$2,700 and \$2,400

- (a) Journalize the 2014 transactions and post to the account Stock Investments. (Use the T-account form.)
- (b) Prepare the adjusting entry at December 31, 2014, to show the securities at fair value. The stock should be classified as non-trading securities.
- (c) Show the balance sheet presentation of the investment-related accounts at December 31, 2014. At this date, Eli Associates has common stock \$2,000,000 and retained earnings \$1,200,000.

Prepare entries under the cost and equity methods, and tabulate differences.

(LO 3)

P12-4B Tuecke's Concrete acquired 20% of the outstanding common stock of Drew, Inc. on January 1, 2014, by paying \$1,100,000 for 40,000 shares. Drew declared and paid a \$0.50 per share cash dividend on June 30 and again on December 31, 2014. Drew reported net income of \$600,000 for the year. At December 31, 2014, the market price of Drew's common stock was \$30 per share.

Instructions

(a) Total dividend revenue \$40,000

- (a) Prepare the journal entries for Tuecke's Concrete for 2014, assuming Tuecke's cannot exercise significant influence over Drew. Use the cost method and assume Drew common stock should be classified as non-trading.

- (b) Prepare the journal entries for Tuecke's Concrete for 2014, assuming Tuecke's can exercise significant influence over Drew. Use the equity method.
- (c) Indicate the balance sheet and income statement account balances at December 31, 2014, under each method of accounting.

(b) Revenue from investment
\$120,000

P12-5B The following are in Verbitsky's Company's portfolio of long-term non-trading securities at December 31, 2013.

Journalize stock investment transactions and show statement presentation.

(LO 3, 5, 6)

	<u>Cost</u>
700 shares of Sasha Corporation common stock	\$35,000
900 shares of Ukraine Corporation common stock	42,000
800 shares of Zaba Corporation preferred stock	22,400

On December 31, the total cost of the portfolio equaled total fair value. Verbitsky's Company had the following transactions related to the securities during 2014.

- Jan. 7 Sold 700 shares of Sasha Corporation common stock at \$56 per share, less brokerage fees of \$700.
- 10 Purchased 300 shares, \$70 par value common stock of Vanucci Corporation at \$78 per share, plus brokerage fees of \$240.
- 26 Received a cash dividend of \$1.15 per share on Ukraine Corporation common stock.
- Feb. 2 Received cash dividends of \$0.40 per share on Zaba Corporation preferred stock.
- 10 Sold all 800 shares of Zaba Corporation preferred stock at \$26 per share less brokerage fees of \$180.
- July 1 Received a cash dividend of \$1.00 per share on Ukraine Corporation common stock.
- Sept. 1 Purchased an additional 800 shares of the \$70 par value common stock of Vanucci Corporation at \$75 per share, plus brokerage fees of \$900.
- Dec. 15 Received a cash dividend of \$1.50 per share on Vanucci Corporation common stock.

At December 31, 2014, the fair values of the securities were:

Ukraine Corporation common stock	\$48 per share
Vanucci Corporation common stock	\$72 per share

Instructions

- (a) Prepare journal entries to record the transactions.
- (b) Post to the investment accounts. (Use T-accounts.)
- (c) Prepare the adjusting entry at December 31, 2014, to report the portfolio at fair value.
- (d) Show the balance sheet presentation at December 31, 2014, for the investment-related accounts.

(a) Loss on sale \$1,780

(c) Unrealized loss \$4,140

P12-6B The following data, presented in alphabetical order, are taken from the records of Redlands Corporation.

Prepare a balance sheet.

(LO 5, 6)

Accounts payable	\$ 375,000
Accounts receivable	135,000
Accumulated depreciation—buildings	270,000
Accumulated depreciation—equipment	80,000
Allowance for doubtful accounts	10,000
Bonds payable (10%, due 2024)	600,000
Buildings	1,350,000
Cash	210,000
Common stock (\$5 par value; 500,000 shares authorized, 440,000 shares issued)	2,200,000
Discount on bonds payable	30,000
Dividends payable	75,000
Equipment	415,000
Goodwill	300,000
Income taxes payable	180,000
Inventory	255,000
Investment in Bonita Inc. stock (30% ownership), at equity	900,000

Land	780,000
Notes payable (due 2015)	110,000
Paid-in capital in excess of par—common stock	300,000
Prepaid insurance	25,000
Retained earnings	480,000
Short-term investments, at fair value (and cost)	280,000

Instructions

Prepare a classified balance sheet at December 31, 2014.

Total assets \$4,290,000

Prepare consolidated worksheet and balance sheet when cost exceeds book value.

***P12-7B** Patel Company purchased all the outstanding common stock of Singh Company on December 31, 2014. Just before the purchase, the condensed balance sheets of the two companies were as follows.

(LO 7)

	<u>Patel Company</u>	<u>Singh Company</u>
Current assets	\$1,478,000	\$379,000
Plant and equipment (net)	1,882,000	351,000
	<u>\$3,360,000</u>	<u>\$730,000</u>
Current liabilities	\$ 870,000	\$ 90,000
Common stock	1,947,000	360,000
Retained earnings	543,000	280,000
	<u>\$3,360,000</u>	<u>\$730,000</u>

Patel used current assets of \$710,000 to acquire the stock of Singh. The excess of this purchase price over the book value of Patel's net assets is determined to be attributable \$20,000 to Singh's plant and equipment and the remainder to goodwill.

Instructions

- Prepare the entry for Patel Company's acquisition of Singh Company stock.
- Prepare a consolidated worksheet at December 31, 2014.
- Prepare a consolidated balance sheet at December 31, 2014.

Excess of cost over book value \$50,000

PROBLEMS: SET C

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Problem Set C.

COMPREHENSIVE PROBLEM: CHAPTERS 11 TO 12

CP12 Part I Mindy Feldkamp and her two colleagues, Oscar Lopez and Lori Melton, are personal trainers at an upscale health spa/resort in Tampa, Florida. They want to start a health club that specializes in health plans for people in the 50+ age range. The growing population in this age range and strong consumer interest in the health benefits of physical activity have convinced them they can profitably operate their own club. In addition to many other decisions, they need to determine what type of business organization they want. Oscar believes there are more advantages to the corporate form than a partnership, but he hasn't yet convinced Mindy and Lori. They have come to you, a small-business consulting specialist, seeking information and advice regarding the choice of starting a partnership versus a corporation.

Instructions

-  Prepare a memo (dated May 26, 2013) that describes the advantages and disadvantages of both partnerships and corporations. Advise Mindy, Oscar, and Lori regarding which organizational form you believe would better serve their purposes. Make sure to include reasons supporting your advice.

Part II After deciding to incorporate, each of the three investors receives 20,000 shares of \$2 par common stock on June 12, 2013, in exchange for their co-owned building (\$200,000 fair value) and \$100,000 total cash they contributed to the business. The next decision that Mindy, Oscar, and Lori need to make is how to obtain financing for renovation and equipment. They understand the difference between equity securities and debt securities, but do not understand the tax, net income, and earnings per share consequences of equity versus debt financing on the future of their business.

Instructions

- (b) Prepare notes for a discussion with the three entrepreneurs in which you will compare the consequences of using equity versus debt financing. As part of your notes, show the differences in interest and tax expense assuming \$1,400,000 is financed with common stock, and then alternatively with debt. Assume that when common stock is used, 140,000 shares will be issued. When debt is used, assume the interest rate on debt is 9%, the tax rate is 32%, and income before interest and taxes is \$300,000. (You may want to use an electronic spreadsheet.)

Part III During the discussion about financing, Lori mentions that one of her clients, Roberto Marino, has approached her about buying a significant interest in the new club. Having an interested investor sways the three to issue equity securities to provide the financing they need. On July 21, 2013, Mr. Marino buys 90,000 shares at a price of \$10 per share.

The club, LifePath Fitness, opens on January 12, 2014, and after a slow start begins to produce the revenue desired by the owners. The owners decide to pay themselves a stock dividend since cash has been less than abundant since they opened their doors. The 10% stock dividend is declared by the owners on July 27, 2014. The market price of the stock is \$3 on the declaration date. The date of record is July 31, 2014 (there have been no changes in stock ownership since the initial issuance), and the issue date is August 15, 2014. By the middle of the fourth quarter of 2014, the cash flow of LifePath Fitness has improved to the point that the owners feel ready to pay themselves a cash dividend. They declare a \$0.05 cash dividend per share on December 4, 2014. The record date is December 14, 2014, and the payment date is December 24, 2014.

Instructions

- (c) (1) Record all of the transactions related to the common stock of LifePath Fitness during the years 2013 and 2014. (2) Indicate how many shares are issued and outstanding after the stock dividend is issued.

Part IV Since the club opened, a major concern has been the pool facilities. Although the existing pool is adequate, Mindy, Oscar, and Lori all desire to make LifePath a cutting-edge facility. Until the end of 2014, financing concerns prevented this improvement. However, because there has been steady growth in clientele, revenue, and income since the fourth quarter of 2014, the owners have explored possible financing options. They are hesitant to issue stock and change the ownership mix because they have been able to work together as a team with great effectiveness. They have formulated a plan to issue secured term bonds to raise the needed \$600,000 for the pool facilities. By the end of April 2015, everything was in place for the bond issue to go ahead. On June 1, 2015, the bonds were issued for \$548,000. The bonds pay semiannual interest of 3% (6% annual) on December 1 and June 1 of each year. The bonds mature in 10 years, and amortization is computed using the straight-line method.

Instructions

- (d) Record (1) the issuance of the secured bonds, (2) the interest payment made on December 1, 2015, (3) the adjusting entry required at December 31, 2015, and (4) the interest payment made on June 1, 2016.

Part V Mr. Marino's purchase of the stock of LifePath Fitness was done through his business. The stock investment has always been accounted for using the cost method on his firm's books. However, early in 2016 he decided to take his company public. He is preparing an IPO (initial public offering), and he needs to have the firm's financial statements audited. One of the issues to be resolved is to restate the stock investment in LifePath Fitness using the equity method, since Mr. Marino's ownership percentage is greater than 20%.

Instructions

- (e) (1) Give the entries that would have been made on Marino's books if the equity method of accounting for investments had been used from the initial investment through 2015. Assume the following data for LifePath.

	<u>2013</u>	<u>2014</u>	<u>2015</u>
Net income	\$30,000	\$70,000	\$105,000
Total cash dividends	\$ 2,100	\$20,000	\$ 50,000

- (2) Compute the balance in the Stock Investments account (as it relates to LifePath Fitness) at the end of 2015.

CONTINUING COOKIE CHRONICLE

(Note: This is a continuation of the Cookie Chronicle from Chapters 1–11.)

CCC12 Natalie has been approached by Ken Thornton, a shareholder of The Beanery Coffee Inc. Ken wants to retire and would like to sell his 1,000 shares in The Beanery Coffee, which represents 30% of all shares issued. The Beanery is currently operated by Ken's twin daughters, who each own 35% of the common shares. The Beanery not only operates a coffee shop but also roasts and sells beans to retailers, under the name "Rocky Mountain Beanery."

Ken has met with Curtis and Natalie to discuss the business operation. All have concluded that there would be many advantages for Cookie & Coffee Creations Inc. to acquire an interest in The Beanery Coffee. Despite the apparent advantages, however, Natalie and Curtis are still not convinced that they should participate in this business venture.

Go to the book's companion website, www.wiley.com/college/weygandt, to see the completion of this problem.

Broadening Your PERSPECTIVE**Financial Reporting and Analysis****Financial Reporting Problem: PepsiCo, Inc.**

BYP12-1 The annual report of PepsiCo, Inc. is presented in Appendix A.

Instructions

- See Note 1 to the financial statements and indicate what the consolidated financial statements include.
- Using PepsiCo's consolidated statement of cash flows, determine how much was spent for capital acquisitions during the current year.

Comparative Analysis Problem: PepsiCo, Inc. vs. The Coca-Cola Company

BYP12-2 PepsiCo's financial statements are presented in Appendix A. Financial statements of The Coca-Cola Company are presented in Appendix B.

Instructions

- Based on the information contained in these financial statements, determine the following for each company.
 - Net cash used for investing (investment) activities for the current year (from the statement of cash flows).
 - Cash used for capital expenditures during the current year.

- (b) Each of PepsiCo's financial statements is labeled "consolidated." What has been consolidated? That is, from the contents of PepsiCo's annual report, identify by name the six divisions that have been consolidated. (*Hint:* PepsiCo uses abbreviations to describe each division. You will need to look up the meaning of each of these abbreviations.)

Real-World Focus

BYP12-3 Most publicly traded companies are examined by numerous analysts. These analysts often don't agree about a company's future prospects. In this exercise, you will find analysts' ratings about companies and make comparisons over time and across companies in the same industry. You will also see to what extent the analysts experienced "earnings surprises." Earnings surprises can cause changes in stock prices.

Address: biz.yahoo.com/i/ or go to www.wiley.com/college/weygandt

Steps

1. Choose a company.
2. Use the index to find the company's name.
3. Choose **Research**.

Instructions

- (a) How many analysts rated the company?
- (b) What percentage rated it a strong buy?
- (c) What was the average rating for the week?
- (d) Did the average rating improve or decline relative to the previous week?
- (e) What was the amount of the earnings surprise percentage during the last quarter?

Critical Thinking

Decision-Making Across the Organization

BYP12-4 At the beginning of the question-and-answer portion of the annual stockholders' meeting of Kemper Corporation, stockholder Mike Kerwin asks, "Why did management sell the holdings in UMW Company at a loss when this company has been very profitable during the period Kemper held its stock?"

Since president Tony Chavez has just concluded his speech on the recent success and bright future of Kemper, he is taken aback by this question and responds, "I remember we paid \$1,300,000 for that stock some years ago. I am sure we sold that stock at a much higher price. You must be mistaken."

Kerwin retorts, "Well, right here in footnote number 7 to the annual report it shows that 240,000 shares, a 30% interest in UMW, were sold on the last day of the year. Also, it states that UMW earned \$520,000 this year and paid out \$160,000 in cash dividends. Further, a summary statement indicates that in past years, while Kemper held UMW stock, UMW earned \$1,240,000 and paid out \$440,000 in dividends. Finally, the income statement for this year shows a loss on the sale of UMW stock of \$180,000. So, I doubt that I am mistaken."

Red-faced, president Chavez turns to you.

Instructions

With the class divided into groups, answer the following.

- (a) What dollar amount did Kemper receive upon the sale of the UMW stock?
- (b) Explain why both stockholder Kerwin and president Chavez are correct.

Communication Activity

BYP12-5 Bunge Corporation has purchased two securities for its portfolio. The first is a stock investment in Longley Corporation, one of its suppliers. Bunge purchased 10% of Longley with the intention of holding it for a number of years, but has no intention of purchasing more shares. The

second investment was a purchase of debt securities. Bunge purchased the debt securities because its analysts believe that changes in market interest rates will cause these securities to increase in value in a short period of time. Bunge intends to sell the securities as soon as they have increased in value.

Instructions

Write a memo to Max Scholes, the chief financial officer, explaining how to account for each of these investments. Explain what the implications for reported income are from this accounting treatment.

Ethics Case

BYP12-6 Bartlet Financial Services Company holds a large portfolio of debt and stock securities as an investment. The total fair value of the portfolio at December 31, 2014, is greater than total cost. Some securities have increased in value and others have decreased. Deb Faust, the financial vice president, and Jan McCabe, the controller, are in the process of classifying for the first time the securities in the portfolio.

Faust suggests classifying the securities that have increased in value as trading securities in order to increase net income for the year. She wants to classify the securities that have decreased in value as long-term non-trading securities, so that the decreases in value will not affect 2014 net income.

McCabe disagrees. She recommends classifying the securities that have decreased in value as trading securities and those that have increased in value as long-term non-trading securities. McCabe argues that the company is having a good earnings year and that recognizing the losses now will help to smooth income for this year. Moreover, for future years, when the company may not be as profitable, the company will have built-in gains.

Instructions

- Will classifying the securities as Faust and McCabe suggest actually affect earnings as each says it will?
- Is there anything unethical in what Faust and McCabe propose? Who are the stakeholders affected by their proposals?
- Assume that Faust and McCabe properly classify the portfolio. At year-end, Faust proposes to sell the securities that will increase 2014 net income, and McCabe proposes to sell the securities that will decrease 2014 net income. Is this unethical?

All About You

BYP12-7 The **Securities and Exchange Commission** (SEC) is the primary regulatory agency of U.S. financial markets. Its job is to ensure that the markets remain fair for all investors. The following SEC sites provide useful information for investors.

Address: www.sec.gov/answers.shtml and <http://www.sec.gov/investor/tools/quiz.htm>.

Instructions

- Go to the first SEC site and find the definition of the following terms.
 - Ask price.
 - Margin.
 - Prospectus.
 - Index fund.
- Go to the second SEC site and take the short quiz.

BYP12-8 You've got \$3,000 in credit card bills at an 18% interest rate. Your employer has a 401(k) plan in which it will match your contributions, up to 10% of your annual salary. Should you pay off your credit card bills before you start putting money into the 401(k)?

YES: Paying off an 18% debt, and thus avoiding 18% interest payments, is essentially equivalent to earning 18% on investments. Reducing your debts reduces your financial vulnerability.

NO: You need to get in the savings habit as soon as possible. You should take part of the money you would have used to pay off your debt each month and instead put it into the 401(k).

Instructions

Write a response indicating your position regarding the situation. Provide support for your view.

FASB Codification Activity

BYP12-9 If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following.

- What is the definition of a trading security?
- What is the definition of non-trading security?
- What is definition of a holding gain or loss?

Answers to Chapter Questions

Answers to Insight and Accounting Across the Organization Questions

p. 608 How Procter & Gamble Accounts for Gillette Q: Where on Procter & Gamble's balance sheet will you find its investment in Gillette Company? **A:** Because Procter & Gamble owns Gillette, Procter & Gamble does not report Gillette in the investment section of its balance sheet. Instead, Gillette's assets and liabilities are included and commingled with the assets and liabilities of Procter & Gamble.

p. 612 And the Correct Way to Report Investments Is... ? Q: Why might the use of the equity method not lead to full disclosure in the financial statements? **A:** Under the equity method, the investment in common stock of another company is initially recorded at cost. After that, the investment account is adjusted at each reporting date to show the investor's equity in the investee. However, on the investor's balance sheet, only the investment account is shown. The pro-rata share of the investee's assets and liabilities are not reported. Because the pro-rata share of the investee's assets and liabilities are not shown, some argue that the full disclosure principle is violated.

A Look at IFRS

The accounting and reporting for investments under IFRS and GAAP are very similar. Recently, the FASB issued a reporting standard that essentially converges to a previously issued IASB standard.

Key Points

- The basic accounting entries to record the acquisition of debt securities, the receipt of interest, and the sale of debt securities are the same under IFRS and GAAP.
- The basic accounting entries to record the acquisition of stock investments, the receipt of dividends, and the sale of stock securities are the same under IFRS and GAAP.
- Both IFRS and GAAP use the same criteria to determine whether the equity method of accounting should be used—that is, significant influence with a general guide of over 20% ownership, IFRS uses the term *associate investment* rather than equity investment to describe its investment under the equity method.

- Under IFRS, both the investor and an associate company should follow the same accounting policies. As a result, in order to prepare financial information, adjustments are made to the associate's policies to conform to the investor's books. GAAP does not have that requirement.
- The basis for consolidation under IFRS is control. Under GAAP, a bipolar approach is used, which is a risk-and-reward model (often referred to as a variable-entity approach) and a voting-interest approach. However, under both systems, for consolidation to occur, the investor company must generally own 50% of another company.
- Both IFRS and GAAP require that companies determine how to measure their financial assets based on two criteria:
 - ◆ The company's business model for managing their financial assets; and
 - ◆ The contractual cash flow characteristics of the financial asset.

If a company has (1) a business model whose objective is to hold assets in order to collect contractual cash flows and (2) the contractual terms of the financial asset gives specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding, then the company should use cost (often referred to as amortized cost).

For example, assume that **Mitsubishi** purchases a bond investment that it intends to hold-for-collection. Its business model for this type of investment is to collect interest and then principal at maturity. The payment dates for the interest rate and principal are stated on the bond. In this case, Mitsubishi accounts for the investment at cost. If, on the other hand, Mitsubishi purchased the bonds as part of a trading strategy to speculate on interest rate changes (a trading investment), then the debt investment is reported at fair value. As a result, only debt investments such as receivables, loans, and bond investments that meet the two criteria above are recorded at amortized cost. All other debt investments are recorded and reported at fair value.

- Both IFRS and GAAP use held-for-collection (debt investments), trading (both debt and equity investments), and non-trading equity investment classifications. These classifications are based on the business model used to manage the investments and the type of security.
- The accounting for trading investments is the same between GAAP and IFRS. Also, held-for-collection investments are accounted for at amortized cost. Gains and losses on non-trading equity investments (IFRS) are reported in other comprehensive income.
