For from blind fear of the unknown, science does certainly deliver man. She does by man as he does by an unbroken colt. The colt sees by the road side some quite new object — a cast-away boot, an old kettle, or what not. What a fearful monster! What unknown terrific powers may it not possess! And the colt shies across the road, runs up the bank, rears on end; putting itself thereby, as many a man does, in real danger. What cure is there? But one, experience. So science takes us, as we should take the colt, gently by the halter; and makes us simply smell at the new monster; till after a few trembling sniffs, we discover, like the colt, that it is not a monster, but a kettle.

*Health and Education*  
Science (p. 284)  
W. Isbister & Company London, England. 1874

...it is the childlike, simple, patient, reverent heart, which science at once demands and cultivates. To prejudice or haste, to self-conceit or ambition, she proudly shuts her treasuries — to open them to men of humble heart, whom this world thinks simple dreamers — her Newtons, and Owens, and Faradays.

*Alton Locke, Taylor and Poet*  
Chapter XVIII (p. 141)  
Macmillan & Company Ltd. London, England. 1911

...Science was the child of Courage, and Courage the child of Knowledge.

*Health and Education*  
Science (p. 259)  
W. Isbister & Company London, England. 1874

**Kipling, Rudyard** 1865–1936  
British writer and poet

There are times when Science does not satisfy.

*With the Night Mail* (p. 24)  
Doubleday, Page & Company. New York, New York, USA. 1909

**Kirby, William** 1759–1850  
Clergyman and entomologist

Mankind in general, not excepting even philosophers, are prone to magnify, often beyond its just merit, the science or pursuit to which they have addicted themselves, and to depreciate any that seems to stand in competition with their favorite: like the redoubted champions of romance, each thinks himself bound to take the field against every one that will not subscribe to the peerless beauty and accomplishments of his own Dulcinea.

*An Introduction to Entomology; or, Elements of the Natural History of Insects*

Letter I (p. 1)

Longman, Green, Longman & Roberts. London, England. 1860

### **Kirkpatrick, Clifford** 1898–1970

American sociologist

Science recognizes no personal powers in the universe responsive to the prayers and needs of men.

*Religion in Human Affairs*

Chapter XVI (p. 470)

John Wiley & Sons, Inc. New York, New York, USA. 1929

### **Kline, Morris** 1908–92

American mathematics professor and writer

Theoretical Science is a game of mathematical make-believe.

*Mathematics: The Loss of Certainty*

Chapter XIV (p. 325)

Oxford University Press, Inc. New York, New York, USA. 1980

### **Kliuchevsky, V. O.** 1841–1911

Russian historian

Science is often identified with knowledge. This is a gross misunderstanding. Science is not merely knowledge, but also consciousness, that is, the skill of properly using knowledge.

Compiled by V.V. Vorontsov

*Words of the Wise: A Book of Russian Quotations*

Translated by Vic Schneierson

Progress Publishers. Moscow, Russia. 1979

### **Knight, David**

No biographical data available

Most science is a very ordinary human activity not so very far removed from painting by numbers.

*Ideas in Chemistry: A History of the Science*

Introduction (p. 6)

Athlone. London, England. 1992

### **Knuth, Donald E.** 1938–

Creator of TeX

Science is what we understand well enough to explain to a computer, Art is all the rest.

In Marko Petkovsek, Herbert S. Wilf and Doron Zeilberger

*A=B*

Foreword

A.K. Peters. Wellesley, Massachusetts, USA. 1996

### **Kofahl, R. E.**

No biographical data available

Science is human experience systematically extended (by intent, methodology and instrumentation) for the purpose of learning more about the natural world and for the critical empirical testing and possible falsification of all ideas about the natural world. Scientific hypotheses may incorporate only elements of the natural empirical world, and thus may contain no element of the supernatural.

Correctly Redefining Distorted Science: A Most Essential Task

*Creation Research Society Quarterly*, Volume 23, 1986 (p. 112)

### **Köhler, Wolfgang** 1887–1967

American psychologist

It would be interesting to inquire how many times essential advances in science have first been made possible by the fact that the boundaries of special disciplines are not respected. ...at the present time it is of course quite customary for physicists to trespass on chemical ground, for mathematicians to do excellent work in physics, and for physicists to develop new mathematical procedures...trespassing is one of the most successful techniques in science.

*Dynamics in Psychology*

Retention and Recall (pp. 115–116)

Liveright Publishing Corporation. New York, New York, USA. 1940

### **Kolb, Edward W. (Rocky)** 1951–

American cosmologist

Science does not proceed like a cookbook recipe in the making of a hypothesis, comparing its prediction with observations and either accepting or rejecting the hypothesis. There is always confusion at the leading edge of research, and there are always a few discrepant and contradictory pieces of information that can't be explained.

*Blind Watchers of the Sky*

Chapter Seven (pp. 193–194)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

The process of science involves heroic ideas as well as its share of stupidity.

*Blind Watchers of the Sky*

Preface (p. x)

Addison-Wesley Publishing Company. Reading, Massachusetts,

USA. 1996

More often than not, the way science goes from point A to point B is by a random lurch through points X, Y, and Z. Even when great leaps of progress do occur, they only rarely come “out of the blue.” Advances are nearly always preceded by years, decades, or even centuries of patient accumulation of facts and data and ideas.

*Blind Watchers of the Sky*

Chapter Two (p. 25)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

**Koshland, Jr., Daniel E.** 1920–  
American biochemist

Science is not impressed with a conglomeration of data. It likes carefully constructed analysis of each problem.

Editorial

*Science*, Volume 263, Number 5144, 14 January 1994 (p. 155)

**Krauss, Lawrence M.** 1954–  
American theoretical physicist

There are times, such as when the state school board in Kansas in 1999 removed evolution from its science curriculum, when I am reminded of Lavoisier, and shudder at the damage that can be done by ignorance combined with power. Even the magnificent modern edifice called science, built up over half a millennium of small increments toward the truth, is not safe from the vicissitudes of the political world. If, as Carl Sagan claimed, science is a “candle in the dark,” banishing demons that haunted the benighted eras of mankind, it burns tenuously at best. One generation of ignorance, steeped in myth and mysticism, is all that may be needed to snuff it out.

*Atom: An Odyssey from the Big Bang to Life on Earth...and Beyond*  
Chapter 13 (p. 172)

Little, Brown & Company. Boston, Massachusetts, USA. 2001

Science is based on limits: It proceeds by progressively finding out what is not possible, through experiment and theory, in order to determine how the universe might really function. It is worth recalling Sherlock Holmes’s adage that when you have eliminated all other possibilities, whatever remains, no matter how improbable, is the truth. Because of this, the universe is a pretty remarkable place even without all the extras. The greatest gift science has bestowed upon humanity, in my opinion, is the knowledge that whether we like it or not, the universe is the way it is.

*Beyond Star Trek: Physics from Alien Invasions to the End of Time*  
Epilogue (p. 173)

Basic Books, Inc. New York, New York, USA. 1997

**Kroeber, Alfred Louis** 1876–1960  
American anthropologist

...it appears that the total work of science must be done on a series of levels which the experience of science gradually discovers.

*The Nature of Culture* (p. 121)

The University of Chicago Press. Chicago, Illinois, USA. 1952

Science has always promised two things not necessarily related — an increase first in our powers, second in our happiness or wisdom, and we have come to realize that it is the first and less important of the two promises which it has kept most abundantly.

*The Modern Temper*

Chapter Three (p. 43)

Harcourt, Brace & Company. New York, New York, USA. 1929

...the most important part of our lives — our sensations, emotions, desires, and aspirations — takes place in a universe of illusions which science can attenuate or destroy, but which it is powerless to enrich.

*The Modern Temper*

Chapter Three (p. 50)

Harcourt, Brace & Company. New York, New York, USA. 1929

**Kubie, L. S.**  
No biographical data available

The primary achievement of science is the humility and honesty with which it constantly corrects its own errors. It is this that makes science the greatest of the humanities.

*The Fostering of Creative Scientific Productivity*

*Daedalus*, Volume 91, 1962 (p. 305)

**Kuhn, Thomas S.** 1922–96  
American historian of science

To understand why science develops as it does, one need not unravel the details of biography and personality that lead each individual to a particular choice, though that topic has vast fascination. What one must understand, however, is the manner in which a particular set of shared values interacts with the particular experiences shared by a community of specialists to ensure that most members of the group will ultimately find one set of arguments rather than another decisive.

*The Structure of Scientific Revolutions*

Postscript–1969 (p. 200)

The University of Chicago Press. Chicago, Illinois, USA. 1970

Normal science...is predicated on the assumption that the scientific community knows what the world is like. Much of the success of the enterprise derives from the community’s willingness to defend that assumption, if necessary at considerable cost.

*The Structure of Scientific Revolutions*

Chapter I (p. 5)

The University of Chicago Press. Chicago, Illinois, USA. 1970

The practice of normal science depends on the ability, acquired from exemplars, to group objects and situations into similarity sets which are primitive in the sense that the grouping is done without an answer to the question, “similar with respect to what?”

*The Structure of Scientific Revolutions*

Postscript–1969 (p. 200)

The University of Chicago Press. Chicago, Illinois, USA. 1970

...science...often suppresses fundamental novelties because they are necessarily subversive of its basic commitments.

*The Structure of Scientific Revolutions*

Chapter I (p. 5)

The University of Chicago Press. Chicago, Illinois, USA. 1970

**Kusch, Polykarp** 1911–93  
German-American physicist

Science is the greatest creative impulse of our time. It dominates the intellectual scene and forms our lives, not only in the material things which it has given us, but also in that it guides our spirit. Science shows us truth and beauty and fills each day with a fresh wonder of the exquisite order which governs our world.

Address to University Students  
December 10, 1955

**Lamb, Charles** 1775–1834

English essayist and critic

Science has succeeded to poetry, no less in the little walks of children than with men. Is there no possibility of averting this sore evil?

In Thoas Noon Talfourd

*The Works of Charles Lamb: To which are Prefixed His Letters, and a Sketch of His Life* (Volume 1)

Letter to S.T. Coleridge, October 23, 1802 (p. 118)

Harper & Brothers, Publishers. New York, New York, USA. 1838

Can we unlearn the arts that pretend to civilize, and then burn the world? There is a march of science; but who shall beat the drums for its retreat?

In Thoas Noon Talfourd

*The Works of Charles Lamb: To which are Prefixed His Letters, and a Sketch of His Life* (Volume 1)

Letter to George Dyer, December 20, 1830 (p. 292)

Harper & Brothers, Publishers. New York, New York, USA. 1838

In everything that relates to science, I am a whole Encyclopaedia behind the rest of the world.

*Essays of Elia*

The Old and the New Schoolmaster (p. 88)

Little, Brown & Company. Boston, Massachusetts. USA. 1896

**Landsberg, Peter Theodore** 1922–

No biographical data available

Everybody who takes up science has the ambition to become a successful scientist and make some discoveries. Most of us are disappointed because we do not make the really big and interesting discoveries. Or, if we do make them, we do not realize they are interesting, because other discoveries seem more important.

*Mathematics Today*, October 1902 (p. 135)

**Lang, Andrew** 1844–1912

Scottish scholar and man of letters

But science, like the spear of Achilles, can cure the wounds which herself inflicts.

*The Disentanglers*

Adventure of the Canadian Heiress (p. 399)

Longmans, Green Publishers. New York, New York, USA. 1902

**Lapp, Ralph E.** 1917–2004

American nuclear physicist

No one — not even the most brilliant scientist alive today — really knows where science is taking us. We are aboard a train which is gathering speed, racing down

a track on which are an unknown number of switches leading to unknown destinations. No single scientist is in the cab, and there may be demons at the switch. Most of society is in the caboose looking backward. Some passengers, fearful that they have boarded an express train to hell, want to jump off before it is too late

*The New Priesthood: The Scientific Elite and the Uses of Power*

Chapter 2 (p. 29)

Harper & Row, Publishers. New York, New York, USA. 1965

**Larrabee, Eric** 1922–90

Historian

Science is a — what? a method, a faith, a body of facts, a structure of theories, an institution, a way of life, a finite number of duly qualified individuals, an infinity of relevance and possibility. For a large number of scientists, science is indescribable, but indisputably a thing: it is knowable, palpable, reliable, usable. They live with it and by it; it is simply and unequivocally there.

Commentary

*Science and the Common Reader*, June 1966 (p. 43)

**Laudan, Larry** 1945–

American philosopher of science

The aim of science is merely to secure theories with a high problem-solving effectiveness.

*New Scientist*, 1 August 1892 (p. 26)

**Lavoisier, Antoine Laurent** 1743–94

French chemist

When we begin the study of any science, we are in a situation, respecting that science, similar to that of children; and the course by which we have to advance is precisely the same which nature follow in the formation of their ideas.

In *Great Books of the Western World* (Volume 45)

*Elements of Chemistry*

Preface (p. 1)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Science still has many chasms, which interrupt the series of facts and often render it extremely difficult to reconcile them with each other...

In *Great Books of the Western World* (Volume 45)

*Elements of Chemistry*

Preface (p. 2)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Le Guin, Ursula K.** 1929–

American writer of science fiction and fantasy

...it is only when science asks why, instead of simply describing how, that it becomes more than technology. When it asks why, it discovers Relativity. When it only shows how, it invents the atomic bomb and then puts its hands over its eyes and says, My God what have I done?...

*Language of the Night*

The Stalin in the Soul (p. 219)  
Putnam. New York, New York, USA. 1979

**Leary, Timothy** 1920–96  
American psychologist and educator

Science is all metaphor.  
*Contemporary Authors*, Volume 107

**Lebowitz, Fran** 1951–  
American comedian

Science is not a pretty thing. It is unpleasantly proportioned, outlandishly attired and often over-eager. What then is the appeal of science? What accounts for its popularity? And who gives it its start?

*Metropolitan Life*  
Science (p. 104)  
Fawcett Crest. New York, New York, USA. 1978

...modern science was largely conceived of as an answer to the servant problem and...is generally practiced by those who lack the flair for conversation.

*Metropolitan Life*  
Science (p. 104)  
Fawcett Crest. New York, New York, USA. 1978

**Leclerc, Georges-Louis, Comte de Buffon** 1707–88  
French naturalist

The only good science is the knowledge of facts, and mathematical truths are only truths of definition, and completely arbitrary, quite unlike physical truths.

In L. Ducros  
*Les Encyclopedistes* (p. 326)  
Publisher undetermined

**Lerner, Max** 1902–92  
American educator and author

It is not science that has destroyed the world, despite all the gloomy forebodings of the earlier prophets. It is man who has destroyed man.

*Actions and Passions: Notes on the Multiple Revolution of Our Time*  
The Human Heart and Human Will (p. 3)  
Simon & Schuster. New York, New York, USA. 1949

**Lewis, Gilbert Newton** 1875–1946  
American chemist

The strength of science lies in its naiveté.  
*The Anatomy of Science*  
Chapter I (p. 1)  
Yale University Press. New Haven, Connecticut, USA. 1926

**Lewis, Wyndham** 1882–1957  
English author and painter

When we say “science” we can either mean any manipulation of the inventive and organizing power of the human intellect: or we can mean such an extremely

different thing as the religion of science, the vulgarized derivative from this pure activity manipulated by a sort of priestcraft into a great religious and political weapon.

*The Art of Being Ruled*  
Revolution and Progress, Chapter 1 (pp. 3–4)  
Chatto & Windus. London, England. 1926

The puritanic potentialities of science have never been forecast. If it evolves a body of organized rites, and is established as a religion, hierarchically organized, things more than anything else will be done in the name of “decency.” The coarse fumes of tobacco and liquors, the consequent tainting of the breath and staining of white fingers and teeth, which is so offensive to many women, will be the first things attended to.

*The Art of Being Ruled*  
Chapter 7 (p. 210)  
Chatto & Windus. London, England. 1926

**Lichtenberg, Georg Christoph** 1742–99  
German physicist and satirical writer

There is no greater impediment to progress in the sciences than the desire to see it take place too quickly.

Translated by R.J. Hollingdale  
*Aphorisms*  
Notebook K, Aphorism 72  
Penguin Classics. New York, New York, USA. 1990

The most heated defenders of a science, who can not endure the slightest sneer at it, are commonly those who have not made very much progress in it and are secretly aware of this defect.

Translated by R.J. Hollingdale  
*Aphorisms*  
Notebook F, aphorism 8  
Penguin Classics. New York, New York, USA. 1990

**Lindley, David** 1956–  
English astrophysicist and author

When scientists begin to wonder...how science is possible at all, which is ultimately what their questioning of the mathematical basis of science is about, they are searching for reassurance, for some proof that there really is a fundamental theory out there in the dark waiting to be hunted down.

*The End of Physics: The Myth of a Unified Theory*  
Prologue (p. 4)  
Basic Books, Inc. New York, New York, USA. 1993

**Locke, John** 1632–1704  
English philosopher and political theorist

Nobody is under an obligation to know every thing. Knowledge and science in general is the business only of those who are at ease and leisure.

*An Essay Concerning Human Understanding and a Treatise on the Conduct of the Understanding*  
A Treatise on the Conduct of the Understanding

Section 7 (p. 494)

James Kay, June & Company. Philadelphia, Pennsylvania, USA. ca.1850

**Lorenz, Konrad** 1903–89  
Austrian zoologist

Truth, in science, can be defined as the working hypothesis best fitted to open the way to the next better one.

Translated by Marjorie Kerr Wilson

*On Aggression*

Chapter Fourteen (p. 288)

Harcourt, Brace & World, Inc. New York, New York, USA. 1963

**Lowell, Percival** 1855–1916  
American astronomer

Now in science there exists two classes of workers. There are men who spend their days in amassing material, in gathering facts. They are the collectors of specimens in natural history, the industrious takers of routine measurements in physics and astronomy or the mechanical accumulators of photographic plates. Very valuable such collections are. They may not require much brains to get, but they enable other brains to get a great deal out of them later.... The rarer they are the better. For the less mind enters into them the more they are worth. When destitute altogether of informing intelligence, they become priceless, as they then convey nature's meaning unmeddled of man.... The second class of scientists are the architects of the profession. They are the men to whom the building up of science is due. In their hands, the acquired facts are put together to that synthesizing of knowledge from which new conceptions spring.... Though the gathering of material is good, without the informing mind to combine the facts they had forever remained barren of fruit.

In William Graves Hoyt

*Lowell and Mars*

Chapter 2 (p. 22)

University of Arizona Press. Tucson, Arizona, USA. 1976

**Lubbock, Sir John** 1834–1913  
English banker, author, and scientist

Science, our Fairy Godmother, will, unless we perversely reject her help, and refuse her gifts, so richly endow us, that fewer hours of labour will serve to supply us with the material necessities of life, leaving us more time to ourselves, more leisure to enjoy all that makes life best worth living.

*The Beauties of Nature and the Wonders of the World We Live In*

Introduction (p. 37)

Macmillan & Company New York, New York, USA. 1893

**Lundberg, G. A.**  
No biographical data available

...no science tells us what to do with the knowledge that constitutes the science. Science only provides a car and a chauffeur for us. It does not directly, as science, tell us where to drive. The car and the chauffeur will take us into the ditch,

over the precipice, against a stone wall, or into the highlands of age-long human aspirations with equal efficiency. If we agree as to where we want to go and tell the driver our goal, he should be able to take us there by one of a number of possible routes the costs and conditions of each of which the scientist should be able to explain to us.

*Can Science Save Us?*

Social Problems (p. 31)

Longmans, Green & Company New York, New York, USA. 1947

**Lynch, Gary**  
No biographical data available

What you really need to do the best science is a tremendous tolerance for ambiguity. You have to be able to tolerate ambiguity. Because we as creatures are set up for some reason to see cause-and-effect. And what you really wind up doing is tolerating the fact that you have all these assumptions and all these uncertainties, and living with them. And when you really go into a novel area, what do you have to guide you? The more novel it is, the fewer the constraints. For a human being that is a very uncomfortable feeling.

In George Johnson

*In the Palaces of Memory: How We Build the Worlds Inside Our Heads*

Mucking Around in the Wetware (pp. 91–92)

Alfred A. Knopf. New York, New York, USA. 1991

**Lysaght, Sidney R.** 1860–1941  
Irish writer

Science is the lamp which man has himself kindled. It has built him lighthouses on the dark shores of the unknown; but his dreams, his quests for truth, lead him beyond the waters which his little lamp of knowledge illuminates.

*A Reading of Life*

Chapter II (p. 54)

Macmillan & Company Ltd. London, England. 1936

**Lyttleton, R. A.**  
English astronomer

...many very serious-minded, solid, and knowledgeable people work hard in science all their lives and produce nothing of the smallest importance, while others, few by comparison and perhaps seemingly carefree and not highly erudite, exhibit a serendipity of mind that enables them to have valuable ideas in any subject they may choose to take up.

In R. Duncan and M. Weston-Smith (eds.)

*The Encyclopaedia of Ignorance: Everything You Ever Wanted to Know*

*About the Unknown*

The Nature of Knowledge (p. 10)

Pergamon Press. Oxford, England. 1977

**MacArthur, Robert H.** 1930–72  
American ecologist

[N]ot all naturalists want to do science; many take refuge in nature's complexity as a justification to oppose any

search for patterns... Doing science is not such a barrier to feeling or such a dehumanizing influence as is often made out. It does not take the beauty from nature.

*Geographical Ecology*

Introduction (p. 1)

Harper & Row, Publishers, New York, New York, USA. 1972

**Macfie, Ronald Campbell** 1867–1931

Poet and physician

The God of Science speaks in the thunder and smiles in the sunshine. He is so great that the stars eddy round his feet not ankle-high, yet so loving that He makes roses and sunsets for the human heart.

*Science, Matter and Immortality*

Chapter XVII (p. 207)

William & Norgate. London, England. 1909

Conceived aright, science must always lead to belief in the unseen and to hope of immortality; but Science must learn to recognize her own limitations — must learn to recognize that her logic is not conclusive when her postulates are dubious — and that she can only become a ruler of men's souls and a brightener of men's lives if she takes Poetry and Philosophy by the hand, and dwells with them in the temple of Beauty and Reverence.

*Science, Matter and Immortality*

Chapter XXIII (p. 300)

William & Norgate. London, England. 1909

It is time that men knew that Science does not write with the cold finger of a starfish; it is time that men realized that true science is not a mere compilation of dead facts; it is time that men understood that Science is flamboyant and alive.

*Science, Matter and Immortality*

Chapter XXIII (p. 297)

William & Norgate. London, England. 1909

**Mach, Ernst** 1838–1916

Austrian physicist and philosopher

All science has its origin in the needs of life.

*The Science of Mechanics* (5<sup>th</sup> edition)

Chapter V, Part II, Section 1 (p. 610)

The Open Court Publishing Company. La Salle, Illinois, USA. 1942

Every one who busies himself with science recognizes how unsettled and indefinite the notions are which he has brought with him from common life, and how, on a minute examination of things, old differences are effaced and new ones introduced.

*Popular Scientific Lectures*

The Forms of Liquids (pp. 1–2)

The Open Court Publishing Company. Chicago, Illinois, USA. 1898

...the entire course of the development of science will, as a matter of course, judge more freely and more correctly of the significance of any present scientific movement than they who, limited in their views to the age in which their own lives have been spent, contemplate merely the

momentary trend that the course of intellectual events takes at the present moment.

*The Science of Mechanics* (5<sup>th</sup> edition)

Introduction (p. 8)

The Open Court Publishing Company. La Salle, Illinois, USA. 1942

The great results achieved by physical science in modern times — results not restricted to its own sphere but embracing that of other sciences which employ its help — have brought it about that physical ways of thinking and physical modes of procedure enjoy on all hands unwonted prominence, and that the greatest expectations are associated with their application.

*The Analysis of Sensations and the Relation of the Physical to the Psychological*

Chapter I (p. 1)

The Open Court Publishing Company. Chicago, Illinois, USA. 1914

The function of science, as we take it, is to replace experience. Thus, on the one hand, science must remain in the province of experience, but, on the other, must hasten beyond it, constantly expecting confirmation, constantly expecting the reverse. Where neither confirmation nor refutation is possible, science is not concerned...

*The Science of Mechanics* (5<sup>th</sup> edition)

Chapter IV, Part IV, Section 7 (p. 587)

The Open Court Publishing Company. La Salle, Illinois, USA. 1942

Physical science does not pretend to be a complete view of the world; it simply claims that it is working toward such a complete view in the future.

*The Science of Mechanics* (5<sup>th</sup> edition)

Chapter IV, Part II, Section 9 (p. 560)

The Open Court Publishing Company. La Salle, Illinois, USA. 1942

Science always has its origin in the adaptation of thought to some definite field of experience.

*The Analysis of Sensations and the Relation of the Physical to the Psychological*

Chapter I (p. 31)

The Open Court Publishing Company. Chicago, Illinois, USA. 1914

Science throws her treasures, not like a capricious fairy into the laps of a favored few, but into the laps of all humanity, with a lavish extravagance that no legend ever dreamt of!

*Popular Scientific Lectures*

The Economical Nature of Physical Inquiry (p. 189)

The Open Court Publishing Company. Chicago, Illinois, USA. 1898

Economy of communication and of apprehension is of the very essence of science. Herein lies its pacificatory, its enlightening, its refining element.

*The Science of Mechanics* (5<sup>th</sup> edition)

Introduction (p. 7)

The Open Court Publishing Company. La Salle, Illinois, USA. 1942

Is science itself anything more than — a business? Is not its task to acquire with the least possible work, in the least possible time, with the least possible thoughts, the greatest possible part of eternal truth?

*Popular Scientific Lectures*

The Forms of Liquids (p. 16)

The Open Court Publishing Company, Chicago, Illinois, USA. 1898

**Maffei, Paolo** 1926–  
Italian astronomer

We are now moving beyond those concepts and the knowledge familiar to us in the first half of this century, and we are entering a world in which science and fantasy intertwine...

Translated by D.J.K. O'Connell

*Beyond the Moon*

Chapter 10 (p. 301)

The MIT Press, Cambridge, Massachusetts, USA. 1978

**Magendie, Francois** 1783–1855  
French physiologist

I am a mere street scavenger of science. With hook in hand and basket on my back, I go about the streets of science collecting whatever I find.

In Rene Dubos

*Louis Pasteur: Free Lance of Science*

Chapter XIII (p. 363)

Little, Brown &amp; Company, Boston, Massachusetts, USA. 1950

**Mandelbrot, Benoit** 1924–  
French mathematician

I started looking in the trash cans of science...because I suspected that what I was observing was...perhaps very widespread. I attended lectures and looked in unfashionable periodicals...once in a while finding some interesting things. In a way it was a naturalist's approach, not a theoretician's approach. But my gamble paid off.

In James Gleick

*Chaos: Making a New Science*

A Geometry of Nature (p. 110)

The Viking Press, New York, New York, USA. 1987

**Mara Corday**  
Fictional character

Science is science, but a girl must get her hair done.

*Tarantula*

Film (1955)

**March, Robert H.** 1937–  
American professor of physics

Science is more than a mere attempt to describe nature as accurately as possible. Frequently the real message is well hidden, and a law that gives a poor approximation to nature has more significance than one which works fairly well but is poisoned at the root.

*Physics for Poets*

Chapter I (p. 17)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1996

**Margenau, Henry** 1901–97  
American physicist

It is in fact obvious that science should be pressed to say all it can about any problem which is at all susceptible to scientific treatment.

*The Nature of Physical Reality: A Philosophy of Modern Physics*

Chapter 2 (p. 12)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1950

**Margulis, Lynn** 1938–  
American cell biologist and evolutionist**Sagan, Dorion** 1959–

American science writer

Science has become a social method of inquiring into natural phenomena, making intuitive and systematic explorations of laws which are formulated by observing nature, and then rigorously testing their accuracy in the form of predictions. The results are then stored as written or mathematical records which are copied and disseminated to others, both within and beyond any given generation. As a sort of synergetic, rigorously regulated group perception, the collective enterprise of science far transcends the activity within an individual brain.

*Microcosmos*

Chapter 12 (p. 233)

Summit Books, New York, New York, USA. 1986

**Maritain, Jacques** 1882–1973  
French philosopher

Since science's competence extends to observable and measurable phenomena, not to the inner being of things, and to the means, not to the ends of human life, it would be nonsense to expect that the progress of science will provide men with a new type of metaphysics, ethics, or religion.

Science and Ontology

*Bulletin of the Atomic Scientists*, 1944, Volume 5 (p. 200)**Marshall, Alfred** 1842–1924  
English economist

...the mathematico-physical group of sciences...have this point in common, that their subject-matter is constant and unchanged in all countries and in all ages. ...if the subject-matter of a science passes through different stages of development, the laws which apply to one stage will seldom apply without modification to others; the laws of science must have a development corresponding to that of the things of which they treat.

In A.C. Pigou (ed.)

*Memorials of Alfred Marshall*

Chapter VI (p. 154)

Macmillan &amp; Company Ltd. London, England. 1925

**Mason, James** 1909–84  
English actor

Don't you see what's at stake here? The ultimate aim of all science — to penetrate the unknown. Do you realize we know less about the earth we live on than about

the stars and the galaxies of outer space? The greatest mystery is right here, right under our feet.

*A Journey to the Center of the Earth*  
Film (1959)

**Matsen, F. Albert**

No biographical data available

Science is defined as a set of observations and theories about observations.

The Role of Theory in Chemistry  
*Journal of Chemical Education*, Volume 62, Number 5, May 1985  
(p. 365)

**Maxwell, James Clerk** 1831–79

Scottish physicist

It was a great step in science when men became convinced that, in order to understand the nature of things, they must begin by asking, not whether a thing is good or bad, noxious or beneficial, but of what kind it is? and how much is there of it? Quality and Quantity were then first recognized as the primary features to be observed in scientific inquiry.

In William H. George  
*The Scientist in Action: A Scientific Study of His Methods*  
British Association Address, 1870 (p. 15)  
Williams & Norgate Ltd. London, England. 1936

**McCarthy, Mary** 1912–89

American writer

Modern neurosis began with the discoveries of Copernicus. Science made man feel small by showing him that the earth was not the center of the universe.

*On the Contrary*  
Tyranny of the Orgasm (p. 168)  
Farrar, Straus & Cudahy, New York, New York, USA, 1961

**McLuhan, Marshall** 1911–80

Canadian educator, philosopher, and scholar

Current illusion is that science has abolished all natural laws.

In Mattie Molinaro, Corinne McLuhan, and William Toye (eds.)  
*Letters of Marshall McLuhan*  
Letter to Ezra Pound  
January 1951  
Oxford University Press, Inc. New York, New York, USA. 1987

**Mead, Margaret** 1901–78

American anthropologist

...the negative cautions of science are never popular. If the experimentalist would not commit himself, the social philosopher, the preacher and the pedagogue tried the harder to give a short-cut answer.

*Coming of Age in Samoa*  
Chapter 1 (p. 3)  
The Modern Library. New York, New York, USA. 1953

**Medawar, Sir Peter Brian** 1915–87

Brazilian-born English zoologist

Science is no more a classified inventory of factual information than history a chronology of dates. The equation of science with facts and of the humane arts with ideas is one of the shabby genteelisms that bolster up the humanist's self-esteem.

Two Conceptions of Science  
*Encounter*, 143, August 1965

Science can only proceed on a basis of confidence, so that scientists do not suspect each other of dishonesty or sharp practice, and believe each other unless there is very good reason to do otherwise.

*The Limits of Science*  
An Essay on Scians [Science] (p. 6)  
Harper & Row, Publishers. New York, New York, USA. 1984

Science will persevere just as long as we retain a faculty we show no signs of losing: the ability to conceive — in no matter how imperfect or rudimentary a form — what the truth might be and retain also the inclination to ascertain whether our imaginings correspond to real life or not.

*The Limits of Science*  
Chapter 4 (pp. 86–87)  
Harper & Row, Publishers. New York, New York, USA. 1984

It is a layman's illusion that in science we caper from pinnacle to pinnacle of achievement and that we exercise a Method which preserves us from error. Indeed we do not; our way of going about things takes it for granted that we guess less often right than wrong, but at the same time ensures that we need not persist in error if we earnestly and honestly endeavor not to do so.

*The Limits of Science*  
Notes, 3 (p. 101)  
Harper & Row, Publishers. New York, New York, USA. 1984

...science is a great and glorious enterprise — the most successful, I argue, that human beings have ever engaged in. To reproach it for its inability to answer all the questions we should like to put to it is no more sensible than to reproach a railway locomotive for not flying or, in general, not performing any other operation for which it was not designed.

*The Limits of Science*  
Preface (p. xiii)  
Harper & Row, Publishers. New York, New York, USA. 1984

If we accept, as I fear we must, that science cannot answer questions about first and last things or about purposes, there is yet no known or conceivable limit to its power to answer questions of the kind science can answer... Science will dry up only if scientists lose or fail to exercise the power or incentive to imagine what the truth might be.

*Advice to a Young Scientist*  
Chapter 11 (p. 90)  
Basic Books, Inc. New York, New York, USA. 1979

...the factual burden of a science varies inversely with its degree of maturity. As a science advances, particular

facts are comprehended within, and therefore in a sense annihilated by, general statements of steadily increasing explanatory powers and compass. In all sciences we are being progressively relieved of the burden of singular instances, the tyranny of the particular. We need no longer record the fall of every apple.

*The Art of the Soluble*

Two Conceptions of Science (p. 114)

Methuen & Company Ltd. London, England. 1967

...nowadays we all give too much thought to the material blessings or evils that science has brought with it, and too little to its power to liberate us from the confinements of ignorance and superstition. The greatest liberation of thought achieved by the scientific revolution was to have given human beings a sense of future in this world.

*The Art of the Soluble*

Introduction (p. 15)

Methuen & Company Ltd. London, England. 1967

One can envisage an end of science no more readily than one can envisage an end of imaginative literature or the fine arts.

*Advice to a Young Scientist*

Chapter 11 (p. 90)

Basic Books, Inc. New York, New York, USA. 1979

### **Melville, Herman** 1819–91

American novelist

...however baby man may brag of his science and skill, and however much, in a flattering future, that science and skill may augment; yet for ever and for ever, to the crack of doom, the sea will insult and murder him, and pulverize the stateliest, stiffest frigate he can make; nevertheless, by the continual repetition of these very impressions, man has lost that sense of the full awfulness of the sea which aboriginally belongs to it.

In *Great Books of the Western World* (Volume 48)

*Moby Dick*

Chapter 58 (p. 204)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

After science comes sentiment.

*Typee, Omoo, Mardi*

Mardi

Chapter 38 (p. 785)

The Library of America. New York, New York, USA. 1982

### **Mencken, H. L. (Henry Louis)** 1880–1956

American journalist and literary critic

There is, in fact, no reason to believe that any given natural phenomenon, however marvelous it may seem today, will remain forever inexplicable. Soon or late the laws governing the production of life itself will be discovered in the laboratory, and man may set up business as a creator on his own account. The thing, indeed, is not only conceivable; it is even highly probable.

*Treatise on the Gods*

Chapter 5 (p. 241)

Vintage Books. New York, New York, USA. 1963

The notion that science does not concern itself with first causes — that it leaves the field to theology or metaphysics, and confines itself to mere effects — this notion has no support in the plain facts. If it could, science would explain the origin of life on earth at once — and there is every reason to believe that it will do so on some not too remote tomorrow. To argue that gaps in knowledge which will confront the seeker must be filled, not by patient inquiry, but by intuition or revelation, is simply to give ignorance a gratuitous and preposterous dignity.

*Treatise on the Gods*

Chapter 5 (p. 239)

Vintage Books. New York, New York, USA. 1963

### **Mendeleev, Dmitry** 1834–1907

Russian chemist

What has been sown for the field of science will grow up for the people's welfare.

Translated by George Kamensky

*Principles of Chemistry* (Volume 1)

Introduction

Longmans, Green & Company. London, England. 1891

While science is pursuing a steady onward movement, it is convenient from time to time to cast a glance back on the route already traversed, and especially to consider the new conceptions which aim at discovering the general meaning of the stock of facts accumulated from day to day in our laboratories.

The Periodic Law of the Chemical Elements

*Journal of the Chemical Society*, Volume 55, 1889 (p. 634)

The edifice of science not only requires material but also a plan, and necessitates the work of preparing the materials, putting them together, working out the plans and the symmetrical proportions of the various parts. To conceive, understand, and grasp the whole symmetry of the scientific edifice, including its unfinished portions, is equivalent to tasting that enjoyment only conveyed by the highest forms of beauty and truth.

*Principles of Chemistry* (Volume 1)

Preface (p. ix, fn 1)

Longmans, Green & Company. London, England. 1891

Science plays an auxiliary part in our lives, for it is merely a means to the attainment of wellbeing.

Compiled by V.V. Vorontsov

*Words of the Wise: A Book of Russian Quotations*

Translated by Vic Schneiersson

Progress Publishers. Moscow, Russia. 1979

Knowing how contented, free and joyful is life in the realms of science, one fervently wishes that many would enter their portals.

*Principles of Chemistry* (Volume 1)

Preface (p. ix, fn 1)

Longmans, Green & Company. London, England. 1891

**Meredith, George** 1828–1909  
English novelist and poet

Science is notoriously of slow movement.

*The Ordeal of Richard Feverel*  
Chapter XLIV (p. 518)  
The Modern Library. New York, New York, USA. 1927

**Meyer, Agnes** 1887–1970  
American author and journalist

From the nineteenth century view of science as a god, the twentieth century has begun to see it as a devil. It behooves us now to understand that science is neither the one nor the other.

*Education for a New Morality*  
Chapter 2 (p. 11)  
The Macmillan Company. New York, New York, USA. 1957

**Mill, John Stuart** 1806–73  
English political philosopher and economist

It is a common notion, or at least it is implied in many common modes of speech, that thoughts, feelings, and actions of sentient beings are not a subject of science.... This notion seems to involve some confusion of ideas, which it is necessary to begin by clearing up. Any facts are fitted, in themselves, to be a subject of science, which follows one another according to constant laws; although those laws may not have been discovered, nor even to be discoverable by our existing resources.

*A System of Logic, Rationative and Inductive* (Volume 2)  
Book VI, Chapter 3, Section 1 (p. 426)  
Longmans, Green, Reader & Dyer. London, England. 1868

**Millikan, Robert Andrews** 1868–1953  
American physicist

We need science in education, and much more of it than we now have, not primarily to train technicians for the industries, which demand them, though that may be important, but much more to give everybody a little glimpse of the scientific mode of approach to life's problems, to give everyone some familiarity with at least one field in which the distinction between right and wrong is not always blurred and uncertain, to let him see that it is not true that "one opinion is as good as another"...

The Relationship of Science to Industry  
*Science*, Volume 69, Number 1776, January 11, 1929 (p. 30)

The distinguishing feature of modern scientific thought lies in the fact that it begins by discarding all a priori conceptions about the nature of reality — or about the ultimate nature of the universe — such as had characterized practically all Greek philosophy and all medieval thinking as well, and takes instead, as its starting point, well-authenticated, carefully tested experimental facts, no matter whether these facts seen at the moment to fit into any general philosophical scheme or not — that is, no matter whether they seem at the moment to be reasonable or not.

Professor Einstein at the California Institute of Technology  
*Science*, Volume 73, Number 1893, April 10, 1931 (p. 376)

It is to lighten man's understanding, to illuminate his path through life, and not merely to make it easy, that science exists.

In Frederick Houk Law  
*Science in Literature*  
Modern Physics (p. 318)  
Harper & Brothers. New York, New York, USA. 1929

...Science walks forward on two feet, namely theory and experiment... Sometimes it is one foot which is put forward first, sometimes the other, but continuous progress is only made by the use of both — by theorizing and then testing, or by finding new relations in the process of experimenting and then bringing the theoretical foot up and pushing it beyond, and so on in unending alternation.

*Nobel Lectures, Physics 1922–1941*  
Nobel lecture for award received in 1923  
The Electron and the Light-Quant from the Experimental Point of View (p. 55)  
Elsevier Publishing Company. Amsterdam, Netherlands. 1965

**Milne, Edward Arthur** 1896–1950  
English astrophysicist and cosmologist

The Christmas message — which is also the Christian message — is "*Gloria in excelsis Deo*"... Glory to God in the highest and on earth peace among men of goodwill.... This is not a bad definition of the aim of all true science: the aim of rejoicing in the splendid mysteries of the world and universe we live in, and of attempting so to understand those mysteries that we can improve our command over nature, improve our conditions of life and so ensure peace...

*Modern Cosmology and the Christian Idea of God*  
Chapter I (p. 1)  
At The Clarendon Press. Oxford, England. 1952

**Mitchell, Maria** 1818–89  
American astronomer and educator

The phrase "popular science" has in itself a touch of absurdity. That knowledge which is popular is not scientific.

In Phebe Mitchell Kendall  
*Maria Mitchell: Life, Letters, and Journals*  
Chapter VII (p. 138)  
Lee & Shepard. Boston, Massachusetts, USA. 1896

**Monod, Jacques** 1910–76  
French biochemist

In science, self-satisfaction is death. Personal self-satisfaction is the death of the scientist. Collective self-satisfaction is the death of the research. It is restlessness, anxiety, dissatisfaction, agony of mind that nourish science.

Obituary  
*News Science*, Volume 109, June 5, 1976 (p. 359)

**Montagu, Ashley** 1905–99  
English-born American anthropologist

As the god of contemporary man's idolatry, science is a two-handed engine, and as such science is too important a human activity to leave to the scientist.

Advertisement of Jacques Barzun's "Science: The Glorious Entertainment"

*New York Times Book Review*, April 26, 1964

**More, Louis Trenchard** 1870–1944

English physicist and biographer of Isaac Newton

Science has so many dazzling achievements to its credit; we have done so many things which seemed to be impossible, that the popular mind is apt to conclude that, if an explanation is given in the name of science, it must be true whether it be understood or not.

*The Dogma of Evolution*

Chapter Seven (p. 241)

Princeton University Press. Princeton, New Jersey, USA. 1925

**Morgan, Lloyd** 1852–1936

English psychologist

Science...deals exclusively with changes of configuration, and traces the accelerations which are observed to occur, leaving to metaphysics to deal with the underlying agency, if it exists.

*The Interpretation of Nature*

Chapter V (p. 62)

The Knickerbocher Press. New York, New York, USA. 1906

**Morrow, James** 1947–

American novelist

Everybody thinks he's being oh-so-deep when he says science doesn't have all the answers.... Science *does* have all the answers.... The problem is that we don't have all the science.

*Only Begotten Daughter* (p. 90)

Harcourt Incorporated. Orlando, Florida, USA. 1990

**Moscovici, S.** 1925–

Romanian-born French psychologist

Science has become involved in this adventure, our adventure, in order to renew everything it touches and warm all that it penetrates — the earth on which we live and the truths which enable us to live. At each turn it is not the echo of a demise, a bell tolling for a passing away that is heard, but the voice of rebirth and beginning, ever afresh, of mankind and materiality, fixed for an instant in their ephemeral permanence. That is why the great discoveries are not revealed on a deathbed like that of Copernicus, but offered like Kepler's on the road of dreams and passion.

*Social Influence and Social Change* (pp. 297–298)

Academic Press. London, England. 1980

**Motto**

Science Finds — Industry Applies — Man Conforms  
Chicago World's Fair, 1933

**Muller, Herbert J.** 1905–80

American historian and educator

Although science is no doubt the Jehovah of the modern world, there is considerable doubt about the glory of its handiwork.

*Science and Criticism: The Humanistic Tradition in Contemporary Thought*  
Chapter III (p. 59)

G. Braziller. New York, New York, USA. 1943

...men of science, men given to "realism," are likely to make a clean sweep of old interests and sentiments as so much rubbish. They regard religion as superstition, metaphysics as moonshine, art as primitive pastime, and all ritual as monkey-business.

*Science and Criticism: The Humanistic Tradition in Contemporary Thought*

Chapter I (p. 6)

G. Braziller. New York, New York, USA. 1943

**Mumford, Lewis** 1895–1990

American social philosopher

...however far modern science and technics have fallen short of their inherent possibilities, they have taught mankind at least one lesson: Nothing is impossible.

*Technics and Civilization*

Chapter VIII, Section 13 (p. 435)

Routledge & Kegan Paul Ltd. London, England, 1934

**Munger, Theodore** 1830–1910

American clergyman

Science cannot determine origin, and so cannot determine destiny. As it presents only a sectional view of creation, it gives only a sectional view of everything in creation.

In Jefferson Hane Weaver

*The World of Physics* (Volume 3)

U.1 (p. 212)

Simon & Schuster. New York, New York, USA. 1987

**Needham, Joseph** 1900–95

English biochemist and sinologist

...our proper conclusion seems to me to be that the conceptual framework of Chinese associative or coordinative thinking was essentially something different from that of European causal and "legal" or nomothetic thinking. That it did not give rise to 17<sup>th</sup>-century theoretical science is no justification for calling it primitive.

*Science and Civilisation in China* (Volume 2) (p. 286)

At The University Press. Cambridge, England. 1954

**Nekrasov, Nikolai** 1821–78

Russian poet

There is no science for the sake of science, no art for the sake of art — they exist for the sake of society, for the ennoblement and exaltation of man, to enrich his knowledge and provide his material comforts.

Compiled by V.V. Vorontsov

*Words of the Wise: A Book of Russian Quotations*

Translated by Vic Schneierson  
Progress Publishers. Moscow, Russia. 1979

### Newell, A.

No biographical data available

Scientific fields emerge as the concerns of scientists congeal around various phenomena. Sciences are not defined, they are recognized.

In R.C. Shank and K.M. Colby (eds.)  
*Computer Models of Thought and Language*  
Artificial Intelligence and the Concept of Mind (p. 1)  
W.H. Freeman. San Francisco, California, USA. 1973

### Newton, Roger G.

Physics professor and author

Science is not holy scripture, nor do its practitioners consider themselves priests protecting a glittering grail, forever unchanging and pure. What drives scientists on is the thirst to understand more and to use nature, to build rather than to exploit a comprehensible universe.

*What Makes Nature Tick?*  
Epilogue (p. 234)  
Harvard University Press. Cambridge, Massachusetts, USA. 1993

Science is, in fact, an intricate edifice erected from complex, imaginative designs in which esthetics is a more powerful incentive than utility. Beauty, finally, comprises its greatest intellectual appeal.

*What Makes Nature Tick?*  
Epilogue (p. 236)  
Harvard University Press. Cambridge, Massachusetts, USA. 1993

### Nietzsche, Friedrich 1844–1900

German philosopher

To the man who works and searches in it, science gives much pleasure; to the man who learns its results, very little.

Translated by Marion Faber  
*Human, All Too Human: A Book for Free Spirits*  
Section Five, Number 251  
Aphorism 205 (p. 153)  
University of Nebraska Press. Lincoln, Nebraska, USA. 1984

Oh, how much is today hidden by science! Oh, how much it is expected to hide!

Translated by William A. Haussmann  
*The Genealogy of Morals*  
What Do Ascetic Ideals Mean?  
Aphorism 23  
Macmillan Publishing Company. New York, New York, USA. 1907

Science offends the modesty of all real women. It makes them feel as though it were an attempt to peek under their skin — or, worse yet, under their dress and ornamentation!

*Beyond Good and Evil*  
Chapter IV, 127 (p. 83)  
The Modern Library. New York, New York, USA. 1917

Science rushes headlong, without selectivity, without “taste,” at whatever is knowable, in the blind desire to know all at any cost.

Translated by Marianne Cowan  
*Philosophy in the Tragic Age of the Greeks*  
Section 3 (p. 43)  
A Gateway Edition. Chicago, Illinois, USA. 1962

The old God was seized by mortal terror. Man himself had been his greatest blunder; he had created a rival to himself; science makes men godlike — it is all up with priests and gods when man becomes scientific — Moral: science is the forbidden per se; it alone is forbidden. Science is the first of sins, the germ of all sins, the original sin. This is all there is of morality. — “Thou shalt not know”: the rest follows from that.

Translated by H.L. Mencken  
*The Anti-Christ*  
Aphorism 48  
Macmillan Publishing Company. New York, New York, USA. 1911

### Nobel Prize Medal

*Inventas vitam iuvat excoluisse per artes.*  
Let us improve life through science and art.  
*Inscribed on Nobel Prize Medal*

### Oberth, Hermann 1894–1989

German mathematician and physicist

The present state of science and of technological knowledge permits the building of machines that can rise beyond the limits of the atmosphere of the earth. After further development these machines will be capable of attaining such velocities that they — left undisturbed in the void of ether space — will not fall back to earth; furthermore, they will even be able to leave the zone of terrestrial attraction.

Publisher undetermined

### O’Neill, Eugene 1888–1953

American playwright

DARRELL: Happiness hates the timid! So does Science!

*Strange Interlude*  
Act Four (p. 152)  
Boni & Liveright. New York, New York, USA. 1928

### Oppenheimer, J. Robert 1904–67

American theoretical physicist

We live today in a world in which poets and historians and men of affairs are proud that they wouldn’t even begin to consider thinking about learning anything of science, regarding it as the far end of a tunnel too long for any wise man to put his head into.

*The Open Mind*  
Chapter VII (p. 128)  
Simon & Schuster. New York, New York, USA. 1955

A subject is much harder to understand when no one understands it. The world is really an open place, but we start with such crude and limited experience, and our minds

are so determined by that experience, that when science carries us into new domains we are not always prepared for what we encounter, and we are floored by it.

In Edward Lueders

*Writing on Life: Sixteen Close-Ups*

Physicist Oppenheimer (p. 358)

William Sloane Associates, Publishers. New York, New York, USA. 1951

**O'Rourke, P. J.** 1947–

American political satirist

...to mistrust science and deny the validity of the scientific method is to resign your job as a human. You'd better go look for work as a plant or wild animal.

*Parliament of Whores: A Lone Humorist Attempts to Explain the Entire U.S. Government*

Dirt of the Earth (p. 1 97)

Vintage Books. New York, New York, USA. 1992

**Orr, Louis**

American Medical Association president

Science will never be able to reduce the value of a sunset to arithmetic. Nor can it reduce friendship or statesmanship to a formula. Laughter and love, pain and loneliness, the challenge of accomplishment in living, and the depth of insight into beauty and truth; these will always surpass the scientific mastery of nature.

Commencement Address, Emory University, June 6, 1960

**Osler, Sir William** 1849–1919

Canadian physician and professor of medicine

To the physician particularly, a scientific discipline is an incalculable gift, which leavens his whole life, giving exactness to habits of thought and tempering the mind with that judicious faculty of distrust which can alone, amid the uncertainties of practice, make him wise unto salvation. For perdition inevitably awaits the mind of the practitioner who has never had the full inoculation with the leaven, who has never grasped clearly the relations of science to his art, and who knows nothing and perhaps cares less, for the limitations of either.

*Aequanimitas, with Other Addresses to Medical Students, Nurses, and Practitioners of Medicine*

The Leaven of Science (p. 92)

The Blakiston Company. Philadelphia, Pennsylvania, USA. 1932

The future belongs to science. More and more she will control the destinies of the nations. Already she has them in her crucible and on her balances.

In Harvey Cushing

*The Life of Sir William Osler* (Volume 2) (p. 262)

Clarendon Press. Oxford, England. 1925

**Ostwald, Friedrich Wilhelm** 1853–1932

Latvian-born German chemist

The more perfect the theoretical evolution of the sciences becomes, the greater will be the scope of their

explanations and at the same time the greater their practical importance.

On Chemical Energy

*The Journal of the American Chemical Society*, Volume 15, Number 8, August 1893 (p. 430)

**Pagels, Heinz R.** 1939–88

American physicist and science writer

This sense of the unfathomable beautiful ocean of existence drew me into science. I am awed by the universe, puzzled by it and sometimes angry at a natural order that brings such pain and suffering, Yet an emotion or feeling I have toward the cosmos seems to be reciprocated by neither benevolence nor hostility but just by silence. The universe appears to be a perfectly neutral screen unto which I can project any passion or attitude, and it supports them all.

*Perfect Symmetry: The Search for the Beginning of Time*

Part Four, Chapter 2 (p. 370)

Simon & Schuster. New York, New York, USA. 1985

Science is not the enemy of humanity but one of the deepest expressions of the human desire to realize that vision of infinite knowledge.

*The Cosmic Code: Quantum Physics as the Language of Nature*

Part III, Chapter 2 (p. 348)

Simon & Schuster. New York, New York, USA. 1982

**Paglia, Camille** 1947–

American social critic, intellectual, and writer

Modern bodybuilding is ritual, religion, sport, art, and science, awash in Western chemistry and mathematics. Defying nature, it surpasses it.

*Sex, Art, and American Culture*

Alice in Muscle Land (p. 82)

Vintage Books. New York, New York, USA. 1992

**Pallister, William Hales** 1877–1946

Canadian physician

You are the sum of what we know,

You are our might and main;

You are the whole of what is so,

The little we retain:

Our fond beliefs all come and go,

And you alone remain.

*Poems of Science*

Science (p. 39)

Playford Press. New York, New York, USA. 1931

Science works by the slow method of the classification of data, arranging the detail patiently in a periodic system into groups of facts, in series like the strata of the rocks. For each series there must be a vocabulary of special words which do not always make good sense when used in another series. But the laws of periodicity seem to hold throughout, among the elements and in every sphere of thought, and we must learn to co-ordinate the whole through our new conception of the reign of relativity.

*Poems of Science*

Men and the Stars (p. 88)  
Playford Press. New York, New York, USA. 1931

**Panunzio, Constantine** 1884–1964  
Italian sociologist

Science...involves active, purposeful search; it discovers, accumulates, sifts, orders, and tests data; it is a slow, painstaking, laborious activity; it is a search after bodies of knowledge sufficiently comprehensive to lead to the discovery of uniformities, sequential orders or so-called "laws"; it may be carried on by an individual, but it gains relevance only as it produces data which can be added to and tested by the findings of others.

*Major Social Institutions*  
Chapter 20 (p. 322)  
The Macmillan Company. New York, New York, USA. 1945

If science is to subserve human needs, it will continue to discover and catalogue "all the islands of the universe 300,000,000 or more light years distant," but it will not fiddle while Rome burns...

*Major Social Institutions*  
Chapter 21 (p. 338)  
The Macmillan Company. New York, New York, USA. 1945

**Parin, V. V.**  
No biographical data available

Science breathes but one air — the oxygen of facts. New methods of research are the trees that clear its atmosphere of the carbon dioxide of inaccurate conclusions and saturate it with the oxygen of first discovered, seen and apprehended phenomena.

Compiled by V.V. Vorontsov  
*Words of the Wise: A Book of Russian Quotations*  
Translated by Vic Schneiereson  
Progress Publishers. Moscow, Russia. 1979

**Pasteur, Louis** 1822–95  
French chemist

You bring me the deepest joy that can be felt by a man whose invincible belief is that Science and Peace will triumph over Ignorance and War, that nations will unite, not to destroy, but to build, and that the future will belong to those who will have done most for suffering humanity.

In Rene Vallery-Radot  
*The Life of Pasteur*  
Chapter XIV (pp. 450–451)  
Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1928

I am imbued with two deep impressions; the first, that science knows no country; the second, which seems to contradict the first, although it is in reality a direct consequence of it, that science is the highest personification of the nation. Science knows no country, because knowledge belongs to humanity, and is the torch which illuminates the world. Science is the highest personification of the nation

because that nation will remain the first which carries the furthest the works of thought and intelligence.

In Rene Dubos  
*Pasteur and Modern Science*  
Chapter 15. A Dedicated Life (p. 146)  
Science Tech Publishers. Madison, Wisconsin, USA. 1988

I could never work for money, but I would always work for science.

In Sir Richard Arman Gregory  
*Discovery; or, The Spirit and Service of Science*  
Chapter I (p. 6)  
Macmillan & Company Ltd. London, England. 1918

**Pavlov, Ivan Petrovich** 1849–1936  
Russian physiologist

Only science, exact science about human nature itself, and the most sincere approach to it by the aid of the omnipotent scientific method, will deliver man from his present gloom, and will purge him from his contemporary shame in the sphere of interhuman relations.

Translated by Stephen G. Brush  
*Lectures on Conditioned Reflexes*  
Preface to the First Russian Edition (p. 41)  
University of California Press. Berkeley, California, USA. 1964

Science moves in fits and starts, depending on the progress in methods of research. Every step forward in method takes us a step higher, affording a broader view of the horizon and of objects that were invisible before.

Compiled by V.V. Vorontsov  
*Words of the Wise: A Book of Russian Quotations*  
Translated by Vic Schneiereson  
Progress Publishers. Moscow, Russia. 1979

Remember that science demands from a man all his life. If you had two lives that would be not enough for you. Be passionate in your work and your searchings.

Bequest of Pavlov to the Academic Youth of his Country  
*Science*, Volume 83, Number 2155, April 17, 1936 (p. 369)

Learn the ABC of science before you try to ascend to its summit. Never begin the subsequent without mastering the preceding. Never attempt to screen an insufficiency of knowledge even by the most audacious surmise and hypothesis.

Bequest of Pavlov to the Academic Youth of His Country  
*Science*, Volume 83, Number 2155, April 17, 1936 (p. 369)

Here I now simply uphold and assert the absolute and incontestable right of natural science to operate wherever and whenever it is able to display its power. And who knows the limits to this!

*Experimental Psychology and Other Essays*  
Natural Science and the Brain (p. 218)  
Philosophical Library. New York, New York, USA. 1957

**Peacock, Thomas Love** 1785–1866  
English writer

Science is one thing and wisdom is another. Science is an edged tool with which men play like children and cut

their own fingers. If you look at the results which science has brought in its train, you will find them to consist almost wholly in elements of mischief... The day would fail if I should attempt to enumerate the evils which science has inflicted on mankind. *Gryll Grange*

Chapter 19 (p. 127)

Penguin Books. Harmondsworth, England. 1949

I almost think it is the ultimate destiny of science to exterminate the human race.

*Gryll Grange*

Chapter 19 (p. 127)

Penguin Books. Harmondsworth, England. 1949

**Pearson, Karl** 1857–1936

English mathematician

When every fact, every present or past phenomenon of that universe, every phase or present or past life therein, has been examined, classified, and co-ordinated with the rest, then the mission of science will be completed. What is this but saying that the task of science can never end till man ceases to be, till history is no longer made, and development itself ceases?

*The Grammar of Science*

Introductory, Section 5 (p. 15)

Charles Scribner's Sons. London, England. 1892

Science for the past is a description, for the future a belief...

*The Grammar of Science*

Chapter IV, Section 1 (p. 136)

Charles Scribner's Sons. London, England. 1892

Every great advance of science opens our eyes to facts which we have failed before to observe, and makes new demands on our powers of interpretation. This extension of the material of science into regions where our great-grandfathers could see nothing at all, or where they would have declared human knowledge impossible, is one of the most remarkable features of modern progress. Where they interpreted the motion of the planets of our own system, we discuss the chemical constitution of stars, many of which did not exist for them, for the telescopes could not reach them. Where they discovered the circulation of the blood, we see the physical conflict of living poisons within the blood, whose battles would have been absurdities for them.

*The Grammar of Science*

Introductory, Section 5 (p. 17)

Charles Scribner's Sons. London, England. 1892

Does science leave no mystery? On the contrary it proclaims mystery where others profess knowledge. There is mystery enough in the universe of sensation and in its capacity for containing those little corners of consciousness which project their own products, or order and law and reason, into an unknown and unknowable world. There is mystery enough here, only let us clearly distinguish it from ignorance within the field of possible knowledge. The one is impenetrable, the other we are daily subduing.

*The Grammar of Science*

Chapter III, Conclusion (p. 134)

Charles Scribner's Sons. London, England. 1892

Modern Science, as training the mind to an exact and impartial analysis of facts, is an education specifically fitted to promote sound citizenship.

*The Grammar of Science*

Introductory, Section 3 (p. 11)

Charles Scribner's Sons. London, England. 1892

**Peattie, Donald Culrose** 1896–1964

American botanist, naturalist, and author

Of our windows on the universe, science is set with the clearest pane; it is not warped or waved to make the images appear to support any dogma; the glass is not rose-tinted, neither is it leaded with a picture that shuts out the sun and, coming between the light of day and you, enforces the credence of the past upon the young present.

*Flowering Earth*

Chapter 18 (p. 244)

G.P. Putnam's Sons. New York, New York, USA. 1939

**Peirce, Charles Sanders** 1839–1914

American scientist, logician, and philosopher

Science, when it comes to understand itself, regards facts as merely the vehicle of eternal truth, while for Practice they remain the obstacles which it has to turn, the enemy of which it is determined to get the better.

*The Essential Peirce: Selected Philosophical Writings* (Volume 2)

The First Rule of Logic (p. 55)

Indiana University Press. Bloomington, Indiana, USA. 1998

It is a common observation that a science first begins to be exact when it is quantitatively treated. What are called the exact sciences are no other than the mathematical ones.

*Chance, Love and Logic: Philosophical Essays*

The Doctrine of Chances (p. 61)

Harcourt, Brace & Company, Inc. New York, New York, USA. 1923

**Perl, Martin** 1927–

American physicist

I was following an old idea in science: "If you can't understand a phenomenon, look for more examples of that phenomenon..."

Electron, Muon, and Tau Heavy Lepton — Are These the Truly Elementary Particles?

*The Science Teacher*, Volume 47, Number 9, December 1980 (pp. 18–19)

**Perutz, Max F.** 1914–2002

Austrian-born English biochemist

It seems to me that, just as the Church did in former times, science offers a safe niche where you can spend a quiet life classifying spiders, away from what E.M. Forster called the world of telegrams and anger.

*Is Science Necessary?*

How to Become a Scientist (p. 193)

E.P. Dutton & Company. New York, New York, USA. 1989

**Pirsig, Robert M.** 1928–  
American writer

Science values static patterns.

*Lila: An Inquiry Into Morals*

Chapter 11 (p. 142)

Bantam Books. New York, New York, USA. 1991

**Planck, Max** 1858–1947  
German physicist

That we do not construct the external world to suit our own ends in the pursuit of science, but that vice versa the external world forces itself upon our recognition with its own elemental power, is a point which ought to be categorically asserted again and again in these positivistic times. From the fact that in studying the happenings of nature we strive to eliminate the contingent and accidental and to come finally to what is essential and necessary, it is clear that we always look for the basic thing behind the dependent thing, for what is absolute behind what is relative, for the reality behind the appearance and for what abides behind what is transitory. In my opinion, this is characteristic not only of physical science but all of science.

*Where Is Science Going?*

Chapter VI (pp. 198–199)

W.W. Norton & Company, Inc. New York, New York, USA. 1932

Science...means unrelenting endeavor and continually progressing development toward an aim which the poetic intuition may apprehend but which the intellect can never fully grasp.

*Continuum*, Volume 20, Number 5, February 1980 (p. 42)

Science cannot solve the ultimate mystery of nature. And that is because, in the last analysis, we ourselves are part of nature and therefore part of the mystery that we are trying to solve.

*Where Is Science Going?*

Epilogue (p. 217)

W.W. Norton & Company, Inc. New York, New York, USA. 1932

Science does not mean an idle resting upon a body of certain knowledge; it means unrelenting endeavor and continually progressing development towards an aim, which the poetic intuition may apprehend, but which the intellect can never fully grasp.

Translated by W. H. Johnston

*The Philosophy of Physics*

Chapter II (p. 83)

W.W. Norton & Company, Inc. New York, New York, USA. 1936

Exact science — what wealth of connotation these two words have! They conjure up a vision of a lofty structure, of imperishable slabs of stone firmly joined together, treasure-house of all wisdom, symbol and promise of the coveted goal for a human race thirsting for knowledge, longing for the final revelation of truth.

*Scientific Autobiography and Other Papers*

The Meaning and Limits of Exact Science (p. 80)

Philosophical Library. New York, New York, USA. 1949

The roots of exact science feed in the soil of human life.

*Scientific Autobiography and Other Papers*

The Meaning and Limits of Exact Science, Part IV (p. 112)

Philosophical Library. New York, New York, USA. 1949

...I had always looked upon the search for the absolute as the noblest and most worthwhile task of science.

*Scientific Autobiography and Other Papers*

A Scientific Autobiography (p. 46)

Philosophical Library. New York, New York, USA. 1949

...science is not contemplative repose amidst knowledge already gained, but is indefatigable work and an ever progressive development.

*Scientific Autobiography and Other Papers*

Philosophical Library. New York, New York, USA. 1949

**Plato** 428 BCE–347 BCE  
Greek philosopher

As being is to becoming, so is pure intellect to opinion. And as intellect is to opinion, so is science to belief...

In *Great Books of the Western World* (Volume 7)

*The Republic*

Book VII, Section 534 (p. 398)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Podolsky, Boris** 1896–1966  
American physicist

In recent years the power of Science has received such popular recognition that the adjective scientific attached to merchandise or statement is known to give to such merchandise or to a statement prestige having definite advertising value. As a consequence the words science and scientific are frequently abused by those who find it profitable to borrow reputation instead of earning it.

What Is Science?

*The Physics Teacher*, Volume 3, Number 2, February 1965 (p. 71)

**Poe, Edgar Allan** 1809–49  
American short story writer

Science! true daughter of old Time thou art  
Who alterest all things with thy peering eyes!  
Why prey'st thou thus upon the poet's heart,  
Vulture! whose wings are dull realities!

*The Raven and Other Poems*

Sonnet — To Science

Columbia University Press. New York, New York, USA. 1942

**Poincaré, Henri** 1854–1912  
French mathematician and theoretical astronomer

The advance of science is not comparable to the changes of a city, where old edifices are pitilessly torn down to give place to new, but to the continuous evolution of zoologic types which develop ceaselessly and end by becoming

unrecognizable to the common sight, but where an expert eye finds always traces of the prior work of the past centuries.

*The Foundations of Science*

The Value of Science, Introduction (p. 208)

The Science Press. New York, New York, USA. 1913

Man, then, can not be happy through science, but to-day he can be much less be happy without it.

*The Foundations of Science*

The Value of Science, Introduction (p. 206)

The Science Press. New York, New York, USA. 1913

There is no science other than disinterested science.

In Stefan Amsterdamski

*Between History and Method*

Chapter V Crisis of the Modern Ideal (p. 94)

Kluwer Academic Publishers. Dordrecht, Netherlands. 1992

As science progress, it becomes more and more difficult to fit in the new facts when they will not fit in spontaneously. The older theories depend upon the coincidences of so many numerical results which can not be attributed to chance. We should not separate what has been joined together.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1912*

The Ether and Matter (pp. 209–210)

Government Printing Office. Washington, D.C. 1913

...science is a rule of action which is successful...

*The Foundations of Science*

The Value of Science, Part III, Chapter X (p. 324)

The Science Press. New York, New York, USA. 1913

**Polanyi, Michael** 1891–1976

Hungarian-born English scientist, philosopher, and social scientist

This coherence of valuation throughout the whole range of science underlies the unity of science. It means that any statement recognized as valid in one part of science can, in general, be considered as underwritten by all scientists. It also results in a general homogeneity of and a mutual respect between all kinds of scientists, by virtue of which science forms an organic unity.

*Science, Faith and Society*

Authority and Conscience (p. 49)

The University of Chicago Press. Chicago, Illinois. 1964

The morsels of science which [the young scientist] picks up — even though often dry or else speciously varnished — instill in him the intimation of intellectual treasures and creative joys far beyond his ken. His intuitive realization of a great system of valid thought and of an endless path of discovery sustain him in laboriously accumulating knowledge and urge him on to penetrate into intricate brain-racking theories. Sometimes he will also find a master whose work he admires and whose manner and outlook he accepts for his guidance. Thus his mind will become assimilated to the premise of science. The scientific institution of reality henceforth shapes his perception. He learns the methods of scientific investigation and accepts the standards of scientific value.

*Science, Faith and Society*

Authority and Conscience (p. 44)

The University of Chicago Press. Chicago, Illinois. 1964

**Pope, Alexander** 1688–1744

English poet

Trace Science then, with Modesty thy guide;

First strip off all her equipage of Pride.

*The Complete Poetical Works* (Volume 2)

An Essay on Man

Epistle II, l. 43–44

Houghton Mifflin Company. New York, New York, USA. 1903

One science only will one genius fit,

So vast is art, so narrow human wit...

*The Complete Poetical Works* (Volume 2)

Essay on Criticism, Part I, l. 60–61

Houghton Mifflin Company. New York, New York, USA. 1903

Far eastward cast thine eye, from whence the Sun

And orient Science their brite course begun.

*The Complete Poetical Works* (Volume 4)

Duncaid, Book III, l. 73–74

Houghton Mifflin Company. New York, New York, USA. 1903

How Index-learning turns no student pale,

Yet holds the eel of science by the tail...

*The Complete Poetical Works* (Volume 4)

Duncaid, Book I, l. 279–80

Houghton Mifflin Company. New York, New York, USA. 1903

**Popper, Karl R.** 1902–94

Austrian/British philosopher of science

The empirical basis of objective science has thus nothing “absolute” about it. Science does not rest upon solid bed-rock. The bold structure of its theories rises, as it were, above a swamp. It is like a building erected on piles. The piles are driven down from above into the swamp, but not down to any natural or “given” base; and when we cease our attempts to drive our piles into a deeper layer, it is not because we have reached firm ground. We simply stop when we are satisfied that they are firm enough to carry the structure, at least for the time being.

*The Logic of Scientific Discovery*

Part II, Chapter V, Section 30 (p. 111)

Basic Books, Inc. New York, New York, USA. 1959

Science is not a system of certain, or well-established statements, nor is it a system which steadily advances towards a state of finality... Like Bacon we might describe our own contemporary science...as consisting of “anticipations, rash and premature,” and as “prejudices.”

*The Logic of Scientific Discovery*

Part II, Chapter X, Section 85 (p. 278)

Basic Books, Inc. New York, New York, USA. 1959

Science may be described as the art of systematic oversimplification.

*The Observer; London*, 1 August 1982

Science does not aim, primarily, at high probabilities. It aims at a high informative content, well backed by

experience. But a hypothesis may be very probable simply because it tells us nothing, or very little.

*The Logic of Scientific Discovery*

Appendix ix (p. 399)

Basic Books, Inc. New York, New York, USA. 1959

...science is most significant as one of the greatest spiritual adventures that man has yet known...

*The Poverty of Historicism*

Chapter III, Section 19 (p. 56)

The Beacon Press. Boston, Massachusetts, USA. 1957

...it is the aim of science to find satisfactory explanations, of whatever strikes us as being in need of explanation.

*Objective Knowledge: An Evolutionary Approach*

Chapter 5 (p. 191)

Clarendon Press. Oxford, England. 1972

### Porterfield, Austin L.

No biographical data available

Science, in the broadest sense, is the entire body of the most accurately tested, critically established, systematized knowledge available about that part of the universe which has come under human observation. For the most part this knowledge concerns the forces impinging upon human beings in the serious business of living and thus affecting man's adjustment to and of the physical and the social world.... Pure science is more interested in understanding, and applied science is more interested in control...

*Creative Factors in Scientific Research*

Chapter II (p. 11)

Duke University Press. Durham, North Carolina, USA. 1941

### Poteat, William Louis 1856–1938

American educator

Science confers power, not purpose. It is a blessing, therefore, if the purpose which it serves is good; it is a curse, if the purpose is bad.

*Can a Man Be a Christian Today?*

Part I, Section 2 (p. 27)

The University of North Carolina Press. Chapel Hill, North Carolina, USA. 1925

### Powers, Richard 1957–

American novelist

Science is not about control. It is about cultivating a perpetual condition of wonder in the face of something that forever grows one step richer and subtler than our latest theory about it. It is about reverence, not mastery.

*The Gold Bug Variations*

Dialog

William Morrow & Company, Inc. New York, New York, USA. 1991

### Praed, Winthrop 1802–39

English poet

Of science and logic he chatters,  
As fine and as fast as he can;

Though I am no judge of such matters,  
I'm sure he's a talented man.

*The Poems of Winthrop Mackworth Praed*

The Talented Man

Houghton Mifflin Company. Boston, Massachusetts, USA. 1909

### Pratt, C. C.

No biographical data available

Science is a vast and impressive tautology.

*The Logic of Modern Psychology*

Chapter VI (p. 154)

The Macmillan Company. New York, New York, USA. 1939

### Prescott, William Hickling 1796–1859

American historian

It is the characteristic of true science, to discern the impassable, but not very obvious, limits which divide the province of reason from that of speculation. Such knowledge comes tardily. How many ages have rolled away in which powers, that, rightly directed, might have revealed the great laws of nature, have been wasted in brilliant, but barren reveries on alchemy and astrology.

*History of the Conquest of Mexico* (Volume 1)

Book I, Chapter IV (p. 102)

J.B. Lippincott Company. Philadelphia, Pennsylvania, USA. 1891

### Pribram, Karl 1919–

Austrian neurosurgeon

For the first time in three hundred years science is admitting spiritual values into its explorations.

Practical Advice* (p. 148)

Faber & Faber. Boston, Massachusetts, USA. 1997

**Quetelet, Adolphe** 1794–1874

Belgian mathematician, astronomer, and statistician

The more progress physical sciences makes, the more  
they tend to enter the domain of mathematics, which is a  
kind of center to which they all converge. We may even  
judge of the degree of perfection to which a science has  
arrived by the facility with which it may be submitted to  
calculation.

In E. Mailly

*Annual Report of the Board of Regents of the Smithsonian Institution,  
1874*

Eulogy of Quetelet (p. 173)

Government Printing Office. Washington, D.C. 1875

**Quine, Willard Van Orman** 1908–2000

American logician and philosopher

Science is like a boat, which we rebuild plank by plank  
while staying afloat in it. The philosopher and the scien-  
tist are in the same boat.

In George Johnson

*In the Palaces of Memory: How We Build the World Inside Our Heads*

The End of Philosophy (p. 222)

Alfred A. Knopf. New York, New York, USA. 1991

**Quinet, Edgar** 1803–75

French historian

Science is Christian, not when it condemns itself to the  
letter of things, but when, in the infinitely little, it discov-  
ers as many mysteries and as much depth and power as  
in the infinitely great.

*Ultramontanism, or the Roman Church and Modern Society*

The Roman Church and Science-Galileo

Lecture, May 7, 1844

**Rabi, Isidor Isaac** 1898–1988

Austrian-born American physicist

Science is a great game. It is inspiring and refreshing.  
The playing field is the universe itself.

*New York Times*, October 28, 1964 (p. 38)

**Ramsay, Sir William** 1852–1916

English chemist

No process is so perfect that there is not plenty of room  
for improvement. There is no finality in science. And  
that which today is a scientific toy may be to-morrow the  
essential part of an important industry.

*Essays Biological and Chemical*

The Great London Chemists

Section I (p. 19)

Archibald Constable & Company Ltd. London, England. 1908

**Randall, J. H.**

No biographical data available

[Science] swept man out of his proud position as the cen-  
tral figure and end of the universe, and made him a tiny  
speck on a third-rate planet revolving about a tenth-rate  
sun drifting in an endless cosmic ocean.

*The Making of the Modern Mind: A Survey of the Intellectual Back-  
ground of the Present Age*

Chapter X (p. 226)

The Riverside Press. Cambridge, Massachusetts, USA. 1940

**Randi, James** 1928–

Canadian magician and scientific skeptic

I believe that science is best defined as a careful, dis-  
ciplined, logical search for knowledge about any and  
all aspects of the universe, obtained by examination of  
the best available evidence and always subject to cor-  
rection and improvement upon the discovery of better  
evidence.

What's left is magic, and it doesn't work.

*The Mask of Nostradamus*

Chapter Five (p. 66)

Prometheus Books. Buffalo, New York, USA. 1993

**Ravetz, J. R.**

No biographical data available

The obsolescence of the conception of science as the pur-  
suit of truth results from several changes in the social  
activity of science. First, the heavy warfare with "theol-  
ogy and metaphysics" is over. Although a few sharp skir-  
mishes still occur, the attacks on the freedom of science  
from this quarter are no longer significant. This is not so  
much because of the undoubted victory of science over  
its ancient contenders as for the deeper reason that the  
conclusions of natural science are no longer ideologically  
sensitive. What people, either the masses or the educated,  
believe about the inanimate universe or the biological

aspects of humanity is not relevant to the stability of society as it was once thought to be.

*Scientific Knowledge and Its Social Problems*  
Chapter I (pp. 200–201)  
Clarendon Press. Oxford, England. 1971

**Raymo, Chet** 1936–

American physicist and science writer

Science cannot be a repository of ultimate faith: It is a fulcrum upon which we can hope to balance the treasure of our knowledge against the claims of ignorance.

*The Virgin and the Mousetrap: Essays in Search of the Soul of Science*  
Chapter 21 (p. 199)  
The Viking Press. New York, New York, USA. 1991

...science is a spider's web. Confidence in any one strand of the web is maintained by the tension and resiliency of the entire web.

*The Virgin and the Mousetrap: Essays in Search of the Soul of Science*  
Chapter 16 (p. 144)  
The Viking Press. New York, New York, USA. 1991

Science, like the play of children, satisfies a deep-seated need for escape from the boredom of fixity and the trauma of chaos.

Focal Point  
*Sky and Telescope*, Volume 81, Number 5, May 1991 (p. 460)

**Renan, Ernest** 1823–92

French philosopher and Orientalist

The lofty serenity of science becomes possible only on the condition of impartial criticism, which without regard for the beliefs of a certain portion of humanity, handles its imperturbable instrument with the inflexibility of the geometrician, without anger and without pity. The critic never insults.

*The Future of Science*  
Chapter XV (p. 257)  
Roberts Brothers. Boston, Massachusetts, USA. 1893

...science is a religion, science alone will henceforth make the creeds, science alone can solve for men the eternal problems, the solutions of which his nature imperatively demands.

*The Future of Science*  
Chapter V (p. 97)  
Roberts Brothers. Boston, Massachusetts, USA. 1893

...science must pursue its road without minding with whom it comes in collision. Let the others get out of the way. If it appears to raise objections against received dogmas, it is not for science but the received dogmas to be on the defensive and to reply to the objections. Science should behave as if the world were free from preconceived opinions, and not heed the difficulties it starts.

*The Future of Science*  
Chapter V (p. 83)  
Roberts Brothers. Boston, Massachusetts, USA. 1893

A little true science is better than a great deal of bad science. One is less liable to error by confessing one's ignorance than by fancying that one knows a great many things one does not.

*The Future of Science*  
Preface (p. xix)  
Roberts Brothers. Boston, Massachusetts, USA. 1893

**Reynolds, William C.** 1933–2004

American mechanical engineer

**Perkins, Harry C.**

No biographical data available

Concepts form the basis for any science. These are ideas, usually somewhat vague (especially when first encountered), which often defy really adequate definition. The meaning of a new concept can seldom be grasped from reading a one-paragraph discussion. There must be time to become accustomed to the concept, to investigate it with prior knowledge, and to associate it with personal experience. Inability to work with details of a new subject can often be traced to inadequate understanding of its basic concepts.

*Engineering Thermodynamics*  
Chapter 1 (p. 4)  
McGraw-Hill Book Company, Inc. New York, New York, USA. 1977

**Richards, Ivor Armstrong** 1893–1979

English literary critic

For science, which is simply our most elaborate way of pointing to things systematically, tells us and can tell us nothing about the nature of things in any ultimate sense. It can never answer any question of the form: What is so and so? [I]t can only tell us how so and so behaves. And it does not attempt to do more than this.

*Science and Poetry*  
Chapter V (pp. 52–53)  
Kegan Paul, Trench, Trubner & Company Ltd. London, England. 1926

**Richards, Theodore William** 1868–1928

American chemist

Every student of Science, even if he cannot start his journey where his predecessors left off, can at least travel their beaten track more quickly than they could while they were clearing the way: and so before his race is run he comes to virgin forest and becomes himself a pioneer.

*Nobel Lectures, Chemistry 1901–1921*  
Nobel lecture for award received in 1914  
Atomic Weights (p. 280)  
Elsevier Publishing Company. Amsterdam, Netherlands. 1966

**Richardson, Samuel** 1689–1761

English novelist

Vast is the field of Science. The more a man knows, the more he will find he has to know.

*Sir Charles Grandison* (Volume 1)

Letter 11

Oxford University Press, Inc. Oxford, England. 1972

**Richet, Charles** 1850–1935

French physiologist

To neglect science is to exclude fair hope, to condemn ourselves to live in a uniform monotonous existence.

*The Natural History of a Savant*

Chapter XIII (p. 147)

J.M. Dent &amp; Sons Ltd. London, England. 1927

The future and the happiness of humanity depend on science.

*The Natural History of a Savant*

Chapter XIII (p. 155)

J.M. Dent &amp; Sons Ltd. London, England. 1927

No one has the right to encumber science with premature assertions.

*The Natural History of a Savant*

Chapter X (p. 122)

J.M. Dent &amp; Sons Ltd. London, England. 1927

All...believe in the sovereignty of science; which like the grammar of Martine, rules even over kings, and imperiously subjects them to its laws.

*The Natural History of a Savant*

Chapter II (p. 13)

J.M. Dent &amp; Sons Ltd. London, England. 1927

**Ridley, Matt** 1958–

English science writer

The fuel on which science runs is ignorance. Science is like a hungry furnace that must be fed logs from the forests of ignorance that surround us. In the process, the clearing we call knowledge expands, but the more it expands, the longer its perimeter and the more ignorance comes into view.... A true scientist is bored by knowledge; it is the assault on ignorance that motivates him — the mysteries that previous discoveries have revealed.

The forest is more interesting than the clearing.

*Genome: The Autobiography of a Species in 23 Chapters*

Chapter 20 (p. 271)

HarperCollins Publishers. New York, New York, USA. 2000

**Robinson, Sir Robert** 1886–1975

English chemist

Science cannot be based on dogma or authority of any kind, nor on any institution or revelation, unless indeed it be of the Book of Nature that lies open before our eyes. We need not dwell on the processes of acquiring knowledge by observation, experiment, and inductive and deductive reasoning. The study of scientific method both in theory and practice is of great importance. It is inherent in the philosophy that the record may be imperfect and the conceptions erroneous; the potential fallibility of our science is not only acknowledged but also insisted upon.

Science and the Scientist

*Nature*, Volume 176, Number 4479, September 3, 1955 (p. 434)**Romanoff, Alexis Lawrence** 1892–1980

Russian soldier and scientist

Pure science has no part in politics.

*Encyclopedia of Thoughts*

Aphorisms 1281

Ithaca Heritage Books. Ithaca, New York, USA. 1975

Religions offer unbounded faith; science, logical preciseness; and the arts, creative imagination.

*Encyclopedia of Thoughts*

Aphorisms 1471

Ithaca Heritage Books. Ithaca, New York, USA. 1975

Science and technology may lead to self-destruction; humanities to sensible social recovery.

*Encyclopedia of Thoughts*

Aphorisms 2937

Ithaca Heritage Books. Ithaca, New York, USA. 1975

Science is advanced by husbands, but wives are often behind them.

*Encyclopedia of Thoughts*

Aphorisms 91

Ithaca Heritage Books. Ithaca, New York, USA. 1975

Dedication to pure science or fine arts often is incompatible with a desire for economic gain.

*Encyclopedia of Thoughts*

Aphorism 1457

Ithaca Heritage Books. Ithaca, New York, USA. 1975

Into the life of a cultured man enter science, art, and poetic philosophy.

*Encyclopedia of Thoughts*

Aphorisms 1220

Ithaca Heritage Books. Ithaca, New York, USA. 1975

**Ross, Sir Ronald** 1857–1932

English bacteriologist

We must not accept any speculations merely because they now appear pleasant, flattering, or ennobling to us. We must be content to creep upwards step by step, planting each foot on the firmest finding of the moment, using the compass and such other instruments as we many have, observing without either despair or contempt the clouds and precipices above and beneath us. Especially our duty at present is to better our present foothold; to investigate; to comprehend the forces of nature, to set our State rationally in order; to stamp down disease in body, mind, and government; to lighten the monstrous misery of our fellows, not by windy dogmas, but by calm science.

In Sir Richard Arman Gregory

*Discovery; or, The Spirit and Service of Science*

Chapter VIII (p. 233)

Macmillan &amp; Company Ltd. London, England. 1918

**Roszak, Theodore** 1933–

American social critic

Science *uses* the senses but does not *enjoy* them; finally buries them under theory, abstraction, mathematical generalization

*Where the Wasteland Ends*

Chapter 9 (p. 280)

Doubleday & Company. Garden City, New York, USA. 1973

**Rothman, Tony** 1953–

American cosmologist

Principle of Literary Oversight: Textbooks may be straightforward and succinct, but the path of science is crooked and tortuous.

*Instant Physics: From Aristotle to Einstein, and Beyond*

Introduction (p. xi)

Ballentine Books. New York, New York, USA. 1995

**Roux, Joseph** 1725–93

French hydrographer

Science is for those who learn; poetry, for those who know.

*Meditations of a Parish Priest*

Part I, Number 71 (p. 43)

Thomas Y. Crowell & Company New York, New York, USA. 1886

**Rubin, Harry**

No biographical data available

...one of the great pitfalls of science is the fallacy of misplaced concreteness. Scientists seem to prefer questionable explanations to no explanation at all.

Does Somatic Mutation Cause Most Cancers?

*Journal of the National Cancer Institute*, Volume 64, Number 5. May 1980 (p. 999)

**Ruse, Michael** 1940–

English historian and philosopher of science

Science, like most human cultural phenomena, has evolved. What was allowable in the early nineteenth century is not necessarily allowable in the late twentieth century. Specifically, science today does not break with law. And this is what counts for us. We want criteria of science for today, not for yesterday.

Response to the Commentary: Pro Justice

*Science, Technology and Human Values*, Volume 7, Number 41, Fall 1982 (p. 21)

**Ruskin, John** 1819–1900

English writer, art critic, and social reformer

Science does its duty, not in telling us the causes of spots in the sun, but in explaining to us the laws of our own life, and the consequences of their violation.

In Henry Attwell

*Thoughts from Ruskin*

33 (p. 29)

Longmans, Green & Company, New York, New York, USA; 1901

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

Science, ever since the time of the Arabs, has had two functions: (1) to enable us to know things, and (2) to enable us to do things.

*The Impact of Science on Society*

Chapter II (p. 18)

Simon & Schuster. New York, New York, USA. 1938

Science has always prided itself on being empirical and believing only what could be verified.

In Robert E. Egner and Lester E. Denonn (eds.)

*The Basic Writings of Bertrand Russell*

Limitations on the Scientific Method (p. 623–24)

Simon & Schuster. New York, New York, USA. 1961

Even if the open windows of science at first make us shiver after the cozy indoor warmth of traditional humanizing myths, in the end the fresh air brings vigor, and the great spaces have a splendor of their own.

*What I Believe*

Chapter I (p. 14)

E.P. Dutton & Company. New York, New York, USA. 1925

In science men have discovered an activity of the very highest value in which they are no longer, as in art, dependent for progress upon the appearance of continually greater genius, for in science the successors stand upon the shoulders of their predecessors; where one man of supreme genius has invented a method, a thousand lesser men can apply it.

*A Free Man's Worship and Other Essays*

Chapter 3 (first published as "The Free Man's Worship" in December 1903)

George Allen & Unwin Ltd. London, England. 1917

A life devoted to science is therefore a happy life, and its happiness is derived from the very best sources that are open to dwellers on this troubled and passionate planet.

*Mysticism and Logic and Other Essays*

Chapter II, Section II (p. 45)

Longmans, Green & Company London, England. 1925

**Sagan, Carl** 1934–96

American astronomer and author

There is no other species on Earth that does science. It is, so far, entirely a human invention, evolved by natural selection in the cerebral cortex for one simple reason: it works. It is not perfect. It can be misused. It is only a tool. But it is by far the best tool we have, self-correcting, ongoing, applicable to everything.

*Cosmos*

Chapter XIII (p. 333)

Random House, Inc. New York, New York, USA. 1980

One of the great commandments of science is, "Mistrust arguments from authority."

*The Demon-Haunted World: Science as a Candle in the Dark*

Chapter 2 (p. 28)

Random House, Inc. New York, New York, USA. 1995

Science is an attempt, largely successful, to understand the world, to get a grip on things, to get hold of ourselves,

to steer a safe course. Microbiology and meteorology now explain what only a few centuries ago was considered sufficient cause to burn women to death.

*The Demon-Haunted World: Science as a Candle in the Dark*  
Chapter 2 (p. 26)

Random House, Inc. New York, New York, USA. 1995

Science involves a seemingly self-contradictory mix of attitudes: On the one hand, it requires an almost complete openness to all ideas, no matter how bizarre and weird they sound, a propensity to wonder... But at the same time, science requires the most vigorous and uncompromising skepticism, because the vast majority of ideas are simply wrong, and the only way you can distinguish the right from the wrong, the wheat from the chaff, is by critical experiment and analysis.

Wonder and Skepticism

*Skeptical Inquirer*, Jan/Feb 1995 (p. 24)

[Science is not popular] is...the fault of the educational system. We do not teach how to think. This is a very serious failure that may even, in a world rigged with 60,000 nuclear weapons, compromise the human future.

The Burden of Skepticism

*Skeptical Inquirer*, Fall 1987

Science demands a tolerance for ambiguity. Where we are ignorant, we withhold belief. Whatever annoyance the uncertainty engenders serves a higher purpose: It drives us to accumulate better data. This attitude is the difference between science and so much else. Science offers little in the way of cheap thrills. The standards of evidence are strict. But when followed they allow us to see far, illuminating even a great darkness.

*Pale Blue Dot: A Vision of the Human Future in Space*  
Chapter 20 (p. 365)

Random House, Inc. New York, New York, USA. 1994

Reasoned disputation is the lifeblood of science — as is, sadly, infrequently the case in the intellectually more anemic arena of politics.

*The Cosmic Connection: An Extraterrestrial Perspective*  
Preface (p. ix)

Dell Publishing, Inc. New York, New York, USA. 1975

Science — pure science, science not for any practical application but for its own sake — is a deeply emotional matter for those who practice it, as well as for those non-scientists who every now and then dip in to see what's been discovered lately.

*The Demon-Haunted World: Science as a Candle in the Dark*  
Chapter 19 (p. 330)

Random House, Inc. New York, New York, USA. 1995

Cutting off fundamental, curiosity-driven science is like eating the seed corn. We may have a little more to eat next winter, but what will we plant so we and our children will have enough to get through the winters to come?

*The Demon-Haunted World: Science as a Candle in the Dark*  
Chapter 23 (p. 400)

Random House, Inc. New York, New York, USA. 1995

It is a supreme challenge for the popularizer of science to make clear the actual, tortuous history of its great discoveries and the misapprehensions and occasional stubborn refusal by its practitioners to change course.

*The Demon-Haunted World: Science as a Candle in the Dark*  
Chapter 1 (p. 22)

Random House, Inc. New York, New York, USA. 1995

Science is far from a perfect instrument of knowledge. It's just the best we have.

*The Demon-Haunted World: Science as a Candle in the Dark*  
Chapter 2 (p. 27)

Random House, Inc. New York, New York, USA. 1995

### **Sandage, Allan** 1926–

American astronomer

Science is the only self-correcting human institution, but it also is a process that progresses only by showing itself to be wrong.

In Alan Lightman and Roberta Brawer

*Origins: The Lives and Worlds of Modern Cosmologists*  
Allan Sandage (p. 82)

Harvard University Press. Cambridge, Massachusetts, USA. 1990

### **Santayana, George (Jorge Augustín Nicolás Ruiz de Santillana)** 1863–1952

Spanish-born American philosopher

Science is a half-way house between private sensation and universal vision.

Part V, Chapter I (p. 385)

Charles Scribner's Sons. New York, New York, USA. 1953

### **Sarnoff, David** 1891–1971

Russian-born American broadcasting executive

At their best, at their most creative, science and engineering are attributes of liberty — noble expressions of man's God-given right to investigate and explore the universe without fear of social or political or religious reprisals.

In Emily Davie (ed.)

*Profile of America: An Autobiography of the U.S.A.*

Electronics — Today and Tomorrow

Crowell. New York, New York, USA. 1954

### **Scatchard, George** 1892–1973

American physical chemist

Since science progresses by building block upon block, it is important to examine the structure from time to time to make sure that there are no badly fitted blocks, none which are being made to carry more than their proper capacity and none which might be made more useful.

Equilibrium Thermodynamics and Biological Chemistry

*Science*, Volume 95, Number 2454, January 9, 1942 (p. 27)

### **Schiebinger, Londa** 1952–

Science historian

Only recently have we begun to appreciate that who does science affects the kind of science that gets done. How, then, has our knowledge of nature been influenced by struggles determining who is included in science and who is excluded, which projects are pursued and which ignored, whose experiences are validated and whose are not, and who stands to gain in terms of wealth or well-being and who does not?

*Nature's Body: Gender in the Making of Modern Science*

Introduction (p. 3)

Beacon Press. Boston, Massachusetts, USA. 1993

**Schiller, Ferdinand Canning Scott** 1864–1937

English philosopher

To Archimedes once came a youth, who for knowledge was thirsting,

Saying, "Initiate me into the science divine,  
Which for my country has borne forth fruit of such wonderful value,

And which the walls of the town 'gainst the Sambuca protects.

"Calls't thou the science divine? It is so," the wise man responded;

"But it was so, my son, ere it avail'd for the town.

Wouldst thou have fruit from her only, e'en mortals wit that can provide thee;

Wouldst thou the goddess obtain, seek not the woman in Her!"

In Edgar Alfred Bower

*The Poems of Schiller*

Archimedes and the Student (p. 262)

John W. Parker & Son. London, England. 1851

Science: To one, she is the exalted and heavenly Goddess; to another she is a capable cow which keeps him supplied with butter.

In Folke Doving

*Knowledge and Ignorance: Essays on Lights and Shadows*

Chapter Ten (p. 141)

Praeger. Westport, Connecticut, USA. 1998

**Schneer, Cecil J.** 1923–

American science historian and mineralogist

The primary importance of science and the characteristic that distinguished it from other philosophies and arts is its usefulness. The remarkable thing about science is the extent to which nature and the world appear to adhere to the rules and constructions of science.

*The Evolution of Physical Science*

Grove Press, Inc. New York, New York, USA. 1960

**Schrödinger, Erwin** 1887–1961

Austrian theoretical physicist

...there is a tendency to forget that all science is bound up with human culture in general, and that scientific findings, even those which at the moment appear the most advanced and esoteric and difficult to grasp, are meaningless outside their cultural context.

Are There Quantum Jumps?

*The British Journal for the Philosophy of Science*, Volume 3, 1952 (p. 109)

A theoretical science unaware that those of its constructs considered relevant and momentous are destined eventually to be framed in concepts and words that have a grip on the educated community and become part and parcel of the general world picture — a theoretical science, I say, where this is forgotten, and where the initiated continue musing to each other in terms that are, at best, understood by a small group of close fellow travelers, will necessarily be cut off from the rest of cultural mankind; in the long run it is bound to atrophy and ossify however virulently esoteric chat may continue within its joyfully isolated groups of experts.

Are There Quantum Jumps?

*The British Journal for the Philosophy of Science*, Volume 3, 1952 (p. 110)

...the scientific picture of the real world around me is very deficient. It gives a lot of factual information, puts all our experience in a magnificently consistent order, but it is ghastly silent about all and sundry that is really near to our heart, that really matters to us. It cannot tell us a word about red and blue, bitter and sweet, physical pain and physical delight; it knows nothing of beautiful and ugly, good or bad, God and eternity. Science sometimes pretends to answer questions in these domains, but the answers are very often so silly that we are not inclined to take them seriously.

*Nature and the Greeks*

Chapter VII (p. 93)

At The University Press. Cambridge, England. 1954

**Schwartz, John** 1941–

American theoretical physicist

Science is a long movie, and the news media generally take mere snapshots.

If You Seek the Truth, Don't Trash the Science

*Washington Post*, 21 February, 1999 (p. B-1)

**Seifriz, William**

No biographical data available

Let me give full credit to the young and enthusiastic research workers, full of high-energy phosphate bonds. What I deplore is their attitude of mind. Science has become tough and students learn to accept it that way.

A New University

*Science*, Volume 120, Number 3107, 16 July 1954 (p. 89)

**Shapiro, Harry L.** 1902–90

American physical anthropologist

Science, like organic life, has ramified by expanding into unoccupied areas and then adapting itself to the special requirements encountered there.

Symposium on the History of Anthropology, the History and Development of Physical Anthropology

*American Anthropologist*, Volume 61, Number 3, 1959 (p. 371)

...as the diversified forms of animals, plants, and insects make evident by their morphology and their function the characteristics of ecological niches whose very existence might otherwise escape notice, so the diversity of techniques and concepts of scientific specialties by their very formulation reveal aspects of nature we would not have suspected. Anthropology, like other branches of science, has also embodied in its structure whole new worlds rich in insights into the development and nature of man.

Symposium on the History of Anthropology, the History and Development of Physical Anthropology  
*American Anthropologist*, Volume 61, Number 3, 1959 (p. 371)

**Shapiro, Robert** 1935–

American DNA researcher and author

Science is not a given set of answers but a system for obtaining answers. The method by which the search is conducted is more important than the nature of the solution. Questions need not be answered at all, or answers may be provided and then changed. It does not matter how often or how profoundly our view of the universe alters, as long as these changes take place in a way appropriate to science. For the practice of science, like the game of baseball, is covered by definite rules.

*Origins: A Skeptic's Guide to the Creation of Life on Earth*  
Chapter One (p. 33)  
Summit Books. New York, New York, USA. 1986

Science is not the place for those who want certainty, who wish the truths they learned in childhood to reassure them in their old age. Surprises occur, and alter our perception of reality — for example, the discovery of radioactivity or the genetic role of DNA.... When we treat each new observation and theory with skepticism, retaining our doubt until it has passed the test of experience, and then place it alongside our other acquisitions with the care of a collector who has acquired a valued object after a long search, then we can experience the joy of science. It is this joy, rather than an insistence on an immediate answer, that is likely to be our reward as we continue to search for the origin of life. But even in this conclusion, let us exercise some caution. We may be closer to the answer than we think.

*Origins: A Skeptic's Guide to the Creation of Life on Earth*  
Chapter Thirteen (p. 312)  
Summit Books. New York, New York, USA. 1986

**Shaw, George Bernard** 1856–1950

Irish comic dramatist and literary critic

Science becomes dangerous only when it imagines that it has reached its goal.

*The Doctor's Dilemma*

Preface on Doctors

The Latest Theories (p. xc)

Brentano's. New York, New York, USA. 1920

Science is always simple and always profound. It is only the half-truths that are dangerous.

*The Doctor's Dilemma*

Act I (p. 24)

Brentano's. New York, New York, USA. 1920

**Shelley, Mary** 1797–1851

English Romantic writer

You seek for knowledge and wisdom, as I once did; and I ardently hope that the gratification of your wishes may not be a serpent to sting you, as mine has been.

*Frankenstein*

Letter 4 (p. 27)

Running Press. Philadelphia, Pennsylvania, USA. 1990

The ambition of the enquirer seemed to limit itself to the annihilation of those visions on which my interest in science was chiefly founded. I was required to exchange chimeras of boundless grandeur for realities of little worth.

*Frankenstein*

Chapter 3 (p. 38)

Running Press. Philadelphia, Pennsylvania, USA. 1990

Life and death appeared to me ideal bounds, which I should first break through, and pour a torrent of light into our dark world.

*Frankenstein*

Chapter 4 (p. 43)

Running Press. Philadelphia, Pennsylvania, USA. 1990

“Man,” I cried, “how ignorant art thou in thy pride of wisdom!”

*Frankenstein*

Chapter 23 (p. 141)

Running Press. Philadelphia, Pennsylvania, USA. 1990

**Shelley, Percy Bysshe** 1792–1822

English poet

The cultivation of those sciences which have enlarged the limits of the empire of man over the external world, has, for want of the poetical faculty, proportionally circumscribed those of the internal world; and man, having enslaved the elements, remains himself a slave.

In Fanny Delisle

*A Study of Shelley's "A Defence of Poetry"* (Volume 1)

Line 1223 (p. 138)

Institute für Englische Sprache und Literatur. Salzburg, Austria. 1974

**Shermer, Michael** 1954–

American science writer

What separates science from all other human activities (and morality has never been successfully placed on a scientific basis) is its commitment to the tentative nature of all its conclusions. There are no final answers in science, only varying degrees of probability. Even scientific “facts” are just conclusions confirmed to such an extent that it would be reasonable to offer temporary agreement, but that assent is never final.

*Why People Believe Weird Things: Pseudoscience, Superstition, and Other Confusions of Our Time*

Part 2, Chapter 8 (p. 124)

Henry H. Holt. New York, New York, USA. 2002

Science is not the affirmation of a set of beliefs but a process of inquiry aimed at building a testable body of knowledge constantly open to rejection or confirmation. In science, knowledge is fluid and certainty fleeting. That is at the heart of its limitations. It is also its greatest strength.

*Why People Believe Weird Things: Pseudoscience, Superstition, and Other Confusions of Our Time*

Part 2, Chapter 8 (p. 124)

Henry H. Holt. New York, New York, USA. 2002

### **Shu, Frank H.**

American theoretical astrophysicist

Science has a beauty and uplifting spirit which rivals any of the other cultural attainments of humanity. This aesthetic response arose in a recent congressional hearing. When asked how particle physics contributes to the defense of our country, Robert Wilson replied that it makes the country worth defending.

*The Physical Universe: An Introduction to Astronomy* (p. 101)

University Science Books. Mill Valley, California, USA. 1982

### **Siegel, Eli** 1902–78

American philosopher, poet, critic, and founder of Aesthetic Realism

Science comes from the knowing that you want to know.

*Damned Welcome*

Aesthetic Realism, Maxims, Part One, #298 (p. 68)

Definition Press. New York, New York, USA. 1972

### **Silver, Brian L.**

Israeli professor of physical chemistry

One point is incontestable: the “truth” of science must always remain open to critical scrutiny and will sometimes have the status of a beauty queen: looks good today, but next year she’ll be dethroned. That is because the real test of a scientific theory is not whether it is “true.” The real test is whether it works.

*The Ascent of Science*

Part I, Chapter 2 (p. 24)

Solomon Press Book. New York, New York, USA. 1998

Science is not a harmless intellectual pastime. In the last two centuries we have moved from being simply observers of nature to being, in a modest but growing way, its controller. Concomitantly, we have occasionally disturbed the balance of nature in ways that we did not always understand. Science has to be watched. The layman can no longer afford to stand to one side, ignorant of the meaning of advances that will determine the kind of world that his children will inhabit—and the kind of children that he will have. Science has become part of the human race’s way of conceiving of and manipulating its future. The manipulation of the future is not a question to be left to philosophers. The answers can affect the

national budget, the health of your next child, and the long-term prospects for life on this planet.

*The Ascent of Science*

Preface (p. xiv)

Solomon Press Book. New York, New York, USA. 1998

Science, man’s greatest intellectual adventure, has rocked his faith and engendered dreams of a material Utopia. At its most abstract, science shades into philosophy; at its most practical, it cures disease. It has eased our lives and threatened our existence. It aspires, but in some very basic ways fails, to understand the ant and the Creation, the infinitesimal atom and the mind-bludgeoning immensity of the cosmos. It has laid its hand on the shoulders of poets and politicians, philosophers and charlatans. Its beauty is often apparent only to the initiated, its perils are generally misunderstood, its importance has been both over- and underestimated, and its fallibility, and that of those who create it, is often glossed over or malevolently exaggerated.

*The Ascent of Science*

Preface (p. xiii)

Solomon Press Book. New York, New York, USA. 1998

...the history of science may be a trail littered with broken theories and discarded concepts, science is also a triumph of reason, luck, and above all imagination. There are few more successful, exciting, or strange journeys.

*The Ascent of Science*

Preface (p. xiv)

Solomon Press Book. New York, New York, USA. 1998

### **Simon, Herbert Alexander** 1916–2001

American social scientist

The central task of a natural science is to make the wonderful commonplace: to show that complexity, correctly viewed, is only a mask for simplicity; to find pattern hidden in apparent chaos.

*The Sciences of the Artificial*

Chapter I (p. 1)

The MIT Press. Cambridge, Massachusetts, USA. 1969

### **Simpson, George Gaylord** 1902–84

American paleontologist

The important distinction between science and those other systematizations [*i.e.*, art, philosophy, and theology] is that science is self-testing and self-correcting. Here the essential point of science is respect for objective fact. What is correctly observed must be believed...the competent scientist does quite the opposite of the popular stereotype of setting out to prove a theory; he seeks to disprove it.

*Notes on the Nature of Science*

Notes on the Nature of Science by a Biologist (p. 9)

Harcourt, Brace & World, Inc. New York, New York, USA. 1962

As for the scope of science, it includes everything known to exist or to happen in the material universe. Since the

arts, philosophy, and theology do exist in the material universe, they too are within the scope of science and can properly be studied as psychological, anthropological, and biological phenomena.

*Notes on the Nature of Science*

Notes on the Nature of Science by a Biologist (pp. 11–12)

Harcourt, Brace & World, Inc. New York, New York, USA. 1962

### **Singer, Charles** 1876–1960

Historian of science and medicine

To succeed in science it is necessary to receive the tradition of those who have gone before us. In science, more perhaps than in any other study, the dead and the living are one.

In Lloyd William Taylor

*Physics: the Pioneer Science* (Volume 1)

Chapter 15 (p. 182)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1941

### **Slosson, Edwin E.** 1865–1929

American chemist and journalist

Science consists in learning from nature how to surpass nature.

Spun Logs

*The Scientific Monthly*, December 1925

Most people think of science as a serious and solemn thing, a strain upon the strongest intellect.

So it is for the pioneers of scientific progress, but not for those who merely follow along behind.

*Chats on Science*

Introduction (p. 1)

G. Bell & Sons Ltd. London, England. 1924

### **Smith, Adam** 1723–1790

Scottish moral philosopher and founder of modern economic theory

Science is the great antidote to the poison of enthusiasm and superstition.

*An Inquiry into the Nature and Causes of the Wealth of Nations*

Book V, Chapter I, part III, Section III (p. 748)

The Modern Library. New York, New York, USA. 1937

### **Smith, Henry Preserved** 1847–1927

American Biblical scholar

More and more, science has become not only increasingly necessary as a foundation for professional skill, but has come to be regarded as the most valuable instrument of culture.

In Lloyd William Taylor

*Physics: The Pioneer Science* (Volume 1)

Chapter 28 (p. 395)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1941

...whether as the new salvation or the new superstition, science has modeled the whole life of the modern world.... All modern production of wealth, all contemporary life, depend on the knowledge of nature acquired by science. But more than that, religion, politics,

philosophy, art and literature have capitulated to science, or at least receded before her. There is no department of human activity today untouched with the spirit of experiment and of mathematics.

*A History of Modern Culture* (Volume 1)

Epilogue (p. 606)

Peter Smith. Gloucester, Massachusetts, USA. 1957

### **Smith, Sydney** 1771–1845

English clergyman, writer, and wit

Science is his forte, and omniscience his foible.

In Isaac Todhunter

*William Whewell* (Volume 1)

Conclusion (p. 410)

Macmillan & Company Ltd. London, England. 1876

### **Smolin, Lee** 1955–

American theoretical physicist

Science is, above everything else, a search for an understanding of our relationship with the rest of the universe.

*The Life of the Cosmos*

Part One, Chapter One (p. 23)

Oxford University Press, Inc. New York, New York, USA. 1997

### **Smyth, Nathan A.**

No biographical data available

To recognize with science that beyond our horizon lies impenetrable mystery will serve but to increase our reverence for the glory of the whole.

*Through Science to God*

Chapter I (p. 5)

The Macmillan Company. New York, New York, USA. 1936

### **Snow, Charles Percy** 1905–80

English novelist and scientist

But after the idyllic years of science, we passed into a tempest of history; and by an unfortunate coincidence, we passed into a technological tempest, too.

In Paul C. Opler and Herman A. Estrin (eds.)

*The New Scientist: Essays on the Methods and Value of Modern Science*

The Moral Un-Neutrality of Science (p. 135)

### **Soddy, Frederick** 1877–1956

English chemist

As science advances and most of the more accessible fields of knowledge have been gleaned of their harvest, the need for more and more powerful and elaborate appliances and more and more costly materials ever grows.

*Science and Life*

Science and the State (p. 60)

E.P. Dutton & Company, Inc. New York, New York, USA. 1920

### **Somerville, Mary** 1780–1872

English mathematician

Science, regarded as the pursuit of truth, which can only be attained by patient and unprejudiced investigation,

wherein nothing is too great to be attempted, nothing so minute as to be justly disregarded, must ever afford occupation of consummate interest and subject of elevated meditation.

*On the Connexion of the Physical Sciences*  
Section I (p. 2)  
John Murray. London, England. 1834

**Sorokin, Pitirim A.** 1889–1968  
Russian-born American sociologist

Any science, at any moment of its historical existence, contains not only truth but also much that is half-truth, sham-truth, and plain error.

*Fads and Foibles in Modern Sociology*  
Preface (p. v)  
Henry Regnery. Chicago, Illinois, USA. 1956

**Spark, Muriel** 1918–2006  
Scottish novelist

Art and religion first; then philosophy; lastly science. That is the order of the great subjects of life, that's their order of importance.

*The Prime of Miss Jean Brodie*  
Chapter 2 (p. 39)  
Macmillan & Company Ltd. London, England. 1961

**Spencer, Herbert** 1820–1903  
English social philosopher

What knowledge is of most worth? — the uniform reply is — Science. This is the verdict on all counts.

*Education: Intellectual, Moral, and Physical*  
Chapter I (p. 84)  
A.L. Fowle. New York, New York, USA. 1860

For direct self-preservation, or the maintenance of life and health, the all-important knowledge is — Science. For the indirect self-preservation which we call gaining a livelihood, the knowledge of greatest value is — Science. For that interpretation of national life, past and present, without which the citizen cannot rightly regulate his conduct, the indispensable key is — Science. Alike for the most perfect production and highest enjoyment of art in all its forms, the needful preparation is still — Science. And for the purposes of discipline — intellectual, moral, religious — the most efficient study is, once more — Science.

*Education: Intellectual, Moral, and Physical*  
Chapter I (pp. 84–85)  
A.L. Fowle. New York, New York, USA. 1860

Only when Genius is married to Science, can the highest results be produced.

*Education: Intellectual, Moral, and Physical*  
Chapter I (p. 70)  
A.L. Fowle. New York, New York, USA. 1860

Devotion to science is a tacit worship — a tacit recognition of worth in the things one studies; and by implication

in their cause. It is not a mere lip-homage, but a homage expressed in actions — not a mere professed respect, but a respect proved by the sacrifice of time, thought, and labour.

In Sir Richard Arman Gregory  
*Discovery; or, The Spirit and Service of Science*  
Chapter III (p. 41)  
Macmillan & Company Ltd. London, England. 1918

**Spencer-Brown, George** 1923–  
English mathematician and polymath

Left to itself, the world of science slowly diminishes as each result classed as scientific has to be reclassified as anecdotal or historical... Science is a continuous living process; it is made up of activities rather than records; and if the activities cease it dies.

*Probability and Scientific Inference*  
Chapter XV (p. 107)  
Longmans, Green & Company. London, England. 1957

**Stanislaus, Leszczynski (Stanislaus I)** 1677–1766  
King of Poland

Science when well digested is nothing but good sense and reason.

*Maxims*  
No. 43  
Publisher undetermined

**Stansfield, William D.** 1930–  
American biologist

Most scientific theories, however, are ephemeral. Exceptions will likely be found that invalidate a theory in one or more of its tenets. These can then stimulate a new round of research leading either to a more comprehensive theory or perhaps to a more restrictive (*i.e.*, more precisely defined) theory. Nothing is ever completely finished in science; the search for better theories is endless. The interpretation of a scientific experiment should not be extended beyond the limits of the available data. In the building of theories, however, scientists propose general principles by extrapolation beyond available data. When former theories have been shown to be inadequate, scientists should be prepared to relinquish the old and embrace the new in their never-ending search for better solutions. It is unscientific, therefore, to claim to have “proof of the truth” when all that scientific methodology can provide is evidence in support of a theory.

*The Science of Evolution*  
Introduction (p. 8)  
Macmillan Publishing Company. New York, New York, USA. 1977

**Stenger, Victor J.** 1935–  
American physicist

No one ever said science was easy, and nobody, scientist or not, should be expected to fall over and play dead when a challenge to existing knowledge is made. If a new

idea has sufficient merit, it should ultimately overcome any resistance, no matter how strong.... Resistance to new ideas is part of the process of science. A worthy new idea must overcome barriers of doubt and skepticism, and even occasional irrational objections. But if an idea has merit, it will eventually climb over these barriers.

*Physics and Psychics: The Search for a World Beyond the Senses*  
Chapter 3 (p. 65)

Prometheus Books. Buffalo, New York, USA. 1990

### **Sterne, Laurence** 1713–68

English novelist and humorist

Sciences may be learned by rote, but Wisdom not.

*The Life and Opinions of Tristram Shandy, Gentleman and A Sentimental Journey Through France and Italy* (Volume 1)

Book V, Chapter XXXII (p. 356)

Macmillan & Company Ltd. London, England. 1900

### **Stevenson, Robert Louis** 1850–94

Scottish essayist and poet

Science writes of the world as if with the cold finger of a starfish; it is all true; but what is it when compared to the reality of which it discourses, where hearts beat high in April, and death strikes, and hills totter in the earthquake, and there is a glamour over all the objects of sight, and a thrill in all noises for the ear, and Romance herself has made her dwelling among men? So we come back to the old myth, and hear the goat-footed piper making the music which is itself the charm and terror of things; and when a glen invites our visiting footsteps, fancy that Pan leads us thither with a gracious tremolo; or when our hearts quail at the thunder of the cataract, tell ourselves that he has stamped his hoof in the nigh thicket.

*Virginibus Puerisque and Familiar Studies of Men and Books*

Pan's Pipe (p. 108)

J.M. Dent & Sons Ltd. London, England. No date

### **Steward, J. H.**

No biographical data available

It is the unhappy lot of science that it must clear the ground of flimsy and fanciful structures built upon false premises and errors of fact before it can build anew.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1936*

Petroglyphs of the United States (p. 407)

Government Printing Office. Washington, D.C. 1937

### **Stewart, Ian** 1945–

English mathematician and science writer

Science is a collective activity, and the actions of each individual resonate and interact with those of the others in a pattern so gigantic that we can no more comprehend the whole than a blood cell can comprehend how its host feels when it mashes a finger in a car door.

*The Problems of Mathematics*

Chapter 20 (p. 234)

Oxford University Press, Inc. Oxford, England. 1987

### **Stoker, Bram** 1847–1912

English writer

There are mysteries which men can only guess at, which age by age they may solve only in part.

*Dracula*

Chapter XV (p. 217)

Ameron House. Mattituck, New York, USA. No date

### **Strutt, John William (Lord Rayleigh)** 1842–1919

English physicist

There are some great men of science whose charm consists in having said the first word on a subject, in having introduced some new idea which has proved fruitful; there are others whose charm consists perhaps in having said the last word on the subject, and who have reduced the subject to logical consistency and clearness.

*Life of John William Strutt: Third Baron Rayleigh*

Chapter XVII (p. 310)

University of Wisconsin Press. Madison, Wisconsin, USA. 1968

### **Sullivan, John William Navin** 1886–1937

Irish mathematician

Science, like everything else that man has created, exists, of course, to gratify certain human needs and desires. The fact that it has been steadily pursued for so many centuries, that it has attracted an ever-wider extent of attention, and that it is now the dominant intellectual interest of mankind, shows that it appeals to a very powerful and persistent group of appetites.

*The Limitations of Science*

Introduction (p. 7)

New American Library. New York, New York, USA. 1956

...science deals with but a partial aspect of reality, and there is no faintest reason for supposing that everything science ignores is less real than what it accepts... Why is it that science forms a closed system? Why is it that the elements of reality it ignores never come in to disturb it? The reason is that all the terms of physics are defined in terms of one another. The abstractions with which physics begins are all it ever has to do with.

*The Limitations of Science*

Chapter 6, Section IV (p. 147)

New American Library. New York, New York, USA. 1956

### **Swann, William Francis Gray** 1884–1962

Anglo-American physicist

The forerunners in the march of science do not often come heralded by much ceremony suggestive of the power that lies behind them. Often in apparent trivialities do they reveal themselves — trivialities so void of spectacular content that but few can be found who deem it worth while to listen to their story.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1928*

Three Centuries of Natural Philosophy (p. 237)

Government Printing Office. Washington, D.C. 1929

**Swenson, Jr., Lloyd S.**

No biographical data available

The interplay of thought and action, theory and experiment, individuals and institutions in science is both comic and tragic, despite the actors' common belief that their lines are delivered as if for a triumphal pageant rather than a tragicomic play.

Locksley Hall, Stanza 6

Oxford University Press, Inc. London, England. 1953

**Thom, René** 1923–2002

French mathematician

If we admit a priori that science is just acquisition of knowledge, that is, building an inventory of all observable phenomena in a given disciplinary domain — then, obviously, any science is empirical.

In J. Casti and A. Karlqvist (eds.)

*Newton to Aristotle: Toward a Theory of Models for Living Systems*

Causality and Finality in Theoretical Biology

**Thomas, Lewis** 1913–93

American physician and biologist

You either have science or you don't, and if you have it you are obliged to accept the surprising and disturbing pieces of information, even the overwhelming and upheaving ones, along with the neat and promptly useful bits. It is like that.

*The Medusa and the Snail: More Notes of a Biology Watcher*  
The Hazard of Science (p. 73)  
The Viking Press. New York, New York, USA. 1979

The central task of science is to arrive, stage by stage, at a clearer comprehension of nature, but this does not mean, as it is sometimes claimed to mean, a search for mastery over nature.

*Late Night Thoughts on Listening to Mahler's Ninth Symphony*  
Humanities and Science (p. 153)  
Viking Press. New York, New York, USA. 1983

The essential wildness of science as a manifestation of human behavior is not generally perceived. As we extract new things of value from it, we also keep discovering parts of the activity that seem in need of better control, more efficiency, less unpredictability.

*The Lives of a Cell: Notes of a Biology Watcher*  
Natural Science (p. 100)  
The Viking Press. New York, New York, USA. 1974

Science began by fumbling. It works because the people involved in it work, and work together. They become excited and exasperated, they exchange their bits of information at a full shout, and, the most wonderful thing of all, they keep at one another.

*Late Night Thoughts on Listening to Mahler's Ninth Symphony*  
Alchemy  
The Viking Press. New York, New York, USA. 1983

### Thompson, A. R.

No biographical data available

...science has not only helped to destroy popular traditions that might have nourished a modern spirit of admiration, but has fostered a wintry skepticism, making man appear not an imperfect angel, but a super-educated monkey.

In R. Foerster (ed.)  
*Humanism and America: Essays on the Outlook of Modern Civilization*  
The Dilemma of Modern Tragedy (p. 129)  
Farrar & Rinehart Inc. New York, New York, USA. 1930

### Thomson, J. Arthur 1861–1933

Scottish biologist

When science makes minor mysteries disappear, greater mysteries stand confessed. For one object of delight whose emotional value science has inevitably lessened — as Newton damaged the rainbow for Keats — science gives back double.

*The Outline of Science* (Volume 4)  
Chapter XXXVIII (p. 1176)  
G.P. Putnam's Sons. New York, New York, USA. 1937

To the grand primary impression of the world power, the immensities, the pervading order, and the universal flux, with which the man of feeling has been nurtured from the old, modern science has added thrilling impressions of manifoldedness, intricacy, uniformity, inter-relatedness, and evolution. Science widens and clears the emotional

window. There are great vistas to which science alone can lead, and they make for elevation of mind.

*The Outline of Science* (Volume 4)  
Chapter XXXVIII (pp. 1176–1177)  
G.P. Putnam's Sons. New York, New York, USA. 1937

The opposition between science and feeling is largely a misunderstanding. As one of our philosophers has remarked, Science is in a true sense “one of the humanities.”

*The Outline of Science* (Volume 4)  
Chapter XXXVIII (p. 1177)  
G.P. Putnam's Sons. New York, New York, USA. 1937

Science expresses a quite specific endeavor to get phenomena under intellectual control, so that we can think of them economically and clearly in relation to the rest of our science, and so that we can use them as a basis for secure prediction and effective action.

*The System of Animate Nature* (Volume 1)  
Lecture I (p. 8)  
William & Norgate. London, England. 1920

Science as science never asks the question Why? That is to say, it never inquires into the meaning, or significance, or purpose of this manifold Being, Becoming, and Having Been.... Thus science does not pretend to be a bedrock of truth.

In Bertrand Russell  
*Religion and Science*  
Mysticism (p. 175)  
Henry Holt & Company. New York, New York, USA. 1935

Science makes so many permanent discoveries, which are never contradicted though often transcended, that she acquires an assured confidence which has only been equaled by that of Theology.

*The System of Animate Nature* (Volume 1)  
Lecture I (p. 13)  
William & Norgate. London, England. 1920

Science is one of the pathways toward the truth, but there are other pathways.

The New World of Science  
*The Atlantic Monthly*, June 1930

Science is not wrapped up with any particular body of facts; it is characterized as an intellectual attitude. It is not tied down to any peculiar methods of inquiry; it is simply sincere critical thought, which admits conclusions only when these are based on evidence.

*Introduction to Science*  
Chapter I (p. 27)  
Williams & Norgate Ltd. London, England. 1916

Science is always setting forth on Columbus voyages, discovering new worlds and conquering them by understanding.

*The Outline of Science* (Volume 1)  
Introduction (p. 3)  
G.P. Putnam's Sons. New York, New York, USA. 1937

Science is frankly empirical in method and aim; it seeks to discover the laws of concrete being and becoming,

and to formulate these in the simplest terms, which are either immediate data of experience or verifiably derived therefrom.

*The System of Animate Nature* (Volume 1)  
Lecture I (p. 39)  
William & Norgate. London, England. 1920

Science is a particular way of looking at the world, but it is not the only way.

The New World of Science  
*The Atlantic Monthly*, June 1930

Great stores of wealth are awaiting the scientific “Open Sesame”; a great heightening of the standard of health will be attainable in a few generation if men of good-will take science as their torch.

*The Outline of Science* (Volume 4 )  
Chapter XXXVIII (p. 1180)  
G.P. Putnam’s Sons. New York, New York, USA. 1937

Is it science that satisfies man’s soul, or is it the attendant feeling and imagining which the study of Nature evokes?

*The System of Animate Nature* (Volume 1)  
Lecture I (p. 27)  
William & Norgate. London, England. 1920

...science gives Man from time to time a greatly increased mastery over Nature; science, with its analytical triumphs, ever tends to diminish, in the shallowminded, the saving grace of wonder; and science is ever dispelling the darkness that oppresses the mind.

*The System of Animate Nature* (Volume 1)  
Lecture I (pp. 41–42)  
William & Norgate. London, England. 1920

...science aims at description in terms of the lowest common denominators available; while religion and philosophy aim at interpretation in terms of the greatest common measure.

The New World of Science  
*The Atlantic Monthly*, June 1930

**Thomson, Sir George** 1892–1975  
English physicist

The influence of science on men’s lives comes in two rather different ways — one through the ideas themselves, and the other through their material consequences.

The New Industrial Revolution  
*Bulletin of the Atomic Scientists*, Volume 13, Number 1, January 1957 (p. 9)

[The method of science is] a collection of pieces of advice, some general, some rather special, which may help to guide the explorer in his passage through the jungle of apparently arbitrary facts.... In fact, the sciences differ so greatly that it is not easy to find any sort of rule which applies to all without exception.

*The Inspiration of Science*  
Chapter II (p. 7)  
Oxford University Press, Inc. London, England. 1961

**Thoreau, Henry David** 1817–62  
American essayist, poet, and practical philosopher

There is a chasm between knowledge and ignorance which the arches of science can never span.

*The Writings of Henry David Thoreau* (Volume 1)  
A Week on the Concord and Merrimack Rivers  
Sunday (p. 125)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

What an admirable training is science for the more active warfare of life! Indeed, the unchallenged bravery which these studies imply, is far more impressive than the trumpeted valor of the warrior.

*The Writings of Henry David Thoreau* (Volume 9)  
Natural History of Massachusetts (p. 131)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

Science with its retorts would have put me to sleep; it was the opportunity to be ignorant that I improved. It suggested to me that there was something to be seen if one had eyes. It made a believer of me more than before. I believed that the woods were not tenantless, but choke-full of honest spirits as good as myself any day, — not an empty chamber, in which chemistry was left to work alone, but an inhabited house, — and for a few moments I enjoyed fellowship with them.

*The Writings of Henry David Thoreau* (Volume 3)  
The Maine Woods, the Allegash and East Branch (pp. 247–248)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

Let us consider under what disadvantages Science has hitherto labored before we pronounce thus confidently on her progress.

*The Writings of Henry David Thoreau* (Volume 4 )  
Paradise (to Be) Regained (p. 301)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

Already nature is serving all those uses which science slowly derives on a much higher and grander scale to him that will be served by her. When the sunshine falls on the path of the poet, he enjoys all those pure benefits and pleasures which the arts slowly and partially realize from age to age. The winds which fan his cheek waft him the sum of that profit and happiness which their lagging inventions supply.

*The Writings of Henry David Thoreau* (Volume 4 )  
Paradise (to Be) Regained (p. 302)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

**Thorne, Kip S.** 1940–  
American theoretical physicist

Science is a community enterprise. The insights that shape our view of the Universe come not from a single person or a small handful, but from the combined efforts of many.

*Black Holes and Time Warps: Einstein’s Outrageous Legacy*  
Preface (p. 18)  
W.W. Norton & Company, Inc. New York, New York, USA. 1994

**Thurber, James** 1894–1961  
American writer and cartoonist

Science has zipped the atom open in a dozen places, it can read the scrawling on the Rosetta stone as glibly as a literary critic explains Hart Crane, but it doesn't know anything about playwrights.

*Collecting Himself: James Thurber on Writing and Writers, Humor and Himself*

Roaming in the Gloaming (p. 194)

Harper & Row, Publishers. New York, New York, USA. 1989

**Tolstoy, Leo** 1828–1910  
Russian writer

What is called science today consists of a haphazard heap of information, united by nothing, often utterly unnecessary, and not only failing to present one unquestionable truth, but as often as not containing the grossest errors, today put forward as truths, and tomorrow overthrown.

*What Is Religion?*

Chapter I (p. 3)

T.Y. Crowell. New York, New York, USA. 1899

The highest wisdom has but one science — the science of the whole — the science explaining the whole creation and man's place in it.

*In Great Books of the Western World* (Volume 51)

*War and Peace*

Book Five, Chapter II (p. 197)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Toynbee, Arnold J.** 1852–83  
English historian

There have been many definitions of the word "science." Perhaps the most generally accepted one is that science is a form of study in which there can be an exact knowledge of the present and the past and, through this, an infallible prediction of the future. If this is what science means, then no study made by a human mind can be completely scientific.

*Occasional Paper, The Institute for the Study of Science in Human Affairs*

Science in Human Affairs: An Historian's View

**Tucker, Wilson** 1914–2006  
American mystery and science fiction writer

...Science tends to frighten those who are infrequently exposed to it, while the practitioners of science are often the most misunderstood people in the world....

*The Year of the Quiet Sun* (p. 78)

Ace. New York, New York, USA. 1970

**Tudge, Colin** 1943–  
English science writer

The true role of science is not to change the universe but more fully to appreciate it.

*The Engineer in the Garden: Genes and Genetics* (p. 361)

Hill & Wang. New York, New York, USA. 1993

**Twain, Mark (Samuel Langhorne Clemens)** 1835–1910  
American author and humorist

Science is as sorry as you are that this year's science is no more like last year's science than last year's was like the science of twenty years gone by. But science cannot help it. Science is full of change. Science is progressive and eternal. The scientists of twenty years ago laughed at the ignorant men who had groped in the intellectual darkness of twenty years before. We derive pleasure from laughing at them.

*Collected Tales, Sketches, Speeches, and Essays 1852–1890* (Volume 1)

A Brace of Brief Lectures on Science (p. 538)

The Library of America. New York, New York, USA. 1992

[W]hat we most admire is the vast capacity of that intellect which, without effort, takes in at once all the domains of science — all the past, the present and the future, all the errors of two thousand years, all the encouraging signs of the passing times, all the bright hopes of the coming age.

*Is Shakespeare Dead?*

Chapter X (p. 124)

Oxford University Press, Inc. London, England. 1996

## Union Carbide and Carbon

More Jobs Through Science  
Advertising slogan

**Urey, Harold Clayton** 1893–1981  
American chemist

To those of us who spend our lives working on scientific problems, science is a great intellectual adventure of such interest that nothing else we ever do can compare with it. We are attempting to understand the order of a physical universe, vast in extent in space and time, and most complicated and beautiful in its details.

In Shirley Thomas

*Men of Space. Profiles of the Scientists Who Probe for Life in Space* (Volume 6)

Harold C. Urey (p. 212)

Chilton Books. Philadelphia, Pennsylvania, USA. 1963

**Valéry, Paul** 1871–1945  
French poet and critic

Science is feasible when the variables are few and can be enumerated; when their combinations are distinct and clear. We are tending toward the condition of science and aspiring to do it. The artist works out his own formulas; the interests of science lies in the art of making science.

In Jackson Mathews (ed.)

*The Collected Works of Paul Valéry* (Volume 14)

Analects (p. 191)

Princeton University Press. Princeton, New Jersey, USA. 1971

Science means simply the aggregate of all the recipes that are always successful. All the rest is literature.

In J. Matthews (ed.)

*Collected Works* (Volume 14)

Analects

Princeton University Press. Princeton, New Jersey, USA. 1971

## Vash

Fictional character

Well, when it comes to choosing between science and profit, I'll choose profit every time.

*Star Trek: Deep Space Nine*

Q-Less

Television program

Season 1, 1993

## Vernadskii, Vladimir Ivanovich 1863–1945

Russian mineralogist

Science is alone and the routes to its achievement are alone. They are independent from the ideas of man, from his aspirations and wishes, from the social tenor of his life, from his philosophical, social, and religious theories. They are independent from his will and from his world outlook — they are primordial.

In Loren R. Graham

*The Soviet Academy of Sciences and the Communist Party, 1927–1932*

Chapter III (p. 80)

Princeton University Press. Princeton, New Jersey, USA. 1967

## Verne, Jules 1828–1905

French novelist

[I]n the cause of science men are expected to suffer.

*A Journey to the Center of the Earth*

Chapter 6 (p. 33)

The Limited Editions Club. New York, New York, USA. 1966

When science has sent forth her fiat — it is only to hear and obey.

*A Journey to the Center of the Earth*

Chapter 11 (p. 73)

The Limited Editions Club. New York, New York, USA. 1966

Science, great, mighty and in the end unerring...science has fallen into many errors — errors which have been fortunate and useful rather than otherwise, for they have been the stepping stones to truth.

*A Journey to the Center of the Earth*

Chapter 28 (p. 182)

The Limited Editions Club. New York, New York, USA. 1966

We may brave human laws, but we cannot resist natural ones.

Translated by Mercier Lewis

*Twenty Thousand Leagues Under the Sea*

Part Two, Chapter 15 (p. 249)

Nelson Doubleday, Inc. Garden City, New York, USA. 1900

## Virchow, Rudolf Ludwig Karl 1821–1902

German pathologist and archaeologist

Science in itself is nothing, for it exists only in the human beings who are its bearers.

Translated by Lelland J. Rather

*Disease, Life, and Man, Selected Essays*

Standpoints in Scientific Medicine (1847) (pp. 29–30)

Stanford University Press. Stanford, California, USA. 1958

Has not science the noble privilege of carrying on its controversies without personal quarrels.

In F.H. Garrison

*Bulletin of the New York Academy of Medicine*, Volume 4, 1928 (p. 995)

## Voltaire (François-Marie Arouet) 1694–1778

French writer

True science necessarily carries tolerance with it.

Letter to Madame d'Épinay

*Correspondance de Voltaire*, 1881 edition, Volume 12, July 6, 1766 (p. 329)

## von Baer, Carl Ernst 1792–1876

Prussian-Estonian biologist

Science...is, in its source, eternal; in its operation, not limited by time and space; in its scope, immeasurable; in its problem, endless; in its goal, unattainable.

In Sir Richard Arman Gregory

*Discovery; or, The Spirit and Service of Science*

Chapter III (p. 53)

Macmillan & Company Ltd. London, England. 1918

## von Frisch, Karl 1886–1982

Austrian ethnologist

Science advances but slowly, with halting steps. But does not therein lie her eternal fascination? And would we not soon tire of her if she were to reveal her ultimate truths too easily?

*A Biologist Remembers*

To Munich for the Fifth Time (p. 178)

Pergamon Press. Oxford, England. 1967

## von Goethe, Johann Wolfgang 1749–1832

German poet, novelist, playwright, and natural philosopher

Sciences destroy themselves in two ways: by the breadth they reach and by the depth they plumb.

*Scientific Studies* (Volume 12)

Chapter VIII (p. 305)

Suhrkamp. New York, New York, USA. 1988

Four epochs of science:

childlike,

poetic, superstitious;

empirical,

searching, curious;

dogmatic,

didactic, pedantic;

ideal,

methodical, mystical.

*Scientific Studies* (Volume 12)

Chapter VIII (pp. 304–305)

Suhrkamp. New York, New York, USA. 1988

Germans — and they are not alone in this — have a knack of making the sciences unapproachable.

*Scientific Studies* (Volume 12)

Chapter VIII (p. 306)  
Suhrkamp. New York, New York, USA. 1988

In general the sciences put some distance between themselves and life, and make their way back to it only by a roundabout path.

*Scientific Studies* (Volume 12)  
Chapter VIII (p. 306)  
Suhrkamp. New York, New York, USA. 1988

A crisis must necessarily arise when a field of knowledge matures enough to become a science, for those who focus on details and treat them as separate will be set against those who have their eye on the universal and try to fit the particular into it.

*Scientific Studies* (Volume 12)  
Chapter VIII (p. 305)  
Suhrkamp. New York, New York, USA. 1988

**von Humboldt, Alexander** 1769–1859  
German naturalist and explorer

Science is the labor of mind applied to nature...

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)  
Introduction (p. 76)  
Harper & Brothers. New York, New York, USA. 1869

**Waddington, Conrad Hal** 1905–75  
British biologist and paleontologist

Science is the organized attempt of mankind to discover how things work as causal systems.

*The Scientific Attitude*  
Forward (p. 9)  
Penguin Books. Middlesex, England. 1941

Science as a whole certainly cannot allow its judgment about facts to be distorted by ideas of what ought to be true, or what one may hope to be true.

*The Scientific Attitude*  
Science Is Not Neutral (p. 25)  
Penguin Books, Middlesex, England. 1941

...science, if given its head, is not just cold efficiency; its attitude is tolerant, friendly and humane. It has already become the dominant inspiration of human culture, so that modern poetry, painting and architecture derive their most constructive ideas from scientific thought.

*The Scientific Attitude*  
The Scientific Attitude (p. 1)  
Penguin Books, Middlesex, England. 1941

**Wald, George** 1906–97  
American biologist and biochemist

Science goes from question to question; big questions, and little, tentative answers. The questions as they age grow ever broader, the answers are seen to be more limited.

*Les Prix Nobel. the Nobel Prizes in 1967*  
Nobel banquet speech for award received in 1967  
Nobel Foundation. Stockholm, Sweden. 1968

The trouble with most of the things that people want is that they get them. No scientist needs to worry on that score. For him there is always the further horizon. Science goes from question to question; big questions, and little, tentative answers. The questions as they age grow ever broader, the answers are seen to be more limited.

*Les Prix Nobel. the Nobel Prizes in 1967*  
Nobel banquet speech for award received in 1967  
Nobel Foundation. Stockholm, Sweden. 1968

**Waterman, Alan T.** 1892–1967  
American physicist

Science, in its pure form, is not concerned with where discoveries may lead; its disciples are interested only in discovering the truth.

*Imagination of Science and Society*  
*American Behavioral Scientist*, Volume VI, Number 4, December 1962 (p. 3)

**Watson, David Lindsay** 1901–73  
No biographical data available

The main vehicle of science is not the published formulations of laws and experiments in books and periodicals. This vehicle is, first and foremost, men who are worthy of them, who can understand and use the laws. But more than this: the vehicle is also the pattern of the society that can produce such men.

*Scientists Are Human*  
Chapter I (p. 3)  
Watts. London, England. 1938

Science sprawls over all the horizons of the modern mind like some vast cloudbank. The outlook and method of science penetrate relentlessly the strata of daily custom into the caverns of the unconscious mind itself. Science is by far the most powerful intellectual phenomenon of modern times, inexorably laying down the law in regions far from the laboratory, and subtly governing, by its techniques and devices, our modes of life and ways of thinking.

*Scientists Are Human*  
Chapter I (p. 1)  
Watts. London, England. 1938

**Watson, James D.** 1928–  
American geneticist and biophysicist

...good science as a way of life is sometimes difficult. It often is hard to have confidence that you really know where the future lies. We must thus believe strongly in our ideas, often to point where they may seem tiresome and bothersome and even arrogant to our colleagues.

*Les Prix Nobel. The Nobel Prizes in 1962*  
Nobel banquet speech for award received in 1962  
Nobel Foundation. Stockholm, Sweden. 1963

**Weaver, Warren** 1894–1978  
American mathematician

The desirable adjuncts of modern living, although in many instances made possible by science, certainly do not constitute science.

*Science and Imagination: Selected Papers*

Chapter 1

Basic Books, Inc. New York, New York, USA. 1967

Science is not technology, it is not gadgetry, it is not some mysterious cult, it is not a great mechanical monster! Science is an adventure of the human spirit. It is essentially an artistic enterprise, stimulated largely by the universe, served largely by disciplined imagination, and based largely on faith in the reasonableness, order, and beauty of the universe of which man is part.

In Walter Orr Robek

Science, a Well Spring of our Discontent

*American Scientist*, Volume 55, Number 1, March 1957 (p. 3)

It is hardly necessary to argue, these days, that science is essential to the public. It is becoming equally true, as the support of science moves more and more to state and national sources, that the public is essential to science. The lack of general comprehension of science is thus dangerous both to science and the public, these being interlocked aspects of the common danger that scientists will not be given the freedom, the understanding, and the support that are necessary for vigorous and imaginative development.

In Hilary J. Deason

*A Guide to Science Reading*

Science and People (p. 38)

The New American Library. New York, New York, USA. 1966

### **Weber, Max** 1864–1920

German founder of modern sociology and economic thinker

Science today is a “vocation” organized in special disciplines in the service of self-clarification and knowledge of interrelated facts. It is not the gift of grace of seers and prophets dispensing sacred values and revelations, nor does it partake of the contemplation of sages and philosophers about the meaning of the Universe.

In H.H. Gerth and C. Wright Mills (eds.)

*From Max Weber: Essays in Sociology*

Science as a Vocation (p. 152)

Oxford University Press, Inc. New York, New York, USA. 1970

### **Weil, Simone** 1909–43

French philosopher and mystic

To us, men of the West, a very strange thing happened at the turn of the century; without noticing it, we lost science, or at least the thing that had been called by that name for the last four centuries. What we now have in place of it is something different, radically different, and we don't know what it is. Nobody knows what it is.

Translated by Richard Rees

*On Science, Necessity, and the Love of God*

Classical Science and After, Chapter I (p. 3)

Oxford University Press, Inc. London, England. 1968

Science is voiceless; it is the scientist who talks.

*On Science, Necessity, and the Love of God*

Reflections on Quantum Theory (p. 57)

Oxford University Press, Inc. London, England. 1968

Science today will either have to seek a source of inspiration higher than itself or perish.

*Gravity and Grace*

Intelligence and Grace (p. 119)

Routledge & Kegan Paul. London, England. 1952

Science only offers three kinds of interest: 1. Technical applications. 2. A game of chess. 3. A road to God. (Attractions are added to the game of chess in the shape of competitions, prizes, and medals.)

*Gravity and Grace*

Intelligence and Grace (p. 119)

Routledge & Kegan Paul. London, England. 1952

Science is today regarded by some as a mere catalogue of technical recipes, and others as a body of pure intellectual speculations which are sufficient unto themselves; the former set too little value on the intellect, the latter on the world.

Translated by Arthur Wills and John Petrie

*Oppression and Liberty*

Theoretical Picture of a Free Society (pp. 104–105)

Routledge & Kegan Paul Ltd. London, England. 1958

### **Weinberg, Steven** 1933–

American nuclear physicist

...there is an essential element in science that is cold, objective, and nonhuman...the laws of nature are as impersonal and free of human values as the rules of arithmetic.... Nowhere do we see human value or human meaning.

Reflections of a Working Scientist

*Daedalus*, Volume 103, 1974 (p. 3)

### **Weiss, Paul A.** 1898–1985

Chemist

Science, to some, is Lady Bountiful, to others is the Villain of the Century. Some years ago, a book called it our “Sacred Cow,” and certainly to many it has at least the glitter of the “Golden Calf.” Glorification at one extreme, vituperation at the other...

*Within the Gates of Science and Beyond*

Science Looks at Itself (p. 25)

Hafner Publishing Company. New York, New York, USA. 1971

### **Weisskopf, Victor Frederick** 1908–2002

Austrian-American physicist

Science cannot develop unless it is pursued for the sake of pure knowledge and insight. It will not survive unless it is used intensely and wisely for the betterment of humanity and not as an instrument of domination by one group over another.

*Physics in the Twentieth Century: Selected Essays*

The Significance of Science (p. 364)  
The MIT Press. Cambridge, Massachusetts, USA. 1972

Science is curiosity, discovering things and asking why.

*The Privilege of Being a Physicist*

Chapter 4 (p. 31)

W.H. Freeman & Company. New York, New York, USA. 1989

**Wells, H. G. (Herbert George)** 1866–1946  
English novelist, historian, and sociologist

The science hangs like a gathering fog in a valley, a fog which begins nowhere and goes nowhere, an incidental, unmeaning inconvenience to passers-by.

*The Works of H.G. Wells* (Volume 9)

A Modern Utopia

Chapter 3, Section 3

Charles Scribner's Sons. London, England. 1924–27

Science is a match that man has just got alight. He thought he was in a room — in moments of devotion, a temple — and that his light would be reflected from and display walls inscribed with wonderful secrets and pillars carved with philosophical systems wrought into harmony. It is a curious sensation, now that the preliminary splutter is over and the flame burns up clear, to see his hands and just a glimpse of himself and the patch he stands on visible, and around him, in place of all that human comfort and beauty he anticipated — darkness still.

The Rediscovery of the Unique

*The Fortnightly Review*, New Series 50, July 1891

**Weyl, Hermann** 1885–1955  
German mathematician

Modern science, insofar as I am familiar with it through my own scientific work, mathematics and physics make the world appear more and more an open one.... Science finds itself compelled, at once by the epistemological, the physical and the constructive-mathematical aspect of its own methods and results, to recognize this situation. It remains to be added that science can do no more than show us this open horizon; we must not by including the transcendental sphere attempt to establish anew a closed (though more comprehensive) world.

*The Open World: Three Lectures in the Metaphysical Implications of Science*

Preface (p. v)

Yale University Press. New Haven, Connecticut, USA. 1932

We must await the further development of science, perhaps for centuries, before we can design a true and detailed picture of the interwoven texture of Matter, Life and Soul. But the old classical determinism of Hobbes, and Laplace need not oppress us any longer.

*The Open World: Three Lectures in the Metaphysical Implications of Science*

Lecture II (p. 55)

Yale University Press. New Haven, Connecticut, USA. 1932

Modern science in so far as I am familiar with it through my own scientific work, mathematics and physics, make the world appear more and more as an open one, as a world not closed but pointing beyond itself...science finds itself compelled, at once by the epistemological, the physical and the constructive-mathematical aspect of its own methods and results, to recognize this situation. It remains to be added that science can do no more than show us this open horizon; we must not by including the transcendental sphere attempt to establish anew a closed (though more comprehensive) world.

In A.S. Eddington

*New Pathways in Science*

Chapter XIV (p. 309)

...science would perish without the continuous interplay between its facts and constructions on the one hand and the imagery of ideas on the other.

*Philosophy of Mathematics and Natural Science*

Preface (p. vi)

Princeton University Press. Princeton, New Jersey, USA. 1949

**Wheeler, John Archibald** 1911–  
American physicist and educator

...the pursuit of science is more than the pursuit of understanding. It is driven by the creative urge, the urge to construct a vision, a map, a picture of the world that gives the world a little more beauty and coherence than it had before.

*Geons, Black Holes, and Quantum Foam: A Life in Physics*

Chapter 3 (p. 84)

W.W. Norton & Company, Inc. New York, New York, USA. 1998

...the human activity that we call science is not science unless it is the uncovering or discovery of something new.

*At Home in the Universe*

Be the Best to Give the Most (p. 76)

The American Institute of Physics. Woodbury, New York, USA. 1994

**Whetham, Sir William Cecil Dampier** 1867–1952  
English scientific writer

But beyond the bright searchlights of science,

Out of sight of the windows of sense,

Old riddles still bid us defiance,

Old questions of Why and of Whence.

*Recent Development of Physical Science* (p. 10)

John Murray. London, England. 1927

**Whewell, William** 1794–1866  
English philosopher and historian

Science begins with common observation of facts; but even at this stage, requires that the observations be precise. Hence the sciences which depend upon space and number were the earliest formed. After common observation, comes Scientific Observation and Experiment.

*The Philosophy of the Inductive Sciences Founded upon Their History* (Volume 2)

Aphorisms, Aphorisms Concerning Science, VII (p. 467)  
John W. Parker. London, England. 1847

The tendency of the sciences has long been an increasing proclivity of separation and dismemberment. The mathematician turns away from the chemist; the chemist from the naturalist; between the mathematician and the chemist is to be interpolated a “physician” (we have no English name for him), who studies heat, moisture and the like.

*Quarterly Review*, Volume 51, 1834 (p. 59)

The principles which constituted the triumph of preceding stages of science may appear to be subverted and ejected by later discoveries, but in fact they are (so far as they are true) taken up into the subsequent doctrines and included in them. They continue to be an essential part of the science. The earlier truths are not expelled but absorbed, not contradicted but extended; and the history of each science which may thus appear like a succession of revolutions is, in reality, a series of developments.

*History of the Inductive Sciences, from the Earliest to the Present Time* (Volume the First)

Introduction (p. 10)

John W. Parker. London, England. 1837

...two things are requisite to science — facts and ideas...

*History of the Inductive Sciences, from the Earliest to the Present Time* (Volume 1)

Book I, Chapter III, Section 2 (p. 79)

John W. Parker. London, England. 1837

Man is the interpreter of Nature, Science is the right interpretation.

*The Philosophy of the Inductive Sciences Founded upon Their History* (Volume 2)

Aphorisms Concerning Ideas, Aphorism I (p. 443)

John W. Parker. London, England. 1847

**White, Leslie Alvin** 1900–75

American anthropologist

Science is sciencing.

Science Is Sciencing

*Philosophy of Science*, Volume 5, 1938

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

Science is the organisation of thought.

*The Organisation of Thought*

Chapter VI (p. 106)

Greenwood Press Publishers. Westport, Connecticut, USA. 1974

Science is in the minds of men, but men sleep and forget, and at their best in any one moment of insight entertain but scanty thoughts. Science therefore is nothing but a confident expectation that relevant thoughts will occasionally occur.

*An Enquiry Concerning the Principles of Natural Knowledge*

Part I, Chapter I (p. 10)

At The University Press. Cambridge, England. 1919

Science is either an important statement of systematic theory correlating observations of a common world or is the daydream of a solitary intelligence with a taste for the daydream of publication.

*Process and Reality: An Essay in Cosmology*

Part IV, Chapter V, Section IV (p. 502)

The Macmillan Company. New York, New York, USA. 1929

Science has always suffered from the vice of overstatement. In this way conclusions true within strict limitations have been generalized dogmatically into a fallacious universality.

*The Function of Reason*

Chapter I (p. 22)

Beacon Press. Boston, Massachusetts, USA. 1929

Science is even more changeable than theology.

*Science and the Modern World*

Chapter XII (p. 183)

The Macmillan Company. New York, New York, USA. 1929

Aristotle discovered all the half-truths which were necessary to the creation of science.

In Lucien Price

*Dialogues of Alfred North Whitehead*

Dialogue XLII September 11, 1945 (p. 344)

Little Brown. Boston, Massachusetts, USA. 1954

Science is a river with two sources, the practical source and the theoretical source. The practical source is the desire to direct our actions to achieve predetermined ends.... The theoretical source is the desire to understand.

*The Organisation of Thought*

Chapter VI (p. 106)

Greenwood Press Publishers. Westport, Connecticut, USA. 1974

A science which hesitates to forget its founders is lost.

*The Organisation of Thought*

Chapter VI (p. 115)

Greenwood Press Publishers. Westport, Connecticut, USA. 1974

**Whyte, Lancelot Law** 1896–1972

Scottish physicist

Science starts with an assumption which is always present, though it may be unconscious, may be forgotten, and may sometimes even be denied.

*Accent on Form: An Anticipation of the Science of Tomorrow*

Chapter IV (p. 59)

Harper & Brothers. New York, New York, USA. 1954

**Wigner, Eugene Paul** 1902–95

Hungarian-born American physicist

There is no natural phenomenon that is comparable with the sudden and apparently accidentally timed development of science, except perhaps the condensation of a super-saturated gas or the explosion of some unpredictable explosives. Will the fate of science show some similarity to one of these phenomena?

*Proceedings of the American Philosophical Society*, Volume 94, Number 5, 1950

**Wilde, Oscar** 1854–1900  
Irish wit, poet, and dramatist

The advantage of the emotions is that they lead us astray,  
and the advantage of Science is that it is not emotional.

*The Picture of Dorian Gray*

Chapter 3 (p. 45)

The Modern Library. New York, New York, USA. 1992

Science can never grapple with the irrational. That is why  
there is no future before it, in this world.

*The Plays of Oscar Wilde*

An Ideal Husband

Act I (p. 9)

The Modern Library. New York, New York, USA. No date

Science is out of the reach of morals, for her eyes are  
fixed upon eternal truths.

*The Works of Oscar Wilde* (Volume 10)

Intentions

The Critic as Artist, Part 2 (p. 394)

AMS Press. New York, New York, USA. 1909

**Wilson, Edward O.** 1929–  
American biologist and author

To a considerable degree science consists in originating  
the maximum amount of information with the minimum  
expenditure of energy. Beauty is the cleanness of line in  
such formulations along with symmetry, surprise, and  
congruence with other prevailing beliefs.

*Biophilia*

The Poetic Species (p. 60)

Harvard University Press. Cambridge, Massachusetts. 1984

Important science is not just any similarity glimpsed for  
the first time. It offers analogues that map the gateways  
to unexplored terrain.

*Biophilia*

The Poetic Species (p. 67)

Harvard University Press. Cambridge, Massachusetts. 1984

**Wittgenstein, Ludwig Josef Johann** 1889–1951  
Austrian-born English philosopher

Man has to awaken to wonder — and so perhaps do peo-  
ples. Science is a way of sending him to sleep again.

Translated by Peter Winch

*Culture and Value* (p. 5e)

The University of Chicago Press. Chicago, Illinois, USA. 1980

**Wolpert, Lewis** 1929–  
British embryologist

When we come to face the problems before us — poverty,  
pollution, overpopulation, illness — it is to science that  
we must turn, not to gurus. The arrogance of scientists is  
not nearly as dangerous as the arrogance that comes from  
ignorance.

In Mary Midgley

Can Science Save Its Soul?

*New Scientist*, Volume 135, Number 1832, 1 August 1992 (p. 24)

**Wordsworth, William** 1770–1850  
English poet

Science appears but what in truth she is,  
Not as our glory and our absolute boast,  
But as a succedaneum and a prop  
To our infirmity. No officious slave  
Art thou of that false secondary power  
By which we multiply distinctions, then  
Deem that our puny boundaries are things  
That we perceive, and not that we have made.

*The Complete Poetical Works of William Wordsworth*

The Prelude, Book II, l. 212–219

Crowell. New York, New York, USA. 1888

**Wright, Chauncey** 1830–75  
American philosopher of science

The accidental causes of science are only “accidents”  
relatively to the intelligence of a man.

*The Philosophical Writings of Chauncey Wright*

The Genesis of Species (p. 37)

The Liberal Arts Press. New York, New York, USA. 1958

**Wright, Frank Lloyd** 1869–1959  
American architect

I have seemed to belittle the nature of our time and the  
great achievements of science, but I have intended to do  
neither because I believe human nature still sound, and  
recognize that science has done a grand job as well; but  
well I know that Science cannot save us.

An Organice Architecture, Speech

London, England, May 1939

**Yates, Frances** 1899–1981  
English historian

Is not all science a gnosis, an insight into the nature of the  
All, which proceeds by successive revelations?

*Giordano Bruno and the Hermetic Tradition*

Chapter XXII (p. 452)

The University of Chicago Press. Chicago, Illinois, USA. 1964

**Ziman, John M.** 1925–2005  
British physicist

Penicillin is not Science, any more than a cathedral is  
Religion or a witness box is Law.

In E.D. Klemke, Robert Hollinger and A. David Kline

*Introductory Readings in the Philosophy of Science*

What Is Science? (p. 36)

Prometheus Books. Buffalo, New York, USA. 1980

In science, to echo Beethoven’s dictum about music,  
“Everything should be both surprising and expected.”

*Reliable Knowledge*

Chapter 3 (fn 17, p. 71)

Cambridge University Press. Cambridge, England. 1978

**Zinkernagel, Rolf M.** 1944–  
Swiss immunologist and pathologist

...in science there are collectors, classifiers, compulsory tidiers-up and permanent contesters, detectives, some artists and many artisans, there are poet-scientists and philosophers and even a few mystics.

*Les Prix Nobel. The Nobel Prizes in 1996*  
Nobel banquet speech for award received in 1996  
Nobel Foundation. Stockholm, Sweden. 1997

**Zinsser, Hans** 1878–1940  
American bacteriologist

Science is but a method. Whatever its material, an observation accurately made and free of compromise to bias and desire, and undeterred by consequence, is science.

Untheological Reflections  
*The Atlantic Monthly*, July 1929 (p. 91)

## SCIENCE, AGE OF

**Compton, Karl Taylor** 1887–1954  
American educator and physicist

We live in an age of science. I do not say “an age of technology” for every age has been an age of technology. We recognize this when we describe past civilizations as the Stone Age, the Bronze Age, and the Age of Steam or of Steel, thus implicitly admitting that the stage of civilization is determined by the tools at man’s disposal — in other words, by his technology....

*A Scientist Speaks: Excerpts from Addresses by Karl Taylor Compton During the Years 1930–1949* (p. 1)  
Undergraduate Association, MIT. Cambridge, Massachusetts, USA. 1955

**Kronenberger, Louis** 1904–80  
American author and critic

Nominally a great age of scientific inquiry, ours has actually become an age of superstition about the infallibility of science; of almost mystical faith in its nonmystical methods; above all...of external verities; of traffic-cop morality and rabbit-test truth.

*Company Manners: A Cultural Inquiry into American Life*  
Chapter 4 (p. 94)  
The Bobbs-Merrill Company, Inc. Indianapolis, Indiana, USA. 1954

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

To say that we live in an age of science is a common place, but like most common places, it is only partially true. From the point of view of our predecessors, if they could view our society, we should, no doubt, appear to be very scientific, but from the point of view of our successors, it is probable that the exactly opposite would seem to be the cause.

*The Scientific Outlook*  
Introduction (p. 9)  
George Allen & Unwin Ltd. London, England. 1931

[T]heoretical science...is an attempt to understand the world. Practical science, which is an attempt to change the world, has been important from the first, and has continually increased in importance, until it has almost ousted theoretical science from men’s thoughts....

*A History of Western Philosophy*  
Book Three, Part I, Chapter I (p. 492–493, 493)  
Simon & Schuster. New York, New York, USA. 1945

The triumph of science has been mainly due to its practical utility, and there has been an attempt to divorce this aspect from that of theory, thus making science more and more a technique, and less and less a doctrine as to the nature of the world. The penetration of this point of view to philosophers is very recent.

*A History of Western Philosophy*  
Book Three, Part I, Chapter I (p. 492–493, 493)  
Simon & Schuster. New York, New York, USA. 1945

## SCIENCE, APPLIED

**Bacon, Sir Francis** 1561–1626  
English lawyer, statesman, and essayist

Even when men build any science and theory upon experiment, yet they almost always turn with premature and hasty zeal to practise, not merely on account of the advantage and benefit to be derived from it, but in order to seize upon some security in a new undertaking of their not employing the remainder of their labor unprofitably, and by making themselves conspicuous, to acquire a greater name for their pursuit.

In *Great Books of the Western World* (Volume 30)  
*Novum Organum*  
First Book, Aphorism 70 (p. 116)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Compton, Karl Taylor** 1887–1954  
American educator and physicist

Applied science is not an end in itself, but it is the most powerful means ever discovered for supplying the opportunity to secure the finest things of life.

*A Scientist Speaks: Excerpts from Addresses by Karl Taylor Compton During the Years 1930–1949* (p. 9)  
Undergraduate Association, MIT. Cambridge, Massachusetts, USA. 1955

**Einstein, Albert** 1879–1955  
German-born physicist

Why does this magnificent applied science which saves work and makes life easier bring us so little happiness? The simple answer runs: Because we have not yet learned to make sensible use of it.

Einstein Seeks Lack in Applying Science  
*The New York Times*, February 17, 1931 (p. 6)

It is not enough that you should understand about applied science in order that your work may increase man’s

blessings. Concern for the man himself and his fate must always form the chief interest of all technical endeavors; concern for the great unsolved problems of the organization of labor and the distribution of our mind shall be a blessing and not a curse to mankind. Never forget this in the midst of your diagrams and equations.

Einstein Seeks Lack in Applying Science  
*The New York Times*, February 17, 1931 (p. 6)

**Huxley, Aldous** 1894–1963

English writer and critic

Applied Science is a conjurer, whose bottomless hat yields impartially the softest of Angora rabbits and the most petrifying of Medusas.

*Tomorrow and Tomorrow and Tomorrow and Other Essays*  
The Desert (p. 82)  
Harper & Brothers. New York, New York, USA. 1956

**Huxley, Thomas Henry** 1825–95

English biologist

I often wish that this phrase “applied science,” had never been invented. For it suggests that there is a sort of scientific knowledge of direct practical use, which can be studied apart from another sort of scientific knowledge, which is of no practical utility, and which is termed “pure science.” But there is no more complete fallacy than this.

*Collected Essays* (Volume 3)  
*Science and Education*  
Science and Culture (p. 137)  
Macmillan & Company Ltd. London, England. 1904

**Pasteur, Louis** 1822–95

French chemist

There does not exist a category of science to which one can give the name applied science. There are science and the applications of science, bound together as the fruit of the tree which bears it.

*Revue Scientifique*  
Pourquoi la France n’a pas trouvé hommes supérieurs au montent du péril (1871)

**Porter, George** 1920–2002

English chemist

To feed applied science by starving basic science is like economising on the foundations of a building so that it may be built higher.

Lest the Edifice of Science Crumble  
*New Scientist*, Volume 111, Number 1524, September 1986 (p. 16)

**Wheeler, Edgar C.**

No biographical data available

...[researchers] cannot remain indefinitely in any field of pure research. For every time they come upon a new bit of knowledge, almost instantly they discover some practical application. Thus the dividing line between pure science and applied science becomes thin.

Makers of Lightning  
*The World’s Work*, January 1927 (p. 271)

**SCIENCE, COMMUNICATION OF**

**Casimir, Hendrik B. G.** 1909–2000

Dutch physicist

There exists today a universal language that is spoken and understood almost everywhere: it is Broken English. [It] is used by the waiters in Hawaii, prostitutes in Paris and ambassadors in Washington, by businessmen from Buenos Aires, by scientists at international meetings and by dirty-postcard peddlers in Greece — in short, by honorable people like myself all over the world.

*Haphazard Reality: Half a Century of Science*  
Chapter 4 (p. 122)  
Harper & Row, Publishers. New York, New York, USA. 1983

**Chargaff, Erwin** 1905–2002

Austrian biochemist

There is no real popularization [of science] possible, only vulgarization that in most instances distorts the discoveries beyond recognition.

Bitter Fruits from the Tree of Knowledge  
*Perspectives in Biology and Medicine*, Volume 16, Summer, 1973 (p. 491)

...Scientists, like little fishes, swim in schools. When we open one of our scientific journals these days, we find a very uneven distribution of topics. Some important fields are almost entirely neglected, others seem to explode into bursts of unbelievable mediocrity. Really valuable contributions in the fields most in vogue at present probably are just as scarce as those dealing with the stepchildren of present-day biochemistry. But not all disciplines make it so easy to call each mush a “homogenate”, each soup a “partially purified extract”, and so to speak — when you have nothing whatever — of a “system.” There is a real danger that our science may suffocate in its own excrements.

*Essays on Nucleic Acids*  
Chapter 10 (p. 162)  
Elsevier Publishing Company. Amsterdam, Netherlands. 1963

**Chesterton, G. K. (Gilbert Keith)** 1874–1936

English author

Scientific phrases are used like scientific wheels and piston-rods to make swifter and smoother yet the path of the comfortable.

*Orthodoxy*  
Chapter VIII (p. 230)  
John Lane Company. New York, New York, USA. 1918

**Dancoff, S. M.**

American physicist

When you set out in a new field and choose a terminology you have the choice of using old, familiar words in new meanings or else you can make up new words for

the new meanings. If you use old words you make the theory look homey and inviting, but you run the risk of confusing the issue every time the old word is used. If you use new words you make the thing look excessively highbrow and frighten off any who might be interested.

Does the Neutrino Really Exist?

*Bulletin of the Atomic Scientists*, Volume 8, Number 5, June 1952 (p. 139)

**Dornan, Christopher** 1957–

American journalism professor

Science is seen as an avenue of access to assured findings, and scientists — in the dissemination of these findings — as the initial sources. The members of the laity are understood purely as recipients of this information. Journalists and public relations personnel are viewed as intermediaries through which the scientific findings filter. The task for science communication is to transmit as much information as possible with maximum fidelity.

Some Problems of Conceptualizing the Issues of “Science and the Media” *Critical Studies in Mass Communication*, Volume 7, Number 1, March 1990 (p. 51)

**Feynman, Richard P.** 1918–88

American theoretical physicist

We have a habit in writing articles published in scientific journals to make the work as finished as possible, to cover all the tracks, to not worry about the blind alleys or describe how you had the wrong idea first, and so on. So there isn’t any place to publish, in a dignified manner what you actually did in order to do the work....

*Nobel Lectures, Physics 1963–1970*

Nobel lecture for award received in 1965

The Development of the Space-Time View of Quantum Electrodynamics (p. 155)

Elsevier Publishing Company. Amsterdam, Netherlands. 1972

German-American physician

You must learn to talk clearly. The jargon of scientific terminology which rolls off your tongues is mental garbage.

In Howard Fabing and Ray Marr

*Fischerisms*

C.C. Thomas. Springfield, Illinois, USA. 1944

**Gibbs, J. Willard** 1839–1903

American mathematician

...science is, above all, communication.

In H.N. Parton

*Science Is Human*

Science and the Liberal Arts (p. 11)

University of Otago Press. Dunedin, New Zealand. 1972

**Huxley, Thomas Henry** 1825–95

English biologist

...there is assuredly no more effectual method of clearing up one’s own mind on any subject than by talking it over

so to speak, with men of real power and grasp, who have considered it from a totally different point of view.

*Collected Essays* (Volume 1)

*Method and Result*

Animal Automatism (p. 202)

Macmillan & Company Ltd. London, England. 1904

**Large, E. C.**

American author

[I]t was contended that...compartments labeled Chemistry, Mycology, Bacteriology...were never really fish-tanks for myopic specialists to swim about in, but merely convenient departments in one splendid and sunlit edifice of science, separated at the most by glass walls, decorated with the flags of all nations, and provided with innumerable intercommunicating doors. If so many stacks of old scientific papers got piled up on each side of the glass partitions that in the end no one could see through them, that was certainly regrettable; and if some of the doors were locked for periods ranging from a decade to a century, well, that also was a pity — but who wanted to work in a draught?

*The Advance of the Fungi*

Chapter XXIII (p. 317)

Henry Holt & Company. New York, New York, USA. 1940

**Lemke, J.**

No biographical data available

True Dialogue occurs when teachers ask questions to which they do not presume to already know the “correct answer.”

*Talking Science: Language, Learning and Values*

Chapter 3 (p. 55)

Ablex Publishing Corporation. Norwood, New Jersey, USA. 1990

**Loomis, Frederic Brewster** 1873–1937

American geologist

Everyone, who is alert as he wanders about this world, wants to know what he is seeing and what it is all about. Here and there with the aid of capable guides a few have been introduced into the sphere that wide and fascinating knowledge of Nature which has been so rapidly accumulated during this and the latter part of the last century. It is a full treasure house constantly being enriched, but unfortunately the few who have been initiated have soon acquired technical language and habit, so that their knowledge and new acquisitions are communicated to but a few.

*Field Book of Common Rocks and Minerals*

Preface (p. vii)

**Macdonald, Sharon**

No biographical data available

...science communication involves selection and definition, not just of which “facts” are presented to the public,

but of what is to count as science and of what kind of entity or enterprise science is to be. That is, science communicators act as authors of science for the public. They may also, however, by dint of their own institutional status, give implicit stamps of approval or disapproval to particular visions or versions of science. That is, they may act as authors with special authority on science — as authorisers of science.

In Alan Irwin and Brian Wynne (eds.)

*Misunderstanding Science? The Public Reconstruction of Science and Technology*

Authorizing Science: Public Understanding of Science in Museums (p. 152)  
Cambridge University Press. Cambridge, England. 1996

### **Mach, Ernst** 1838–1916

Austrian physicist and philosopher

Science is communicated by instruction, in order that one man may profit by the experience of another and be spared the trouble of accumulating it for himself; and thus, to spare posterity, the experiences of whole generations are stored up in libraries.

*The Science of Mechanics* (5<sup>th</sup> edition)

Chapter IV, Part IV, Section 1 (p. 578)

The Open Court Publishing Company. La Salle, Illinois, USA. 1942

### **Michelson, Albert Abraham** 1852–1931

German-American physicist

Science, when it has to communicate the results of its labor, is under the disadvantage that its language is but little understood. Hence it is that circumlocution is inevitable and repetitions are difficult to avoid.

*Light Waves and Their Uses*

Lecture I (p. 1)

The University of Chicago Press. Chicago, Illinois, USA. 1903

### **Moore, John A.**

American writer and professor of genetics and biology

... recall some of the lectures you may have heard recently. Did you always know why the research had been done? Was it clear what problem was being illuminated by the data presented?

Science as a Way of Knowing

*American Zoologist*, Volume 24, Number 2, 1984 (p. 471)

### **Moravcsik, M. J.**

No biographical data available

New theories, when first proposed, may appear on the first page of the New York Times, but their demise, a few years later, never makes even page 68.

*Research Policy*, Volume 17, 1988 (p. 293)

### **Neal, Patricia** 1926–

American actress

Gort, *Klaatu berada nikto!*

*The Day the Earth Stood Still*

Film (1951)

### **Oppenheimer, J. Robert** 1904–67

American theoretical physicist

The true responsibility of a scientist, as we all know, is to the integrity and vigor of his science. And because most scientists, like all men of learning, tend in part also to be teachers, they have a responsibility for the communication of the truths they have found. This is at least a collective, if not an individual responsibility. That we should see in this any insurance that the fruits of science will be used for man's benefit, or denied to man when they make for his distress or destruction, would be a tragic naïveté.

*The Open Mind*

Chapter V (p. 91)

Simon & Schuster. New York, New York, USA. 1955

Often the very fact that the words of science are the same as those of our common life and tongues can be more misleading than enlightening, more frustrating to understanding than recognizably technical jargon.

*Science and the Common Understanding*

Chapter 1 (p. 5)

Simon & Schuster. New York, New York, USA. 1954

It is proper to the role of the scientist that he not merely find new truth and communicate it to his fellows, but that he teach, that he try to bring the most honest and intelligible account of new knowledge to all who will try to learn.

*The Open Mind: Lectures*

Prospects in the Arts and Sciences (p. 138)

Simon & Schuster. New York, New York, USA. 1955

### **Parton, H. N.**

No biographical data available

Scientists have the duty to communicate, firstly with each other, that is with those who are interested in the same or allied problems, and secondly with laymen: by layman I mean anyone not familiar with their special science, for specialization has raised the level of scientific achievement so much, that chemists, for example, are usually laymen in say, biology; we may hope, intelligent laymen.

*Science Is Human*

Science and the Liberal Arts (p. 12)

University of Otago Press. Dunedin. 1972

Aldous Huxley, in a lecture on his grandfather, said that all communication is literature, and even in scientific writing there is wide room for the exercise of art.

*Science Is Human*

Science and the Liberal Arts (p. 14)

University of Otago Press. Dunedin. 1972

Computing and communication are becoming one...

*Technologies Without Boundaries: On Telecommunications in a Global Age*

Part I, Chapter I (p. 8)

Harvard University Press. Cambridge, Massachusetts, USA. 1990

**Priestley, Joseph** 1733–1804  
English theologian and scientist

When for the sake of a little more reputation, men can keep brooding over a new fact, in the discovery of which they might, possibly, have very little real merit, till they think they can astonish the world with a system as complete as it is new, and give mankind a high idea of their judgment and penetration; they are justly punished for their ingratitude to the fountain of all knowledge, and for their want of a genuine love of science and of mankind, in finding their boasted discoveries anticipated, and the field of honest fame pre-occupied, by men, who, from a natural ardour of mind engage in philosophical pursuits, with an ingenious simplicity immediately communicate to others whatever occurs to them in their inquiries.

*Experiment and Observations on Different Kinds of Air* (Volume 1)  
The Preface (pp. xvii–cviii)  
Printed by Thomas Pearson. Birmingham, England. 1740

**Roe, Anne** 1904–1991  
American psychologist

Nothing in science has any value to society if it is not communicated. . . .

*The Making of a Scientist*  
Chapter I (p. 17)  
Greenwood Press, Publishers. Westport, Connecticut, USA. 1973

**Schrödinger, Erwin** 1887–1961  
Austrian theoretical physicist

Bohr's . . . approach to atomic problems . . . is really remarkable. He is completely convinced that any understanding in the usual sense of the word is impossible. Therefore the conversation is almost immediately driven into philosophical questions, and soon you no longer know whether you really take the position he is attacking, or whether you really must attack the position that he is defending.

In W. Moore  
*Schrodinger: Life and Thoughts*  
Chapter 6, Letter to W. Wein 1926 (p. 228)  
Cambridge University Press. Cambridge, England. 1989

If you cannot — in the long run — tell everyone what you have been doing, your doing has been worthless.

*Science and Humanism: Physics in Our Time*  
The Spiritual Bearing of Science on Life (pp. 8–9)  
At The University Press. Cambridge, England. 1952

**von Goethe, Johann Wolfgang** 1749–1832  
German poet, novelist, playwright, and natural philosopher

The present age has a bad habit of being abstruse in the sciences. We remove ourselves from common sense without opening up a higher one; we become transcendent, fantastic, fearful of intuitive perception in the real world, and when we wish to enter the practical realm, or need to, we suddenly turn atomistic and mechanical.

*Scientific Studies* (Volume 12)

Chapter VIII (pp. 308–309)  
Suhrkamp. New York, New York, USA. 1988

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

Nobody has a right to speak more clearly than he thinks.  
*Washingtonian*, Volume 15, Number 143, November 1979

**Wiener, Norbert** 1894–1964  
American mathematician

[T]he more probable the message, the less information it gives. Clichés, for example, are less illuminating than great poems.

*The Human Use of Human Beings*  
Chapter I (p. 21)  
Da Capo Press. New York, New York, USA. 1988

**Ziman, John M.** 1925–2005  
British physicist

The cliché of scientific prose betrays itself “Hence we arrive at the conclusion that. . . .” The audience to which scientific publications are addressed is not passive; by its cheering or booing, its bouquets or brickbats, it actively controls the substance of the communications that it receives.

*Public Knowledge: An Essay Concerning the Social Dimension of Science*  
Chapter 1 (p. 9)  
Cambridge University Press. Cambridge, England. 1968

It is not enough to observe, experiment, theorize, calculate and communicate; we must also argue, criticize, debate, expound, summarize, and otherwise transform the information that we have obtained individually into reliable, well established, public knowledge.

Information, Communication, Knowledge  
*Nature*, Volume 224, Number 5217, October 25, 1969 (p. 324)

## SCIENCE, HISTORY OF

**Appleton, Sir Edward** 1892–1965  
English physicist

. . . the history of science has proved that fundamental research is the lifeblood of individual progress and that the ideas which lead to spectacular advances spring from it.

In J. Edwin Holmstrom  
*Records and Research in Engineering and Industrial Science*  
Chapter One (p. 7)  
Chapman & Hall. London, England. 1956

**Asimov, Isaac** 1920–92  
American author and biochemist

A number of years ago, when I was a freshly-appointed instructor, I met, for the first time, a certain eminent historian of science. At the time I could only regard him with tolerant condescension. I was sorry for a man who, it seemed to me, was forced to hover about the edges of

science.... In a lifetime of being wrong at many a point, I was never more wrong. It was I, not he, who was wandering in the periphery. It was he, not I, who lived in the blaze. I had fallen victim to the fallacy of the "growing edge"; the belief that only the very frontier of scientific advance counted; that everything that had been left behind by that advance was faded and dead.

*Adding a Dimension*

Introduction (p. 7)

Lancer Books, New York, New York, USA. 1969

### **Bernal, John Desmond** 1901–71

Irish-born physicist and x-ray crystallographer

The whole history of modern science, has been that of a struggle between ideas derived from observation and practice, and pre-conceptions derived from religious training. It was not...that Science had to fight an external enemy, the Church; it was that the Church itself — its dogmas, its whole way of conceiving the universe — was within the scientists themselves.... After Newton, God ruled the visible world by means of Immutable Laws of Nature, set in action by one creative impulse, but He ruled the moral world by means of absolute intimations of moral sanctions, implanted in each individual soul, reinforced and illuminated by Revelation and the Church....

In W.H. Waddington

*Science and Ethics*

A Marxist Critique (pp. 115–116)

George Allen & Unwin Ltd. London, England. 1942

The role of God in the material world has been reduced stage by stage with the advance of Science, so much so that He only survives in the vaguest mathematical form in the minds of older physicists and biologists.

In W.H. Waddington

*Science and Ethics*

A Marxist Critique (pp. 115–116)

George Allen & Unwin Ltd. London, England. 1942

### **Butterfield, Herbert** 1900–79

English historian and philosopher of history

The greatest obstacle to the understanding of the history of science is our inability to unload our minds of modern views about the nature of the universe.

*The History of Science, Origins and Results of the Scientific Revolution: A Symposium*

Dante's View of the Universe (p. 15)

Free Press, Glencoe, Illinois, USA. 1953

One of the safest speculations that we could make...[is] that very soon the history of science is going to acquire an importance...incommensurate with anything that it has hitherto possessed. It...is no longer merely an account of one of many human activities like the history of music or...of cricket.... Because it deals with one of the main constituents of the modern world and the modern mind, we cannot construct a respectable history of Europe or

a tolerable survey of western civilization without it. It is going to be as important for us for the understanding of ourselves as Graeco-Roman antiquity was for Europe during a period of over a thousand years.

*The History of Science and the Study of History*

*Harvard Library Bulletin*, Volume 13, 1959 (pp. 330–331)

Free Press, Glencoe, Illinois, USA. 1953

[The scientific revolution] outshines everything since the rise of Christianity and reduces the Renaissance and Reformation to the ranks of mere episodes, mere internal displacements, within the system of medieval Christendom...it looms so large as the real origin of the modern world and the modern mentality that our customary periodization of European history has become an anachronism and an encumbrance.

*The Origins of Modern Science*

Introduction (pp. vii–viii)

The Macmillan Company, New York, New York, USA. 1961

### **Chamberlain, Owen** 1920–2006

American physicist

The most that any scientist can ask is that he help to lay a few stones of a partially-built edifice that we call scientific knowledge. To him this edifice is a beautiful structure, although it will never be finished.

*Les Prix Nobel. the Nobel Prizes in 1959*

Nobel banquet speech for award received in 1959

Nobel Foundation, Stockholm, Sweden. 1960

### **Cohen, I. Bernard** 1914–2003

American physicist and science historian

History with the history of science, to alter slightly an apothegm of Lord Bacon, resembles a statue of Polyphemus without his eye — that very feature being left out which most marks the spirit and life of the person. My own thesis is complementary: science taught...without a sense of history is robbed of those very qualities that make it worth teaching to the student of the humanities and the social sciences.

In I. Bernard Cohen and Fletcher G. Watson (eds.)

*General Education in Science* (p. 71)

*The History of Science and the Teaching of Science* (p. 71)

Harvard University Press, Cambridge, Massachusetts, USA. 1952

### **Conant, James Bryant** 1893–1978

American educator and scientist

We can put it down as one of the principles learned from the history of science that a theory is only overthrown by a better theory, never merely by contradictory facts.

*On Understanding Science*

Chapter II (p. 36)

Yale University Press, New Haven, Connecticut, USA. 1947

The history of science demonstrates beyond doubt that the really revolutionary and significant advances come not from empiricism but from new theories.

*Modern Science and Modern Man*

Science and Technology (p. 30)

Columbia University Press. New York, New York, USA. 1952

**Darwin, Charles Robert** 1809–82

English naturalist

Great is the power of steady misrepresentation — but the history of science shows how, fortunately, this power does not long endure.

In *Great Books of the Western World* (Volume 49)

*The Origin of Species by Means of Natural Selection*

Chapter XV (p. 239)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Draper, John William** 1811–82

American scientist, philosopher, and historian

The history of science is not a mere record of isolated discoveries; it is a narrative of the conflict of two contending powers, the expansive force of the human intellect on one side, and the compression arising from traditionary faith and human interest on the other.

*History of the Conflict Between Religion and Science*

Preface (p. vi)

D. Appleton and Company. New York, New York, USA. 1898

**Duhem, Pierre-Maurice-Marie** 1861–1916

French physicist and mathematician

...the history of science alone can keep the physicist from the mad ambitions of dogmatism as well as the despair of Pyrrhonian skepticism.

*The Aim and Structure of Physical Theory*

Part II, Chapter VII (p. 270)

Princeton University Press. Princeton, New Jersey, USA. 1954

**Feyerabend, Paul K.** 1924–94

Austrian-born American philosopher of science

The history of science, after all, does not just consist of facts and conclusions drawn from facts. It also contains ideas, interpretations of facts, problems created by conflicting interpretations, mistakes, and so on. On closer analysis we even find that science knows no “bare facts” at all but that the “facts” that enter our knowledge are already viewed in a certain way and are, therefore, essentially ideational.

*Against Method: Outline of an Anarchistic Theory of Knowledge*

Introduction (p. 19)

Verso. London, England. 1978

...the history of science will be as complex, chaotic, full of mistakes, and entertaining as the ideas it contains, and these ideas in turn will be as complex, chaotic, full of mistakes, and entertaining as are the minds of those who invented them.

*Against Method: Outline of an Anarchistic Theory of Knowledge*

Introduction (p. 19)

Verso. London, England. 1978

**Fisher, Sir Ronald Aylmer** 1890–1962

English statistician and geneticist

More attention to the History of Science is needed, as much by scientists as by historians, and especially by biologists, and this should mean a deliberate attempt to understand the thoughts of the great masters of the past, to see in what circumstances or intellectual milieu their ideas were formed, where they took the wrong turning or stopped short on the right track.

Natural Selection from the Genetical Standpoint

*Australian Journal of Science*, Volume 22, 1959

**Foster, Sir Michael** 1836–1907

English physiologist and educator

When we look into the past of science and trace our the first buddings of what afterwards grow to be umbrageous branches, it sometimes seems as if every time, and almost every year, marked an epoch.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1898*

Recent Advances in Science, and Their Bearing on Medicine and Surgery (p. 345)

Government Printing Office. Washington, D.C. 1899

It is one of the lessons of the history of science that each age steps on the shoulders of the ages which have gone before.

In Lloyd William Taylor

*Physics: The Pioneer Science* (Volume 1)

Chapter 5 (p. 51)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1941

**Geikie, Sir Archibald** 1835–1924

English geologist

In science, as in all other departments of inquiry, no thorough grasp of a subject can be gained unless the history of its development is clearly appreciated.

*The Founders of Geology*

Lecture I (p. 1)

Macmillan & Company Ltd. London, England. 1897

**Hall, Alfred Rupert** 1920–

English historian of science

The difficulty [in understanding science history] is the greater because the history of science is not, and cannot be, a tight unity. The different branches of science are themselves unlike in complexity, in techniques, and in their philosophy. They are not all affected equally, or at the same time, by the same historical factors, whether internal or external. It is not even possible to trace the development of a single scientific method, some formulation of principles and rules of operating which might be imagined as applicable to every scientific inquiry, for there is no such thing.

*The Scientific Revolution, 1500–1800*

Introduction (p. xiv)

Longmans, Green & Company. London, England. 1954

**Hall, Marie Boas** 1919–

English historian of science

For the...student whose chief interest does lie in science, for whom history as a course of study so often seems to deal solely with subjects remote from his intellectual turn of mind, the history of science provides a valid and useful point of contact with history, through which he may learn to develop wider humanistic interests. For the non-scientist, bored and baffled by the technical problems of science, the history of science may provide some insight into the scientific point of view and prevent the feeling of isolation which too often makes the scientist and the humanist appear to move in separate worlds.

*History of Science* (p. 1)

American Historical Association. Washington, D.C. 1958

### **Holton, Gerald** 1922–

Research professor of physics and science history

And yet, on looking into the history of science, one is overwhelmed by evidence that all too often there is no regular procedure, no logical system of discovery, no simple, continuous development. The process of discovery has been as varied as the temperament of the scientist.

*Thematic Origins of Scientific Thought: Kepler to Einstein*

Chapter 11 (pp. 384–385)

Harvard University Press. Cambridge, Massachusetts, USA. 1973

### **Huxley, Thomas Henry** 1825–95

English biologist

...any one acquainted with the history of science will admit that its progress has meant, in all ages and now more than ever, the extension of the province of matter and causation, and the gradual banishment from human thought of what we call spirit and spontaneity.

*Collected Essays* (Volume 1)

*Method and Result*

On the Physical Basis of Life (p. 159)

Macmillan & Company Ltd. London, England. 1904

### **Knickerbocker, William Skinkle** 1892–1972

American professor of English and author

...the history of science is as inspiring in its human values as are the legends of the saints. Contemplate the heroism of a Galileo, the patience of a Darwin, the humility of a Pasteur; a modern eleventh chapter of Hebrews might be written listing the names of all those men of faith who by quiet work, unremitting in their zeal, one by one discovered facts which made man's lot easier and happier in what was otherwise to him a hostile and unhappy universe.

*Classics of Modern Science*

Preface

Alfred A Knopf. New York, New York, USA. 1927

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

### **Kuhn, Thomas S.** 1922–96

American historian of science

Though the gap seems small, there is no chasm that more needs bridging than that between the historian of ideas and the historian of science.

*International Encyclopedia of the Social Sciences*

Volume 14, History of Science (p. 78)

The Macmillan Company. New York, New York, USA. 1968

### **Lakatos, Imre** 1922–74

Hungarian-born philosopher

Philosophy of science without history of science is empty; history of science without philosophy of science is blind.

In R. Buck and R. Cohen (eds.)

*Boston Studies in the Philosophy of Science* (Volume 8)

History of Science and Rational Reconstructions (p. 91)

D. Reidel Publishing Company. Dordrecht, Netherlands.

### **Lavoisier, Antoine Laurent** 1743–94

French chemist

...if I had allowed myself to enter into long dissertations on the history of the science, and the works of those who have studied it, I must have lost sight of the true object I had in view, and produced a work, the reading of which must have been extremely tiresome to beginners. It is not to the history of the science, or of the human mind, that we are to attend in an elementary treatise: Our only aim ought to be ease and perspicuity, and with the utmost care to keep every thing out of view which might draw aside the attention of the student; it is a road which we should be continually rendering more smooth, and from which we should endeavor to remove every obstacle which can occasion delay.

*Elements of Chemistry in a New Systematic Order*

Preface of the Author (pp. xxxii–xxxiii)

Printed for William Creech. Edinburgh, Scotland. 1790

### **Lévi-Strauss, Claude** 1908–

French social anthropologist and structuralist

...scientific knowledge advances haltingly and is stimulated by contention and doubt.

Translated by John and Doreen Weightman

*The Raw and the Cooked*

Overture (p. 7)

Harper & Row, Publishers. New York, New York, USA. 1975

### **Libby, Walter** 1867–1955

American science historian

The history of science has something to offer to the humblest intelligence. It is a means of imparting a knowledge of scientific facts and principles to unschooled minds.

*An Introduction to the History of Science*

Preface (p. v)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1917

The history of science is an aid in scientific research. It places the student in the current of scientific thought, and gives him a clue to the purpose and necessity of the theories he is required to master. It presents science as the constant pursuit of truth rather than the formulation of truth long since revealed; it shows science as progressive

rather than fixed; dynamic rather than static, a growth to which each may contribute.

*An Introduction to the History of Science*

Preface (p. v)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1917

The history of science is hostile to the spirit of caste. It shows the sciences rising from daily needs and occupations, formulated by philosophy, enriching philosophy, giving rise to new industries, which react in turn upon the sciences.

*An Introduction to the History of Science*

Preface (p. vi)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1917

The history of science studies the past for the sake of the future. It is a story of continuous progress. It is rich in biographical material. It shows the sciences in their interrelations, and saves the student from narrowness and premature specialization.

*An Introduction to the History of Science*

Preface (p. vi)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1917

### **Mach, Ernst** 1838–1916

Austrian physicist and philosopher

[N]ot only a knowledge of the ideas that have been accepted and cultivated by subsequent teachers is necessary for the historical understanding of a science, but also that the rejected and transient thoughts of the inquirers, may even apparently erroneous notions, may be very important and very instructive. The historical investigation of the development of a science is most needful, lest the principles treasured up in it become a system of half-understood prescripts, or worse, a system of prejudices.

*The Science of Mechanics* (5<sup>th</sup> edition)

Chapter II, Part VIII, Section 7 (p. 316)

The Open Court Publishing Company. La Salle, Illinois, USA. 1942

Historical investigation not only promotes the understanding of that which now is, but also brings new possibilities before us, by showing that which exists to be in great measure conventional and accidental. From the higher point of view at which different paths of thought converge we may look about us with freer vision and discover routes before unknown.

*The Science of Mechanics* (5<sup>th</sup> edition)

Chapter II, Part VIII, Section 7 (p. 316)

The Open Court Publishing Company. La Salle, Illinois, USA. 1942

The knowledge of the development of a science rests on the study of writings in their historical sequence and in their historical connection.

*The Science of Mechanics* (5<sup>th</sup> edition)

Chapter I, Part V, Section 9 (p. 97)

The Open Court Publishing Company. La Salle, Illinois, USA. 1942

### **Macquer, Pierre Joseph** 1718–84

French chemist

As the History of any Science ought to relate the labours, the discoveries, and the errors of the cultivators of that Science; and to shew the obstacles which they have been obliged to surmount, and the mistaken paths into which they have sometimes been misled; it cannot therefore fail of being very useful to persons engaged in the same pursuits.

*A Dictionary of Chemistry* (Volume 1)

A Preliminary Discourse Concerning the Origin and Progress of Chemistry (p. 1)

Printed for T. Caldwell & R.F. Elmsly. London, England. 1771

### **Popper, Karl R.** 1902–94

Austrian/British philosopher of science

The history of science, like the history of all human ideas, is a history of irresponsible dreams, of obstinacy, and of error.

*Conjectures and Refutations: The Growth of Scientific Knowledge*

Chapter 10, Section I (p. 216)

Harper & Row, Publishers. New York, New York, USA. 1963

### **Richet, Charles** 1850–1935

French physiologist

In the history of science, nobody has left his mark on the world unless he has been, in this sense, an innovator.

*The Natural History of a Savant*

Chapter VI (p. 38)

J.M. Dent & Sons Ltd. London, England. 1927

### **Rostand, Jean** 1894–1972

French biologist and philosopher

By showing us the extreme diversity of the factors involved in scientific creativity, the history of science teaches us that we should open the doors of our laboratories more widely. If we put that lesson into practice, our reflection on the past will have had a beneficial effect on the future.

*Humanly Possible: A Biologist's Note on the Future of Mankind*

On the History of Science (p. 182)

Saturday Review Press. New York, New York, USA. 1970

If there is one notion that clearly emerges from the history of science, and from which we can learn something, it is, I believe, the extreme diversity of the personal qualities and abilities that have contributed to the advancement of our knowledge.

*Humanly Possible: A Biologist's Note on the Future of Mankind*

On the History of Science (p. 180)

Saturday Review Press. New York, New York, USA. 1970

### **Sarton, George** 1884–1956

Belgian-born American scholar and writer

From the point of view of the history of science, transmission is as essential as discovery.

*Introduction to the History of Science* (Volume 2)

Introductory Chapter (p. 15)

The Williams & Wilkins Company. Baltimore, Maryland, USA. 1927

The study of history, and especially of the history of science, may thus be regarded, not only as a source of

wisdom and humanism, but also as a regulator for our consciences: it helps us not to be complacent, arrogant, too sanguine of success, and yet remain grateful and hopeful, and never to cease working quietly for the accomplishment of our own task.

*The History of Science and the New Humanism*

Chapter IV (p. 191)

Indiana University Press. Bloomington, Indiana, USA. 1962

### **Schweizer, Karl W.**

American professor of history

One of the obstructions to a genuine appreciation of history is the existence of a vague unformulated assumption that historical research merely seeks to disinter a fossilized past — merely digs into the memory to recover things which the human race once knew before. On the basis of such an assumption it is possible for people to have the feeling that history can never produce anything which is fundamentally novel, but merely fills our minds with the lumber of bygone ages.

*Herbert Butterfield: Essays on the History of Science*

Chapter II (p. 19)

Edwin Mellon Press. Lewiston, New York, USA. 1998

### **Silver, Brian L.**

Israeli professor of physical chemistry

The essence of scientific history has been conflict.

*The Ascent of Science*

Preface (p. xiii)

Solomon Press Book. New York, New York, USA. 1998

### **Tannery, Paul** 1843–1904

French mathematician and historian of science

The scientist in so far as he is a scientist is only drawn to the history of the particular science that he studies himself; he will demand that this history be written with every possible technical detail, for it is only thus that it can supply him with materials of any possible utility. But what he will particularly require is the study of the thread of ideas and the linking together of discoveries. His chief object is to rediscover in its original form the expression of his predecessors' actual thoughts, in order to compare them with his own; and to unravel the methods that served in the construction of current theories, in order to discover at what point and towards what goal an effort towards innovation may be made.

In A. Rupert Hall

Can the History of Science Be History?

*The British Journal for the History of Science*, Volume 4, Part III, Number 15, June 1969 (p. 212)

### **Turner, H. H.**

No biographical data available

It is a familiar fact that there are epochs in the history of a science when it acquires new vigor; when new branches are put forth and old branches bud afresh or blossom

more plenteously. The vivifying cause is generally to be found either in the majestic form of the discovery of a new law of nature or in the humbler guise of the invention of a new instrument of research.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1904*

Some Reflections Suggested by the Application of Photography to

Astronomical Research (p. 171)

Government Printing Office. Washington, D.C. 1905

### **Weisskopf, Victor Frederick** 1908–2002

Austrian-American physicist

It was a heroic period [about 1922–1930] without any parallel in the history of science, the most fruitful and interesting one of modern physics.... In this great period of physics, Bohr and his associates touched the nerve of the universe. The intellectual eye of man was opened to the inner workings of nature.

In A.P. French and P.J. Kennedy (eds.)

*Niels Bohr: A Centenary Volume*

Niels Bohr, the Quantum, and the World (p. 22)

Harvard University Press. Cambridge, Massachusetts, USA. 1985

### **Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

History is no exception amongst the sciences; as the gaps fill in, the outline simplifies; as the outlook broadens, the clustering multitude of details dissolve into general laws.

*The Outline of History*

Introduction (p. vi)

The Macmillan Company. New York, New York, USA. 1921

### **Whewell, William** 1794–1866

English philosopher and historian

We may best hope to understand the nature and conditions of real knowledge by studying the nature and conditions of the most certain and stable portions of knowledge which we already possess: and we are most likely to learn the best methods of discovering truth by examining how truths, now universally recognized, have really been discovered. *The Philosophy of the Inductive Sciences Founded upon Their History* (Volume 1)

Book I, Chapter I (p. 1)

John W. Parker. London, England. 1847

[T]here do exist among us doctrines of solid and acknowledged certainty, and truths of which the discovery has been received with universal applause. These constitute what we commonly term Sciences; and of these bodies of exact and enduring knowledge, we have within our reach so large and varied a collection, that we may examine them, and the history of their formation, with good prospect of deriving from the study such instruction as we seek.

*The Philosophy of the Inductive Sciences Founded upon Their History* (Volume 1)

Book I, Chapter I (p. 2)

John W. Parker. London, England. 1847

It will be universally expected that a history of Inductive Science should...afford us some indication of the most promising mode of directing our future efforts to add to its extent and completeness.

*History of the Inductive Sciences, from the Earliest to the Present Time* (Volume the First)

Introduction (p. 5)

John W. Parker. London, England. 1837

[T]he progress of knowledge is the main action of our drama; and all the events which do not bear upon this, though they may relate to the cultivation and the cultivators of philosophy, are not a necessary part of our theme.

*History of the Inductive Sciences, from the Earliest to the Present Time* (Volume the First)

Introduction (pp. 9, 12)

John W. Parker. London, England. 1837

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

Science is concerned with the facts of bygone transition. History relates the aim at ideals. And between Science and History, lies the operation of the Deistic impulse of energy. It is the religious impulse in the world which transforms the dead facts of Science into the living drama of History. For this reason Science can never foretell the perpetual novelty of History.

*Modes of Thought*

Chapter II, Lecture Five (p. 142)

The Macmillan Company. New York, New York, USA. 1938

**Williams, L. Pearce**

American historian of science

...the history of science is a professional and rigorous discipline demanding the same level of skills and scholarship as any other scholarly field. It is time for the scientists to realize that he studies nature and others study him. He is no more nor no less competent to comment on his own activities and the activities of his fellow scientist than is the politician. Critical political history is rarely written by the politician and the same is true of the history of science.

Letter to the Editor

*Scientific American*, Volume 214, Number 6, June 1966 (p. 8)

**Willstätter, Richard** 1872–1942

German chemist

I consider the teaching and study of the historical development of science as indispensable.... Our textbooks fail in this respect.

In Rolf Huisgen

Adolf von Baeyer's Scientific Achievements — A Legacy

*Angewandte Chemie International Edition in English*, Volume 25, Number 4, April 1986 (p. 297)

## SCIENCE, MAN OF

**Barrie, Sir James M.** 1860–1937

Scottish journalist, writer, and dramatist

The man of science appears to be the only man who has something to say, just now — and the only man who does not know how to say it.

*Applied Physics*, Volume 2, 1963

**Berkeley, George** 1685–1753

Irish prelate and metaphysical philosopher

Query: Whether the difference between a mere computer and a man of science be not, that the one computes on principles clearly conceived, and by rules evidently demonstrated, whereas the other doth not?

In A. Luce and T. Jessop (eds.)

*The Works of George Berkeley, Bishop of Cloyne* (Volume 4)

The Analyst

Nelson. London, England. 1948

**Bernard, Claude** 1813–78

French physiologist

Men of science, then, do not seek for the pleasure of seeking; they seek the truth to possess it, and they possess it already within the limits expressed in the present state of science.

Translated by Henry Copley Greene

*An Introduction to the Study of Experimental Medicine*

Part Three, Chapter IV, Section IV (p. 222)

Henry Schuman, Inc. New York, New York, USA. 1927

...men of science must not halt on the road; they must climb ever higher and strive toward perfection; they must always seek as long as they see anything to be found.

Translated by Henry Copley Greene

*An Introduction to the Study of Experimental Medicine*

Part Three, Chapter IV, Section IV (p. 222)

Henry Schuman, Inc. New York, New York, USA. 1927

**Bradley, Omar** 1893–1981

American Army general

With the monstrous weapons man already has, humanity is in danger of being trapped in this world by its moral adolescents. Our knowledge of science has already outstripped our capacity to control it. We have many men of science, too few men of God.

Address

Boston, November 10, 1948

**Butler, Samuel** 1612–80

English novelist, essayist, and critic

I do not know whether my distrust of men of science is congenital or acquired, but I think I should have transmitted it to descendants.

In Geoffrey Keynes and Brian Hill (eds.)

*Samuel Butler's Notebooks*

Myself and Distrust of Men of Science (p. 32)

Jonathan Cape. London, England. 1951

If [men of science] are worthy of the name, [they] are indeed about God's path and about his bed and spy out all his ways.

In Geoffrey Keynes and Brian Hill (eds.)  
*Samuel Butler's Notebooks*  
 Men of Science (p. 204)  
 Jonathan Cape. London, England. 1951

**Chesterton, G. K. (Gilbert Keith)** 1874–1936  
 English author

Far away in some strange constellation in skies infinitely remote, there is a small star, which astronomers may some day discover. At least, I could never observe in the faces or demeanor of most astronomers or men of science any evidence that they had discovered it; though as a matter of fact they were walking about on it all the time. It is a star that brings forth out of itself very strange plants and very strange animals; and none stranger than the men of science.

*The Everlasting Man*  
 Chapter I (p. 1)  
 Dodd, Mead & Company. New York, New York, USA. 1925

...the ordinary scientific man is strictly a sentimentalist. He is a sentimentalist in this essential sense, that he is soaked and swept away by mere associations.

*Orthodoxy*  
 Chapter IV (pp. 94–95)  
 John Lane Company. New York, New York, USA. 1918

**Clifford, William Kingdon** 1845–79  
 English philosopher and mathematician

A man of science...explains as much as ever he can, and then he says, "This is all I can do; for the rest you must ask the next man."

In Leslie Stephen and Frederick Pollock (eds.)  
*Lectures and Essays* (Volume 2)  
 Body and Mind (p. 32)  
 Macmillan & Company. London, England. 1879

**Darwin, Charles Robert** 1809–82  
 English naturalist

Children are one's greatest happiness, but often and often a still greater misery. A man of science ought to have none — perhaps not a wife; for then there would be nothing in this wide world worth caring for, and a man might (whether he could is another question) work away like a Trojan.

In Francis Darwin (ed.)  
*More Letters of Charles Darwin* (Volume 1)  
 Letter 139, Darwin Asa Gray, July 11, 1862 (p. 202)  
 D. Appleton & Company. New York, New York, USA. 1903

...my success as a man of science, whatever this may have amounted to, has been determined, as far as I can judge, by complex and diversified mental qualities and conditions. Of these, the most important have been — the love of science, unbounded patience in long reflecting over any subject, industry in observing and collecting facts, and a fair share of invention as well as of common-sense. With such moderate abilities as I possess,

it is truly surprising that I should have influenced to a considerable extent the belief of scientific men on some important points.

In Francis Darwin (ed.)  
*The Life and Letters of Charles Darwin* (Volume 1)  
 Chapter II (p. 85)  
 D. Appleton & Company. New York, New York, USA. 1896

**Dumas, Jean Baptiste-Andre** 1800–84  
 French biochemist

The recollection of an already long life has permitted me to become acquainted with a great variety of personages. And if I call on memory to picture to me how the type of true happiness is realized on earth I do not see it under the form of the powerful man clothed in high authority, nor under that of the rich man to whom the splendors of luxury and the delicacies of well-being are granted, but under that of the man of science, who consecrates his life to penetrating the secrets of Nature and to the discovery of new truths.

In Sir Richard Arman Gregory  
*Discovery; or, The Spirit and Service of Science*  
 Chapter I (p. 18)  
 Macmillan & Company Ltd. London, England. 1918

**Eddington, Sir Arthur Stanley** 1882–1944  
 English astronomer, physicist, and mathematician

Verily, it is easier for a camel to pass through the eye of a needle than for a scientific man to pass through a door. And whether the door be barn door or church door it might be wiser that he should consent to be an ordinary man and walk in rather than wait till all the difficulties involved in a really scientific ingress are resolved.

*The Nature of the Physical World*  
 Chapter XV (p. 342)  
 The Macmillan Company. New York, New York, USA. 1930

**Einstein, Albert** 1879–1955  
 German-born physicist

It has often been said, and certainly not without justification, that the man of science is a poor philosopher. Why then should it not be the right thing for the physicist to let the philosopher do the philosophizing? ...At a time like the present, when experience forces us to seek a newer and more solid foundation, the physicist cannot simply surrender to the philosopher the critical contemplation of the theoretical foundations; for, he himself knows best, and feels more surely where the shoe pinches. In looking for a new foundation, he must try to make clear in his own mind just how far the concepts which he uses are justified, and are necessities.

*Physik and Realität*  
*Journal of the Franklin Institute*, Volume 221, 1936

**Emerson, Ralph Waldo** 1803–82  
 American lecturer, poet, and essayist

We hearken to the man of science, because we anticipate the sequence in natural phenomena which he uncovers.

*The Complete Works of Ralph Waldo Emerson* (Volume 4)

Representative Men

Chapter IV (p. 170)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

**Froude, James Anthony** 1818–94

English historian and biographer

The secrets of nature have been opened out to us on a thousand lines; and men of science of all creeds can pursue side by side their common investigations.

*Short Studies on Great Subjects* (Volume 1)

Times of Erasmus, Desiderius and Luther, Lecture I (p. 41)

**Gregory, Sir Richard Arman** 1864–1952

British science writer and journalist

The scientific man has to work for truth so far as her ways can be comprehended by him, but he is never more than a trustee for posterity, and has no authority to define the functions or limit the freedom of those who follow him.

*Discovery; or The Spirit and Service of Science*

Chapter II (p. 30)

Macmillan & Company Ltd. London, England. 1918

The man of science, by virtue of his training, is alone capable of realising the difficulties — often enormous — of obtaining accurate data upon which just judgment may be based.

*Discovery; or, The Spirit and Service of Science*

Chapter III (p. 40)

Macmillan & Company Ltd. London, England. 1918

To the popular mind, a man of science is a callous necromancer who has cut himself off from communion with his fellows, and has thereby lost the throbbing and compassionate heart of a full life: he is a Faust who has not yet made a bargain with Mephistopheles, and is therefore without human interest.

*Discovery; or, The Spirit and Service of Science*

Preface (p. v)

Macmillan & Company Ltd. London, England. 1918

**Hall, Asaph** 1829–1907

American astronomer

When men are striving for the discovery of truth in its various manifestations, they learn that it is by correcting the mistakes of preceding investigators that progress is made, and they have charity for criticism. Hence persecution for difference of opinion becomes an absurdity. The labours of scientific men are forming a great body of doctrine that can be appealed to with confidence in all countries. Such labours bring people together, and tend to break down national barriers and restrictions.

In Sir Richard Arman Gregory

*Discovery; or, The Spirit and Service of Science*

Chapter II (pp. 30–31)

Macmillan & Company Ltd. London, England. 1918

**Huxley, Thomas Henry** 1825–95

English biologist

The man of science has learned to believe in justification, not by faith, but by verification.

*Collected Essays* (Volume 1)

*Method and Result*

On Improving Natural Knowledge (p. 41)

Macmillan & Company Ltd. London, England. 1904

**Laplace, Pierre Simon** 1749–1827

French mathematician, astronomer, and physicist

The isolated man of science can dedicate himself without fear to dogmatism; he hears only from afar contradictions of his ideas. But in a scientific society the impact of dogmatic ideas soon results in their destruction, and the desire to win one another over to their point of view establishes necessarily among members the convention of admitting only the results of observations and calculation.

In Maurice Crosland

*Gay-Lussac: Scientist and Bourgeois*

Chapter 2 (p. 34)

Cambridge University Press. Cambridge, England. 1978

**Mather, Kirtley F.** 1888–1978

American geologist

To the man of science every event in the history of the universe is a miracle. It is both awe-inspiring and significant, a “sign and wonder.”

In Edward H. Cotton

*Has Science Discovered God?*

Sermons from Stones (p. 3)

Thomas Y. Crowell Company, Publishers. New York, New York, USA. 1931

**Melville, Herman** 1819–91

American novelist

...a man of true science...uses but few hard words, and those only when none other will answer his purpose; whereas the smatterer in science...thinks, that by mouthing hard words, he proves that he understands hard things.

*White Jacket*

Chapter LXIII (p. 277)

Northwestern University Press. Evanston, Illinois, USA. 1970

**Pearson, Karl** 1857–1936

English mathematician

The scientific man has above all things to strive at self-elimination [elimination of self] in his judgments....

*The Grammar of Science*

Introductory, Section 2 (p. 7)

Charles Scribner's Sons. London, England. 1892

**Poincaré, Henri** 1854–1912

French mathematician and theoretical astronomer

The true man of science has no such expression in his vocabulary as useful science...if there can be no science for science's sake there can be no science.

In James Kip Finch  
Engineering and Science  
*Technology and Culture*, Fall 1961 (p. 330)

**Popper, Karl R.** 1902–94

Austrian/British philosopher of science

...it is not his possession of knowledge, of irrefutable truth, that makes the man of science, but his persistent and recklessly critical quest for truth.

*The Logic of Scientific Discovery*  
Part II, Chapter X, Section 85 (p. 281)  
Basic Books, Inc. New York, New York, USA. 1959

**Renan, Ernest** 1823–92

French philosopher and Orientalist

With the saints, the heroes, the great men of all ages we may fearlessly compare our men of scientific minds, given solely to the research of truth, indifferent to fortune, often proud of their poverty, smiling at the honors they are offered, as careless of flattery as of obloquy, sure of the worth of that they are doing, and happy because they possess truth.

The Nobility of Science  
*Scientific American*, Volume 40, Number 20, New Series, 17 May 1879 (p. 310)

**Robinson, James Harvey** 1863–1936

American historian

**Beard, Charles A.** 1874–1948

American historian

It may well be that men of science, not kings, or warriors, or even statesmen are to be the heroes of the future.

*The Development of Modern Europe: An Introduction to the Study of Current History* (Volume 2)  
Chapter XXXI (p. 421)  
Ginn & Company. Boston, Massachusetts, USA. 1908

**Ross, Sir Ronald** 1857–1932

English bacteriologist

A witty friend of mine once remarked that the world thinks of the man of science as one who pulls out his watch and exclaims, "Ha! half an hour to spare before dinner: I will just step down to my laboratory and make a discovery."

Who but men of science themselves are to blame for such a misconception? Out of the many memoirs...[o]ur books of science are records of results rather than of that sacred passion for discovery which leads to them. Yet many discoveries have really been the climax of an intense drama... in which the protagonists are man and nature, and the issue a decision for all the ages.

*Memoirs*  
Preface (pp. v–vi)  
Publisher undetermined

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

The man of science looks for facts that are significant, in the sense of leading to general laws; and such facts are frequently quite devoid of intrinsic interest.

*The Scientific Outlook*  
Chapter I (p. 49)  
George Allen & Unwin Ltd. London, England. 1931

All the conditions of happiness are realized in the life of the man of science.

*The Conquest of Happiness*  
Chapter X (p. 146)  
Liverwright Publishing Corporation. New York, New York, USA. 1930

**Spencer, Herbert** 1820–1903

English social philosopher

Only the sincere man of science (and by this title we do not mean the mere calculator of distances, or analyser of compounds, or labeler of species; but him who through lower truths seeks higher, and eventually the highest) — only the genuine man of science, we say, can truly know how utterly beyond, not only human knowledge, but human conception, is the Universal Power of which Nature, and Life, and Thought are manifestations.

*Education: Intellectual, Moral, and Physical*  
Chapter I (p. 84)  
A.L. Fowle. New York, New York, USA. 1860

**Suits, C. G.**

American physicist

I've never met that "coldly calculating man of science" whom the novelists extol.... I doubt that he exists; and if he did exist I greatly fear that he would never make a startling discovery or invention.

In Frederic Brownell  
Heed that Hunch  
*The American Magazine*, December 1945 (p. 142)

**Sullivan, John William Navin** 1886–1937

Irish mathematician

...outside their views on purely scientific matters there is nothing characteristic of men of science.

*Aspects of Science*  
Scientific Citizen (p. 120)  
J. Cape & H. Smith. New York, New York, USA. 1927

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

He is not a true man of science who does not bring some sympathy to his studies, and expect to learn something by behavior as well as by application. It is childish to rest in the discovery of mere coincidences, or of partial and extraneous laws. The study of geometry is a petty and idle exercise of the mind if it is applied to no larger system than the starry one.

*The Writings of Henry David Thoreau* (Volume 1)  
A Week on the Concord and Merrimack Rivers  
Friday (p. 477)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

The true man of science will know nature better by his finer organization; he will smell, taste, see, hear, feel, better than other men. His will be a deeper and finer experience. We do not learn by inference and deduction and the application of mathematics to philosophy, but by direct intercourse and sympathy. It is with science as with ethics, — we cannot know truth by contrivance and method; the Baconian is as false as any other, and with all the helps of machinery and the arts, the most scientific will still be the healthiest and friendliest man, and possess a more perfect Indian wisdom.

*The Writings of Henry David Thoreau* (Volume 9)  
Natural History of Massachusetts (pp. 161–162)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

**Twain, Mark (Samuel Langhorne Clemens)** 1835–1910  
American author and humorist

The surest way for a nation's scientific men to prove that they were proud and ignorant was to claim to have found out something fresh in the course of a thousand years or so. Evidently the peoples of this book's day regarded themselves as children, and their remote ancestors as the only grown-up people that had existed. Consider the contrast:... our own scientific men may and do regard themselves as grown people and their grandfathers as children. The change... is probably the most sweeping that has ever come over mankind in the history of the race. It is the utter reversal, in a couple of generations, of an attitude which had been maintained without challenge or interruption from the earliest antiquity.... The change from reptile to bird was not more tremendous, and it took longer.

*The Complete Humorous Sketches and Tales of Mark Twain*  
A Majestic Literary Fossil (p. 534)  
Hanover House. Garden City, New York, USA. 1961

**von Goethe, Johann Wolfgang** 1749–1832  
German poet, novelist, playwright, and natural philosopher

Scientific man is supposed to limit himself to his immediate surroundings. However if he should occasionally want to step forth as a poet, he certainly should not be prevented from doing so.

In Karl J. Fink  
*Goethe's History of Science*  
Chapter 9 (p. 125)  
Cambridge University Press. Cambridge, England. 1991

**von Helmholtz, Hermann** 1821–94  
German scientist and philosopher

In fact, men of science form, as it were, an organised army, labouring on behalf of the whole nation, and gen-

erally under its direction and at its expense, to augment the stock of such knowledge as may serve to promote industrial enterprises, to increase wealth, to adorn life, to improve political and social relations, and to further the moral development of individual citizens.

*Popular Lectures on Scientific Subjects*  
Lecture I  
Volume 2, 1846 (p. 28)  
D. Appleton & Company. New York, New York, USA. 1885

**Wells, H. G. (Herbert George)** 1866–1946  
English novelist, historian, and sociologist

The training of a scientific man is a training in what an illiterate lout would despise as a weakness, it is a training in blabbing, in blurring things out, in telling just as plainly as possible and as soon as possible what it is he has found.

*New Worlds for Old*  
Chapter II (p. 23)  
The Macmillan Company. New York, New York, USA. 1918

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

No man of science wants merely to know. He acquires knowledge to appease his passion for discovery. He does not discover in order to know, he knows in order to discover.

*The Orginsation of Thought*  
Chapter II (p. 37)  
Greenwood Press Publishers. Westport, Connecticut, USA. 1974

**Whitney, Willis Rodney** 1868–1958  
American chemical and electrical engineer

For the engineer "safety first" is a good slogan, but "safety last" is better for the man of research.

The Stimulation of Research in Pure Science Which Has Resulted from the Needs of Engineers and of Industry  
*Science*, Volume 65, Number 1862, March 25, 1927 (p. 289)

**Wordsworth, William** 1770–1850  
English poet

If the labours of men of Science should ever create any material revolution, direct or indirect, in our condition, and in the impressions which we habitually receive, the Poet will sleep then no more than at present, but he will be ready to follow the steps of the Man of Science, not only in those general indirect effects, but he will be at his side, carrying sensation into the midst of the objects of the Science itself. The remotest discoveries of the Chemist, the Botanist, or Mineralogist will be as proper objects of the Poet's art as any upon which I can be employed, if the time should ever come when these things shall be familiar to us... In R.L. Brett and A.R. Jones (eds.)

*Lyrical Ballads*  
Preface (pp. 259–260)  
Methuen & Company Ltd. London, England. 1963

**SCIENCE, PROGRESS OF****Abernethy, John** 1680–1740

Irish Presbyterian minister, theologian, and dissenter

Although knowledge has at times appeared to exhibit something of uniformity in its advances, yet it can not have escaped the least observant that, as a whole, the Progress of Science has been marked by very variable activity. At once time marvelously rapid; at another, indefinitely slow; now merged in darkness or obscurity, and not blazing forth with meridian splendor.

*Memoirs of John Abernethy*

Chapter I (p. 1)

Harper &amp; Brothers. New York, New York, USA. 1853

**Ardrey, Robert** 1908–80

American anthropologist

The contemporary revolution in the natural sciences has proceeded in something more striking than silence. It has proceeded in secret. Like our tiny, furry, squirrel-like, earliest primate ancestors, seventy million years ago, the revolution has found obscurity its best defence and modesty the key to its survival. For it has challenged larger orthodoxies than just those of science, and its enemies exist beyond counting. From seashore and jungle, from ant-heap and travertine cave have been collected the inflammable materials that must some day explode our most precious intellectual movement seeking light under darkest cover.

*African Genesis*

Chapter I, Section 2 (p. 13)

Athenaeum. New York, New York, USA. 1968

**Bernard, Claude** 1813–78

French physiologist

The progress of experimental method consists in this, — that the sum of truths grows larger in proportion as the sum of errors grows less. But each one of these particular truths is added to the rest to establish more general truths. In this fusion, the names of promoters of science disappear little by little, and the further science advances, the more it takes an impersonal form and detaches itself from the past.

*An Introduction to the Study of Experimental Medicine*

Part I, Chapter II, Section iv (p. 42)

Henry Schuman, Inc. New York, New York, USA. 1927

**Bronowski, Jacob** 1908–74

Polish-born British mathematician and polymath

The progress of science is the discovery at each step of a new order which gives unity to what had long seemed unlike.

*Science and Human Value*

The Creative Mind (p. 26)

Harper &amp; Row, Publishers. New York, New York, USA. 1965

**Cohen, Morris Raphael** 1880–1947

American philosopher

...the progress of science always depends upon our questioning the plausible, the respectably accepted, and the seemingly self-evident.

*Reason and Nature*

Book III

Chapter One, Section II (p. 348)

Free Press. Glencoe, Georgia, USA. 1953

**Coles, Abraham** 1813–91

American physician, hymnist, and poet

Believing needless ignorance a crime,  
You strive to reach the summit of your time;  
To old age learning up from early youth  
Your life one long apprenticeship to truth.

Wisely suspicious sometimes of the new,  
Ye give alert acceptance to the true:

Even though it make old science obsolete,  
It with a thousand welcomes still you greet...

Each Year adds something — many things ye know  
Your sires knew not a Hundred Years ago.

*The Microcosm and Other Poems*

The Microcosm

Physician's Character and Aims — Science Progressive

D. Appleton &amp; Company. New York, New York, USA. 1881

**Daly, Reginald Aldworth** 1871–1957

Canadian-American geologist

Inasmuch as cosmogony and geology are both young sciences, consensus of opinions about the earth's origin and history is still reserved for the future. Meantime these sciences are advancing through the erection and testing of competing hypotheses; in other words, through speculation, controlled by all the available facts. Science progresses through systematic guessing in the good sense of the world.

*Our Mobile Earth*

Introduction (p. xx)

Charles Scribner's Sons. New York, New York, USA. 1926

**Dewar, James** 1842–1923

English physicist and chemist

In a legitimate sense all genuine scientific workers feel that they are "inheritors of unfulfilled renown." The battlefields of science are the centers of a perpetual warfare, in which there is no hope of final victory, although partial conquest is ever triumphantly encouraging the continuance of the disciplined and strenuous attack on the seemingly impregnable fortress of nature.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1902*

History of Cold and the Absolute Zero (p. 240)

Government Printing Office. Washington, D.C. 1903

**Dryden, John** 1631–1700

English poet, dramatist, and literary critic

Is it not evident, in these last hundred years (when the Study of Philosophy has been the business of all the Virtuosi in Christendom) that almost a new Nature has been reveal'd to us? that more errors of the School have been detected, more useful Experiments in Philosophy have been made, more Noble Secrets in Opticks, Medicine, Anatomy, Astronomy, discover'd, than in all those credulous and doting Ages from Aristotle to us? so true it is that nothing spreads more fast than Science, when rightly and generally cultivated.

*Of Dramatick Poesie: An Essay* (Volume 1) (p. 12)  
Printed for Henry Herringman. London, England. 1684

**Duclaux, Pierre Émile** 1840–1904  
French biochemist

It is because science is sure of nothing that it is always advancing.

In William Osler  
*Evolution of Modern Medicine*  
Chapter VI (p. 219)  
Yale University Press. New Haven, Connecticut, USA. 1921

A series of judgments, revised without ceasing, goes to make up the incontestable progress of science.

In W. Mansfield Clark  
*The Determination of Hydrogen Ions*  
Chapter VIII (p. 177)  
The Williams & Wilkins Company. Baltimore, Maryland, USA. 1928

**Einstein, Albert** 1879–1955  
German-born physicist

**Infeld, Leopold** 1898–1968  
Polish physicist

Science forces us to create new ideas, new theories. Their aim is to break down the wall of contradictions which frequently blocks the way of scientific progress. All the essential ideas in science were born in a dramatic conflict between reality and our attempts at understanding.

*The Evolution of Physics*  
Quanta (p. 280)  
Simon & Schuster. New York, New York, USA. 1934

**Enriques, Federigo** 1871–1946  
Italian mathematician

[T]he progress of science is dependent upon science itself, it is an extension and not a creation.

*Problems of Science*  
Chapter 3, Section 37 (p. 165)  
The Open Court Publishing Company. Chicago, Illinois, USA. 1914

**Foster, Sir Michael** 1836–1907  
English physiologist and educator

The path [of progress in science] may not always be in a straight line; there may be swerving to this side and to that; ideas may seem to return again and again to the same point of the intellectual compass; but it will always

be found that they have reached a higher level.... Moreover, science is not fashioned as is a house, by putting brick to brick, that which is once put remaining as it was put to the end. The growth of science is that of a living being. As is the embryo, phases follows phase, and each member or body puts on in succession different appearances, though all the while the same member, so a scientific conception of one age seems to differ from that of a following age...

*Annual Report of the Smithsonian Institution For 1899*  
The Growth of Science in the Nineteenth Century  
Government Printing Office. Washington, D.C. 1900

**France, Anatole (Jean Jacques Brousseau)** 1844–1924  
French writer

The progress of science renders useless the very books which have been the greatest aid to that progress. As those works are no longer useful, modern youth is naturally inclined to believe they never had any value; it despises them, and ridicules them if they happen to contain any superannuated opinion whatever.

Translated by Lafcadio Hern  
*The Crime of Sylvester Bonnard*  
June 4 (p. 168)  
Harper & Brothers. New York, New York, USA. 1890

**Free, E. E.**  
No biographical data available

Like a man on a bicycle science cannot stop; [science] must progress or collapse.

The Electric Brains in the Telephone  
*The World's Work*, Volume LIII, Number 4, February 1927 (p. 429)

**Garrod, Archibald** 1857–1936  
English physician

In these days of rapid scientific progress there is a tendency to accept the facts of nature, as at present known, without glancing back at the slow and difficult stages by which the knowledge of these facts has been arrived at. Yet such a retrospect is by no means unprofitable, since it warns us that hasty generalizations upon insufficient data retard rather than advance the progress of knowledge, and that the theories of the day must not be accepted as necessarily expressing absolute truths.

In Alexander G. Bearn  
*Archibald Garrod and the Individuality of Man*  
Chapter 3 (p. 25)  
Clarendon Press. Oxford, England. 1993

**Greene, Brian** 1963–  
American physicist

Progress in science proceeds in fits and starts. Some periods are filled with great breakthroughs, in other times researchers experience dry spells. Scientists put forward results, both theoretical and experimental. The results are debated by the community, sometimes they are discarded,

sometimes they are modified, and sometimes they provide inspirational jumping-off points for new and more accurate ways of understanding the physical universe. In other words, science proceeds along a zigzag path toward what we hope will be ultimate truth, a path that began with humanity's earliest attempts to fathom the cosmos and whose end we cannot predict.

*The Elegant Universe*

Chapter 1 (p. 20)

W.W. Norton & Company, Inc. New York, New York, USA.2003

### **Heisenberg, Werner Karl** 1901–76

German physicist and philosopher

Science progresses not only because it helps to explain newly discovered facts, but also because it teaches us over and over again what the word “understanding” may mean.

*Physics and Beyond*

Chapter 10 (p. 124)

Harper & Row, Publishers. New York, New York, USA. 1971

### **Kuhn, Thomas S.** 1922–96

American historian of science

... we must explain why science — our surest example of sound knowledge — progresses as it does, and we first must find out how, in fact, it does progress.

In Imre Lakatos and Alan Musgrave (eds.)

*Criticism and the Growth of Knowledge*

Logic of Discovery or Psychology of Research (p. 20)

Cambridge University Press. Cambridge, England. 1970

Does a field make progress because it is a science, or is it a science because it makes progress?

*The Structure of Scientific Revolutions* (2<sup>nd</sup> edition)

Chapter XIII (p. 162)

The University of Chicago Press. Chicago, Illinois, USA. 1970

### **Lee, Tsung Dao** 1926–

Chinese-born American nuclear physicist

The progress of science has always been the result of a close interplay between our concepts of the universe and our observations on nature. The former can only evolve out of the latter and yet the latter is also conditioned greatly by the former. Thus, in our exploration of nature, the interplay between our concepts and our observations may sometimes lead to totally unexpected aspects among already familiar phenomena.

*Nobel Lectures, Physics 1942–1962*

Nobel lecture for award received in 1957

Weak Interactions and Nonconservation of Parity (p. 417)

Elsevier Publishing Company. Amsterdam, Netherlands. 1964

### **Lindley, David** 1956–

English astrophysicist and author

Progress in science is a matter of jumping to conclusions. The trick is to jump to useful and interesting conclusions. Generalizing from small scraps of evidence may lead one astray, but sticking strictly to what limited evidence

one has, and refusing to countenance anything that is not directly provable, leads nowhere at all. The scientist has to generate new ideas and hypotheses, then act upon them.

*Where Does the Weirdness Go? Why Quantum Mechanics Is Strange, but Not as Strange as You Think*

An Engineer, a Physicist, and a Philosopher... (p. 157)

Basic Books, Inc. New York, New York, USA. 1996

### **Lowie, Robert H.** 1883–1957

Austrian-born American anthropologist

The clarification of concepts...directly gauges scientific progress.

*The History of Ethnological Theory*

Chapter XIV (p. 281)

Rinehart & Company, Inc. New York, New York, USA. 1937

### **Mayr, Ernst** 1904–2005

German-born American biologist

Any scientific revolution has to accept all sorts of black boxes, for if one had to wait until all black boxes are opened, one would never have any conceptual advances.

*One Long Argument: Charles Darwin and the Genesis of Modern Evolutionary Thought*

Chapter Ten (p. 146)

Harvard University Press. Cambridge, Massachusetts, USA. 1991

### **Medawar, Sir Peter Brian** 1915–87

Brazilian-born English zoologist

It can be said that Science progresses only by peeling away, one after another, all the covering of apparent stability in the world; disclosing beneath the immobility of the infinitely small, movement of extra rapidity, and beneath the immobility of the Immense, movement of extra slowness.

*The Future of Man*

Some Reflections on Progress (p. 62)

Methuen & Company Ltd. London, England. 1960

### **Planck, Max** 1858–1947

German physicist

It is a rather zigzag pattern than the curve of scientific progress follows; indeed I might say that the forward movement is of an explosive type, where the rebound is an attendant characteristic of the advance. Every applied hypothesis which succeeds in throwing the searchlight of a new vision across the field of physical science represents a plunge into the darkness; because we cannot at first reduce the vision to a logical statement. Then follows the birth-struggle of a new theory. Once this has seen the light of day it has to go forward willy-nilly until the stamp of its destiny is put on it when the test of the research measurements is applied.

*Where Is Science Going?*

Nature's Image in Science (pp. 90–91)

W.W. Norton & Company, Inc. New York, New York, USA.1932

An important scientific innovation rarely makes its way by gradually winning over and converting its opponents:

it rarely happens that Saul becomes Paul. What does happen is that its opponents gradually die out and that the growing generation is familiarized with the idea from the beginning...

*The Philosophy of Physics*

Chapter III (p. 97)

W.W. Norton & Company, Inc. New York, New York, USA. 1936

**Popper, Karl R.** 1902–94

Austrian/British philosopher of science

In science it would be a tremendous loss if we were to say: “We are not making very much progress. Let us sweep away all science and start afresh.” The rational procedure is to correct it and to revolutionize it, but not to sweep it away. You may create a new theory, but the new theory is created in order to solve those problems which the old theory did not solve.

*Conjectures and Refutations*

Chapter 4 (p. 132)

Harper & Row, Publishers. New York, New York, USA. 1963

...in order that a new theory should constitute a discovery or a step forward it should conflict with its predecessor...it should contradict its predecessor; it should overthrow it. In this sense, progress in science — or at least a striking progress — is always revolutionary.

In Rom Harré

*Problems of Scientific Revolution*

The Rationality of Scientific Revolutions (pp. 82–83)

The Clarendon Press. Oxford, England. 1975

**Price, Don K.** 1910–1995

American presidential advisor and educator

...most scientists are prepared to work most of the time within the framework of ideas developed by their acknowledged leaders. In that sense...science is ruled by oligarchs who hold influence as long as their concepts and systems are accepted as the most successful strategy.... Once in a great while, a rival system is proposed; then there can usually be no settlement of the issue by majority opinion. The metaphor of “scientific revolution” suggests the way in which the losing party is displaced from authority, discredited and its doctrines eliminated from textbooks.

*The Scientific Estate*

Chapter 6 (p. 172)

Harvard University Press. Cambridge, Massachusetts, USA. 1965

**Priestley, Joseph** 1733–1804

English theologian and scientist

If the progress continues the same in another period, of equal length, what a glorious science shall we see unfold, what a fund of entertainment is there in store for us, and what important benefits must derive mankind.

Quoted by John G. McEvoy

Electricity, Knowledge, and the Nature of Progress in Priestley’s

Thought *The British Journal for the History of Science*, Volume 12,

Number 40, 1979 (p. 76)

**Richet, Charles** 1850–1935

French physiologist

One can only progress in the sciences — with the exception of Mathematics — at the price of great pecuniary sacrifice.

Translated by Sir Oliver Lodge

*The Natural History of a Savant*

Chapter II (p. 21)

J.M. Dent & Sons Ltd. London, England. 1927

All progress in science is progress in civilization, and consequently contributes to the welfare of man.

Translated by Sir Oliver Lodge

*The Natural History of a Savant*

Chapter XIII (p. 145)

J.M. Dent & Sons Ltd. London, England. 1927

**Rindos, David** 1947–96

American educator

Progress in science depends not only upon new data but also upon the careful elaboration of new approaches to old data as well as new.

In Michael B. Schiffer (ed.)

*Archaeological Method and Theory* (Volume 1)

Chapter I (p. 1)

University of Arizona Press. Tucson, Arizona, USA. 1989

**Romanoff, Alexis Lawrence** 1892–1980

Russian soldier and scientist

Science is the key to the progress of the world.

*Encyclopedia of Thoughts*

Aphorism 20

Ithaca Heritage Books. Ithaca, New York, USA. 1975

**Thomson, Sir George** 1892–1975

English physicist

...the progress of science is a little like making a jig-saw puzzle. One makes collections of pieces which certainly fit together, though at first it is not clear where each group should come in the picture as a whole, and if at first one makes a mistake in placing it, this can be corrected later without dismantling the whole group.

*The Inspiration of Science*

Introduction (pp. 5–6)

Oxford University Press, Inc. London, England. 1961

**von Bertalanffy, Ludwig** 1901–72

Austrian biologist

The evolution of science is not a movement in an intellectual vacuum; rather it is both an expression and a driving force of the historical process.

*Problems of Life: An Evaluation of Modern Biological Thought*

Chapter Six (p. 202)

Watts & Company, London, England. 1952

**von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

...we might well mention from our perspective, that there are advantages to entering a field of science which is in a state of crisis, and in which we also find an active, extraordinary person. We are young with young methods, our beginnings reach into a new epoch.

In Karl J. Fink

*Goethe's History of Science*

Chapter 6 (p. 88)

Cambridge University Press. Cambridge, England. 1991

**von Liebig, Justus** 1803–73

German organic chemist

Thus the progress of science is, like the development of nature's works, gradual and expansive. After the buds and branches spring forth the leaves and blossoms, after that blossoms the fruit.

*Familiar Letters on Chemistry*

Letter I (p. 10)

Taylor & Walton. London, England. 1843

**von Neumann, John** 1903–57

Hungarian-American mathematician

**Morgenstern, Oskar** 1902–77

German-born American economist

The great progress in every science came when, in the study of problems which were modern as compared with ultimate aims, methods were developed which could be extended further and further. The free fall is a very trivial physical phenomenon, but it was the study of this exceedingly simple fact and its comparison with the astronomical material, which brought forth mechanics.

*Theory of Games and Economic Behavior*

Chapter 1.3.2 (p. 6)

Princeton University Press. Princeton, New Jersey, USA. 1947

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

The progress of Science consists in observing interconnections and in showing with a patient ingenuity that the events of this ever-shifting world are but examples of a few general relations, called laws. To see what is general in what is particular, and what is permanent in what is transitory, is the aim of scientific thought.

*An Introduction to Mathematics*

Chapter 1 (p. 4)

Oxford University Press, Inc. New York, New York, USA. 1958

[S]cience started its modern career by taking over ideas derived from the weakest side of the philosophies of Aristotle's successors. In some respects it was a happy choice. It enabled the knowledge of the seventeenth century to be formulated so far as physics and chemistry were concerned, with a completeness which lasted to the present time. But the progress of biology and psychology has probably been checked by the uncritical assumption of half-truths.

*Science and the Modern World*

Chapter I (pp. 16–17)

The Macmillan Company. New York, New York, USA. 1929

In the conditions of modern life the rule is absolute, the race which does not value trained intelligence is doomed. Not all your heroism, not all your social charm, not all your wit, not all your victories on land or at sea, can move back the finger of fate. Today we maintain ourselves. Tomorrow science will have moved forward yet one more step, and there will be no appeal from the judgment which will then be pronounced on the uneducated.

*The Organisation of Thought*

Chapter I (p. 28)

Greenwood Press Publishers. Westport, Connecticut, USA. 1974

## SCIENCE AND ART

**Asimov, Isaac** 1920–92

American author and biochemist

How often people speak of art and science as though they were two entirely different things, with no interconnection. An artist is emotional, they think, and uses only his intuition; he sees all at once and has no need of reason. A scientist is cold, they think, and uses only his reason; he argues carefully step by step, and needs no imagination. That is all wrong. The true artist is quite rational as well as imaginative and knows what he is doing; if he does not, his art suffers. The true scientist is quite imaginative as well as rational, and sometimes leaps to solutions where reason can follow only slowly; if he does not, his science suffers.

*The Roving Mind*

Chapter 25 (p. 116)

Prometheus Books. Buffalo, New York, New York, USA. 1983

## Author undetermined

Art is personal and science is universal.

In Lecomte du Nouy

*The Road to Reason*

Chapter 1 (p. 31)

Longmans, Green & Company. London, England. 1949

**Blake, William** 1757–1827

English poet, painter, and engraver

He who would do good to another must

do it in Minute Particulars:

General Good is the plea of the scoundrel,  
hypocrite and flatterer;

For art and science cannot exist but in  
minutely organized Particulars.

*The Complete Poetry and Prose of William Blake*

Jerusalem

The Holiness of Minute Particulars, 3, Section 55 (p. 399)

University of California Press. Berkeley, California, USA. 1982

**Brecht, Bertolt** 1898–1956

German writer

But science and art meet on this ground, that both are there to make man's life easier, the one setting out to maintain, the other to entertain us. In the age to come art will create entertainment from that new productivity which can so greatly improve our maintenance, and in itself, if only it is left unshackled, may prove to be the greatest pleasure of all.

Translated by John Willett

*Brecht on Theatre: The Development of an Aesthetic*  
A Short Organon for the Theater, 20 (p. 185)  
Hill & Wang. New York, New York, USA. 1964

**Campbell, Norman R.** 1880–1949  
English physicist and philosopher

Science is the noblest of the arts and men of science the most artistic of all artists.

*Physics: The Elements*  
Chapter VIII (p. 227–228)  
At The University Press. Cambridge, England. 1920

Science, like art, should not be something extraneous, added as a decoration to other activities of existence; it should be part of them, inspiring our most trivial actions as well as our noblest thoughts.

*What Is Science?*  
Chapter VIII (p. 183)  
Dover Publications. New York, New York, USA. 1952

**Cassidy, Harold Gomes**  
No biographical data available

If humans understood science and would effectively make their voices heard, they could, with the aid of scientists, control the forces of cultural change in the process of their actual generation, directing them in the ways that lead toward the morally and ethically just ends that arise from the union of art and science. This union, when it is a union of whole science and whole art, supports and illuminates anew a noble image of man.

*The Sciences and the Arts: A New Alliance*  
Chapter 11 (p. 165)  
Harper & Brothers. New York, New York, USA. 1962

**Cassirer, Ernst** 1874–1945  
German philosopher

Since art and science move in entirely different planes, they cannot contradict or thwart one another.

*An Essay on Man: An Introduction to a Philosophy of Human Culture*  
Chapter IX (p. 170)  
Yale University Press. New Haven, Connecticut, USA. 1944

**Cohen, I. Bernard** 1914–2003  
American physicist and science historian

Great creations whether of science or art — can never be viewed dispassionately.

In the 1952 printing  
*Optics*

Preface (p. ix)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Connolly, Cyril** 1903–74  
English critic and editor

Today the function of the artist is to bring imagination to science and science to imagination, where they meet, in the myth.

*The Unquiet Grave*  
Part III (p. 86)  
Hamish Hamilton. London, England. 1945

**Crick, Francis Harry Compton** 1916–2004  
English biochemist

People with training in the arts still feel that in spite of the alterations made in their life by technology — by the internal combustion engine, by penicillin, by the Bomb — modern science has little to do with what concerns them most deeply. As far as today's science is concerned this is partly true, but tomorrow's science is going to knock their culture right out from under them.

*Of Molecules and Men*  
The Prospect Before Us (p. 95)  
University of Washington Press. Seattle, Washington, USA. 1966

**De Gourmont, Rémy** 1858–1915  
French critic and novelist

Art includes everything that stimulates the desire to live; science, everything that sharpens the desire to know. Art, even the most disinterested, the most disembodied, is the auxiliary of life. Born of the sensibility, it sows and creates it in its turn. It is the flower of life and, as seed, it gives back life. Science, or to use a broader term, knowledge, has its end in itself, apart from any idea of life and propagation of the species.

Translated by Glenn S. Burne  
*Selected Writings*  
Art and Science (p. 170)  
The University of Michigan Press. Ann Arbor, Michigan, USA. 1966

**Delbrück, Max** 1906–81  
German-born American biologist

The books of the great scientists are gathering dust on the shelves of learned libraries. And rightly so. The scientist addresses an infinitesimal audience of fellow composers. His message is not devoid of universality but its universality is disembodied and anonymous. While the artist's communication is linked forever with its original form, that of the scientist is modified, amplified, fused with the ideas and results of others, and melts into the stream of knowledge and ideas which forms our culture.

A Physicist's Renewed Look at Biology: Twenty Years Later  
*Science*, Volume 168, Number 3937, June 12, 1970 (p. 1314)

The scientist has in common with the artist only this: that he can find no better retreat from the world than his work and also no stronger link with the world than his work.

A Physicist's Renewed Look at Biology: Twenty Years Later  
*Science*, Volume 168, Number 3937, June 12, 1970 (p. 1314)

**Dubos, René Jules** 1901–82  
French-born American microbiologist and environmentalist

Directly or indirectly, the various forms of art reflect the strivings, the struggles, and the sufferings of mankind. The state of health and the ills of a society are recorded not only in the writings of its physicians and scholars but also in the themes and moods of its artists and poets.

Mirage of Health  
Chapter VII (p. 215)  
Harper & Brothers Publishers. New York, New York, USA. 1959

**Durant, William James** 1885–1981  
American historian and essayist

Every science begins as philosophy and ends as art; it arises in hypothesis and flows into achievement.

*The Story of Philosophy*  
Introduction (p. 2)  
Simon & Schuster. New York, New York, USA. 1953

**Einstein, Albert** 1879–1955  
German-born physicist

Science exists for Science's sake, like Art for Art's sake, and does not go in for special pleading or for the demonstration of absurdities.

*Cosmic Religion, with Other Opinions and Aphorisms*  
On Science (p. 100)  
Covici-Fiede. New York, New York, USA. 1931

...one of the strongest motives that lead men to art and science is escape from everyday life with its painful crudity and hopeless dreariness, from the fetters of one's own ever shifting desires. A finely tempered nature longs to escape from personal life into the world of objective perception and thought... Man tries to make for himself in the fashion that suits him best a simplified and intelligible picture of the world; he then tries to some extent to substitute this cosmos of his for the world of experience, and thus to overcome it. This is what the painter, the poet, the speculative philosopher, and the natural scientist do, each in his own way.

*The World as I See It*  
Principles of Research (pp. 20–21)  
Philosophical Library. New York, New York, USA. 1949

**Einstein, Albert** 1879–1955  
German-born physicist

After a certain high level of technical skill is achieved, science and art tend to coalesce in esthetics, plasticity, and form. The greatest scientists are always artists as well.

In Alice Calaprice (ed.)  
*The Quotable Einstein* (p. 171)  
Princeton University Press. Princeton, New Jersey, USA. 1996

**Escher, M. C.** 1898–1972  
Dutch graphic artist

...science and art sometimes can touch one another, like two pieces of the jigsaw puzzle which is our human life, and that contact may be made across the borderline between the two respective domains.

In Doris Schattschneider  
*Visions of Symmetry: Notebooks, Periodic Drawings, and Related Works of M.C. Escher*  
Chapter 2 (p. 104)  
W.H. Freeman & Company. New York, New York, USA. 1990

**Feynman, Richard P.**

I've always been very one-sided about science and when I was younger I concentrated almost all my effort on it. I didn't have time to learn and I didn't have much patience with what's called the humanities, even though in the university there were humanities that you had to take. I tried my best to avoid somehow learning anything and working at it. It was only afterwards, when I got older, that I got more relaxed, that I've spread out a little bit. I've learned to draw and I read a little bit, but I'm really still a very one-sided person and I don't know a great deal. I have a limited intelligence and I use it in a particular direction.

In Jeffrey Robbins (ed.)  
*The Pleasure of Finding Things Out: The Best Short Works of Richard P. Feynman*  
Chapter 1 (p. 2)  
Perseus Books. Cambridge, Massachusetts, USA. 1999

**Harvey, William** 1578–1657  
English physician

On the same terms, therefore, as art is attained to, is all knowledge and science acquired; for as art is a habit with reference to things to be done, so is science a habit in respect to things to be known; as that proceeds from the imitation of types or forms so this proceeds from the knowledge of natural things.

In *Great Books of the Western World* (Volume 28)  
*Anatomical Exercises on the Generation of Animals*  
Of the Manner and Order of acquiring Knowledge (p. 333)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Heisenberg, Werner Karl** 1901–76  
German physicist and philosopher

Both science and art form in the course of the centuries a human language by which we can speak about the more remote parts of reality, and the coherent sets of concepts as well as the different styles of art are different words or groups of words in this language.

*Physics and Philosophy: The Revolution in Modern Science*  
Chapter VI (p. 109)  
Harper & Row, Publishers. New York, New York, USA. 1958

**Huxley, Aldous** 1894–1963  
English writer and critic

Unlike art, science is genuinely progressive. Achievement in the fields of research and technology is cumulative;

each generation begins at the point where its predecessor left off.

*Science, Liberty and Peace*

Chapter I (p. 30)

William Morrow & Company, Inc. New York, New York, USA. 1967

Science and art are only too often a superior kind of dope, possessing this advantage over booze and morphia: that they can be indulged in with a good conscience and with the conviction that, in the process of indulging, one is leading the “higher life.”

*Ends and Means*

Chapter XIV (p. 276)

Chatto & Windus. London, England. 1938

**Karanikas, Alexander** 1916–2006

Greek-American professor of English

...science pierces reality like a dagger in search of fact and truth while art caresses reality looking for pleasure, grace and beauty.

*Tillers of a Myth*

Science, the False Messiah (p. 127)

The University of Wisconsin Press. Madison, Wisconsin, USA. 1969

**Kepes, Gyorgy** 1906–2001

Hungarian-born American artist and theorist

The essential vision of reality presents us not with fugitive appearances but with felt patterns of order which have coherence and meaning for the eye and for the mind. Symmetry, balance and rhythmic sequences express characteristics of natural phenomena: the connectedness of nature — the order, the logic, the living process. Here art and science meet on common ground.

*The New Landscape*

In Art and Science

Chapter I (p. 24)

Paul Theobald & Company Chicago, Illinois, USA. 1956

Mathematicians who build new spaces and physicists who find them in the universe can profit from the study of pictorial and architectural spaces conceived and built by men of art.

*The New Landscape*

In Art and Science

Chapter I (p. 28)

Paul Theobald & Company Chicago, Illinois, USA. 1956

**Klee, Paul** 1879–1940

Swiss expressionist painter

...the worst state of affairs is when science begins to concern itself with art.

*The Diaries of Paul Klee 1898–1918*

Diary III, Number 747 (p. 194)

University of California Press. Berkeley, California, USA. 1964

**Knuth, Donald E.** 1938–

Creator of TeX

The difference between art and science is that science is what people understand well enough to explain to a computer. All else is art.

In Robert Slater

*Portraits in Silicon*

Chapter 31 (p. 351)

The MIT Press. Cambridge, Massachusetts, USA. 1987

**Koestler, Arthur** 1905–83

Hungarian-born English writer

Einstein’s space is no closer to reality than Van Gogh’s sky. The glory of science is not in a truth more absolute than the truth of Bach or Tolstoy, but in the act of creation itself. The scientist’s discoveries impose his own order on chaos, as the composer or painter imposes his; an order that always refers to limited aspects of reality, and is based on the observer’s frame of reference, which differs from period to period as a Rembrandt nude differs from a nude by Manet.

*The Act of Creation*

Book One, Part Two, Chapter X (p. 252)

The Macmillan Company. New York, New York, USA. 1964

**Kraus, Karl** 1874–1936

Austrian essayist and poet

Science is spectrum analysis. Art is photosynthesis.

In John D. Barrow

*The Artful Universe* (p. 114)

Clarendon Press. Oxford, England. 1995

**Medawar, Sir Peter Brian** 1915–87

Brazilian-born English zoologist

There is no spiritual copyright in scientific discoveries, unless they should happen to be quite mistaken. Only in making a blunder does a scientist do something which, conceivably, no one else might ever do again. Artists are not troubled by matters of priority, but Wagner would certainly not have spent twenty years on The Ring if he had thought it at all possible for someone else to nip in ahead of him with Götterdämmerung.

*The Act of Creation*

*New Statesman*, 19 June 1964

**Melville, Herman** 1819–91

American novelist

One can envisage an end of science no more readily than one can envisage an end of imaginative literature or the fine arts.

*Advice to a Young Scientist*

Chapter 11 (p. 90)

Basic Books, Inc. New York, New York, USA. 1979

**Oppenheimer, J. Robert** 1904–67

American theoretical physicist

Both the man of science and the man of art live always at the edge of mystery, surrounded by it; both always,

as to the measure of their creation, have had to do with the harmonization of what is new with what is familiar, with the balance between novelty and synthesis, with the struggle to make partial order in total chaos.

Prospects in the Arts and Sciences

Speech, 26 December 1954, Columbia University Bicentennial

The frontiers of science are separated now by long years of study, by specialized vocabularies, arts, techniques, and knowledge from the common heritage even of a most civilized society; and anyone working at the frontier of such science is in that sense a very long way from home, a long way too from the practical arts that were its matrix and origin, as indeed they were of what we today call art.

Prospects in the Arts and Sciences

Speech, 26 December 1954, Columbia University Bicentennial

### **Reynolds, Osborne** 1842–1912

English fluid dynamics engineer

I have to deal with facts, and I shall try to deal with nothing but facts. Many of these facts, or the conclusions to be immediately drawn from them, may appear to bear on the possibilities — or, rather, the impossibilities — of art. But in the Society of Arts I need not point out that art knows no limit; where one way is found to be closed, it is the function of art to find another. Science teaches us the results that will follow from a known condition of things; but there is always the unknown condition, the future effect of which no science can predict.

*Papers on Mechanical and Physical Subjects* (Volume 2)

Lecture to the Society of Arts

At The University Press. Cambridge, England. 1900=03

### **Sagan, Carl** 1934–96

American astronomer and author

It is sometimes said that scientists are unromantic, that their passion to figure out robs the world of beauty and mystery. But is it not stirring to understand how the world actually works — that white light is made of colors, that color is the way we perceive the wavelengths of light, that transparent air reflects light, that in so doing it discriminates among the waves, and that the sky is blue for the same reason that the sunset is red? It does no harm to the romance of the sunset to know a little bit about it.

*Pale Blue Dot: A Vision of the Human Future in Space*

Chapter 10 (pp. 159–160)

Random House, Inc. New York, New York, USA. 1994

### **Santayana, George (Jorge Augustín Nicolás Ruiz de Santillana)** 1863–1952

Spanish-born American philosopher

Science is the response to the demand for information. . . .

Art is the response to the demand for entertainment.

*The Sense of Beauty*

Part I, Section 2 (p. 22)

Transaction Publishers. New Brunswick, New Jersey, USA. 2000

### **Shlain, Leonard**

American surgeon and author

Both art and physics are unique forms of language. Each has a specialized lexicon of symbols that is used in a distinctive syntax. Their very different and specific contexts obscure their connection to everyday language as well as to each other. Nevertheless, it is noteworthy just how often the terms of one can be applied to the concepts of the other. “Volume,” “space,” “mass,” “force,” “light,” “color,” “tension,” “relationship,” and “density” are descriptive words that are heard repeatedly if you trail along with a museum docent. They also appear on the blackboards of freshman college physics lectures.

Quoted by Gerald Noltan

*Art and Physics: Parallel Visions in Space, Time and Light*

Chapter 1

William Morrow & Company, Inc. New York, New York, USA. 1991

The proponents of these two diverse endeavors [art and physics] wax poetic about elegance, symmetry, beauty, and aesthetics. While physicists demonstrate that A equals B or that X is the same as Y, artists often choose signs, symbols, and allegories to equate a painterly image with a feature of experience. Both of these techniques reveal previously hidden relationships.

Quoted by Gerald Noltan

*Art and Physics: Parallel Visions in Space, Time and Light*

Chapter 1

William Morrow & Company, Inc. New York, New York, USA. 1991

### **Silver, Brian L.**

Israeli professor of physical chemistry

Whatever the Sun may be, said D. H. Lawrence, it is certainly not a ball of flaming gas. Helios, the sun god, has more sex appeal than a cloud of gas, however hot.

*The Ascent of Science*

Part IX, Chapter 36 (p. 485)

Solomon Press Book. New York, New York, USA. 1998

[D. H.] Lawrence [saw] science systematically chipping away at the mysterious, but generally benign, unknown and arrogantly replacing it with the dull, prosaic, down-to-earth known. . . . The scientist’s rainbow is the result of the different refractive indices of the various frequencies of light that make up solar radiation. But man evidently prefers mystery to math, and the intrusion of science into the movements of the planets and the stars, into the living cell and into that final sanctuary of the spirit, the mind, has undoubtedly cast a chill over that warm, blurred garden, the theocentric universe. The scientist, ruthlessly buying up desirable property, appears to many people to be building an automated factory in the middle of the garden.

*The Ascent of Science*

Part IX, Chapter 36 (p. 485)

Solomon Press Book. New York, New York, USA. 1998

**Smyth, H. D.**

No biographical data available

We have a paradox in the method of science. The research man may often think and work like an artist, but he has to talk like a bookkeeper in terms of facts, figures and logical sequence of thought.

Quoted by Gerald Nolton

On the Duality and Growth of Physical Science  
*American Scientist*, Volume 41, 1953 (p. 93)

**Spencer, Herbert** 1820–1903

English social philosopher

...Science is necessary not only for the most successful production, but also for the full appreciation of the fine arts.

*Education: Intellectual, Moral, and Physical*  
Chapter I (p. 70)

A.L. Fowle. New York, New York, USA. 1860

**Sullivan, John William Navin** 1886–1937

Irish mathematician

The measure in which science falls short of art is the measure in which it is incomplete as science.

The Justification of the Scientific Method  
*The Athenaeum*, May 1919 (p. 275)

**Valéry, Paul** 1871–1945

French poet and critic

There is a science of simple things, an art of complicated ones. Science is feasible when the variables are few and can be enumerated; when their combinations are distinct and clear. We are tending toward the condition of science and aspiring to it. The artist works out his own formulas; the interest of science lies in the art of making science.

In Jackson Mathews (ed.)

### **Lovell, Sir Alfred Charles Bernard** 1913–

English physicist, radio astronomer, and author

The pursuit of the good and evil are now linked in astronomy as in almost all science.... The fate of human civilization will depend on whether the rockets of the future carry the astronomer's telescope or a hydrogen bomb.

*The Individual and the Universe* (p. 72)

Oxford University Press. London, England. 1959

### **Metropolis, Nicholas C.** 1915–99

Mathematician

Science is the locomotive that drives our civilization.

In Sigfried S. Hecker and Gian-Carlo Rota (eds.)

*Essays on the Future: In Honor of Nick Metropolis*

Belated Thoughts (p. xv)

Birkhäuser. Boston, Massachusetts, USA. 2000

### **Ortega y Gasset, José** 1883–1955

Spanish philosopher

...experimental science has progressed thanks in great part to the work of men astoundingly mediocre, and even less than mediocre. That is to say, modern science, the root and symbol of our actual civilisation, finds a place for the intellectually commonplace man and allows him to work therein with success.... A fair amount of the things that have to be done in physics or in biology is mechanical work of the mind which can be done by anyone or almost anyone. For the purpose of innumerable investigations it is possible to divide science into small sections, to enclose oneself in one of these, and leave out of consideration all the rest.

*The Revolt of the Masses*

Chapter 12 (p. 110, 111)

W.W. Norton & Company, Inc. New York, New York, USA. 1960

### **Parson, H. N.**

No biographical data available

A successful blending of the sciences and the humanities is necessary for the health of our civilization.

*Science Is Human*

Science Is Human (p. 31)

University of Otago Press. Dunedin, New Zealand. 1972

### **Sagan, Carl** 1934–96

American astronomer and science writer

The very method of mathematical reasoning that Isaac Newton introduced to explain the motion of the planets

around the Sun has led to most of the technology of our modern world. The Industrial Revolution, for all its shortcomings, is still the global model of how an agricultural nation can emerge from poverty. These debates have bread-and-butter consequences.

*Pale Blue Dot: A Vision of the Human Future in Space*

Chapter 4 (p. 56)

Random House, Inc. New York, New York, USA. 1994

## SCIENCE AND MORALS

### **Bronowski, Jacob** 1908–74

Polish-born British mathematician and polymath

It is not the business of science to inherit the earth, but to inherit the moral imagination; because without that man and beliefs and science will perish together.

*The Ascent of Man*

Chapter 13 (p. 432)

Little, Brown & Company. Boston, Massachusetts, USA. 1973

### **Chesterton, G. K. (Gilbert Keith)** 1874–1936

English author

...when any part of the general public is drawn into a debate on physical science, we may be certain that it has already become a debate on moral science.

*All Is Grist: A Book of Essays*

On Gossip about Heredity (p. 96)

Methuen & Company Ltd. London, England. 1931

### **Compton, Karl Taylor** 1887–1954

American educator and physicist

I would emphasize the fact that scientific discovery is, per se, neither good nor bad. It simply produces knowledge and with knowledge, opportunity and responsibility. I think it fair to say that the advance of science carries with it powerful demands on morality if the results are to be beneficial rather than harmful.

*A Scientist Speaks: Excerpts from Addresses by Karl Taylor Compton*

During the Years 1930–1949 (p. 5)

Undergraduate Association, MIT. Cambridge, Massachusetts, USA. 1955

### **Dewey, John** 1859–1952

American philosopher and educator

Science through its physical technological consequences is now determining the relations which human beings, severally and in groups, sustain to one another. If it is incapable of developing moral techniques which will also determine these relations, the split in modern culture goes so deep that not only democracy but all civilized values are doomed.

*Freedom and Culture*

Chapter Six (p. 118)

Prometheus Books. Buffalo, New York, USA. 1989

### **Diderot, Denis** 1713–84

French encyclopedist and philosopher of materialism

The moral universe is so closely linked to the physical universe that it is scarcely likely that they are not one and the same machine.

*Éléments de Physiologie* (pp. xiii–xiv)  
Librairie M. Didier. Paris, France. 1964

**Ferré, Nels F. S.** 1908–71  
Swedish-American theologian

Science can be and is being made into an escapist philosophy — into a dodge of moral disciplines and spiritual responsibilities.

*Faith and Reason*  
Chapter II (p. 83)  
Harper & Brothers. New York, New York, USA. 1946

**Friedenberg, Edgar Z.** 1921–2001  
Educator, education critic, and sociologist

...only science can hope to keep technology in some sort of moral order.

*The Vanishing Adolescent*  
The Impact of the School, the Clarification of Experience (p. 50)  
Beacon Press. Boston, Massachusetts. 1964

**Gould, Stephen Jay** 1941–2002  
American paleontologist, evolutionary biologist, and historian of science

I do not know when the technical and popular prose of science became separated, although I accept the inevitability of such a division as knowledge became increasingly more precise, detailed, and specialized. We have now reached the point where most technical literature not only falls outside the possibility of public comprehension but also (as we would all admit in honest moments) outside our own competence in scientific disciplines far removed from our personal expertise. I trust that we all regard this situation as saddening, even though we accept its necessity.

Take Another Look  
*Science*, Volume 286, Number 5441, October 29, 1999 (p. 899)

**Jefferson, Thomas** 1743–1826  
3<sup>rd</sup> president of the United States

...if science produces no better fruits than tyranny, murder, rapine and destitution of national morality, I would rather wish our country to be ignorant, honest and estimable, as our neighboring savages are.

*The Writings of Thomas Jefferson* (Volume 6)  
Letter to John Adams, 1812 (p. 37)  
Deby & Jackson. New York, New York, USA. 1859

**Kruyt, Hugo Rudolph** 1882–1959  
Dutch colloid chemist

Clearer than ever we understand that knowledge is not all, that we need morals and brotherhood to avoid science becoming a curse.

In John P. Dickinson

*International Council of Scientific Unions*  
First General Assembly Following the Second World War, Science and Scientific Researchers in Modern Society (p. 165)

**Lerner, Max** 1902–92  
American educator and author

Science itself is a humanist in the sense that it doesn't discriminate between human beings, but it is also morally neutral. It is no better or worse than the ethos with and for which it is used.

Manipulating Life  
*New York Post*, January 24, 1968

**Masters, William H.** 1915–2001  
American gynecologist and researcher

Science by itself has no moral dimension. But it does seek to establish truth. And upon this truth morality can be built.

Two Sex Researchers on the Firing Line  
*Life*, 24 June 1966 (p. 49)

**Oppenheimer, J. Robert** 1904–67  
American theoretical physicist

Scientists aren't responsible for the facts that are in nature. It's their job to find the facts. There's no sin connected with it — no morals. If anyone should have a sense of sin, it's God. He put the facts there.

In Lincoln Barnett  
J. Robert Oppenheimer  
*Life*, October 10, 1949 (p. 133)

**Poincaré, Henri** 1854–1912  
French mathematician and theoretical astronomer

There can no more be immoral science than there can be scientific morals.

*The Foundations of Science*  
The Values of Science, Introduction (p. 206)  
The Science Press. New York, New York, USA. 1913

**Snow, Charles Percy** 1905–80  
English novelist and scientist

...there is a moral component right in the grain of science itself...

*The Two Cultures: And a Second Look*  
Chapter I (p. 13)  
At The University Press. Cambridge, England. 1964

**Toynbee, Arnold J.** 1852–83  
English historian

Our western science is a child of moral virtues; and it must now become the father of further moral virtues if its extraordinary material triumphs in our time are not to bring human history to an abrupt, unpleasant and discreditable end.

A Turning Point in Man's Destiny  
*The New York Times Magazine*, December 26, 1954 (p. 5)

**Wallace, Henry A.** 1888–1935  
33<sup>rd</sup> vice-president of the United States

I can understand the impulse which prompts scientists to defend science against the attacks of the uninformed. Science has achieved so many miracles for society, saved so many lives, made possible so extraordinary an advance in material living standards for so many millions of people, that it is disquieting to think that all the consequences of science can ever be other than good. Yet I don't see what basis we have for assuming that science can and does have only beneficial consequences. Is the product of man's curiosity inevitably good?...It may be disturbing to realize it, but the truth seems to be that science proceeds without moral obligations; it is neither moral nor immoral, but in essence amoral.

Scientists in an Unscientific Society  
*Scientific Monthly*, Volume 150, 1934 (p. 285)

## SCIENCE AND PHILOSOPHY

**Bacon, Sir Francis** 1561–1626  
English lawyer, statesman, and essayist

The great and radical difference of capacities, as to philosophy and the sciences, lies here: that some are stronger and fitter to observe the differences of things; others their correspondencies: for a steady and sharp genius can fix it's contemplations, and dwell and fasten upon all the subtlety of differences, while a sublime and ready genius perceives and compares the smallest and most general agreements of things; but both kinds easily fall into excess, by grasping either at the dividing scale, or shadows of things. The former is so taken up with the particles of things, as almost to neglect their structure, whilst the other views their fabrication with such astonishment, as not to enter into the simplicity of nature.

In George Adams  
*Lectures on Natural and Experimental Philosophy* (Volume 1)  
Lecture IV (p. 127)  
Printed by R. Hindmarsh. London, England. 1794

**Burroughs, John** 1837–1921  
American naturalist and writer

Science displeases literature when it dehumanizes nature and shows us irrefragable laws when we had looked for humanistic divinities.

*The Breath of Life*  
Chapter X (p. 243)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1915

**Chesterton, G. K. (Gilbert Keith)** 1874–1936  
English author

To mix science up with philosophy is only to produce a philosophy that has lost all its ideal value and a science that has lost all its practical value.

*All Things Considered*  
Science and Religion (p. 187)  
John Lane Company. New York, New York, USA. 1908

**Compton, Karl Taylor** 1887–1954  
American educator and physicist

Science is not a technique or a body of knowledge, though it uses both. It is rather an attitude of inquiry, or observation and reasoning, with respect to the world. It can be developed, not by memorizing facts or juggling formulas to get an answer, but only by actual practice of scientific observation and reasoning.

*A Scientist Speaks: Excerpts from Addresses by Karl Taylor Compton During the Years 1930–1949* (p. 44)  
Undergraduate Association, MIT. Cambridge, Massachusetts, USA. 1955

**de Casseres, Benjamin** 1873–1945  
American journalist and author

My studies in speculative philosophy, metaphysics, and science are all summed up in the image of a mouse called man, running in and out of every hole in the cosmos hunting for the absolute cheese.

*Harper's Weekly*, Volume 19, Number 3164, June 28, 1976

**Durant, William James** 1885–1981  
American historian and essayist

Philosophy...is the front trench in the siege of truth. Science is the captured territory.

*The Story of Philosophy*  
Introduction (p. 2)  
Simon & Schuster. New York, New York, USA. 1953

Science without philosophy, facts without perspective and valuation, cannot save us from havoc and despair. Science gives us knowledge, but only philosophy can give us wisdom.

*The Story of Philosophy*  
Introduction (p. 3)  
Simon & Schuster. New York, New York, USA. 1953

Science is analytical description, philosophy is synthetic interpretation. Science wishes to resolve the whole into the known.

*The Story of Philosophy*  
Introduction (p. 2)  
Simon & Schuster. New York, New York, USA. 1953

**Eddy, Mary Baker** 1821–1910  
American religious writer

Jesus of Nazareth was the most scientific man that ever trod the globe. He plunged beneath the material surface of things, and found the spiritual cause.

*Science and Health with Key to the Scriptures*  
Chapter X (p. 313)  
Joseph Armstrong. Boston, Massachusetts, USA. 1906

**Fischer, Martin H.** 1879–1962  
German-American physician

Not fact-finding, but attainment to philosophy, is the aim of science.

*Fischerisms* (p. 7)

C.C. Thomas. Springfield, Illinois, USA. 1944

### Gornick, Vivian

American essayist

Science — like art, religion, political theory, or psychoanalysis — is work that holds out the promise of philosophical understanding, excites in us the belief that we can “make sense of it all.”

*Women in Science: Portraits from a World in Transition*

Part One (p. 66)

Simon & Schuster. New York, New York, USA. 1983

### Huxley, Julian 1887–1975

English biologist, philosopher, and author

The attempt to understand this universe, including the nature of man, is the task of science; and as she makes progress with this task, so will she become more and more an indispensable part of philosophy and religion — imagination’s touchstone, thought’s background, action’s base.

Searching for the Elixir of Life

*The Century Illustrated Monthly Magazine*, Volume 103, Number 4, February 1922

### Jeans, Sir James Hopwood 1877–1946

English physicist and mathematician

The philosophy of any period is always largely interwoven with the science of the period, so that any fundamental change in science must produce reactions in philosophy.

*Physics and Philosophy*

Chapter I (p. 2)

Dover Publications, Inc. New York, New York, USA. 1981

In whatever ways we define science and philosophy their territories are contiguous; wherever science leaves off — and in many places its boundary is ill-defined — there philosophy begins.

*Physics and Philosophy*

Chapter I (p. 17)

Dover Publications, Inc. New York, New York, USA. 1981

### Jones, Steve 1944–

English genetics professor

...philosophy is to science as pornography is to sex.

In Mary Midgley

Can Science Save Its Soul?

*New Scientist*, 1 August 1992 (p. 25)

### Keats, John 1795–1821

English Romantic lyric poet

Do not all charms fly

At the mere touch of cold philosophy?

There was an awful rainbow once in heaven:

We know her woof, her texture; she is given

In the dull catalogue of common things.

Philosophy will clip an Angel’s wings,

Conquer all mysteries by rule and line,

Empty the haunted air, and gnom’ed mine —

Unweave a rainbow...

*The Complete Poetical Works and Letters of John Keats*

Lamia, Part II, l. 229–237

Houghton Mifflin Company. Boston, Massachusetts, USA. 1890

### Mercier, André 1913–99

Swiss physicist

Philosophy does not “solve problems”, whereas science does. Philosophy, in its relations to science, gathers up the problems of science, which are no longer problems since they have found solutions, and seeks to order them in such a way that the structure of knowledge does, in fact, appear.

Fifty Years of the Theory of Relativity

*Nature*, Volume 175, Number 4465, May 28, 1955 (p. 919)

### Pope Pius XII 1876–1958

Bishop of Rome

Science descends ever more deeply into the hidden recesses of things, but it must halt at a certain point when questions arise which cannot be settled by means of sense observations. At that point the scientist needs a light which is capable of revealing to him truth which entirely escapes his senses. This light is philosophy.

In Philip G. Fothergill

*Life and Its Origin*

Pontifical Academy of Science, Meeting 1955 (p. 12)

### Popper, Karl R. 1902–94

Austrian/British philosopher of science

All science and all philosophy are enlightened common sense.

*Objective Knowledge: An Evolutionary Approach*

Chapter 2 (p. 34)

Clarendon Press. Oxford, England. 1972

### Renan, Ernest 1823–92

French philosopher and Orientalist

Socrates founded philosophy, and Aristotle science. There was philosophy before Socrates, and science before Aristotle; and since Socrates and since Aristotle, philosophy and science have made immense progress: but all has all been built upon the foundations they laid.

*The Life of Jesus*

Chapter 28 (p. 383)

Modern Library. New York, New York, USA. 1955

### Ritchie, Arthur David 1891–1967

Scottish philosopher and science history writer

Philosophers who write about Science and scientists who write about Philosophy are too often preoccupied

with the scientific theories and discoveries of the moment to the detriment of both their Science and their Philosophy.

*Scientific Method: An Inquiry into the Character and Validity of Natural Laws*

Preface (p. v)

Kegan Paul, Trench, Trubner & Company Ltd. London, England. 1923

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

The man who has no tincture of philosophy goes through life imprisoned in the prejudices.... To such a man the world tends to become definite, finite, obvious; common objects rouse no questions, and unfamiliar possibilities are contemptuously rejected.

*The Problems of Philosophy*

Chapter XV (pp. 156–157)

Oxford University Press, Inc. London, England. 1959

It seems to me that science has a much greater likelihood of being true in the main than any philosophy hitherto advanced (I do not, of course, except my own). In science there are many matters about which people are agreed; in philosophy there are none. Therefore, although each proposition in a science may be false, and it is practically certain that there are some that are false, yet we shall be wise to build our philosophy upon science, because the risk of error in philosophy is pretty sure to be greater than in science. If we could hope for certainty in philosophy, the matter would be otherwise, but so far as I can see such a hope would be a chimerical.

*The Philosophy of Logical Atomism*

Logical Atomism

University of Minnesota Press. Minneapolis, Minnesota, USA. 1959

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

In our science and philosophy, even, there is commonly no true and absolute account of things. The spirit of sect and bigotry has planted its hoof amid the stars. You have only to discuss the problem, whether the stars are inhabited or not, in order to discover it.

*The Writings of Henry David Thoreau* (Volume 4)

Life Without Principle (p. 469)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

**Weyl, Hermann** 1885–1955

German mathematician

A scientist who writes on philosophy faces conflicts of conscience from which he will seldom extricate himself whole and unscathed; the open horizon and depth of philosophical thoughts are not easily reconciled with that objective clarity and determinacy for which he has been trained in the school of science.

*Philosophy of Mathematics and Natural Science*

Preface (p. v)

Princeton University Press. Princeton, New Jersey, USA. 1949

## SCIENCE AND POETRY

**Beston, Henry** 1888–1968

American writer

Poetry is as necessary to comprehension as science. It is as impossible to live without reverence as it is without joy.

*The Outermost House*

Chapter X (p. 221)

Rinehart & Company. New York, New York, USA. 1928

**Clifford, William Kingdon** 1845–79

English philosopher and mathematician

It is an open secret to the few who know it, but a mystery and a stumbling-block to the many, that Science and Poetry are own sisters; inasmuch that in those branches of scientific inquiry which are most abstract, most formal, and most remote from the grasp of the ordinary sensible imagination, a higher power of imagination akin to the creative insight of the poet is most needed and most fruitful of lasting work.

In Leslie Stephen and Frederick Pollock (eds.)

*Lectures and Essays* (Volume 1)

Introduction (p. 1)

Macmillan & Company. London, England. 1886

**Davis, Joel** 1948–

No biographical data available

Poetry and science are closer than most people realize. Many poets and scientists already know this, of course. Most of the rest of us are still trapped in dismal stereotypes about both fields of human endeavor. The deep link between the two is vision.

*Alternate Realities*

In a Grain of Sand (p. 3)

Plenum Trade. New York, New York, USA. 1997

**Day-Lewis, C. (Cecil)** 1904–72

Irish-born English author and poet

Science is concerned with finding out and stating the facts: poetry's task is to give you the look, the smell, the taste, the "feel" of those facts.

*Poetry for You*

Chapter I (p. 10)

Basil Blackwell & Mott Ltd. Oxford, England. 1959

Every good poem, in fact, is a bridge built from the known, familiar side of life over into the unknown. Science, too, is always making expeditions into the unknown. But this does not mean that science can supersede poetry. For poetry enlightens us in a different way from science: it speaks directly to our feelings or imagination. The findings of poetry are no more and no less true than science.

*Poetry for You*

Chapter VIII (p. 92)

Basil Blackwell & Mott Ltd. Oxford, England. 1959

**Holton, Gerald** 1922–

Research professor of physics and science history

Poets rush in where scientists fear to tread.

*Einstein, History, and Other Passions: The Rebellion Against Science at the End of the Twentieth Century*

Part One, Chapter 6 (p. 132)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

**Jones, Frederick Wood** 1879–1954

Physician

Whoever wins to a great scientific truth will find a poet before him in the quest.

*Medical Journal of Australia*, 29 August 1931

**Lysaght, Sidney R.** 1860–1941

Irish writer

Science in the first place looks for information, poetry for beauty; and, taking different paths, they meet on the borderland of discovery.

*A Reading of Life*

Chapter II (p. 35)

Macmillan & Company Ltd. London, England. 1936

**Melandri, E.**

No biographical data available

The existence of poetics of science is undeniable.... Barring poetics from science is the same as barring use of the hypothesis.

In Fernand Hallyn

*The Poetic Structure of the World: Copernicus and Kepler*

Introduction (p. 7)

Zone Books. New York, New York, USA. 1990

**Miller, Hugh** 1802–56

Scottish geologist and theologian

Because science flourishes, must poesy decline? The complaint serves but to betray the weakness of the class who urge it.

*Sketch-Book of Popular Geology*

Lecture Second (p. 80)

William P. Nimmo & Company. Edinburgh, Scotland. 1880

**Spencer, Herbert** 1820–1903

English social philosopher

...those who have never entered upon scientific pursuits know not a tithe of the poetry by which they are surrounded.

*Education: Intellectual, Moral and Physical*

A.L. Fowle. New York, New York, USA. 1860

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

The poet uses the results of science and philosophy, and generalizes their widest deductions.

*The Writings of Henry David Thoreau* (Volume 1)

A Week on the Concord and Merrimac Rivers

Friday (p. 478)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

**Tillyard, E. M. W.** 1889–1962

English classical scholar

**Lewis, C. S. (Clive Staples)** 1898–1963

British author, scholar, and popular theologian

Only science can tell you where and when you are likely to meet an elm: only poetry can tell you what meeting an elm is like.

*The Personal Heresy: A Controversy*

Chapter V (p. 110)

Oxford University Press, Inc. London, England. 1939

**von Schlegel, Friedrich** 1772–1829

German philosopher, critic, and writer

Strictly speaking, the idea of a scientific poem is probably as nonsensical as that of a poetic science.

*Dialogue on Poetry and Literary Aphorisms*

Selected Aphorisms from the Lyceum

Aphorism 61 (p. 127)

The Pennsylvania State University Press, University Park. Pennsylvania, USA. 1968

**Wheelock, John Hall** 1886–1978

American poet

The statements of science are hearsay, reports from a world outside the world we know. What the poet tells us has long been known to us all, and forgotten. His knowledge is of our world, the world we are both doomed and privileged to live in, and it is a knowledge of ourselves, of the human condition, the human predicament.

*What Is Poetry?*

Chapter 6

Charles Scribner's Sons. New York, New York, USA. 1963

**Whitman, Walt** 1819–92

American poet, journalist, and essayist

Exact science and its practical movements are no checks on the greatest poet but always his encouragement and support. ...there the arms that lifted him first and brace him best...there he returns after all his goings and comings. The sailor and traveller...the anatomist chemist astronomer geologist phrenologist spiritualist mathematician historian and lexicographer are not poets, but they are the lawgivers of poets and their construction underlies the structure of every perfect poem.

*Leaves of Grass*

Preface to the 1855 edition of "Leaves of Grass" (p. 304)

Doubleday, Doran & Company, Inc. New York, New York, USA. 1940

If there shall be love and content between the father and the son and if the greatness of the son is the exuding of the greatness of the father, there shall be love between the poet and the man of demonstrable science. In the beauty of poems are the tuft and final applause of science.

*Leaves of Grass*

Preface to the 1855 edition of "Leaves of Grass" (p.304)  
 Doubleday, Doran & Company, Inc. New York, New York, USA. 1940

**Zee, Anthony**

American physicist

In science, one tries to say what no one else has ever said before. In poetry, one tries to say what everyone else has already said, but better. This explains, in essence, why good poetry is as rare as good science.

*Fearful Symmetry*

Chapter 7 (p. 103)  
 Macmillan Publishing Company, New York, New York, USA. 1986

**SCIENCE AND POLITICS****Born, Max** 1882–1970

German-born English physicist

...the subordination of fundamental research to political and military authorities is detrimental. The scientists themselves have learned by now that the period of unrestricted individualism in research has come to an end. They know that even the most abstract and remote ideas may one day become of great practical importance — like Einstein's law of equivalence of mass and energy. They have begun to organize themselves and to discuss the problem of their responsibility to human society. It should be left to these organizations to find a way to harmonize the security of the nations with the freedom of research and publication without which science must stagnate.

*The Restless Universe*

Postscript (p. 308)  
 Dover Publications, Inc. New York, New York, USA. 1951

**Budworth, D.**

No biographical data available

Science policy is essentially about the allocation of scarce resources, and is therefore a part of politics.... The scarce resource with which science policy should concern itself in the short term is not money, but that portion of the scientific population which is capable of initiating and leading significant work. Such people are always in short supply, even when the total population itself is greater than the available jobs.

Science Policy Should Be About People  
*New Scientist*, Volume 69, Number 993, 25 March 1976 (pp. 684–685)

**Clarke, Arthur C.** 1917–

English science and science fiction writer

The menace of interplanetary imperialism can be overcome only by world-wide technical and political agreements well in advance of the actual event, and these will require continual pressure and guidance from the organizations which have studied the subject.

*The Challenge of the Spaceship*

The Challenge of the Spaceship (p. 8)  
 Harper & Brothers. New York, New York, USA. 1959

**de Maupertuis, Pierre-Louis Moreau** 1698–1759

French mathematician and astronomer

There are sciences over which the will of kings has no immediate influence; it can procure advancement there only in so far as the advantages which it attaches to their study can multiply the number and the efforts of those who apply themselves to them. But there are other sciences which for their progress urgently need the power of sovereigns; they are all those which require greater expenditure than individuals can make or experiments which would not ordinarily be practicable.

*Lettres su le progrès des sciences, Oeuvres de Maupertuis*

Dresden (pp. 6–7)  
 Publisher undetermined

**Johnson, Harry G.** 1923–1979

American economist

Basic science, per se, contributes to culture; it contributes to our social well-being, including national defence and public health; to our economic well-being; and it is an essential element of the education not only of scientists but also of the population as a whole. In deciding how much science the society needs, one must decide how the support of science bears on these other, politically defined, goals of the society.

In National Academy of Sciences

*Basic Research and National Goals: A Report to the Committee on Science and Astronautics*

Federal Support of Basic Research: Some Economic Issues, Summary (p. 5)

U.S. Government Printing Office. Washington, D.C. 1965

**Koestler, Arthur** 1905–83

Hungarian-born English writer

No scientist is admired for failing in the attempt to solve problems that lie beyond his competence. The most he can hope for is the kindly contempt earned by the Utopian politician. If politics is the art of the possible, research is surely the art of the soluble. Both are immensely practical-minded affairs.

The Act of Creation

*New Statesman*, Volume 19, June 1964

**Price, Don K.** 1910–1995

American presidential advisor and educator

...all sciences are considered by their professors as equally significant; by the politicians, as equally incomprehensible; and by the military as equally expensive.

*The Scientific Estate*

Chapter 1 (p. 12)  
 Harvard University Press. Cambridge, Massachusetts, USA. 1965

...it has begun to seem evident to a great many administrators and politicians that science had become something very close to an establishment, in the old and proper sense of that word: a set of institutions supported by tax funds but largely on faith and without direct responsibility to political control.

*The Scientific Estate*

Chapter 1 (p. 12)

Harvard University Press. Cambridge, Massachusetts, USA. 1965

**Rabinowitch, Eugene** 1901–73

Russian-born American biophysicist

Science has assumed such an important role in determining the parameters of national and international life, that participation in national decisions by people whose world picture has been affected by the study and practice of science (even if this picture has its own bias), is indispensable for many major political decisions — to correct the bias of the more traditional molders of national decisions, such as men with legal training.

Open Season on Scientists

*The New Republic*, January 1, 1966 (p. 21)

## SCIENCE AND RELIGION

**Adams, George** 1750–95

English instrument maker

The two kingdoms of nature and grace, as two parallel lines, correspond to each other, follow a like course, but can never be made to touch. An adequate understanding of this distinction in all its branches, would be the consummation of human knowledge.

*Lectures on Natural and Experimental Philosophy* (Volume 1)

Lecture VI (p. 242)

Printed by R. Hindmarsh. London, England. 1794

**Adams, Henry Brooks** 1838–1918

American man of letters

The preacher then went on to criticise the attitude of religion towards science. “If there is still a feeling of hostility between them...it is no longer the fault of religion. There have been times when the church seemed afraid, but she is so no longer. Analyze, dissect, use your microscope or your spectrum till the last atom of matter is reached; reflect and refine till the last element of thought is made clear; the church now knows with the certainty of science what she once knew only by the certainty of faith, that you will find enthroned behind all thought and matter only one central idea, — that idea which the church has never ceased to embody, — I AM!

*Democracy, and Esther: Two Novels by Henry Adams*

Esther (p. 212)

Peter Smith. Gloucester, Massachusetts, USA. 1965

**Allport, Gordon** 1897–1967

American psychologist

A narrowly conceived science can never do business with a narrowly conceived religion.

*The Individual and His Religion: A Psychological Interpretation*

Preface (p. vi)

The Macmillan Company. New York, New York, USA. 1956

**Alpher, Ralph Asher** 1921–

American physicist

I...reject the argument put forth by many fundamentalists that science has nothing to do with religion because God is not among the things making up the universe in which we live. Surely if a necessity for a god-concept in the universe ever turns up, that necessity will become evident to the scientist.

Theology of the Big Bang

*Religious Humanism*, Volume 17, Number 1, Winter 1983 (p. 12)

**Appleyard, Bryan** 1951–

English author and journalist

Science was the lethally dispassionate search for truth in the world whatever its meaning might be; religion was the passionate search for meaning whatever the truth might be. Science can lay a claim to a meaning in the sense of establishing causality, and religion could claim truth in the sense of a transcendent order. But science’s meaning does not answer the question Why? And religion’s truth had no scientific relevance.

*Understanding the Present: Science and the Soul of Modern Man*

Chapter 4 (p. 79)

Doubleday. New York, New York, USA. 1992

**Berger, Peter L.** 1929–

American sociologist

Protestant theologians have been increasingly engaged in playing a game whose rules have been dictated by their cognitive antagonists.

*A Rumor of Angels: Modern Society and the Rediscovery*

*of the Supernatural*

Chapter 1 (p. 10)

Doubleday & Company, Inc. Garden City, New York, USA. 1970

**Bernal, John Desmond** 1901–71

Irish-born physicist and x-ray crystallographer

Now the history of scientific advance has shown us clearly that any appeal to Divine Purpose or any supernatural agency, to explain any phenomenon, is in fact only a concealed confession of ignorance, and a bar to genuine research.

*Science and Ethics*

A Marxist Critique (p. 116)

George Allen & Unwin Ltd. London, England. 1942

The role of God in the material world has been reduced stage by stage with the advance of science, so much so that He only survives in the vaguest mathematical form in the minds of older physicists and biologists.

In C.H. Waddington (ed.)

*Science and Ethics*

A Marxist Critique (p. 116)

George Allen &amp; Unwin Ltd. London, England. 1942

**Boutroux, Émile** 1845–1921

French philosopher

In spite of their relations, science and religion remain, and must remain, distinct. If there were no other way of establishing a rational order between things than that of reducing the many to the one, either by assimilation or by elimination, the destiny of religion would appear doubtful.

Translated by Jonathan Nield

*Science and Religion in Contemporary Philosophy*

Conclusion (pp. 399–400)

Duckworth &amp; Company. London, England. 1912

**Buck, Pearl S.** 1892–1973

American author

Science and religion, religion and science, put it as I may they are two sides of the same glass, through which we see darkly until these two, focusing together, reveal the truth.

*A Bridge for Passing*

Chapter III (p. 255)

John Day Company. New York, New York, USA. 1962

**Bultmann, R.**

No biographical data available

...the New Testament provides a world picture which belongs entirely to Jewish or Gnostic mythology and is incredible or even meaningless in a scientific age.

In H.J. Paton

*The Modern Predicament: A Study in the Philosophy of Religion*

Chapter XV, Section 3 (p. 228)

Collier Books. New York, New York, USA. 1962

**Burroughs, John** 1837–1921

American naturalist and writer

The mysteries of religion are of a different order from those of science; they are parts of an arbitrary system of man's own creation; they contradict our reason and our experience, while the mysteries of science are revealed by our reason, and transcend our experience.

Scientific Faith

*The Atlantic Monthly*, July 1915 (p. 33)

The miracles of religion are to be discredited, not because we cannot conceive of them, but because they run counter to all the rest of our knowledge; while the mysteries of science, such as chemical affinity, the conservation of energy, the indivisibility of the atom, the change of the non-living into the living...extend the boundaries of our knowledge, though the modus operandi of the changes remains hidden.

Scientific Faith

*The Atlantic Monthly*, July 1915 (p. 33)**Bush, Vannevar** 1890–1974

American electrical engineer and physicist

To pursue science is not to disparage the things of the spirit. In fact, to pursue science rightly is to furnish a framework on which the spirit may rise.

Speech, MIT, October 5, 1953

**Bushnell, Horace** 1802–76

American Congregational minister

As the science of nature goes toward completion, religion, having all the while been watching for it in close company, will have gotten immense breadth and solidity, from the ideas and facts unfolded in its discoveries, and will be as much enlarged in its confidence and the sentiment of worship, as beholding God's deep system in the world signifies more than looking on its surfaces.

Science and Religion

*Putnam's Magazine*, Volume 1, 1868 (p. 267)**Butler, Samuel** 1612–80

English novelist, essayist, and critic

Science and religion are reconciled in amiable and sensible people but nowhere else.

*The Note-Books of Samuel Butler* (Volume 1)

1874–1883 (p. 118)

University Press of America, Inc. Lanham, Maryland, USA. 1984

**Chadwick, Owen** 1916–

English historian and Christian scholar

Science versus Religion — the antithesis conjures two hypostatized entities of the later nineteenth century: Huxley St. George slaying Samuel smoothest of dragons; a mysterious undefined ghost called Science against a mysterious indefinable ghost called Religion; until by 1900 schoolboys decided not to have faith because Science, whatever that was, disproved Religion, whatever that was.

*The Secularisation of the European Mind in the Nineteenth Century*

Part II, Chapter 7 (p. 161)

Cambridge University Press. Cambridge, England. 1990

**Clark, W. C.**

No biographical data available

**Majone, G.**

No biographical data available

The social uses of science have always had something in common with the social uses of religion. And in the two decades following the Second World War, modern science took on a most religious-looking numinous legitimacy as an unquestioned source of authority on all manner of policy problems.

*Report of the International Institute of Applied Systems Analysis*

The Critical Appraisal of Scientific Inquiries with Policy Implications, Laxenburg, Austria, 1984 (p. 35)

**Compton, Karl Taylor** 1887–1954

American educator and physicist

Science has contributed to the making of religion into a developing dynamic spiritual force.

*A Scientist Speaks: Excerpts from Addresses by Karl Taylor Compton During the Years 1930–1949* (p. 19)  
Undergraduate Association, MIT. Cambridge, Massachusetts, USA. 1955

**Conklin, Edwin Grant** 1863–1952

American zoologist

Science cannot solve the great mysteries of our existence, — why we are, whither we are bound, and what it all means. Faith alone assures us that there is definite purpose in all experience. This knowledge makes life worth living and service a privilege.

In Edward H. Cotton

*Has Science Discovered God?*

A Biologist's Religion (p. 89)

Thomas Y. Crowell Company. New York, New York, USA. 1931

**Coulson, Charles Alfred** 1910–74

English theoretical chemist

...science is one aspect of God's presence, and scientists therefore part of the company of His heralds.

*Science and Christian Belief*

Scientific Method (p. 30)

The University of North Carolina Press. Chapel Hill, North Carolina, USA. 1955

**Davies, Paul Charles William** 1946–

British-born physicist, writer, and broadcaster

If the Church is largely ignored today it is not because science has finally won its age-old battle with religion, but because it has so radically reoriented our society that the biblical perspective of the world now seems largely irrelevant. As one television cynic recently remarked, few of our neighbors possess an ass for us to covet.

*God and the New Physics*

Chapter 1 (p. 2)

Simon & Schuster. New York, New York, USA. 1983

Those who invoke God as an explanation of cosmic organization usually have in mind a supernatural agency, acting on the world in defiance of natural laws. But it is perfectly possible for much, if not all of what we encounter in the universe to be the product of intelligent manipulation of a purely natural kind: within the laws of physics. For example, our galaxy could have been made by a powerful mind who rearranged the primeval gases using carefully placed gravitating bodies, controlled explosions and all the other paraphernalia of a space age astro-engineer.

*God and the New Physics*

Chapter 15 (p. 208)

Simon & Schuster. New York, New York, USA. 1983

In spite of the fact that religion looks backward to revealed truth while science looks forward to new vistas and discoveries, both activities produce a sense of awe and a curious mixture of humility and arrogance in their

practitioners. All great scientists are inspired by the subtlety and beauty of the natural world that they are seeking to understand. Each new subatomic particle, every unexpected object, produces delight and wonderment. In constructing their theories, physicists are frequently guided by arcane concepts of elegance in the belief that the universe is intrinsically beautiful.

*God and the New Physics*

Chapter 17 (p. 220)

Simon & Schuster. New York, New York, USA. 1983

**Dembski, William A.** 1960–

Mathematician and philosopher

Any view of the sciences that leaves Christ out of the picture must be seen as fundamentally deficient.

*Intelligent Design: The Bridge Between Science and Theology*

Part 3, Chapter 7, Section 7.6 (p. 206)

InterVarsity Press. Downers Grove, Illinois, USA. 1999

**Dobzhansky, Theodosius** 1900–75

Russian-American scientist

There are still many people who are happy and comfortable adhering to fundamentalist creeds. This should cause no surprise, since a large majority of these believers are as unfamiliar with scientific findings as were people who lived centuries ago.

*The Biology of Ultimate Concern*

Chapter 5 (p. 95)

The New American Library, Inc. New York, New York, USA. 1967

Science and religion deal with different aspects of existence...[T]hese are the aspect of facts and the aspect of meaning. But there is one stupendous fact...the meaning of which they have ceaselessly tried to discover. This fact is Man.

*The Biology of Ultimate Concern*

Chapter 5 (p. 96)

The New American Library, Inc. New York, New York, USA. 1967

...nothing gives more pleasure to a rather common type of religious person than to point out that science cannot explain this or cannot account for that!

*The Biology of Ultimate Concern*

Chapter 5 (p. 97)

The New American Library, Inc. New York, New York, USA. 1967

**Draper, John William** 1811–82

American scientist, philosopher, and historian

As to Science, she has never sought to ally herself to civil power. She has never attempted to throw odium or inflict social ruin on any human being. She has never subjected any one to mental torment, physical torture, least of all to death, for the purpose of upholding or promoting her ideas. She presents herself unstained by cruelties and crimes. But in the Vatican — we have only to recall the Inquisition — the hands that are now raised in appeals to the Most Merciful are crimsoned.

*History of the Conflict between Religion and Science*

Preface (p. xi)

D. Appleton and Company. New York, New York, USA. 1898

**du Noüy, Pierre Lecomte** 1883–1947

French scientist

Any man who believes in God must realize that no scientific fact, as long as it is true, can contradict God. Otherwise, it would not be true. Therefore, any man who is afraid of science does not possess a strong faith.

*Human Destiny*

Chapter 16 (p. 243)

Longmans, Green & Company. London, England. 1947

**Dubos, René Jules** 1901–82

French-born American microbiologist and environmentalist

Religion and science...constitute deep-rooted and ancient efforts to find richer experience and deeper meaning than are found in the ordinary biological and social satisfactions. As pointed out by Whitehead, religion and science have similar origins and are evolving toward similar goals.

*A God Within*

Chapter 12. On Being Human (p. 255)

Charles Scribner's Sons. New York, New York, USA. 1972

Both [religion and science] started from crude observations and fanciful concepts, meaningful only within a narrow range of conditions for the people who formulated them of their limited tribal experience. But progressively, continuously, and almost simultaneously, religious and scientific concepts are ridding themselves of their coarse and local components, reaching higher and higher levels of abstraction and purity.

*A God Within*

Chapter 12. On Being Human (p. 255)

Charles Scribner's Sons. New York, New York, USA. 1972

Both the myths of religion and the laws of science, it is now becoming apparent, are not so much descriptions of facts as symbolic expressions of cosmic truths.

*A God Within*

Chapter 12. On Being Human (p. 255)

Charles Scribner's Sons. New York, New York, USA. 1972

**Durant, William James** 1885–1981

American historian and essayist

Those of you who specialize in science will find it hard to understand religion, unless you feel, as Voltaire did, that the harmony of the spheres reveals a cosmic mind, and unless you realize, as Rousseau did, that man does not live by intellect alone.

Commencement Address

Webb School of Claremont, California, June 7, 1958

We are such microscopic particles in so immense a universe that none of us is in a position to understand the world, much less to dogmatize about it. Pascal trembled at the thought of man's bewildered minuteness between

the immensity of the whole and the complexity of each part; "these infinite spaces," he said, "frighten me!" Let us be careful how we pit our pitiful generalizations against the infinite variety, scope, and subtlety of the world.

Commencement Address

Webb School of Claremont, California, June 7, 1958

**Dyson, Freeman J.** 1923–

American physicist and educator

Professional scientists today live under a taboo against mixing science and religion.

*Disturbing the Universe*

Chapter 23 (p. 245)

Basic Books, Inc. New York, New York, USA. 1979

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

The starting-point of belief in mystical religion is a conviction of significance or, as I have called it earlier, the sanction of a striving in the consciousness. This must be emphasized because appeal to intuitive conviction of this kind has been the foundation of religion through all ages, and I do not wish to give the impression that we have now found something new and more scientific to substitute. I repudiate the idea of proving the distinctive beliefs of religion either from the data of physical science or by the methods of physical science.

*The Nature of the Physical World*

Chapter XV (p. 333)

The Macmillan Company. New York, New York, USA. 1930

It is curious that the doctrine of the running down of the physical universe is so often looked upon as pessimistic and contrary to the aspirations of religion. Since when has the teaching that "heaven and earth shall pass away" become ecclesiastically unorthodox?

*New Pathways in Science*

Chapter III, Section III (p. 59)

The Macmillan Company. New York, New York, USA. 1935

It is probably true that the recent changes of scientific thought remove some of the obstacles to a reconciliation of religion with science; but this must be carefully distinguished from any proposal to base religion on scientific discovery. For my own part I am wholly opposed to any such attempt.

*Science and the Unseen World*

Chapter VII (pp. 72–73)

The Macmillan Company. New York, New York, USA. 1929

**Einstein, Albert** 1879–1955

German-born physicist

All religions, arts and sciences are branches of the same tree.

*Out of My Later Years* (p. 7)

Thames & Hudson. London, England. 1950

Everyone who is seriously involved in the pursuit of science becomes convinced that a spirit is manifest in the laws of the Universe — a spirit vastly superior to that of man, and one in the face of which we with our modest powers must feel humble. In this way the pursuit of science leads to a religious feeling of a special sort, which is indeed quite different of the religiosity of someone more naive.

In Helen Dukas and Banesh Hoffman

*Albert Einstein: The Human Side — New Glimpses from His Archives*

Letter dated 20 December, 1935 (p. 33)

Princeton University Press. Princeton, New Jersey, USA. 1979

Scientific research is based on the idea that everything that takes place is determined by laws of nature, and therefore this holds for the actions of people. For this reason, a research scientist will hardly be inclined to believe that events could be influenced by a prayer, i.e., by a wish addressed to a supernatural Being. However, it must be admitted that our actual knowledge of these laws is only imperfect and fragmentary, so that, actually, the belief in the existence of basic all-embracing laws in Nature also rests on a sort of faith. [Belief in basic laws of Nature] has been largely justified so far by the success of scientific research.

In Helen Dukas and Banesh Hoffman

*Albert Einstein: The Human Side: New Glimpses from His Archives*

Letter dated 24 January 1936 (pp. 32–34)

Princeton University Press. Princeton, New Jersey, USA. 1979

The basis of all scientific work is the conviction that the world is an ordered and comprehensive entity, which is a religious sentiment. My religious feeling is a humble amazement at the order revealed in the small patch of reality to which our feeble intelligence is equal.

*Cosmic Religion, With Other Opinions and Aphorisms*

On Science (p. 98)

Covici-Fiede. New York, New York, USA. 1931

[E]very one who is seriously involved in the pursuit of science becomes convinced that a spirit is manifest in the laws of the Universe — a spirit vastly superior to that of man, and one in the face of which we with our modest powers must feel humble. In this way the pursuit of science leads to a religious feeling of a special sort, which is indeed quite different from the religiosity of someone more naive.

In Helen Dukas and Banesh Hoffman

*Albert Einstein: The Human Side: New Glimpses from His Archives*

Letter dated 24 January 1936 (pp. 32–34)

Princeton University Press. Princeton, New Jersey, USA. 1979

[T]he cosmic religious experience is the strongest and the noblest driving force behind scientific research. No one who does not appreciate the terrific assertions, and, above all, the devotion without which pioneer creations in scientific thought cannot come into being, can judge the strength of the feeling out of which alone such work, turned away as it is from immediate practical life, can

grow. What a deep faith in the rationality of the structure of the world and what a longing to understand even a small glimpse of the reason revealed in the world there must have been in Kepler and Newton to enable them to unravel the mechanism of the heavens in long years of lonely study.

*The New York Times Magazine*, 9 November 1930

Certain it is that a conviction, akin to religious feeling, of the rationality or intelligibility of the world lies behind all scientific work of a higher order... This firm belief, a belief bound up with deep feeling, in a superior mind that reveals itself in the world of experience, represents my conception of God.

*Ideas and Opinions*

On Scientific Truth (p. 261)

Crown Publishers, Inc. New York, New York, USA. 1954

I have never found a better expression than “religious” for this trust in the rational nature of reality and of its peculiar accessibility to the human mind. Where this trust is lacking science degenerates into an uninspired procedure. Let the devil care if the priests make capital out of this. There is no remedy for that.

*Lettres a Maurice Solovine* (pp. 102–103)

Gauthier-Villars. Paris, France. 1956

I am of the opinion that all the finer speculations in the realm of science spring from a deep religious feeling, and that without such feeling they would not be fruitful.

Science and God: A Dialog

*Forum*, Volume 83, June 1930 (p. 373)

Science without religion is lame, religion without science is blind.

*Out of My Later Years*

Science and Religion, II (p. 26)

Thames & Hudson. London, England. 1950

...science not only purifies the religious impulse of the dross of its anthropomorphism but also contributes to a religious spiritualization of our understanding of life.

*Out of My Later Years*

Science and Religion, II (p. 29)

Thames & Hudson. London, England. 1950

**Eiseley, Loren C.** 1907–77

American anthropologist, educator, and author

Century after century, humanity studies itself in the mirror of fashion, and ever the mirror gives back distortions, which for the moment impose themselves upon man’s real image. In one period we believe ourselves governed by immutable laws; in the next, by chance. In one period angels hover over our birth; in the following time we are planetary waifs, the product of a meaningless and ever altering chemistry. We exchange halos in one era for fangs in another. Our religious and philosophical conceptions change so rapidly that the theological and moral exhortations of one decade become the

wastepaper of the next epoch. The ideas for which millions yielded up their lives produce only bored yawns in a later generation.

*The Unexpected Universe*

Chapter Eight, Section 2 (p. 179)

Harcourt, Brace & World, Inc. New York, New York, USA. 1969

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

The Religion that is afraid of science dishonors God and commits suicide.

English historian and biographer

The superstitions of science scoff at the superstitions of faith.

*The Lives of the Saints*

*Eclectic Review*, February 1852

**Garman, Charles E.** 1862–1932

No biographical data available

Science is thinking God's thoughts after Him just as truly as when we read the scriptures.

*Letters, Lectures, Addresses of Charles Edward Garman; A Memorial Volume, Prepared with the Cooperation of the Class of 1884, Amherst Science and Theism* (p. 231)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1909

**Gilkey, Langdon** 1919–2004

Protestant theologian

It is because science is limited to a certain level of explanation that scientific and religious theories can exist side by side without excluding one another, that one person can hold both to the scientific accounts of origins and to a religious account, to the creation of all things by God...

*Creationism on Trial: Evolution and God at Little Rock*

Chapter 5 (p. 117)

Winston Press. Minneapolis, Minnesota, USA. 1985

**Gillispie, Charles Coulston** 1918–

French writer and editor of philosophy and history of science

If one be clear about the nature of science as a description of the world, declarative but never normative, may not the choice between science and religion be refused? Is it not simply a false problem, arising from a confusion — an ancient confusion going back to the beginning of science — between objects and persona? Science is about nature, after all, not about duties. It is about objects. Christianity is about persons, the relation of the persons of men to the person of God.

*The Edge of Objectivity: An Essay in the History of Scientific Ideas*

Chapter VIII (pp. 350–351)

Princeton University Press. Princeton, New Jersey, USA. 1960

**Goodspeed, Edgar J.** 1871–1962

American scholar

Science needs religion, to prevent it from becoming a curse to mankind instead of a blessing.

*The Four Pillars of Democracy*

Chapter VI (p. 134)

Harper & Brothers. New York, New York, US. 1940

Science sees meaning in every part; religion sees meaning in the whole.

*Four Pillars of Democracy*

Chapter V (p. 106)

Harper & Brothers. New York, New York, USA. 1940

...religion needs science, to protect it from religion's greatest danger, superstition.

*Four Pillars of Democracy*

Chapter V (p. 115)

Harper & Brothers. New York, New York, USA. 1940

**Grinnel, Frederick**

...modern science constitutes a method for understanding and modifying the world but has no inherent direction, whereas modern religion describes a messianic world view but lacks a useful method to bring about this state of affairs.

Complementarity: An Approach to Understanding the Relationship Between Science and Religion  
*Perspectives in Biology and Medicine*, Volume 29, Number 2, Winter 1986 (p. 293)

**Gull, Sir William Withey** 1816–90  
 English physician

Realize, if you can, what a paralyzing influence on all scientific inquiry the ancient belief must have had which attributed the operations of nature to the caprice not of one divinity only, but of many. There still remains vestiges of this in most of our minds, and the more distinct in proportion to our weakness and ignorance.

*British Medical Journal*, Volume 2, 1874 (p. 425)

**Haldane, John Burdon Sanderson** 1892–1964  
 English biologist

The wise man regulates his conduct by the theories both of religion and science. But he regards these theories not as statements of ultimate fact but as art-forms.

*Possible Worlds and Other Papers*  
 Chapter XXXI (p. 252)

Harper & Brothers. New York, New York, USA. 1928

**Hardin, Garrett** 1915–2003  
 American ecologist and microbiologist

We are terribly clever people, we moderns: we bend Nature to our will in countless ways. We move mountains, we make caves, fly at speeds no other organism can achieve and tap the power of the atom. We are terribly clever. The essentially religious feeling of subserviency to a power greater than ourselves comes hard to us clever people. But by our intelligence we are now beginning to make out the limits of our cleverness, the impotence principles that say what can and cannot be. In an operational sense, we are experiencing a return to a religious orientation toward the world.

*Nature and Man's Fate*

The Search for Truth

The New American Library. New York, New York, USA. 1961

**Heisenberg, Werner Karl** 1901–76  
 German physicist and philosopher

In the history of science, ever since the famous trial of Galileo, it has repeatedly been claimed that scientific truth cannot be reconciled with the religious interpretation of the world. Although I am now convinced that scientific truth is unassailable in its own field, I have never found it possible to dismiss the content of religious thinking as simply part of an outmoded phase in the consciousness of mankind, a part we shall have to give up from now on. Thus in the course of my life I have repeatedly been compelled to ponder on the relationship of these two regions of thought, for I have never been able to doubt the reality of that to which they point.

*Across the Frontiers*  
 Chapter XVI (p. 213)  
 Harper & Row, Publishers. New York, New York, USA. 1974

If we are honest — and scientists have to be — we must admit that religion is a jumble of false assertions, with no basis in reality. The very idea of God is a product of human imagination.

*Physics and Beyond: Encounters and Conversations*

Chapter 7 (p. 85)

Harper & Row, Publishers. New York, New York, USA. 1972

**Hertz, Rabbi Richard**

No biographical data available

I find no conflict between science and religion. Science teaches what is. Religion teaches what ought to be. Science describes. Religion prescribes. Science analyzes what we can see. Religion deals with what is unseen. Each can help the other.

*The American Jew in Search of Himself*

Chapter 4 (p. 42)

Bloch Publishing Company. New York, New York, USA. 1962

**Hillis, W. Daniel** 1956–

American engineer, inventor, and author

...I remain convinced that neither religion nor science has everything figured out.

*The Pattern on the Stone: The Simple Ideas that Make Computers Work*  
 (p. 152)

Basic Books, Inc. New York, New York, USA. 1998

**Hooykaas, Reijer**

Dutch historian of science

Metaphorically speaking, whereas the bodily ingredients of science may have been Greek, its vitamins and hormones were biblical.

Epilogue (p. 162)

William B. Eerdmans Publishing Company. Grand Rapids, Michigan, USA. 1972

**Huxley, Julian** 1887–1975

English biologist, philosopher, and author

...it is no longer possible to maintain that science and religion must operate in thought-tight compartments or concern separate sectors of life; they are both relevant to the whole of human existence.

In Teilhard de Chardin

*The Phenomenon of Man*

Introduction (p. 26)

Harper & Row, Publishers. New York, New York, USA. 1959

Like the meridians as they approach the poles, science, philosophy and religion are bound to converge as they draw nearer to the whole. I say “converge” advisedly, but without merging, and without ceasing, to the very end, to assail the real from different angles and on different planes.

In Teilhard de Chardin  
*The Phenomenon of Man*  
 Introduction (p. 30)  
 Harper & Row, Publishers. New York, New York, USA. 1959

**Huxley, Thomas Henry** 1825–95  
 English biologist

True science and true religion...are twin-sisters, and the separation of either from the other is sure to prove the death of both. Science prospers exactly in proportion as it is religious; and religion flourishes in exact proportion to the scientific depth and firmness of its basis. The great deeds of philosophers have been less the fruit of their intellect than of the direction of that intellect by an imminently religious tone of mind. Truth has yielded herself rather to their patience, their love, their single-heartedness, and their self-denial, than to their logical acumen.

In Herbert Spencer  
*Education: Intellectual, Moral, and Physical*  
 Chapter I (p. 81)  
 A.L. Fowle. New York, New York, USA. 1860

...the materialistic position that there is nothing in the world but matter, force, and necessity, is as utterly devoid of justification as the most baseless of theological dogmas.

*Collected Essays* (Volume 1)  
 On the Physical Basis of Life (p. 162)  
 Macmillan & Company Ltd. London, England. 1904

Elijah's great question, "Will you serve God or Baal? Choose ye," is uttered audibly enough in the ears of every one of us as we come to manhood. Let every man who tries to answer it seriously ask himself whether he can be satisfied with the Baal of authority, and with all the good things his worshippers are promised in this world and the next. If he can, let him, if he be so inclined, amuse himself with such scientific implements as authority tells him are safe and will not cut his fingers; but let him not imagine he is, or can be, both a true son of the Church and a loyal soldier of science.

*Collected Essays* (Volume 2)

 Confessio Fidei (p. 56)  
 Longmans, Green & Company. London, England. 1922

**Jastrow, Robert** 1925–  
 American space scientist

For the scientist who has lived by his faith in the power of reason, the story ends like a bad dream. He has scaled

the mountains of ignorance; he is about to conquer the highest peak; as he pulls himself over the final rock, he is greeted by a band of theologians who have been sitting there for centuries.

*God and the Astronomers*  
 Chapter 6 (p. 116)  
 W.W. Norton & Company, Inc. New York, New York, USA. 1978

### Joint Statement of Religious Leaders

The purpose of science is to develop, without prejudice or preconception of any kind, a knowledge of the facts, the laws, and the processes of nature. The even more important task of religion, on the other hand, is to develop the consciences, the ideals, and the aspirations of mankind.

In Robert Andrews Millikan  
*Science and Life*  
 A Joint Statement upon the Relations of Science and Religion (p. 86)  
 The Pilgrim Press. Boston, Massachusetts, USA. 1924

**Kaempffert, Waldemar** 1877–1956  
 American science editor and museum director

Religion may preach the brotherhood of man; science practices it.

In Edward R. Murrow  
*This I Believe*  
 2, Michael Faraday (p. 196)  
 Simon & Schuster. New York, New York, USA. 1952

**King, Jr., Martin Luther** 1929–68  
 American civil rights leader and clergyman

Science investigates; religion interprets. Science gives man knowledge which is power; religion gives man wisdom which is control.

*Strength to Love*  
 Chapter I (p. 3)  
 Harper & Row, Publishers. New York, New York, USA. 1963

**Lewis, C. S. (Clive Staples)** 1898–1963  
 British author, scholar, and popular theologian

Keep pressing home on him the ordinariness of things. Above all, do not attempt to use science (I mean, the real sciences) as a defense against Christianity. They will positively encourage him to think about realities he can't touch and see. There have been sad cases among the modern physicists.

Chapter V. Cosmic Origins (p. 74)

The Bruce Publishing Company. Milwaukee, Minnesota, USA. 1968

**Mencken, H. L. (Henry Louis)** 1880–1956

American journalist and literary critic

To me the scientific point of view is completely satisfying, and it has been so as long as I can remember. Not once in this life have I ever been inclined to seek a rock

and a refuge elsewhere. It leaves a good many dark spots in the universe, to be sure, but not a hundredth time as many as theology. We may trust it, soon or late, to throw light upon many of them, and those that remain dark will be beyond illumination by any other agency. It also fails on occasion to console, but so does theology...

In Charles A. Fecher

*Mencken: A Study of His Thought* (p. 84)

Alfred A. Knopf. New York, New York, USA. 1978

The notion that science does not concern itself with first causes — that it leaves the field to theology or metaphysics, and confines itself to mere effects — this notion has no support in the plain facts. If it could, science would explain the origin of life on earth at once — and there is every reason to believe that it will do so on some not too remote tomorrow. To argue that gaps in knowledge which will confront the seeker must be filled, not by patient inquiry, but by intuition or revelation, is simply to give ignorance a gratuitous and preposterous dignity.

*Treatise on the Gods*

Chapter 5 (p. 239)

Vintage Books. New York, New York, USA. 1963

The essence of science is that it is always willing to abandon a given idea, however fundamental it may seem to be, for a better one; the essence of theology is that it holds its truths to be eternal and immutable. To be sure, theology is always yielding a little to the progress of knowledge, and only a Holy Roller in the mountains of Tennessee would dare to preach today what the popes preached in the Thirteenth Century, but this yielding is always done grudgingly, and thus lingers a good while behind the event.

*Minority Report: H.L. Mencken's Notebooks*

No. 232 (p. 166)

Alfred A. Knopf. New York, New York, USA. 1956

The effort to reconcile science and religion is almost always made, not by theologians, but by scientists unable to shake off altogether the piety absorbed with their mother's milk.

*Minority Report: H.L. Mencken's Notebooks*

No. 232 (p. 166)

Alfred A. Knopf. New York, New York, USA. 1956

**Mernissi, Fatima** 1940–

Moroccan writer, feminist, and sociologist

Awareness of the stars and their light pervades the Koran, which reflects the brightness of the heavenly bodies in many verses. The blossoming of mathematics and astronomy was a natural consequence of this awareness. Understanding the cosmos and the movements of the stars means understanding the marvels created by Allah. There would be no persecuted Galileo in Islam, because Islam, unlike Christianity, did not force people to believe in a "fixed" heaven.

Translated by Mary Jo Lakeland

*Islam and Democracy: Fear of the Modern World*  
Chapter 9 (p. 133)  
Perseus Publishing, New York, New York, USA. 1992

**Miller, Kenneth R.** 1948–  
American biology professor and author

To a believer, God's great gift was to provide us with a means to understand, to master, and to do good using both the strengths and weaknesses of human nature.

Where does science sit with all of this? I would argue that any scientist who believes in God possesses the faith that we are given our unique imaginative powers not only to find God, but also to discover as much of His universe as we could. In other words, to a religious person, science can be a pathway towards God, not away from Him, an additional and sometimes even an amazing grace!

*Finding Darwin's God*  
Chapter 9 (pp. 280–281)  
HarperCollins Publishers, Inc. New York, New York, USA. 1999

**Millikan, Robert Andrews** 1868–1953  
American physicist

Modern science, of the real sort, is slowly learning to walk humbly with its God, and in learning that lesson it is contributing something to religion.

*Evolution in Science and Religion*  
Chapter III (pp. 94–95)  
Yale University Press. New Haven, Connecticut, USA. 1927

The purpose of science is to develop, without prejudice or preconception of any kind, a knowledge of the facts, the laws and the processes of nature. The even more important task of religion, on the other hand, is to develop the consciences, the ideals and the aspirations of mankind. Each of these two activities represents a deep and vital function of the soul of man, and both are necessary for the life, the progress and the happiness of the human race.

Science Serves God  
*Time*, June 4, 1923

It is a sublime conception of God which is furnished by science, and one wholly consonant with the highest ideals of religion, when it represents Him as revealing Himself through countless ages in the development of the earth as an abode for man and in the age long inbreathing of life into its constituent matter, culminating in man with his spiritual nature and all his Godlike powers.

Science Serves God  
*Time*, June 4, 1923

**Moore, Benjamin** 1748–1816  
Episcopal writer and professor of rhetoric

When new scientific facts are suddenly thrown in amongst old pre-conceived ideas of divinity, there may at first appear discords, and zealous champions of natural sci-

ence and of religious knowledge fly to arms and indulge in acrimonious polemics; but as time advances and things that are crude and adventitious are thrown away one each side, it is discovered that science has added a new beauty to religion, or rather revealed a beauty that was there all the while, but concealed by misconceptions, or by lack of knowledge.

*The Origin and Nature of Life*  
Chapter I (p. 8)  
Henry Holt & Company. New York, New York, USA. No date

**Moore, John A.**  
American writer and professor of genetics and biology

A fundamental difference between religious and scientific thought is that the received beliefs in religion are ultimately based on revelations or pronouncements, usually by some long dead prophet or priest. . . . Dogma is interpreted by a caste of priests and is accepted by the multitude on faith or under duress. In contrast, the statements of science are derived from the data of observations and experiment, and from the manipulation of these data according to logical and often mathematical procedures.

*Science as a Way of Knowing: The Foundations of Modern Biology*  
Chapter 4 (p. 59)  
Harvard University Press. Cambridge, Massachusetts, USA. 1993

**Morrow, Lance** 1942–  
American writer and professor of journalism

Sometime after the Enlightenment, science and religion came to a gentleman's agreement. Science was for the real world: machines, manufactured things, medicines, guns, moon rockets. Religion was for everything else, the immeasurable: morals, sacraments, poetry, insanity, death, and some residual forms of politics and statesmanship. Religion became, in both senses of the word, immaterial.

*Fishing in the Tiber: Essays*  
God and Science (p. 195)  
Henry Holt & Company. New York, New York, USA. 1988

Science and religion were apples and oranges. So the pact said: render unto apples the things that are Caesar's, and unto oranges the things that are God's. Just as the Maya kept two calendars, one profane and one priestly, so Western science and religion fell into two different conceptions of the universe, two different vocabularies.

*Fishing in the Tiber: Essays*  
God and Science (p. 195)  
Henry Holt & Company. New York, New York, USA. 1988

**Nemerov, Howard** 1920–91  
American poet, novelist, and critic

Religion and science both profess peace (and the sincerity of the professors is not being doubted), but each always turns out to have a dominant part in any war that is going or contemplated.

*Figures of Thought: Speculations on the Meaning of Poetry and Other Essays*

On the Resemblances Between Science and Religion  
David R. Godine. Boston Massachusetts, USA. 1979

**Paley, William** 1743–1805  
English theologian

There cannot be design without a designer; contrivance without a contriver; order without choice; arrangement, without any thing capable of arranging; subserviency and relation to a purpose, without that which could intend a purpose; means suitable to an end, without the end ever having been contemplated, or the means accommodated to it. Arrangement, disposition of parts, subserviency of means to an end, relation of instruments to an use, imply the presence of intelligence and mind.

*The Works of William Paley. D.D.*

Natural Theology

Chapter II, Section III (p. 22)

Ward, Lock & Company. London, England. No date

**Planck, Max** 1858–1947  
German physicist

There can never be any real opposition between religion and science; for the one is the compliment of the other.

*Where Is Science Going?*

Chapter V (p. 168)

W.W. Norton & Company, Inc. New York, New York, USA. 1932

Religion belongs to that realm that is inviolable before the law of causation and therefore closed to science.

*Where Is Science Going?*

Chapter V (p. 168)

W.W. Norton & Company, Inc. New York, New York, USA. 1932

Religion and natural science...are in agreement, first of all, on the point that there exists a rational world order independent from man, and secondly, on the view that the character of this world order can never be directly known but can only be indirectly recognized or suspected. Religion employs in this connection its own characteristic symbols, while natural science uses measurements founded on sense experiences.

*Scientific Autobiography and Other Papers*

Religion and Natural Science, Part IV (pp. 182–183)

Philosophical Library. New York, New York, USA. 1949

Religion and natural science are fighting a joint battle in an incessant, never relaxing crusade against skepticism and against dogmatism, against disbelief and against superstition, and the rallying cry in this crusade has always been, and always will be, "On to God."

*Scientific Autobiography and Other Papers*

Religion and Natural Science, Part IV (p. 187)

Philosophical Library. New York, New York, USA. 1949

**Polanyi, Michael** 1891–1976

Hungarian-born English scientist, philosopher, and social scientist

Admittedly, religious conversion commits our whole person and changes our whole being in a way that an expansion of natural knowledge does not do. But once the dynamics of knowing are recognized as the dominant principle of knowledge, the difference appears only as one of degree...it establishe[s] a continuous ascent from our less personal knowing of inanimate matter to our convivial knowing of living beings and beyond this to knowing our responsible fellow men. Such I believe is the true transition from the sciences to the humanities and also from our knowing the laws of nature to our knowing the person of God.

Faith and Reason

*Journal of Religion*, Volume 41, Number 4, October 1961 (p. 244, 245)

**Polkinghorne, John** 1930–

British physicist, Episcopal priest, and writer

Only in the media, and in the popular and polemical scientific writing, does there persist the myth of the light of pure scientific truth confronting the darkness of obscurantist religious error. Indeed, when one reads writers like Richard Dawkins or Daniel Dennett, one sees that nowadays the danger of a facile triumphalism is very much a problem for the secular academy rather than the Christian Church.

*Quarks, Chaos, and Christianity* (p. 5)

Abingdon Press. Nashville, Tennessee, USA. 2005

**Pope John Paul II** 1920–2005

Bishop of Rome

Science can purify religion from error and superstition. Religion can purify science from idolatry and false absolutes.

In James Reston

HarperCollins Publishers, Inc. New York, New York, USA. 1994

**Pope Pius XII** 1876–1958

Bishop of Rome

The more true science advances, the more it discovers God, almost, as though he were standing, vigilant behind every door which science opens.

Address, November 22, 1951

**Popper, Karl R.** 1902–94

Austrian/British philosopher of science

Science is most significant as one of the greatest spiritual adventures that man has yet known.

In John Oulton Wisdom

*Foundations of Inference in Natural Science* (p. v)

Methuen & Company Ltd. London, England. 1952

**Raven, Charles E.** 1885–1964

English writer of theology and science

To mention Science and Religion in the same sentence is...to affirm an antithesis and suggest a conflict.

*Science, Religion and the Future*

Chapter 1 (p. 1)

At The University Press. Cambridge, England. 1943

**Raymo, Chet** 1936–

American physicist and science writer

Everything we have learned in science since the time of Galileo suggests that the nebulas and galaxies are oblivious to our fates. Everything we have learned suggests that our souls and bodies are inseparable. Everything we have learned suggests that the grave is our destiny. Therefore, if the promise of eternal life is to have maximum drawing power, it is essential for Church and guru to undermine the legitimacy of science.

*Skeptics and True Believers: The Exhilarating Connection Between Science and Religion*

Chapter Four (pp. 66–67)

Walker & Company. New York, New York, USA. 1998

**Reichenbach, Hans** 1891–1953

German philosopher of science

The belief in science has replaced in large measure, the belief in God. Even where religion was regarded as compatible with science, it was modified by the mentality of the believer in scientific truth.

*The Rise of Scientific Philosophy*

Chapter 3 (p. 44)

University of California Press. Berkeley, California, USA. 1951

**Rice, Laban Lacy** 1870–1973

American educator

Science does not regard its currently established truths as final: religion everywhere and in all centuries has followed the trend toward crystallization of belief.

*The Universe: Its Origin, Nature and Destiny*

Chapter I (p. 15)

Exposition Press. New York, New York, USA. 1951

**Roelofs, Howard Dykema** 1893–1974

Professor of philosophy

Religion can produce on occasion what science never does, namely, saints. Today we have science and scientists aplenty. We lack saints.

Chapter III (p. 59)

G. Braziller. New York, New York, USA. 1943

**Sagan, Carl** 1934–96

American astronomer and author

How is it that hardly any major religion has looked at science and concluded, “This is better than we thought! The

Universe is much bigger than our prophets said, grander, more subtle, more elegant?”

*Pale Blue Dot: A Vision of the Human Future in Space*

Chapter 4 (p. 52)

Random House, Inc. New York, New York, USA. 1994

If you lived two or three millennia ago, there was no shame in holding that the Universe was made for us. It was an appealing thesis consistent with everything we knew; it was what the most learned among us taught without qualification. But we have found out much since then. Defending such a position today amounts to willful disregard of the evidence, and a flight from self-knowledge.

*Pale Blue Dot: A Vision of the Human Future in Space*

Chapter 4 (p. 52)

Random House, Inc. New York, New York, USA. 1994

Heroes who try to explain the world in terms of matter and energy may have arisen many times in many cultures, only to be obliterated by the priests and philosophers in charge of the conventional wisdom....

*The Demon-Haunted World: Science as a Candle in the Dark* (p. 310)

Random House, Inc. New York, New York, USA. 1995

If you want to know when the next eclipse of the Sun will be, you might try magicians or mystics, but you’ll do much better with scientists.

*The Demon-Haunted World: Science as a Candle in the Dark* (p. 30)

Random House, Inc. New York, New York, USA. 1995

**Shaw, George Bernard** 1856–1950

Irish comic dramatist and literary critic

Let the Churches ask themselves why there is no revolt against the dogmas of mathematics though there is one against the dogmas of religions. It is not that the mathematical dogmas are more comprehensible.... It is not that science is free from legends, witchcraft, miracles, biographic boostings of quacks as heroes and saints, and of barren scoundrels as explorers and discoverers.... But no student of science has yet been taught that specific gravity consists in the belief that Archimedes jumped out of the bath and ran naked through the streets of Syracuse shouting Eureka, Eureka, or that the law of inverse squares must be discarded if anyone can prove that Newton was never in an orchard in his life.

*Back to Methuselah*

Preface (pp. lxxvii–lxxviii)

Constable & Company Ltd. London, England. 1921

**Sperry, Roger Wolcott** 1913–94

Neuropsychologist

Probably the widest, deepest rift in contemporary culture and the source of its most profound conflict is that separating the two major opposing views of existence upheld by science and by orthodox religions, respectively. Together they represent two totally different kinds of “truth”, the former asking us to accept impersonal

mass-energy accounts of the cosmos, the latter requiring faith in varied spiritual explanations.

The New Mentalist Paradigm and Ultimate Concern  
*Perspectives in Biology and Medicine*, Volume 29, Number 3, Part I,  
Spring 1986 (p. 415)

**Stace, Walter Terence** 1886–1967  
English philosopher and educator

...no scientific argument — by which I mean an argument drawn from the phenomena of nature — can ever have the slightest tendency either to prove or disprove the existence of God...science is irrelevant to religion.

*Religion and the Modern Mind*

Chapter 5 (p. 76)

J.B. Lippincott Company, Philadelphia, Pennsylvania, USA. 1952

**Stapledon, Olaf** 1886–1950  
English author

Within the chapel, the great Bible was decorously removed and the windows thrown open, to dispel somewhat the odour of sanctity. For though the early and spiritistic interpretations of relativity and quantum theory had by now accustomed men of science to pay their respects to the religions, many of them were still liable to a certain asphyxia when they were actually within the precincts of sanctity. *Last and First Men*

Chapter II (p. 29)

Jeremy P. Tarcher, Inc. Los Angeles, California, USA. 1988

When the scientists had settled themselves upon the archaic and unyielding benches, the President explained that the chapel authorities had kindly permitted this meeting because they realized that, since men of science had gradually discovered the spiritual foundation of physics, science and religion must henceforth be close allies. Moreover the purpose of this meeting was to discuss one of those supreme mysteries which it was the glory of science to discover and religion to transfigure.

*Last and First Men*

Chapter II (p. 29)

Jeremy P. Tarcher, Inc. Los Angeles, California, USA. 1988

**Streeter, B. H. (Burnett Hillman)** 1874–1937  
English theologian and New Testament scholar

Science is the great cleanser of the human thinking; it makes impossible any religion but the highest.

Chapter XXXVIII (p. 1177)

G.P. Putnam's Sons, New York, New York, USA. 1937

**Tillich, Paul** 1886–1965  
German-born American theologian

The distinction between the truth of faith and the truth of science leads to a warning, directed to theologians, not to use recent scientific discoveries to confirm the truth of faith. Microphysics have undercut some scientific hypotheses concerning the calculability of the universe. The theory of quantum and the principle of indeterminacy have had this effect. Immediately religious writers use these insights for the confirmation of their own ideas of human freedom, divine creativity, and miracles. But there is no justification for such a procedure at all, neither from the point of view of physics nor from the point of view of religion. The physical theories referred to have no direct relation to the infinitely complex phenomenon of human freedom, and the emission of power in quantum has no direct relation to the meaning of miracles...

The truth of faith cannot be confirmed by latest physical or biological or psychological discoveries — as it cannot be denied by them.

*Dynamics of Faith*

Chapter V, Section 2 (p. 85)

Harper & Brothers. New York, New York, USA. 1957

...theology cannot rest on scientific theory. But it must relate its understanding of man to an understanding of universal nature, for man is a part of nature and statements about nature underlie every statement about him.

In Theodosius Dobzhansky

*The Biology of Ultimate Concern*

Chapter 6 (pp. 109–110)

The New American Library, Inc. New York, New York, USA. 1967

**Toynbee, Arnold J.** 1852–83

English historian

Theology, not religion, is the antithesis to science.

*Toynbee's Industrial Revolution*

Notes and Jottings (p. 243)

A.M. Kelley. New York, New York, USA. 1969

Before the close of the seventeenth century our forefathers consciously took their treasure out of religion and reinvested it in natural science...

A Turning Point in Man's Destiny

*The New York Times Magazine*, December 26, 1954 (p. 5)

**Tyndall, John** 1820–93

Irish-born English physicist

We claim, and we shall wrest from theology, the entire domain of cosmological theory.

The Belfast Address

The Position of Science

**Valéry, Paul** 1871–1945

French poet and critic

Without religions the sciences would never have existed. For the human brain would not have trained itself to range beyond the immediate, ever — present “facts” of appearance which, for it, constitute reality.

In Jackson Mathews (ed.)

*The Collected Works of Paul Valéry* (Volume 14)

Analects, XLVIII (p. 285)

Princeton University Press. Princeton, New Jersey, USA. 1971

**Virchow, Rudolf Ludwig Karl** 1821–1902

German pathologist and archaeologist

There can be no scientific dispute with respect to faith, for science and faith exclude one another.

Translated by Lelland J. Rather

*Disease, Life, and Man, Selected Essays*

On Man (p. 68)

Stanford University Press. Stanford, California, USA. 1958

The task of science... is not to attack the objects of faith, but to establish the limits beyond which knowledge

cannot go and to found a unified self-consciousness within these limits.

Translated by Lelland J. Rather

*Disease, Life, and Man, Selected Essays*

On Man (p. 69)

Stanford University Press. Stanford, California, USA. 1958

...belief has no place as far as science reaches, and may be first permitted to take root where science stops.

Translated by Lelland J. Rather

*Disease, Life, and Man, Selected Essays*

On Man (p. 69)

Stanford University Press. Stanford, California, USA. 1958

**Whaling, Thornton** 1858–1938

American Presbyterian writer

There can be no real conflict between natural science and true religion because their spheres are entirely distinct and separate. ... Conflicts between these two are always the result of misinterpretation and misrepresentation of one or the other or both, and history abounds with illustrations of all these forms of confusing contradictions. Science and religion, while thus separate, have various relationships which make each the servant of the other.

*Science and Religion Today* (pp. 51–52)

The University of North Carolina Press. Chapel Hill, North Carolina. 1929

Dean Inge [English religious leader] remarks, “We may hope for a time when the science of a religious man will be scientific and religion of a scientific man religious.”

*Science and Religion Today* (pp. 51–52)

The University of North Carolina Press. Chapel Hill, North Carolina. 1929

**Whewell, William** 1794–1866

English philosopher and historian

All speculations on subjects in which Science and Religion bear upon each other are liable to one of the two opposite charges[:] that the speculator sets Philosophy and Religion at variance; or that he warps Philosophy into a conformity with Religion.

*Of the Plurality of Worlds*

Preface (p. iv)

John W. Parker & Son. London, England. 1853

**White, Andrew Dickson** 1832–1918

American author, educator, and diplomat

In all modern history, interference with science in the supposed interests of religion...has resulted in the direst evils both to religion and science; and, on the other hand all untrammelled scientific investigation, no matter how dangerous to religion some of its stages may have seemed...has invariably resulted in the highest good both of religion and of science.

*A History of the Warfare of Science with Theology in Christendom*

Introduction (p. viii)

Macmillan & Company Ltd. London, England. 1896

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

When we consider what religion is for mankind, and what science is, it is no exaggeration to say that the future course of history depends upon the decision of this generation as to the relations between them.

*Science and the Modern World*

Chapter XII (p. 181)

The Macmillan Company. New York, New York, USA. 1929

Religion will not gain its old power until it can face change in the same spirit as does science. Its principles may be eternal, but the expression of these principles requires continual development.

*Science and the Modern World*

Chapter XII (p. 189)

The Macmillan Company. New York, New York, USA. 1929

Science suggests a cosmology; and whatever suggests a cosmology suggests a religion.

*Religion in the Making*

Truth and Criticism (p. 136)

New American Library. New York, New York, USA. 1960

**Wilde, Oscar** 1854–1900

Irish wit, poet, and dramatist

Science is the record of dead religions.

*Phrases and Philosophies for the Use of the Young*

L. Smithers. London, England. 1903

Press. Minneapolis, Minnesota, USA. 1996

**SCIENCE AND SOCIETY****Asimov, Isaac** 1920–92

American author and biochemist

Science with all its faults has brought education and the arts to more people — a larger percentage — than has ever existed before science. In that respect it is science that is the great humanizer. And, if we are going to solve the problems that science has brought us, it will be done by science and in no other way.

Essay 400 — A Way of Thinking

*The Magazine of Fantasy and Science Fiction*, December 1994

...science must not be viewed as a mysterious black box out of which came toys and goodies, for that way laymen would view scientists as a kind of lab-coated priesthood — and, eventually, fear and hate them.

Essay 400 — A Way of Thinking

*The Magazine of Fantasy and Science Fiction*,

December 1994

**Barry, Dave** 1947–

American humor columnist

...a recent survey, conducted by the National Science Foundation...showed that the average American does not understand basic scientific principles. Naturally, the news

media reported this finding as though it was shocking, which is silly. This is, after all, a nation that has produced tournament bass fishing and the Home Shopping Channel; we should be shocked that the average American still knows how to walk erect.

In a World of Scientists, No One Really Knows Much of Anything

*Dave's World*, July 8, 1996**Bauer, Henry H.** 1931–

American chemist

The point is that no amount of knowledge of or about science in itself causes individuals or groups to make good decisions about the many quandaries of life: humans readily subjugate their knowledge to their wishes, believing and doing what they want, all scientific facts and knowledge notwithstanding.

*Scientific Literacy and the Myth of the Scientific Method*

Chapter 1 (p. 13)

University of Illinois Press. Urbana, Illinois, USA. 1992

What is the social value of science? Why should we support it with taxes? Answer: It can keep people honest. Emperors and popes used to insist that people subscribe to lies about the Earth, about the relationships among different sorts of people, and about a lot of other things. They cannot lie to that extent anymore. Science can put and keep politicians and prophets in their proper place, at least over some things.

*Scientific Literacy and the Myth of the Scientific Method*

Chapter 7 (p. 146)

University of Illinois Press. Urbana, Illinois, USA. 1992

Scientific research is an investment in the future; trying to make it pay off quickly is as counterproductive as is, in the economic sphere, skimming wealth from corporations through leveraged buy-outs instead of investing for the long haul. Science is part of humanity's cultural heritage. Being educated in science is as important as being educated in philosophy, or psychology, or foreign languages because without it one is ignorant, a primitive savage rather than a civilized human being. And to be scientifically literate is to understand that.

*Scientific Literacy and the Myth of the Scientific Method*

Chapter 7 (p. 147)

University of Illinois Press. Urbana, Illinois, USA. 1992

Studying science is excellent training for the mind, much better than the classically prescribed study of Latin. When you study science in the right way, you learn about reality therapy; and that is worth applying to other things than science.

*Scientific Literacy and the Myth of the Scientific Method*

Chapter 7 (p. 147)

University of Illinois Press. Urbana, Illinois, USA. 1992

**Bernstein, Jeremy** 1929–

American physicist, educator, and writer

We live in a complex, dangerous, and fascinating world. Science has played a role in creating the dangers, and one hopes that it will aid in creating ways of dealing with these dangers. But most of these problems cannot, and will not, be dealt with by scientists alone. We need all the help we can get, and this help has got to come from a scientifically literate general public. Ignorance of science and technology is becoming the ultimate self-indulgent luxury.

*Cranks, Quarks, and the Cosmos: Writings on Science*  
Chapter 16 (p. 202)  
Basic Books, Inc. New York, New York, USA. 1993

...the first reason for teaching science to non scientists is that many of these nonscientists have a genuine desire to learn about science, and this, after all, is the best reason for teaching anything to anyone.

*Cranks, Quarks, and the Cosmos: Writings on Science*  
Chapter 16 (p. 196)  
Basic Books, Inc. New York, New York, USA. 1993

**Brin, David** 1950–  
American scientist and author

We Americans have refined self-righteousness to a high art, cherishing the romantic image of smart outsiders against the establishment. New Age types see themselves as brave truth-seekers, opposed by a rigid technological priesthood. No matter that this priesthood is dedicated to self-criticism, and to sharing whatever they learn. Science represents this era's "establishment," and is therefore automatically suspect.

*Otherness*  
What to Say to a UFO  
Bantam Dell Doubleday Publishing Group. New York, New York, USA. 1994

**Calvin, William H.** 1939–  
Theoretical neurophysiologist

Science doesn't merely empower us, as in seeding better technologies; it also helps prevent trouble in the first place. Knowledge can be like a vaccine, immunizing you against false fears and bad moves.

*How Brains Think: Evolving Intelligence, Then and Now*  
Chapter 3 (p. 41)  
Basic Books, Inc. New York, New York, USA. 1996

**Clarke, Arthur C.** 1917–  
English science and science fiction writer

One of the factors, ironically enough, which has contributed to popular willingness to accept the incredible is the success of modern science. Because so many technical marvels have been achieved, the public believes that the scientist is a magician who can make anything happen. It does not know where to draw the line between the possible, the plausible, the improbable and the frankly absurd. Admittedly this is often extremely difficult, and even the

experts sometimes fall flat on their faces. But usually, all that is needed is a little common sense.

*Voices from the Sky: A Preview of the Coming Space Age*  
The Lunatic Fringe  
Harper & Row, Publishers. New York, New York, USA. 1965

**Compton, Karl Taylor** 1887–1954  
American educator and physicist

There is "something new under the sun" in that modern science has given mankind, for the first time in the history of the human race, a way of securing a more abundant life which does not simply consist in taking it away from someone else. Science really creates wealth and opportunity where they did not exist before.

*A Scientist Speaks: Excerpts from Addresses by Karl Taylor Compton During the Years 1930–1949* (p. 2)  
Undergraduate Association, MIT. Cambridge, Massachusetts, USA. 1955

**Cori, Carl** 1896–1984  
American biochemist

Art and science can best grow and develop in a society which cherishes freedom and which shows respect for the needs, the happiness and the dignity of human beings.

*Les Prix Nobel. The Nobel Prizes in 1947*  
Nobel banquet speech for award received in 1947  
Nobel Foundation. Stockholm, Sweden. 1948

**Crick, Francis Harry Compton** 1916–2004  
English biochemist

The average adult can usually enjoy something only if it relates to what he knows already, and what he knows about science is in many cases pitifully inadequate.

*What Mad Pursuit: A Personal View of Scientific Discovery*  
Chapter 7 (p. 80)  
Basic Books, Inc. New York, New York, USA. 1988

**Dawkins, Richard** 1941–  
British ethologist, evolutionary biologist, and popular science writer

People certainly blame science for nuclear weapons and similar horrors. It's been said before but needs to be said again: if you want to do evil, science provides the most powerful weapons to do evil; but equally, if you want to do good, science puts into your hands the most powerful tools to do so. The trick is to want the right things, then science will provide you with the most effective methods of achieving them.

*Science, Delusion and the Appetite for Wonder*  
Richard Dimpleby Lecture, BBC1 Television, November 12<sup>th</sup>, 1996

It has become almost a cliché to remark that nobody boasts of ignorance of literature, but it is socially acceptable to boast ignorance of science and proudly claim incompetence in mathematics.

*Science, Delusion and the Appetite for Wonder*  
Richard Dimpleby Lecture, BBC1 Television, November 12<sup>th</sup>, 1996

Science provokes more hostility than ever, sometimes with good reason, often from people who know nothing about it and use their hostility as an excuse not to learn. Depressingly many people still fall for the discredited cliché that scientific explanation corrodes poetic sensibility.

*Science and Sensibility*

Queen Elizabeth Hall Lecture, London, 24<sup>th</sup> March 1998

## Editorial

The scientific illiteracy of politicians, their simple lack of “feel” for what science is and what it can do, prevents them from exploring the deeper questions, among the most important facing humankind: how can science be conducted so that, on the one hand, the thinkers have the freedom to think, for that is the *sine qua non*; and how, on the other hand, can the products of unfettered thought be harnessed for the needs of society?

Who Cares About Science?

*New Scientist*, 17 October 1985 (p. 18)

## Eisenhower, Dwight David 1890–1969

34<sup>th</sup> president of the United States

Science, great as it is, remains always the servant and the handmaiden of freedom. And a free science will ever be one of the most effective tools through which man will eventually bring to realization his age-old aspiration for an abundant life, with peace and justice for all.

In Dael Wolfe (ed.)

*Symposium on Basic Research*

Casper Auditorium of the Rockefeller Institute, May, 1959

Science: Handmaiden of Freedom (p. 142)

American Association of the Advancement of Science. Washington, D.C. 1959

## Feyerabend, Paul K. 1924–94

Austrian-born American philosopher of science

[Because] there is trouble in the third world... [it is argued that] the attempt to judge cosmologies by their content may have to be given up. Such a development, far from being undesirable, changes science from a stern and demanding mistress into an attractive and yielding courtesan who tries to anticipate every wish of her lover. Of course, it is up to us to choose either a dragon or a pussy cat for our company. I do not think I need to explain my own preferences.

*Realism, Rationalism and Scientific Method*

Consolations for the Specialist (p. 161)

Cambridge University Press. Cambridge, England. 1985

## Feynman, Richard P. 1918–88

American theoretical physicist

...the things that appear in the newspaper and that seem to excite the adult imagination are always those things which they cannot possibly understand, because they haven't learned anything at all of the much more interesting well-

known [to scientists] things that people have found out before. It's not the case with children, thank goodness, for a while — at least until they become adults.

In Jeffrey Robbins, ed.

*The Pleasure of Finding Things Out: The Best Short Works of Richard P. Feynman*

Chapter 4 (p. 102)

Perseus Books. Cambridge, Massachusetts, USA. 1999

Another value of science is the fun called intellectual enjoyment which some people get from reading and learning and thinking about it, and which others get from working in it. This is an important point, one which is not considered enough by those who tell us it is our social responsibility to reflect on the impact of science on society. Is this mere personal enjoyment of value to society as a whole? No! But it is also a responsibility to consider the aim of society itself. Is it to arrange matters so that people can enjoy things? If so, then the enjoyment of science is as important as anything else.

In Jeffrey Robbins (ed.)

*The Pleasure of Finding Things Out: The Best Short Works of Richard P. Feynman*

Chapter 6 (p. 143)

Perseus Books. Cambridge, Massachusetts, USA. 1999

I don't believe in the idea that there are a few peculiar people capable of understanding math, and the rest of the world is normal. Math is a human discovery, and it's no more complicated than humans can understand. I had a calculus book once that said, “What one fool can do, another can.” What we've been able to work out about nature may look abstract and threatening to someone who hasn't studied it, but it was fools who did it, and in the next generation, all the fools will understand it.

In Jeffrey Robbins (ed.)

*The Pleasure of Finding Things Out: The Best Short Works of Richard P. Feynman*

Chapter 9 (p. 144)

Perseus Books. Cambridge, Massachusetts, USA. 1999

When we read about this in the newspaper, it says “Scientists say this discovery may have importance in the search for a cure for cancer.” The paper is only interested in the use of the idea, not the idea itself. Hardly anyone can understand the importance of an idea, it is so remarkable. Except that, possibly, some children catch on. And when a child catches on to an idea like that, we have a scientist.

In Jeffrey Robbins (ed.)

*The Pleasure of Finding Things Out: The Best Short Works of Richard P. Feynman*

Chapter 6 (p. 145)

Perseus Books. Cambridge, Massachusetts, USA. 1999

[I]f a thing is not scientific, if it cannot be subjected to the test of observation, this does not mean that it is dead, or wrong, or stupid. We are not trying to argue that science is somehow good and other things are somehow not

good. Scientists take all those things that can be analyzed by observation, and thus the things called science are found out. But there are some things left out, for which the method does not work. This does not mean that those things are unimportant. They are, in fact, in many ways the most important.

*The Meaning of It All: Thoughts of a Citizen Scientist*  
Chapter 1 (p. 16)  
Perseus Books. Reading, Massachusetts, USA. 1998

It is odd, but on the infrequent occasions when I have been called upon in a formal place to play the bongo drums, the introducer never seems to find it necessary to mention that I also do theoretical physics.

*The Character of Physical Law*  
Chapter 1 (p. 13)  
British Broadcasting Company. London, England. 1965

### **Freud, Sigmund** 1856–1939

Austrian neurologist and co-founder of psychoanalysis

There are the elements, which seem to mock at all human control: the earth, which quakes and is torn apart and buries all human life and its works; water, which deluges and drowns everything in a turmoil; storms, which blow everything before them; there are diseases, which we have only recently recognized as attacks by other organisms; and finally there is the painful riddle of death, against which no medicine has yet been found, nor probably will be. With these forces nature rises up against us, majestic, cruel and inexorable; she brings...to our mind once more our weakness and helplessness, which we thought to escape through the work of civilization.

*The Future of an Illusion*  
Chapter III (pp. 15–16)  
W.W. Norton & Company, Inc. New York, New York, USA. 1961

### **Gleick, James** 1954–

American author, journalist, and essayist

Einstein's relativity did not speak to human values. Those were, or were not, relative for reasons unrelated to the physics of objects moving at near-light speed. Borrowing metaphors from the technical sciences could be a dangerous practice.

*Genius: The Life and Science of Richard Feynman*  
Epilogue (p. 430)  
Pantheon Books. New York, New York, USA. 1992

### **Gould, Stephen Jay** 1941–2002

American paleontologist and evolutionary biologist

Science, since people must do it, is a socially embedded activity. It progresses by hunch, vision, and intuition. Much of its change through time does not record a closer approach to absolute truth, but the alteration of cultural contexts that influence it so strongly. Facts are not pure and unsullied bits of information; culture also influences what we see and how we see it. Theories, moreover, are

not inexorable inductions from facts. The most creative theories are often imaginative visions imposed upon facts; the source of imagination is also strongly cultural.

*The Mismeasure of Man*  
Chapter One (pp. 53–54)  
W.W. Norton & Company, Inc. New York, New York, USA. 1996

...I believe that science must be understood as a social phenomenon, a gutsy, human enterprise, not the work of robots programmed to collect pure information.... Science, since people must do it, is a socially embedded activity. It progresses by hunch, vision, and intuition. Much of its change through time does not record a closer approach to absolute truth, but the alteration of cultural contexts that influence it so strongly. Facts are not pure and unsullied bits of information; culture also influences what we see and how we see it. Theories, moreover, are not inexorable inductions from facts. The most creative theories are often imaginative visions imposed upon facts; the source of imagination is also strongly cultural.

*The Mismeasure of Man*  
Chapter One (p. 53)  
W.W. Norton & Company, Inc. New York, New York, USA. 1996

Science is accessible to all thinking people because it applies universal tools of intellect to its distinctive material. The understanding of science — one need hardly repeat the litany — becomes ever more crucial in a world of biotechnology, computers, and bombs.

*Time's Arrow, Time's Cycle: Myth and Metaphor in the Discovery of Geological Time*  
Chapter 1 (p. 7)  
Harvard University Press. Cambridge, Massachusetts, USA. 1987

### **Hardy, G. H. (Godfrey Harold)** 1877–1947

English pure mathematician

...a science is said to be useful if its development tends to accentuate the existing inequalities in the distribution of wealth, or more directly promotes the destruction of human life.

*A Mathematician's Apology*  
Chapter 22 (p. 120)  
Cambridge University Press. Cambridge, England. 1967

### **Haskins, C. P.**

No biographical data available

Science provides a challenge to effort for the individual youth that is far greater than the challenge of militarism. It provides a unity of thought which is far wider, for it transcends all national boundaries. It provides a wider battleground, for the goal of militarism is the conquering of man, but that of science is the understanding and the subjugation of all the rest of our natural environment. And finally, it is an infinitely broader training than totalitarian training can possibly be, for it requires, in addition to great courage, stamina, and drive, the qualities of intellectualism and gentleness.

*Science Philosophy and Religion*

Scientific Thought and a Democratic Ideology (p. 235)

The Conference on Science, Philosophy and Religion in Their Relation to a Democratic Way of Life, Inc. New York, New York, USA. 1941

**Hoffmann, Roald** 1937–

Polish-born American chemist

...the overall effect of science is inexorably democratizing, in the deepest sense of the word — by making available to a wider range of people the necessities and comforts that in a previous age were reserved for a privileged elite.

*The Same and Not the Same*

Part Eight, Chapter 40 (p. 212)

Columbia University Press. New York, New York, USA. 1995

**Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

I am a little afraid that science is breeding us down too fast into coral-insects. A man like Newton or Leibnitz or Haller used to paint a picture of outward or inward nature with a free hand, and stand back and look at it as a whole and feel like an archangel; but nowadays you have a Society, and they come together and make a great mosaic, each man bringing his little bit and sticking it in its place, but so taken up with his petty fragment that he never thinks of looking at the picture the little bits make when they are put together.

*The Poet at the Breakfast-Table*

Chapter III (p. 79)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1895

**Holton, Gerald** 1922–

Research professor of physics and science history

Was not the universe of Dante and Milton so powerful and “gloriously romantic” precisely because it incorporated, and thereby rendered meaningful, the contemporary scientific cosmology alongside the moral and aesthetic conceptions? Leaving aside the question of whether Dante’s and Milton’s contemporaries by and large were living in a rich and fragrant world of gladness, love, and beauty, it is fair to speculate that if our new cosmos is felt to be cold, inglorious, and unromantic, it is not the new cosmology which may be at fault, but the absence of new Dantes and Miltons.

*Einstein, History, and Other Passions: The Rebellion Against Science at the End of the Twentieth Century*

Part One, Chapter 2 (p. 53)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

But making science again a part of every intelligent person’s educational resource is the minimum requirement — not because science is more important than other field, but because it is an integral part of a sound contemporary worldview.

*Einstein, History, and Other Passions: The Rebellion Against Science at the End of the Twentieth Century*

Part One, Chapter 2 (p. 53)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

**King, Jr., Martin Luther** 1929–68

American civil rights leader and clergyman

The means by which we live have outdistanced the ends for which we live. Our scientific power has outrun our spiritual power. We have guided missiles and misguided men.

*Strength to Love*

Chapter VII (p. 57)

Harper &amp; Row, Publishers. New York, New York, USA. 1963

**Lederman, Leon** 1922–

American high-energy physicist

In his “Defense of Poetry,” the English romantic poet Percy Bysshe Shelley contended that one of the sacred tasks of the artist is to “absorb the new knowledge of the sciences and assimilate it to human needs, color it with human passions, transform it into the blood and bone of human nature.” Not many romantic poets rushed to accept Shelley’s challenge, which may explain the present sorry state of our nation and planet. If we had Byron and Keats and Shelley and their French, Italian, and Urdu equivalents explaining science, the science literacy of the general public would be far higher than it is now.

*The God Particle: If the Universe Is the Answer, What Is the Question*

Chapter 9 (p. 382)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1993

**Medawar, Sir Peter Brian** 1915–87

Brazilian-born English zoologist

Money can’t buy ideas, that’s for sure, but lack of it can prevent one having them.

*The Cost-Benefit Analysis of Pure Research**Hospital Practice*, Sept 1973

I am afraid we shall have to regard the funding of “pure” research as a tax levied upon society that is not dissimilar in kind from that which maintains art galleries and opera houses — a “civilization tax”, perhaps.

*The Cost-Benefit Analysis of Pure Research**Hospital Practice*, Sept 1973

It is the great glory and also the great threat of science that anything which is possible in principle — which does not flout a bedrock law of physics — can be done if the intention to do it is sufficiently resolute and long sustained.

*Four Score Years and Ten—And Still Counting**Guardian*, December 13, 1984**Paulos, John Allen** 1945–

American mathematician

In general, almost any mathematically expressed scientific fact can be transformed into a consumer caveat (or lure) that will terrify (or attract) people.

*A Mathematician Reads the Newspaper*

Asbestos Removal Closes NYC Schools (p. 142)  
Basic Books, Inc. New York, New York, USA. 1995

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

Some men are so impressed by what science knows that they forget what it does not know; others are so much more interested in what it does not know than in what it does that they belittle its achievements.

*Unpopular Essays*

Philosophy for Laymen (p. 40)

George Allen & Unwin Ltd. London, England. 1950

Can a society in which thought and technique are scientific persist for a long period, as, for example, ancient Egypt persisted, or does it necessarily contain within itself forces which must bring either decay or explosion?

Lloyd Roberts lecture

Can a Scientific Community be Stable, Royal Society of Medicine, London, November 29, 1949

**Sagan, Carl** 1934–96

American astronomer and author

Many of the dangers we face indeed arise from science and technology — but, more fundamentally, because we have become powerful without becoming commensurately wise. The world-altering powers that technology has delivered into our hands now require a degree of consideration and foresight that has never before been asked of us.

*Pale Blue Dot: A Vision of the Human Future in Space*

Chapter 22 (p. 384)

Random House, Inc. New York, New York, USA. 1994

Surely...any powerful tool, those in power will try to use...or even monopolize.... Surely scientists, being people, grow up in a society and reflect the prejudices of that society. How could it be otherwise? Some scientists have been nationalists; some have been racists; some have been sexists. But that doesn't undermine the validity of science. It's just a consequence of being human.

Wonder and Skepticism

*Skeptical Inquirer*, January/February 1995 (p. 24)

There is a reward structure in science that is very interesting: Our highest honors go to those who disprove the findings of the most revered among us... [I]t's exactly the opposite [in economics, politics, or religion]: There we reward those who reassure us that what we've been told is right, that we need not concern ourselves about it. This difference, I believe, is at least a basic reason why we've made so much progress in science, and so little in some other areas.

Wonder and Skepticism

*Skeptical Inquirer*, January/February 1995 (p. 24)

The scientific world view works so well, explains so much and resonates so harmoniously with the most advanced parts of our brains that in time, I think, virtually every culture on the Earth, left to its own devices, would have discovered science.

*Cosmos*

Chapter VII (p. 176)

Random House, Inc. New York, New York, USA. 1980

**Schrödinger, Erwin** 1887–1961

Austrian theoretical physicist

...— who are we? ... I consider this not only one of the tasks, but the task of science, the only one that really counts.

*Science and Humanism: Physics in Our Time*

The Alleged Break-Down of the Barrier Between Subject and Object (p. 51)

At The University Press. Cambridge, England. 1952

**Silver, Brian L.**

Israeli professor of physical chemistry

Scientific ideas have affected the relationship of man to society, his ideas of God, and his image of himself. Science has influenced the way people write poetry and the way they paint pictures. In the hands of bigots, it has provided a theoretical justification for the sterilization of some human beings and the enslavement of others. Science, as a source of ideas, is a major character in the human drama.

*The Ascent of Science*

Preface (p. xvi)

Solomon Press Book. New York, New York, USA. 1998

**Snow, Charles Percy** 1905–80

English novelist and scientist

Literary intellectuals at one pole — at the other scientists. — .... Between the two a gulf of mutual incomprehension.

*The Two Cultures and the Scientific Revolution*

Chapter I (p. 4)

Cambridge University Press. New York, New York, USA. 1961

**Stenger, Victor J.** 1935–

American physicist

Most humans on this planet use the fruits of science in every phase of their lives. I become very irritated at those who decry science while accepting its every benefit. It is especially ironic how the antiscientists use modern communications to get their messages to the public.

*Physics and Psychics: The Search for a World Beyond the Senses*

Chapter 14 (p. 297)

Prometheus Books. Buffalo, New York, USA. 1990

**Tennyson, Alfred (Lord)** 1809–92

English poet

Science grows and Beauty dwindles.

*Alfred Tennyson's Poetical Works*

Locksley Hall. Sixty Years After, Stanza 123  
Oxford University Press, Inc. London, England. 1953

**Thomas, Lewis** 1913–93  
American physician and biologist

The cloning of humans is on most of the lists of things to worry about from Science, along with behavior control, genetic engineering, transplanted heads, computer poetry and the unrestrained growth of plastic flowers.

*The Medusa and the Snail: More Notes of a Biology Watcher*  
On Cloning Human Beings (pp. 51–52)  
The Viking Press. New York, New York, USA. 1979

**Weinberg, Steven** 1933–  
American nuclear physicist

It is simply a logical fallacy to go from the observation that science is a social process to the conclusion that the final product, our scientific theories, is what it is because of the social and historical forces acting in this process. A party of mountain climbers may argue over the best path to the peak, and these arguments may be conditioned by the history and social structure of the expedition, but in the end either they find a good path to the peak or they do not, and when they get there they know it. (No one would give a book about mountain climbing the title Constructing Everest.)

*Dreams of a Final Theory: The Scientist's Search for the Ultimate Laws of Nature*  
Chapter VI (p. 165)  
Pantheon Books. New York, New York, USA. 1992

It certainly feels to me that we are discovering something real in physics, something that is what it is without any regard to the social and historical conditions that allowed us to discover it.

*Dreams of a Final Theory: The Scientist's Search for the Ultimate Laws of Nature*  
Chapter VI (p. 165)  
Pantheon Books. New York, New York, USA. 1992

**Weinberg, Steven** 1933–  
American nuclear physicist

We may need to rely again on the influence of science to preserve a sane world. It is not the certainty of scientific knowledge that fits it for this role, but its uncertainty. Seeing scientists change their minds again and again about matters that can be studied directly in laboratory experiments, how can one take seriously the claims of religious tradition or sacred writings to certain knowledge about matters beyond human experience?

*Dreams of a Final Theory: The Scientist's Search for the Ultimate Laws of Nature*  
Chapter VII (p. 188)  
Pantheon Books. New York, New York, USA. 1992

**Weisskopf, Victor Frederick** 1908–2002  
Austrian-American physicist

Science cannot develop unless it is pursued for the sake of pure knowledge and insight. It will not survive unless it is used intensely and wisely for the betterment of humanity and not as an instrument of domination. Human existence depends upon compassion and curiosity. Curiosity without compassion is inhuman; compassion without curiosity is ineffectual.

*Science Yesterday, Today, and Tomorrow*  
Speech, 1993

**Wilson, Edward O.** 1929–  
American biologist and author

The love of complexity without reductionism makes art; the love of complexity with reductionism makes science.

*Consilience: The Unity of Knowledge*  
Chapter 4 (p. 54)  
Alfred A. Knopf. New York, New York, USA. 1998

**Wolpert, Lewis** 1929–  
British embryologist

Mary Shelley's *Dr. Frankenstein*, H. G. Wells's *Dr. Moreau* and Aldous Huxley's *Brave New World*...are evidence of a powerfully emotive anti-science movement. Science is dangerous, so the message goes — it dehumanizes; it takes away free will; it is materialistic and arrogant. It removes magic from the world and makes it prosaic. But note where these ideas come from — not from the evidence of history, but from creative artists who have molded science by their own imagination.

*The Unnatural Nature of Science*  
Introduction (p. x)  
Harvard University Press. Cambridge, Massachusetts, USA. 1992

**Zelinsky, Wilbur** 1921–  
American cultural geographer

Perhaps the greatest discovery of twentieth century science has to do with its own essential nature: That it is, first and always, a social activity, an organized band of human beings who obey the same fundamental rules of organized behavior as do any other complex group of people, not a disembodied flock of angels soaring unswervingly upward toward the elysian fields of truth.

*The Demigod's Dilemma*  
*Annals of the Association of American Geographers*, Volume 65, 1975  
(p. 133)

## SCIENCE AND STATE

**Duprée, Hunter** 1921–  
American historian of science and technology

The mighty edifice of government science dominated the scene in the middle and twentieth century as a Gothic cathedral dominated a thirteenth century landscape. The work of many hands over the years, it universally inspired admiration, wonder and fear.

*Science in the Federal Government*

Chapter XIX (p. 375)

Harvard University Press. Cambridge, Massachusetts. 1957

**Feyerabend, Paul K.** 1924–94

Austrian-born American philosopher of science

...the separation of state and church must be complemented by the separation of state and science, that most recent, most aggressive, and most dogmatic religious institution.

*Against Method: Outline of an Anarchistic Theory of Knowledge*

Chapter 18 (p. 295)

Verso. London, England. 1978

**Mellanby, Kenneth** 1908–93

English ecologist and entomologist

...the corridors of power have a strong attraction for even the most devoted investigator, and these corridors seldom lead back to the laboratory.

Disorganisation of Scientific Research

*New Scientist*, Volume 59, Number 86023 August 1973 (p. 436)

**Ramón y Cajal, Santiago** 1852–1934

Spanish neuropathologist

Today's statesmen undoubtedly have limitations, one of which is not realizing that the greatness and might of nations are the products of science, and that justice, order, and good laws are important but secondary factors in prosperity.

*Advice for a Young Investigator*

Chapter 6 (p. 91)

The MIT Press. Cambridge, Massachusetts, USA. 1999

**Rutherford, Ernest** 1871–1937

English physicist

It is essential for men of science to take an interest in the administration of their own affairs or else the professional civil servant will step in — and then the Lord help you.

*Bulletin of the Institute of Physics*, 1950, 1, Number 1, cover

**Wiener, Norbert** 1894–1964

American mathematician

Neither the public nor the big administrator [of science] has too good an understanding of the inner continuity of science, but they have both seen its world-shaking consequences, and they are afraid of it. Both of them wish to decerebrate the scientist, as the Byzantine State emasculated its civil servants. Moreover the great administrator who is not sure of his own intellectual level can aggrandize himself only by cutting his scientific employees down to size.

*I Am a Mathematician*

Epilogue (p. 363)

Doubleday. Garden City, NY 1956

## SCIENCE AND SUPERSTITION

**Einstein, Albert** 1879–1955

German-born physicist

By furthering logical thought and a logical attitude, science can diminish the amount of superstition in the world. There is no doubt that all but the crudest scientific work is based on a firm belief — akin to religious feeling — in the rationality and comprehensibility of the world.

*Cosmic Religion, With Other Opinions and Aphorisms*

On Science (p. 98)

Covici-Fiede. New York, New York, USA. 1931

**Lovecraft, H. P. (Howard Phillips)** 1890–1937

American writer of fantasy, horror, and science fiction

We were not...in any sense childishly superstitious, but scientific study and reflection had taught us that the known universe of three dimensions embraces the merest fraction of the whole cosmos of substance and energy.

*The Shunned House*

Section IV

The Recluse Press. Athol, Massachusetts, USA. 1928

To say that we actually believed in vampires or werewolves would be a carelessly inclusive statement. Rather must it be said that we were not prepared to deny the possibility of certain unfamiliar and unclassified modifications of vital force and attenuated matter; existing very infrequently in three-dimensional space because of its more intimate connection with other spatial units, yet close enough to the boundary of our own to furnish us occasional manifestations which we, for lack of a proper vantage-point, may never hope to understand.

*The Shunned House*

Section IV

The Recluse Press. Athol, Massachusetts, USA. 1928

**Machen, Arthur** 1863–1947

Welsh author

I have told you that I was of skeptical habit; but though I understood little or nothing, I began to dread, vainly proposing to myself the iterated dogmas of science that all life is material, and that in the system of things there is no undiscovered land, even beyond the remotest stars, where the supernatural can find a footing. Yet there struck in on this the thought that matter is as really awful and unknown as spirit, that science itself but dallies on the threshold, scarcely gaining more than a glimpse of the wonders of the inner place.

*The Novel of the Black Seal* (p. 18)

Kessinger Publishing. Whitefish, Montana, USA.

**Pagels, Heinz R.** 1939–88

American physicist and science writer

I like to browse in occult bookshops if for no other reason than to refresh my commitment to science.

*The Dreams of Reason: The Computer and the Rise of the Sciences of Complexity*

Chapter 11 (p. 242)

Simon & Schuster. New York, New York, USA. 1988

## SCIENCE AND WOMEN

### Bolton, Henrietta

No biographical data available

As a general rule the scientific woman must be strong enough to stand alone, able to bear the often unjust sarcasm and dislike of men who are jealous of seeing what they consider their own field invaded.

Women in Science

*Popular Science Monthly*, Volume 53, 1898 (p. 511)

### Buckley, Arabella B. 1840–1929

English author

I have promised to introduce you today to the fairy-land of science, — a somewhat bold promise, seeing that most of you probably look upon science as a bundle of dry facts, while fairy-land is all that is beautiful, and full of poetry and imagination. But I thoroughly believe myself, and hope to prove to you, that science is full of beautiful pictures, of real poetry, and of wonder-working fairies...

*The Fairy-Land of Science*

Lecture I (p. 7)

D. Appleton & Company. New York, New York, USA. 1892

### Cannon, Annie Jump 1863–1941

American astronomer

...a life spent in the routine of science need not destroy the attractive human element of a woman's nature.

Williamina Patton Fleming

*Science*, Volume 33, Number 861, June 30, 1911 (p. 988)

### de Lamennais, Félicité Robert 1782–1854

French nobleman and ecclesiastic scholar

I have never met a woman who was competent to follow a course of reasoning the half of a quarter of an hour — *un demi quart d'heure*. She has qualities which are wanting in us, qualities of a particular, inexpressible charm; but, in the matter of reason, logic, the power to connect ideas, to enchain principles of knowledge and perceive their relationships, woman, even the most highly gifted, rarely attains to the height of a man of mediocre capacity.

In H.J. Mozans

*Women in Science*

Chapter III (p. 136)

The MIT Press. Cambridge, Massachusetts, USA. 1974

### de Pizan, Christine 1364–ca. 1430

Venician Medieval writer and analyst

I'll give you some conclusive examples. I repeat — and don't doubt my word — that if it were the custom to send little girls to school and to teach them all sorts of different subjects there, as one does with little boys, they would grasp and learn the difficulties of all the arts and sciences just as easily as the boys do.

Translated by Rosalind Brown-Grant

*The Book of the City of Ladies*

Part I, 26 (p. 57)

Penguin Books. London, England. 1999

### Gildersleeve, Virginia Crocheron 1877–1965

American educator

If we could produce one or two more Madame Curies, that would accomplish far more for the advancement of women than any amount of agitation, argument and legislation.

*Many a Good Crusade: Memoirs of Virginia Crocheron Gildersleeve*

Part I. The Advancement of Women, (p. 104)

The Macmillan Company. New York, New York, USA. 1954

### Kant, Immanuel 1724–1804

German philosopher

All abstract speculations, all knowledge which is dry, however useful it may be, must be abandoned to the laborious and solid mind of man.... For this reason women will never learn geometry.

In H.J. Mozans

*Women in Science*

Chapter III (p. 136)

The MIT Press. Cambridge, Massachusetts, USA. 1974

### Kass-Simon, G.

American neurobiologist

### Farnes, Patricia 1931–85

American health care writer

For women in science to be remembered, not only must their work be thought right, but usually it must have such impact upon scientific thought that exclusion is impossible. If women scientists are wrong, or if they narrowly miss the mark, or if they propound ideas that are ultimately superseded, not only are their ideas quickly forgotten, but as often as not, the women are ostracized by their contemporaries or treated with derision.

*Women of Science: Righting the Record*

Introduction (p. xiii)

Indiana University Press. Bloomington, Indiana, USA. 1990

### Lamy, Étienne 1845–1919

French essayist, politician, and lawyer

Women...group themselves at the center of human knowledge, whereas men disperse themselves toward its outer boundaries. While men are always pushing analysis to its utmost limits, women are seeking a synthesis. While men are becoming more technical, women

are becoming more intellectual. They are better placed to observe the correlations of the different sciences, and to subordinate them to the common and unique source of truth from which they all descend. We seem, indeed, to be approaching a time when women will become the conservers of general ideas.

In H.J. Mozans

*Women in Science.*

Chapter XII (pp. 409–410)

The MIT Press. Cambridge, Massachusetts, USA. 1974

### **Marcet, Jane Haldimand** 1769–1858

English expository author in chemistry, botany, religion, and economics

In writing these pages, the author was more than once checked in her progress by the apprehension that such an attempt might be considered by some, either as unsuited to the ordinary pursuits of her sex, or ill justified by her own recent and imperfect knowledge of the subject. But, on the one hand, she felt encouraged by the establishment of those public institutions, open to both sexes, for the dissemination of philosophical knowledge, which clearly prove that the general opinion no longer excludes women from an acquaintance with the elements of science...

*Conversations on Chemistry, in Which the Elements of that Science Are Familiarly Explained and Illustrated by Experiments*

Preface (p. iv)

Sidney's Press for Cooke. New Haven, Connecticut, USA. 1809

### **Merchant, Carolyn** 1936? –

American ecofeminist philosopher

While learned ladies had always been present among the educated of nobility, and women had contributed to science and mathematics from earliest times, the “scientific lady” was a product of the Scientific Revolution.

*The Death of Nature: Women, Ecology, and the Scientific Revolution*

Chapter 11 (p. 269)

Harper & Row, Publishers. San Francisco, California, USA. 1980

### **Mitchell, Maria** 1818–89

American astronomer and educator

Women, more than men, are bound by tradition and authority. What the father, the brother, the doctor, and the minister have said has been received undoubtingly. Until women throw off this reverence for authority, they will not develop. When they do this, when they come to truth through their investigations, when doubt leads them to discovery, the truth which they get will be theirs, and their minds will work on and on unfettered.

In Eve Merriam

*Growing Up Female in America*

Maria Mitchell (p. 96)

Doubleday & Company, Inc. Garden City, New York, USA. 1971

### **Mozans, H. J. (John Augustine Zahm)** 1851–1921

American priest, professor of physics, and science writer

Whilst men of science will be forced to continue as specialists as long as the love of fame, to consider no other motives of research, continue to be a potent influence in their investigations, it is probable that women will have less love for the long and tedious processes involved in the more difficult kinds of specialization. They will, it seems likely, be more inclined to acquire a general knowledge of the whole circle of the sciences — a knowledge that will enable them to take a comprehensive survey of nature. And it will be fortunate for themselves, as well as for the men who must perforce remain specialists, if they elect to do so. For nothing gives false views of nature as a whole, nothing more unfit the mind for a proper apprehension of higher and more important truths, nothing more incapacitates one for the enjoyment of the masterpieces of literature or the sweeter amenities of life, than the narrow occupation of a specialist who sees nothing in the universe but electrons, microbes and protozoa.

*Women in Science*

Chapter XII (pp. 408–409)

The MIT Press. Cambridge, Massachusetts, USA. 1974

### **Myrdal, Sigrid**

American scientist and inventor

There's the question of how you react when your data do not turn out the way you want them to. One possibility is to think “Oh no, something went wrong, my experiment failed.” or “Did I ask the question wrong?” and put the data in the drawer. I think the feminine approach is to ask “What's this trying to tell me?” and consider that nature may be more interesting and complicated than... expected, but therefore probably a bit more elegant. By actually having to deal with the data, I've gone to totally different interpretations. If something turns out quite screwy, I give it a chance. It's possible that it's more feminine to give something a chance.

In Linda Jean Shepherd

*Lifting the Veil: The Feminine Face of Science*

Receptivity (p. 86)

Shambhala. Boston, Massachusetts, USA. 1993

### **Plato** 428 BCE–347 BCE

Greek philosopher

Nothing can be more absurd than the practice, which prevails in our country, of men and women not following the same pursuits with all their strength and with one mind, for thus the state, instead of being a whole, is reduced to a half.

In H.J. Mozans

*Women and Science* (p. 2)

The MIT Press. Cambridge, Massachusetts, USA. 1974

### **Poullain de la Barre, François** 1647–1723

French feminist theorist and philosopher

*L'esprot n'a point de sexe.*

The mind has no sex.

*De l'éducation des dames pour la conduite de l'esprit dans les sciences et dans les moeurs*  
Paris, France. 1674.

**Rich, Adrienne** 1929–  
American poet

The belief that established science and scholarship — which have so relentlessly excluded women from their making — are “objective” and “value-free” and that feminist studies are “unscholarly,” “biased,” and “ideological” dies hard. Yet the fact is that all science, and all scholarship, and all art are ideological; there is no neutrality in culture!

*Blood, Bread and Poetry*  
Chapter 1 (p. 3)  
W.W. Norton & Company. New York, New York, USA. 1986

**Yentsch, Clarice M.**  
No biographical data available

**Sindermann, Carl J.**  
No biographical data available

Science, as a remarkably conservative human institution despite its relatively brief history, has typically cast women in supporting roles in which they were subservient to male professionals, usually dreadfully underpaid, and totally unrecognized.

*The Woman Scientist: Meeting the Challenges for a Successful Career*  
Chapter 2 (p. 27)  
Plenum Press. New York, New York, USA. 1992

## SCIENCE CREED

**Emerson, Ralph Waldo** 1803–82  
American lecturer, poet, and essayist

Science corrects the old creeds....

*The Complete Works of Ralph Waldo Emerson* (Volume 8)  
Letters and Social Aims  
Chapter VII (p. 228)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

**Hall, Asaph** 1829–1907  
American astronomer

The scientific creed is constantly growing and expanding, and we have no fears, but rejoice at its growth. We need no consistency of bishops, no synod of ministers, to tell us what to believe. Everything is open to investigation and criticism.

In Sir Richard Arman Gregory  
*Discovery; or, The Spirit and Service of Science*  
Chapter II (pp. 30–31)  
Macmillan & Company Ltd. London, England. 1918

**Huxley, Thomas Henry** 1825–95  
English biologist

...science... commits suicide when it adopts a creed.

*Collected Essays* (Volume 2)  
*Darwiniana*  
The Darwin Memorial (p. 252)  
Macmillan & Company Ltd. London, England. 1904

**LeShan, Lawrence**

No biographical data available

**Margenau, Henry** 1901–97  
American physicist

1. We believe that the search for truth is a never-ending quest; yet we pledge ourselves to seek it.
2. We will not recognize or accept any kind of truth that pretends to be ultimate or absolute. We will consider and weigh all claims as provisional conclusions. If examination shows them to be stop signs on the road of inquiry, we will ignore them; if they are signposts, we will note them and move on.
3. We recognize no subjects and no facts that are alleged to be forever closed to inquiry or understanding; for science, every mystery is but a challenge.
4. We believe that new principles of understanding are constantly created through the efforts of man, and that a philosophy which sees the answers to all questions already implied in what is now called science is presumptuous and contrary to the spirit of science.
5. We are confident that scientific illumination can be made to penetrate not only the realms now affirmed as scientific, but also the shadowy regions that surround human consciousness, the essence of the mind, including features that are still obscure or occult and mysterious.

*Einstein's Space and Van Gogh's Sky*  
Chapter 4 (pp. 70–71)  
The Macmillan Company. New York, New York, USA. 1982

## SCIENCE FICTION

**Asimov, Isaac** 1920–92  
American author and biochemist

Individual science fiction stories may seem as trivial as ever to the blinder critics and philosophers of today — but the core of science fiction, its essence...has become crucial to our salvation if we are to be saved at all.

In Robert Holdstock (ed.)  
*The Encyclopedia of Science Fiction*  
Foreword (p. 7)  
Octopus Books Ltd. London, England. 1978

**Ballard, James Graham** 1930–  
English writer

Everything is becoming science fiction. From the margins of an almost invisible literature has sprung the intact reality of the 20<sup>th</sup> century.

Fictions of Every Kind  
*Books and Bookmen*, February 1971

**Hawking, Stephen William** 1942–  
English theoretical physicist

There is a two-way trade between science fiction and science. Science fiction suggests ideas that scientists incorporate into their theories, but sometimes science turns up notions that are stranger than any science fiction.

In Lawrence M. Krauss  
*The Physics of Star Trek*  
Forward (p. xii)  
Harp Perennial Publishers. New York, New York, USA. 1995

We may not yet be able to boldly go where no man (or woman) has gone before, but at least we can do it in the mind.

In Lawrence M. Krauss  
*The Physics of Star Trek*  
Foreword (pp. xi–xii)  
Harp Perennial Publishers. New York, New York, USA. 1995

Nevertheless, today's science fiction is often tomorrow's science fact. The physics that underlies Star Trek is surely worth investigating. To confine our attention to the terrestrial matters would be to limit the human spirit.

In Lawrence M. Krauss  
*The Physics of Star Trek*  
Forward (p. xiii)  
Harp Perennial Publishers. New York, New York, USA. 1995

## SCIENCE GEEK

**Willis, Connie** 1945–  
American science fiction writer

The effect, especially with the Coke-bottle glasses, should have been science geek, but it wasn't.... Science geeks wear black shoes and white socks. he wasn't even wearing a pocket protector, though he should have been.

*Bellwether* (p. 12)  
Bantam Spectra. New York, New York, USA. 1997

## SCIENTIFIC COMMUNITY

**Latour, Bruno** 1947–  
French sociologist of science

**Woolgar, S.**  
No biographical data available

...a body of practices widely regarded by outsiders as well organized, logical, and coherent, in fact consists of a disordered array of observations with which scientists struggle to produce order.... Despite participants' well-ordered reconstructions and rationalizations, actual scientific practice entails the confrontation and negotiation of utter confusion.

*Laboratory Life: The Social Construction of Scientific Facts*  
Chapter 1 (p. 36)  
Sage Publications. Beverly Hills, California, USA. 1979

**Oppenheimer, J. Robert** 1904–67  
American theoretical physicist

In any science there is harmony between practitioners. A man may work as an individual, learning of what his colleagues do through reading or conversation; he may be working as a member of a group on problems whose technical equipment is too massive for individual effort. But whether he is part of a team or solitary in his own study, he, as a professional, is a member of a community. His colleagues in his own branch of science will be grateful to him for the inventive or creative thoughts he has, will welcome his criticism....

*The Open Mind*  
Chapter VIII (pp. 137–138)  
Simon & Schuster. New York, New York, USA. 1955

**Rabi, Isidor Isaac** 1898–1988  
Austrian-born American physicist

There isn't a scientific community. It is a culture. It is a very undisciplined organization.

In Daniel S. Greenberg  
*The Politics of Pure Science*  
Book One, Chapter I (p. 3)  
New American Library. New York, New York, USA. 1967

## SCIENTIFIC CRITICISM

**Pearson, Karl** 1857–1936  
English mathematician

In an age like our own, which is essentially an age of scientific inquiry, the prevalence of doubt and criticism ought not to be regarded with despair or as a sign of decadence. It is one of the safeguards of progress; — *la critique est la vie de la science*, I must again repeat. One of the most fatal (and not so impossible) futures for science would be the institution of a scientific hierarchy which would brand as heretical all doubt as to its conclusions, all criticism of its results.

*The Grammar of Science*  
Chapter II, Section 7 (p. 66)  
Charles Scribner's Sons. London, England. 1892

**Tagore, Rabindranath** 1861–1941  
Indian poet and philosopher

Our scientific world is our world of reasoning. It has its greatness and uses and attractions. We are ready to pay homage due to it. But when it claims to have discovered the real world for us and laughs at the worlds of all simple-minded men, then we must say it is like a general grown intoxicated with his power, usurping the throne of his king.

*Personality*  
The World of Personality (p. 70)  
The Macmillan Company. New York, New York, USA. 1917

**Schrödinger, Erwin** 1887–1961  
Austrian theoretical physicist

Our age is possessed by a strong surge towards the criticism of traditional customs and opinions. A new spirit is arising which is unwilling to accept anything on authority, which does not so much permit as demand independent, rational thought on every subject, and which refrains from hampering any attack based upon such thought, even though it be directed against things which formerly were considered to be as sacrosanct as you please. ...Its results can only be advantageous: no scientific structure falls entirely into ruin: what is worth preserving preserves itself and requires no protection.

*Science and the Human Temperament*

Chapter I (p. 38)

W.W. Norton & Company, Inc. New York, New York, USA. 1935

**von Goethe, Johann Wolfgang** 1749–1832  
German poet, novelist, playwright, and natural philosopher

A scientific researcher must always think of himself as a member of a jury. His only concern should be the adequacy of the evidence and the clarity of the proofs which support it. Guided by this, he will form his opinion and cast his vote without regard for whether he shares the author's views.

*Scientific Studies* (Volume 12)

Chapter VIII (pp. 306–307)

Suhrkamp. New York, New York, USA. 1988

**von Mises, Ludwig** 1881–1973  
Austrian economist

...scientific criticism has no nobler task than to shatter false beliefs.

*Socialism: An Economic and Sociological Analysis*

Preface to the Second German Edition (p. 19)

Yale University Press. New Haven, Connecticut, USA. 1951

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

If science is not to degenerate into a medley of ad hoc hypotheses, it must become philosophical and must enter upon a thorough criticism of its own foundations.

*Science and the Modern World*

Chapter I (pp. 16–17)

The Macmillan Company. New York, New York, USA. 1929

**Ziman, John M.** 1925–2005  
British physicist

The community of those who are competent to contribute to, or criticize, scientific knowledge must not be closed; it must be larger, and more open, than the group of those who entirely accept a current consensus or orthodoxy. It is an essential element in the health of Science, or of a science, or of the sciences, that self-confirming, mutually validating circles be unable to

close. Yet it is also essential that technical scientific discussion be not smothered in a cloud of ignorant prejudices and cranky speculations.

*Public Knowledge: An Essay Concerning the Social Dimension of Science*

Chapter 4 (p. 64)

Cambridge University Press. Cambridge, England. 1968

## SCIENTIFIC DOUBT

**Richet, Charles** 1850–1935  
French physiologist

Scientific doubt is a first-class quality, but rather eliminates piquancy from controversy.

*The Natural History of a Savant*

Chapter III (p. 25)

J.M. Dent & Sons Ltd. London, England. 1927

## SCIENTIFIC INQUIRY

**Dewey, John** 1859–1952  
American philosopher and educator

The routine of custom tends to deaden even scientific inquiry; it stands in the way of discovery and of the active scientific worker. For discovery and inquiry are synonymous as an occupation. Science is a pursuit, not a coming into possession of the immutable; new theories as points of view are more prized than discoveries that quantitatively increase the store on hand.

*Reconstruction in Philosophy*

Introduction (p. xvii)

Beacon Press. Boston, Massachusetts, USA. 1920

**Heinlein, Robert A.** 1907–88  
American science fiction writer

There ought not to be anything in the whole universe that man can't poke his nose into — that's the way we're built and I assume there's some reason for it.

*Methuselah's Children*

Chapter 8 (p. 160)

Aeonian Press. Mattituck, New York, USA. 1976

**Herschel, Sir John Frederick William** 1792–1871  
English astronomer and chemist

A mind which has once imbibed a taste for scientific inquiry, and has learnt the habit of applying its principles readily to the cases which occur, has within itself an inexhaustible source of pure and exciting contemplations...

*A Preliminary Discourse on the Study of Natural Philosophy*

Part I, Chapter I, Section 11 (pp. 14–15)

Printed for Longman, Rees, Orme, Brown & Green. London, England. 1831

**Herwitz, Daniel**  
No biographical data available

Cosmological inquiry takes place in the space between mathematics, theory, experiment, simulation, observation, and philosophic speculation. It is where science lives.

In Heather Wax and Gerald Shaw

Master of His Universe

*Science & Spirit*, November–December 2004

**Medawar, Sir Peter Brian** 1915–87

Brazilian-born English zoologist

If the purpose of scientific methodology is to prescribe or expound a system of enquiry or even a code of practice for scientific behavior, then scientists seem able to get on very well without it.

*Pluto's Republic*

Induction and Intuition in Scientific Thought (p. 78)

Oxford University Press, Inc. Oxford, England. 1982

The purpose of scientific enquiry is not to compile an inventory of factual information, nor to build up a totalitarian world picture of Natural Laws in which every event that is not compulsory is forbidden. We should think of it rather as a logically articulated structure of justifiable beliefs about nature. It begins as a story about a Possible World — a story which we invent and criticize and modify as we go along, so that it winds by being, as nearly as we can make it, a story about real life.

*Pluto's Republic*

Mainly About Intuition, Section 4 (pp. 110–111)

Oxford University Press, Inc. Oxford, England. 1982

...it is high time that laymen abandoned the misleading belief that scientific enquiry is a cold dispassionate enterprise, bleached of imaginative qualities, and that a scientist is a man who turns the handle of discovery; for at every level of endeavor scientific research is a passionate undertaking and the Promotion of Natural Knowledge depends above all on a *sortée* into what can be imagined but is not yet known.

Imagination and Hypothesis

*The Times Literary Supplement* (London), October 25, 1963 (p. 850)

**Rothschild, Lord Nathaniel Mayer** 1910–90

English banker

It is sometimes said in justification of basic research, that chance observations made during such work, and their subsequent study may be just as important as those made during applied R & D. While there is some truth in this contention, the country's needs are not so trivial as to be left to the mercies of a form of scientific roulette, with many more than the conventional 37 numbers on which the ball may land.

*A Framework for Government Research and Development* (p. 3)

Her Majesty's Stationery Office. London, England. 1971

**Thomson, J. Arthur** 1861–1933

Scottish biologist

Scientific inquiry may be likened to fishing in the sea of reality with a particular kind of tackle. The tackle has well-known excellences, but it has also recognized limitations; and there may be much in the sea that the net used will not catch, being of too wide a mesh.

The New World of Science

*The Atlantic Monthly*, June 1930

## SCIENTIFIC INVESTIGATION

**Agassiz, Jean Louis Rodolphe** 1807–73

Swiss-born American naturalist, geologist, and teacher

Scientific investigation in our day should be inspired by a purpose as animating to the general sympathy, as was the religious zeal which built the Cathedral of Cologne or the Basilica of St. Peter's. The time is passed when men expressed their deepest convictions by these wonderful and beautiful religious edifices; but it is my hope to see, with the progress of intellectual culture, a structure arises among us which may be a temple of the revelations written in the material universe.

*Louis Agassiz: His Life and Correspondence* (Volume 2)

Dredging Expedition (pp. 670–671)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1885

**Bayliss, William Maddock** 1860–1925

English physiologist

It is not going too far to say that the greatness of a scientific investigator does not rest on the fact of his having never made a mistake, but rather on his readiness to admit that he has done so, whenever the contrary evidence is cogent enough.

*Principles of General Physiology*

Preface (pp. xvi–xvii)

Longmans, Green & Company. London, England. 1920

**Born, Max** 1882–1970

German-born English physicist

The Scientist's urge to investigate, like the faith of the devout or the inspiration of the artist, is an expression of mankind's longing for something fixed, something at rest in the universal whirl: God, Beauty, Truth.

*The Restless Universe*

Chapter V (p. 278)

Dover Publications, Inc. New York, New York, USA. 1951

**Boycott, A. E.**

No biographical data available

The difficulty in most scientific work lies in framing the questions rather than in finding the answers.

The Transition from Live to Dead

*Nature*, Volume 123, January 19, 1929 (p. 93)

**Carryl, Charles Edward** 1841–1920

American writer

Then we gather as we travel,  
 Bits of moss and dirty gravel,  
 And we chip off little specimens of stone;  
 And we carry home as prizes  
 Funny bugs, of handy sizes,  
 Just to give the day a scientific tone.

In Franklin P. Adams

*Innocent Merriment: An Anthology of Light Verse*

Robinson Crusoe's Story

McGraw-Hill Book Company, Inc. New York, New York, USA. 1942

**Chargaff, Erwin** 1905–2002

Austrian biochemist

The scientific professions began to develop a momentum of their own, thereby creating a vested interest in always having more science, bigger science, better-endowed science. This is, incidentally, quite in contrast, for instance, to orchestra musicians whose influence on the number of orchestra pieces being written is minimal.

Voices in the Labyrinth

*Perspectives in Biology and Medicine*, Volume 18, Number 3, Spring 1975 (p. 324)

**Crookes, Sir William** 1832–1919

English chemist and physicist

To stop short in any research that bids fair to widen the gates of knowledge, to recoil from fear of difficulty or adverse criticism, is to bring reproach on science. There is nothing for the investigator to do but to go straight on; to explore up and down, inch by inch, with the taper of his reason; to follow the light wherever it may lead, even should it at times resemble a will-o'-the-wisp.

Address

British Association for the Advancement of Science, Bristol, England (1898)

**Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

Holmes is a little too scientific for my tastes — it approaches to cold-bloodedness. I could imagine his giving a friend a little pinch of the latest vegetable alkaloid, not out of malevolence, you understand, but simply out of a spirit of inquiry in order to have an accurate idea of the effects. To do him justice, I think that he would take it himself with the same readiness. He appears to have a passion for definite and exact knowledge.

In William S. Baring-Gould (ed.)

*The Annotated Sherlock Holmes* (Volume 1)

A Study in Scarlet, Chapter 1 (p. 149)

Wings Books. New York, New York, USA. 1967

**Farrington, Benjamin** 1891–1974

Irish scholar

Just as all scientific investigation is fruitless which is not pursued in a spirit of truth, so the results of all scientific endeavor are wasted if the continuity of tradition cannot

be assured. It is of the very essence of science to be a co-operation and that not only of the men of the same generation, but of the generations successively.

In Lloyd William Taylor

*Physics: The Pioneer Science* (Volume 2)

Chapter 35 (p. 503)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1941

**Hall, Alfred Rupert** 1920–

English historian of science

The cumulative growth of science, arising from the employment of methods of investigation and reasoning which have been justified by their fruits and their resistance to the corrosion of criticism, cannot be reduced to any single themes. We cannot say...why some men can perceive the truth, or a technical trick, which has eluded others. From the bewildering variety of experience in its social, economic and psychological aspects it is possible to extract only a few factors, here and there, which have had a bearing on the development of science. At present at least, we can only describe, and begin to analyse, where we should like to understand.

*The Scientific Revolution, 1500–1800*

Introduction (p. xiv)

Longmans, Green & Company. London, England. 1954

**Hertz, Heinrich** 1857–94

German physicist

I have never forgotten what I often used to say to myself, that I would rather be a great scientific investigator than a great engineer, but would rather be a second-rate engineer than a second-rate investigator.

*Miscellaneous Papers*

Introduction (p. x)

Macmillan & Company Ltd. London, England. 1896

**Huxley, Thomas Henry** 1825–95

English biologist

The method of scientific investigation is nothing but the expression of the necessary mode of working of the human mind. It is simply the mode in which all phenomena are reasoned about, rendered precise and exact.

*Collected Essays* (Volume 2)

*Darwiniana*

Six Lectures to Working Men (p. 363)

Macmillan & Company London, England. 1904

**Peirce, Charles Sanders** 1839–1914

American scientist, logician, and philosopher

The man of action has to believe, the inquirer has to doubt; the scientific investigator is both.

In J.B. Conant

*Modern Science and Modern Man*

Science and Spiritual Values (p. 103)

Columbia University Press. New York, New York, USA. 1952

**von Lommel, Eugen** 1837–99

German physicist

The deeds of a man of science are his scientific investigations. Truth once discovered does not remain shut up in the study or the laboratory. When the moment comes, it bursts its narrow bonds and joins the quick pulse of life. That which has been discovered in solitude, in the unselfish struggle for knowledge, in pure love of science, is often fated to be the mighty lever to advance the culture of our race.

In Sir Richard Arman Gregory

*Discovery; or, The Spirit and Service of Science*

Chapter VII (p. 184)

Macmillan & Company Ltd. London, England. 1918

**Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

The popular idea of scientific investigation is a vehement, aimless collection of little facts, collected as a bower of birds collects shells and pebbles, in methodical little rows, and out of this process, in some manner unknown to the popular mind, certain conjuring tricks — the celebrated “wonders of science” — in a sort of accidental way emerge.

*The Discovery of the Future* (p. 34)

B.W. Huebsch. New York, New York, USA. 1913

**Wittgenstein, Ludwig Josef Johann** 1889–1951

Austrian-born English philosopher

In the course of a scientific investigation we say all kinds of things; we make many utterances whose role in the investigation we do not understand. For it isn't as though everything we say has a conscious purpose; our tongues just keep going. Our thoughts run in established routines, we pass automatically from one thought to another according to the techniques we have learned. And now comes the time for us to survey what we have said. We have made a whole lot of movements that do not further our purpose, or that even impede it, and now we have to clarify our thought processes philosophically.

Translated by Peter Winch

*Culture and Value* (p. 64e)

The University of Chicago Press. Chicago, Illinois, USA. 1980

## SCIENTIFIC LITERACY

**Deason, Hilary J.** d. 1971

No biographical data available

Scientific literacy has become a real and urgent matter for the informed citizen. Many have allowed themselves to lapse into a coma of scientific illiteracy because of the misconception that science and mathematics are beyond their understanding, have no personal appeal, and can be rejected or ignored. For them a tocsin [alarm bell] has been sounded by hundreds of intelligent men and women whose personal crusade is the awakening of people

everywhere to scientific awareness. They admonish, “read, mark, learn, and inwardly digest.”

*A Guide to Science Reading*

Foreword to the First Edition (p. ix)

The New American Library. New York, New York, USA. 1966

## SCIENTIFIC METHOD

**Agre, Peter** 1949–

American biologist

The field was essentially stuck, but following the well known scientific approach known as “sheer blind luck,” we stumbled upon the protein that is the answer to the question: do water channels exist?

*Les Prix Nobel. The Nobel Prizes in 2003*

Nobel lecture for award received in 2003

Nobel Foundation. Stockholm, Sweden. 2004

**Bauer, Henry H.** 1931–

American chemist

There is no good reason to discard the scientific method as an ideal; rather, there is good reason to keep it so. Myths, after all, even if not literally true, are stories that embody moral truths.

*Scientific Literacy and the Myth of the Scientific Method*

Chapter 2 (p. 39)

University of Illinois Press. Urbana, Illinois, USA. 1992

One of the things wrong with the popular, classical definition of the scientific method is the implication that solitary people can successfully do good science, for example frame hypotheses and test them. In practice, however, the people who put forward the hypotheses are not usually the same people who apply the best test to them.

*Scientific Literacy and the Myth of the Scientific Method*

Chapter 3 (p. 52)

University of Illinois Press. Urbana, Illinois, USA. 1992

**Becker, Carl L.** 1873–1945

American historian

It is one of the engaging ironies of modern thought that the scientific method, which it was once fondly hoped would banish mystery from the world, leaves it every day more inexplicable.

*The Heavenly City of the Eighteenth Century Philosophers*

Chapter 1 (p. 24)

Yale University Press. New Haven, Connecticut, USA. 1932

**Bernard, Claude** 1813–78

French physiologist

I believe, in a word, that the true scientific method confines the mind without suffocating it, leaves it as far as possible face to face with itself, and guides it, while respecting the creative originality and the spontaneity which are its most precious qualities.

Translated by Henry Copley Greene

*An Introduction to the Study of Experimental Medicine*  
Part Three, Chapter III, Section iv (p. 226)  
Henry Schuman, Inc. New York, New York, USA. 1927

**Born, Max** 1882–1970  
German-born English physicist

There are two objectionable types of believers: those who believe the incredible and those who believe that “belief” must be discarded and replaced by “the scientific method.”

*Natural Philosophy of Cause and Chance*  
Appendix One (p. 209)  
At The Clarendon Press. Oxford, England. 1949

**Bridgman, Percy Williams** 1882–1961  
American physicist

The scientific method, as far as it is a method, is nothing more than doing one’s damndest with one’s mind, no holds barred.

*Reflections of a Physicist*  
Chapter 21 (p. 351)  
Philosophical Library. New York, New York, USA. 1950

It seems to me that there is a good deal of ballyhoo about scientific method. I venture to think that the people who talk most about it are the people who do least about it. Scientific method is what working scientists do, not what other people or even they themselves may say about it... Scientific method is something talked about by people standing on the outside and wondering how the scientist manages to do it....

*Reflections of a Physicist*  
Chapter 5 (p. 81)  
Philosophical Library. New York, New York, USA. 1955

[S]cience is what scientists do, and there are as many scientific methods as there are individual scientists.

*Reflections of a Physicist*  
Chapter 5 (p. 81)  
Philosophical Library. New York, New York, USA. 1955

**Butler, Nicholas Murray** 1862–1947  
American educator and university administrator

The making of a few score of admirable specialists, and the annual production of a small army of youths with narrow, if minute, information useful in some particular vocation, is a sorry substitute for reaching the great mass of the population with the influence and ideals of scientific inquiry and the scientific method.

In Bernard Jaffe  
*New World of Chemistry*  
Preface (p. vii)  
Silver, Burdett & Company. New York, New York, USA. 1935

**Campbell, Norman R.** 1880–1949  
English physicist and philosopher

If the discovery of laws could be reduced to a set of formal rules, anyone who learnt the rules could discover

laws. But there is no broad road to progress. Herein lies the most serious objection to much that has been written on the methods of science. There is no method, and it is because there is no method which can be expounded to all the world that science is a delight to those who possess the instincts which make methods unnecessary.

*Physics: The Elements*  
Chapter IV (p. 112)  
At The University Press. Cambridge, England. 1920

**Conant, James Bryant** 1893–1978  
American educator and scientist

There is no such thing as the scientific method. If there were, surely an examination of the history of physics, chemistry, and biology would reveal it. For as I have already pointed out, few would deny that it is the progress in physics, chemistry and experimental biology which gives everyone confidence in the procedures of the scientist. Yet, a careful examination of these subjects fails to reveal any one method by means of which the masters in these fields broke new ground.

*Science and Common Sense*  
Chapter Three (p. 45)  
Yale University Press. New Haven, Connecticut, USA. 1951

**Crick, Francis Harry Compton** 1916–2004  
English biochemist

What, then, do Jim Watson and I deserve credit for? If we deserve any credit at all, it is for persistence and the willingness to discard ideas when they became untenable. One reviewer thought that we couldn’t have been very clever because we went on so many false trails, but that is the way discoveries are usually made. Most attempts fail not because of lack of brains but because the investigator gets stuck in a cul-de-sac or gives up too soon.

*What Mad Pursuit: A Personal View of Scientific Discovery*  
Chapter 6 (p. 74)  
Basic Books, Inc. New York, New York, USA. 1988

**Davies, Paul Charles William** 1946–  
British-born physicist, writer, and broadcaster

The success of the scientific method at unlocking the secrets of nature is so dazzling it can blind us to the greatest scientific miracle of all: science works.

*The Mind of God: The Scientific Basis for a Rational World*  
Chapter 1 (p. 20)  
Simon & Schuster. New York, New York, USA. 1992

**Dubos, René Jules** 1901–82  
French-born American microbiologist and environmentalist

...like its literary and artistic counterparts, the process of scientific creation is a completely personal experience for which no technique of observation has yet been devised. Moreover, out of false modesty, pride, lack of inclination or psychological insight, very few of the great

discoverers have revealed their own mental processes; at the most they have described methods of work — but rarely their dreams, urges, struggles and visions.

*Louis Pasteur: Free Lance of Science*

Chapter XIII (p. 369)

Little, Brown & Company. Boston, Massachusetts, USA. 1950

**Feyerabend, Paul K.** 1924–94

Austrian-born American philosopher of science

The idea that science can, and should, be run according to fixed and universal rules, is both unrealistic and pernicious.

*Against Method: Outline of an Anarchistic Theory of Knowledge*

Chapter 18 (p. 295)

Verso. London, England. 1978

**Feynman, Richard P.** 1918–88

American theoretical physicist

After we look for the evidence we have to judge the evidence. There are the usual rules about the judging the evidence; it's not right to pick only what you like, but to take all of the evidence, to try to maintain some objectivity about the thing — enough to keep the thing going — not to ultimately depend upon authority. Authority may be a hint as to what the truth is, but is not the source of information. As long as it's possible, we should disregard authority whenever the observations disagree with it.

In Jeffrey Robbins (ed.)

*The Pleasure of Finding Things Out: The Best Short Works of Richard P. Feynman*

Chapter 4 (p. 104)

Perseus Books. Cambridge, Massachusetts, USA. 1999

**Feynman, Richard P.** 1918–88

American theoretical physicist

**Leighton, Robert B.** 1919–97

American physicist

**Sands, Matthew L.** 1919–

American physicist

Observation, reason, and experiment make up what we call the scientific method.

*The Feynman Lectures on Physics* (Volume 1)

Chapter 2–1 (p. 2–1)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA.

1983

**Flexner, Abraham** 1866–1959

American educator

So long as men strive to transcend their native powers, to rid themselves of prejudice and preconception, to observe phenomena in a dry light, the effort is scientific, whether at the moment it attains mathematical accuracy or not.

*Medical Education: A Comparative Study*

Chapter I (p. 3)

The Macmillan Company. New York, New York, USA. 1925

**France, Anatole (Jean Jacques Brousson)** 1844–1924

French writer

...the scientific reasons for preferring one piece of evidence to another are sometimes very strong, but they are never strong enough to outweigh our passions, our prejudices, our interests, or to overcome that levity of mind common to all grave men. It follows that we continually present the facts in a prejudiced or frivolous manner.

*Penguin Island*

Preface (p. vi)

Dodd, Mead & Company. New York, New York, USA. 1923

**Garrod, Archibald** 1857–1936

English physician

[Scientific method] acts as a check, as well as a stimulus, sifting the value of the evidence, and rejecting that which is worthless, and restraining too eager flights of the imagination and too hasty conclusions.

In Alexander G. Bearn

*Archibald Garrod and the Individuality of Man*

Chapter 7 (p. 82)

Clarendon Press. Oxford, England. 1993

**Gould, Stephen Jay** 1941–2002

American paleontologist, evolutionary biologist, and historian of science

It is important that we, as working scientists, combat these myths of our profession as something superior and apart. The myths may serve us well in the short and narrow as rationale for a lobbying strategy — give us the funding and leave us alone, for we know what we're doing and you don't understand anyway. But science can only be harmed in the long run by its self-proclaimed separation as a priesthood guarding a sacred rite called the scientific method. *Time's Arrow, Time's Cycle: Myth and Metaphor in the Discovery of Geological Time*

Chapter 1 (p. 7)

Harvard University Press. Cambridge, Massachusetts, USA. 1987

The Nobel prizes focus on quantitative nonhistorical, deductively oriented fields with their methodology of perturbation by experiment and establishment of repeatable chains of relatively simple cause and effect. An entire set of disciplines, different though equal in scope and status, but often subjected to ridicule because they do not follow this pathway of "hard" science, is thereby ignored: the historical sciences, treating immensely complex and nonrepeatable events (and therefore eschewing prediction while seeking explanation for what has happened) and using the methods of observation and comparison.

Balzan Prize to Ernst Mayr

*Science*, Volume 223, Number 4633, January 20, 1984 (p. 255)

If justification required eyewitness testimony, we would have no sciences of deep time — no geology, no ancient human history either. (Should I believe Julius Caesar

ever existed? The hard bony evidence for human evolution...surely exceeds our reliable documentation of Caesar's life.)

Dorothy, *It's Really Oz*

*Time Magazine*, August 23, 1999 (p. 59)

[O]ur ways of learning about the world are strongly influenced by the social preconceptions and biased modes of thinking that each scientist must apply to any problem. The stereotype of a fully rational and objective "scientific method," with individual scientists as logical (and interchangeable) robots, is self-serving mythology.

This View of Life. In *Mind of the Beholder*

*Natural History*, Volume 103, Number 2, February 1994 (p. 14)

### **Hoffman, Paul** 1934–

American writer

...sometimes serious scientific problems are solved by a scientific method that can be described only as playful.

*Playing for Keeps*

*Discover*, October 1990 (p. 4)

### **Huxley, Thomas Henry** 1825–95

English biologist

I am not afraid of the priests in the long-run. Scientific method is the white ant which will slowly but surely destroy their fortifications. And the importance of scientific methods in modern practical life — always growing and increasing — is the guarantee for the gradual emancipation of the ignorant upper and lower classes, the former of whom especially are the strength of the priests.

*Collected Essays* (Volume 3)

*Science and Education*

*Life and Letters* (p. 330)

Macmillan & Company Ltd. London, England. 1904

### **Kropotkin, Peter Alekseyevich** 1842–1921

Russian revolutionary and geographer

He who has once in his life experienced this joy of scientific creation will never forget it; he will be longing to renew it; and he cannot but feel with pain that this sort of happiness is the lot of so few of us, while so many could also live through it, — on a small or on a grand scale, — if scientific methods and leisure were not limited to a handful of men.

*Memoirs of a Revolutionist*

Part IV, I (p. 6)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1899

### **Krutch, Joseph Wood** 1893–1970

American naturalist, conservationist, and writer

We are committed to the scientific method, and measurement is the foundation of that method; hence we are prone to assume that whatever is measurable must be significant and that whatever cannot be measured may as well be disregarded.

*Human Nature and the Human Condition*

Chapter V (p. 78)

Random House, Inc. New York, New York, USA. 1959

### **Maxwell, James Clerk** 1831–79

Scottish physicist

Nature is a journal of science, and one of the several tests of a scientific mind is to discern the limits of the legitimate application of scientific methods.

In W.D. Niven (ed.)

*The Scientific Papers of James Clerk Maxwell* (Volume 2)

*Paradoxical Philosophy* (p. 759)

Dover Publications, Inc. New York, New York, USA. 1965

### **Medawar, Sir Peter Brian** 1915–87

Brazilian-born English zoologist

The scientific method, as it is sometimes called, is a potentiation of common sense.

*Advice to a Young Scientist*

Chapter 11 (p. 93)

Basic Books, Inc., Publishers. New York, New York, USA. 1979

The accusation is sometimes directed against scientists that there is in reality no such thing as the scientific method, i.e., that there is no logically accountable and intellectually rigorous process by which we may proceed directly to the solution of a given problem. Scientific method works only in retrospect. This accusation is perfectly just but it doesn't in practice amount to anything more than saying that there is no set of cut-and-dried rules for writing a poem or passage of music or conducting any other imaginative exercise.

*The Cost-Benefit Analysis of Pure Research*

*Hospital Practice*, Sept 1973

Ask a scientist what he conceives the scientific method to be, and he will adopt an expression that is at once solemn and shifty-eyed; solemn because he feels he ought to declare an opinion; shifty-eyed, because he is wondering how to conceal the fact that he has no opinion to declare.

*Induction and Intuition in Scientific Thought*

Chapter I, Section 2 (p. 11)

American Philosophical Society. Philadelphia, Pennsylvania, USA. 1969

### **Pearson, Karl** 1857–1936

English mathematician

I assert that the encouragement of scientific investigation and the spread of scientific knowledge by largely inculcating scientific habits of mind will lead to more efficient citizenship and so to increased social stability. Minds trained to scientific methods are less likely to be led by mere appeal to the passions or by blind emotional excitement to sanction acts which in the end may lead to social disaster.

*The Grammar of Science*

Introductory, Section 3 (pp. 10–11)

Charles Scribner's Sons. London, England. 1892

**Pirsig, Robert M.** 1928–  
American writer

Traditional scientific method has always been at the very best, 20–20 hindsight. It's good for seeing where you've been.

*Zen and the Art of Motorcycle Maintenance: An Inquiry Into Values*  
Part III, Chapter xxiv (p. 280)  
William Morrow & Company, Inc. New York, New York, USA. 1974

When I think of formal scientific method an image sometimes comes to mind of an enormous juggernaut, a huge bulldozer — slow, tedious, lumbering, laborious, but invincible. It takes twice as long, five times as long, maybe a dozen times as long as informal mechanic's techniques, but you know in the end you're going to get it. There's no fault isolation problem in motorcycle maintenance that can stand up to it. When you've hit a really tough one, tried everything, racked your brain and nothing works, and you know that this time Nature has really decided to be difficult, you say, "Okay, Nature, that's the end of the nice guy," and you crank up the formal scientific method.

*Zen and the Art of Motorcycle Maintenance: An Inquiry into Values*  
Part II, Chapter 9 (p. 107)  
William Morrow & Company, Inc. New York, New York, USA. 1974

The real purpose of scientific method is to make sure Nature hasn't misled you into thinking you know something you don't actually know. There's not a mechanic or scientist or technician alive who hasn't suffered from that one so much that he's not instinctively on guard.... If you get careless or go romanticizing scientific information, giving it a flourish here and there, Nature will soon make a complete fool out of you.

*Zen and the Art of Motorcycle Maintenance: An Inquiry into Values*  
Part II, Chapter 9 (p. 108)  
William Morrow & Company, Inc. New York, New York, USA. 1974

**Polanyi, Michael** 1891–1976

Hungarian-born English scientist, philosopher, and social scientist

Scientists who believe that the old, tried, and true is sufficient or who underestimate and fail to understand the need for change may soon be lost in a challenging and exciting period of history. But those who have the vision to see beyond the obvious, the wisdom to search for and recognize the truth, and the ability to apply basic knowledge for the good of mankind will find this period one of great reward and satisfaction.

Challenges to Editors of Scientific Journals  
*Science*, Volume 141, Number 3585, September 13, 1963 (p. 1017)

**Raymo, Chet** 1936–

American physicist and science writer

How is it that astronomers can tell such stories, stories more fabulous than any myth of gods and nymphs, when the ink of night offers to the eye only pinpricks of light?

The answer is both simple and complex. We look, we invent, we look again. We test our inventions against what we see, and we insist that our inventions be consistent with one another, that our stories of the stars be consistent with our stories of the earth, of life, and of matter and energy.... The story of the falling apple and the story of the stars must resonate together. Only then, when our stories of the world vibrate with a symphonic harmony, are we confident that our inventions partake of reality.

*The Virgin and the Mousetrap: Essays in Search of the Soul of Science*  
Chapter 19 (p. 175)  
The Viking Press. New York, New York, USA. 1991

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

Whatever knowledge is attainable, must be attained by scientific methods; and what science cannot discover, mankind cannot know.

*Religion and Science*  
Science and Ethics (p. 243)  
Henry Holt & Company. New York, New York, USA. 1935

Scientific method...consists mainly in eliminating those beliefs which there is reason to think a source of shocks, while retaining those against which no definite argument can be brought.

*Human Knowledge: Its Scope and Limits*  
Part III, Chapter III (p. 185)  
Simon & Schuster. New York, New York, USA. 1948

Scientific method...consists in observing such facts as will enable the observer to discover general laws governing facts of the kind in question.

*The Scientific Outlook*  
Chapter I (p. 15)  
George Allen & Unwin Ltd. London, England. 1931

In arriving at a scientific law there are three main stages: The first consists in observing the significant facts; the second in arriving at a hypothesis, which, if it is true, would account for these facts; the third is deducing from this hypothesis consequences which can be tested by observation. If the consequences are verified, the hypothesis is provisionally accepted as true, although it will usually require modification later on as a result of the discovery of further facts.

*The Scientific Outlook*  
Chapter II (p. 58)  
George Allen & Unwin Ltd. London, England. 1931

**Stansfield, William D.** 1930–

American biologist

Most scientific theories, however, are ephemeral. Exceptions will likely be found that invalidate a theory in one or more of its tenets. These can then stimulate a new round of research leading either to a more comprehensive theory or perhaps to a more restrictive (i.e., more precisely

defined) theory. Nothing is ever completely finished in science; the search for better theories is endless.

*The Science of Evolution*

Introduction (p. 8)

Macmillan Company. New York, New York, USA. 1977

The interpretation of a scientific experiment should not be extended beyond the limits of the available data. In the building of theories, however, scientists propose general principles by extrapolation beyond available data. When former theories have been shown to be inadequate, scientists should be prepared to relinquish the old and embrace the new in their never-ending search for better solutions. It is unscientific, therefore, to claim to have “proof of the truth” when all that scientific methodology can provide is evidence in support of a theory.

*The Science of Evolution*

Introduction (p. 8)

Macmillan Publishing Company. New York, New York, USA. 1977

**Skinner, Burrhus Frederick** 1904–90

American psychologist

Here was a first principle not formally recognized by scientific methodologists: When you run into something interesting, drop everything else and study it.

A Case History in Scientific Method

*The American Psychologist*, Volume 11, 1956 (p. 223)

**Skolimowski, Henryk** 1930–

Polish philosopher

We are the proud inheritors and perpetuators of the scientific tradition. But perhaps also the slaves of certain modes of thinking; subjects to a conceptual tyranny which we glorify, thus being perfect slaves — slaves who enjoy their imprisonment.

In A.J. Ayala (ed.)

*Studies in the Philosophy of Biology: Reduction and Related Problems*

Problems of Rationality in Biology (p. 213)

Macmillan & Company Ltd. London, England. 1974

**Sullivan, John William Navin** 1886–1937

Irish mathematician

To judge from the history of science, the scientific method is excellent as a means of obtaining plausible conclusions which are always wrong, but hardly as a means of reaching the truth.

The Justification of the Scientific Method

*The Athenaeum*, Number 4644, 2 May 1919 (p. 275)

**Tate, Allen** 1899–1979

American poet, teacher, and novelist

Scientific approaches, because each has its own partial conventions momentarily arrogating to themselves the authority of total explanation, must invariably fail to see all the experience latent in the work.

Critical Responsibility

*The New Republic*, Volume 51, Number 663, August 17, 1927 (p. 340)

**Tennant, F. R.**

No biographical data available

Half a century ago, it was taught that the scientific method is the sole means of approach to the whole realm of possible knowledge: that there were no reasonably propounded questions worth discussing to which its method was inapplicable. Such belief is less widely held today. Since many men of science became their own epistemologists, science has been more modest.

*Philosophical Theology* (Volume 1)

Chapter XIII (p. 333)

At The University Press. Cambridge, England. 1956

**Thomson, Sir George** 1892–1975

English physicist

The scientific method is not a royal road leading to discoveries in research, as Bacon thought, but rather a collection of pieces of advice, some general, some rather special, which may help to guide the explorer in his passage through the jungle of apparently arbitrary facts.

*The Inspiration of Science*

Chapter II (p. 7)

Oxford University Press, Inc. London, England. 1961

**Weisz, Paul B.** 1919–

German-born American chemical engineer and biomedical researcher

All science begins with observation, the first step of the scientific method. At once this delimits the scientific domain; something that cannot be observed cannot be investigated by science.

*Elements of Biology* (p. 40)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1965

**Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

For the true scientific method is this:

To trust no statements without verification,  
to test all things as rigorously as possible,  
to keep no secrets, to attempt no monopolies,  
to give out one’s best modestly and plainly,  
serving no other end but knowledge.

In William Beebe

*Edge of the Jungle*

Cover page (p. 1)

Garden City Publishing Company, Inc. Garden City, New York, USA. 1925

**Wolpert, Lewis** 1929–

British embryologist

Even distinguished philosophers of science... recognize the failure of philosophy to help understand the nature of science. They have not discovered a scientific method that provides a formula or prescriptions for how to make discoveries. But many famous scientists have given advice: try many things; do what makes

your heart leap; think big; dare to explore where there is no light; challenge expectation; cherchez le paradox; be sloppy so that something unexpected happens, but not so sloppy that you can't tell what happened; turn it on its head; never try to solve a problem until you can guess the answer; precision encourages the imagination; seek simplicity; seek beauty.... One could do no better than to try them all.

*The Unnatural Nature of Science*

Chapter 6 (p. 108)

Harvard University Press. Cambridge, Massachusetts, USA. 1992

No one method, no paradigm, will capture the process of science. There is no such thing as the scientific method.

*The Unnatural Nature of Science*

Chapter 6 (p. 108)

Harvard University Press. Cambridge, Massachusetts, USA. 1992

### **Zimmerman, Michael** 1946–

American biologist

Having a scientific outlook means being willing to divest yourself of a pet hypothesis, whether it relates to easy self-help improvements, homeopathy, graphology, spontaneous generation, or any other concept, when the data produced by a carefully designed experiment contradict that hypothesis. Retaining a belief in a hypothesis that cannot be supported by data is the hallmark of both the pseudoscientist and the fanatic. Often the more deeply held the hypothesis, the more reactionary is the response to nonsupportive data.

*Science, Nonscience, and Nonsense: Approaching Environmental Literacy*

Chapter Two (p. 37)

The Johns Hopkins University Press. Baltimore, Maryland, USA. 1995

## SCIENTIFIC MIND

### **Abbey, Edward** 1927–89

American environmentalist and nature writer

Any good poet, in our age at least, must begin with the scientific view of the world; and any scientist worth listening to must be something of a poet, must possess the ability to communicate to the rest of us his sense of love and wonder at what his work discovers.

*The Journey Home: Some Words in Defense of the American West*

Chapter 8 (p. 87)

E.P. Dutton & Company. New York, New York, USA. 1977

### **Ackerman, Edward A.** 1911–73

American geographer

The mind of the scientist, no less than that of the poet or musician, must be structured by thought and experience before it reaches the creative stage.

Where Is a Research Frontier?

*Annals of the Association of American Geographers*, Volume 30, 1931 (p. 433)

### **Bauer, Henry H.** 1931–

American chemist

Science progresses not because scientists as a whole are passionately open-minded but because different scientists are passionately closed-minded about different things.

*Scientific Literacy and the Myth of the Scientific Method*

Chapter 4 (p. 76)

University of Illinois Press. Urbana, Illinois, USA. 1992

### **Beveridge, William Ian Beardmore** 1908–

Australian zoologist

It is true that much time and effort is devoted to training and equipping the scientist's mind, but little attention is paid to the techniques of making the best use of it.

*The Art of Scientific Investigation*

Preface (p. viii)

W.W. Norton & Company, Inc. New York, New York, USA. 1957

### **Compton, Karl Taylor** 1887–1954

American educator and physicist

Science requires straight and independent thinking. Every hypothesis or idea is capable of definite proof or disproof. The habit of mind that subjects every idea to rigid test is of utmost value. Much of the loose thinking in social, educational, political, and economic affairs would be avoided if the workers in these fields could be given a real training in accurate scientific thinking.

*A Scientist Speaks: Excerpts from Addresses by Karl Taylor Compton*

*During the Years 1930–1949* (p. 39)

Undergraduate Association, MIT. Cambridge, Massachusetts, USA.

1955

### **Dewey, John** 1859–1952

American philosopher and educator

The future of our civilization depends on the widening spread and deepening hold of the scientific habit of mind.

In Lloyd William Taylor

*Physics: The Pioneer Science* (Volume 1)

Chapter 11 (p. 137)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1941

### **Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

The true scientific mind is not to be tied down by its own conditions of time and space. It builds itself an observatory erected upon the border line of present, which separates the infinite past from the infinite future. From this sure post it makes its sallies even to the beginning and to the end of all things.

*The Poison Belt*

Chapter Three (p. 84)

The Macmillan Company. New York, New York, USA. 1964

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

The scientific mind must have a faith which is science.

*The Complete Works of Ralph Waldo Emerson* (Volume 6)

The Conduct of Life

Chapter VI (p. 240)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

**Fisher, Sir Ronald Aylmer** 1890–1962

English statistician and geneticist

In scientific subjects, the natural remedy for dogmatism has been found in research. By temperament and training, the research worker is the antithesis of the pundit. What he is actively and constantly aware of is his ignorance, not his knowledge; the insufficiency of his concepts, of the terms and phrases in which he tries to excogitate his problems: not their final and exhaustive sufficiency. He is, therefore, usually only a good teacher for the few who wish to use their mind as a workshop, rather than to store it as a warehouse.

Eugenics, Academic and Practical

*Eugenics Review*, Volume 27, 1935

**Foster, Sir Michael** 1836–1907

English physiologist and educator

...the mind which has been already sharpened by the methods of one science takes a keener edge, and the more quickly, when it is put on the whetstone of another science, than does a mind which knows nothing of no science.

*Annual Report of the Board of Regents of the Smithsonian Institution*, 1898

Recent Advances in Science, and Their Bearing on Medicine and Surgery (p. 340)

Government Printing Office. Washington, D.C. 1899

**Kingsley, Charles** 1819–75

English clergyman and author

In one word, [scientific] men [have] acquired just the habit of mind which the study of Natural Science can give, and must give; for without it there is no use studying Natural Science; and the man who has not got that habit of mind, if he meddles with science, will merely become a quack and a charlatan, only fit to get his bread as a spirit-rapper, or an inventor of infallible pills.

*Town Geology*

Preface

D. Appleton & Company. New York, New York, USA. 1873

**Knickerbocker, William Skinkle** 1892–1972

American professor of English and author

...the scientific...mind produces many of the virtues which in old-fashioned courses of ethics were taught as objectively as a problem in geometry. Patience, endurance, humility, teachableness, honesty, accuracy — without these it is impossible for a scientist to work.

*Classics of Modern Science*

Preface

Alfred A Knopf. New York, New York, USA. 1927

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

**Kruger, Otto** 1885–1974

American actor

My mind is just as open as it ever was, professor. But it's a scientific mind, and there's no place in it for superstitions.

*Dracula's Daughter*

Film (1936)

**Large, E. C.**

No biographical data available

There were two age-old tendencies toward stagnation in scientific thought which those of youthful spirit had always to resist. One was the human weakness of accepting the uncorroborated say-so of eminent authorities, and the other was the human stupidity of regarding natural science as something divisible into watertight compartments.

*The Advance of the Fungi*

Chapter XXIII (p. 317)

Henry Holt & Company. New York, New York, USA. 1940

**Lévi-Strauss, Claude** 1908–

French social anthropologist and structuralist

The scientific mind does not so much provide the right answers as ask the right questions.

Translated by John and Doreen Weightman

*The Raw and the Cooked*

Overture (p. 7)

Harper & Row, Publishers. New York, New York, USA. 1975

**Maxwell, James Clerk** 1831–79

Scottish physicist

...one of the severest tests of a scientific mind is to discern the limits of the legitimate application of the scientific method.

In W.D. Niven (ed.)

*The Scientific Papers of James Clerk Maxwell* (Volume 2)

Paradoxical Philosophy (p. 759)

At The University Press. Cambridge, England. 1890

**Medawar, Sir Peter Brian** 1915–87

Brazilian-born English zoologist

There is no such thing as a Scientific Mind. Scientists are people of very dissimilar temperaments doing different things in very different ways. Among scientists are collectors, classifiers and compulsive tidiers-up; many are detectives by temperament and many are explorers; some are artists and others artisans. There are poet-scientists and philosopher-scientists and even a few mystics. What sort of mind or temperament can all these people be supposed to have in common? Obligative scientists must be very

rare, and most people who are in fact scientists could easily have been something else instead.

*The Art of the Soluble*

Hypothesis and Imagination (p. 132)

Methuen & Company Ltd. London, England. 1967

**Menzel, Donald H.** 1901–76

American astronomer and astrophysicist

**Boyd, Lyle B.**

No biographical data available

The creative scientist, eternally curious, keeps an open mind toward strange phenomena and novel ideas, knowing that we have only begun to understand the universe we live in. He remembers, too, that Biot's discovery that meteorites were "stones from the sky" was at first greeted with disbelief, and he hopes never to be guilty or similar obtuseness. But an open mind does not mean credulity or a suspension of the logical faculties that are man's most valuable asset.

*The World of Flying Saucers: A Scientific Examination of a Major Myth of the Space Age*

Chapter VIII (p. 289)

Doubleday & Company, Inc. Garden City, New York, USA. 1963

**Pagels, Heinz R.** 1939–88

American physicist and science writer

I like to browse in occult bookshops if for no other reason than to refresh my commitment to science.

*The Dreams of Reason: The Computer and the Rise of the Sciences of Complexity*

Chapter 11 (p. 242)

Simon & Schuster. New York, New York, USA. 1988

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

...the scientific attitude is in some degree unnatural to man; the majority of our opinions are wish-fulfillments, like dreams in the Freudian theory.

*The Scientific Outlook*

Chapter I (p. 16)

George Allen & Unwin Ltd. London, England. 1931

**Thomson, J. Arthur** 1861–1933

Scottish biologist

The scientific mood is especially marked by a passion for facts, by cautiousness of statement, by clearness of vision, and by a sense of the inter-relatedness of things.

*Introduction to Science*

Chapter I (p. 34)

Williams & Norgate Ltd. London, England. 1916

**Trotter, Wilfred** 1872–1939

British surgeon and sociologist

The truly scientific mind is altogether unafraid of the new, and while having no mercy for ideas which have served their turn or shown their uselessness, it will not

grudge to any unfamiliar conception its moment of full and friendly attention, hoping to expand rather than to minimize what small core of usefulness it may happen to contain.

Observation and Experiment and Their Use in the Medical Sciences

*British Medical Journal*, Volume 2, 1930

**Valéry, Paul** 1871–1945

French poet and critic

Each mind can regard itself as a laboratory in which processes peculiar to the individual are used for transforming a substance common to all.

The results obtained by certain individuals are a source of wonderment to others. Starting out with ordinary carbon, one man produces a diamond, by means of temperatures and pressures that others never dreamt of. "Why, it's only carbon!" they say, after analyzing it. But they don't know how to do what he did.

In Jackson Mathews (ed.)

*The Collected Works of Paul Valéry* (Volume 14)

Analects (p. 482)

Princeton University Press. Princeton, New Jersey, USA. 1971

**Weidlein, Edward Ray**

Chemical engineer

A true scientist never grows old in his way of thinking. His mind is constantly working to improve his surroundings and to better understand the laws of nature. He expects to live in a changing world.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1938*

A World of Change (p. 199)

Government Printing Office. Washington, D.C. 1939

**Weil, Simone** 1909–43

French philosopher and mystic

A scientific conception of the world doesn't prevent one from observing what is socially fitting.

Translated by Arthur Wills

*The Need for Roots: Prelude to a Declaration of Duties Toward Mankind*

Part Three (p. 248)

The Beacon Press. Boston, Massachusetts, USA. 1952

**Weisskopf, Victor Frederick** 1908–2002

Austrian-American physicist

Some people maintain that scientific insight has eliminated the need for meaning. I do not agree. The scientific worldview established the notion that there is a sense and purpose in the development of the universe when it recognized the evolution from the primal explosion to matter, life, and humanity. In humans, nature begins to recognize itself.

*The Joy of Insight: Passions of a Physicist*

Chapter Fourteen (pp. 317–318)

Basic Books, Inc. New York, New York, USA. 1991

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

The aim of scientific thought are to see the general in the particular and the eternal in the transitory.

*OMNI Magazine*

Volume 2, Number 41, November 1979

A man who only knows his own science, as a routine peculiar to that science, does not even know that. He has no fertility of thought, no power of quick seizing the bearing of alien ideas. He will discover nothing, and be stupid in practical applications.

*The Organisation of Thought*

Chapter II (p. 46)

Greenwood Press Publishers. Westport, Connecticut, USA. 1974

**SCIENTIFIC PROGRESS****Bush, Vannevar** 1890–1974

American electrical engineer and physicist

Scientific progress on a broad front results from free play of free intellects, working on subjects of their own choice, in the manner dictated by their curiosity for the exploration of the unknown.

*Science: The Endless Frontier*

Chapter I (p. 2)

United States Government Printing Office. Washington, D.C. 1945

**Compton, Karl Taylor** 1887–1954

American educator and physicist

The whole history of scientific progress illustrates the importance of free communication of ideas, of co-operative work at all levels, of adequate support and facilities, and above all, of high grade research workers and top-notch leadership.

*A Scientist Speaks: Excerpts from Addresses by Karl Taylor Compton During the Years 1930–1949* (p. 11)

Undergraduate Association, MIT. Cambridge, Massachusetts, USA. 1955

The geographical pioneer is now supplanted by the scientific pioneer... Without the scientific pioneer our civilization would stand still and our spirit would stagnate; with him mankind will continue to work toward his higher density. This being so, our problem is to make science as effective an element as possible in our American program for social progress.

*A Scientist Speaks: Excerpts from Addresses by Karl Taylor Compton During the Years 1930–1949* (p. 2)

Undergraduate Association, MIT. Cambridge, Massachusetts, USA. 1955

**Crick, Francis Harry Compton** 1916–2004

English biochemist

It can be confidently stated that our present knowledge of the brain is so primitive — approximately at the stage of

the four humours in medicine or of bleeding in therapy (what is psychoanalysis but mental bleeding?) — that when we do have fuller knowledge our whole picture of ourselves is bound to change radically. Much that is now culturally acceptable will then seem to be nonsense. People with training in the arts still feel that in spite of the alterations made in their life by technology — by the internal combustion engine, by penicillin, by the Bomb — modern science has little to do with what concerns them most deeply. As far as today's science is concerned this is partly true, but tomorrow's science is going to knock their culture right out from under them.

*Of Molecules and Men*

The Prospect Before Us (p. 94)

University of Washington Press. Seattle, Washington, USA. 1966

**Gould, Stephen Jay** 1941–2002

American paleontologist and evolutionary biologist

The most important scientific revolutions all include, as their only common feature, the dethronement of human arrogance from one pedestal after another of previous convictions about our centrality in the cosmos.

*Dinosaur in a Haystack: Reflections in Natural History*

Part Three, Chapter 13 (p. 164)

Random House, Inc. New York, New York, USA. 1995

**Gregory, Sir Richard Arman** 1864–1952

British science writer and journalist

The discovery of a law of Nature is always of great advantage to scientific progress. By the warp and woof of experiment, the man of science weaves a pattern from the threads of evidence, and presents the result to the world for anyone to improve.

*Discovery: Or the Spirit and Service of Science*

Chapter VII (p. 183)

Macmillan &amp; Company Ltd. London, England. 1918

**Jacob, François** 1920–

French biologist

Contrary to what I once thought, scientific progress did not consist simply in observing, in accurately formulating experimental facts and drawing up a theory from them. It began with the invention of a possible world, or a fragment thereof, which was then compared by experimentation with the real world. And it was this constant dialogue between imagination and experiment that allowed one to form an increasingly fine-grained conception of what is called reality.

In William Calvin

*The Cerebral Symphony: Seashore Reflections on the Structure of Consciousness*

Chapter 10 (p. 206)

Bantam Books. New York, New York, USA. 1989

**Mather, Kirtley F.** 1888–1978

American geologist

The more we know about the world, the more mysterious and marvelous it becomes. The arrogance which characterized so many scientists of preceding generations has given place to a true humility, admirably displayed by most of the leaders in contemporary scientific progress.

In Edward H. Cotton

*Has Science Discovered God?*

Sermons from Stones (p. 3)

Thomas Y. Crowell Company, Publishers. New York, New York, USA. 1931

**Trimble, George S.** d. 1863

Duffield & Company. New York, New York, USA. 1921

## SCIENTIFIC PUBLISHING

**Agnew, Neil McK.**

No biographical data available

**Pyke, Sandra W.**

No biographical data available

...perhaps the most deceptive myth of all is that the Ph.D. represents the last hurdle in some kind of knowledge race. A student who has just cleared the jump should enjoy this illusion while it lasts. The science game now shifts to a new ground with new rules. Your rating first depends on getting some articles out; then, once you've demonstrated that you can publish, your rating depends on whether you are publishing in respectable journals; then your rating depends on whether you have a good book out; and then...

*The Science Game*

Chapter 12 (p. 146)

Prentice-Hall, Inc. Englewood Cliffs, New Jersey, USA. 1969

**Arber, Agnes Robertson** 1879–1960

English botanist

A record of research should not resemble a casual pile of quarried stone; it should seem "not built, but born", as Vasari said in praise of a building.

*The Mind and the Eye: A Study of the Biologist's Standpoint*

Chapter V (p. 50)

At The University Press. Cambridge, England, USA. 1954

## Author undetermined

As this paper contains nothing which deserves the name either of experiment or discovery, and as it is, in fact, destitute of every species of merit, we should have allowed it to pass among the multitude of those articles which must always find their way into the collections of a society which is pledged to publish two or three volumes every year... We wish to raise our feeble voice against innovations, that can have no other effect than to check the progress of science, and renew all those wild phantoms of the imagination which Bacon and Newton put to flight from her temple.

Review of Dr. Young's Bakerian Lecture

*Edinburgh Review*, January 1803 (p. 450)

**Batchelor, G. K.** 1920–2000

English applied mathematics professor and fluid mechanics engineer

Reading a paper is a voluntary and demanding task, and a reader needs to be enticed and helped and stimulated by the author.

Preoccupations of a Journal Editor

*Journal of Fluid Mechanics*, Volume 106, 1981 (p. 8)

**Buckle, Henry Thomas** 1821–62  
English historian

The publications of our scientific authors overflow with minute and countless details, which perplex the judgment, and which no memory can retain. In vain do we demand that they should be generalized, and reduced into order. Instead of that, the heap continues to swell. We want ideas, and get more facts. We hear constantly what nature is doing, but we rarely hear what man is thinking.

*History of Civilization in England* (Volume 2)

Chapter VI (p. 396)

D. Appleton & Company, New York, New York, USA. 1891

**Casimir, Hendrik B. G.** 1909–2000  
Dutch physicist

I should like to find a way of discouraging unnecessary publications, but I have not found a solution, save the radical one...that all scientific papers be published anonymously.

In Praise of Smallness — How Can We Return to Small Science

*Perspectives in Biology and Medicine*, Volume 23, Number 3, Spring

1980 (p. 383)

**Chargaff, Erwin** 1905–2002  
Austrian biochemist

Scientific journals must remain the preserve of articles capable of affecting the consensus of the scientific public. Books are the place for opinions, speculations, and fanciful accounts of ricocheting planets. The publisher has only to convince enough buyers to cover their cost of publication. In a free society with a vigorous press, there is little danger that an important idea will not get a fair hearing.

*Uncommon Sense: The Heretical Nature of Science*

Chapter 8 (pp. 149–150)

Oxford University Press, Inc. New York, New York, USA. 1993

**Comroe, Jr., Julius H.** 1911–84  
American physician

Almost every scientist working today can get his work published, somewhere, once he decides to “write it up”; maybe it will be in the Bulletin of the Podunk Medical Society rather than in a journal with international prestige or readership, or maybe it will be published only as an abstract. The main determinant of what is or is not published therefore seems to be the scientist, for it is he who decides to become or not to become an author.

Publish and/or Perish

*American Review of Respiratory Disease*, Volume 113, 1976

**Dubos, René Jules** 1901–82  
French-born American microbiologist and environmentalist

...a scientific paper should never try to make more than one point.

In B.D. Davis

Two Perspectives

*Perspectives in Biology and Medicine*, Volume 35, Number 1, Autumn

1991 (p. 38)

**Dyson, Freeman J.** 1923–  
American physicist and educator

Most of the papers which are submitted to the Physical Review are rejected, not because it is impossible to understand them, but because it is possible. Those which are impossible to understand are usually published.

Innovation in Physics

*Scientific American*, Volume 199, Number 3, September 1958

**Elder, Joseph**  
No biographical data available

Publication is the end-product of research. Research without publication is sterile.

Jargon—Good and Bad

*Science* Volume 119, Number 3095, 23 April 1954 (p. 536)

**Gastel, Barbara**  
American medical science writing educator

Every master’s thesis or doctoral dissertation should be accompanied by a lay summary or press release written by the graduate student (with the guidance, if possible, of a science writing instructor or public information officer at the student’s institution).

*Earth and Life Science Editing*, Volume 24, 1985 (p.3)

**Gelernter, David** 1955–  
Computer scientist

Scientists nowadays rarely know how to read seriously. They are accustomed to strip-mining a paper to get the facts out and then moving on, not to mollycoddling the thing in search of nuances; there probably aren’t any.

In John Brokman and Katinka Matson (eds.)

*How Things Are: A Tool Kit For the Mind*

Study Talmud (p. 213)

William Morrow & Company, Inc. New York, New York, USA. 1995

**Glaisher, James Whitbread Lee** 1848–1928  
English mathematician

In other branches of science, where quick publication seems to be so much desired, there may possibly be some excuse for giving to the world slovenly or ill-digested work, but there is no excuse in mathematics. The form ought to be as perfect as the substance, and the demonstrations as rigorous as those of Euclid. The mathematician has to deal with the most exact facts of Nature, and he should spare no effort to render his interpretation worthy of his subject, and to give to his work its highest degree of perfection.

Presidential Address, British Association for the Advancement of Science, *Nature*, Section A (1890), Volume 42 (p. 467)

**Gould, Stephen Jay** 1941–2002

American paleontologist, evolutionary biologist, and historian of science

I do not know when the technical and popular prose of science became separated, although I accept the inevitability of such a division as knowledge became increasingly more precise, detailed, and specialized. We have now reached the point where most technical literature not only falls outside the possibility of public comprehension but also (as we would all admit in honest moments) outside our own competence in scientific disciplines far removed from our personal expertise. I trust that we all regard this situation as saddening, even though we accept its necessity.

Take Another Look

*Science*, Volume 286, Number 5441, October 29, 1999 (p. 899)

**Hagstrom, Warren O.**

No biographical data available

Manuscripts submitted to scientific periodicals are often called “contributions,” and they are, in fact, gifts. Authors do not usually receive royalties or other payments, and their institutions may even be required to aid in the financial support of the periodical. On the other hand, manuscripts for which the scientific authors do receive financial payments, such as textbooks and popularizations, are, if not despised, certainly held in much lower esteem than articles containing original research results.

*The Scientific Community*

Basic Books, Inc. New York, New York, USA. 1965

**Haldane, John Burdon Sanderson** 1892–1964

English biologist

Four stages of acceptance: i) this is worthless nonsense; ii) this is an interesting, but perverse, point of view; iii) this is true, but quite unimportant; iv) I always said so.

*Journal of Genetics*, Volume 58 (p. 464)

**Hudson, Jeffrey**

No biographical data available

There’s this desert prison... with an old prisoner, resigned to his life, and a young one just arrived. The younger one talks constantly of escape, and, after a few months, he makes a break. He’s gone a week, and then he’s brought back by the guard. He’s half dead, crazy with hunger and thirst. He describes how awful it was to the old prisoner. The endless stretches of sand, no oasis, no sign of life anywhere. The old prisoner listens for awhile, then says. “Yep. I know. I tried to escape myself, twenty years ago.” The younger prisoner says “You did? Why didn’t you tell me, all these months I was planning my escape? Why didn’t you let me know it was impossible?” And the old prisoner shrugs, and says, “So who publishes negative results?”

*A Case of Need*

Tuesday, 11 October

Nine (p. 121)

The World Publishing Company. New York, New York, USA. 1968

**Huth, Edward Janavel** 1923–

American physician

Why should the investigators confine themselves to one paper when they can slice up data and interpretations into two, three, five, or more papers that will better serve their needs when they face promotion or tenure committees? “Salami science” does not always equal baloney, but such divided publication is often an abuse of scientific publication.

Irresponsible Authorship and Wasteful Publication

*Annals of Internal Medicine*, Volume 104, 1986

**Ingle, Dwight J.** 1907–78

Biologist and endocrinologist

Science cannot be equated to measurement, although many contemporary scientists behave as though it can. For example, the editorial policies of many scientific journals support the publication of data and exclude the communication of ideas.

*Principles of Research in Biology and Medicine*

Chapter 1 (p. 3)

Lippincott. Philadelphia, Pennsylvania, USA. 1958

**Kennedy, Donald**

No biographical data available

All the thinking, all the textual analysis, all the experiments and the data-gathering aren’t anything until we write them up. In the world of scholarship we are what we write.

*Academic Duty* (p. 186)

Harvard University Press. Cambridge, Massachusetts, USA. 1997

**Maslow, A. H.** 1908–70

American psychologist

I do not recall seeing in the literature with which I am familiar any paper that criticized another paper for being unimportant, trivial or inconsequential.

*Motivation and Personality*

Chapter 2 (p. 14)

Harper & Row, Publishers. New York, New York. 1970

**Mayo, William J.** 1861–1939

American physician

Reading papers is not for the purpose of showing how much we know and what we are doing, but is an opportunity to learn.

The Value of the Weekly General Staff Meeting

*Proceedings of Staff Meetings, Mayo Clinic*, Volume 10, January 30, 1935

**Medawar, Sir Peter Brian** 1915–87

Brazilian-born English zoologist

...it is no use looking to scientific “papers,” for they not merely conceal but actively misrepresent the reasoning that goes into the work they describe.... Nor is it any use listening to accounts of what scientists say they do, for their opinions vary widely enough to accommodate almost any methodological hypothesis we may care to devise. Only unstudied evidence will do — and that means listening at a keyhole.

*The Art of the Soluble*

Hypothesis and Imagination (p. 151)

Methuen & Company Ltd. London, England. 1967

**Nelkin, Dorothy** 1933–2003

American sociologist

...too often science in the press is more a subject for consumption than for public scrutiny, more a source of entertainment than of information. Too often science is presented as an arcane activity outside and above the sphere of normal human understanding, and therefore beyond our control. Too often the coverage is promotional and uncritical, encouraging apathy, a sense of impotence, and the ubiquitous tendency to defer to expertise.

*Selling Science: How the Press Covers Science and Technology*  
Chapter 10 (p. 173)

W.H. Freeman & Company. New York, New York, USA. 1995

**Price, Derek John de Solla** 1922–83

English science historian and information scientist

...scientists have a strong urge to write papers but only a relatively mild one to read them.

*Little Science, Big Science*

Chapter 3 (pp. 69–70)

Columbia University Press. New York, New York, USA. 1963

**Rowland, Henry Augustus** 1848–1901

American physicist

A hermit philosopher we can imagine might make many useful discoveries. Yet, if he keeps them to himself, he can never claim to have benefited the world in any degree. His unpublished results are his private gain, but the world is not better off until he has made them known in language strong enough to call attention to them and to convince the world of their truth.

*The Physical Papers of Henry Augustus Rowland*

The Highest Aim of the Physicist (p. 669)

Johns Hopkins Press. Baltimore, Maryland, USA. 1902

**Schrödinger, Erwin** 1887–1961

Australian theoretical physicist

...a typical scientific paper has never pretended to be more than another little piece in a larger jigsaw — not significant in itself but as an element in a grander scheme. This technique, of soliciting many modest contributions to the vast store of human knowledge, has been the secret of Western science since the seventeenth century, for it

achieves a corporate, collective power that is far greater than any one individual can exert.

Information, Communication, Knowledge  
*Nature*, Volume 224, Number 5217, October 25, 1969 (p. 324)

Primary scientific papers are not meant to be final statement of indisputable truths; each is merely a tiny tentative step forward, through the jungle of ignorance.

Information, Communication, Knowledge  
*Nature*, Volume 224, Number 5217, October 25, 1969 (p. 324)

**Shrady, George**

No biographical data available

The time is already past when any man can hope to rise to be an authority in any department of medical science through any royal road of social influence, political manipulations, or even personal charms. Those who are to be the leaders and guides of medical science for the coming generation must earn their position by persistent, original investigation, and by faithfully recording their experience in the permanent literature of the day.

Medical Authorship  
*Medical Record*, Volume 2, 1867

**Simpson, Michael A.**

No biographical data available

We still consistently overvalue poor research and semi-literate publication; again, partly, because quantity, in number of publications, is easier to measure than quality.

A Mythology of Medical Education  
*Lancet*, Volume 3, 1974

**Wilson, Logan**

No biographical data available

Results unpublished are little better than those never achieved.... One must write something and get it into print. Situational imperatives dictate a “publish or perish” credo within the ranks.

*The Academic Man: A Study in the Sociology of a Profession* (p. 197)  
Oxford University Press, Inc. London, England. 1942

**Woolley, Sir Charles Leonard** 1880–1960

English archaeologist

The prime duty of the field archaeologist is to collect and set in order material with not all of which he can himself deal at first hand. In no case will the last word be with him; and just because that is so his publication of the material must be minutely detailed, so that from it others may draw not only corroboration of his views but fresh conclusions and more light.

*Digging Up the Past*  
Chapter V (pp. 133–134)  
Charles Scribner’s Sons. New York, New York, USA. 1931

**Ziman, John M.** 1925–2005

British physicist

The moment of truth for many young scientists comes when they first act as a referee for a scientific paper; having striven for years to get their own work published against the criticism of anonymous referees, they find themselves, by psychological role-reversal, on the other side of the fence. Thus do we eventually internalize the “scientific attitude.”

*Reliable Knowledge*

Chapter 6 (fn 13, p. 132)

Cambridge University Press. Cambridge, England. 1978

## SCIENTIFIC SPIRIT

**Bernard, Claude** 1813–78

French physiologist

In my opinion the true scientific spirit is that whose high aspiration fertilize the sciences and draw them on in search of truths which are still beyond them but which must not be suppressed, because they have been attacked by stronger and more delicate philosophic minds.

Translated by Henry Copley Greene

*An Introduction to the Study of Experimental Medicine*

Part Three, Chapter III, Section iv (p. 223)

Henry Schuman, Inc. New York, New York, USA. 1927

**Clifford, William Kingdon** 1845–79

English philosopher and mathematician

There is no scientific discoverer, no poet, no painter, no musician, who will not tell you that he found ready made his discovery or poem or picture — that it came to him from outside, and that he did not consciously create it from within.

In Leslie Stephen and Frederick Pollock (eds.)

*Lectures and Essays* (Volume 1)

Some of the Conditions of Mental Development (p. 99)

Macmillan & Company Ltd. London, England. 1879

The subject of science is the human universe; that is to say, everything that is, or has been, or may be related to man.

In Leslie Stephen and Frederick Pollock (eds.)

*Lectures and Essays* (Volume 1)

On the Aims and Instruments of Scientific Thought (p. 126)

Macmillan & Company Ltd. London, England. 1879

**Compton, Arthur H.** 1892–1962

American physicist

The spirit of science knows no national or religious boundaries, and it is thus a powerful force for the peace of the world.

*Les Prix Nobel. The Nobel Prizes in 1927*

Nobel banquet speech for award received in 1927

Nobel Foundation. Stockholm, Sweden. 1928

**Franklin, Benjamin** 1706–90

American printer, scientist, and diplomat

Furnished as all Europe now is with Academies of Science, with nice instruments and the spirit of experiment, the progress of human knowledge will be rapid and discoveries made of which we have at present no conception. I begin to be almost sorry I was born so soon, since I cannot have the happiness of knowing what will be known a hundred years hence.

*The Writings of Benjamin Franklin*

Letter, July 27, 1783, to naturalist Sir Joseph Banks (p. 74)

Macmillan & Company Ltd. London, England. 1906

**Garrod, Archibald** 1857–1936

English physician

...scientific method is not the same as the scientific spirit. The scientific spirit does not rest content with applying that which is already known, but is a restless spirit, ever pressing forward towards the regions of the unknown....

*Archibald Garrod and the Individuality of Man*

Chapter 7 (p. 82)

Clarendon Press. Oxford, England. 1993

**Hocking, W. E.** 1873–1966

American philosopher

We are scientific people and we want our students to feel the enthusiasm and promise of the scientific method. We want them to feel the moral quality of exact technique, as exact as the subject matter permits. We want them to feel that science is a spiritual experience.

In Lloyd William Taylor

*Physics: The Pioneer Science* (Volume 1)

Chapter 6 (p. 63)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1941

**Huxley, Thomas Henry** 1825–95

English biologist

...the scientific spirit is of more value than its products, and irrationally held truths may be more harmful than reasoned errors. Now the essence of the scientific spirit is criticism. It tells us that whenever a doctrine claims our assent we should reply, “Take it if you can compel it.” The struggle for existence holds as much in the intellectual as in the physical world. A theory is a species of thinking, and its right to exist is coextensive with its power of resisting extinction by its rivals.

*Collected Essays* (Volume 2)

*Darwiniana*

The Coming of Age of “The Origin of Species” (p. 229)

Macmillan & Company Ltd. London, England. 1904

**Millikan, Robert Andrews** 1868–1953

American physicist

The God of science is the Spirit of rational order, and of orderly development. Atheism as I understand it is the denial of the existence of the spirit. Nothing could therefore be more antagonistic to the whole spirit of science.

*Evolution in Science and Religion*

Chapter III (p. 88)  
Yale University Press. New Haven, Connecticut, USA. 1927

**Peirce, Charles Sanders** 1839–1914  
American scientist, logician, and philosopher

...the scientific spirit requires a man to be at all times ready to dump his whole cartload of beliefs, the moment experience is against them.

In Justus Buchler (ed.)  
*Philosophical Writings of Peirce*  
Chapter 4 (pp. 46–47)  
Dover Publications, Inc. New York, New York, USA. 1955

**Rabi, Isidor Isaac** 1898–1988  
Austrian-born American physicist

The essence of the scientific spirit is to use the past only as a springboard to the future.

In A.A. Warner, Dean Morse, and T.E. Cooney (eds.)  
*The Environment of Change*  
The Revolution in Science (p. 47)  
Columbia University Press. New York, New York, USA. 1969

**Weisskopf, Victor Frederick** 1908–2002  
Austrian-American physicist

Science, of course, is not the only way of giving sense to our lives. Art does it; so does religion. But when this sense is missing, that's when spiritual pollution is present, when people don't know why they are here. We can have leisure time diversions, of course. But until we learn to fill the vacuum in our minds with content — with meaning, with sense — we will never find solutions to our problems.

*The Privilege of Being a Physicist*  
Chapter 13 (p. 107)  
W.H. Freeman & Company. New York, New York, USA. 1989

## SCIENTIFIC TRENDS

**Cooper, Leon** 1930–  
American physicist

I like to say sometimes that scientific fashion is like fashion in men's and women's clothes.... One year the ties are wide; the next year they're narrow. One year the skirts are high; the next year they're low. And if everyone is wearing a short skirt, you're just hopelessly out of fashion if you're wearing a long skirt. That's the way it sometimes seems with science. You want to be in the middle of what everyone is talking about; you want to be in the mainstream. And the next year it might be something completely different.

In George Johnson  
*In the Palaces of Memory: How We Build the Worlds Inside Our Heads*  
A Model of Memory (p. 149)  
Alfred A. Knopf. New York, New York, USA. 1991

## SCIENTIFIC TRUTH

**Agassiz, Jean Louis Rodolphe** 1807–73  
Swiss-born American naturalist, geologist, and teacher

...the time has come when scientific truth must cease to be the property of the few, when it must be woven into the common life of the world; for we have reached the point where the results of science touch the very problem of existence, and all men listen for the solving of that mystery.

*Methods of Study in Natural History*  
Chapter IV (p. 42)  
Ticknor & Fields. Boston, Massachusetts, USA. 1863

**Black, Max** 1909–88  
Anglo-American philosopher

Scientists can never hope to be in a position to know the truth, nor would they have any means of recognizing it if it came into their possession.

*Critical Thinking: An Introduction to Logic and Scientific Method*  
Chapter 19 (p. 396)  
Prentice-Hall. New York, New York, USA. 1952

**Broad, William** 1951–  
Science writer

**Wade, Nicholas**  
British-born scientific writer

Like any other profession, science is ridden with clanishness and clubbiness. This would be in no way surprising, except that scientists deny it to be the case. The pursuit of scientific truth is held to be a universal quest that recognizes neither national boundaries nor the barriers of race, creed or class. In fact, researchers tend to organize themselves into clusters of overlapping clubs.

*Betrayers of the Truth*  
Chapter 9 (p. 180)  
Simon & Schuster. New York, New York, USA. 1982

**Chargaff, Erwin** 1905–2002  
Austrian biochemist

The initial incommunicability of truth, scientific or otherwise, shows that we think in groves, and that it is painful for us to be torn away from the womblike security of accepted concepts.

*Heraclitean Fire: Sketches from a Life Before Nature*  
Part II  
The Exquisiteness of Minute Differences (p. 86)  
Rockefeller University Press. New York, New York, USA. 1978

**Crichton, Michael** 1942–  
American novelist

Scientists have an elaborate line of bullshit about how they are seeking to know the truth about nature.

*Jurassic Park*  
Aviary (p. 284)  
Alfred A. Knopf. New York, New York, USA. 1990

**Dunne, Finley Peter** 1867–1936

American journalist and humorist

There's always wan encouragin' thing about th' sad scientific facts that come out ivry week in th' pa-papers. They're usually not thrue.

*Mr. Dooley on Making a Will and Other Necessary Evils*

On the Descent of Man (p. 90)

Charles Scribner's Sons. New York, New York, USA. 1919

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

Amid all our faulty attempts at expression the kernal of scientific truth steadily grows; and of this truth it may be said — The more it changes, the more it remains the same.

*The Nature of the Physical World*

Conclusion (p. 353)

The Macmillan Company. New York, New York, USA. 1930

**Einstein, Albert** 1879–1955

German-born physicist

It is difficult even to attach a precise meaning to the term “scientific truth.” Thus the meaning of the word “truth” varies according to whether we deal with a fact of experience, a mathematical proposition, or a scientific theory. “Religious truth” conveys nothing clear to me at all.

*Ideas and Opinions*

On Scientific Truth (p. 261)

Crown Publishers, Inc. New York, New York, USA. 1954

**Feynman, Richard P.** 1918–88

American theoretical physicist

No government has the right to decide on the truth of scientific principles, nor to prescribe in any way the character of the questions investigated.

*The Meaning of It All: Thoughts of a Citizen Scientist*

Chapter II (p. 57)

Perseus Books. Reading, Massachusetts, USA. 1998

**Geikie, Sir Archibald** 1835–1924

English geologist

In scientific as in other mundane questions there may often be two sides, and the truth may ultimately be found not to lie wholly with either.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1892*

Geological Change and Time (p. 125)

Government Printing Office. Washington, D.C. 1893

**Gesenius, Wilhelm** 1786–1842

German orientalist and biblical critic

Unwearing personal observation and an impartial examination of the researches of others; the grateful admission and adoption of every real advance and illustration of science; but also a manly foresight and caution, which does not with eager levity adopt every novelty thrown out in

haste and from the love of innovation, all these must go hand in hand, wherever scientific truth is to be successfully promoted.

*Hebrew Grammar*

Preface (p. 7)

Gould, Kendall & Lincoln. Boston, Massachusetts, USA. 1834

**Gregory, Sir Richard Arman** 1864–1952

British science writer and journalist

It is necessary to believe in the holiness of scientific work in order to preserve to the end; for without the encouragement which such belief gives, many investigators would fall by the wayside.

*Discovery; or, The Spirit and Service of Science*

Chapter I (p. 12–13)

Macmillan & Company Ltd. London, England. 1918

Scientific truth is not won by prayer and fasting, but by patient observation and persistent inquiry.

*Discovery; or, The Spirit and Service of Science*

Chapter I (p. 12)

Macmillan & Company Ltd. London, England. 1918

**Hawkins, Michael** 1942–

British astrophysicist

“Scientific truths” is simply another way of saying “the fittest, most beautiful, and most elegant survivors of scientific debate and testing.”

*Hunting Down the Universe: The Missing Mass, Primordial Black Holes, and Other Dark Matters*

Chapter 1 (p. 6)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA.

1997

**Hoagland, Hudson** 1899–1982

American physiologist

In a scientific oriented society the quest for truth is the important thing, even though we know that ultimate, final truth with a capital T is not to be found.

Science and the New Humanism

*Science*, Volume 143, Number 3062, 10 January 1964 (p. 112)

**Inscription**

The works of those who have stood the test of ages have a claim to that respect and veneration to which no modern can pretend.

On the dome of the National Gallery

**Jeffers, Robinson** 1887–1962

American poet

...they work alongside the truth

Never touching it; their equations are false

But the things work.

In Tim Hunt (ed.)

*The Collected Poetry of Robinson Jeffers* (Volume 3)

The Mathematicians and Physics Men (p. 459) Stanford University Press. Stanford, California, USA. 1988

**Lee, Oliver Justin** 1881–1964  
American astronomer

The truth to a scientist is not the vague metaphysical concept about which philosophers talk and write so much and know so little. To him truth is that body of statements and conclusions about any set of features and phenomena in nature which represent most accurately all the best observations he can make and which conform most closely to all findings in adjacent or related phases and fields of investigations. He may and does often wonder what the so-called ultimate truth may be, but he does not worry about it. He knows that a priori pure thinking will never reveal it so far as knowledge of the physical universe is concerned, and that observation and deduction alone in the manner of science will ever do it.

*Measuring Our Universe: From the Inner Atom to Outer Space*  
Chapter 14 (pp. 149–150)  
The Ronald Press Company. New York, New York, USA. 1950

**Maxwell, James Clerk** 1831–79  
Scottish physicist

For the sake of these different types, scientific truth should be presented in different forms, and should be regarded as equally scientific, whether it appears in the robust form of vivid colouring of a physical illustration, or in the tenuity and paleness of a symbolical expression.

*The Collected Papers of James Clerk Maxwell* (Volume 2)  
Chapter XLI, Address to the Mathematical and Physical Sections of the British Association, September 15, 1870 (p. 220)  
At the University Press. Cambridge, England. No data

**Mendeléeff, Maria** ca. 1800–ca. 1850  
Siberian factory manager and mother of Russian chemist Dmitri Mendeléeff

Refrain from illusions, insist on work, and not on words, patiently search divine and scientific truth.

In Benjamin Harrow  
*Eminent Chemists of Our Time*  
Dmitri Ivanowitch Mendeléeff (p. 22)  
D. Van Nostrand Company, Inc. New York, New York, USA. 1927

**Poincaré, Henri** 1854–1912  
French mathematician and theoretical astronomer

For a superficial observer, scientific truth is beyond the possibility of doubt; the logic of science is infallible, and if the scientists are sometimes mistaken, this is only from their mistaking its rules.

*The Foundations of Science*  
Science and Hypothesis, Introduction (p. 27)  
The Science Press. New York, New York, USA. 1913

**Raymo, Chet** 1936–  
American physicist and science writer

Science is not a smorgasbord of truths from which we can pick and choose.

*The Virgin and the Mousetrap: Essays in Search of the Soul of Science*

Chapter 16 (p. 144)  
The Viking Press. New York, New York, USA. 1991

Scientific truths are tentative and partial, and subject to continual revision and refinement, but as we tinker with truth in science — amending here, augmenting there — we always keep our ear attuned to the timbre of the web.

*The Virgin and the Mousetrap: Essays in Search of the Soul of Science*  
Chapter 16 (p. 145)  
The Viking Press. New York, New York, USA. 1991

**Renan, Ernest** 1823–92  
French philosopher and Orientalist

Orthodox people have as a rule very little scientific honesty. They do not investigate, they try to prove, and this must necessarily be so. The result has been given to them beforehand; this result is true, undoubtedly true. Science has no business with it, science which starts from doubt without knowing whither it is going, and gives itself up bound hand and foot to criticism which leads it where-soever it lists.

*The Future of Science*  
Chapter III (p. 33)  
Roberts Brothers. Boston, Massachusetts, USA. 1893

**Serge, Corrado**  
No biographical data available

Many times a scientific truth is placed as it were on a lofty peak, and to reach it we have at our disposal at first only dark paths along perilous slopes whence it is easy to fall into the abysses where dwells error; only after we have reached the peak by these paths is it possible to lay out safe roads which lead there without peril. Thus it has frequently happened that the first way of obtaining a result has not been quite satisfactory, and that only afterwards did the science succeed in completing the demonstration.

On Some Tendencies in Geometric Investigations  
*Bulletin of the American Mathematical Society*, 2<sup>nd</sup> Series, Volume 10,  
June 1904 (pp. 453–454)

**Shaw, George Bernard** 1856–1950  
Irish comic dramatist and literary critic

In the Middle Ages people believed that the earth was flat, for which they at least had the evidence of their senses: we believe it to be round, not because as many as one percent of us could give the physical reasons for so quaint a belief, but because modern science has convinced us that nothing that is obvious is true, and that everything that is magical, improbable, extraordinary, gigantic, microscopic, heartless, or outrageous is scientific.

*Man and the Gods: Three Tragedies*  
Saint Joan, Preface, The Real Joan Is Not Marvellous for Us (p. 132)  
Harcourt, Brace & World, Inc. New York, New York, USA. 1964

**Spencer, Herbert** 1820–1903  
English social philosopher

Scientific truths, of whatever order, are reached by eliminating perturbing or conflicting factors, and recognizing only fundamental factors.

*The Data of Ethics*

Chapter XV, Section 104 (p. 311)

William & Norgate. London, England. 1907

**Thomas, Lewis** 1913–93

American physician and biologist

The only solid piece of scientific truth about which I feel totally confident is that we are profoundly ignorant about nature.

*The Medusa and the Snail: More Notes of a Biology Watcher*

The Hazard of Science (p. 73)

The Viking Press. New York, New York, USA. 1979

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

The eye which can appreciate the naked and absolute beauty of a scientific truth is far more rare than that which is attracted by a moral one. Few detect the morality in the former, or the science in the latter.

*The Writings of Henry David Thoreau* (Volume 1)

A Week on the Concord and Merrimack Rivers

Friday (p. 476)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

**Weaver, Warren** 1894–1978

American mathematician

...[one] finds unresolved and apparently unresolvable disagreement among scientists concerning the relationship of scientific thought to reality — and concerning the nature of reality itself...that the explanations of science have utility, but that they do in sober fact not explain. He finds that the old external appearance of inevitability completely vanished, for he discovers a charming capriciousness in all the individual events. He finds that logic, so generally supposed to be infallible and unassailable, is in fact shaky and incomplete. He finds that the whole concept of objective truth is a will-o-the-wisp.

The Imperfections of Science

*American Scientist*, Volume 49, 1961 (pp. 99–113)

**Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

Scientific truth is the remotest of mistresses; She hides in strange places, she is attained by tortuous and laborious roads, but she is always there! Win to her and she will not fail you; she is yours and mankind's forever. She is reality, the one reality I have found in this strange disorder of existence...

*Tono-Bungay*

Book the Third, Chapter the Third, I (p. 324)

Duffield & Company. New York, New York, USA. 1921

## SCIENTIFIC WORK

**Einstein, Albert** 1879–1955

German-born physicist

To be sure, it is not the fruits of scientific research that elevate a man and enrich his nature, but the urge to understand, the intellectual work, creative or receptive.

*Ideas and Opinions*

Good and Evil (p. 12)

Crown Publishers, Inc. New York, New York, USA. 1954

**Fisher, Sir Ronald Aylmer** 1890–1962

English statistician and geneticist

The concept that the scientific worker can regard himself as an inert item in a vast co-operative concern working according to accepted rules is encouraged by directing attention away from his duty to form correct scientific conclusions, to summarize them and to communicate them to his scientific colleagues, and by stressing his supposed duty mechanically to make a succession of automatic “decisions”...

*Statistical Methods and Scientific Inference*

Chapter IV (p. 101)

Hafner Publishing Company. New York, New York, USA. 1959

**Heisenberg, Werner Karl** 1901–76

German physicist and philosopher

Take from your scientific work a serious and incorruptible method of thought, help to spread it, because no understanding is possible without it. Revere those things beyond science which really matter and about which it is so difficult to speak.

*Philosophic Problems of Nuclear Science*

Chapter 8 (p. 128)

Faber & Faber Ltd. London, England. 1952

**Huxley, Thomas Henry** 1825–95

English biologist

The only people, scientific or other, who never make mistakes are those who do nothing.

*Collected Essays* (Volume 5)

*Science and Christian Traditions*

An Episcopal Trilogy (p. 156)

Macmillan & Company Ltd. London, England. 1904

**Lorand, Arnold**

American physician and prolongevity advocate

...we have often observed in persons whose lives have been devoted to serious scientific work, which has entirely absorbed them, a total absence of sexual desire for a long time, and even impotence.

*Old Age Deferred*

Chapter XLIX (p. 399)

F.A. Davis Company, Publishers. Philadelphia, Pennsylvania, USA.

1911

**Payne-Gaposchkin, Cecelia** 1900–79  
British-American astronomer

Do not undertake a scientific career in quest of fame or money. There are easier and better ways to reach them. Undertake it only if nothing else will satisfy you; for nothing else is probably what you will receive. Your reward will be the widening of the horizon as you climb. And if you achieve that reward you will ask no other.

*Cecilia Payne-Gaposchkin: An Autobiography and Other Recollections*  
Chapter 22 (p. 227)  
Cambridge University Press. New York, New York, USA. 1984

**Rosenthal-Schneider, Ilse** 1891–1990  
German physicist and author of history and philosophy of science

The deep satisfaction found in scientific work, akin to the delight derived from genuine art, is one of the fundamental human emotions which is highly intensified by personal contact with the creative mind.

In Paul Arthur Schlipp (ed.)  
*Albert Einstein: Philosopher-Scientist*  
Presuppositions and Anticipations in Einstein's Physics (p. 145)  
The Library of Living Philosophers, Inc. Evanston, Illinois, USA. 1949

**Snow, Charles Percy** 1905–80  
English novelist and scientist

Scientific work...has a value of its own, whether you're liking it or not. It's — there. It's permanent. It's work which is always going to last. It's a real creation.

*The Search*  
Part IV, Chapter II, Section II (p. 326)  
The Bobbs-Merrill Company. Indianapolis, Indiana, USA. 1935

**Weber, Max** 1864–1920  
German founder of modern sociology and economic thinker

In science, each of us knows that what he has accomplished will be antiquated in ten, twenty, fifty years. That is the fate to which science is subjected; it is the very meaning of scientific work, to which it is devoted in a quite specific sense, as compared with other spheres of culture.... Every scientific "fulfillment" raises new "questions"; it asks to be surpassed and outdated. Whoever wishes to serve science has to resign himself to this fact.... We cannot work without hoping that others will advance further than we have.

In H.H. Gerth and C. Wright Mills (eds.)  
*From Max Weber: Essays in Sociology*  
Science as a Vocation (p. 138)  
Oxford University Press, Inc. New York, New York, USA. 1970

## SCIENTIST

**Adams, Douglas** 1952–2001  
English author, comic radio dramatist, and musician

You can't possibly be a scientist if you mind people thinking that you're a fool.

*The Ultimate Hitchhiker's Guide to the Galaxy*  
So Long And Thanks For All The Fish  
Chapter 31 (p. 587)  
The Ballantine Book Company. New York, New York, USA. 2002

**Agnew, Ralph Palmer**  
American mathematician

Scientists, like professional golfers and piano players, should sometimes concentrate upon a task until they can perform it with professional skill.

*Differential Equations*  
Chapter 1, Problem 1.49 (p. 16)  
McGraw-Hill Book Company, Inc. New York, New York, USA. 1972

**Appleton, Sir Edward** 1892–1965  
English physicist

It seems to me that we must recognize that the proper use of science is one of the most important challenges of the present day. And here I think the scientist has a twofold mission, not only of extending the frontiers of knowledge but also of interpreting his results to his fellow-men.

*Les Prix Nobel. The Nobel Prizes in 1947*  
Nobel banquet speech for award received in 1947  
Nobel Foundation. Stockholm, Sweden. 1948

**Appleyard, Bryan** 1951–  
Author and journalist

Scientists inevitably take on the mantle of the wizards, sorcerers and witch doctors. Their miracle cures are our spells, their experiments our rituals.

*Understanding the Present: Science and the Soul of Modern Man*  
Chapter 1 (p. 9)  
Doubleday. New York, New York, USA. 1992

**Artuad, Antonin** 1896–1948  
French poet, actor, and director

But how is one to make a scientist understand that there is something unalterably deranged about differential calculus, quantum theory, or the obscene and so inately liturgical ordeals of the precession of the equinoxes — ....

In Susan Sontag  
*Selected Writings*  
Part 33, Van Gogh, the Man Suicided by Society (p. 497)

**Auden, W. H.** 1907–72  
English-born poet

The true men of action in our time, those who transform the world, are not the politicians and statesmen, but the scientists.

*The Dyer's Hand*  
Part II, The Poet and The City (p. 81)  
Random House. New York, New York, USA. 1962

When I find myself in the company of scientists, I feel like a shabby curate who has strayed by mistake into a drawing room full of dukes.

*The Dyer's Hand*

Part II, *The Poet and The City* (p. 81)  
Random House. New York, New York, USA. 1962

**Bacon, Sir Francis** 1561–1626  
English lawyer, statesman, and essayist

Those who have treated of the sciences have been either empirics or dogmatical. The former like ants only heap up and use their store, the latter like spiders spin out their own webs. The bee, a mean between both, extracts matter from the flowers of the garden and the field, but works and fashions it by its own efforts. The true labor of philosophy resembles hers, for it neither relies entirely nor principally on the powers of the mind, nor yet lays up in the memory of matter afforded by the experiments of natural history and mechanics in its raw state, but changes and works it in the understanding.

In *Great Books of the Western World* (Volume 30)  
*Novum Organum*  
First Book, Aphorism 95 (p. 126)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Baker, Russell** 1925–  
American writer and journalist

Two leading Congressional scientists, Senator Helms and Representative Hyde, have been doing pioneering research on the nature of life. This has produced the Helms–Hyde theory which states that scientific fact can be established by a majority vote of the United States Congress.

*The Rescue of Miss Yaskel and Other Pipe Dreams*  
Congdon & Weed. New York, New York, USA. 1983

**Barr, Amelia Edith Huddleston** 1831–1919  
Anglo-American novelist

Whatever the scientists may say, if we take the supernatural out of life, we leave only the unnatural.

*All the Days of My Life*  
Chapter 26 (p. 477)  
Arno Press. New York, New York, USA. 1980

**Beveridge, William Ian Beardmore** 1908–  
Australian zoologist

The scientist who has an independent mind and is able to judge the evidence on its merits rather than in light of prevailing conceptions is the one most likely to be able to realize the potentialities in something really new.

*The Art of Scientific Investigation*  
Chapter Three (p. 35)  
W.W. Norton & Company, Inc. New York, New York, USA. 1957

**Bohr, Niels Henrik David** 1886–1962  
Danish physicist

Every sentence I utter must be understood not as an affirmation, but as a question.

*New York Times Book Review*, October 20, 1957

**Born, Max** 1882–1970  
German-born English physicist

It seems to me that the scientists who led the way to the atomic bomb were extremely skillful and ingenious, but not wise men. They delivered the fruits of their discoveries unconditionally into the hands of politicians and soldiers; thus they lost their moral innocence and their intellectual freedom...

*The Restless Universe*  
Postscript (p. 280)  
Dover Publications, Inc. New York, New York, USA. 1951

**Brain, Lord Walter Russell** 1895–1966  
British neurologist

Scientists...meet one another to exchange ideas, to promote their own particular branch of science, or science in general, or because they are aware of its social implications. Nevertheless, such collective activities...play a small part in their lives. Scientists, though they must always be aware of the work of their fellows in their own fields, are essentially individualists; and the body of knowledge to which they are contributing is an impersonal one. Apart from contributing to it, they have no collective consciousness, interest, or aim.

*Science and Antiscience*  
*Science*, Volume 148, Number 3667, April 1965 (p. 193)

**Brewster, Edwin Tenney** 1866–1960  
Educator

For scientific people are after all precisely like the rest of us, and can no more resist — most of them — the urge to speculate where they can not prove than other men can.

*This Puzzling Planet*  
Chapter XIX (p. 301)  
The Bobbs-Merrill Company, Indianapolis, Indiana. 1928

**Bronowski, Jacob** 1908–74  
Polish-born British mathematician and polymath

Dissent is the native activity of the scientist, and it has got him into a good deal of trouble in the last years. But if that is cut off, what is left will not be a scientist. And I doubt whether it will be a man.

*Science and Human Values*  
*The Sense of Human Dignity* (p. 61)  
Harper & Row, Publishers. New York, New York, USA. 1965

The society of scientists must be a democracy. It can keep alive and grow only by a constant tension between dissent and respect; between independence from the view of others, and tolerance from them.

*Science and Human Values*  
*The Sense of Human Dignity* (pp. 62–63)  
Harper & Row, Publishers. New York, New York, USA. 1965

The most remarkable discovery made by scientists is science itself.

*A Sense of the Future: Essays in Natural Philosophy*  
Chapter 2 (p. 6)  
The MIT Press. Cambridge, Massachusetts, USA. 1977

It is important that students bring a certain ragamuffin, barefoot irreverence to their studies; they are not here to worship what is known, but to question it.

*The Ascent of Man*  
Chapter 11 (p. 360)  
Little, Brown & Company. Boston, Massachusetts, USA. 1973

**Buchanan, Scott** 1895–1968  
American educator and philosopher

The scientist is the contemporary monk copyist, writing over old literature on the palimpsest of experience, triumphantly announcing his faithfulness and accuracy in transferring the copy.

*Poetry and Mathematics*  
Chapter I  
The University of Chicago Press. Chicago, Illinois, USA. 1975

**Buck, Pearl S.** 1892–1973  
American author

No one really understood music unless he was a scientist, her father had declared, and not just a scientist, either, oh, no, only the real ones, the theoreticians, whose language mathematics. She had not understood mathematics until he had explained to her that it was the symbolic language of relationships. “And relationships,” he had told her, “contained the essential meaning of life.”

*The Goddess Abides*  
Part I  
John Day Company. New York, New York, USA. 1972

**Burroughs, William S.** 1914–97  
American writer

Too many scientists seem to be ignorant of the most rudimentary spiritual concepts. And they tend to be suspicious, bristly, paranoid-type people with huge egos they push around like some elephantiasis victim with his distended testicles in a wheelbarrow terrified no doubt that some skulking ingrate of a clone student will sneak into his very brain and steal his genius work.

*The Adding Machine: Selected Essays*  
Immortality (p. 132)  
Seaver Books. New York, New York, USA. 1986

**Calder, Alexander** 1898–1976  
American sculptor and inventor of the mobile

Scientists leave their discoveries, like foundlings, on the doorstep of society, while the stepparents do not know how to bring them up.

In Alan J. Friedman and Carol C. Donley  
*Einstein as Myth and Muse*  
Chapter 1 (p. 7)  
Cambridge University Press. Cambridge, England. 1985

**Chargaff, Erwin** 1905–2002  
Austrian biochemist

Great scientists are particularly worth listening to when they speak about something of which they know little; in their own specialty they are usually great and dull.

*Heraclitean Fire: Sketches from a Life before Nature*  
Part II  
The Hereditary Code-Script (p. 85)  
Rockefeller University Press. New York, New York, USA. 1978

...outside his own ever-narrowing field of specialization, a scientist is a layman. What members of an academy of science have in common is a certain form of semiparasitic living.

*Bitter Fruits from the Tree of Knowledge*  
*Perspectives in Biology and Medicine*, Section III, Volume 16, Number 4, Summer 1973 (p. 492)

A scientific autobiography belongs to a most awkward literary genre. If the difficulties facing a man trying to record his life are great — and few have overcome them successfully — they are compounded in the case of scientists, of whom many lead monotonous and uneventful lives and who, besides, often do not know how to write...

Book Review of *The Double Helix*  
*Science*, Volume 159, Number 3822, 29 March 1968 (p. 1448)

**Chesterton, G. K. (Gilbert Keith)** 1874–1936  
English author

Apparently a scientist is a man who surveys all the sciences, without any particular study of them, and then gives expression to his own moral principles or prejudices.

*All Is Grist: A Book of Essays*  
On Mr. Mencken and Fundamentalism (p. 50)  
Methuen & Company Ltd. London, England. 1931

**Clarke, Arthur C.** 1917–  
English science and science fiction writer

When a distinguished but elderly scientist states that something is possible, he is almost certainly right. When he states that something is impossible, he is very probably wrong.

*Profiles of the Future: An Inquiry into the Limits of the Possible*  
Chapter 2 (p. 14)  
Harper & Row, Publishers. New York, New York, USA. 1973

...scientists of over fifty are good for nothing except board meetings and should at all costs be kept out of the laboratory!

*Profiles of the Future: An Inquiry into the Limits of the Possible*  
Chapter 2 (pp. 14–15)  
Harper & Row, Publishers. New York, New York, USA. 1973

**Conant, James Bryant** 1893–1978  
American educator and scientist

...scientists today represent the progeny of one line of descent who migrated, so to speak, some centuries ago into certain fields which were ripe for cultivation. Once science had become self-propagating, those who till these fields have had a relatively easy time keeping up the tradition of their forebears.

*Science and Common Sense*

Chapter One (p. 13)

Yale University Press. New Haven, Connecticut, USA. 1951

**Cornforth, John W.** 1917–2004

English organic chemist

Scientists do not believe; they check.

Scientists as Citizens

*Australian Journal of Chemistry*, Volume 46, 1993 (p. 266)

**Cousteau, Jacques-Yves** 1910–77

French naval officer and ocean explorer

What is a scientist after all? It is a curious man looking through a keyhole, the keyhole of nature, trying to know what's going on.

*Christian Science Monitor*, 21 July 1971

**Cramer, F.**

No biographical data available

In the long run it pays the scientist to be honest, not only by not making false statements, but by giving full expression to facts that are opposed to his views. Moral sloveness is visited with far severer penalties in the scientific than in the business world.

In W.I.B. Beveridge

*The Art of Scientific Investigation*

Chapter Eleven (p. 142)

W.W. Norton & Company, Inc. New York, New York, USA. 1957

**Crichton, Michael** 1942–

American novelist

I sometimes think scientists really don't notice that their colleagues have flaws. But in my experience scientists are very human people: which means that some are troubled, deceitful, petty or vain.

*Science Views Media*, January 25, 1999

**Cronenberg, David** 1943–

Canadian film director

...everybody's a mad scientist, and life is their lab. We're all trying to experiment to find a way to live, to solve problems, to fend off madness and chaos.

In Chris Rodley

*Cronenberg on Cronenberg*

Chapter 1 (p. 7)

Faber & Faber Ltd. London, England. 1992

**de Jouvenel, Bertrand** 1903–87

French man of letters

No one can become a scientist who is not driven by a primary urge for discovery, who is not the ardent suitor of a hidden beauty. Somewhat romantically, scientists can be likened to a company of knights dispersed in search of Sleeping Princesses, all of whom are more or less distantly related. The spirit of the quest is essential to the making of a scientist, and forms a fundamental bond between scientists.

*The Logic of Personal Knowledge*

The Republic of Science

The Free Press. Glencoe, Illinois, USA. 1961

**de Madariaga, Salvador** 1886–1978

Spanish writer and statesman

There are two kinds of scientists: they were once described...as the "why" and the "how." The how-scientist is mainly interested in the way things happen; the why-scientist seeks to find out the cause of things. The first is more of a technician; the second, more of a philosopher. The first is more of a man of talent; the second, more of a man of genius.

*Essays with a Purpose*

Science and Freedom (p. 43)

Hollis & Carter. London, England. 1954

**Devine, Betsy**

No biographical data available

**Cohen, Joel E.**

No biographical data available

Scientists are funny people. Not just the great ones who think they've discovered the secret of life or of the brain or of the common cold. Even ordinary day-to-day scientists are funny, because they all think that the world makes sense! Most people know better.

*Absolute Zero Gravity: Science Jokes, Quotes, and Anecdotes*

Fireside/Simon & Shuster. New York, New York, USA.

**Dr. Kemp**

Fictional character

Straightforward scientists have no need for barred doors and drawn blinds.

*The Invisible Man*

Film (1933)

**du Noüy, Pierre Lecomte** 1883–1947

French scientist

The scientist with imagination is the pioneer of progress.

*The Road to Reason*

Chapter 3 (p. 81)

Longmans, Green & Company. London, England. 1949

**Dubos, René Jules** 1901–82

French-born American microbiologist and environmentalist

Scientists, like artists, unavoidably reflect the characteristics of the civilization and the time in which they live.

In this sense, they are “enchained”...by the inexorable logic of their time and their work.

*Louis Pasteur: Free Lance of Science*

Introduction (p. xxxviii)

Little, Brown & Company. Boston, Massachusetts, USA. 1950

...like other men, scientists become deaf and blind to any argument or evidence that does not fit into the thought pattern which circumstances have led them to follow.

*Louis Pasteur: Free Lance of Science*

Chapter VII (p. 197)

Little, Brown & Company. Boston, Massachusetts, USA. 1950

**Dyson, Freeman J.** 1923–

American physicist and educator

When something ceases to be mysterious it ceases to be of absorbing concern to scientists. Almost all the things scientists think and dream about are mysterious.

*Infinite in All Directions*

Part One, Chapter Two (p. 14)

HarperCollins Publisher, Inc. New York, New York, USA. 1988

**Egler, Frank E.** 1911–96

American botanist and ecologist

Scientists are only men, and are subject to all the foibles of their kind. They have the same drives for freedom, security, certainty, image and status as have other men. ...the same attraction for the known the familiar and the comfortable, and will cling to old and sterile ideas like a broody hen sitting on boiled eggs. Like those others, there is a lunatic fringe, and a reasonable quota of social misfits, small-pool big-frogs, megalomaniacs, prima donnas, nymphomaniacs, gold diggers, entrepreneurs, prophets and devout disciples.

*The Way of Science*

The Nature of Science (p. 1)

Hafner Publishing Company. New York, New York, USA. 1970

**Einstein, Albert** 1879–1955

German-born physicist

The eyes of the scientist are directed upon those phenomena which are accessible to observation, upon their apprehension and conceptual formulation.

*Concepts of Space: The History of Theories of Space in Physics*

Preface (p. xi)

Harvard University Press. Cambridge, Massachusetts, USA. 1954

For the scientist, there is only “being,” but no wishing, no valuing, no good, no evil — in short, no goal. As long as we remain within the realm of science proper, we can never encounter a sentence of the type: “Thou shalt not lie.”

In Philipp Frank

*Relativity — A Richer Truth*

The Laws of Science and the Laws of Ethics (p. 9)

Jonathan Cape. London, England. 1951

...the scientist finds his reward in what Henri Poincaré calls the joy of comprehension, and not in the possibilities of application to which any discovery may lead.

In Max Planck

*Where Is Science Going?*

Epilogue (p. 211)

W.W. Norton & Company, Inc. New York, New York, USA. 1932

**Emelyanov, A. S.**

No biographical data available

A scientist cannot be a “pure” mathematician, biophysicist or sociologist for he cannot remain indifferent to the fruits of his work, to whether they will be useful or harmful to mankind. An indifferent attitude as to whether people will be better or worse off as a result of scientific achievement is cynicism, if not a crime.

In E.H.S. Burhop In Maurice Goldsmith and Alan Mackay (eds.)

*Society and Science*

Scientist and Public Affairs (p. 31)

Simon & Schuster. New York, New York, USA. 1965

**England, Terry**

No biographical data available

...if three scientists ever agree completely on anything, it’s a cult.

*Rewind* (p. 71)

Avon Books. New York, New York, USA. 1997

**Eysenck, Hans Jurgen** 1916–97

Founder of theory of personality

Scientists, especially when they leave the particular field in which they have specialized, are just as ordinary, pig-headed and unreasonable as anybody else.

Continuum

*OMNI Magazine*, Volume 2, December 1979 (p. 49)

**Faulkner, William** 1897–1962

American novelist and short story writer

Our privacy...has been slowly and steadily and increasingly invaded until now our very dream of civilization is in danger. Who will save us but the scientist and the humanitarian? Yes, the humanitarian in science, and the scientist in the humanity of man.

Quoted in Warren Weaver

Science and People

*Science*, Volume 122, Number 3183, December 30, 1955 (p. 1259)

**Feibleman, James K.** 1904–1987

American philosopher

It is not the business of scientists to investigate just what the business of science is.

Pure Science, Applied Science, Technology, Engineering: An Attempt at Definitions

*Technology and Culture*, Volume II, Number 4, Fall 1961 (p. 305)

**Feyerabend, Paul K.** 1924–94

Austrian-born American philosopher of science

Scientists are sculptors of reality — but sculptors in a special sense. They do not merely act causally upon the world (though they do that, too, and they have to if they want to “discover” new entities); they also create semantic conditions engendering strong inferences from known effects to novel projections and, conversely, from the projections to testable effects.

Realism and the Historicity of Knowledge

*The Journal of Philosophy*, Volume LXXXVI, Number 8, 1989 (pp. 404–405)

**Feynman, Richard P.** 1918–88

American theoretical physicist

It is our responsibility as scientists, knowing the great progress which comes from a satisfactory philosophy of ignorance, the great progress which is the fruit of freedom of thought, to proclaim the value of this freedom; to teach how doubt is not to be feared but welcomed and discussed; and to demand this freedom as our duty to all coming generations.

*What Do You Care What Other People Think?*

The Value of Science (p. 248)

W.W. Norton & Company, Inc. New York, New York, USA. 1988

I would like to point out that people are not honest. Scientists are not honest at all, either. It's useless. Nobody's honest. Scientists are not honest. And people usually believe that they are. That makes it worse. By honest I don't mean that you only tell what's true. But you make clear the entire situation. You make clear all the information that is required for somebody else who is intelligent to make up their mind.

*The Meaning of It All: Thoughts of a Citizen Scientist*

Chapter III (p. 106)

Perseus Books. Reading, Massachusetts, USA. 1998

**Finniston, Sir Monty** 1912–91

British industrialist

You mustn't think scientists are stupid.

Saying of the Week

*Observer*, 16 January 1983

**Fitzgerald, Penelope** 1916–2000

English novelist and biographer

If they don't depend on true evidence, scientists are no better than gossips.

*The Gate of Angels*

Chapter 3 (p. 24)

Doubleday & Company, New York, New York, USA. 1992

**Foster, Alan Dean** 1946–

American science fiction writer

A man of science is helpless by himself, but two of them constitute an entity capable of ignoring starvation, freezing, and prospects of imminent death just by chatting about some item of mutual interest.

*Icerigger* (p. 116)

Ballantine Books. New York, New York, USA. 1974

**Fox, Robin** 1934–

English anthropologist, poet, and essayist

The real poet, like any artist, tries all the time to see the general in the particular. In this he is no different from the scientist. They are siblings under the skin.

In Paul R. Gross, Norman Levitt, and Martin W. Lewis (eds.)

*The Flight from Science and Reason*

State of the Art/Science in Anthropology (p. 343)

New York Academy of Sciences. New York, New York, USA. 1996

Scientists, being children of Adam, can be fools and charlatans or even just blind and biased. Indeed, my own despair at the “academic/scientific enterprise” which raised the initial question is a despair over the inevitability of human frailty, not over the ideals of scientific discovery.

In Paul R. Gross, Norman Levitt, and Martin W. Lewis (eds.)

*The Flight from Science and Reason*

State of the Art/Science in Anthropology (p. 329)

New York Academy of Sciences. New York, New York, USA. 1996

**Freud, Sigmund** 1856–1939

Austrian neurologist and co-founder of psychoanalysis

I am not really a man of science, not an observer, not an experimenter, and not a thinker. I am nothing but by temperament a conquistador — an adventurer if you want to translate the word.

Mighty Minds (1900 letter to Fleiss)

*New Scientist*, 4 April 1998 (p. 11)

**Fuller, R. Buckminster** 1895–1983

American engineer and architect

...public journals, assumedly bespeaking public opinion, [say] scientists “wrest order out of chaos.” But the scientists who have made the great discoveries have been trying their best to tell the public that...they have never found chaos to be anything other than the superficial confusion of innately a priori human ignorance at birth — an ignorance that is often burdened by the biases of others to remain gropingly unenlightened throughout its life.

In L.L. Larison Cudmore

*The Center of Life: A Natural History of the Cell* (p. xi)

New York Times Book Company. New York, New York, USA. 1977

What the scientists have always found by physical experiment was an a priori orderliness of nature, or Universe always operating at an elegance level that made the discovering scientist's working hypotheses seem crude by comparison. The discovered reality made the scientists' exploratory work seem relatively disorderly.

In L.L. Larison Cudmore

*The Center of Life: A Natural History of the Cell* (p. xi)

New York Times Book Company. New York, New York, USA. 1977

**Galston, Arthur William** 1920–  
American plant biologist

In my view, the only recourse for a scientist concerned about the social consequences of his work is to remain involved with it to the end.

Science and Social Responsibility  
*Annals of the New York Academy of Science*, Volume 196, 1972 (p. 223)

**Galton, Sir Francis** 1822–1911  
English anthropologist, explorer, and statistician

A special taste for science seems frequently to be so ingrained in the constitution of scientific men, that it asserts itself throughout their whole existence.

In Karl Pearson  
*The Life, Letters and Labours of Francis Galton* (Volume 2) (p. 152)  
At The University Press. Cambridge, England. 1914–30

**Gardner, Martin** 1914–  
American writer and mathematics games editor

When reputable scientists correct flaws in an experiment that produced fantastic results, then fail to get those results when they repeat the test with flaws corrected, they withdraw their original claims. They do not defend them by arguing irrelevantly that the failed replication was successful in some other way, or by making intemperate attacks on whomever dares to criticize their competence.

Reply to Claims for ESP  
*The New York Review of Books*, February 19, 1981

**Gauss, Johann Carl Friedrich** 1777–1855  
German mathematician, physicist, and astronomer

A taste for the abstract sciences in general and, above all, for the mysteries of numbers, is very rare: this is not surprising, since the charms of this sublime science in all their beauty reveal themselves only to those who have the courage to fathom them. But when a woman, because of her sex, our customs, and prejudices, encounters infinitely more obstacles than men in familiarizing herself with their knotty problems, yet overcomes these fetters and penetrates that which is most hidden, she doubtless has the most noble courage, extraordinary talent, and superior genius.

Letter, Carl Friedrich Gauss to Sophie Germain, 30 April, 1807

**Gell-Mann, Murray** 1929–  
American physicist

But the practitioners of science are, after all, human beings. They are not immune to the normal influences of egotism, economic self-interest, fashion, wishful thinking and laziness. A scientist may try to steal credit, knowingly initiate a worthless project for gain, or take a conventional idea for granted instead of looking for a better explanation. From time to time scientists even fudge

their results, breaking one of the most serious taboos of their profession.

*The Quark and the Jaguar: Adventures in the Simple and the Complex* (p. 80)  
W.H. Freeman & Company. New York, New York, USA. 1994

**Gibran, Kahlil** 1883–1931  
Lebanese-American philosophical essayist

A scientist without imagination is a butcher with dull knives and out-worn scales.

*Sand and Foam: A Book of Aphorisms* (p. 46)  
Alfred A. Knopf. New York, New York, USA. 1959

**Glashow, Sheldon L.** 1932–  
American physicist

Many scientists are deeply religious in one way or another, but all of them have a certain rather peculiar faith — they have a faith in the underlying simplicity of nature; a belief that nature is, after all, comprehensible and that one should strive to understand it as much as we can. Now this faith in simplicity, that there are simple rules — a few elementary particles, a few quantum rules to explain the structure of the world — is completely irrational and completely unjustifiable. It is therefore a religion.

*The Quantum Universe*  
Coproduced by WETA-TV and The Smithsonian Institution (1990).

**Gleck, James** 1954–  
American author, journalist, and essayist

Scientists still ask the what if questions. What if Edison had not invented the electric light — how much longer would it have taken? What if Heisenberg had not invented the S matrix? What if Fleming had not discovered penicillin? Or (the king of such questions) what if Einstein had not invented general relativity? “I always find questions like that...odd,” Feynman wrote to a correspondent who posed one. Science tends to be created as it is needed. “We are not that much smarter than each other,” he said.

*Genius: The Life and Science of Richard Feynman*  
Caltec (p. 329)  
Pantheon Books. New York, New York, USA. 1992

Children and scientists share an outlook on life. If I do this, what will happen? is both the motto of the child at play and the defining refrain of the physical scientist...

The unfamiliar and the strange — these are the domain of all children and scientists.

*Genius: The Life and Science of Richard Feynman*  
The Rockaway (p. 19)  
Pantheon Books. New York, New York, USA. 1992

**Goldenweiser, Alexander** 1880–1940  
American anthropologist

The scientist, when in his laboratory, is craftsman and inventor in one. He also faces nature as a learner. Like

the craftsman, he is prepared to commit errors and, having learned from them, to revise his procedure. Like the inventor, he is after something new, he plans his experiments deliberately, watches carefully, ever on the alert for a promising lead — a discovery.

*Robots or Gods*

Chapter IV (p. 44)

Alfred A. Knopf. New York, New York, USA. 1931

A scientist who is no longer capable of framing a hypothesis — or never was — is not a scientist but a methodological fossil.

*Robots or Gods*

Chapter IV (p. 48)

Alfred A. Knopf. New York, New York, USA. 1931

### Goldstein, A.

No biographical data available

Science is always a race...and scientists are competitive people. Because the monetary rewards are minimal, they go for ego rewards....

In J. Goldberg

*Anatomy of a Scientific Discovery*

Locks and Keys (p. 25)

Bantam Books. Toronto, Ontario, Canada. 1988

### Gornick, Vivian

American critic, essayist, and memoirist

To do science today is to experience a dimension unique in contemporary working lives; the work promises something incomparable: the sense of living both personally and historically. That is why science now draws to itself all kinds of people — charlatans, mediocrities, geniuses — everyone who wants to touch the flame, feel alive in the time.

*Women in Science: Portraits from a World in Transition*

Part One (p. 26)

Simon & Schuster. New York, New York, USA. 1983

Whatever a scientist is doing — reading, cooking, talking, playing — science thoughts are always there at the edge of the mind. They are the way the world is taken in; all that is seen is filtered through an everpresent scientific musing.

*Women in Science: Portraits from a World in Transition*

Part One (p. 39)

Simon & Schuster. New York, New York, USA. 1983

### Gray, George W.

Freelance science writer

The modern scientist is like a detective who finds clues, but never gets a glimpse of the fugitive he seeks.

New Eyes of the Universe

*The Atlantic Monthly*, Volume 155, Number 5, May 1935 (p. 607)

### Harding, Rosamund E. M.

No biographical data available

If the scientist has, during the whole of his life, observed carefully, trained himself to be on the look-out for analogy and possessed himself of relevant knowledge, then the “instrument of feeling”...will become a powerful divining rod leading the scientist to discover order in the midst of chaos by providing him with a clue, a hint, or an hypothesis upon which to base his experiments.

*An Anatomy of Inspiration*

Chapter V (p. 86)

W. Heffer & Sons Ltd. Cambridge, England. 1940

### Harnwell, G. P. 1903–1982

No biographical data available

The motivations of the pure scientist would appear to many at first thoughts as whimsical and abstract as the immediate results he achieves. The briefest explanation of why he works is curiosity rather than the necessity of earning a livelihood.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1939*

Our Knowledge of Atomic Nuclei (p. 189)

Government Printing Office. Washington, D.C. 1940

### Heinlein, Robert A. 1907–88

American science fiction writer

Most “scientists” are bottle washers and button sorters.

*Time Enough for Love*

Intermission (p. 257)

G.P. Putnam’s Sons. New York, New York, USA. 1973

### Hight, Gilbert 1906–78

American classicist

There are naive people all over the world — some of them scientists — who believe that all problems, sooner or later, will be solved by Science. The word Science itself has become a vague reassuring noise, with a very ill-defined meaning and a powerful emotional charge: It is now applied to all sorts of unsuitable subjects and used as a cover for careless and incomplete thinking in dozens of fields. But even taking Science at the most sensible of its definitions, we must acknowledge that it is imperfect as are all activities of the human mind.

*Man’s Unconquerable Mind*

Part Two, Chapter 4 (p. 106)

Cambridge University Press. New York, New York, USA. 1954

### Hogan, James P. 1946–

English writer of hard science fiction

Scientists are the easiest to fool...They think in straight, predictable, directable, and therefore misdirectable, lines. The only world they know is the one where everything has a logical explanation and things are what they appear to be. Children and conjurers — they terrify me. Scientists are no problem; against them I feel quite confident.

*Code of the Lifemaker*

Chapter I (p. 14)

Ballantine Books. New York, New York, USA. 1983

**Hubbard, Elbert** 1856–1915

American editor, publisher, and author

The scientist who now takes off his shoes knows that the place whereon he stands is holy ground. Science is reverent and speaks with lowered voice, for she has caught glimpses of mysteries undefinable, and to her have come thoughts that are beyond speech. Science cultivates the receptive heart and hospitable mind, and her prayer is for more light, and to that prayer the answer is even now coming.

In Albert Lane

*Elbert Hubbard and His Work* (p. 100)

The Blanchard Press. Worcester, Massachusetts, USA. 1901

**Hubble, Edwin Powell** 1889–1953

American astronomer

Scientists in general are not very articulate; they work in comparative seclusion and they do not cultivate the art of persuasion.

*The Nature of Science and Other Lectures*

Part I, The Nature of Science (p. 3)

The Huntington Library. San Marino, California, USA. 1954

The scientist, in his purely scientific moods, seeks to understand the world — not to reform it, not to control it, but merely to understand it.

*The Nature of Science and Other Lectures*

Part I, Science and Technology (p. 20)

The Huntington Library. San Marino, California, USA. 1954

**Huggins, Charles** 1901–1997

Canadian born-American surgeon

...there are two kinds of scientists — The “gee whiz” kind and the “so what” kind. Flies around the urine cause the first type to exclaim: “Gee whiz, what could that mean?” whereas the other says: “so what, let’s clean up this mess and get on with a proper experiment.”

In Elwood V. Jensen

*The Science of Science*

*Perspectives in Biology and Medicine*, Volume 12, Number 2, Winter 1969 (p. 283)

**Hull, David L.** 1935–

American philosopher of biology

From the beginning of their careers, scientists are presented with a dilemma. They can make their work look as conventional as possible — just one more brick in the edifice of science — or as novel and controversial as possible — declaring a whole new theory or possibly even a whole new science.... From my own reading of the recent history of science, I see no strong correlation between my own estimates of the novelty of an idea and the strategy that an author adopts.

*Science as a Process: An Evolutionary Account of the Social and Conceptual Development of Science*

Chapter Six (p. 202)

The University of Chicago Press. Chicago, Illinois, USA. 1988

**Husserl, Edmund** 1859–1938

German philosopher

When it is actually natural science that speaks, we listen gladly and as disciples. But it is not always natural science that speaks when natural scientists are speaking...

Translated by W.R. Boyce Gibson

*Ideas: General Introduction to Pure Phenomenology*

Second Chapter, Section 20 (p. 86)

George Allen & Unwin Ltd. London, England. 1931

**Ian**

Fictional character

Your scientists were so preoccupied with whether or not they could, they didn’t stop to think if they should.

*Jurassic Park*

Film (1993)

**Imhof, Peter**

German computer scientist and social science modeler

...scientists are not a select few intelligent enough to think in terms of “broad sweeping theoretical laws and principles.” Instead, scientists are people specifically trained to build models that incorporate theoretical assumptions and empirical evidence. Working with models is essential to the performance of their daily work; it allows them to construct arguments and to collect data.

Tools for Thinking (book review)

*Science*, Volume 287, 1935–1936

**Ingram, Jay** 1945–

Canadian author and television host

The caricature of the nerdy scientist in his/her lab coat, complete with pocket protector, uttering incomprehensible jargon is bad enough. But the implied character of the person behind the wardrobe is worse: strait-jacketed by conservatism, too quick to demand hard data, hell-bent on reducing life’s mysteries to uninteresting sets of numbers and graphs. ...The truth is that scientists love a mystery as much as anyone (it’s their business to chase mysteries after all) even when...there is almost no chance it will be solved. Why? Because it’s intriguing, challenging, and fun.

*The Barmaid’s Brain and other Strange Tales from Science*

The Burning Mirrors of Syracuse

**Jensen, Elwood V.**

No biographical data available

Research among the less imaginative scientists has been likened to a fox-hunt. A creative investigator shouts “Tally-ho”, and the entire troop rides off in the same direction.

*The Science of Science*

*Perspectives in Biology and Medicine*, Volume 12, Number 2, Winter 1969 (p. 278)

**Katscher, F.**

No biographical data available

That great scientists were believing Christians does not prove anything. In this century many free-thinkers have also made great contributions to science, scientific thinking and ethical questions regarding the application of science.

Correspondence

*Nature*, Volume 363, Number 6428, 3 June 1993 (p. 390)

**Killian, Jr., James R.** 1904–88

American manager

The scientist, it is repeatedly said, should be on tap but not on top. He thus is considered to be merely one of the hired men who has no business doing anything but what he is told to do in the field of his specialty.... I do not imply that the scientist has any right or unique qualifications to be on top. I am disturbed by the attitude that because a man is a scientist, he is disqualified for public and private administrative responsibility even though he may have the qualifications.

The Shortage Re-Examined

*American Scientist*, Spring, April 1956 (p. 126)

**Kingsley, Charles** 1819–75

English clergyman and author

[Scientists] Good men, honest men, accurate men, righteous men, patient men, self-restraining men, fair men, modest men. Men who are aware of their own vast ignorance compared with the vast amount that there is to be learned in such a universe as this. Men who are accustomed to look at both sides of a question; who, instead of making up their minds in haste like bigots and fanatics, wait like wise men, for more facts, and more thought about the facts. *Town Geology*

Preface

D. Appleton & Company. New York, New York, USA. 1873

**Koestler, Arthur** 1905–83

Hungarian-born English writer

[Scientists are] Peeping Toms at the keyhole of eternity.

*The Roots of Coincidence*

Chapter 5, Section 9 (p. 140)

Random House. New York, New York, USA. 1972

**Kolb, Edward W. (Rocky)** 1951–

American cosmologist

No one devotes a lifetime to science in the hope of making small advances. Every scientist secretly or overtly hopes to make great discoveries.

*Blind Watchers of the Sky*

Chapter Two (p. 42)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA.

1996

Most scientists spend their lives groping around trying to find their way, as if lost in a fog.

*Blind Watchers of the Sky*

Chapter Eight (p. 203)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

**Kornberg, Arthur** 1918–

American biochemist

A scientist...shouldn't be asked to judge the economic and moral value of his work. All we should ask the scientist to do is to find the truth — and then not keep it from anyone.

*San Francisco Examiner*, December 19, 1971

**Kuhn, Thomas S.** 1922–96

American historian of science

Scientists, it should already be clear, never learn concepts, laws, and theories in the abstract and by themselves. Instead, these intellectual tools are from the start encountered in a historically and pedagogically prior unit that displays them with and through their applications.

*The Structure of Scientific Revolutions*

Chapter V (p. 46)

The University of Chicago Press. Chicago, Illinois, USA. 1970

Though many scientists talk easily and well about the particular individual hypotheses that underlie a concrete piece of current research, they are little better than laypersons at characterizing the established basis of their field, its legitimate problems and methods. If they have learned such abstractions at all they show it mainly through their ability to do successful research.

*The Structure of Scientific Revolutions*

Chapter V (p. 47)

The University of Chicago Press. Chicago, Illinois, USA. 1970

**Larrabee, Eric** 1922–90

Historian

Perhaps the time has come for [scientists] to wonder about why they sometimes jar the nerves and try the patience of non-scientists.

...Scientists seem able to go about their business in a state of indifference to, if not ignorance of, anything but the going, currently acceptable doctrine of their several disciplines. ...

*Commentary*

Science and the Common Reader, June 1966 (p. 48)

The only thing wrong with scientists is that they don't understand science. They don't know where their own institutions come from, what forces shaped and are still shaping them, and they are wedded to an anti-historical way of thinking which threatens to deter them from ever finding out.

*Commentary*

Science and the Common Reader, June 1966 (p. 48)

**Lebowitz, Fran** 1951–  
American comedian

Scientists are rarely to be counted among the fun people. Awkward at parties, shy with strangers, deficient in irony — they have had no choice but to turn their attention to the close study of everyday objects.

*Metropolitan Life*

Science (p. 106)

Fawcett Crest. New York, New York, USA. 1978

**Lederman, Leon** 1922–  
American high-energy physicist

Physicists today feel the same emotions that scientists have felt for centuries. The life of a physicist is filled with anxiety, pain, hardship, tension, attacks of hopelessness, depression, and discouragement. But these are punctuated by flashes of exhilaration, laughter, joy, and exultation. These epiphanies come at unpredictable times. Often they are generated simply by the sudden understanding of something new and important, something beautiful, that someone else has revealed.

*The God Particle: If the Universe Is the Answer, What Is the Question?*

Chapter 1 (p. 7)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1993

[If] you are mortal, like most of the scientists I know, the far sweeter moments come when you yourself discover some new fact about the universe. It's astonishing how often this happens at 3 A.M., when you are alone in the lab and you have learned something profound, and you realize that not one of the other five billion people on earth knows what you now know. Or so you hope. You will, of course, hasten to tell them as soon as possible. This is known as "publishing."

*The God Particle: If the Universe Is the Answer, What Is the Question?*

Chapter 1 (p. 7)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1993

When I talk about the pain and hardship of a scientist's life, I'm speaking of more than existential angst. Galileo's work was condemned by the Church; Madame Curie paid with her life, a victim of leukemia wrought by radiation poisoning. Too many of us develop cataracts. None of us gets enough sleep. Most of what we know about the universe we know thanks to a lot of guys (and ladies) who stayed up late at night.

*The God Particle: If the Universe Is the Answer, What Is the Question?*

Chapter 1 (p. 16)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1993

**Leon, Mark**  
No biographical data available

"Read Popper on the philosophy of science," Alan said. "I don't wholly agree with him, but he has a point when he says the scientist's job is to disprove rather than prove theories. Humans are passionate believers. The history of

philosophy and religion is a grand testament to our will to believe. Scientists just try to inject a little sanity into the whole business, and that often requires a passion not to believe."

*The Unified Field* (p. 11)

Avon Books. New York, New York, USA. 1996

**Leonard, Jonathan Norton** 1903–75  
No biographical data available

[A scientist's] real work is done in the silent hours of thought, the apparently aimless days of puttering around in the laboratory, and the mighty searching through reference books.

Steinmetz, Jove of Science, Part II

*The World's Work*, February 1929 (p. 140)

**Levi, Primo** 1919–87  
Italian writer and chemist

A scientist's life, the author says, is indeed conflictual, formed by battles, defeats, and victories: but the adversary is always and only the unknown, the problem to be solved, the mystery to be clarified. It is never a matter of civil war; even though of different opinions, or of different political leanings, scientists dispute each other, they compete, but they do not battle: they are bound together by a strong alliance, by the common faith "in the validity of Maxwell's or Boltzmann's equations," and by the common acceptance of Darwinism and the molecular structure of DNA.

Translated by Raymond Rosenthal

*The Mirror Maker: Stories and Essays by Primo Levi*

Bacteria Roulette (p. 123)

Shocken Books. New York, New York, USA. 1989

**Levinson-Lessing, F. Y.** 1861–1939  
Russian geologist

A scientist lacking imagination can at best become a splendid walking library and source of information — he absorbs, but does not create.

Compiled by V.V. Vorontsov

*Words of the Wise: A Book of Russian Quotations*

Translated by Vic Schneierson

Progress Publishers. Moscow, Russia. 1979

**Lewis, Gilbert Newton** 1875–1946  
American chemist

The scientist is a practical man and his are practical aims. He does not seek the ultimate but the proximate. He does not speak of the last analysis but rather of the next approximation. ... On the whole, he is satisfied with his work, for while science may never be wholly right it certainly is never wholly wrong; and it seems to be improving from decade to decade.

*The Anatomy of Science*

Chapter I (pp. 6–7)

Yale University Press. New Haven, Connecticut, USA. 1926

**Lewis, Sinclair** 1885–1951  
American novelist

...the scientist is intensely religious — ...he will not accept quarter-truths, because they are an insult to his faith. He wants that everything should be subject to inexorable laws. He is the only real revolutionary, the authentic scientist, because he alone knows how little he knows. He lives in a cold, clear light. Yet he is not cold nor heartless. And he prays for unclouded eyes and freedom from haste, for a quiet and relentless anger against all pretence and all pretentious work and all work left slack and unfinished,...a restlessness whereby he may neither sleep nor accept praise till his observed results equal his calculated results....

*Arrowsmith* (p. 278)

Harcourt, Brace & World, Inc. New York, New York, USA. 1952

He had never dined with a duchess, never received a prize, never been interviewed, never produced anything which the public could understand, nor experienced anything since his schoolboy amours which nice people could regard as romantic.

He was, in fact, an authentic scientist.

*Arrowsmith*

Chapter XII, Section I (p. 128)

Harcourt, Brace & World, Inc. New York, New York, USA. 1952

To be a scientist — it is not just a different job so that a man should choose between being a scientist and being an explorer or a bond-salesman or a physician or a king or a farmer. It is a tangle of very obscure emotions, like mysticism, or wanting to write poetry; it makes its victim all different from the good natural man.

*Arrowsmith*

Chapter XXVI, Section I (p. 290)

Harcourt, Brace & World, Inc. New York, New York, USA. 1952

The normal man, he does not care much what he does except that he should eat and sleep and make love. But the scientist is intensely religious — he is so religious that he will not accept quarter truths, because they are an insult to his faith.

*Arrowsmith*

Chapter XXVI, Section I (p. 290)

Harcourt, Brace & World, Inc. New York, New York, USA. 1952

[The scientist] hates the preachers who talk their fables, but he is not too kindly to the anthropologists and historians who can only make guesses, yet they have the nerve to call themselves scientists!

*Arrowsmith*

Chapter XXVI, Section I (p. 290)

Harcourt, Brace & World, Inc. New York, New York, USA. 1952

**Lightman, Alan** 1948–  
Physicist, novelist, and essayist

Scientists turn reckless and mutter like gamblers who cannot stop betting.

*Einstein's Dreams*

3 May 1905 (p. 41)

Pantheon Books. New York, New York, USA. 1993

Fictional character

A scientist who cannot prove what he has accomplished, has accomplished nothing.

*Journey to the Center of the Earth*

Film (1959)

**Martel, Yann** 1963–

Canadian novelist

Scientists are a friendly, atheistic, hard-working, beer-drinking lot whose minds are preoccupied with sex, chess and baseball when they are not preoccupied with science.

*Life of Pi* (p.5)

Harcourt Inc. Orlando, Florida, USA. 2001

**Maxwell, James Clerk** 1831–79

Scottish physicist

[Scientists'] actions and thoughts, being more free from the influence of passion than those of other men, are all the better materials for the study of the calmer parts of human nature. ... [B]y aspiring to noble ends... [scientists] have risen above the region of storms into a clearer atmosphere, where there is no misrepresentation of opinion, nor ambiguity of expression, but where one mind comes into closest contact with another at the point where both approach nearest to the truth.

In C.C. Gillispie (ed.)

*The Edge of Objectivity: An Essay in the History of Scientific Ideas*

Forward (pp. vii, viii)

Princeton University Press. Princeton, New Jersey, USA. 1960

**Mayer, Joseph** 1904–83

American chemist

What does one have to do to be called a scientist? I decided that anyone who spent on science more than 10% of his waking, thinking time for a period of more than a year would be called a scientist, at least for that year.

In "The Way it Was"

*Annual Review of Physical Chemistry*, Volume 33, 1982 (pp. 1–2)

**Mayo, Charles Horace** 1865–1939

American physician

The scientist is not content to stop at the obvious.

Problems in Medical Education

*Collected Papers of the Mayo Clinic & Mayo Foundation*, Volume 18, 1926

**Medawar, Sir Peter Brian** 1915–87

Brazilian-born English zoologist

To be creative, scientists need libraries and laboratories and the company of other scientists; certainly a quiet and

untroubled life is a help. A scientist's work is in no way deepened or made more cogent by privation, anxiety, distress, or emotional harassment.

*Advice to a Young Scientist*

Chapter 5 (p. 40)

Basic Books, Inc. New York, New York, USA. 1979

[T]he private lives of scientists may be strangely and even comically mixed up, but not in ways that have any special bearing on the nature and quality of their work. If a scientist were to cut off an ear, no one would interpret such an action as evidence of an unhappy torment of creativity; nor will a scientist be excused any bizarre [action], however extravagant, on the grounds that he is a scientist, however brilliant.

*Advice to a Young Scientist*

Chapter 5 (p. 40)

Basic Books, Inc. New York, New York, USA. 1979

Much of a scientist's pride and sense of accomplishment turns...upon being the first to do something — upon being the man who did actually speed up or redirect the flow of thought and the growth of understanding.

The most heinous offense a scientist as a scientist can commit is to declare to be true that which is not so; if a scientist cannot interpret the phenomenon he is studying, it is a binding obligation upon him to make it possible for another to do so.

*The Limits of Science*

An Essay on Scians [Science] (p. 6)

Harper & Row, Publishers. New York, New York, USA. 1984

[James] Watson's childlike vision makes them seem like the creatures of a Wonderland, all at a strange contentious noisy tea-party which made room for him because for people like him, at this particular kind of party, there is always room.

Lucky Jim

*New York Review of Books*, 28 March 1968

...Watson had one towering advantage over all of [his classmates in other disciplines]: in addition to being extremely clever he had something important to be clever about. This is an advantage which scientists enjoy over most other people engaged in intellectual pursuits, and they enjoy it at all levels of capability. To be a first-rate scientist it is not necessary (and certainly not sufficient) to be extremely clever, anyhow in a pyrotechnic sense.

Lucky Jim

*New York Review of Books*, 28 March 1968

One of the great social revolutions brought about by scientific research has been the democratization of learning. Anyone who combines strong common sense with an ordinary degree of imaginativeness can become a creative scientist, and a happy one besides, in so far as happiness depends upon being able to develop to the limit of one's abilities.

Lucky Jim

*New York Review of Books*, 28 March 1968

People who criticize scientists for wanting to enjoy the satisfaction of intellectual ownership are confusing possessiveness with pride of possession. Meanness, secretiveness and, sharp practice are as much despised by scientists as by other decent people in the world of ordinary everyday affairs; nor, in my experience, is generosity less common among them, or less highly esteemed.

Lucky Jim

*New York Review of Books*, 28 March 1968

Before a good scientist tries to persuade others that he is on to something good, he must first convince himself.

*Florey Story* (London Review of Books, 20 December 1979)

Reprinted in "The Strange Case of the Spotted Mice and Other Classic Essays on Science"

Oxford University Press, Inc. New York, New York, USA. 1996

...scientists tend not to ask themselves questions until they can see the rudiments of an answer in their minds. Embarrassing questions tend to remain unasked or, if asked, to be asked rudely.

*The Future of Man: The BBC Reith Lectures 1959*

Chapter 4 (p. 62)

Methuen & Company Ltd. London, England. 1960

**Mencken, H. L. (Henry Louis)** 1880–1956

American journalist and literary critic

The scientist who yields anything to theology, however slight, is yielding to ignorance and false pretences, and as certainly as if he granted that a horse-hair put into a bottle of water will turn into a snake.

*Minority Report: H.L. Mencken's Notebooks*

No. 45 (p. 33)

Alfred A. Knopf. New York, New York, USA. 1956

**Mendeleyev, Dmitry** 1834–1907

Russian chemist

Science exists separately from scientists, it lives autonomously, it is the sum of knowledge worked out by the whole mass of scientists, similar to how the acknowledged political order of a country is worked out by the mass of persons who live in it. Science is authoritative, separate scientists are not. A scientist can only and should only use this authority when he is following science, just as in a well-ordered state the authority of power is used only by the person who observes the law.

In Michael D. Gordin

*A Well-Ordered Thing: Dmitrii Mendeleev and the Shadow of the Periodic Table*

Chapter 4 (p. 103)

Basic Books, Inc. New York, New York, USA. 2004

**Mitchell, Maria** 1818–89

American astronomer and educator

The true scientist must be self-forgetting. He knows that under the best circumstances he is sowing what others must reap — or rather he is striking the mine which others must open up — for human life at longest has not the measure of a single breath in the long life of science.

In Helen Wright

*Sweeper in the Sky*

Chapter 9 (p. 168)

Macmillan & Company. New York, New York, USA. 1949

It is the highest joy of the true scientist...that he can reap no lasting harvest — that whatever he may bring into the storehouse today will be surpassed by the gleaners tomorrow — he studies Nature because he loves her and rejoices to “look through Nature up to Nature’s God.”

In Helen Wright

*Sweeper in the Sky*

Chapter 9 (p. 168)

Macmillan & Company. New York, New York, USA. 1949

### **Montessori, Maria** 1870–1952

Italian educationist

...what is a scientist?...We give the name scientist to the type of man who has felt experiment to be a means guiding him to search out the deep truth of life, to lift a veil from its fascinating secrets, and who, in this pursuit, has felt arising within him a love for the mysteries of nature, so passionate as to annihilate the thought of himself.

Translated by Anne E. George

*The Montessori Method*

Chapter I (p. 8)

Frederick A. Stokes Company. New York, New York, USA. 1912

The scientist is not the clever manipulator of instrument, he is the worshipper of nature and he bears the external symbols of his passion as does the follower of some religious order.

Translated by Anne E. George

*The Montessori Method*

Chapter I (p. 8)

Frederick A. Stokes Company. New York, New York, USA. 1912

### **Motz, Lloyd** 1910–2004

American astronomer

### **Weaver, Jefferson Hane**

American science author

To the nonscientist, science, particularly in its modern dress and as pursued today, is a glittering intellectual jewel, mysterious, forbidding, and even threatening except to a few chosen ones, the scientists, who appear to be superior beings, endowed with an ability to probe and understand nature far beyond that of the average layman.

*The Concepts of Science: From Newton to Einstein*

Preface (p. vii)

Plenum Press. New York, New York, USA. 1988

### **Muppets**

Fictional characters

German scientist: We are going to perform an electronic cerebractomy.

Doc Hooper: A what?

German Scientist: An electronic cerebractomy! It’s something so sensational, you’ll have to hold on to your hat.... Look, when a German scientist says hold on to your hat he isn’t making casual conversation, he means to hold on to your hat. Hat! Hold!

*The Muppet Movie*

Film (1979)

### **National Academy of Sciences**

Scientists must be fact-seekers, open-minded, and willing to accept changes indicated by the signposts of evidence.

*Science and Creationism — A View from the National Academy of Sciences* (p. 5).

National Academy Press. Washington, D.C. 1984

### **Ninotchka**

Fictional character

[Cyd Charrise talking down love to Fred Astaire] He was one of our greatest scientists. He has proved, beyond any question, that physical affection is purely electrochemical.

*Silk Stockings*

Film (1957)

### **Pasteur, Louis** 1822–95

French chemist

When moving forward toward the discovery of the unknown, the scientist is like a traveler who reaches higher and higher summits from which he sees in the distance new countries to explore.

In Rene Dubos

*Louis Pasteur: Free Lance of Science*

Chapter III (p. 87)

Little, Brown & Company. Boston, Massachusetts, USA. 1950

### **Peabody, Francis Weld** 1881–1927

American physician

...the popular conception of the scientist as a man who works in a laboratory and who uses instruments of precision is as inaccurate as it is superficial, for a scientist is known, not by his technical processes, but by his intellectual processes; and the essence of the scientific method of thought is that it precedes in an orderly manner toward the establishment of truth.

*The Care of the Patient*

The Care of the Patient (p. 21)

Harvard University Press. Cambridge, Massachusetts, USA. 1928

**Pearse, A. S.** 1877–1956

No biographical data available

Science is always right because it seeks only for truth, and truth hurts no one. Unfortunately, scientists are not always right.

Adventure, Romance and Science

*Science*, Volume 58, Number 1492, 3 August, 1923 (p. 78)

**Perelman, S. J. (Sidney Joseph)** 1904–79

American comic writer

I guess I'm just an old mad scientist at bottom. Give me an underground laboratory, half a dozen atom smashers, and a beautiful girl in a diaphanous veil waiting to be turned into a chimpanzee, and I care not who writes the nation's laws.

*Crazy Like a Fox*

Captain Future, Block that Kick (p. 210)

Random House, Inc. New York, New York, USA. 1944

**Perry, Ralph Barton** 1876–1957

American philosopher and educator

Every scientist, furthermore, is himself a “self-made man.” He owes his strictly scientific attainment to his own efforts and to the endowment with which nature has equipped him. Whatever elevation in life he reaches is not an artificial status created by institutions or traditions, but a measure of solid achievement. The scientist, therefore, respects man for what he is rather than for his class or station.

*The Present Conflict of Ideals: A Study of the Philosophical Background of the World War*

Chapter IX (pp. 101–102)

Longmans, Green. New York, New York, USA. 1918

**Planck, Max** 1858–1947

German physicist

Since the real world, in the absolute sense of the word, is independent of individual personalities, and in fact of all human intelligence, every discovery made by an individual acquires a completely universal significance. This gives the inquirer, wrestling with his problem in quiet seclusion, the assurance that every discovery will win the unhesitating recognition of all experts throughout the entire world, and in this feeling of the importance of his work lies his happiness. It compensates him fully for many a sacrifice which he must make in his daily life.

*Scientific Autobiography and Other Papers*

The Meaning and Limits of Exact Science, Part III (p. 103)

Philosophical Library. New York, New York, USA. 1949

**Poincaré, Henri** 1854–1912

French mathematician and theoretical astronomer

The scientist should not waste his time on the achievement of practical goals. He will surely reach such goals, but this must be marginal with respect to his principal

activity. He should never forget that the specific object he is investigating is part of a whole which is infinitely greater than this object; love for this whole and an interest in it should constitute the only motives of the actions of the scientist. Science has marvelous applications, but a science in which applications were the only aim would no longer be science but only a kitchen.

In Stefan Amsterdamski

*Between History and Method*

Chapter V. Crisis of the Modern Ideal (p. 94)

Kluwer Academic Publishers. Dordrecht, Netherlands. 1992

**Polanyi, Michael** 1891–1976

Hungarian-born English scientist, philosopher, and social scientist

There are differences in rank between scientists, but these are of secondary importance: everyone's position is sovereign. The Republic of Science realizes the ideal of Rousseau, of a community in which each is an equal partner in a General Will. But this identification makes the General Will appear in a new light. It is seen to differ from any other will by the fact that it cannot alter its own purpose. It is shared by the whole community because each member of it shares in a joint task.

*Science, Faith and Society*

Background and Prospect (pp. 16–17)

The University of Chicago Press. Chicago, Illinois. 1964

**Popper, Karl R.** 1902–94

Austrian/British philosopher of science

...what is to be called “science” and who is to be called a “scientist” must always remain a matter of convention or decision.

*The Logic of Scientific Discovery*

Part I, Chapter II, Section 10 (p. 52)

Basic Books, Inc. New York, New York, USA. 1959

**Price, Derek John de Solla** 1922–83

English science historian and information scientist

The ivory tower of the artist can be a one-man cell; that of the scientist must contain many apartments so that he may be housed among his peers.

*Little Science, Big Science*

Chapter 3 (p. 69)

Columbia University Press. New York, New York, USA. 1963

**Primas, Hans** 1928–

German spectroscopy scientist

The legendary image of a scientist as a humble searcher for truth is more and more replaced by the image of a scientist as a well-paid brilliant expert, speaking an unintelligible professional jargon, highly competent in a narrowly defined domain but arrogantly extending his competence into fields in which he knows nothing, and neglecting the fact that science is only a small subdivision of human knowledge.

*Chemistry, Quantum Mechanics and Reductionism: Perspectives in Theoretical Chemistry*  
Chapter 1, Section 1.1 (p. 24)  
Springer-Verlag, Berlin, West Germany. 1981

**Prusiner, Stanley B.** 1942–  
American neurologist

Being a scientist is a special privilege: for it brings the opportunity to be creative, the passionate quest for answers to nature's most precious secrets, and the warm friendships of many valued colleagues. Collaborations extend far beyond the scientific achievements, no matter how great the accomplishments might be, the rich friendships which have no national borders are treasured even more.

*Les Prix Nobel. The Nobel Prizes in 1997*  
Nobel banquet speech for award received in 1997  
Nobel Foundation. Stockholm, Sweden. 1998

**Mark O'Brian**  
Fictional character

I'm a scientist also, Dr. Holden. I know the value of the cold light of reason. But I also know the deep shadows that light can cast. The shadows that can blind men to truth.

*The Curse of the Demon*  
Film (1957)

**Ramon y Cajal, Santiago** 1852–1934  
Spanish neuropathologist

It is certainly true that the scientist's fame is not as great as the playwright or artist's glamour and popularity. People live in a world of sentiment, and it is asking too much of them to provide warmth and support for the heroes of reason.

*Advice for a Young Investigator*  
Chapter 3 (p. 44)  
The MIT Press. Cambridge, Massachusetts, USA. 1999

**Richards, Ivor Armstrong** 1893–1979  
English literary critic

We believe a scientist because he can substantiate his remarks, not because he is eloquent and forcible in his enunciation. In fact, we distrust him when he seems to be influencing us by his manner.

*Science and Poetry*  
Chapter II (p. 24)  
Kegan Paul, Trench, Trubner & Company Ltd. London, England. 1926

**Richet, Charles** 1850–1935  
French physiologist

Probably, what characterizes all scientists, whatever they may be, archivists, mathematicians, chemists, astronomers, physicists, is that they do not seek to reach a practical conclusion by their work.

*The Natural History of a Savant*

Chapter I (p. 4)  
J.M. Dent & Sons Ltd. London, England. 1927

**Roe, Anne**  
No biographical data available

Science is the creation of scientists and every scientific advance bears somehow the mark of the man who made it. . . . The creative scientist, whatever his field, is very deeply involved emotionally and personally in his work, and. . . he himself is his own most essential tool.

*The Psychology of the Scientist*  
*Science*, Volume 134, Number 3477, August 18, 1961 (p. 456)

**Roszak, Theodore** 1933–  
American social critic

. . . science rests itself not in the world the scientist beholds at any particular point in time, but in his mode of viewing that world. A man is a scientist not because of what he sees, but because of how he sees it.

*The Making of a Counter Culture: Reflections on the Technocratic Society and Its Youthful Opposition*  
Chapter VII (p. 213)  
Doubleday & Company, Inc., Garden City, New York, USA; 1969

**Rothman, Milton A.** 1919–2001  
American nuclear physicist and science writer

It makes no sense to complain about a lack of imagination in scientists when their failure is simply that they cannot make the world be what it is not, and they cannot make the world do what it cannot do.

*The Science Gap: Dispelling the Myths and Understanding the Reality of Science*  
Prometheus Books. Buffalo, New York, USA. 1992

**Rothman, Tony** 1953–  
American cosmologist

The makers of *Revenge of the Nerds* know, as do millions who have seen it, that all scientists when young are undernourished sociophobics who relate best to a computer terminal through coke bottle eyeglasses after midnight in a basement laboratory.

*A Physicist on Madison Avenue*  
Chapter 1 (p. 3)  
Princeton University Press. Princeton, New Jersey, USA. 1991

**Ruse, Michael** 1940–  
English historian and philosopher of science

A scientist should not cheat or falsify data or quote out of context or do any other thing that is intellectually dishonest. Of course, as always, some individuals fail; but science as a whole disapproves of such action. Indeed, when transgressors are detected, they are usually expelled from the community.

Response to the Commentary: Pro Justice  
*Science, Technology and Human Values*, Volume 7, Number 41, Fall 1982 (p. 74)

**Rushton, John Phillippe** 1941–

British/Canadian experimental psychology professor and writer

Research has suggested that scientists differ from non-scientists by exhibiting a high level of curiosity, especially at an early age, and in demonstrating a relatively low level of sociability. Scientists also tend to be shy, lonely, slow in social development, and indifferent to close personal relationships, group activities and politics. Other attributes include skepticism, preoccupation, reliability, and a facility for precise, critical thinking. Generally they are cognitively complex, independent, non-conformist, assertive, and unlikely to suppress thoughts and impulses; and, like successful entrepreneurs, eminent scientists are also calculated risk-takers.

*Journal of Social and Biological Structure*, Volume 11, 1980 (p. 140)

**Sabin, Albert** 1906–93

American medical researcher

No matter how good you are, you cannot be a scientist unless you learn to live with frustration.

I Only Ask for a Place to Work

*New Scientist*, Volume 57, Number 835, 1 March 1973 (pp. 491–492)

**Sagan, Carl** 1934–96

American astronomer and author

[Scientists] are capable of self-deception. ... All sorts of socially abhorrent doctrines have at one time or another been supported by scientists, well-known scientists, famous brand-name scientists. And, of course, politicians. And respected religious leaders. Slavery, for instance, or the Nazi brand of racism. Scientists make mistakes, theologians make mistakes, everybody makes mistakes...

*Contact: A Novel* (p. 167)

Simon & Schuster. New York, New York, USA. 1985

Who discovered that CFCs [chlorofluorocarbons] posed a threat to the ozone layer? Was it the principal manufacturer, the DuPont Corporation, exercising corporate responsibility? Was it the Environmental Protection Agency protecting us? Was it the Department of Defense defending us? No, it was two ivory-tower, white-coated university scientists working on something else — Sherwood Rowland and Mario Molina of the University of California, Irvine. Not even an Ivy League university. No one instructed them to look for dangers to the environment. They were pursuing fundamental research. They were scientists following their own interests. Their names should be known to every schoolchild.

*Pale Blue Dot: A Vision of the Human Future in Space*

Chapter 14 (pp. 221–222)

Random House, Inc. New York, New York, USA. 1994

**Seifriz, William** 1888–1955

Professor of Botany

It is no matter of chance that the greatest scientists of all time, Copernicus, Newton, Kepler, Linnaeus, Faraday, Darwin, and Maxwell, were men of noble character, modest, straightforward, and full of human sympathy. The great French mathematician, Henri Poincaré, stated that the chief end of life is contemplation, not action.

A New University

*Science*, Volume 120, Number 3107, 16 July 1954 (pp. 88–89)

**Selye, Hans** 1907–82

Austrian-American endocrinologist

Scientists are probably the most individualistic bunch of people in the world. All of us are and should be essentially different; there would be no purpose in trying to fit us into a common mold.

*From Dream to Discovery: On Being a Scientist*

Introduction

McGraw-Hill Book Company, Inc. New York, New York, USA. 1950

**Sheckley, Robert** 1928–2005

American writer

The scientist, who examines everything, should look at himself. Tentatively I would define him as a discovery-producing animal whose products fall from him as naturally and as thoughtlessly as a hen produces eggs. Like the hen, he is largely indifferent to the use made of his products. Scientists are mostly not in favor of atom bombs, of course, and hens presumably dislike omelets; but both are realists and go along with the conditions they find.

In Damon Knight

*The Observers* (p. 189)

Tor. New York, New York, USA. 1988

**Shelley, Mary** 1797–1851

English Romantic writer

The modern masters of chemistry promise very little; they know that metals cannot be transmuted and that the elixir of life is a chimera. But these philosophers, whose hands seem only made to dabble in dirt, and their eyes to pore over the microscope or crucible, have indeed performed miracles. They penetrate into the recesses of nature and show how she works in her hiding places. They ascend into the heavens; they have discovered how the blood circulates, and the nature of the air we breathe. They have acquired new and almost unlimited powers; they can command the thunders of heaven, mime the earthquake, and even mock the invisible world with its own shadows.

*Frankenstein*

Chapter 3 (p. 39)

Running Press. Philadelphia, Pennsylvania, USA. 1990

**Sigurdsson, Haraldur** 1939–

Icelandic volcanologist

The scientist or scholar is the keeper of the flame of knowledge and he or she also advances our knowledge in a chosen field of research, but should also be responsible for linking the present with the past and maintaining a record of the history of knowledge in that field.

*Melting the Earth*

Preface (p. viii)

Oxford University Press, Inc. New York, New York, USA. 1999

### Silver, Brian L.

Israeli professor of physical chemistry

Scientists come in many colors, of which the green of jealousy and the purple of rage are fashionable shades.

*The Ascent of Science*

Preface (p. xiii)

Solomon Press Book. New York, New York, USA. 1998

### Sinsheimer, Robert L. 1920–

American molecular biologist

I am a scientist, a member of a most fortunate species. The lives of most people are filled with ephemera. All too soon, much of humanity becomes mired in the tepid tracks of their short lives. But a happy few of us have the privilege to live with and explore the eternal.

*The Strands of a Life: The Science of DNA and the Art of Education*

The University of California Press. Berkeley, California, USA. 1994

### Smith, Homer W.

Renal physiologist

A scientist is one who, when he does not know the answer, is rigorously disciplined to speak up and say so unashamedly; which is the essential feature by which modern science is distinguished from primitive superstition, which knew all the answers except how to say, “I do not know.”

*From Fish to Philosopher*

Chapter XIII (p. 210)

Little, Brown & Company. Boston, Massachusetts, USA. 1953

### Snow, Charles Percy 1905–80

English novelist and scientist

I believe the intellectual life of the whole of western society is increasingly being split into two polar groups. ... Literary intellectuals at one pole — at the other scientists, and as the most representative, the physical scientists. Between the two a gulf of mutual incomprehension — sometimes (particularly among the young) hostility and dislike, but most of all lack of understanding.

*The Two Cultures: And a Second Look*

Chapter I (p. 3)

At The University Press. Cambridge, England. 1964

### Spallanzani, Lazzaro 1729–99

Italian natural philosopher

If I set out to prove something, I am no real scientist — I have to learn to follow where the facts lead me — I have to learn to whip my prejudices.

In R. Coope

*The Quiet Art* (p. 4)

E.S. Livingstone Ltd. Edinburgh, Scotland. 1952

### Standen, Anthony 1907–??

Anglo-American science writer

When a white-robed scientist, momentarily looking away from his microscope or cyclotron, makes some pronouncement for the general public, he may not be understood but at least he is certain to be believed. Scientists are exalted beings who stand at the very top-most pinnacle of popular prestige, for they have the monopoly of the formula “It has been scientifically proved.”, which appears to rule out all possibility of disagreement. Thus the world is divided into Scientists, who practice the art of infallibility, and non-scientists, sometimes contemptuously called “laymen”, who are taken in by it.

*Science Is a Sacred Cow*

Chapter I (p. 13)

E.P. Dutton & Company. New York, New York, USA. 1950

We are having wool pulled over our eyes if we let ourselves be convinced that scientists as a group are anything special in the way of brains. They are very ordinary professional men, and all they know is their own trade, just like all other professional men.

*Science Is a Sacred Cow*

E.P. Dutton & Company. New York, New York, USA. 1950

### Szent-Györgyi, Albert 1893–1986

Hungarian-born American biochemist

The real scientist...is ready to bear privations and, if need be, starvation rather than let anyone dictate to him which direction his work must take.

Science Needs Freedom

*World Digest*, Volume 55, 1943

In the great struggle between ignorance, distrust and brutality on one side, knowledge, understanding and peace on the other the scientist must stand fearlessly on the side of the latter, strengthening link between man and man and preaching that the only effective weapon of self-defense is good-will to others.

*Les Prix Nobel. The Nobel Prizes in 1937*

Nobel banquet speech for award received in 1937

Nobel Foundation. Stockholm, Sweden. 1938

Good science is made by good scientists, poor science by poor scientists, and the most brilliant project is worthless in the hands of a poor scientist, while, conversely, a good scientist has a good chance to come up with something valuable whatever he touches, because “*die Welt rundet sich im Tautropfen*” (Goethe), which could be translated

by saying that all the great laws of nature are represented in a drop of dew.

Research Grants

*Perspectives in Biology and Medicine*, Volume 18, Number 1, Autumn 1974 (p. 41)

**Tait, Peter Guthrie** 1831–1901

Scottish physicist and mathematician

The life of a genuine scientific man is, from the common point of view, almost always uneventful. Engrossed with the paramount claims of inquiries raised high above the domain of mere human passions, he is with difficulty tempted to come forward in political discussions, even when they are of national importance; and he regards with surprise, if not with contempt, the petty municipal squabbles in which local notoriety is so eagerly sought.

In W.J. Miller (ed.)

*Scientific Papers: By W.J. Macquorn Rankine*

Memoir (p. ix)

Charles Griffin & Company. London, England. 1881

To [the scientific man] the discovery of a new law of nature, or even of a new experimental fact, or the invention of a novel mathematical method, no matter who has been the first to reach it, is an event of an order altogether different from, and higher than, those which are so profusely chronicled in the newspapers.

In W.J. Miller (ed.)

*Scientific Papers: By W.J. Macquorn Rankine*

Memoir (p. ix)

Charles Griffin & Company. London, England. 1881

**Taylor, Alfred Maurice** 1903–76

English optics physicist

The three attributes of commitment, imagination, and tenacity seem to be the distinguishing marks of greatness in a scientist. A scientist must be as utterly committed to the pursuit of truth as the most dedicated of mystics; he must be as pertinacious in his struggle to advance into uncharted country as the most indomitable pioneers; his imagination must be as vivid and ingenious as a poet's or a painter's. Like other men, for success he needs ability and some luck; his imagination may be sterile if he has not a flair for asking the right questions, questions to which nature's reply is intelligible and significant.

*Imagination and the Growth of Science*

Chapter I (p. 5)

Schocken Books. New York, New York, USA. 1970

**Thomas, Lewis** 1913–93

American physician and biologist

Scientists at work have the look of creatures following genetic instructions; they seem to be under the influence of a deeply placed human instinct. They are, despite their efforts at dignity, rather like young animals engaged in savage play. When they are near to an answer their hair

stands on end, they sweat, they are awash in their own adrenaline. To grab the answer, and grab it first, is for them a more powerful drive than feeding or breeding or protecting themselves against the elements.

*The Lives of a Cell: Notes of a Biology Watcher*

Natural Science (p. 101)

The Viking Press. New York, New York, USA. 1974

**Thorne, Kip S.** 1940–

American theoretical physicist

I do not aspire to a historian's standards of completeness, accuracy, or impartiality.

*Black Holes and Time Warps: Einstein's Outrageous Legacy*

Preface (p. 19)

W.W. Norton & Company, Inc. New York, New York, USA. 1994

**Ting, Samuel C. C.** 1936–

Chinese-American physicist

...scientists must go beyond what is taught in the textbook, and they must think independently. Also, they cannot hesitate to ask questions, even when their view may be unpopular.

In Janet Nomura Morey and Wendy Dunn

*Famous Asian Americans*

Samuel C.C. Ting (p. 143)

**Tolkien, J. R. R.** 1892–1973

English philologist, writer, and professor

Merry stared at the lines of marching stones: they were worn and black; some were leaning, some were fallen, some were cracked or broken; they looked like rows of old and hungry teeth. He wondered what they could be...

*The Lord of the Rings*

The Return of the King, Book Three (p. 795)

HarperCollins Publishers. 2004

**Toulmin, Stephen** 1922–

English philosopher

No doubt, a scientist isn't necessarily penalized for being a complex, versatile, eccentric individual with lots of extra-scientific interests. But it certainly doesn't help him a bit.

*Civilization and Science in Conflict or Collaboration*

CIBA Foundation Symposium

Associated Scientific Publishers. Amsterdam, Netherlands. 1972

**Twain, Mark (Samuel Langhorne**

**Clemens)** 1835–1910

American author and humorist

That is their way, those plagues, those scientists — peg, peg, peg — dig, dig, dig — plod, plod, plod. I wish I could catch a cargo of them for my place; it would be an economy. Yes, for years, you see. They never give up. Patience, hope, faith, perseverance; it is the way of all the breed.

*Europe and Elsewhere*

Sold to Satan

Harper &amp; Brothers. New York, New York, USA. 1923

That is the way of the scientist. He will spend thirty years in building up a mountain range of facts with the intent to prove a certain theory; then he is so happy in his achievement that as a rule he overlooks the main chief fact of all — that his accumulation proves an entirely different thing.

*What Is Man? and Other Essays, 1917 ed*

The Bee Essay (p. 283)

Harper &amp; Brothers. New York, New York, USA. 1917

Such is professional jealousy; a scientist will never show any kindness for a theory which he did not start himself. There is no feeling of brotherhood among these people. Indeed, they always resent it when I call them brother. To show how far their ungenerosity can carry them, I will state that I offered to let Prof. H — y publish my great theory as his own discovery; I even begged him to do it; I even proposed to print it myself as his theory. Instead of thanking me, he said that if I tried to fasten that theory on him he would sue me for slander.

*A Tramp Abroad*

Chapter XLIII (p. 321)

Penguin Books. New York, New York, USA. 1997

Scientists have odious manners, except when you prop up their theory; then you can borrow money of them.

*What Is Man? and Other Essays, 1917 ed*

The Bee Essay (p. 283)

Harper &amp; Brothers. New York, New York, USA. 1917

**University of California, Berkeley**

Scientists work better when they're all mixed-up.

Scientists are the poets of today.

*Artspace*, Volume 9, Fall 1985 (p. 30)**Vernadskii, Vladimir Ivanovich** 1863–1945

Russian mineralogist

Scientists are in fact imaginers and artists; they are not free with their ideas; they can work well and hard only at what their thinking accepts and what their feelings are drawn to. Ideas alternate; impossible and often mad ones appear; they swarm and whirl, fuse and sparkle. Scientists live among these ideas and work for them.

Foreword (p. vii)

Cornell University Press. Ithaca, New York, USA. 1950

**Wald, George** 1906–97

American biologist and biochemist

A scientist should be the happiest of men. Not that science isn't serious; but as everyone knows, being serious is one way of being happy...

*Les Prix Nobel. The Nobel Prizes in 1967*

Nobel banquet speech for award received in 1967

Nobel Foundation. Stockholm, Sweden. 1968

A scientist is in a sense a learned small boy. There is something of the scientist in every small boy. Others must outgrow it. Scientists can stay that way all their lives.

*Les Prix Nobel. The Nobel Prizes in 1967*

Nobel banquet speech for award received in 1967

Nobel Foundation. Stockholm, Sweden. 1968

**Walshe, Sir F. M. R.**

No biographical data available

It often is the cloistered scientist who knows least about men who is apt to pontificate most loudly and confidently about Man. Beware of him when he assures you that he knows all the answers about us, for too often his is one of those Peter Pans of science that every generation produces: a clever boy who hasn't grown up.

*Canadian Medical Association Journal*, Volume 67, 1962 (p. 395)**Weil, Simone** 1909–43

French philosopher and mystic

On could count on one's fingers the number of scientists throughout the world with a general idea of the history and development of their particular science: there is none who is really competent as regards sciences other than his own. As science forms an indivisible whole, one may say that there are no longer, strictly speaking, scientists, but only drudges doing scientific work.

Translated by Arthur Wills and John Petrie

*Oppression and Liberty*

Prospects (p. 13)

Routledge &amp; Kegan Paul Ltd. London, England. 1958

**Weinberg, Alvin Martin** 1915–2006

American physicist

The traditional working scientists are at the bottom rung — each one knows almost everything about almost nothing; as one progresses toward the top of the ladder, the subject matter becomes more abstract until one finally reaches the philosopher at the top who knows almost nothing about almost everything.

*Reflections on Big Science*

Chapter II (p. 47)

The MIT Press. Cambridge, Massachusetts, USA. 1967

**Weiss, Paul A.** 1898–1989  
Austrian-born American biologist

Just like the painter, who steps periodically back from his canvas to gain perspective, so the laboratory scientist emerges above ground occasionally from the deep shaft of his specialized preoccupation to survey the cohesive, meaningful fabric developing from innumerable component tributary threads, spun underground much like his own. Only by such shuttling back and forth between the worm's eye view of detail and the bird's eye view of the total scenery of science can the scientist gain and retain a sense of perspective and proportions.

Austrian-American physicist

Science has become adult; I am not sure whether scientists have.

In Anthony R. Michaelis & Hugh Harvey eds.  
*Scientists in Search of Their Conscience*  
Conclusion (p. 193)  
Springer-Verlag, Berlin, Germany. 1973

**Wells, H. G. (Herbert George)** 1866–1946  
English novelist, historian, and sociologist

What there is great about [scientists] is an annoyance to their fellow scientists and a mystery to the general public, and what is not is evident. There is no doubt about what is not great, no race of men have such obvious little-nesses.... And withal the reef of science that these little "scientists" built and are yet building is so wonderful, so portentous, so full of mysterious half-shapen promises for the mighty future of man! They do not seem to realise the things they are doing.

*Seven Famous Novels by H.G. Wells*  
The Food of the Gods  
Chapter I. (p. 533)  
Alfred A. Knopf. New York, New York, USA. 1934

No doubt long ago even Mr. Bensington, when...he consecrated his life to the alkaloids and their kindred compounds had some inkling of the vision — more than an inkling. Without some great inspiration, for such glories and positions only as a "scientist" may expect, what young man would have given his life to this work, as young men do? No, they must have seen the glory, they must have had the vision, but so near that it has blinded them, mercifully, so that for the rest of their lives they can hold the light of knowledge in comfort — that we may see.

*Seven Famous Novels by H.G. Wells*  
The Food of the Gods  
Chapter I. (p. 533)  
Alfred A. Knopf. New York, New York, USA. 1934

**Weyl, Hermann** 1885–1955  
German mathematician

One of the great differences between the scientist and the impatient philosopher is that the scientist bides his time. We must await the further development of science, perhaps for centuries, perhaps for thousands of years, before we can design a true and detailed picture of the interwoven texture of matter, life and soul. But the old classical determinism of Hobbes and LaPlace need not oppress us any longer.

Lecture II (p. 55)  
Yale University Press. New Haven, Connecticut, USA. 1932

**Whewell, William** 1794–1866  
English philosopher and historian

We need very much a name to describe a cultivator of science in general. I should incline to call him a Scientist. Thus we might say, that as an Artist is a Musician, Painter, or Poet, a Scientist is a Mathematician, Physicist, or Naturalist.

*Novum Organum Renovatum*  
Aphorisms Concerning the Language of Science  
John W. Parker & Son. London, England. 1858

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

Many a scientist has patiently designed experiments for the purpose of substantiating his belief that animal operations are motivated by no purpose...Scientists animated by the purpose of proving that they are purposeless constitute an interesting subject for study.

*The Function of Reason*  
Chapter I (p. 12)  
Beacon Press. Boston, Massachusetts, USA. 1929

A few generations ago the clergy, or to speak more accurately, large sections of the clergy were the standing examples of obscurantism. Today their place has been taken by scientists.

*The Function of Reason*  
Chapter I (pp. 34–35)  
Beacon Press. Boston, Massachusetts, USA. 1929

**Whitney, Willis Rodney** 1868–1958  
American chemical and electrical engineer

We humans want better minds, broader horizons, and greater understanding. Scientists everywhere are at work in their respective fields searching for new truths to improve the process by which our minds, our horizons, our powers, and our outlooks grow.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1924*  
The Vacuum — There's Something in It (p. 193)  
Government Printing Office. Washington, D.C. 1925

**Wiener, Norbert** 1894–1964

American mathematician

...the first industrial revolution, ... of the “dark satanic mills,” [devalued] the human arm by the competition of machinery. ... The modern industrial revolution is similarly bound to devalue the human brain...in its simpler and more routine decisions. Of course, just as the skilled carpenter, the skilled mechanic, the skilled dressmaker have in some degree survived the first industrial revolution, so the skilled scientist and the skilled administrator may survive the second. However, ... the average human being of mediocre attainment or less has nothing to sell that is worth anyone’s money to buy.

*Cybernetics: Or Control and Communication in the Animal and the Machine*

Introduction (pp. 27–28)

The MIT Press. Cambridge, Massachusetts, USA. 1961

...the degradation of the position of the scientist as independent worker and thinker to that of a morally irresponsible stooge in a science-factory has proceeded even more rapidly and devastatingly than I had expected.

A Rebellious Scientist after Two Years

*Bulletin of the Atomic Scientists*, Volume 4, Number 11, November 4, 1948 (p. 338)

[A scientist] must live in a world where science is a career, where he has companions with whom to talk, and in contact with whom he may bring out his own self. It may be true that 95 percent of the really original scientific work is done by less than 5 per cent of the professional scientists, but the greater part of it would not be done at all if the other 95 per cent were not there and did not create a high level of public scientific opinion.

Science, Monkeys, and Mozart

*Saturday Review of Literature*, November 20, 1956

**Wikström, J. E.**

Former Swedish Minister of Education and Cultural Affairs

...Scientists are like children playing with fire without heeding the disastrous consequences of their games or, even worse, “they are like incendiaries which completely destroy property.”

In Torgny Segerstedt

*Ethics for Science Policy: Proceedings of a Nobel Symposium Held at Södergarn, Sweden, 20–25 August 197*

Opening Remarks (p. xiii)

Pergamon Press. Oxford, England. 1979

**Wilder, Thornton** 1897–1975

American playwright and novelist

Then there is technology, the excess of scientists who learn how to make things much faster than we can learn what to do with them.

In Flora Lewis

Thornton Wilder at 65 Looks Ahead – And Back

*New York Times Magazine*, 15 April 1962 (p. 28)

**Wilf, Alexander**

No biographical data available

A scientist can not be measured quantitatively by the number of degrees or the accumulation of information. A true scientist should have a measure of courage to correct error and seek truth — no matter how painful. The alternative is more painful. To build error upon error is to drift into dogmas, metaphysics, science fiction, and mythology.

*Origin and Destiny of the Moral Species* (p. 9)

A.S. Barnes. South Brunswick, New Jersey, USA. 1969

**Wilson, Edward O.** 1929–

American biologist and author

The ideal scientist thinks like a poet and works like a bookkeeper, and I suppose that if gifted with a full quiver, he also writes like a journalist. As a painter stands before canvas or a novelist recycles old emotion with eyes closed, he searches his imagination for subjects as much as for conclusions, for questions as much as for answers.

Scientists, Scholars, Knaves and Fools

*American Scientist*, Volume 86, January–February 1998 (p. 7)

Scientists, I believe, are divided into two categories: those who do science in order to be a success in life, and those who become a success in life in order to do science.

*Naturalist*

The Forms of Things Unknown (p. 210)

Island Press. Washington, D.C. 1994

Scientists do not discover in order to know, they know in order to discover.

*Biophilia*

The Poetic Species (p. 58)

Harvard University Press. Cambridge, Massachusetts. 1984

Scientists live and die by their ability to depart from the tribe and go out into an unknown terrain and bring back, like a carcass newly speared, some new discovery or fact or theoretical insight and lay it in front of the tribe; and then they all gather and dance around it. Symposia are held in the National Academy of Sciences and prizes are given [The symposia are] fundamentally no [different] from a paleolithic camp site celebration.

In Edward Lueders

*Writing Natural History: Dialogues with Authors*

Dialogue One (p. 25)

University of Utah Press. Salt Lake City, Utah, USA. 1989

The scientist is not a very romantic figure. ... [His work] amounts to a sort of puttering: trying to find a good problem, thinking up experiments, mulling over data, arguing in the corridor with colleagues, and making guesses with the aid of coffee and chewed pencils until finally something — usually small — is uncovered. Then comes a flurry of letters and telephone calls, followed by the writing of a short paper in an acceptable jargon. The great majority of scientists are hard-working, pleasant

journeymen, not excessively bright, making their way through a congenial occupation.

*Biophilia*

The Poetic Species (p. 59)

Harvard University Press. Cambridge, Massachusetts. 1984

**Wittgenstein, Ludwig Josef Johann** 1889–1951

Austrian-born English philosopher

What a curious attitude scientists have — : “We still don’t know that; but it is knowable and it is only a matter of time before we get to know it!” As if that went without saying.

Translated by Peter Winch

*Culture and Value* (p. 40e)

The University of Chicago Press. Chicago, Illinois, USA. 1980

**Wolpert, Lewis** 1929–

British embryologist

Both Newton and Darwin were driven by the data and were forced to recognize that they couldn’t explain everything. It may be a characteristic of great scientists to know what to accept and what to leave out.

*The Unnatural Nature of Science*

Chapter 4 (p. 72)

Harvard University Press. Cambridge, Massachusetts, USA. 1992

**Young John Zachary** 1907–97

English zoologist

One of the characteristics of scientists and their work, curiously enough, is a certain confusion, almost a muddle. This may seem strange if you have come to think of science with a big S as being all clearness and light.

*Doubt and Certainty in Science: A Biologist’s Reflections on the Brain*

First Lecture (p. 1)

Oxford University Press, Inc. Oxford, England. 1960

...in his laboratory he does not spend much of his time thinking about scientific laws at all. He is busy with other things, trying to get some piece of apparatus to work, finding a way of measuring something more exactly. ... You may feel that he hardly knows himself what law he is trying to prove. He is continually observing, but his work is a feeling out into the dark, as it were. When pressed to say what he is doing he may present a picture of uncertainty or doubt, even of actual confusion.

*Doubt and Certainty in Science: A Biologist’s Reflections on the Brain*

First Lecture (p. 2)

Oxford University Press, Inc. Oxford, England. 1960

## SCRIBBLES

**Ulam, Stanislaw** 1909–84

Polish-born mathematician

It is still an unending source of surprise for me how a few scribbles on a blackboard or on a piece of paper can change the course of human affairs.

Prologue (p. 5)

Charles Scribner’s Sons. New York, New York, USA. 1976

## SEA

**Beebe, William** 1877–1962

American ornithologist

When once it has been seen, it will remain forever the most vivid memory in life, solely because of its cosmic chill and isolation, the eternal and absolute darkness and the indescribable beauty of its inhabitants.

*Half Mile Down*

Chapter 9 (p. 175)

Harcourt, Brace & Company. New York, New York, USA. 1934

**Berger, John** 1926–

English art critic, novelist, painter and author

The sun is low in the sky and the sea is calm. Like a mirror as they say. Only it is not like a mirror. The waves which are scarcely waves, for they come and go in many different directions and their rising and falling is barely perceptible, are made up of innumerable tiny surfaces at variegating angles to one another — of these surfaces those which reflect the sunlight straight into one’s eyes, sparkle with a white light during the instant before their angle, relative to oneself and the sun, shifts and they merge again into the blackish blue of the rest of the sea.

G

Chapter 10 (p. 310)

The Viking Press. New York, New York, USA. 1972

[A]s the sea recedes towards the sun, the number of sparkling surfaces multiplies until the sea indeed looks somewhat like a silver mirror. But...it is not still. Its granular surface is in continual agitation. The further away the ricocheting grains, of which the mass become silver and the visibly distinct minority a dark leaden colour, the greater is their apparent speed. Uninterruptedly receding towards the sun, the transmission of its reflexions becoming ever faster, the sea neither requires nor recognizes any limit. The horizon is the straight bottom edge of a curtain arbitrarily and suddenly lowered on a performance.

G

Chapter 10 (p. 310)

The Viking Press. New York, New York, USA. 1972

**Beston, Henry** 1888–1968

American writer

Listen to the surf, really lend it to your ears, and you will hear in it a world of sounds: hollow boomings and heavy roarings, great watery tumbings and trappings, long hissing seethes, sharp, rifle-shot reports, splashes, whispers, the grinding undertone of stones, and sometimes vocal sounds that might be the half-heard talk of people in the sea.

*The Outermost House*  
Chapter III (p. 43)  
Rinehart & Company. New York, New York, USA. 1928

**Bradley, Jr., John Hodgdon** 1898–1962  
American geologist

Like the turbulent crowd at the rim of an arena, the sea surrounds the lands and awaits the issue of combat. Fretfully the colossus chafes at the margins of battlefields it is eager but impotent to enter.

*Autobiography of Earth*  
Chapter VI (p. 168)  
Coward-McCann, Inc. New York, New York, USA. 1935

**Broch, Hermann** 1886–1951  
Austrian writer

Those who live by the sea can hardly form a single thought of which the sea would not be part.

*The Spell*  
Forward (p. 3)  
North Point Press. San Francisco, California, USA. 1989

**Carson, Rachel** 1907–64  
American marine biologist and author

There we see the parts of the plan fall into place: the water receiving from earth and air the simple materials, storing them up until the gathering energy of the spring sun wakens the sleeping plants to a burst of dynamic activity, hungry swarms of planktonic animals growing and multiplying upon the abundant plants, and themselves falling prey to the shoals of fish; all, in the end, to be redissolved into their component substances when the inexorable laws of the sea demand it.

*Undersea*  
*Atlantic Monthly*, September 1937 (p. 29)

It is a curious situation that the sea, from which life first arose should now be threatened by the activities of one form of that life. But the sea, though changed in a sinister way, will continue to exist; the threat is rather to life itself.

*The Sea Around Us*  
Preface (p. xiii)  
Oxford University Press, Inc. New York, New York, USA. 1989

**Cousteau, Jacques-Yves** 1910–77  
French naval officer and ocean explorer

The sea is not a bargain basement.  
*The Living Sea*  
Chapter Seventeen (p. 313)  
Harper & Row, Publishers. New York, New York, USA. 1963

From the vast expanses of its surface waters to its beaches and marshes and tidelands and mangrove swamps, from its many thousands of miles of rocky shores to its deepest and darkest abyss, the sea produces life in fantastic abundance.

*The Ocean World of Jacques Cousteau: The Adventure of Life*  
Chapter I (p. 10)  
The World Publishing Company. New York, New York, USA. 1973

The sea is the universal sewer.  
House Committee on Science and Astronautics  
28 January 1971

**Cromie, William J.** 1930–  
American journalist and writer

In the open ocean one sees no green meadows or fertile prairies. Away from the rim of seaweed around the coasts one is aware of only an endless confusion of seemingly barren waves. Yet there are lush pastures in the open sea.

*The Living World of the Sea*  
Chapter 3 (p. 37)  
Prentice-Hall, Inc. Englewood Cliffs, New Jersey, USA. 1966

The sea gave birth to life and without its waters no living thing could ever survive on Earth. Now man, rightly or wrongly, is looking to the ocean as his ultimate safety valve, the answer to his problems of food, waste and even space. But the sea has no mind and the sea is not inexhaustible.

*The Living World of the Sea*  
Chapter 15 (p. 332)  
Prentice-Hall, Inc. Englewood Cliffs, New Jersey, USA. 1966

**Diolé, Philippe**  
French archaeologist

Between the air and the water a steel blade quivers. What people call the surface is also a ceiling: a mirror from above, watered silk from beneath. Nothing is torn on the way through. Only a few bubbles mark the diver's channel and behind him the frontier soon closes. But once the threshold is crossed, one can turn back slowly and look up: that dazzling screen is the border between two worlds, as clear to one as to the other. Behind the looking glass the sky is made of water.

Translated by Alan Ross

O Sea! Thou saline and undulant aqueous solution of halides, carbonates, phosphates, sulfates, and other soluble inorganic compounds! What mysterious colloids are dispersed within thy slightly alkaline bosom? What silent and unseen reactions vibrate in dynamic equilibrium, constantly destroyed and instantly restored, among thy unnumbered oscillating molecules? What uncounted myriads of restless ions migrate perpetually throughout thy tentatively estimated volume? What unguessed phenomena of catalysis, metathesis, and osmosis transpire in thy secret fluid profundities under excessively increased pressure? What cosmic precipitates descend in countless kilograms upon thy argillaceous, gelatinous, siliceous, diatomaceous, and totally unilluminated bottom? In short, most magnificent reservoir, what is thy flow-chart and complete analysis?

A Chemist Addresses the Ocean  
*Industrial and Engineering Chemistry: News Edition*, Volume 8, Number 22, September 20, 1930

**Ledbetter, B. G.**  
No biographical data available

The sea often appears tranquil and serene, but its permanent hills and valleys illustrate that in fact it is restless, always in motion, mixing and flowing in ceaseless search for peace.

Sea Level Isn't Level — It's Hilly  
*Science Digest*, Volume 68, Number 1, July 1970 (p. 72)

**Lindbergh, Anne Marrow** 1906–2001  
American aviator and writer

The sea does not reward those who are too anxious, too greedy, or too anxious. To dig for treasures shows not only impatience and greed, but a lack of faith. Patience, patience, patience, is what the sea teaches. Patience and faith. One should lie empty, open, choiceless as a beach-waiting for a gift from the sea.

*Gift from the Sea*  
Part I, The Beach (p. 17)  
Pantheon Books, Inc. New York, New York, USA. 1955

**Longfellow, Henry Wadsworth** 1807–82

American poet

Learn the secret of the sea?

Only those who brave its dangers

Comprehend its mystery.

*The Seaside and the Fireside*

The Secret of the Sea

Ticknor, Reed &amp; Fields. Boston, Massachusetts, USA. 1850

...my soul is full of longing for the secrets of the sea.

And the heart of the great ocean

Sends a thrilling pulse through me.

*The Seaside and the Fireside*

The Secret of the Sea

Ticknor, Reed &amp; Fields. Boston, Massachusetts, USA. 1850

**Lowell, James Russell** 1819–91

American poet, critic, and editor

The sea was meant to be looked at from shore, as mountains are from the plain.

*Fireside Travels*

At Sea (p. 155)

Ticknor &amp; Fields. Boston, Massachusetts, USA. 1864

There is nothing so desperately monotonous as the sea, and I no longer wonder at the cruelty of pirates.

*Fireside Travels*

At Sea (p. 157)

Ticknor &amp; Fields. Boston, Massachusetts, USA. 1864

**Lubbock, Sir John** 1834–1913

English banker, author, and scientist

The Sea is outside time. A thousand, ten thousand, or a million years ago it must have looked just as it does now, and as it will ages hence.

*The Beauties of Nature and the Wonders of the World We Live In*

Chapter IX (p. 340)

Macmillan &amp; Company New York, New York, USA. 1893

**Maury, Matthew Fontaine** 1806–73

American hydrographer and naval officer

The sea...has its offices and duties to perform;... its currents, and so, too, its inhabitants; consequently, he who undertakes to study its phenomena must cease to regard it as a waste of waters. He must look upon it as a part of that exquisite machinery by which the harmonies of nature are preserved, and then he will begin to perceive the developments of order and the evidence of design; these make it a most beautiful and interesting subject for contemplation.

In J.A. Colin Nicol

*The Biology of Marine Animals* (2<sup>nd</sup> edition)

Chapter I (p. 1)

Sir Isaac Pitman &amp; Sons Ltd. London, England. 1967

Could the waters of the Atlantic be drawn off so as to expose to view this great sea-gash...it would present a scene most rugged, grand, and imposing. The very ribs

of the solid earth, with the foundations of the sea would be brought to light, and we should have presented to us at one view, in the empty cradle of the ocean, "a thousand fearful wrecks," with that dreadful array of dead men's skulls, great anchors, heaps of pearl and inestimable stones, which, in the poet's eye, lie scattered in the bottom of the sea, making it hideous with sights of ugly death.

*The Physical Geography of the Sea*

Chapter XII (p. 208)

Harper &amp; Brothers. New York, New York, USA. 1855

Harmonious in their action, the air and sea are obedient to law and subject to order in all their movements; when we consult them in the performance of their offices, they teach us lessons concerning the wonders of the deep, the mysteries of the sky, the greatness, and the wisdom, and goodness of the Creator.

*The Physical Geography of the Sea*

Chapter III (p. 96)

Harper &amp; Brothers. New York, New York, USA. 1855

Astronomers had measured the volumes and weighed the masses of the most distant planets, and increased thereby the stock of human knowledge. Was it creditable to the age that the depths of the sea should remain in the category of an unsolved problem?... Indeed, telescopes of huge proportions and of vast space-penetrating powers had been erected here and there by the munificence of individuals, and attempts made with them to gauge the heavens and sound out the regions of space. Could it be more difficult to sound out the sea than to gauge the blue ether and fathom the vault of the sky?

*The Physical Geography of the Sea*

Chapter XI (pp. 201, 202)

Harper &amp; Brothers. New York, New York, USA. 1855

**Melville, Herman** 1819–91

American novelist

There is, one knows not what sweet mystery about the sea, whose gently awful stirrings seem to speak of some hidden soul beneath.

In *Great Books of the Western World* (Volume 48)*Moby Dick*

Chapter 107 (p. 354)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Miller, Robert C.**

No biographical data available

We can no longer think of the sea as a vast, illimitable dumping ground for products that man does not know what to do with on land. It must instead be recognized as our greatest natural resource, and one to be conserved in every possible way. So regarded, and wisely used, it can be a permanent source of raw materials, of food, of life-giving water, and of recreation, enjoyment and adventure.

*The Sea*

Chapter 15 (p. 311)

Random House, Inc. New York, New York, USA. 1966

**Muir, John** 1838–1914

American naturalist

...both ocean and sky are already about as rosy as possible; the one with stars, the other with dulse, and foam, and wild light.

*Steep Trails*

Chapter I (p. 3)

Norman S. Berg, Publisher. Dunwoody, Georgia, USA. 1970

**Plattes, Gabriel**

No biographical data available

...the Sea never resting, but perpetually winning land in one place and losing in another, doth show what may be done in length of time by a continual operation not subject unto ceasing or intermission.

*Discovery of Subterranean Treasure*

Chapter XI (p. 22)

Printed by Robert Bell. Philadelphia, Pennsylvania, USA. 1784

**Sandburg, Carl** 1878–1967

American poet and biographer

The sea folds away from you like a mystery. You can look and look at it and mystery never leaves it.

*Remembrance Rock* (p. 75)

Harcourt, Brace &amp; World, Inc. New York, New York, USA. 1948

**Sexton, Anne** 1928–74

American poet

The sea is mother-death and she is a mighty female, the one who wins, the one who sucks us all up.

In Howard Moss (ed.)

*The Poet's Story*

A Small Journal (p. 219)

19 November, 1971

The Macmillan Company. New York, New York, USA. 1973

**Stevenson, Robert Louis** 1850–94

Scottish essayist and poet

“And what is the sea?” asked Will.

“The sea!” cried the miller. “Lord help us all, it is the greatest thing God made! ... There are great fish in it five times bigger than a bull, and one old serpent as long as our river and as old as all the world, with whiskers like a man, and a crown of silver on her head.

*Strange Case of Dr. Jekyll and Mr. Hyde. The Merry Men and Other Tales and Fables*

Will O' the Wisp

The Plain and the Stars (pp. 77–78)

Current Literature Publishing Company New York, New York, USA.

1912

**The Bible**

Others there are who go to sea in ships, plying their trade on the wide ocean. These have seen what the Lord has done, his marvelous actions in the deep.

*The Revised English Bible*

Psalms 107:23–24

Oxford University Press, Inc. Oxford, England. 1989

**Maury, Matthew Fontaine** 1806–73

American hydrographer and naval officer

We never tire of the sea; it is a laboratory in which delightful processes are continually being wrought out for our admiration and use. Its flora and its fauna, its waves and its tides, its salts and its currents, all afford grand and profitable themes of study and thought.

*The Physical Geography of the Sea, and Its Meteorology*

Chapter XVIII, section 740 (p. 394)

Sampson Low, Son &amp; Marston. London, England. 1868

**Young, Louise B.**

Science writer

Throughout the planet's history the sea has carved and molded the character of the land. She has scooped out steep escarpments and deep gorges, impressed the rhythm of her movement on the hard rocky shores of the continents. But still she is ever yielding. Beneath her smiling, enigmatic face there are grave depths where silence and darkness dwell always. Here in these hidden places she watches impassively while the earth tears itself violently apart and makes itself anew. Quietly giving way to make room for the growing landmass, she receives and holds this newborn substance in her soft embrace.

*The Blue Planet*

Chapter 2 (p. 46)

Little, Brown &amp; Company. Boston, Massachusetts, USA. 1983

**Verne, Jules** 1828–1905

French novelist

Yes; I do love it! The sea is everything. It covers seven-tenths of the terrestrial globe. Its breath is pure and healthy. It is an immense desert, where man is never lonely, for he feels life stirring on all sides. The sea is only the embodiment of a supernatural and wonderful existence. ...

Translated by Mercier Lewis

*Twenty Thousand Leagues Under the Sea*

Part One, Chapter 10 (p. 58)

Nelson Doubleday, Inc. Garden City, New York, USA. 1900

Nature manifests herself in it by her three kingdoms, mineral, vegetable, and animal. The sea is the vast reservoir of Nature. The globe began with sea, so to speak; and who knows if it will not end with it? In it is supreme tranquility. The sea does not belong to despots. Upon its surface men can still exercise unjust laws, fight, tear

one another to pieces, and be carried away with terrestrial horrors. But at thirty feet below its level, their reign ceases, their influence is quenched, and their power disappears.

Translated by Mercier Lewis

*Twenty Thousand Leagues Under the Sea*

Part One, Chapter 10 (p. 58)

Nelson Doubleday, Inc. Garden City, New York, USA. 1900

## SEA SERPENT

### 19<sup>th</sup> Century Naval Song

Strange things come up to look at us —  
The masters of the deep.

*The Modern Traveler*

The Return of the Admiral (p. 107)

Printed for T. Lowndes. London, England. 1776–1777

### Pontoppidan, Erich 1698–1754

Bishop in Bergen, Norway

Amongst the many great things which are in the ocean, and concealed from our eyes or only presented to our view for a few minutes, is the Kraken. This creature is the largest and most surprising of all the animal creation, and consequently well deserves such an account as the nature of the thing, according to the Creator's wise ordinance, will admit of.

*Natural History of Norway*

### Tennyson, Alfred (Lord) 1809–92

English poet

Below the thunders of the upper deep;  
Far, far beneath in the abysmal sea,  
His ancient, dreamless, uninvaded sleep  
The Kraken sleepeth...

*Alfred Tennyson's Poetical Works*

The Kraken

Oxford University Press, Inc. London, England. 1953

## SEA SICKNESS

### Charlie Chan

Fictional character

Mention of food more painful than surgeon's knife without anesthetic.

*Charlie Chan on Broadway*

Film (1937)

### Jerome, Jerome K. 1859–1927

English author

It is a curious fact, but nobody ever is seasick — on land. At sea, you come across plenty of people very bad indeed, whole boat-loads of them; but I never met a man yet, on land, who had ever known at all what it was to be seasick.

*Three Men in a Boat, to Say Nothing of the Dog!*

Chapter 1 (p. 10)

Time Incorporated. New York, New York, USA. 1964

## SEASIDE

### Spencer, Herbert 1820–1903

English social philosopher

Whoever at the seaside has not had a microscope and aquarium, has yet to learn what the highest pleasures of the seaside are.

*Education: Intellectual, Moral, and Physical*

Chapter I (pp. 72–73)

A.L. Fowle. New York, New York, USA. 1860

## SEDIMENT

### Geikie, Sir Archibald 1835–1924

English geologist

I know no recent observation in physical geography more calculated to impress deeply the imagination than the testimony of this presumably meteoric iron from the most distant abysses of the ocean. To be told that mud gathers on the floor of these abysses at an extremely slow rate conveys but a vague notion of the tardiness of the process. But to learn that it gathers so slowly, that the very star-dust which falls from outer space forms an appreciable part of it, brings home to us, as hardly anything else could do, the idea of undisturbed and excessively slow accumulation.

*The Harvard Classics*

Scientific Papers: Physiology, Medicine, Surgery, Geology: With Introductions and Notes

Geographical Evolution (p. 347)

P.F. Collier & Son. New York, New York, USA. 1910

### Kipling, Rudyard 1865–1936

British writer and poet

There is no sound, no echo of sound, in the deserts of the deep,

Or the great grey level plains of ooze where the shell-burred cables creep.

Here is the womb of the world — here on the tie-ribs of earth

Words, and the words of men, flicker and flutter and beat.

*Rudyard Kipling's Verse*

The Deep Sea Cables

Hodder & Stroughton. London, England. 1919

## SEED

### Baker, Henry 1698–1774

English naturalist

Each seed includes a Plant: that Plant, again,

Has other Seeds, which other Plants contain:  
 Those other Plants have All their Seeds, and Those  
 More Plants again, successively, inclose.  
 Thus ev'ry single Berry that we find,  
 Has, really, in itself whole Forests of its Kind.  
 The Discovery of a Perfect Plant in Semine  
*Philosophical Transactions of the Royal Society of London*, Number  
 457, 1740 (p. 451)

A ripe seed falling to the earth is in the condition of the ovum of an animal getting loose from its ovary and dropping into the uterus, and, to go on with the analogy, the juices of the earth swell and extend the vessels of the seed as the juices of the uterus do those of the ovum, till the seminal leaves unfold and perform the office of a placenta to the infant included plant; which, imbibing suitable and sufficient moisture, gradually extends its parts, fixes its own root, shoots above the ground, and may be said to be born.

The Discovery of a Perfect Plant in Semine  
*Philosophical Transactions of the Royal Society of London*, Number  
 457, 1740 (p. 451)

**de la Mare, Walter** 1873–1956  
 English poet and novelist

The seeds I sowed —  
 For weeks unseen —  
 Have pushed up pygmy  
 Shoots of green;  
 So frail you'd think  
 The tiniest stone  
 Would never let  
 A Glimpse be shown.

*Rhymes and Verses: Collected Poems for Children*  
 Seeds

H. Holt & Company. New York, New York, USA. 1947

**Muir, John** 1838–1914  
 American naturalist

The dispersal of Juniper seeds is effected by the plum and cherry plan of living birds at the cost of their board, and thus obtaining the use of a pair of extra good wings.

*Our National Parks*  
 Chapter IV (p. 121)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

Sequoia seeds have flat wings and glint and glance in their flight like a boy's kite.

*Our National Parks*  
 Chapter IV (p. 121)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

**Ruskin, John** 1819–1900  
 English writer, art critic and social reformer

The reason for seeds is that flowers may be; not the reason of flowers that seeds may be.

*The Queen of the Air Being a Study of the Greek Myths of Cloud and Storm*

II, Section 60, Athena in the Earth (p. 67)  
 Smith, Elder & Company London, England. 1869

**Tabb, John Banister** 1845–1909  
 American poet

Bearing a life unseen,  
 Thou lingerest between  
 A flower withdrawn,  
 And — what thou ne'er shalt see —  
 A blossom yet to be  
 When thou art gone.

*The Poetry of Father Tabb*

Nature — Miscellaneous, The Seed  
 Dodd, Mead. New York, New York, USA. 1928

**Wilde, Oscar** 1854–1900  
 Irish wit, poet, and dramatist

To look at a thing is very different from seeing a thing.

*The Decay of Lying* (p. 19)

Sunflower Company. New York, New York, USA. 1902

## SEISMOGRAPH

**Oldham, Richard Dixon** 1858–1936  
 English geologist

... the seismograph, recording the unfelt motion of distant earthquakes, enables us to see up to a certain point into the Earth and determine its nature with as great a certainty, as if we could drive a tunnel through it and take samples of the matter passed through.

Geological Society, The Constitution of the Interior of the Earth as Revealed by Earthquakes

*Quarterly Journal*, Volume 62, August 1906 (p. 456)

## SEISMOGRAPHER

**Karch, Carroll S.**  
 No biographical data available

Seismographer: Shudder bug.

*Quote, the Weekly Digest*  
 August 4, 1968 (p. 97)

## SEISMOGRAPHY

**Richter, Charles** 1900–85  
 American seismologist

Since my first attachment to seismology, I have had the horror of [earthquake] predictions and of predictors. Journalists and the general public rush to any suggestion of earthquake prediction like hogs toward a full trough.

Annals of the New York Academy of Sciences, Ethical and Scientific Issues Posed by Human Uses of Molecular Genetics, Announcements  
*Bulletin American Seismological Society*, Volume 67, Number 4, August 1977 (p. 1246)

**Schrödinger, Erwin** 1887–1961  
Austrian theoretical physicist

...there are natural sciences which have obviously no practical bearing at all on the life of the human society: astrophysics, cosmology, and some branches of geophysics. Take, for instance, seismology. We know enough about earthquakes to know that there is very little chance of foretelling them, in the way of warning people to leave their houses, as we warn trawlers to return when a storm is drawing near.

*Science and Humanism: Physics in Our Time*  
The Spiritual Bearing of Science on Life (pp. 2–3)  
At The University Press. Cambridge, England. 1952

## SELF

**Pascal, Blaise** 1623–62  
French mathematician and physicist

When I consider the small span of my life absorbed in the eternity of all time, or the small part of space which I can touch or see engulfed by the infinite immensity of spaces that I know not and that know me not, I am frightened and astonished to see myself here instead of there...now instead of then.

In Rudy Rucker  
*Infinity and the Mind*  
Chapter 1 (p. 2)  
Princeton University Press. Princeton, New Jersey, USA. 1995

## SELF-AWARENESS

**Nuland, Sherwin B.** 1930–  
American surgeon and teacher of bioethics and medicine

Self-awareness has never been the strong suit of those who choose to become doctors. When so much fuel is readily available for stoking the fires of ego, there is little inclination to apply it in raising the candlepower of the searching light that might illumine the inner man or woman.

The Uncertain Art: The Whole Law of Medicine  
*The American Scholar*, Volume 67, Number 3, Summer, 1998

## SELF-DELUSION

**Sylvester, James Joseph** 1814–97  
English mathematician

It is difficult to estimate the lengths to which human self-delusion can be carried.

*The Collected Mathematical Papers of James Joseph Sylvester*  
(Volume 3)  
A Lady's Fan on Parallel Motion, and on an Orthogonal Web of Jointed Rods (p. 82)  
University Press. Cambridge, England. 1904–1912

## SEMINAR

**Djerassi, Carl** 1929–  
Austrian-born American organic chemist and educator

Seminar is not yet officially a transitive verb. Still, most graduate students in any large research-oriented university have at times felt themselves more the helpless objects of a seminar than its active participants. Seminared into numbness describes that feeling of oversaturation.

*Cantor's Dilemma 1989*  
Chapter 14 (p. 122)  
Penguin Group Inc. New York, New York, USA.

## SENSES

**Einstein, Albert** 1879–1955  
German-born physicist

We can only see the universe by the impressions of our senses reflecting indirectly the things of reality.

*Cosmic Religion, with Other Opinions and Aphorisms*  
On Science (p. 101)  
Covici-Fiede. New York, New York, USA. 1931

## SERIES

**Abel, Niels Henrik** 1802–29  
Norwegian mathematician

With the exception of the geometric series, there does not exist in all of mathematics a single infinite series whose sum has been determined rigorously.

In Eli Maor  
*To Infinity and Beyond: A Cultural History of the Infinite* (p. 29)  
Birkhäuser. Boston, Massachusetts, USA. 1987

The divergent series are the invention of the devil, and it is a shame to base on them any demonstration whatsoever. By using them, one may draw any conclusion he pleases and that is why these series have produced so many fallacies and so many paradoxes...

In Eli Maor  
*To Infinity and Beyond: A Cultural History of the Infinite* (p. 33)  
Birkhäuser. Boston, Massachusetts, USA. 1987

## SET THEORY

**Armstrong, David Malet** 1926–  
Australian philosopher

Set theory is peculiarly important...because mathematics can be exhibited as involving nothing but set-theoretical propositions about set-theoretical entities.

*A Combinatorial Theory of Possibility*  
Part I, Chapter 1, Section II (p. 10)  
Cambridge University Press. Cambridge, England. 1989

Philosophers have not found it easy to sort out sets...

*A Combinatorial Theory of Possibility*  
Part II, Chapter 9, Section iv (p. 133)  
Cambridge University Press. Cambridge, England. 1989

**Barwise, Jon** 1942–2000  
American mathematician, philosopher, and logician

**Moss, Lawrence**  
No biographical data available

Set theory has a dual role in mathematics. In pure mathematics, it is the place where questions about infinity are studied. Although this is a fascinating study of permanent interest, it does not account for the importance of set theory in applied areas. There the importance stems from the fact that set theory provides an incredibly versatile toolbox for building mathematical models of various phenomena.

*Vicious Circles: On the Mathematics of Non-Wellfounded Phenomena*  
Chapter 1 (p. 5)  
Center for the Study of Language and Information. Stanford, California, US. 1996

**Byron, George Gordon, 6<sup>th</sup> Baron Byron** 1788–1824

English Romantic poet and satirist

For a “mixt company” implies, that, save  
Yourself and friends, and half a hundred more,  
Whom you may bow to without looking grave,  
The rest are but a vulgar set.

*The Complete Poetical Works of Byron*  
Beppo: A Venetian Story  
Houghton Mifflin. Boston, Massachusetts, USA. 1933

**Cleveland, Richard**

No biographical data available

We can’t be assured of a full set,  
Or even a reasonable dull set.  
It wouldn’t be clear  
That there’s any set here,  
Unless we assume there’s a null set.

The Axioms of Set Theory  
*Mathematics Magazine*, Volume 52, Number 4, September 1979  
(pp. 256–257)

**Poincaré, Henri** 1854–1912

French mathematician and theoretical astronomer

Later generations will regard *Mengenlehre* as a disease from which one has recovered.

In Jeremy Gray  
Did Poincaré Say “Set Theory Is a Disease”?  
*The Mathematical Intelligencer*, Volume 13, Number 1, Winter 1991  
(p. 19)

**Quine, Willard Van Orman** 1908–2000

American logician and philosopher

To say that mathematics in general has been reduced to logic hints at some new firming up of mathematics at its

foundations. This is misleading. Set theory is less settled and more conjectural than the classical mathematical superstructure than can be founded upon it.

*Elementary Logic*  
Chapter IV, Section 48 (p. 125)  
Harper & Row, Publishers. New York, New York, USA. 1965

## SEX

**Heinlein, Robert A.** 1907–88

American science fiction writer

Sex is a learned art, as much so as ice skating or tight wire walking or fancy diving; it is not instinct. Oh, two animals couple by instinct, but it takes intelligence and patient willingness to turn copulation into a high and lively art.

*Time Enough for Love*  
Chapter XII (p. 314)  
G.P. Putnam’s Sons. New York, New York, USA. 1973

**Jung, Carl G.** 1875–1961

Swiss psychiatrist and founder of analytical psychology

Our civilization bothers us less with food tabus than with sexual restrictions. In modern society these have come to play the role of an injured deity that is getting its own back in every sphere of human activity, including psychology, where it would reduce “spirit” to sexual repression.

Translated by R.F.C. Hull  
*Flying Saucers: A Modern Myth of Things Seen in the Skies*  
Chapter Two (p. 45)  
Routledge & Kegan Paul. London, England. 1959

**Stoppard, Tom** 1937–

Czech-born English playwright

Lending one’s bicycle is a form of safe sex, possibly the safest there is.

*Arcadia*  
Act I, Scene Four (p. 51)  
Faber & Faber Ltd. London, England. 1993

**Watts, Alan Wilson** 1915–73

American philosopher

Perhaps one of the subordinate reasons why sex is a matter for laughter is that there is something ridiculous in “doing” it with set purpose and deliberation...

*Nature, Man, and Woman*  
Part II, Chapter 8 (p. 201)  
Vintage Books. New York, New York, USA. 1970

## SEXUALITY

**Linnaeus, Carl (von Linné)** 1707–78

Swedish botanist and explorer

The organs of generation, which in the animal kingdom are by nature generally removed from sight, in the

vegetable kingdom are exposed to the eyes of all, and that when their nuptials are celebrated, it is wonderful what delight they afford to the spectator by their most beautiful colors and delicious odors.

*Oeconomia naturae*

*Amoenitates Academicæ*, Volume 2, 1752 (p. 16)

By what mechanisms are the sexuality of the worker naked mole rats suppressed, and how does the queen exert her supremacy? Research at London's Institute of Zoology by Chris Faulkes and others shows surprisingly that the main mechanism are not pheromonal (chemical) as we might immediately suppose. Mysteriously, it is the queenly presence, her behavior, that keeps the rest so firmly switched off; which one of the British researcher has called the "Thatcher effect."

*New Scientist*, Volume 131, No 1780, 3 August 1991 (p. 43)

## SHADOW

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

In the world of physics we watch a shadowgraph performance of familiar life. The shadow of my elbow rests on the shadow-tables as the shadow-ink flows over the shadow-paper...The frank realisation that physical science is concerned with a world of shadows is one of the most significant of recent advances.

*The Nature of the Physical World*

Introduction (p. xiv, xv)

The Macmillan Company. New York, New York, USA. 1930

## SHAPES

**Lovecraft, H. P. (Howard Phillips)** 1890–1937

American writer of fantasy, horror, and science fiction

They told him that every figure of space is but the result of the intersection by a plane of some corresponding figure of one or more dimension — as a square is cut from a cube, or a circle from a sphere.

Through the Gates of the Silver Key

*Weird Tales*, Chapter 5, Volume 24, Number 1, July 1934

## SHELL

**Glaessner, M. F.** 1906–1989

Australian paleontologist and professor of pre-Cambrian life

The naive assumption that shells are acquired because they protect soft bodies seems influenced by anthropocentric thinking: man uses shields for protection from aggressors.

*The Dawn of Animal Life: A Biohistorical Study*

Chapter 4.6 (p. 174)

Cambridge University Press. Cambridge, England. 1984

**Hooke, Robert** 1635–1703

English physicist

I...humbly conceive (tho' some possibly may think there is too much notice taken of such a trivial thing as a rotten Shell, yet) that Men do generally too much...pass over without regard these Records of Antiquity which Nature have left as Monuments and Hieroglyphick Characters of preceding Transactions in the like duration or Transactions of the Body of the Earth, which are infinitely more evident and certain tokens than any thing of Antiquity that can be fetched out of Coins or Medals...since the best of those ways may be counterfeited or made by Art and Design...

*The Posthumous Works of Robert Hooke*

A Discourse on Earthquakes (p. 411)

S. Smith & B. Walford. London, England. 1705

**Hsi, Chu (Zhu Xi)** 1130–1200

Chinese philosopher

I have seen on high mountains conchs and oyster shells, often embedded in the rocks. These rocks in ancient times were earth or mud, and the conchs and oysters lived in water. Subsequently everything that was at the bottom came to be at the top, and what was originally soft became solid and hard. One should meditate deeply on such matters, for these facts can be verified.

In Joseph Needham

*Science and Civilisation in China* (Volume 3)

Chapter 23 (p. 598 ff)

The University Press. Cambridge, England. 1954

**Tennyson, Alfred (Lord)** 1809–92

English poet

See what a lovely shell,  
Small and pure as pearl,  
Lying close to my foot,  
Frail, but a work divine,  
Made so fairly well,  
With delicate spire and whorl,  
How exquisitely minute,  
A miracle of design!

*Alfred Tennyson's Poetical Works*

Maud, Part II, Section II, Stanza I

Oxford University Press, Inc. London, England. 1953

## SHORE

**Carson, Rachel** 1907–64

American marine biologist and author

...the shore has a dual nature, changing with the swing of the tides, belonging now to the land, now to the sea. On the ebb tide it knows the harsh extremes of the land world, being exposed to heat and cold, to wind, to rain and drying sun. On the flood side it is a water world, returning briefly to the relative stability of the open sea.

*The Edge of the Sea*  
Chapter I (p. 1)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1955

The shore is an ancient world, for as long as there has been an earth and sea there has been this place of the meeting of land and water.

*The Edge of the Sea*  
Chapter I (p. 2)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1955

**Emerson, Ralph Waldo** 1803–82  
American lecturer, poet, and essayist

I with my hammer pounding evermore  
The rocky coast, smite Andes into dust,  
Strewing by beds and, in another age,  
Rebuild a continent for better men.

*The Complete Works of Ralph Waldo Emerson* (Volume 9)  
Seashore (p. 243)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

## SICKNESS

**Barnes, Djuna** 1892–1982  
American author

No man needs curing of his individual sickness; his universal malady is what he should look to.

*Nightwood*  
La Somnambule (p. 41)  
Harcourt, Brace & Company. New York, New York, USA. 1937

**Burton, Robert** 1577–1640  
English clergyman and scholar

Sickness is the mother of modesty, putteth us in minde of our mortality; and, when wee are in the full careere of worldly pompe and jollity, she pulleth us by the eare, and maketh us knowe ourselves.

*The Anatomy of Melancholy* (Volume 1)  
Part II, Sect. III, Memb. IV, Subsect. 6 (p. 399)  
AMS Press, Inc. New York, New York, USA. 1973

**Chrysostom, John** ?–407  
Christian bishop and preacher

Princes, Masters, Parents, Magistrates, Judges, Friends, Eniemies, faire or foule meanes cannot containe, us; but a little sickness will correct and amend us.

In Robert Burton  
*The Anatomy of Melancholy* (Volume 2)  
Part II, Sect. III, Memb. II (p. 157)  
AMS Press, Inc. New York, New York, USA. 1973

**Donne, John** 1572–1631  
English poet and divine

And can there be worse sickness, than to know that we are never well, nor can be so?

*An Anatomy of the World*  
The First Anniversary, l. 93–4

Presented for presentation to members of the Roxburghe Club. Cambridge, England. 1951

**Dunlap, William** 1766–1839  
American dramatist and theatrical manager

He seems a little under the weather, somehow; and yet he's not sick.

*The Memoirs of a Water Drinker* (Volume 1)  
Chapter VIII (p. 80)  
Saunders & Otley. New York, New York, USA. 1837

**Dunne, Finley Peter** 1867–1936  
American journalist and humorist

...whin a man's sick, he's sick an' nawthin' will cure him or annything will.

*Mr. Dooley Says*  
Drugs (p. 97)  
Charles Scribner's Sons. New York, New York, USA. 1910

**Emerson, Ralph Waldo** 1803–82  
American lecturer, poet, and essayist

It is dainty to be sick, if you have leisure and convenience for it.

*Journals of Ralph Waldo Emerson 1838–1841*  
February 7, 1839 (p. 162)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

For sickness is a cannibal which eats up all the life and youth it can lay hold of, and absorbs its own sons and daughters.

*Ralph Waldo Emerson: Essays and Lectures*  
The Conduct of Life  
Consideration by the Way (p. 1088)  
The Library of America. New York, New York, USA. 1983

**Fuller, Thomas** 1608–61  
English clergyman and author

He who was never sick dies the first fit.

In Thomas Fuller  
*Gnomologia: Adages and Proverbs, Wise Sentences, and Witty Sayings. Ancient and Modern, Foreign and British*  
Proverb  
Printed for Thomas & Joseph Allman. London, England. 1816

**Harris, Joel Chandler** 1848–1908  
American journalist

You know w'at de jay-bird say ter der squinch-owls!, "I'm sickly but sassy."

*The Complete Tales of Uncle Remus*  
Chapter 50 (p. 311)  
Houghton Mifflin Company. New York, New York, USA. 1955

**Halsted, Anna Roosevelt** 1906–75  
Daughter of Franklin and Eleanor Roosevelt

There are so many indignities to being sick and helpless...

In Joseph P. Lash  
*Eleanor: The Years Alone*

To The End, Courage, Letter to David Gray, November 1, 1962 (p. 327)  
W.W. Norton & Company, Inc. New York, New York, USA. 1972

**Hood, Thomas** 1799–1845

English poet and editor

I'm sick of gruel, and the dietics,  
I'm sick of pills, and sicker of emetics,  
I'm sick of pulse, tardiness or quickness,  
I'm sick of blood, its thinness or its thickness, —  
In short, within a word, I'm sick of sickness!

*The Poetical Works of Thomas Campbell* (Volume 2)

Fragment (p. 424)

Wiley & Long. New York, New York, USA. 1836

**Jonson, Ben** 1573?–1637

English dramatist and poet

Take heed, sickness, what you do,  
I shall fear you'll surfeit too.  
Live not we, as all they stalls,  
Spittles, pest-house, Hospitals,  
Scarce will take our present store?

In Robert Bell

*The Poems of Robert Greene, Christopher Marlowe, and Ben Jonson*

The Forest, Viii. To Sickness

Hurst & Company. New York, New York, USA. ca. 1880

**Johnson, Samuel** 1696–1772

English critic, biographer, and essayist

... what can a sick man say, but that he is sick?

*Boswell's "Life of Samuel Johnson"*

August, 1784 (p. 1347)

Oxford University Press, Inc. Oxford, England. 1965

**Lamb, Charles** 1775–1834

English essayist and critic

How sickness enlarges the dimensions of a man's self to himself! he is his own exclusive object. Supreme selfishness is inculcated upon him as his only duty.

*Essays of Elia*

The Convalescent (p. 330)

Henry Altemus. Philadelphia, Pennsylvania, USA. 1893

If there be a regal solitude, it is a sick-bed. How the patient lords it there; what caprices he acts without control! how kinglike he sways his pillow-tumbling, and tossing, and shifting, and lowering, and thumping, and flattening, and molding it, to the ever-varying requisitions of his throbbing temples.

*Essays of Elia*

The Convalescent (p. 329)

Henry Altemus. Philadelphia, Pennsylvania, USA. 1893

**Luttrell, Henry** 1765–1851

English wit and writer

Come, come, for trifles never stick:  
Most servants have a failing;  
Yours, it is true, are sometimes sick,  
But mine are always ale-ing.

In William Davenport Adams

*English Epigrams*

On Ailing and Ale-ing, dclxxiii

G. Routledge. London, England. 1878

**Milton, John** 1608–74

English poet

...all maladies

Of ghastly Spasm, or racking torture, qualms  
Of heart-sick Agonie, all feverous kinds,  
Convulsions, Epilepsies, fierce Catarrhs,  
Intestine Stone and Ulcer, Colic pangs,  
Dropsies and Asthmas, and Joint-racking Rheums.

In *Great Books of the Western World* (Volume 32)

*Paradise Lost*

Book XI, l. 480–485

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**O'Connor, Flannery** 1926–64

American author

I have never been anywhere but sick. In a sense sickness is a place, more instructive than a long trip to Europe, and it's always a place where there's no company, where nobody can follow. Sickness before death is a very appropriate thing and I think those who don't have it miss one of God's mercies.

*The Habit of Being*

Part II (p. 163)

Farrar, Straus & Giroux, Inc. New York, New York, USA. 1988

**Roy, Gabrielle** 1909–83

Canadian author

The Christian Scientists held that it was not God Who wanted sickness, but man who [put] himself in the way of suffering. If this were the case, though, wouldn't we all die in perfect health?

Translated by Harry Binsse

*The Cashier*

Chapter 3 (pp. 36–37)

Harcourt, Brace. New York, New York, USA. 1955

**Shakespeare, William** 1564–1616

English poet, playwright, and actor

This sickness doth infect

The very life-blood of our enterprise.

In *Great Books of the Western World* (Volume 26)

*The Plays and Sonnets of William Shakespeare* (Volume 1)

The First Part of King Henry the Fourth

Act IV, Scene i, l. 28–29

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

What, is Brutus sick,

And will he steal out of his wholesome bed,

To dare the vile contagion of the night?

In *Great Books of the Western World* (Volume 26)

*The Plays and Sonnets of William Shakespeare* (Volume 1)

Julius Caesar

Act II, Scene i, l. 263–265

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Sickness is catching.

In *Great Books of the Western World* (Volume 26)  
*The Plays and Sonnets of William Shakespeare* (Volume 1)  
 A Midsummer-Night's Dream  
 Act I, Scene i, l. 186  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

My long sickness

Of health and living now begins to mend,

And nothing brings me all things.

In *Great Books of the Western World* (Volume 27)  
*The Plays and Sonnets of William Shakespeare* (Volume 2)  
 Timon of Athens  
 Act V, Scene i, l. 189–191  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Sterne, Laurence** 1713–68

English novelist and humorist

I am sick as a horse...

*The Life and Opinions of Tristram Shandy, Gentleman, and A Sentimental Journey Through France and Italy* (Volume 2)  
 Book VII, Chapter II (p. 66)  
 Macmillan & Company Ltd. London, England. 1900

**Swift, Jonathan** 1667–1745

Irish-born English writer

Poor Miss, she's sick as a Cushion...

*The Prose Works of Jonathan Swift* (Volume the Fourth)  
 Polite Conversation, Dialogue I (p. 153)  
 Printed at the Shakespeare Head Press. Oxford, England. 1939–1968

**Weingarten, Violet**

Writer

Sickness, like sex, demands a private room, or at the very least, a discrete curtain around the ward bed.

*Intimations of Mortality* (p. 3)  
 Alfred A. Knopf. New York, New York, USA. 1978

**Wolfe, Thomas** 1900–38

American novelist

Most of the time we think we're sick it's all in the mind.

*Look Homeward, Angel*  
 Part I, Chapter I (p. 11)  
 Simon & Schuster. New York, New York, USA. 1995

## SIGHT

**Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

I refer to the use of dioptric media which correct the diminished refracting power of the humors of the eye, — in other words, spectacles. I don't use them. All I ask is a large, fair type, a strong daylight or gas-light, and one yard of focal distance, and my eyes are as good as ever.

*The Autocrat of the Breakfast-Table*  
 Chapter VII (p. 173)  
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1891

**Marsh, George Perkins** 1801–82

American scholar, author, and statesman

Sight is a faculty; seeing, an art.

*The Earth as Modified by Human Action: A New Edition of Man and Nature*

Chapter I (p. 12)  
 Scribner, Armstrong & Company. New York, New York, USA. 1874

**Plato** 428 BCE–347 BCE

Greek philosopher

The sight in my opinion is the source of the greatest benefit to us, for had we never seen the stars, and the sun, and the heaven, none of the words which we have spoken about the universe would ever have been uttered. But now the sight of day and night, and the months and the revolutions of the years, have created number, and have given us a conception of time, and the power of enquiring about the nature of the universe...

In *Great Books of the Western World* (Volume 7)  
*Timaeus*  
 Section 40 (p. 455)  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

## SIMPLICITY

**Bailey, Janet**

No biographical data available

It is an article of faith in physics that the world's bewildering mask of complexity hides an ultimate simplicity.

*The Good Servant: Making Peace with the Bomb at Los Alamos*  
 Chapter 4 (p. 110)  
 Simon & Schuster. New York, New York, USA. 1995

**Chandrasekhar, Subrahmanyan** 1910–95

Indian-born American astrophysicist

The simple is the seal of the true and beauty is the splendor of truth.

*Nobel Lectures, Physics 1981–1990*  
 Nobel lecture for award received in 1983  
 On Stars, Their Evolution and Their Stability (p. 163)  
 World Scientific Publishing Company. Singapore. 1993

**Coleridge, Samuel Taylor** 1772–1834

English lyrical poet, critic, and philosopher

We study the complex in the simple; and only from the intuition of the lower can we safely proceed to the intellection of the higher degrees. The only danger lies in the leaping from low to high, with the neglect of the intervening gradations.

*Hints Towards the Formation of a More Comprehensive Theory of Life*  
 Physiology of Life (p. 41)  
 Lea & Blanchard. Philadelphia, Pennsylvania, USA, 1848

**Davies, Paul Charles William** 1946–

British-born physicist, writer, and broadcaster

Whether mathematical simplicity is God's affair or our, the fact remains that this feature more than any other remains the mainspring of progress in the physical sciences.

*The Edge of Infinity: Where the Universe Came from and How It Will End*

Chapter 9 (p. 188)

Simon & Schuster. New York, New York, USA. 1981

### **Davy, Sir Humphry** 1778–1829

English chemist

Complexity almost always belongs to the early epochs of every science; and the grandest results are usually obtained by the most simple means.

*The Collected Works of Sir Humphry Davy* (Volume 4 )

Elements of Chemical Philosophy

Part I, Introduction (p. 41)

Smith, Elder & Company. London, England. 1839–1840

The more the phenomena of the universe are studied, the more distinct their connection appears, the more simple their causes, the more magnificent their design, and the more wonderful the wisdom and power of their author.

*The Collected Works of Sir Humphry Davy* (Volume 4 )

Elements of Chemical Philosophy

Part I, Introduction (p. 42)

Smith, Elder & Company. London, England. 1839–1840

Have you ever thought... about whatever man builds, that all of man's industrial efforts, all his calculations and computations, all the nights spent over working draughts and blueprints, invariably culminate in the production of a thing whose sole and guiding principle is the ultimate principle of simplicity?

*Wind, Sand and Stars*

Chapter 3 (p. 65)

Reynal & Hitchcock. New York, New York, USA. 1939

In any thing at all, perfection is finally attained, not when there is no longer anything to add, but when there is no longer anything to take away.

*Wind, Sand and Stars*

Chapter 3 (p. 66)

Reynal & Hitchcock. New York, New York, USA. 1939

### **du Noüy, Pierre Lecomte** 1883–1947

French scientist

The complex is not always profound; but the profound is not necessarily simple.

*The Road to Reason*

Chapter 5 (p. 115)

Longmans, Green & Company. London, England. 1949

### **Einstein, Albert** 1879–1955

German-born physicist

Control by experiment...is, of course, an essential prerequisite of the validity of any theory. But one can't possibly test everything. That is why I am so interested in

your remarks about simplicity. Still, I should never claim that I really understood what is meant by the simplicity of natural laws.

In Werner Heisenberg

*Physics and Beyond: Encounters and Conversations*

Chapter 5 (p. 69)

Harper & Row, Publishers. New York, New York, USA. 1971

In every important advance the physicist finds that the fundamental laws are simplified more and more as experimental research advances. He is astonished to notice how sublime order emerges from what appeared to be chaos. And this cannot be traced back to the workings of his own mind but is due to a quality that is inherent in the world of perception. Leibniz well expressed this quality by calling it a pre-established harmony.

In Max Planck

*Where Is Science Going?*

Prologue (p. 11)

W.W. Norton & Company, Inc. New York, New York, USA. 1932

### **Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

Nothing is more simple than greatness; indeed, to be simple is to be great.

*Ralph Waldo Emerson: Essays and Lectures*

Nature: Addresses, and Lectures (p. 100)

The Library of America. New York, New York, USA. 1983

### **Feynman, Richard P.** 1918–88

American theoretical physicist

Perhaps a thing is simple if you can describe it fully in several different ways without immediately knowing that you are describing the same thing.

*Nobel Lectures, Physics 1963–1970*

Nobel lecture for award received in 1965

The Development of the Space-Time View of Quantum Electrodynamics  
Elsevier Publishing Company. Amsterdam, Netherlands. 1972

The answer to all these questions may not be simple. I know there are some scientists who go about preaching that Nature always takes on the simplest solutions. Yet the simplest solution by far would be nothing, that there should be nothing at all in the universe. Nature is far more inventive than that, so I refuse to go along thinking it always has to be simple.

*Feynman Lectures on Gravitation*

Lecture 13 (p. 186)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1995

### **Fuller, Thomas** 1608–61

English clergyman and author

Generally nature hangs out a sign of simplicity in the face of a fool.

*The Holy and Profane State*

Book III, Chapter XII, Maxim I

Maxim I (p. 171)

Printed for Thomas Tegg. London, England. 1841

**Gibran, Kahlil** 1883–1931  
Lebanese-American philosophical essayist

The obvious is that which is never seen until someone expresses it simply.

*Sand and Foam: A Book of Aphorisms* (p. 54)  
Alfred A. Knopf. New York, New York, USA. 1959

**Goodman, Nelson** 1906–98  
American philosopher

All scientific activity amounts to the invention of and the choice among systems of hypotheses. One of the primary considerations guiding this process is that of simplicity. Nothing could be much more mistaken than the traditional idea that we first seek a true system and then, for the sake of elegance alone, seek a simple one.

The Test of Simplicity  
*Science*, Volume 128, 1958 (p. 1064)

**Gore, George** 1826–1909  
English electrochemist

Simplicity, whether truthful or not, is often attractive to unphilosophical minds, because it requires less intellectual exertion.

*The Art of Scientific Discovery*  
Chapter IV (p. 29)  
Longmans, Green & Company. London, England. 1878

**Grimaux, L. E.**  
No biographical data available

**Gerhardt, C.**  
No biographical data available

The chemist must always compare the results of his experiments with those which precede them; for it is by this comparison alone that little by little we arrive at general laws, and consequently at the simplification of science.

In Russell McCormmach (ed.)  
*Historical Studies in the Physical Sciences* (Volume 6)  
In John Hedley Brooke  
Laurent, Gerhardt, and the Philosophy of Chemistry (p. 424)  
Princeton University Press. Princeton, New Jersey, USA. 1975

**Haldane, John Burdon Sanderson** 1892–1964  
English biologist

In scientific thought we adopt the simplest theory which will explain all the facts under consideration and enable us to predict new facts of the same kind. The catch in this criterion lies in the word “simplest.” It is really an aesthetic canon such as we find implicit in our criticisms of poetry or painting. The layman finds such a law as  $x/t = k(2x/y^2)$  less simple than “it oozes,” of which it is the mathematical statement. The physicist reverses this judgment.

*On Being the Right Size and Other Essays*  
Science and Theology as Art-Forms (pp. 33–34)  
Oxford University Press, Inc. Oxford, England. 1985

**Heisenberg, Werner Karl** 1901–76  
German physicist and philosopher

You [to Einstein] must have felt this too: the frightening simplicity and wholeness of the relationships which nature suddenly spreads out before us and for which none of us was in the least prepared.

*Physics and Beyond: Encounters and Conversations*  
Chapter 5 (p. 69)  
Harper & Row, Publishers. New York, New York, USA. 1971

You may object that by speaking of simplicity and beauty I am introducing aesthetic criteria of truth, and I frankly admit that I am strongly attracted by the simplicity and beauty of the mathematical schemes which nature presents us. You must have felt this too: the almost frightening simplicity and wholeness of the relationships, which nature suddenly spreads out before us...

*Physics and Beyond: Encounters and Conversations*  
Chapter 5 (pp. 68–69)  
Harper & Row, Publishers. New York, New York, USA. 1971

**Hoagland, Mahlon** 1921–  
American biochemist

It is often the scientist’s experience that he senses the nearness of truth when such connections are envisioned. A connection is a step toward simplification, unification. Simplicity is indeed often the sign of truth and a criterion of beauty.

*Toward the Habit of Truth: A Life in Science*  
Preface (p. xxiii)  
W.W. Norton & Company, Inc. New York, New York, USA. 1990

**Hoffer, Eric** 1902–83  
American longshoreman and philosopher

It is not at all simple to understand the simple.

*The Passionate State of Mind, and Other Aphorisms*  
No. 230  
Harper & Brothers. New York, New York, USA. 1955

**Hoffmann, Hans** 1848–1904  
German novelist

The ability to simplify means to eliminate the unnecessary so that the necessary may speak.

In Bradley Efron and Robert J. Tibshirani  
*An Introduction to the Bootstrap*  
Preface (p. xiv)  
Chapman & Hall. New York, New York, USA. 1993

**Jevons, William Stanley** 1835–82  
English economist and logician

Simplicity is naturally agreeable to a mind of limited powers, but to an infinite mind all things are simple.

*The Principles of Science: A Treatise on Logic and Scientific Method*  
Book V, Chapter XXVII (p. 625)  
Macmillan & Company. London, England. 1887

**Jung, Carl G.** 1875–1961

Swiss psychiatrist and founder of analytical psychology

It would be simple enough, if only simplicity were not the most difficult of all things.

Translated by R.F.C. Hull

*Alchemical Studies*

Modern Psychology Offers a Possibility of Understanding (p. 16)  
Princeton University Press. Princeton, New Jersey, USA. 1967

**Lavoisier, Antoine Laurent** 1743–94

French chemist

In performing experiments, it is a necessary principle, which ought never to be deviated from, that they be simplified as much as possible, and that every circumstance capable of rendering their results complicated be carefully removed.

*Elements of Chemistry in a New Systematic Order*

Translated by Kerr (p. 103)

W. Creech. Edinburgh, Scotland. 1790

**Lindley, Dennis V.** 1923–

American statistician

I believe that almost all important, useful ideas are simple. Peter Whittle has recently put it nicely in an autobiographical essay. “If a piece of work is heavy and complicated then it is wrong. . . .” Some writers feel that to express their ideas in simple terms is degrading. Some use complexity to disguise the paucity of their material. In fact, simplicity is a virtue and when, as here, it is both original and useful, it can represent a real advance in knowledge.

Simplicity

*RSS News*, April 1995 (p. 1)**Oppenheimer, J. Robert** 1904–67

American theoretical physicist

The point is to simplify and to order knowledge. The profession I’m part of has as its whole function the rendering of the physical world understandable and beautiful. Otherwise, you have only tables and statistics.

With Oppenheimer on an Autumn Day

*Look*, Volume 30, Number 26, 27 December 1966 (p. 63)**Percy, Walker** 1916–90

American writer

It is not merely the truth of science that makes it beautiful, but its simplicity.

*Signposts in a Strange Land*

From Fact to Fiction (p. 187)

Farrar, Straus &amp; Giroux. New York, New York, USA. 1991

**Poincaré, Henri** 1854–1912

French mathematician and theoretical astronomer

...it is because simplicity, because grandeur, is beautiful that we preferably seek simple facts, sublime facts,

that we delight now to follow the majestic courses of the stars, now to examine with the microscope that prodigious littleness which is also grandeur, now to seek in geologic time the traces of a past which attracts because it is far away.

*The Foundations of Science*

Science and Method, Book I

Chapter I (p. 367)

The Science Press. New York, New York, USA. 1913

**Rainich, G. Y.** 1886–1968

Ukrainian mathematical physicist

...the really fundamental things have a way of appearing to be simple once they have been stated by a genius. . . .

Analytic Function and Mathematical Physics

*Bulletin of the American Mathematical Society*, October 1931 (p. 700)**Reid, Thomas** 1710–96

Scottish philosopher

Men are often led into errors by the love of simplicity, which disposes us to reduce things to few principles, and to conceive a greater simplicity in nature than there really is.

*Essays on the Intellectual Powers of Man*

Essay VI, Chapter VIII (p. 656)

Printed for John Bell. London, England. 1785

**Schumacher, Ernst Friedrich** 1911–77

German-born English economist

...it is rather more difficult to recapture directness and simplicity than to advance in the direction of ever more sophistication and complexity. Any third-rate engineer or researcher can increase complexity; but it takes a certain flair of real insight to make things simple again.

*Small Is Beautiful*

Part II, Chapter 5 (p. 146)

Harper &amp; Row, Publishers. New York, New York, USA. 1973

**Slobodkin, Lawrence B.**

American ecologist and evolution scientist

The awkward richness of possibilities seems to shatter any possible coherent theory of simplicity...

*Simplicity and Complexity in Games of the Intellect*

Chapter 10 (p. 204)

Harvard University Press. Cambridge, Massachusetts, USA. 1992

**Smith, George Otis** 1871–1944

American geologist

I am convinced that, at its best, science is simple — that the simplest arrangement of facts that sets forth the truth best deserves the term scientific. So the geology I plead for is that which states facts in plain words — in language understood by the many rather than only by the few. Plain geology needs little defining, and I may state my case best by trying to set forth the reasons why we have strayed so far away from the simple type.

Plain Geology

*Economic Geology*, Volume 17, Number 1, 1922 (p. 34)

### Stone, David

No biographical data available

One man's "simple" is another man's "huh?"

*OMNI Magazine*, May 1979

### Teague, Jr., Freeman

No biographical data available

Nothing is so simple it cannot be misunderstood.

*OMNI Magazine*, May 1979

### Teller, Edward 1908–2003

Hungarian-born American nuclear physicist

### Sylvester, James Joseph 1814–97

English mathematician

No endeavor that is worthwhile is simple in prospect; if it is right, it will be simple in retrospect.

*The Pursuit of Simplicity*

Chapter Five (p. 152)

Pepperdine University Press, Malibu. 1981

### Thoreau, Henry David 1817–62

American essayist, poet, and practical philosopher

Simplify. Simplify.

*The Writings of Henry David Thoreau* (Volume 2)

Walden

Chapter II (p. 144)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

### Twain, Mark (Samuel Langhorne

Clemens) 1835–1910

American author and humorist

It's as simple as tit-tat-toe, three-in-a-row, and as easy as playing hooky. I should hope we can find a way that's a little more complicated than that...

*The Adventures of Huckleberry Finn*

Chapter XXXIV (p. 298)

Grosset & Dunlap Publishers. New York, New York, USA. 1948

### Wright, Frank Lloyd 1867–1959

American architect

To know what to leave out and what to put in; just where and just how, ah, that is to have been educated in knowledge of simplicity...

*Frank Lloyd Wright: An Autobiography*

Simplicity (p. 144)

Duell, Sloan & Pearce. New York, New York, USA. 1943

## SIMULTANEITY

### Bridgman, Percy Williams 1882–1961

American physicist

Einstein, in thus analyzing what is involved in making a judgment of simultaneity, and in seizing on the act of the observer as the essence of the situation, is actually adopting a new point of view as to what the concepts of physics should be, namely, the operational view.

*The Logic of Modern Physics*

Chapter I (p. 8)

The Macmillan Company. New York, New York, USA. 1927

### Medawar, Sir Peter Brian 1915–87

Brazilian-born English zoologist

Simultaneous discovery is utterly commonplace, and it was only the rarity of scientists, not the inherent improbability of the phenomenon, that made it remarkable in the past. Scientists on the same road may be expected to arrive at the same destination, often not far apart.

*The Act of Creation*

*New Statesman*, 19 June 1964

## SINGULARITY

### Barrow, John D. 1952–

English theoretical physicist

In recent years cosmologists have begun to discuss the spontaneous creation of the Universe as a problem in physics. Those who do this assume that a future synthesis of quantum theory and relativity which reveals how gravity behaves when matter is enormously compressed will evade the predictions of a real singularity of the type required by the singularity theorems. Although the assumptions of the singularity theorems are not expected to hold near the singularity, we do not know whether to expect a singularity or not as yet. But even in the absence of this singularity to denote the beginning of the Universe, it has been speculated that the application of quantum theory to the whole Universe may allow physical content to be given to the concept of "creation of the Universe out of Nothing." The goal of this research is to show that the creation of an expanding universe is inevitable. The reason there is something rather than nothing is that "nothing" is unstable.

*The World within The World* (p. 230)

Clarendon Press. Oxford, England. 1988

### Hawking, Stephen William 1942–

English theoretical physicist

We showed that if general relativity is correct, any reasonable model of the universe must start with a singularity. This would mean that science could predict that the universe must have had a beginning, but that it could not predict how the universe should begin: For that, one would have to appeal to God... Now, as a result of the singularity theorems, nearly everyone believes that the universe began with a singularity, at which the laws of

physics broke down. However, I now think that although there is a singularity, the laws of physics can still determine how the universe began.

*Black Holes and Baby Universes and Other Essays*  
Chapter Nine (p. 91)  
Bantam Books. New York, New York, USA. 1987

## SITE

**Bagnold, Ralph A.** 1896–1990  
English officer and engineer

There is an unfailing joy in identifying oneself with the actual sites where great things happened long ago. It appeals to a very human trait in all of us.

*Libyan Sands: Travel in a Dead World*  
Chapter III (p. 74)  
Hodder & Stoughton. London, England. 1941

**Woolley, Sir Charles Leonard** 1880–1960  
English archaeologist

If the field archaeologist had his will, every ancient capital would have been overwhelmed by the ashes of a conveniently adjacent volcano. It is with green jealousy that the worker on other sites visits Pompeii and sees the marvelous preservation of its buildings, the houses standing up to the second floor, the frescoes on the walls and all the furniture and household objects still in their places as the owners left them as they fled from the disaster.

*Digging Up the Past*  
Chapter I (p. 19)  
Charles Scribner's Sons. New York, New York, USA. 1931

## SIZE

**Hardy, Thomas** 1840–1928  
English poet and regional novelist

There is a size at which dignity begins; further on there is a size at which grandeur begins; further on there is a size at which solemnity begins; further on, a size at which awfulness begins; further on, a size at which ghastliness begins. That size faintly approaches the size of the stellar universe.

*Two on a Tower*  
Chapter IV (p. 35)  
Harper & Brothers. New York, New York, USA. No date

The vastness of the field of astronomy reduces every terrestrial thing to atomic dimensions.

*Two on a Tower*  
Chapter XXXIV (p. 258)  
Harper & Brothers. New York, New York, USA. No date

**Scott Cary**  
Fictional character

The unbelievably small and the unbelievably vast eventually meet — like the closing of a gigantic

circle. I looked up, as if somehow I would grasp the heavens. The universe, worlds beyond number, God's silver tapestry spread across the night. And in that moment, I knew the answer to the riddle of the infinite. I had thought in terms of man's own limited dimension. I had presumed upon nature. That existence begins and ends in man's conception, not nature's. And I felt my body dwindling, melting, becoming nothing. My fears melted away. And in their place came acceptance. All this vast majesty of creation, it had to mean something. And then I meant something, too. Yes, smaller than the smallest. I meant something, too. To God there is no zero. I still exist!

*The Incredible Shrinking Man*  
Film (1957)

**Shapley, Harlow** 1885–1972  
American astronomer

The atomically small leads directly to the size really immense.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1946*

On the Astronomical Dating of the Earth's Crust (p. 140)  
Government Printing Office. Washington, D.C. 1947

## SKELETON

**Selzer, Richard** 1928–  
American physician and essayist

What man does not ponder the whereabouts of his skeleton — the place where it will lie? Say what you will, all sanitary and pragmatic considerations aside, these jaunty saunterers that have held us upright, have stiffened us against the grate and grind of life, are dear to us. What stands closer to a man all his days than his bones?

*Mortal Lessons*  
Bone (pp. 54–55)  
Simon & Schuster. New York, New York, USA. 1976

## SKEPTICISM

**Darwin, Charles Robert** 1809–82  
English naturalist

I am not very skeptical — a frame of mind which I believe to be injurious to the progress of science. A good deal of skepticism in a scientific man is advisable to avoid too much loss of time, but I have met with not a few men, who, I feel sure, have often thus been deterred from experiment or observations which would have proved directly or indirectly serviceable.

In Francis Darwin (ed.)  
*The Life and Letters of Charles Darwin* (Volume 1)  
Chapter II (p. 83)  
D. Appleton & Company. New York, New York, USA. 1896

**Gould, Stephen Jay** 1941–2002

American paleontologist, evolutionary biologist, and historian of science

Skepticism or debunking often receives the bad rap reserved for activities — like garbage disposal — that absolutely must be done for a safe and sane life, but seem either unglamorous or unworthy of overt celebration. Yet the activity has a noble tradition, from the Greek coinage of “skeptic” (a word meaning “thoughtful”) to Carl Sagan’s...The Demon-Haunted World.... Skepticism is the agent of reason against organized irrationalism — and is therefore one of the keys to human social and civic decency.... Skepticism’s bad rap arises from the impression that, however necessary the activity, it can only be regarded as a negative removal of false claims. Not so.... Proper debunking is done in the interest of an alternate model of explanation, not as a nihilistic exercise. The alternate model is rationality itself, tied to moral decency — the most powerful joint instrument for good that our planet has ever known.

In Michael Shermer

*Why People Believe Weird Things: Pseudoscience, Superstition, and Other Confusions of Our Time*

Foreword (pp. ix–xii)

Henry Holt & Company, New York, New York, USA. 2002

**Raymo, Chet** 1936–

American physicist and science writer

Skepticism is a critical reluctance to take anything as absolute truth, even one’s own most cherished beliefs. Astonishment is the ability to be dazzled by the commonplace. At first glance these two qualities might seem opposed. The Skeptic is often thought to lack passionate commitment. The easily astonished person is sometimes thought of as gullible. In fact reasoned skepticism does not preclude passionate belief, and astonishment is enhanced by knowledge.

*Skeptics and True Believers: The Exhilarating Connection Between Science and Religion*

Chapter Fourteen (pp. 252–253)

Walker & Company, New York, New York, USA. 1998

The difference between Skeptics and True Believers is not that Skeptics believe what is sensible and obvious, while True Believers accept what is fanciful and far-fetched. Often, it is the other way around.

*Skeptics and True Believers: The Exhilarating Connection Between Science and Religion*

Chapter Two (p. 27)

Walker & Company, New York, New York, USA. 1998

**Sagan, Carl** 1934–96

American astronomer and author

...science requires the most vigorous and uncompromising skepticism, because the vast majority of ideas are simply wrong, and the only way to winnow the wheat from the chaff is by critical experiment and analysis.

*The Demon-Haunted World: Science as a Candle in the Dark*  
Chapter 17 (p. 305)

Random House, Inc. New York, New York, USA. 1995

Finding the occasional straw of truth awash in a great ocean of confusion and bamboozle requires vigilance, dedication, and courage. But if we don’t practice these tough habits of thought, we cannot hope to solve the truly serious problems that face us — and we risk becoming a nation of suckers, a world of suckers, up for grabs by the next charlatan who saunters along.

*The Fine Art of Baloney Detection*

*Parade*, February 1, 1987

**Schrödinger, Erwin** 1887–1961

Austrian theoretical physicist

Skepticism alone is a cheap and barren affair. Skepticism in a man who has come nearer to the truth than anyone before, and yet clearly recognizes the narrow limits of his own mental construction, is great and fruitful, and does not reduce but doubles the value of the discoveries.

*Nature and the Greeks*

Chapter II (p. 31)

At The University Press. Cambridge, England. 1954

**SKIN****Levi, Primo** 1919–87

Italian writer and chemist

I live in my house as I live inside my skin: I know more beautiful, more ample, more sturdy and more picturesque skins: but it would seem to me unnatural to exchange them for mine.

*Other People’s Trades*

My House

Summit Books, New York, New York, USA. 1989

**Selzer, Richard** 1928–

American physician and essayist

I sing of skin, layered fine as baklava, whose colors shame the dawn, at once the scabbard upon which is writ our only signature, and the instrument by which we are thrilled, protected, and kept constant in our natural place. Here is each man bagged and trussed in perfect amiability.

*Mortal Lessons*

Skin (p. 105)

Simon & Schuster, New York, New York, USA. 1976

**SKY****Astronomy Survey Committee**

Nature offers no greater splendor than the starry sky on a clear, dark night. Silent, timeless, jeweled with the constellations of ancient myth and legend, the night sky has inspired wonder throughout the ages.

Society and Solitude

Chapter VI (p. 144)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

**Fuller, Wallace H.** 1915–2006

American geologist

A thin rind of loose material covering the continents of the earth is all that stands between life and lifelessness.

*Soils of the Desert Southwest*

A Word from the Author (p. xiii)

University of Arizona Press. Tucson, Arizona, USA. 1975

Grit and grime, crumbling rock and decaying organic residue-abrading by wind and water — weather into soil — Mother Earth. This soft and yielding earth lives and continually changes under the forces of climate, having formed through the ages as a result of meteorological, geological, and biological action on rock. The soil not only lives, but it continually renews life as well. Animal and plant residues decay into simpler constituents, and nutrient elements again are made available for new life in a perpetual cycle.

*Soils of the Desert Southwest*

A Word from the Author (p. xiii)

University of Arizona Press. Tucson, Arizona, USA. 1975

**Molloy, Les**

No biographical data available

...for only rarely have we stood back and celebrated our soils as something beautiful, and perhaps even mysterious. For what other natural body, worldwide in its distribution, has so many interesting secrets to reveal to the patient observer? The great events of long ago — volcanic eruptions, dust storms, floods and Ice Ages — have left their imprints as have the agricultural practices of earlier times.

*Soils in the New Zealand Landscape: The Living Mantle*

Mallison Rendel Publishers Ltd. Wellington, New Zealand. 1988

The soil can...tell us much about our present day environment. It is the home of millions of living things and a recycling factory for so much of the solar and geochemical energy that sustains life. In its form and properties it expresses the combined influences of local climate, shape of the land, and rocks and organisms that are broken down and incorporated into it.

*Soils in the New Zealand Landscape: The Living Mantle*  
Mallison Rendel Publishers Ltd. Wellington, New Zealand. 1988

### **Simonson, Roy**

American soil scientist

Be it deep or shallow, red or black, sand or clay, the soil is the link between the rock core of the earth and the living things on its surface. It is the foothold for the plants we grow. Therein lies the main reason for our interest in soils.

*USDA Yearbook of Agriculture*, 1957

## **SOLAR SYSTEM**

### **Burroughs, John** 1837–1921

American naturalist and writer

When I look up at the starry heavens at night and reflect upon what it is that I really see there, I am constrained to say, "There is no God." ...I see no lineaments of personality, no human traits, but an energy upon whose currents solar systems are but babbles.

*The Light of the Day: Religious Discussions and Criticisms from the Naturalist's Point of View* (p. 224)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1900

### **Carlyle, Thomas** 1795–1881

English historian and essayist

Did not the Boy Alexander weep because he had not two Planets to conquer; or a whole Solar System; or after that, a whole universe?

*Sartor Resartus*

Book II, Chapter VIII (p. 165)  
Ginn & Company. Boston, Massachusetts, USA. 1897

### **Clarke, Arthur C.** 1917–

English science and science fiction writer

The Solar System is rather a large place, though whether it will be large enough for so quarrelsome an animal as *Homo sapiens* remains to be seen.

*The Challenge of the Spaceship*

The Challenge of the Spaceship (p. 8)  
Harper & Brothers. New York, New York, USA. 1959

The Solar System, comprising the nine known worlds of our Sun and their numerous satellites, is a relatively compact structure, a snug little celestial oasis in an endless desert.

*The Challenge of the Spaceship*

The Planets Are Not Enough (p. 54)  
Harper & Brothers. New York, New York, USA. 1959

### **Davies, Paul Charles William** 1946–

British-born physicist, writer, and broadcaster

The secret of our success on planet Earth is space. Lots of it. Our solar system is a tiny island of activity in an ocean of emptiness.

The Conduct of Life

Worship (p. 1055)

The Library of America. New York, New York, USA. 1983

### **Flammarion, Camille** 1842–1925

French astronomer and author

Like a shower of stars the worlds whirl, borne along by the winds of heaven, and are carried down through immensity, suns, earths, satellites, comets, shooting stars, humanities, cradles, graves, atoms of the infinite, seconds of eternity, perpetually transform beings and things.

*Popular Astronomy: A General Description of the Heavens*

American Book Company. New York, New York, USA. 1899

### **Hey, Nigel S.** 1936–

American science writer

Naturally their [men and women] writings deal with spaceflight, the solar system, and the Cosmos...reveal the profoundly human aspects of this great adventure, from the excitement of solving the problems of spacecraft that are millions of miles distant to the self-examination that occurs when considering whether we might someday send robots, and not people, as our ambassadors to distant star systems. Some of the nobility of the human condition, so often obscured, shines through their words.

*Solar System*

Introduction (p. 8)

Weidenfield & Nicolson. London, England. 2002

Our explorations of the solar system are the first halting steps in a journey that will transform our kind into a species that knowingly lives among the stars, in mind and possibly in body. Our destiny awaits in the planets

and their moons, in this star system and in the galaxy beyond. Without exaggeration this journey is epochal in its significance to the human race.

*Why People Need Space*

Lecture, National Space Centre, October 2002

**Horowitz, Norman H.** 1915–2005

American geneticist

If the exploration of the solar system in our time bring home to us a realization of the uniqueness of our small planet and thereby increase our resolve to avoid self-destruction, [it] will have contributed more than just science to the human future.

*To Utopia and Back: The Search For Life in the Solar System*

Chapter Eight (p. 146)

W.H. Freeman & Company. San Francisco, California, USA. 1986

**Jeffreys, Sir Harold** 1891–1989

English astronomer and geophysicist

Damn the solar system. Bad light; planets too distant; pestered with comets; feeble contrivance; could make a better one myself.

In John D. Barrow

*The Artful Universe* (p. 34)

Clarendon Press. Oxford, England. 1995

**Lambert, Johann Heinrich** 1728–77

Swiss-German mathematician and astronomer

Nothing is more simple than the plan of the Solar System...

Translated by James Jacque

*The System of the World*

Part I, Chapter I (p. 1)

Printed for Vernor & Hood. London, England. 1800

**Lowell, Percival** 1855–1916

American astronomer

Now when we think that each of these stars is probably the center of a solar system grander than our own, we cannot seriously take ourselves to be the only minds in it all.

*Mars*

Chapter I (p. 5)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1895

**Maclennan, Hugh** 1907–99

Canadian author and professor of English

We have just reached the outer fringes of the Solar System. Can any sane man possibly argue that we should stop there?

*Scotchman's Return and Other Essays*

Remembrance Day, 2010 A.D. (p. 89)

Charles Scribner's Sons. New York, New York, USA. 1960

**Patten, W.**

No biographical data available

A solar system has attributes and powers that can not be defined or measured in terms of its members, or of its ultimate chemical elements, for a solar system is not merely an aggregate, or the algebraic sum of its various elements and qualities.... It is a system, a new type of individuality, with special creative powers of its own.

*The Grand Strategy of Evolution* (p. 34)

Richard G. Badger. Boston, Massachusetts, USA. 1920

**Peterson, Ivars**

Mathematics and computer writer and editor

We can...be thankful that the solar system in which we live has been unreasonably kind throughout the long history of human efforts to understand its dynamics and to extend that knowledge to the rest of the universe. At each step along the way, it has served as a perspicacious teacher, posing questions just difficult enough to prompt new observations and calculations that have led to fresh insights, but not so difficult that any further study becomes mired in a morass of confusing detail.

*Newton's Clock: Chaos in the Solar System*

Chapter 12 (p. 286)

W.H. Freeman & Company. New York, New York, USA. 1993

**Pliny (C. Plinius Secundus)** 23–79

Roman savant and author

Most men are not acquainted with a truth known to the founders of the science from their arduous study of the heavens, that what when they fall to earth are termed thunderbolts are the fires of the three upper planets, particularly those of Jupiter, which is in the middle position — possibly because it voids in this way the charge of excessive moisture from the upper circle (of Saturn) and of excessive heat from the circle below (of Mars); and that this is the origin of the myth that thunderbolts are the javelins hurled by Jupiter. Consequently heavenly fire is spit forth by the planet as crackling charcoal flies from a burning log, bringing prophecies with it. And this is accompanied by a very great disturbance of the air, because moisture collected causes an overflow or because it is disturbed by the birth-pangs so to speak of the planet in travail.

*Natural History*

Volume 1, Book II, sec 84

Harvard University Press. Cambridge, Massachusetts, USA. 1947

**Sagan, Carl** 1934–96

American astronomer and author

The emerging picture of the early Solar System does not resemble a stately progression of events designed to form the Earth. Instead, it looks as if our planet was made, and survived, by mere lucky chance, amid unbelievable violence. Our world does not seem to have been sculpted by a master craftsman. Here, too, there is no hint of a Universe made for us.

*Pale Blue Dot: A Vision of the Human Future in Space*  
Chapter 17 (p. 295)  
Random House, Inc. New York, New York, USA. 1994

**Somerville, Mary** 1780–1872  
English mathematician

Yonder starry sphere  
Of planets and of fix'd, in all her wheels,  
Resembles nearest mazes intricate,  
Eccentric, intervolved, yet regular,  
Then most, when most irregular they seem.

*The Connexion of the Physical Sciences* (9<sup>th</sup> edition)

Section III (p. 23)

John Murray. London, England. 1858

**Tsiolkovsky, Konstantin Eduardovich** 1857–1935  
Russian research scientist

Should man penetrate the solar system, should he learn  
to comport himself there as the mistress in her home —  
would the secrets of the world then open for him? Not in  
the least. Not anymore that inspecting a pebble or shell  
would reveal to him the secrets of the ocean.

Compiled by V.V. Vorontsov

*Words of The Wise: A Book of Russian Quotations*

Translated by Vic Schneerson

Progress Publishers. Moscow, Russia. 1979

## SOLID STATE

**Updike, John** 1932–  
American novelist, short story writer, and poet

Textbooks & Heaven only are Ideal;  
Solidity is an imperfect state,  
Within the cracked and dislocated Real  
Nonstoichiometric crystals dominate.  
Stray Atoms sully and precipitate;  
Strange holes, excitons, wander loose; because  
Of Dangling Bonds, a chemical Substrate  
Corrodes and Catalyzes — surface Flaws  
Help Expitazial Growth to fix absorptive claws.

*Midpoint and Other Poems*

The Dance of the Solids

Stanza 9

Fawcett Publications, Inc. Greenwich, Connecticut, USA. 1970

## SOLUBILITY

**Witt, Otto N.** 1853–1915  
German chemist

In the strictly scientific sense of the word insolubility  
does not exist, and even those substances characterized  
by the most obstinate resistance to the solvent action of  
water may properly be designated as extraordinarily diffi-  
cult of solution, not as insoluble.

In Joseph William Mellor

*Mellor's Modern Inorganic Chemistry*

Chapter 13 (p. 177)  
Longmans, Green & Company Ltd. London, England. 1967

## SOLUTION

**Bohr, Niels Henrik David** 1886–1962  
Danish physicist

Every great and deep difficulty bears in itself its own  
solution. It forces us to change our thinking in order to  
find it.

In Brian VanDeMark

*Pandora's Keepers*

Chapter 1 (p. 29)

Little, Brown & Company. Boston, Massachusetts, USA. 2003

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

In science we sometimes have convictions as to the right  
solution of a problem which we cherish but cannot jus-  
tify; we are influenced by some innate sense of the fitness  
of things.

*The Nature of the Physical World*

Chapter XV (p. 337)

The Macmillan Company. New York, New York, USA. 1930

**Heisenberg, Werner Karl** 1901–76  
German physicist and philosopher

...the genuine solution of a difficult problem is neither  
more nor less than a glimpse of the wider context, a  
glimpse that helps us to clear away other difficulties as  
well, including many whose existence we do not even  
suspect.

*Physics and Beyond: Encounters and Conversations*

Chapter 8 (p. 102)

Harper & Row, Publishers. New York, New York, USA. 1971

**Kosko, Bart** 1960–  
American electrical engineer

A solution has a way of bubbling up out of your uncon-  
scious if you brood about a problem long enough.

*Fuzzy Thinking*

Chapter 3 (p. 61)

Hyperion. New York, New York, USA. 1993

**MacCready, Paul** 1925–?  
American aeronautical engineer

When you do dome up with a solution, you can always  
explain it logically, even though it's the absurd approach  
that gave you the solution.

In Kenneth A. Brown

*Inventors at Work*

Paul MacCready (p. 11)

Microsoft Press. Redmond, Washington, USA. 1988

**Mencken, H. L. (Henry Louis)** 1880–1956  
American journalist and literary critic

...there is always a well-known solution to every human problem — neat, plausible, and wrong.

*Prejudices: Second Series*

The Divine Afflatus (p. 158)

Alfred A. Knopf. New York, New York, USA. 1922

**Szilard, Leo** 1898–1964

Hungarian-born American nuclear physicist

Once a man has missed the solution to a problem when he passes by, it is less likely he will find it the next time.

In Editors of International Science and Technology

*The Way of the Scientist: Interviews from the World of Science and Technology*

Leo Szilard (p. 28)

Simon & Schuster. New York, New York, USA. 1966

## SOUL

**Russell, Sir Edward John** 1872–1965

British agriculturalist and writer

Those young people of today, who will be the leaders of thought and of action tomorrow, are faced with the problem of enduring that, in gaining control over Nature, man does not lose his own soul.

*Science and Modern Life* (p. 101)

Philosophical Library. New York, New York, USA. 1955

## SOUND

**Hooke, Robert** 1635–1703

English physicist

‘Tis not impossible to hear a whisper a furlong’s distance, it having been already done; and perhaps the nature of the thing would not make it more impossible, though that furlong should be ten times multiply’d...for that [air] that is not the only medium, I can assure the Reader, that I have, by the help of a distended wire, propagated the sound to a very considerable distance in an instant, or with as seemingly quick a motion as that of light, at least, incomparably swifter then that, which at the same time was propagated through the Air...

*Micrographia*

Preface

Printed for Jo. Martyn and Ja. Allestry. London, England. 1665

## SPACE

**Adams, Douglas** 1952–2001

English author, comic radio dramatist, and musician

Space...is big, really big...You may think it’s a long way down the street to the chemists’ but that’s just peanuts to space.

*The Ultimate Hitchhiker’s Guide to the Galaxy*

The Hitchhiker’s Guide to the Galaxy

Chapter 8 (p. 53)

The Ballantine Book Company. New York, New York, USA. 2002

**Alfven, Hannes** 1908–95

Swedish physicist

Having probes in space was like having a cataract removed.

In Eric J. Lerner

*The Big Bang Never Happened*

Chapter 1 (p. 45)

Random House, Inc. New York, New York, USA. 1991

**Bailey, Philip James** 1816–1902

English poet

Unimaginable space,

As full of suns as is earth’s sun of atoms.

*Festus: A Poem*

Scene IV (p. 61)

George Routledge & Sons, Ltd. London, England. 1893

**Barnes, Bishop**

Bishop of San Bernardino

It is fairly certain that our space is finite though unbounded. Infinite space is simply a scandal to human thought.

In Joseph Silk

*The Big Bang* (p. 81)

W.H. Freeman & Company. San Francisco, California, USA. 1980

**Bergaust, Erik** 1925–95

American writer and journalist

As far as man on Earth is concerned, space begins at the high border of the Earth’s atmosphere and extends to infinity.

*Wernher von Braun*

Are Flying Saucers Real? (p. 546)

National Space Institute. Washington, D.C. 1976

**Bergson, Henri** 1859–1941

French philosopher

For it is scarcely possible to give any other definition of space: space is what enables us to distinguish a number of identical and simultaneous sensations from one another; it is thus a principle of differentiation, and consequently it is a reality with no quality.

Translated by F.L. Pogson

*Time and Free Will: An Essay on the Immediate Data of Consciousness*

Chapter II (p. 95)

George Allen & Unwin Ltd. London, England. 1950

**Bradbury, Ray** 1920–

American writer

Man does not need escape so much as he needs release into a new spirit, a transcendent knowledge of himself that only Space can give him.

In Ray Bradbury, Arthur C. Clarke, Bruce Murray, Carl Sagan, and

Walter Sullivan

*Mars and the Mind of Man*

Foreword (p. XI)

Harper & Row, Publishers. New York, New York, USA. 1973

**Bradley, Jr., John Hodgdon** 1898–1962  
American geologist

A sea whose shores no eyes have ever seen, whose depth no instrument can fathom, whose waters no scientist can analyze — such is the sea of space. Nothing can be as empty and cold as the gulf wherein our destinies are immersed.

*Parade of the Living*  
Part I, Chapter I (p. 3)  
Coward-McCann, Inc. New York, New York, USA. 1930

**Bruno, Giordano** 1548–1600  
Italian philosopher and pantheist

There are countless constellations, suns and planets; we see only the suns because they give light; the planets remain invisible, for they are small and dark. There are also numberless earths circling around their suns, no worse and no less than this globe of ours.

*On the Infinite Universe and Worlds*  
Henry Schuman, Inc. New York, New York, USA. 1950

There is a single general space, a single vast immensity which we may freely call Void: in it are innumerable globes like this on which we live and grow; this space we declare to be infinite, since neither reason, convenience, sense-perception nor nature assign it a limit.

In Joseph Silk  
*The Big Bang* (p. 81)  
W.H. Freeman & Company. San Francisco, California, USA. 1980

**Captain Kirk**  
Fictional character

Space, the final frontier...

Opening lines  
*Star Trek*  
Television series

**Clarke, Arthur C.** 1917–  
English science and science fiction writer

Go out beneath the stars on a clear winter night, and look up at the Milky Way spanning the heavens like a bridge of glowing mist. Up there, ranged one beyond the other to the end of the Universe, suns without number burn in the loneliness of space. Down to the south hang the brilliant, unwinking lanterns of other worlds — the electric blue of Jupiter, the glowing ember of Mars. Across the zenith, a meteor leaves a trail of fading incandescence, and a tiny voyager of space has come to a flaming end.

In Neil McAleer  
*Odyssey: The Authorized Biography of Arthur C. Clarke* (p. 34)  
Victor Gollancz. London, England. 1993

The sea which beats against the coasts of Earth, which seems so endless and so eternal, is as the drop of water on the slide of a microscope compared with the shoreless sea of space.

*The Challenge of the Spaceship*  
Across the Sea of Stars (p. 128)  
Harper & Brothers. New York, New York, USA. 1959

In space there are no horizons; the questing eye reaches out forever, in all directions, and finds no fixed point at which to rest.

*The Challenge of the Spaceship*  
Which Way Is Up? (p. 143)  
Harper & Brothers. New York, New York, USA. 1959

**Collins, Billy** 1941–  
American poet

Here's to the wind blowing against this lighted house and to the vast, windless spaces between the stars.

*The Art of Drowning*  
Chapter XXXIII, Cheers  
University of Pittsburgh Press. Pittsburgh, Pennsylvania, USA. 1995

**Davies, Paul Charles William** 1946–  
British-born physicist, writer, and broadcaster

For those who think of space as emptiness, the assignment of an adjective, especially one as enigmatic as “curved”, might be regarded as cryptic.

*The Encyclopaedia of Ignorance: Everything You Ever Wanted to Know About the Unknown*  
Curved Space (p. 78)  
Pergamon Press. Oxford, England. 1977

**Deudney, Daniel**  
American political scientist

Space is only 80 miles from every person on earth — far closer than most people are to their own national capitals...

*Space: The High Frontier in Perspective*  
Introduction (p. 6)  
Worldwatch Institute. Washington, D.C. 1982

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

To put the conclusion rather crudely — space is not a lot of points close together; it is a lot of distances interlocked.

*The Mathematical Theory of Relativity*  
Chapter I, Section 1 (p. 10)  
At The University Press. Cambridge, England. 1930

**Empson, William** 1906–84  
English literary critic and poet

Space is like earth, rounded, a padded cell;  
Plumb the stars' depth, your lead bumps you behind...

*The Complete Poems of William Empson*  
The World's End (p. 13)  
University Press of Florida. Gainesville, Florida, USA. 2001

**Ferris, Timothy** 1944–  
American science writer

While walking with Heisenberg, the physicist Felix Bloch, who had just read Weyl's *Space, Time and Matter*,

felt moved to declare that space is simply the field of linear equations. Heisenberg replied, "Nonsense. Space is blue and birds fly through it." "What he meant, Bloch writes, "was that it was dangerous for a physicist to describe Nature in terms of idealized abstractions too far removed from the evidence of actual observation."

*The Whole Shebang: A State-of-The Universe's Report*

Notes, 3 (p. 320)

Simon & Schuster. New York, New York, USA. 1996

### **Frost, Robert** 1874–1963

American poet

Space ails us moderns: we are sick with space.

Its contemplation makes us out as small

As a brief epidemic of microbes.

*Complete Poems of Robert Frost*

The Lesson for Today

Henry Holt & Company. New York, New York, USA. 1949

### **Gauss, Johann Carl Friedrich** 1777–1855

German mathematician, physicist, and astronomer

We must confess in all humility that, while number is a product of our mind alone, space has a reality beyond the mind whose rules we cannot completely prescribe.

In Charles W. Misner et al.

*Gravitation*

Part III, Chapter 8 (p. 195)

W.H. Freeman & Company. San Francisco, California, USA. 1973

### **Gibran, Kahlil** 1883–1931

Lebanese-American philosophical essayist

Space is not space between the earth and the sun to one who looks down from the windows of the Milky Way.

*Sand and Foam: A Book of Aphorisms* (p. 7)

Alfred A. Knopf. New York, New York, USA. 1959

### **Glenn, Jr., John** 1921–

American astronaut and politician

In space one has the inescapable impression that here is a virgin area of the universe in which civilized man, for the first time, has the opportunity to learn and grow without the influence of ancient pressures. Like the mind of a child, it is yet untainted with acquired fears, hate, greed, or prejudice.

In Kevin W. Kelley

*The Home Planet*

With Plate 136

Addison-Wesley Publishing Company. Reading, Massachusetts, USA.

1988

### **Heisenberg, Werner Karl** 1901–76

German physicist and philosopher

Space is blue and birds fly through it.

In Harald Fritzsch

Translated by Jean Steinberg

*The Creation of Matter: The Universe from Beginning to End*

Chapter 1 (pp. 12–13)

Basic Books, Inc. New York, New York, USA. 1984

### **Hey, Nigel S.** 1936–

American science writer

People...regardless of their educational, religious, or economic background, are blessed with the ability to look into the sky and marvel at the greatness of all that is out there. . . . It transports us beyond ourselves and our artifacts. It is another way in which we are able to emerge from our self-centered psychological neighborhoods, to explore a multidimensional realm where self is of no particular significance. It is one path among many through which individual people may comprehend the close community of all life and all humanity, and, with the accession of humility, the rightness of compassion and peace.

*Solar System*

Introduction (pp. 7–8)

Weidenfield & Nicolson. London, England. 2002

### **Hubble, Edwin Powell** 1889–1953

American astronomer

The outstanding feature, however, is the possibility that the velocity-distance relation may represent the de Sitter effect, and hence that numerical data may be introduced into discussions of the general curvature of space.

A Relation Between Distance and Radial Velocity Among

Extra-Galactic Nebulae

*Proceedings of the National Academy of Science*, Volume 15, 1929

(p. 168)

### **Jammer, Max** 1915–

Israeli physicist and philosopher

Like all science, the science of space must still be classed as unfinished business.

*Concepts of Space: The History of Theories of Space in Physics*

Chapter V (p. 190)

Harvard University Press. Cambridge, Massachusetts, USA. 1954

### **Jeans, Sir James Hopwood** 1877–1946

English physicist and mathematician

The immensity of space is paralleled by that of time.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1928*

The Wider Aspects of Cosmogony (p. 171)

Government Printing Office. Washington, D.C. 1929

...space, regarded as a receptacle for radiant energy, is a bottomless pit.

Supplement to "Nature"

*Nature*, Volume 122, Number 3079, November 3, 1928 (p. 698)

### **Kant, Immanuel** 1724–1804

German philosopher

Space is not a conception which has been derived from outward experiences. For, in order that certain sensations may relate to something without me (that is, to something which occupies a different part of space from that in which I am); in like manner, in order that I may represent

them not merely as without, of, and near to each other, but also in separate places, the representation of space must already exist as a foundation. Consequently, the representation of space cannot be borrowed from the relations of external phenomena through experience; but, on the contrary, this external experience is itself only possible through the said antecedent representation.

In *Great Books of the Western World* (Volume 42)

*Critique of Pure Reason*

First Part, Of Space, Metaphysical Exposition of this Conception, 1  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Leonov, Aleksei** 1934–

Soviet cosmonaut

What struck me most was the silence. It was a great silence, unlike any I have encountered on Earth, so vast and deep that I began to hear my own body: my heart beating, my blood vessels pulsing, even the rustle of my muscles moving over each other seemed audible. There were more stars in the sky than I had expected. The sky was deep black, yet at the same time bright with sunlight.

The View from Out There: In Words and Pictures

*Life*, Volume 11, Number 13, November 1988 (p. 197)

**Lewis, Gilbert Newton** 1875–1946

American chemist

...when we analyze the highly refined concept of space used by mathematicians we find it to be quite similar to the concept of number.

*The Anatomy of Science*

Chapter II (p. 29)

Yale University Press. New Haven, Connecticut, USA. 1926

**Macvey, John W.**

No biographical data available

The land lies sleeping under the enveloping mantle of night. Bright stars gleam like jewels from out the velvet darkness of the moonless sky. Beyond these points of celestial beauty, in depths frightening in their sheer immensity, lies realms powdered in stellar glory.

*Whispers from Space*

Chapter 1

Macmillan Publishing Company. New York, New York, USA. 1973

**Maxwell, James Clerk** 1831–79

Scottish physicist

...the aim of the space-crumplers is to make its curvature uniform everywhere, that is over the whole of space whether that whole is more or less than  $\tilde{N}$ . The direction of the curvature is not related to one of the  $x y z$  more than another or to  $-x -y -z$  so that as far as I understand we are once more on a pathless sea, starless, windless and poleless...

*The Scientific Letters and Papers of James Clerk Maxwell: Volume 2, 1862–1873*

Postcard to Peter Guthrie Tait, 11 November, 1874 (p. 137)

Clarendon Press. Oxford, England. 1988

### **Tennyson, Alfred (Lord)** 1809–92

English poet

... The clear galaxy

Shorn of its hoary lustre, wonderful,

Distinct and vivid with sharp point of light,

Blaze within blaze, an unimagin'd depth

And harmony of planet-girded suns

And moon — encircled planets, wheel in wheel,

Arch'd the wan sapphire. Nay, the hum of men.

Or other things talking in unknown tongues,

And notes of busy life in distant worlds

Beat like a far wave on my anxious ear.

*Alfred Tennyson's Poetical Works*

Timbuctoo, I. 105–113

Oxford University Press, Inc. London, England. 1953

### **The X-Files**

MULDER: Hey, Scully, we send those men up into space to unlock the doors of the universe, and we don't even know what's behind them.

*The X-Files*

Space

Television program

Season 1, 1993

### **Thomson, J. Arthur** 1861–1933

Scottish biologist

There is grandeur in the spectacle of the star-strewn sky, so apparently crowded, but there are thousands of worlds unseen for every one our unaided eyes can image, and yet the astronomers tell us that the emptiness of space is its most striking characteristic.

*The System of Animate Nature* (Volume 1)

Lecture I (p. 30)

William & Norgate. London, England. 1920

### **Tsiolkovsky, Konstantin Eduardovich** 1857–1935

Russian research scientist

Man will not always stay on earth; the pursuit of light and space will lead him to penetrate the bounds of the

atmosphere, timidly at first, but in the end to conquer the whole of solar space.

In Herbert Friedman

*The Amazing Universe*

Chapter 1 (p. 28)

National Geographic Society. Washington DC. 1980

### **vas Dias, Robert**

Anglo-American poet and writer

The premise... is that outer space is as much a territory of the mind as it is a physical concept.

*Inside Outer Space: New Poems of the Space Age*

Introduction (p. xxxix)

Anchor Press. Garden City, New York, USA. 1970

### **von Bitter Rucker, Rudy** 1946–

American mathematician and science fiction writer

What is the shape of space? Is it flat, or is it bent? Is it nicely laid out, or is it warped and shrunken? Is it finite, or is it infinite? Which of the following does space resemble more: (a) a sheet of paper, (b) an endless desert, (c) a soap bubble, (d) a doughnut, (e) an Escher drawing, (f) an ice cream cone, (g) the branches of a tree, or (h) a human body?

*The Fourth Dimension: Toward a Geometry of Higher Reality*

Chapter 7 (p. 91)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1984

### **von Braun, Wernher** 1912–77

German-American rocket science

... the progress of mankind here on Earth is directly linked to the future than man builds for himself in space.

In Erik Bergaust

*Wernher von Braun*

A Horse Named Susie (p. 373)

National Space Institute. Washington, D.C. 1976

... don't tell me that man doesn't belong out there. Man belongs wherever he wants to go — and he'll do plenty well when he gets there.

Reach for the Stars

*Time*, Volume 71, 17 February 1958 (p. 25)

### **Weyl, Hermann** 1885–1955

German mathematician

Nowhere do mathematics, natural sciences, and philosophy permeate one another so intimately as in the problem of space.

*Philosophy of Mathematics and Natural Science*

Part I, Chapter III (p. 67)

Princeton University Press. Princeton, New Jersey, USA. 1949

### **Wheeler, John Archibald** 1911–

American physicist and educator

### **Thorne, Kip S.** 1940–

American theoretical physicist

Space tells matter how to move...and matter tells space how to curve.

In Charles W. Misner et al

*Gravitation*

Part I, Chapter 1 (p. 23)

W.H. Freeman & Company. San Francisco, California, USA. 1973

...in essence, the curvature in space created by the electromagnetic field is the electromagnetic field; and this curvature can in principle be detected by purely geometric measurements.

*International Science and Technology*

The Dynamics of Space-Time, December 1963 (p. 72)

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

All space measurement is from stuff in space to stuff in space.

*The Aims of Education and Other Essays*

Chapter X (p. 233)

The Macmillan Company. New York, New York, USA. 1959

**Whitman, Walt** 1819–92

American poet, journalist, and essayist

Now while the great thoughts of space and eternity fill me I will measure myself by them. And now touch'd with the lives of other globes arrived as far long as those of the earth or waiting to arrive, or pass'd on farther than those of the earth, I henceforth no more ignore them than I ignore my own life.

*Complete Poetry and Collected Prose*

Night on the Prairies

The Library of America. New York, New York, USA. 1982

Every cubic inch of space is a miracle.

*Complete Poetry and Collected Prose*

Miracles

The Library of America. New York, New York, USA. 1982

**Winchell, Alexander** 1824–91

American geologist

In the midst of this universe of seething movements is our home. The mind, uplifted in the effort to contemplate them and grasp their method, grows giddy and impotent. How sublime these activities! To what a numerous and lofty companionship does our little planet belong! Hard it seems to be imprisoned here while the realm of the universe tempts us to its exploration. How can a human soul content itself to roll and whirl through space during its mortal days, and eat and sleep and trifle, like rats in a ship at sea, without wondering where we are and whither we are bound.

*World-Life or Comparative Geology*

Part I, Chapter II, Section 4.7 (p. 142)

S.C. Griggs & Company. Chicago, Illinois, USA. 1883

**Zubrin, Robert** 1952–

Engineer

Like the philosophy of Greece, the paintings of the Renaissance and the music of the Enlightenment, the explosion of knowledge about our solar system and the surrounding universe will be remembered for thousands of years as the defining brilliance of our age. To destroy [the space] program for the sake of bean counting, or perhaps as part of some obscure political maneuver, is not tolerable. It is not just a mistake, it is a crime — an infamous crime against civilization that is comparable to the burning of the Library of Alexandria.

*Space News*, September 13, 1999

Americans are proud of our space exploration program, and rightly so. It is a statement that we continue to be a nation of explorers and pioneers. But more than that, it is a statement that we are a truly great nation, great not because of our military might...but because we do great things for all humanity and for all time. Killing our space exploration program amounts to nothing less than pulling some of the stars off our flag. This is a desecration we cannot allow.

*Space News*, September 13, 1999

## SPACE AGE

**Clarke, Arthur C.** 1917–

English science and science fiction writer

Across the gulf of centuries, the blind smile of Homer is turned upon our age. Along the echoing corridors of time, the roar of the rockets merges now with the creak of the wind-taut rigging. For somewhere in the world today, still unconscious of his destiny walks the boy who will be the first Odysseus of the Age of Space...

*The Challenge of the Spaceship*

Envoi (p. 213)

Harper & Brothers. New York, New York, USA. 1959

## SPACE EXPLORATION

**Armstrong, Neil A.** 1930–

American astronaut

The *Eagle* has landed.

*The Washington Post*, July 21, 1969 (p. 1)

**Arnold, James R.**

No biographical data available

Space is the empty place next to the full place where we live. I believe we will be true to our nature and go there.

The Frontier in Space. Will One Be True to Our Nature and Accept the Challenge of the Next Frontier?

*American Scientist*, Volume 68, Number 3, May–June 1980 (p. 304)

**Asimov, Isaac** 1920–92

American author and biochemist

Throughout the history of humanity, we have been extending our range until it is now planet-wide, covering all parts of the Earth's surface and reaching to the bottom of the ocean, to the top of the atmosphere, and beyond it to the Moon. We will flourish only as long as we continue to extend that range, and although the potential range is not infinite, it is incredibly vast even by present standards. We will eventually extend our range to cover the whole of the solar system, and then we will head outward to the stars.

In James Burke, Jules Bergman and Isaac Asimov  
*The Impact of Science on Society*  
Our Future in the Cosmos — Space (p. 79)  
National Aeronautics and Space Administration. Washington, D.C. 1985

Unless we are willing to settle down into a world that is our prison, we must be ready to move beyond Earth. ...

In James Burke, Jules Bergman and Isaac Asimov  
*The Impact of Science on Society*  
Our Future in the Cosmos — Space (p. 80)  
National Aeronautics and Space Administration. Washington, D.C. 1985

**Bernal, John Desmond** 1901–71

Irish-born physicist and x-ray crystallographer

On earth, even if we should use all the solar energy which we receive, we should still be wasting all but one two-billionths of the energy the sun gives out. Consequently, when we have learnt to live on this solar energy and also to emancipate ourselves from the earth's surface, the possibilities of the spread of humanity will be multiplied accordingly.... There will, from desire or necessity, come the idea of building a permanent home for men in space.... At first space navigators, and then scientists whose observations would be best conducted outside the earth, and then finally those who for any reason were dissatisfied with earthly conditions would come to inhabit these bases and found permanent spatial colonies.

*The World, the Flesh and the Devil: An Enquiry Into the Future of the Three Enemies of the Rational Soul*  
Chapter II (pp. 11–12)  
Indiana University Press. Bloomington, Indiana, USA. 1969

**Blagonravov, Anatoly A.** 1894–1975

Russian scientist

The exploration of the cosmos — the moon and the planets — is a noble aim. Our generation has the right to be proud of the fact that it has opened the space era of mankind.

In Mose L. Harvey  
The Lunar Landing and the US–Soviet Equation  
*Bulletin of the Atomic Scientists*, Volume 25, Number 7, September 1969 (p. 29)

**Bradbury, Ray** 1920–

American writer

Get along to Mars and beyond.

The journey is long, the end uncertain, and there is more dark along the way than light, but you can whistle. Come with me by the wall of the great tombyards of all time which lie a billion years ahead. What shall we whistle as we stroll in our rocket, hoping to make it by the vast darkness where shadows wait to seize and keep us?

Follow me.

I know a tune.

Here...listen.

In Ray Bradbury, Arthur C. Clarke, Bruce Murray, Carl Sagan, and Walter Sullivan

*Mars and the Mind of Man*

Ray Bradbury (p. 143)

Harper & Row, Publishers. New York, New York, USA. 1973

...I would not see our candle blown out in the wind. It is a small thing, this dear gift of life handed us mysteriously out of immensity. I would not have that gift expire. ...What's the use of looking at Mars through a telescope, sitting on panels, writing books, if it isn't to guarantee, not just the survival of mankind, but mankind surviving forever!"

In Ray Bradbury, Arthur C. Clarke, Bruce Murray, Carl Sagan and Walter Sullivan

*Mars and the Mind of Man*

Ray Bradbury (p. 133)

Harper & Row, Publishers. New York, New York, USA. 1973

**Clarke, Arthur C.** 1917–

English science and science fiction writer

There are still some scientists who consider that there is no point in sending men into space, even when it becomes technically possible; machines, they argue, can do all that is necessary. Such an outlook is incredibly shortsighted; worse than that, it is stupid, for it completely ignores human nature.

Lecture

St Martin's Technical School on Charing Cross Road, October 5, 1946

Though the specific ideals of astronautics are new, the motives and impulses underlying them are old as the race — and in the ultimate analysis, they owe as much to emotion as to reason. Even if we could learn nothing in space that our instruments would not already tell us, we should go there just the same.

Lecture

St Martin's Technical School on Charing Cross Road, October 5, 1946

To find anything comparable with our forthcoming ventures into space, we must go back far beyond Columbus, far beyond Odysseus — far, indeed, beyond the first ape-man. We must contemplate the moment, now irrevocably lost in the mists of time, when the ancestor of all of us came crawling out of the sea.

*Profiles of the Future: An Inquiry into the Limits of the Possible*

Chapter 8 (p. 94)

Harper & Row, Publishers. New York, New York, USA. 1973

This [the sea] is where life began, and where most of this planet's life remains to this day, trapped in a meaningless cycle of birth and death. Only the creatures who dared the hostile, alien land were able to develop intelligence; now that intelligence is about to face a still greater challenge. It may even be that this beautiful Earth of ours is no more than a brief resting-place between the sea of salt where we were born, and the sea of stars on which we must now venture forth.

*Profiles of the Future: An Inquiry into the Limits of the Possible*  
Chapter 8 (p. 94)  
Harper & Row, Publishers. New York, New York, USA. 1973

With the landing of the first spaceship on Mars and Venus, the Childhood of our race was over and history as we know it began...

*The Exploration of Space*  
Chapter 18 (p. 195)  
Harper & Brothers. New York, New York, USA. 1951

The challenge of the great spaces between the worlds is a stupendous one; but if we fail to meet it, the story of our race is drawing to a close. Humanity will have turned its back upon the still untrodden heights and will be descending again the long slope that stretches, across a thousand million years of time, down to the shores of the primeval sea.

*Interplanetary Flight: An Introduction to Astronautics*  
Chapter 10 (p. 127)  
Harper & Row, Publishers. New York, New York, USA. 1960

Even if we never reach the stars by our own efforts, in the millions of years that lie ahead it is almost certain that the stars will come to us. Isolationism is neither a practical policy on the national or the cosmic scale. And when the first contact with the outer universe is made, one would like to think that Mankind played an active and not merely a passive role — that we were the discoverers, not the discovered.

*The Exploration of Space*  
Chapter 17 (p. 182)  
Harper & Brothers. New York, New York, USA. 1951

Long before the Sun's radiation has shown any measurable increase, Man will have explored all the Solar System and, like a cautious bather testing the temperature of the sea, will be making breathless little forays into the abyss that separates him from the stars.

*The Challenge of the Spaceship*  
The Challenge of the Spaceship (p. 4)  
Harper & Brothers. New York, New York, USA. 1959

Interplanetary travel is now the only form of "conquest and empire" compatible with civilization. Without it, the human mind, compelled to circle forever in its planetary goldfish bowl, must eventually stagnate.

*The Challenge of the Spaceship*  
The Challenge of the Spaceship (p. 7)  
Harper & Brothers. New York, New York, USA. 1959

...there is no way back into the past; the choice, as Wells once said, is the universe — or nothing. Though men and civilizations may yearn for rest, for the dream of the lotus-eaters, that is a desire that merges imperceptibly into death. The challenge of the great spaces between the worlds is a stupendous one; but if we fail to meet it, the story of our race will be drawing to its close.

*Interplanetary Flight: An Introduction to Astronautic*  
Chapter 10 (p. 127)  
Harper & Row, Publishers. New York, New York, USA. 1960

...who can guess what strange roads there may yet be on which we may travel to the stars?

*The Promise of Space*  
To the Stars (p. 299)  
Harper & Row, Publishers. New York, New York, USA. 1968

**Commoner, Barry** 1917–  
American biologist, ecologist, and educator

Explorations of space, like the earlier explorations, are great adventures because they are bold, and they are bold because they are hazardous.

*Science and Survival*  
Chapter 4 (p. 56)  
The Viking Press. New York, New York, USA. 1966

**Cousins, Norman** 1912–90  
American editor and author

The justification for exploring the cosmos rests not on tangible benefits, but on philosophical grounds and on our instinctive need to evolve.

*Rendezvous with Infinity*  
*Cosmic Search Magazine*, Volume 1, Number 1, January 1, 1979 (p. 30)

**Deudney, Daniel**  
American political scientist

...for all our looking and probing of the universe, we have yet to find any place as habitable as the remotest, most forbidding parts of this planet. Space exploration has taught us just how rare and precious the earth is.

*Space: The High Frontier in Perspective*  
Toward an Earth-Oriented Space Program (p. 51)  
Worldwatch Institute. 1982

**Dyson, Freeman J.** 1923–  
American physicist and educator

When we are a million species spreading through the galaxy, the question "Can man play God and still stay sane?" will lose some of its terrors. We shall be playing God, but only as local deities and not as lords of the universe. There is safety in numbers. Some of us will become insane, and rule over empires as crazy as Doctor Moreau's island. Some of us will shit on the morning star. There will be conflicts and tragedies. But in the long run, the sane will adapt and survive better than the insane.

*Disturbing the Universe*

Chapter 21 (pp. 236–237)  
Basic Books, Inc. New York, New York, USA. 1979

Nature's pruning of the unfit will limit the spread of insanity among species in the galaxy, as it does among individuals on earth. Sanity is, in its essence, nothing more than the ability to live in harmony with nature's laws.

*Disturbing the Universe*  
Chapter 21 (pp. 236–237)  
Basic Books, Inc. New York, New York, USA. 1979

**Ferris, Timothy** 1944–  
American science writer

We who came down from out of the forest seek to grow a forest of knowing among the stars.

*The Mind's Sky: Human Intelligence in a Cosmic Context*  
It (p. 222)  
Bantam Books. New York, New York, USA. 1992

We don't know whether human music will mean anything to nonhuman intelligences on other planets. But any creature that comes across Voyager and recognizes the record as an artifact can realize that it was dispatched with no hope of return. That gesture may speak more clearly than music. It says: However primitive we seem, however crude this spacecraft, we knew enough to envision ourselves citizens of the cosmos. ... However small we were, something in us was large enough to want to reach out to discoverers unknown, in times when we shall have perished or changed beyond recognition. ... Whoever and whatever you are, we too once lived in this house of stars, and we thought of you.

*Murmurs of Earth: The Voyager Instellar Record*  
Voyager's Music  
Random House, Inc. New York, New York, USA. 1978

**Firsoff, Valdemar Axel** 1910–82  
English astronomer and author

Yet if we go into space, let us do so humbly, in the spirit of cosmic piety. We know very little. We are face to face with the great unknown and have no right to assume that we are alone in the Solar System.

*Exploring the Planets*  
Chapter XV (p. 160)  
Sidgwick & Jackson. London, England. 1964

**Gregory, Sir Richard Arman** 1864–1952  
British science writer and journalist

Man as a physical being is but a microscopic part of the universe, yet his mind carries him ever upward, and with spirit bold and unconquerable he seeks to reach the summit of Mount Olympus. Infinite space remains to humble his pride in spite of the knowledge he has obtained of the starry heavens; yet he pursues his inquiries into the unknown, and his children's children will continue to search.

*Discovery; or, The Spirit and Service of Science*  
Chapter I (p. 21)  
Macmillan & Company Ltd. London, England. 1918

**Hale, George Ellery** 1868–1938  
American astronomer

Like buried treasures, the outposts of the universe have beckoned to the adventurous from immemorial times. Princes and potentates, political or industrial, equally with men of science, have felt the lure of the uncharted seas of space, and through their provision of instrumental means the sphere of exploration has rapidly widened...

*Possibilities of Large Telescopes*  
*Harper's Magazine*, April 1928 (p. 639)

**Hawking, Stephen William** 1942–  
English theoretical physicist

I don't think the human race will survive the next thousand years, unless we spread into space. There are too many accidents that can befall life on a single planet. But I'm an optimist. We will reach out to the stars.

By Roger Highfield, Science Editor  
Colonies in space may be only hope, says Hawking  
Telegraph, Filed: 16/10/2001

**Heinlein, Robert A.** 1907–88  
American science fiction writer

But space travel can't ease the pressure on a planet grown too crowded not even with today's ships and probably not with any future ships — because stupid people won't leave the slopes of their home volcano even when it starts to smoke and rumble. What space travel does do is drain off the best brains: those smart enough to see a catastrophe before it happens and with the guts to pay the price — abandon home, wealth, friends, relatives, everything — and go. That's a tiny fraction of one percent. But that's enough.

*Time Enough for Love*  
Chapter XIV (p. 413)  
G.P. Putnam's Sons. New York, New York, USA. 1973

**Heppenheimer, T. A.** 1947–  
Aviation writer

...if humanity persists and endures, in time we will come face to face with the evolution of our sun. In a few billion years its slow brightening will speed up as it swells into a red giant. Earth will then be uninhabitable, as will the inner regions of the Solar System. Yet there will be other more clement stars to which our descendants may wish to migrate. Certainly a society that has developed space flight and space colonization will have the advantage of never thereafter having to stand hostage to fortune.

*Toward Distant Suns*  
Chapter 13 (p. 244)  
Stackpole Books. Harrisburg, Pennsylvania, USA. 1979

**Hey, Nigel S.** 1936–

American science writer

Space scientists and engineers serve the intangible needs of humankind, and share common ground with the poet. It is self-deceptive to suppose that society is wholly bound up in supplying life-or-death needs. Humans are thinkers, explorers, wonderers, and dreamers. If we were not, we would not need space exploration; but then we would also lead a listless and uncreative existence.

*How We Will Explore the Outer Planets* (p. 142)

G.P. Putnam's Sons. New York, New York, USA. 1973

Most of our knowledge of this marvel-filled universe is due to astronomy, telescopes and to robotic spaceflight. It is impossible to think of any thing that more exquisitely embodies the technical genius of humankind, in so small a package, as the interplanetary spacecraft.

*Solar System*

Chapter 3 (p. 61)

Weidenfield & Nicolson. London, England. 2002

**Hoyle, Sir Fred** 1915–2001

English mathematician and astronomer

Space isn't remote at all. It's only an hour's drive away if your car could go straight upwards.

*Observer*, September 9, 1979

The seemingly insuperable difficulties of deep-space travel suggest an intention to keep us fixed at home in our own solar system, and the physical nature of our part of the Universe, as well as the basic rules of physics and chemistry, have a warning look about them, like barriers designed to isolate intelligent life. This means that for us, unlike the situation for humble microorganisms, deep-space travel is probably a stark impossibility.

*The Intelligent Universe*

Chapter 6 (p. 156)

Holt, Rinehart & Winston. New York, New York, USA. 1983

**Hubble, Edwin Powell** 1889–1953

American astronomer

Thus the explorations of space end on a note of uncertainty. And necessarily so. We are, by definition, in the very center of the observable region. We know our immediate neighborhood rather intimately. With increasing distance, our knowledge fades, and fades rapidly. Eventually, we reach the dim boundary — the utmost limits of our telescopes. There, we measure shadows, and we search among ghostly errors of measurement for landmarks that are scarcely more substantial.

The search will continue. Not until the empirical resources are exhausted, need we pass on to the dreamy realms of speculation.

*The Realm of the Nebulae*

Chapter VIII (p. 202)

Dover Publications, Inc. New York, New York, USA. 1958

The exploration of space has swept outward in successive waves, first, through the system of the planets, then, through the stellar system, and finally, into the realm of the nebulae. Today we study a region of space so vast and so homogeneous that it may well be a fair sample of the universe. At any rate, we are justified in adopting the assumption as a working hypothesis and attempting to infer the nature of the universe from the observed characteristics of the sample.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1942*

The Problem of the Expanding Universe (p. 119)

Government Printing Office. Washington, D.C. 1943

**Johnson, Lyndon B.** 1908–7336<sup>th</sup> president of the United States

No national sovereignty rules in outer space. Those who venture there go as envoys of the entire human race. Their quest, therefore, must be for all mankind, and what they find should belong to all mankind.

News Conference

Johnson City, Texas, 29 August, 1965

**Kennedy, John F.** 1917–6335<sup>th</sup> president of the United States

We choose to go to the Moon in this decade and do the other things, not because they are easy — but because they are hard!

Speech, Rice University, 12 September, 1962

I believe that this nation should commit itself to achieving the goal, before this decade is out, of landing a man on the Moon and returning him safely to Earth. No single space project in this period will be more impressive to mankind, or more important in the long-range exploration of space; and none will be so difficult or expensive to accomplish.

Announcement to American Congress

25 May, 1961

**Kepler, Johannes** 1571–1630

German astronomer

Provide ship or sails adapted to the heavenly breezes, and there will be some who will not fear even that void.... So, for those who will come shortly to attempt this journey, let us establish the astronomy: Galileo, you of Jupiter, I of the moon.

In John Lear

*Kepler's Dream*

Introduction and Interpretation, I (p. 3)

University of California Press. Berkeley, California, USA. 1965

**Lewis, John S.**

American professor of planetary science

It is in the interests of all the residents of Earth to see exploration continue and to see our realm of competence

expand to fill the Solar System. Like our ancient ancestors at the time of their emergence from the sea onto the land, we are challenged by events to master this great new environment, to drink of its knowledge, and to feast on its boundless resources. Let us not squander this golden opportunity.

In John S. Lewis

*Physics and Chemistry of the Solar System*

Chapter XII (p. 517)

Academic Press. San Diego, California, USA. 1995

### **Lowell, Percival** 1855–1916

American astronomer

From time immemorial travel and discovery have called with strange insistence to him who, wandering on the world, felt adventure in his veins. The leaving familiar sights and faces to push forth into the unknown has with magnetic force drawn the bold to great endeavor and fired the thought of those who stayed at home.

*Mars and Its Canals*

Chapter I (p. 3)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1895

### **Lucretius** ca. 99 BCE–55 BCE

Roman poet

...he passed far beyond the flaming walls of the world and traversed throughout in mind and spirit the immeasurable universe...

In *Great Books of the Western World* (Volume 12)

*The Nature of the Universe*

Book I, 62 (p. 2)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### **Makarov, Oleg** 1933–2003

Soviet cosmonaut

You keep returning to the thought that only very thin walls separate you from the deathly cold and incomprehensible emptiness of space, which can extinguish life instantly and piteously.

The View from Out There: In Words and Pictures

*Life*, Volume 11, Number 13, November 1988 (p. 198)

### **Martin, Charles-Noël** 1923–

French nuclear physicist

As men travel further and further into space they are bound to meet sights beyond their wildest expectations.

Translated by A.J. Pomerans

*The Role of Perception in Science*

Chapter 4 (p. 92)

Hutchinson of London. London, England. 1963

### **Moulton, Forest Ray** 1872–1952

American astronomer

...there is not the slightest possibility of [travel to other worlds]. There is not in sight any source of energy that would...be necessary to get us beyond the gravitative

control of the earth; there is not theory that would guide us through interplanetary space to another world even if we could control our departure from the earth; there is no means of carrying the large amount of oxygen, water, and food that would be necessary for such a long journey; and there is no known way of easing our ether ship down onto the surface of another world, if we could get there at low enough speed to avoid destruction.

*Consider the Heavens*

Chapter VII

Chapter II (p. 107)

Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1935

### **Nixon, Richard M.** 1913–94

37<sup>th</sup> president of the United States

We must see our space effort, then, not only as an adventure of today but also as an investment in tomorrow. We did not go to the Moon merely for the sport of it. To be sure, those undertakings have provided an exciting adventure for all mankind and we are proud that it was our nation that met this challenge. But the most important thing about man's first footsteps on the Moon is what they promise for the future.

Statement by President Nixon on the Space Program

Released from the Office of the White House

Press Secretary, Key Biscayne, Florida, 7 March 1970

From time immemorial, man has insisted on venturing into the unknown despite his inability to predict precisely the value of any given exploration. He has been willing to take risks, willing to be surprised, willing to adapt to new experiences. Man has come to feel that such quests are worthwhile in and of themselves — for they represent one way in which he expands his vision and expresses the human spirit. A great nation must always be an exploring nation if it wishes to remain great.

Statement by President Nixon on the Space Program

Released from the Office of the White House

Press Secretary, Key Biscayne, Florida, 7 March 1970

As we enter a new decade, we are conscious of the fact that man is also entering a new historic era. For the first time, he has reached beyond his planet; for the rest of time, we will think of ourselves as men from the planet Earth. It is my hope that as we go forward with our space program, we can plan and work in a way which makes us proud both of the planet from which we come and of our ability to travel beyond it.

Statement by President Nixon on the Space Program

Released from the Office of the White House

Press Secretary, Key Biscayne, Florida, 7 March 1970

### **Oberth, Hermann** 1894–1989

German mathematician and physicist

This is the goal:

To make available for life every place where life is possible.

To make inhabitable all worlds as yet uninhabitable, and all life purposeful.

Translated by G.P.H. de Freville

*Man into Space: New Projects for Rocket and Space Travel*

Chapter VIII (p. 167)

Harper & Brothers. New York, New York, USA. 1957

**O'Neill, Gerard K.** 1927–92

American physicist

Clearly our first task is to use the material wealth of space to solve the urgent problems we now face on Earth: to bring the poverty-stricken segments of the world up to a decent living standard, without recourse to war or punitive action against those already in material comfort; to provide for a maturing civilization the basic energy vital to its survival.

*The High Frontier*

Bantam Dell Doubleday Publishing Group. New York, New York, USA. 1978

**Purcell, Edward** 1912–97

American physicist

All this stuff about traveling around the universe... belongs back where it came from, on the cereal box.

In A.G.W. Cameron (ed.)

*Interstellar Communication; A Collection of Reprints and Original Contributions*

Radio Astronomy and Communication Through Space (p. 143)

W.A. Benjamin, Inc. New York, New York, USA. 1963

**Reade, Winwood** 1838–75

English philosopher and historian

A time will come when science will transform [our bodies] by means which we cannot conjecture.... And then, the earth being small, mankind will migrate into space, and will cross the airless Saharas which separate planet from planet, and sun from sun. The earth will become a Holy Land which will be visited by pilgrims from all quarters of the universe.

*The Martyrdom of Man*

Chapter IV (pp. 459, 460)

E.P. Dutton & Company. New York, New York, 1926

**Roddenberry, Gene** 1921–91

American television producer and writer

Let me end with an explanation of why I believe the move into space to be a human imperative. It seems to me obvious in too many ways to need listing that we cannot much longer depend upon our planet's relatively fragile ecosystem to handle the realities of the human tomorrow. Unless we turn human growth and energy toward the challenges and promises of space, our only other choice may be the awful risk, currently demonstrable, of stumbling into a cycle of fratricide and regression which could end all chances of our evolving further or of even surviving.

Hailing Frequencies Open!

*Planetary Report*, Volume 1, April/May 1981 (p. 3)

**Russen, David**

No biographical data available

Since Springiness is a cause of forcible motion; and a Spring will, when bended and let loose, extend its self to its length; could a Spring of well-tempered steel be framed, whose basis being fastened to the Earth, and on the other end placed a Frame or Seat, wherein a Man with other necessaries could abide in safety, this Spring being with Cords, Pullies, or other Engines bent, and then let loose by degrees by those who manage the Pullies, the other end...reach the Moon, where the Person who ascended landing, the Spring might again be bent, till the end touching the earth, should discharge the passenger again in safety.

In Noel Deisch

The Navigation of Space in Early Speculation and in Modern Research

*Popular Astronomy*, Volume 38, Number 2, February 1930 (p. 81)

**Sagan, Carl** 1934–96

American astronomer and author

Since, in the long run, every planetary civilization will be endangered by impacts from space, every surviving civilization is obliged to become spacefaring — not because of exploratory or romantic zeal, but for the most practical reason imaginable: staying alive.... If our long-term survival is at stake, we have a basic responsibility to our species to venture to other worlds.

*Pale Blue Dot: A Vision of the Human Future in Space*

Chapter 21 (p. 371)

Random House, Inc. New York, New York, USA. 1994

Centuries hence, when current social and political problems may seem as remote as the problems of the Thirty Years' War are to us, our age may be remembered chiefly for one fact: It was the time when the inhabitants of the earth first made contact with the vast cosmos in which their small planet is embedded.

The Solar System

*Scientific American*, Volume 233, Number 3, 1975 (p. 30)

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

...perchance, coming generations will not abide the dissolution of the globe, but, availing themselves of future inventions in aerial locomotion, and the navigation of space, the entire race may migrate from the earth, to settle some vacant and more western planet.... It took but little art, a simple application of natural laws, a canoe, a paddle, and a sail of matting, to people the isles of the Pacific, and a little more will people the shining isles of space. Do we not see in the firmament the lights carried along the shore by night, as Columbus did? Let us not despair or mutiny.

*The Maine Woods*

Paradise (to Be) Regained (p. 58)

Houghton Mifflin Company. New York, New York, USA. 1893

**Tipler, Frank** 1947–

American physicist

If the human species, or indeed any part of the biosphere, is to continue to survive, it must eventually leave the Earth and colonize space. For the simple fact of the matter is, the planet Earth is doomed.... Let us follow many environmentalists and regard the Earth as Gaia, the mother of all life (which indeed she is). Gaia, like all mothers, is not immortal. She is going to die. But her line of descent might be immortal... Gaia's children might never die out — provided they move into space. The Earth should be regarded as the womb of life — but one cannot remain in the womb forever.

*The Physics of Immortality: Modern Cosmology, God and the Resurrection of the Dead*

Chapter II (p. 18, 18–19)

Doubleday & Company, Inc. New York, New York, USA. 1994

**van der Riet Wooley, Sir Richard** 1906–1986

British Astronomer Royal

...the whole procedure [of shooting rockets into space]... presents difficulties of so fundamental a nature, that we are forced to dismiss the notion as essentially impracticable, in spite of the author's insistent appeal to put aside prejudice and to recollect the supposed impossibility of heavier-than-air flight before it was actually accomplished.

x

Rockets in Space

*Nature*, Supplement, March 14, 1936 (p. 442)

It's utter bilge. I don't think anybody will ever put up enough money to do such a thing... What good would it do us? If we spend the same amount of money on preparing first-class astronomical equipment we would learn much more about the universe... It is all rather rot.

Utter Bilge

*Time*, January 16, 1956 (p. 42)

**Verne, Jules** 1828–1905

French novelist

...I repeat that the distance between the earth and her satellite is a mere trifle, and undeserving of serious consideration. I am convinced that before twenty years are over one-half of our earth will have paid a visit to the moon.

*From the Earth to the Moon and Round the Moon*

From Earth to the Moon, Chapter XIX (p. 99)

A.L. Burt Company. New York, New York, USA. 1890

In spite of the opinions of certain narrow-minded people, who would shut up the human race upon this globe, as within some magic circle which it must never outstep, we shall one day travel to the moon, the planets, and the

stars, with the same facility, rapidity, and certainty as we now make the voyage from Liverpool to New York.

*From the Earth to the Moon and Round the Moon*

From Earth to the Moon, Chapter XIX (p. 97)

A.L. Burt Company. New York, New York, USA. 1890

**von Braun, Wernher** 1912–77

German-American rocket scientist

[Space travel] will free man from his remaining chains, the chains of gravity which still tie him to this planet. It will open to him the gates of heaven.

The Jupiter People

*Time*, February 10, 1958 (p. 18)

**Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

All this world is heavy with the promise of greater things, and a day will come, one day in the unending succession of days, when beings, beings who are now latent in our thoughts and hidden in our loins, shall stand upon this earth as one stands upon a footstool and laugh and reach out their hands amidst the stars.

The Discovery of the Future

*Nature*, Volume 65, Number 1684, February 6, 1902 (pp. 326–331)

**Whipple, Fred L.** 1906–2004

American comet research pioneer

In conquering space, man will take his greatest single step forward in his ever-expanding struggle against the limitations set by nature. The scientist, by knowing more about the universe, may find paths that will lead to still further conquests of nature. And it may be truly said that man will no longer be limited to seeing "as through a glass darkly." The universe will be spread out clearly before him.

In Cornelius Ryan (ed.)

*Across the Space Frontier*

The Heavens Open (p. 143)

The Viking Press. New York, New York, USA. 1952

**Wilkins, John** 1614–72

English writer

We see a great ship swims as well as a small cork, and an eagle flies in the air as well as a little gnat.... 'Tis likely enough that there may be means invented of journeying to the moon; and how happy they shall be that are first successful in this attempt.

*A Discourse Concerning a New World and Another Planet*

Book 1, Chapter 14

J. Maynard. London, England. 1640

**Wren, Sir Christopher** 1632–1723

English mathematician and architect

A time would come when Men should be able to stretch out their Eyes... they should see the Planets like our Earth.

Inauguration Speech, Gresham College, 1657

## SPACE FLIGHT

**Burroughs, Edgar Rice** 1875–1950  
American writer

I knew that I had ample room in which to wander, since science has calculated the diameter of space to be eighty-four thousand million light years, which, when one reflects that light travels at the rate of one hundred eighty-six thousand miles a second, should satisfy the wanderlust of the most inveterate roamer.

*Pirates of Venus*

Chapter Two (p. 19)

University of Nebraska Press. Lincoln, Nebraska, USA. 2001

...man is an artifact designed for space travel. He is not designed to remain in his present biologic state any more than a tadpole is designed to remain a tadpole.

*The Adding Machine: Selected Essays*

Civilian Defense (p. 82)

Seaver Books. New York, New York, USA. 1986

**Clarke, Arthur C.** 1917–

English science and science fiction writer

It has often been said — and though it is becoming platitudinous it is nonetheless true — that only through space-flight can mankind find a permanent outlet for its aggressive and pioneering instincts. The desire to reach the planets is only an extension of the desire to see what is over the next hill.

*The Exploration of Space*

Pocket Books. New York, New York, USA. 1979

**Cousins, Norman** 1912–90

American editor and author

What was most significant about the first lunar voyage was not that men set foot on the moon, but that they set eye on earth.

*Rendezvous with Infinity*

*Cosmic Search Magazine*, Volume 1, Number 1, January 1, 1979 (p. 31)

**Dyson, Freeman J.** 1923–

American physicist and educator

There are three reasons, ...apart from scientific considerations, mankind needs to travel in space. The first...is garbage disposal; we need to transfer industrial processes into space so that the earth may remain a green and pleasant place for our grandchildren to live in. The second...to escape material impoverishment: the resources of this planet are finite, and we shall not forego forever the abundance of solar energy and minerals and living space that are spread out all around us. The third...our spiritual need for an open frontier.

*Disturbing the Universe*

Chapter 10 (p. 116)

Basic Books, Inc. New York, New York, USA. 1979

When will the third romantic age in the history of space-flight begin? The third romantic age will see little model sailboats spreading their wings to the sun in space...

*Disturbing the Universe*

Chapter 10 (p. 116)

Basic Books, Inc. New York, New York, USA. 1979

**Feynman, Richard P.** 1918–88

American theoretical physicist

[Regarding space shuttle concept] It appears that there are enormous differences of opinion as to the probability of a failure with loss of vehicle and of human life. The estimates range from roughly 1 in 100 to 1 in 100,000. The higher figures come from the working engineers, and the very low figures from management.... For a successful technology, reality must take precedence over public relations, for nature cannot be fooled.

*Roger's Commission Report on the Space Shuttle Challenger Accident*

Personal observations on the reliability of the Shuttle, Appendix

**Haber, Heinz** 1868–1934

German physical chemist

The conquest of space hinges on man's survival in space. And the crews of rocket ships and space stations, while they can never be completely protected against hazards such as meteors, will probably be safer than pedestrians crossing a busy street at a rush hour.

In Cornelius Ryan (ed.)

*Across the Space Frontier*

Can We Survive in Space? (p. 97)

The Viking Press. New York, New York, USA. 1952

**Jung, Carl G.** 1875–1961

Swiss psychiatrist and founder of analytical psychology

Space flights are merely an escape, a fleeing away from oneself, because it is easier to go to Mars or to the moon than it is to penetrate one's own being.

In Miguel Serrano

*C.G. Jung and Hermann Hesse*

The Farewell (p. 102)

Schocken Books. New York, New York, USA. 1966

**Kepler, Johannes** 1571–1630

German astronomer

There will certainly be no lack of human pioneers when we have mastered the art of flight. Who would have thought that navigation across the vast ocean is less dangerous and quieter than in the narrow, threatening gulfs of the Adriatic, or the Baltic, or the British straits? Let us create vessels and sails adjusted to the heavenly ether, and there will be plenty of people unafraid of the empty wastes. In the meantime, we shall prepare, for the brave sky travelers, maps of the celestial bodies — I shall do it for the moon, you, Galileo, for Jupiter.

In Arthur Koestler

*The Watershed — A Biography of Johannes Kepler*

Letter from Kepler to Galileo  
 April 1610 (p. 195)  
 Doubleday & Company, Inc. Garden City. New York, New York, USA.

**Mallove, Eugene F.** 1947–2004  
 American physicist

Starflight is not just very hard, it is very, very, very hard.  
*Starflight Handbook*  
 Introduction (p. 5)  
 John Wiley & Sons, Inc. New York, New York, USA. 1989

**von Braun, Wernher** 1912–77  
 German-American rocket scientist

With our present knowledge, we can respond to the challenge of stellar space flight solely with intellectual concepts and purely hypothetical analysis. Hardware solutions are still entirely beyond our reach and far, far away.  
 Can We Ever Go to the Stars?  
*Popular Science*, Volume 183, Number 1, July 1963 (p. 170)

## SPACE SETTLEMENT

**Wolfe, Steven**  
 No biographical data available

Remember, the space settlement dream was born in you so that you would strive for its fulfillment in this generation, not defer it to the next. It was, and is, a call to you to take some action in this lifetime; and if you are not meant to see it through to completion, than you must at least lay a foundation on which those who will follow can build.  
 Space Settlement: The Journey Inward  
*Ad Astra*, Jan/Feb/Mar 2004

## SPACE-TIME

**Barnett, Lincoln** 1909–79  
 Science writer

...the universe is not a rigid and inimitable edifice where independent matter is housed in independent space and time; it is an amorphous continuum, without any fixed architecture, plastic and variable, constantly subject to change and distortion. Wherever there is matter and motion, the continuum is disturbed. Just as a fish swimming in the sea agitates the water around it, so a star, a comet, or a galaxy distorts the geometry of the space-time through which it moves.  
*The Universe and Dr. Einstein*  
 Chapter 11 (pp. 81–82)  
 William Sloane Associates. New York, New York, USA. 1948

**Berlinski, David** 1942–  
 American mathematician

Yet everything has a beginning, everything comes to an end, and if the universe actually began in some dense explosion, thus creating time and space, so time and space are themselves destined to disappear, the measure vanishing with the measured, until with another ripple running through the primordial quantum field, something new arises from nothingness once again.  
*A Tour of the Calculus*  
 Chapter 26 (p. 309)  
 Pantheon Books. New York, New York, USA. 1995

**Bohr, Niels Henrik David** 1886–1962  
 Danish physicist

We must, therefore, be prepared to find that further advance into this region will require a still more extensive renunciation of features which we are accustomed to demand of the space time mode of description.  
*Atomic Theory and the Description of Nature*  
 Introductory Survey (p. 14)  
 Cambridge University Press. Cambridge, England. 1934

**Carlyle, Thomas** 1795–1881  
 English historian and essayist

Deepest of all illusory Appearances, for hiding Wonder, as for many other ends, are your two grand fundamental world-enveloping Appearances, Space and Time.  
*Sartor Resartus*  
 Chapter VIII  
 Ginn & Company. Boston, Massachusetts, USA. 1897

**Clarke, Arthur C.** 1917–  
 English science and science fiction writer

Through all the ages, man has fought against two great enemies — time and space. Time he may never wholly conquer, and the sheer immensity of space may also defeat him when he has ventured more than a few light-years from the Sun. Yet on this little Earth, at least, he may one day claim a final victory.

**de Beaugard, Costa**  
 No biographical data available

There can no longer be any objective and essential... division of space-time between “events which have already occurred” and “events which have not yet occurred.”...Relativity is a theory in which everything

is “written” and where change is only relative to the perceptual mode of living beings.

In J.T. Fraser

*The Voices of Time: A Cooperative Survey of Man's Views of Time as Expressed by the Sciences and by the Humanities*

Time in Relativity Theory: Arguments for a Philosophy of Being (p. 429)

G. Braziller. New York, New York, USA. 1966

### **de Broglie, Louis** 1892–1987

French physicist

In space-time, everything which for each of us constitutes the past, the present, and the future is given in block, and the entire collection of events, successive for us, which form the existence of a material particle is represented by a line, the world-line of the particle. Each observer, as his time passes, discovers, so to speak, new slices of space-time which appear to him as successive aspects of the material world, though in reality the ensemble of events constituting space-time exist prior to his knowledge of them.

In Paul Arthur Schlipp (ed.)

English author and scholar

Everything lies within space, and everything happens within time.

*The Human Situation* (p. 328)

Longmans, Green & Company. London, England. 1937

### **Dyson, Freeman J.** 1923–

American physicist and educator

Not only is Space from the point of view of life and humanity empty, but Time is empty also. Life is like a little glow, scarcely kindled yet, in these void immensities.

*Infinite in All Directions*

Part One, Chapter One (p. 9)

HarperCollins Publisher, Inc. New York, New York, USA. 1988

### **Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

It [the physical world is a *thing*; not like space, which is a mere negation; nor like time, which is — Heaven knows what!

*The Nature of the Physical World*

Introduction (p. ix)

The Macmillan Company. New York, New York, USA. 1930

### **Einstein, Albert** 1879–1955

German-born physicist

Time and space are modes by which we think and not conditions in which we live.

In Alyesa Forsee

*Albert Einstein, Theoretical Physicist* (p. 81)

The Macmillan Company. New York, New York, USA. 1963

### **Ferris, Timothy** 1944–

American science writer

Newton viewed space and time as separate and absolute. As conceived by Einstein they are united in a flexible continuum that responds to the presence of matter. The stars and planets wrap the spacetime continuum around themselves, in a sense, each sitting in the center of a sort of spacetime whirlpool.

*The Red Limit: The Search for the Edge of the Universe*

Chapter 3 (p. 71)

William Morrow & Company, Inc. New York, New York, USA. 1977

[Einstein explained] the commerce we call gravity occurs because objects follow the easiest, most efficient course over the undulations of the continuum. Earth in its orbit glides along inside the sun's spacetime vortex like a roulette ball whirling above the wheel, balancing its velocity against its tendency to slide toward the sun. That tendency is equivalent to gravity, but no “force” of gravity is postulated. Light beams also follow the dips and hills of the continuum. They trace trajectories we call “bent,” though that is just three-dimensional parochialism talking; they are going just as straight as the shape of spacetime allows.

*The Red Limit: The Search for the Edge of the Universe*

Chapter 3 (p. 71)

William Morrow & Company, Inc. New York, New York, USA. 1977

### **Hawking, Stephen William** 1942–

English theoretical physicist

The theory of relativity does, however, force us to change fundamentally our ideas of space and time. We must accept that time is not completely separate from and independent of space, but is combined with it to form an object called space-time.

*A Brief History of Time: From the Big Bang to Black Holes*

Chapter 2 (p. 123)

Bantam Books. Toronto, Ontario, Canada. 1988

### **Hoffmann, Banesh** 1906–86

Mathematician and educator

What is it that pulls the apple to the ground, bends the circling moon to the earth and makes the planets captive of the sun? ... It is intangible time and space themselves, acting in awesome concert as curved space-time holding sway over all things in the universe.

*Relativity and Its Roots*

Chapter 6 (pp. 156–157)

W.H. Freeman & Company. New York, New York, USA. 1983

Houghton Mifflin Company. Boston, Massachusetts, USA. 1954

**Maeterlinck, Maurice** 1862–1949

Belgian playwright and poet

To attempt to explain space by time and time by space is to seek to explain the night by darkness and the darkness by the night; it is to revolve hopelessly in the circle of the unknowable.

Translated by Bernard Miall  
*The Life of Space*  
The Fourth Dimension, XXIX (pp. 96–97)  
Dodd, Mead & Company. New York, New York, USA. 1928

Space is the present made visible. Time is space that is on the move and becoming the future or the past. Space is time extended; it is horizontal time; time is space perpendicular, vertical space. Space is time that endures; time is space that flies.

Translated by Bernard Miall  
*The Life of Space*  
The Fourth Dimension, XXIX (p. 97)  
Dodd, Mead & Company. New York, New York, USA. 1928

**Maxwell, James Clerk** 1831–79

Scottish physicist

March on, symbolic host! with step sublime,  
Up to the flaming bounds of Space and Time!  
There pause, until by Dickenson depicted,  
In two dimensions, we the form may trace  
Of him whose soul, too large for vulgar space,  
In  $n$  dimensions flourished unrestricted.

In Lewis Campbell and William Garnett  
*The Life of James Clerk Maxwell with Selections from his Correspondence and Occasional Writings*  
To the Committee of the Cayley Portrait Fund (p. 637)  
Macmillan & Company. London, England. 1882

**Minkowski, Hermann** 1864–1909

German mathematician

From this hour on, space as such and time as such shall recede to the shadows and only a kind of union of the two retain significance.

In A.P. French  
*Einstein: A Centenary Volume*  
Chapter 12 (p. 231)  
Harvard University Press. Cambridge, Massachusetts, USA. 1979

The views of space and time which I wish to lay before you have sprung from the soil of experimental physics, and therein lies their strength. Henceforth space by itself and time by itself, are doomed to fade away into mere shadows, and only a kind of union of the two will preserve an independent reality.

*Space and Time*  
80<sup>th</sup> Assembly of German Natural Scientists and Physicians, September 21, 1908

The objects of our perception invariably include places and times in combination. Nobody has ever noticed a place except at a time, or a time except at a place. But I still respect the dogma that both space and time have independent significance. A point of space at a point of time, that is a system of values  $x, y, z, t$ , I will call a world-point.

North-Holland Publishing Company. Amsterdam, Netherlands. 1965

**Taylor, Edwin F.**

American physicist

**Wheeler, John Archibald** 1911–

American physicist and educator

Never make a calculation until you know the answer: Make an estimate before every calculation, try a simple physical argument (symmetry! invariance! conservation!) before every derivation, guess the answer to every puzzle. Courage: no one else needs to know what the guess is. Therefore make it quickly, by instinct. A right guess reinforces this instinct. A wrong guess brings the refreshment of surprise. In either case, life as a spacetime expert, however long, is more fun!

*Spacetime Physics*

Chapter 1 (p. 60)

W.H. Freeman & Company. San Francisco, California, USA. 1966

**Thorne, Kip S.** 1940–

American theoretical physicist

...spacetime is like a piece of wood impregnated with water. ...the wood represents space, the water represents time.... [W]ood and water; space and time...are tightly

interwoven, unified. The singularity and the laws of quantum gravity that rule it are like a fire into which the water impregnated wood is thrown. The fire boils the water out of the wood, leaving the wood alone and vulnerable; in the singularity, the laws of quantum gravity destroy time, leaving space alone and vulnerable. The fire then converts the wood into a froth of flakes and ashes; the laws of quantum gravity then convert space into a random, probabilistic froth.

*Black Holes and Time Warps: Einstein's Outrageous Legacy*

Chapter 13 (p. 477)

W.W. Norton & Company, Inc. New York, New York, USA. 1994

...Space and time, unified as spacetime, do not merely witness great masses struggling to bend the motion of other masses. Like the gods of ancient Greece, spacetime helps guide the battle and itself participates.... The scope and power of this century's new view of gravity and spacetime is seen nowhere more dramatically than in its prediction of the expansion of the universe. To have predicted...against all expectation, a phenomenon so fantastic is the greatest token yet of our power to understand this strange and beautiful universe.

*A Journey into Gravity and Spacetime*

Chapter 1 (p. 2)

Scientific American Library. New York, New York, USA. 1990

**Valéry, Paul** 1871–1945

French poet and critic

Space is an imaginary body, as time is fictive movement.

When we say "in space" or "space is filled with" we are positing a body.

In Jackson Mathews (ed.)

*The Collected Works of Paul Valéry* (Volume 14)

Analects, CIX (p. 321)

Princeton University Press. Princeton, New Jersey, USA. 1971

## SPECIALIZATION

**Agassiz, Jean Louis Rodolphe** 1807–73

Swiss-born American naturalist, geologist, and teacher

A man cannot be a professor of zoology on one day, and of chemistry on the next, and do good work in both. As in a concert all are musicians — one plays one instrument, and one another, but none all in perfection.

In Charles Frederick Holder

*Louis Agassiz: His Life and Work*

At Penikese (p. 174)

G.P. Putnam's Sons. New York, New York, USA. 1893

You cannot do without one specialty; you must have some base-line to measure the work and attainments of others.

In Charles Frederick Holder

*Louis Agassiz: His Life and Work*

At Penikese (p. 174)  
G.P. Putnam's Sons. New York, New York, USA. 1893

**Asimov, Isaac** 1920–92  
American author and biochemist

...the orchard of science is a vast globe-encircling monster, without a map, and known to no one man; indeed, to no group of men fewer than the whole international mass of creative scientists. Within it, each observer clings to his own well-known and well-loved clump of trees. If he looks beyond, it is usually with a guilty sigh.

*View from a Height*

Introduction (p. 7)

Avon Books. New York, New York, USA. 1975

**Bell, E. T. (Eric Temple)** 1883–1960  
Scottish-American mathematician and educator

To interrupt one's own researches in order to follow those of another is a scientific pleasure which most experts delegate to their assistants. Consequently, the confusion of tongues increases as the square of the number of talkers, until only ever more select coteries of narrow specialists really understand the refinements of their esoteric vocabularies.

*The Development of Mathematics* (p. 510)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1945

**Burnet, Frank Macfarlane** 1899–1985  
Australian immunologist and virologist

We may well find that the men who staff the hospitals of next century will include many who are much more mathematicians and biochemists than physicians as we know them today, but there will still be wide range of surgical and other specialists.... I fancy that those men will still need to be able to apply common sense, courage, and compassion in dealing with all the human difficulties that escape the machines.

*Changing Patterns: An Atypical Autobiography* (pp. 251–252)  
William Heineman. London, England. 1968

**Groen, Janny**  
No biographical data available

**Smit, Eefke**  
No biographical data available

Scientific information is essential, not only for the scientist. The politician, the entrepreneur and the public at large need to know about it too. The people in business find that neither the mass media nor the specialized scientific press are providing the information needed. General information is no longer enough, specialist information is only digestible for the learned. Who will bridge the gap?

*The Discipline of Curiosity: Science in the World*

Introduction (p. 4)

Elsevier Science. Amsterdam, Netherlands. 1990

**Heinlein, Robert A.** 1907–88  
American science fiction writer

A human being should be able to change a diaper, plan an invasion, butcher a hog, conn a ship, design a building, write a sonnet, balance accounts, build a wall, set a bone, comfort the dying, take orders, give orders, cooperate, act alone, solve equations, analyze new problems, pitch manure, program a computer, cook a tasty meal, fight efficiently, die gallantly.

Specialization is for insects.

*Time Enough for Love*

Intermission (pp. 265–266)

G.P. Putnam's Sons. New York, New York, USA. 1973

**Morrow, Prince Albert** 1846–1913  
American dermatologist and sociologist

The genius of modern medical literature is clearly in the direction of division of labor and associated effort.

*A System of Genito-Urinary Diseases, Syphilology, and Dermatology*

Preface

D. Appleton & Company. New York, New York, USA. 1893–4

**Ortega y Gasset, José** 1883–1955  
Spanish philosopher

For the purpose of innumerable investigations it is possible to divide science into small sections, to enclose oneself in one of these, and to leave out of consideration all the rest. The solidity and exactitude of the methods allow...this temporary but...disarticulation of knowledge. The work...done under [such] methods [is] as with a machine, and in order to obtain quite abundant results it is not even necessary to have rigorous notions of their meaning and foundations.

*The Revolt of the Masses*

Chapter 12 (p. 111)

W.W. Norton & Company, Inc. New York, New York, USA. 1960

[The division of science into specialties means] the majority of scientists help the general advance of science while shut up in the narrow cell of their laboratory, like the bee in the cell of its hive, or the turnspit in its wheel.

*The Revolt of the Masses*

Chapter 12 (p. 111)

W.W. Norton & Company, Inc. New York, New York, USA. 1960

**Osler, Sir William** 1849–1919  
Canadian physician and professor of medicine

The extraordinary development of modern science may be her undoing. Specialism, now a necessity, has fragmented the specialties themselves in a way that makes the outlook hazardous. The workers lose all sense of proportion in a maze of minutiae.

*The Old Humanities and the New Science*

Chapter III (p. 49)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1920

**Peattie, Donald Culrose** 1896–1964

American botanist, naturalist, and author

It is my contention that specialization should be left to those who are not mentally gifted at generalization.

*An Almanac for Moderns*

September Twenty-First (p. 199)

G.P. Putnam's Sons. New York, New York, USA. 1935

**Stevens, Rosemary** 1935–

No biographical data available

In the whole process of reassessment...of the medical profession...has come the recognition of medicine as an interdependent, not independent, profession and as one consisting of a complex of specialties rather than one general discipline.

*American Medicine and the Public Interest* (p. 413)

Yale University Press. New Haven, Connecticut, USA. 1971

**Vesalius, Andreas** 1514–64

Flemish physician and anatomist

Great harm is caused by too wide a separation of the disciplines which work toward the perfection of each individual art, and much more by the meticulous distribution of the practices of this art to different workers.

*The Fabric of the Human Body*

Preface

1543

**Weiner, Jonathan** 1953–

American fiction and non-fiction writer

Specialization has gotten out of hand. There are more branches in the tree of knowledge than there are in the tree of life. A petrologist studies rocks; a pedologist studies soils. The first one sieves the soil and throws away the rocks. The second one picks up the rocks and brushes off the soil. Out in the field, they bump into each other only like Laurel and Hardy, by accident, when they are both backing up.

*The Next One Hundred Years: Shaping the Fate of Our Living Earth*

Chapter 10 (pp. 198–199)

Bantam Books. New York, New York, USA. 1990

**SPECIES****Bessey, Charles E.** 1845–1915

American botanist

Nature produces individuals and nothing more

The Taxonomic Aspect of the Species Question

*The American Naturalist*, Volume 42, Number 496, April 1908 (p. 218)

**Blumenbach, Johann Friedrich** 1752–1840

German naturalist and anthropologist

What is species? We say that animals belong to one and the same species if they agree so well in form and

constitution that those things in which they differ may have arisen from degeneration... Now we come to the real difficulty, which is to set forth the characters by which in the natural world we may distinguish mere varieties from genuine species.

*The Anthropological Treatises of Johann Friedrich Blumenbach*

Section II (p. 188)

Longman, Green, Longman, Roberts & Green. London, England. 1865

**Darwin, Charles Robert** 1809–82

English naturalist

Unless we suppose the same species to have been created in two different countries, we ought not to expect any closer similarity between the organic beings on the opposite sides of the Andes than on shores separated by a broad strait of the sea.

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 1)

Chapter X (p. 365)

D. Appleton & Company. New York, New York, USA. 1896

Widely ranging species, abounding in individuals, which have already triumphed over many competitors in their own widely extended homes will have the best chance of seizing on new places, when they spread into new countries.

In *Great Books of the Western World* (Volume 49)

*The Origin of Species by Means of Natural Selection*

Chapter XII (p. 182)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

It is really laughable to see what different ideas are prominent in various naturalists' minds, when they speak of "species:" in some, resemblance seems to go for nothing, and Creation the reigning idea — in some, descent is the key, — in some, sterility an unfailling test, with others it is not worth a farthing. It comes, I believe, from trying to define the undefinable.

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 1)

Letter to J.D. Hooker, December 24, 1856 (p. 446)

D. Appleton & Company. New York, New York, USA. 1896

...I look at the term species as one arbitrarily given, for the sake of convenience, to a set of individuals closely resembling each other...

In *Great Books of the Western World* (Volume 49)

*The Origin of Species by Means of Natural Selection*

Chapter II (p. 29)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Falk, Donald**

American ecologist and biologist

We consider species to be like a brick in the foundation of a building. You can probably lose one or two or a dozen bricks and still have a standing house. But by the time you've lost 20 per cent of species, you're going to destabilize the entire structure. That's the way ecosystems work.

*Christian Science Monitor*, 26 May 1989

**Forbes, Edward** 1815–54  
English naturalist

...every true species presents in its individuals, certain features, specific characters, which distinguish it from every other species; as if the Creator had set an exclusive mark or seal on each type.

*The Natural History of the European Seas*  
Chapter I (p. 8)  
John Van Voorst. London, England. 1859

**Gregory, Sir Richard Arman** 1864–1952  
British science writer and journalist

When scientific work is instituted solely with the object of securing commercial gain, its correlative selfishness; when it is confined to the path of narrow specialisation, it leads to arrogance; and when its purpose is materialistic domination, without regard for the spiritual needs of humanity, it is a social danger and may become an excuse for learned barbarity.

*Discovery: Or the Spirit and Service of Science*  
Preface (pp. v–vi)  
Macmillan & Company Ltd. London, England. 1918

**Lamarck, Jean-Baptiste Pierre Antoine** 1744–1829  
French biologist

It is not a futile purpose to decide definitely what we mean by the so-called species among living bodies, and to enquire if it is true that species are of absolute constancy, as old as nature, and have all existed from the beginning just as we see them today; or if, as a result of changes in their environment, albeit extremely slow, they have not in course of time changed their characters and shape.

Translated by Hugh Elliot  
*Zoological Philosophy: An Exposition with Regard to the Natural History of Animals*  
Chapter III (p. 35)  
The University of Chicago Press. Chicago, Illinois, USA. 1984

What a swarm of mollusk shells are furnished by every country and every sea, eluding our means of distinction and draining our resources.

Translated by Hugh Elliot  
*Zoological Philosophy: An Exposition With Regard to the Natural History of Animals*  
Chapter III (p. 38)  
The University of Chicago Press. Chicago, Illinois, USA. 1984

The idea of bringing together under the name of species a collection of like individuals, which perpetuate themselves unchanged by reproduction and are as old as nature, involved the assumption that the individuals of one species could not unite in reproductive acts with individuals of another species.

Unfortunately, observation has proved and continues every day to prove that this assumption is unwarranted;

for the hybrids so common among plants, and the copulations so often noticed between animals of very different species, disclose the fact that the boundaries between these alleged constant species are not so impassable as had been imagined.

Translated by Hugh Elliot  
*Zoological Philosophy: An Exposition With Regard to the Natural History of Animals*  
Chapter III (p. 39)  
The University of Chicago Press. Chicago, Illinois, USA. 1984

**Leakey, Richard Erskine** 1944–  
Kenyan paleoanthropologist and politician

As a species, we are blessed with a curiosity about the world of nature and our place in it. We want to know — *need* to know — how we came to be as we are, and what our future is.

*The Origin of Humankind*  
Preface (p. xv)  
Basic Books, Inc. New York, New York, USA. 1994

**Locke, John** 1632–1704  
English philosopher and political theorist

...the boundaries of the species, whereby men sort them, are made by men.

In *Great Books of the Western World* (Volume 35)  
*An Essay Concerning Human Understanding*  
Book III, Chapter VI, Section 37 (p. 279)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Lyell, Sir Charles** 1797–1875  
English geologist

...species are abstractions, not realities — are like genera. Individuals are the only realities. Nature neither makes nor breaks molds — all is plastic, unfixed, transitional, progressive, or retrograde. There is only one great resource to fall back upon, a reliance that all is for the best, trust in God, a belief that truth is the highest aim, that if it destroys some idols it is better that they should disappear, that the intelligent ruler of the universe has given us this great volume as a privilege, that its interpretation is elevating.

In Leonard G. Wilson (ed.)  
*Sir Charles Lyell's Scientific Journals on the Species Question*  
Journal II, July 10, 1856 (p. 121)  
Yale University Press. New Haven, Connecticut, USA. 1970

**Mayr, Ernst** 1904–2005  
German-born American biologist

We had an international conference in Rome in 1981 on the mechanisms of speciation. It was attended by many of the leading botanists, zoologists, paleontologists, geneticists, cytologists and biologists. The one thing on which they all agreed was that we still have no idea what happens genetically during speciation. That's a damning statement, but it's the truth.

*OMNI Magazine*

February, 1983 (p. 78)

It may not be exaggeration if I say that there are probably as many species concepts as there are thinking systematists and students of speciation.

*Systematics and the Origin of Species*

Chapter V (p. 115)

Harvard University Press. Cambridge, Massachusetts, USA. 1942

### **Morton, Ron L.**

*Diversity and the Tropical Rain Forest*

Chapter 1 (p. 6)

Scientific American Library. New York, New York, USA. 1992

### **Wallace, Alfred Russel** 1823–1913

English humanist, naturalist, and geographer

The rule...I have endeavored to adopt [in determining what is a species and what is a species variety] is, that when the difference between two forms inhabiting separate areas seems quite constant, when it can be defined in words, and when it is not confined to a single peculiarity only, I have considered such forms to be species. When... the individuals of each locality vary among themselves, so as to cause the distinctions between the two forms to become inconsiderable and indefinite, or where the differences, though constant, are confined to one particular only, such as size, tint, or a single point of difference in marking or in outline, I class one of the forms as a variety of the other.

On the Phenomena of Variation and Geographical Distribution as Illustrated by the Papilionidae of the Malayan Region  
*Transactions of the Linnean Society of London*, Volume 25, 1865 (p. 4)

Species are merely those strongly marked races or local forms which, when in contact, do not intermix, and when

inhabiting distinct areas are generally regarded to have had a separate origin, and to be incapable of producing a fertile hybrid offspring.

On the Phenomena of Variation and Geographical Distribution as Illustrated by the Papilionidae of the Malayan Region

*Transactions of the Linnean Society of London*, Volume 25, 1865 (p. 12)

[A]s the test of hybridity cannot be applied [to species identification] in one case in ten thousand, and even if it could be applied, would prove nothing, since it is founded on an assumption of the very question to be decided — and as the test of origin is in every case inapplicable — and as, further, the test of non-intermixture is useless, except in those rare cases where the most closely allied species are found inhabiting the same area, it will be evident that we have no means whatever of distinguishing so-called “true species” from the several modes of variation here pointed out, and into which they so often pass by an insensible gradation.

On the Phenomena of Variation and Geographical Distribution as Illustrated by the Papilionidae of the Malayan Region  
*Transactions of the Linnean Society of London*, Volume 25, 1865 (p. 12)

...The essential character of a species in biology is that it is a group of living organisms, separated from all other such groups by a set of distinctive characters, having relations to the environment not identical with those of any other group of organisms, and having the power of continuously reproducing its like. Genera are merely assemblages of a number of these species which have a closer resemblance to each other in certain important and often prominent characters than they have to any other species...

*Fortnightly Review*, Volume 57, New Series, 1895 (p. 441)

## **SPECIFICATION**

### **Alger, John R. M.**

American design engineer

### **Hays, Carl V.**

No biographical data available

Once a problem is recognized clearly and all the parties concerned have agreed on its nature, the development of detailed specifications becomes vital.

*Creative Synthesis in Design* (p. 15)

Prentice-Hall. Englewood Cliffs, New Jersey, USA. 1964

A good engineer is adroit in negotiating changes in specifications or trade-offs...

*Creative Synthesis in Design* (p. 16)

Prentice-Hall. Englewood Cliffs, New Jersey, USA. 1964

### **Hoover, Herbert** 1874–1964

31<sup>st</sup> president of the United States

Specifications are the formulated, definite, and complete statements of what the buyer requires of the seller.

*National Directory of Commodity Specifications*  
M 65, Forward (p. 1)

### Matthews, J. A.

Good sense is highly desirable in writing specifications and is even more necessary in interpreting them. If they only contained the minimum number of requirements to define the character of material wanted...the matter would be greatly simplified. Rarely do they cover the only material suited to the purpose intended, and more rarely do they cover the best material for the purpose intended. Once written, they become as the laws of the Medes and Persians, which alter not. They acquire a sort of sanctity, like the Ten Commandments or the Constitution before the adoption of the Eighteenth Amendment. Present Tendencies in Engineering Materials  
*Mechanical Engineering*, Volume 48, Number 8, August 1926 (p. 792)

## SPECTROSCOPE

### Clerke, Agnes Mary 1842–1907

Irish astronomer

Custom can never blunt the wonder with which we must regard the achievement of compelling rays emanating from a source devoid of sensible magnitude through immeasurable distances, to reveal, by its distinctive qualities, the composition of that source.

*A Popular History of Astronomy During the Nineteenth Century*  
Part II, Chapter XII (p. 372)  
A. & C. Black. London, England. 1908

### Crookes, Sir William 1832–1919

English chemist and physicist

The spectroscope reveals that the elementary components of the stars and the earth are pretty much the same.

In Frederick Houk Law

*Science in Literature*

The Romance of the Diamonds (p. 111)

Harper & Brothers. New York, New York, USA. 1929

### Draper, John William 1811–82

American scientist, philosopher, and historian

And now, while we have accomplished only a most imperfect examination of objects that we find on earth, see how, on a sudden, through the vista that has been opened by the spectroscope, what a prospect lies beyond us in the heavens! I often look at the bright yellow ray emitted from the chromosphere of the sun, by that unknown element, Helium, as the astronomers have ventured to call it. It seems trembling with excitement to tell its story, and how many unseen companions it has. And if this be the case with the sun, what shall we say of the magnificent hosts of the stars? May not every one of them have special elements of its own? Is not each a chemical laboratory in itself?

Presidential Address

American Chemical Society, November 16, 1876

### Huggins, Sir William 1824–1910

English astronomer

One important object of this original spectroscopic investigation of the light of the stars and other celestial bodies, namely to discover whether the same chemical elements as those of our earth are present throughout the universe, was most satisfactorily settled in the affirmative; a common chemistry, it was shown, exists throughout the universe.

*The Scientific Papers of Sir William Huggins*

Spectra of the Fixed Stars (p. 49)

W. Wesley & Son. London, England. 1909

I looked into the spectroscope. No spectrum such as I expected! A single bright line only!...The riddle of the nebulae was solved. The answer, which had come to us in the light itself, read: Not an aggregation of stars, but a luminous gas. Stars after the order of our own sun, and of the brighter stars, would give a different spectrum; the light of this nebula had clearly been emitted by a luminous gas.

*The Scientific Papers of Sir William Huggins*

Historical Statement (p. 106)

W. Wesley & Son. London, England. 1909

### Maxwell, James Clerk 1831–79

Scottish physicist

The vast interplanetary and interstellar regions will no longer be regarded as waste places in the universe, which the Creator has not seen fit to fill with the symbols of the manifold order of His kingdom. We shall find them to be already full of this wonderful medium; so full, that no human power can remove it from the smallest portion of space, or produce the slightest flaw in its infinite continuity. It extends unbroken, from star to star; and when a molecule of hydrogen vibrates in the dog-star, the medium receives the impulses of these vibrations; and after carrying them in its immense bosom for three years, delivers them in due course, regular order, and full tale into the spectroscope...

In W.D. Niven (ed.)

*The Scientific Papers of James Clerk Maxwell* (Volume 2)

Action at a Distance (p. 322)

At The University Press. Cambridge, England. 1890

## SPECTRUM

### Thomson, James 1700–48

Scottish poet

First the flaming red Sprang vivid forth; the tawny orange next, And next delicious yellow; by whose side Fell the kind beams of all-refreshing green. Then the pure blue that swells autumnal skies, Ethereal play'd; and then,

of sadder hue Emerged the deeper indigo (as when The heavy-skirted evening droops with frost), While the last gleamings of refracted light Died in the fainting violet away.

*Poetical Works of James Thomson*

A Poem Sacred to the Memory of Sir Isaac Newton  
Reeves & Turner. London, England. 1895

## SPECTRUM ANALYSIS

**de la Rue, Warren** 1815–89

English astronomer and inventor

...if we were to go to the sun, and to bring away some portions of it and analyze them in our laboratories, we could not examine them more accurately than we can by this new mode of spectrum analysis....

*Chemical News*, Volume 4, 1861 (p. 130)

**Lockyer, Joseph Norman** 1836–1920

English astronomer and physicist

...we believe that each molecular vibration disturbs the ether; that spectra are thus begotten' each wavelength of light resulting from a molecular tremor of corresponding wavelength. The molecule is, in fact, the sender, the ether the wire, and the eye the receiving instrument, in this new telegraphy.

*Studies in Spectrum Analysis*

Chapter IV (pp. 118–119)

D. Appleton & Company. New York, New York, USA. 1878

**White, H. E.**

No biographical data available

That photographs are an extremely important feature of any book on atomic spectra may be emphasized by pointing out that, of all the theories and knowledge concerning atoms, the spectrum lines will remain the same for all time.

*Introduction to Atomic Spectra* (p. vii)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1934

## SPECULATION

**Comfort, Alex** 1920–2000

English gerontologist and author

Rash speculation does not bother the physicists — it has got them where they are today. And it is high time that the life sciences looked critically at the solidity of their tribal idols, including stochastic-genetic evolution, morphogenesis and the “mind-body problem” — while being mindful that, in the present climate, work on some quite unrelated matter may prove, incidentally and quite unwittingly, to have altered the entire face of the problem. Nor will the answers obtained lie within any existing frame of discourse.

On Physics and Biology: Getting Our Act Together

*Perspectives in Biology and Medicine*, Volume 29, Number 1, Autumn 1985 (p. 9)

**Darwin, Charles Robert** 1809–82

English naturalist

All young geologists have a great turn for speculation; I have burned my fingers pretty sharply in that way, and am now inclined to cavil at speculation when the direct and immediate effect of a cause in question cannot be shown.

In Francis Darwin (ed.)

*More Letters of Charles Darwin* (Volume 2)

Letter 487, Darwin to C.H.L. Wood, March 4, 1850 (p. 133)

D. Appleton & Company. New York, New York, USA. 1903

**Dr. Seuss (Theodor Seuss Geisel)** 1904–1991

American children's book author and illustrator

Some have two feet and some have four. Some have six feet and some have more. Where do they come from? I can't say. But I bet they have come a long long way.

*One Fish, Two Fish, Red Fish, Blue Fish* (p. 12)

Beginner Books Inc. New York, New York, USA. 1988

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

If we are not content with the dull accumulation of experimental facts, if we make any deductions or generalizations, if we seek for any theory to guide us, some degree of speculation cannot be avoided. Some will prefer to take the interpretation which seems to be most immediately indicated and at once adopted as an hypothesis; others will rather seek to explore and classify the widest possibilities which are not definitely inconsistent with the facts. Either choice has its dangers: the first may be too narrow a view and lead progress into a cul-de-sac; the second may be so broad that it is useless as a guide and diverge indefinitely from experimental knowledge.

The Internal Constitution of the Stars

*Observatory*, Volume 43, 1920 (p. 356)

**Einstein, Albert** 1879–1955

German-born physicist

I think that only daring speculation can lead us further and not accumulation of facts.

In Michele Besso

*Correspondence 1903–1955*

Letter to M. Besso, October 8, 1952 (p. 487)

Hermann. Paris, France. 1972

**Feuerbach, Ludwig** 1804–72

German philosopher

Speculation is philosophy intoxicated; let philosophy get sober again; it will then be to the mind what pure spring water is to the body.

In Ludwig Buchner

*Force and Matter*

Preface to the First Edition (p. xx)

Trubner &amp; Company. London, England. 1864

**Jeffreys, Sir Harold** 1891–1989

English astronomer and geophysicist

The problem of the origin and development of the solar system suffers from the label “speculative.” It is frequently said that as we were not there when the system was formed, we cannot legitimately arrive at any idea as to how it was formed.

In B. Gutenberg (ed.)

*Internal Constitution of the Earth*

The Origin of the Solar System

Dover Publications. New York, New York, USA. 1951

Scottish writer

The Golden Age of speculation was the Stone Age of knowledge.

The Triumph of Physics

*The Rationalist Annual*, 1931 (p. 28)**Woodford, F. Peter**

American editor

Of course speculation is in order in a Discussion, but it must be reasonable, firmly founded on observation, and subject to test, if it is to get past a responsible editorial board.

*Scientific Writing for Graduate Students* (p. 29)

Council of Biology Editors. Bethesda, Maryland, USA. 1986

**SPIN****Goudsmit, Samuel A.** 1902–78

Dutch-born American physicist

It was a little over fifty years ago that George Uhlenbeck and I introduced the concept of spin. It is therefore not surprising that most young physicists do not know that spin had to be introduced. They think that it was revealed in Genesis or perhaps postulated by Sir Isaac Newton, which most young physicists consider to be about simultaneous.

In Anthony French and Edwin Taylor

*An Introduction to Quantum Physics* (p. 424)

W.W. Norton &amp; Company, Inc. New York, New York, USA. 1978

**SPIRAL ARMS****van de Hulst, H. C.** 1918–2000

Dutch astronomer

The discovery of spiral arms and — later — of molecular clouds in our Galaxy, combined with a rapidly growing understanding of the birth and decay process of stars, changed interstellar space from a stationary “medium” into an “environment” with great variations in space and time.

In A. Bonetti, J.M. Greenberg and S. Aiello (eds.)

*Evolution in Interstellar Dust and Related Topics* (p. 5)

North-Holland Publishing Company. Amsterdam, Netherlands. 1989

**SPONTANEOUS GENERATION****Urey, Harold Clayton** 1893–1981

American chemist

The common assumption is that the earth and its atmosphere have always been as they are now, but if this is assumed it is necessary to account for the present highly oxidized conditions by some processes taking place early in the earth's history. Briefly, the highly oxidized condition is rare in the cosmos.

On the Early Chemical History of the Earth and the Origin of Life

*Proceedings of the National Academy of Science USA*, Volume 38, 1952**Hacking, Ian** 1936–

Canadian-born philosopher of science

**STAMP COLLECTING****Alvarez, Luis Walter** 1911–88

American experimental physicist

Paleontologists...they're really not very good scientists. They're more like stamp collectors.

*New York Times*  
19 Jan 1988

**Birch, Arthur J.** 1915–1995  
Australian chemist

I have never been emotionally attracted by exactitude of detail, but rather by the broad sweep of ideas collected around philosophically defined examples that can be tested experimentally. I have never been a scientific “stamp collector”, although it takes all types to make the world and I have greatly benefited by the “collections” of others...

*To See the Obvious*

Why Chemistry? (pp. 13–14)

American Chemical Society. Washington, D.C. 1995

**Rutherford, Ernest** 1871–1937  
English physicist

All science is either physics or stamp collecting.

In J.B. Birks

*Rutherford at Manchester*

Memories of Rutherford (p. 108)

W.A. Benjamin Inc. New York, New York, USA. 1963

**Simpson, George Gaylord** 1902–84  
American paleontologist

Biology starts with biochemistry and goes on to neurophysiology and genetics. All else is stamp-collecting.

*This View of Life: The World of an Evolutionist*

Chapter Six (p. 108)

Harcourt, Brace & World, Inc. New York, New York, USA. 1964

## STANDARD

**Woll, Matthew** 1880–1956  
Luxembourg-born American photo engraver

I know very well that in a great many circles the man who does not enter with a neatly arranged plan, with a set of doctrines, with a rounded and sonorous formula, and with assurance about everything, is set down as something of an old fogey, perhaps reactionary, certainly not one of the elect who are “doing things” and providing guidance for the race. I must assume the risk. I have no formula. [But I shall resist] those who have the formula for so many things and who seek so avidly to force it down the throats of every one else.

Standardization

*Annals of the American Academy of Political and Social Science*, Volume 137, May 1928 (p. 47)

## STAR

**Acton, Loren** 1936–  
American astronaut and solar physicist

When you look out the other way toward the stars you realize it's an awful long way to the next watering hole.

In Kevin W. Kelley

*The Home Planet*

With Plate 84

Addison-Wesley. Reading, Massachusetts, USA. 1988

**Adams, George** 1750–95  
English instrument maker

New stars offer to the mind a phenomenon more surprising, and less explicable, than almost any other in the science of astronomy.

*Lectures on Natural and Experimental Philosophy* (Volume 4)

Chapter XLIV (p. 213)

Printed by R. Hindmarsh. London, England. 1794

**Aiken, Conrad** 1889–1973  
American poet, short story writer and novelist

Ice is the silent language of the peak; and fire is the silent language of the star.

*Collected Poems*

Sonnet 10

Oxford University Press, Inc. New York, New York, USA. 1970

**Alighieri, Dante** 1265–1321  
Italian poet and writer

...and thence we issued forth again to see the stars.

In *Great Books of the Western World* (Volume 21)

*The Divine Comedy of Dante Alighieri*

Hell, Canto XXXIV, l. 138–139

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Andreas, Brian** 1956–  
American artist, sculpture, and storyteller

We lay there & looked up at the night sky & she told me about stars called blue squares & red swirls & I told her I'd never heard of them. Of course not, she said, the really important stuff they never tell you. You have to imagine it on your own.

*Blue Squares*

**Aratus** 271 BCE–213 BCE  
Greek statesman

In his fell jaw

Flames a star above all others with searing beams

Fiercely burning, called by mortals Sirius.

In Garrett P. Serviss

*Astronomy with the Naked Eye*

Chapter III (p. 42)

Harper & Brothers New York, New York, USA. 1908

**Aurelius Antoninus, Marcus** 121–180  
Roman emperor

The Pythagoreans bid us in the morning look to the heavens that we may be reminded of those bodies which continually do the same thing and in the same manner

perform their work, and also be reminded of their purity and nudity. For there is no veil over a star.

In *Great Books of the Western World* (Volume 12)  
*The Meditations of Marcus Aurelius*  
 Book XI, # 27 (p. 306)  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Look around at the courses of the stars, as if thou wert going along with them; and constantly consider the changes of the elements into one another; for such thoughts purge away the filth of the terrene life.

In *Great Books of the Western World* (Volume 12)  
*The Meditations of Marcus Aurelius*  
 Book VII, #47 (p. 282)  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Bailey, Philip James** 1816–1902  
 English poet

Surely the stars are images of love.

*Festus: A Poem*  
 Scene XXXI (p. 510)  
 George Routledge & Sons, Ltd. London, England. 1893

... the stars

As dewdrops countless on the aetherial fields  
 Of the skies...

*Festus: A Poem*  
 Scene I (p. 32)  
 George Routledge & Sons, Ltd. London, England. 1893

**Baudelaire, Charles** 1821–67  
 French poet

... those stars whose light speaks a known language...

*The Flowers of Evil*  
 Obsession (p. lxxix)  
 Wesleyan University Press. Middletown, Connecticut, USA. 1979

**Benét, William Rose** 1886–1950  
 American poet and editor

One speck within vast star-space lying  
 Awoke, arose, resumed its clothing,  
 And crawled another day toward dying.

*Animalcule*  
 Stanza 7  
 George H. Doran Company. New York, New York, USA. 1927

**Berry, Richard** 1946–  
 American amateur astronomer and author

It is a pity, in an age of rockets and space telescopes, that so few people have a direct acquaintance with the stars. Learning the stars and following their nightly courses across the sky brings a deep satisfaction, a satisfaction born of familiarity with something both ancient and ageless.

*Discover the Stars* (p. 2)  
 Harmony Books. New York, New York, USA. 1987

**Blake, William** 1757–1827  
 English poet, painter, and engraver

When the stars threw down their spears,  
 And water'd heaven with their tears,  
 Did he smile his work to see?

Did he who made the Lamb make thee?  
*The Complete Poetry and Prose of William Blake*  
 The Tyger  
 University of California Press. Berkeley, California, USA. 1982

**Borland, Hal** 1900–78  
 American writer

...it is the stars that lure man's mind to the endless immensity of a universe so broad that tangible reality can never span it.

*An American Year: Country Life and Landscapes Through the Seasons*  
 June (p. 46)  
 Simon & Schuster. New York, New York, USA. 1946

**Brecht, Bertolt** 1898–1956  
 German writer

SAGREDO [reluctant to go to the telescope]: I feel something not all that remote from fear, Galileo.

GALILEO: I'm about to show you one of the shining milkwhite clouds in the Milky Way. Tell me what it's made up of.

SAGREDO: Those are stars, innumerable stars.

Translated by John Willett  
*Life of Galileo*  
 Scene 3 (p. 26)  
 Arcade Publishing. New York, New York, USA. 1994

**Brewster, David** 1781–1868  
 English physicist

It is no ways probable that the Almighty, who always acts with infinite wisdom, and does nothing in vain, should create so many glorious suns, fit for so many important purposes, and place them at such distances from one another, without proper objects near enough to be benefited by their influences. Whoever imagines they were created only to give a faint glimmering light to the inhabitants of this globe, must have a very superficial knowledge of astronomy, and a mean opinion of the Divine wisdom: since, by an infinitely less exertion of creating power, the Deity would have given our earth much more light by one single additional moon.

*Ferguson's Astronomy, Explained upon Sir Isaac Newton's Principles*  
 (Volume 1)  
 Chapter I (p. 3)  
 Printed for the author. London, England. 1756

**Brood, William J.**  
 No biographical data available

A telescope in the void recently found cosmic "maternity wards" where clouds of interstellar gas and dust appear to be in various stages of giving birth to stars.

"Golden Age" of Astronomy Peers to the Edge of the Universe  
*New York Times*, C1, May 8, 1984

**Brown, Fredric** 1906–72

American writer of science fiction and mystery

Overhead and in the far distance are the lights in the sky that are stars. The stars they tell us we can never reach because they are too far away. They lie; we'll get there. If rockets won't take us, something will.

*The Lights in the Sky Are Stars* (p. 20)

**Browne, J. Stark**

No biographical data available

The stillness of the heavens is, however, apparent only, for commotion of the fiercest kind is raging on all sides. Stars are suns, and the suns are spheres of fire blazing with fury indescribable; scenes of activity so tremendous that no vehemence of tempest or tornado on earth can give the slightest idea of their fearfulness.

The Number and Distances of the Stars

*The Rationalist Annual*, 1931 (p. 61)

**Browning, Robert** 1812–89

English poet

All that I know  
of a certain star,  
Is, it can throw,  
(Like the angled spar)  
Now a dart of red,  
Now a dart of blue.

*The Poems and Plays of Robert Browning*

Dramatic Lyrics, My Star

The Modern Library. New York, New York, USA. 1934

**Bryant, William Cullen** 1794–1878

American poet

The sad and solemn night  
Hath yet her multitude of cheerful fires;  
The glorious host of light  
Walk the dark hemisphere till she retires;  
All through her silent watches, gliding slow,  
Her constellations come and climb the heavens and go.

In Parke Godwin (ed.)

*Poems*

Hymn to the North Star

D. Appleton & Company. New York, New York, USA. 1874

**Meredith, Owen (Edward Robert  
Bulwer-Lytton, 1<sup>st</sup> Earl Lytton)** 1831–91

English statesman and poet

When stars are in the quiet skies,  
Then most I pine for thee;  
Bend on me then thy tender eyes,  
As stars look on the sea.

*The Works of Edward Bulwer-Lytton* (Volume 6)

Night and Love (p. 59)

Peter Fenelon Collier. New York, New York, USA. 1892

**Bunting, Basil** 1900–85

English modernist poet

Furthest, fairest thing, stars, free of our humbug,  
each his own, the longer known, the more alone,  
wrapt in emphatic fire roaring out to a black flue...  
Then is Now. The star you steer by is gone.

*Collected Poems*

Briggflats, V (p. 58)

Oxford University Press, Inc. London, England. 1978

**Burke, Edmund** 1729–97

English statesman and philosopher

The starry heaven, though it occurs so very frequently to our view, never fails to excite an idea of grandeur. This cannot be owing to the stars themselves, separately considered. The number is certainly the cause. The apparent disorder augments the grandeur, for the appearance of care is highly contrary to our ideas of magnificence. Besides, the stars lie in such apparent confusion, as makes it impossible on ordinary occasions to reckon them. This gives them the advantage of a sort of infinity.

*A Philosophical Enquiry into the Origin of Our Ideas of the Sublime and Beautiful Magnificence* (p. 139)

University of Notre Dame Press. Notre Dame, Indiana, USA. 1968

**Burnet, Thomas** 1635–1715

English cleric and scientist

They lie carelessly scatter'd, as if they had been sown in the Heaven, like Seed, by handfuls; and not by a skilful hand neither. What a beautiful Hemisphere they would have made, if they had been plac'd in rank and order, if they had been all dispos'd into regular figures, and the little ones set with due regard to the greater. Then all finish and made up into one fair piece or great Composition, according to the rules of Art and Symmetry.

*The Sacred Theory of the Earth* (2<sup>nd</sup> edition)

Book II, Chapter XI (p. 220)

Printed by R. Norton. London, England. 1691

**Burritt, Elijah H.** 1794–1838

American astronomer

These vast globes of light then, could never have been designed merely to diversify the voids of infinite space, nor to shed a few glimmering rays on our far distant world, for the amusement of a few astronomers, who, but for the most powerful telescopes, had never seen the ten thousandth part of them.

*The Geography of the Heavens*

Chapter XVI (p. 154)

Huntington & Savage, Mason & Law. New York, New York, USA. 1850

**Butler, Samuel** 1612–80

English novelist, essayist, and critic

Cry out upon the stars for doing  
Ill offices, to cross their wooing.

*The Poetical Works of Samuel Butler* (Volume 1)

Part III, Canto I, l. 17

Bell & Daldy. London, England. 1835

**Campbell, Thomas** 1777–1844  
Scottish poet

...the sentinel stars set their watch in the sky.

*The Complete Poetical Works*

The Soldier's Dream

Chadwyck-Healey. Cambridge, England. 1992

**Carlyle, Thomas** 1795–1881  
English historian and essayist

Canopus shining-down over the desert, with its blue diamond brightness (that wild, blue, spirit-like brightness far brighter than we ever witness here), would pierce into the heart of the wild Ishmaelitic man, whom it was guiding through the solitary waste there.

*On Heroes and Hero Worship*

Lecture I (p. 13)

John B. Alden, Publisher. New York, New York, USA. 1887

...when I gazed into these Stars, have they not looked down on me as if with pity, from their serene spaces; like Eyes glistening with heavenly tears over the little lot of man! Thousands of human generations, all as noisy as our own, have been swallowed up of Time, and there remains no wreck of them any more; and Arcturus and Orion and Sirius and the Pleiades are still shining in their courses, clear and young, as when the Shepherd first noted them in the plain of Shinar.

*Sartor Resartus*

Book II, Chapter VIII (p. 165)

Ginn & Company. Boston, Massachusetts, USA. 1897

**Cernan, Eugene** 1934–  
American astronaut

I know the stars are my home. I learned about them, needed them for survival in terms of navigation. I know where I am when I look up at the sky. I know where I am when I look up at the Moon; it's not just some abstract romantic idea, it's something very real to me. See, I've expanded my home.

The View from Out There: In Words and Pictures

*Life*, Volume 11, Number 13, November 1988 (p. 198)

**Cicero (Marcus Tullius Cicero)** 106 BCE–43 BCE  
Roman orator, politician, and philosopher

No one regards things before his feet  
But views with care the regions of the sky.

Translated by William Armistead Falconer

English theologian

How lovely are the portals of the night,  
When stars come out to watch the daylight die.

Twilight

Source undetermined

**Coleridge, Samuel Taylor** 1772–1834  
English lyrical poet, critic, and philosopher

...the stars hang bright above her dwelling,

Silent as though they watched the sleeping Earth!

*The Complete Poetical Works of Samuel Taylor Coleridge* (Volume 1)

Dejection: An Ode, Stanza VIII

The Clarendon Press. Oxford, England. 1912

**Coman, Dale Rex** 1906–

American research physician and wildlife writer

How dismal a universe it would be without the lights of the stars to probe its infinite blackness.

*The Endless Adventure*

The Early Days of May (p. 148)

Henry Regnery Company. Chicago, Illinois, USA. 1972

**Comte, Auguste** 1798–1857

French philosopher

We can imagine the possibility of determining the shapes of stars, their distances, their sizes, and their movements; whereas there is no means by which we will ever be able to examine their chemical composition, their mineralogical structure, or especially, the nature of organisms that live on their surfaces.... Our positive knowledge with respect to the stars is necessarily limited to their observed geometrical and mechanical behavior.

*The Positive Philosophy of Auguste Comte* (Volume 2) (p. 9)

John Chapman. London, England. 1853

On the subject of stars, all investigations which are not ultimately reducible to simple visual observations are... necessarily denied to us... We shall never be able by any means to study their chemical composition.

In Neil deGrasse Tyson

Over the Rainbow

*Natural History*, Volume 110, Number 7, September 2001 (p. 33)

**Copernicus, Nicolaus** 1473–1543

Polish astronomer

...the first and highest of all is the sphere of the fixed stars, which comprehends itself and all things, and is accordingly immovable.

In *Great Books of the Western World* (Volume 16)

*On the Revolutions of the Heavenly Spheres*

Book One, Chapter 10 (p. 526)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Crane, Hart** 1899–1932

American poet

Stars scribble on our eyes the frosty sagas,  
The gleaming cantos of unvanquished space.

In Brom Weber (ed.)

*The Complete Poems and Selected Letters and Prose of Hart Crane*

Cape Hatteras

Anchor Books. Garden City, New York, USA. 1966

**Dawkins, Richard** 1941–

British ethologist, evolutionary biologist, and popular science writer

The stars have larger agendas in which the preoccupations of human pettiness do not figure.

*Unweaving the Rainbow: Science, Delusion and the Appetite for Wonder*

Chapter 6 (p. 117)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1998

The universe we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil, no good, nothing but blind, pitiless indifference.

Chapter 4 (p. 133)

Basic Books, Inc. New York, New York, USA. 1995

**de la Mare, Walter** 1873–1956

English poet and novelist

Wide are the meadows of night  
And daisies are shining there,  
Tossing their lovely dew,  
Lustrous and fair,  
And through these sweet fields go,  
Wanderers amid the stars —  
Venus, Mercury, Uranus, Neptune,  
Saturn, Jupiter, Mars.

*Peacock Pie: A Book of Rhymes*

The Wanderers

A. Constable & Company. London, England. 1913

**de Saint-Exupéry, Antoine** 1900–44

French aviator and writer

All men have the stars...but they are not the same things for different people. For some, who are travelers, the stars are guides. For others they are no more than little lights in the sky. For others, who are scholars, they are problems. For my businessman they were wealth. But all these stars are silent. You — you alone — will have the stars as no one else has them...

Translated by Katherine Woods

*The Little Prince*

Chapter XXVI (p. 85)

Harcourt, Brace & Company. New York, New York, USA. 1943

**de Tabley, Lord** 1835–95

English literary scholar and botanist

The May-fly lives an hour,  
The star a million years;  
But as a summer flower,  
Or as a maiden's fears,  
They pass, and heaven is bare  
As tho' they never were.

*The Collected Poems of Lord de Tabley*

Hymn to Astarte

Chapman and Hall. London, England. 1903

**Dee, John** 1527–1609

English mathematician and occultist

The stars and celestial powers are like seals whose characters are imprinted differently by reason of differences in the elemental matter.

*John Dee on Astronomy*

XXVI (p. 135)

University of California Press. Berkeley, California, USA. 1978

**Dick, Thomas** 1600–80

Scottish theologian and philosopher

Come forth, O man! yon azure round survey,  
And view those lamps which yield eternal day.  
Bring forth thy glasses; clear thy wondering eyes;  
Millions beyond the former millions rise;  
Look further; — millions more blaze from yonder skies.

*The Works of Thomas Dick, LL.D.*

The Solar System, Volume 10, Chapter VIII (p. 197)

**Dickinson, Emily** 1830–86

American lyric poet

“Arcturus” is his other name —  
I’d rather call him “star.”

It’s very mean of Science

To go and interfere!

*The Complete Poems of Emily Dickinson*

No. 70 (p. 36)

Little, Brown & Company. Boston, Massachusetts, USA. 1960

**Disraeli, Benjamin, 1<sup>st</sup> Earl of****Beaconsfield** 1804–81

English prime minister, founder of Conservative Party, and novelist

It shows you exactly how a star is formed; nothing can be  
so pretty! A cluster of vapor, the cream of the milky way,  
a sort of celestial cheese, churned into light...

*Tancred*

Book I, Chapter IX

H. Colburn. London, England. 1847

**Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

Are you conscious of the restful influence which the  
stars exert? To me they are the most soothing things in  
Nature. I am proud to say that I don’t know the name  
of one of them. The glamour and romance would pass  
away from them if they were all classified and ticketed  
in one’s brain. But when a man is hot and flurried, and  
full of his own little ruffled dignities and infinitesimal  
misfortunes, then a star bath is the finest thing in the  
world.

*The Stark Munro Letters*

Letter VIII (p. 170)

D. Appleton & Company. New York, New York, USA. 1895

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

We are bits of stellar matter that got cold by accident, bits  
of a star gone wrong.

*New York Times Magazine*

October 9, 1932

We can now form some sort of picture of the inside of  
a star — a hurly burly of atoms, electrons and aether-  
waves. Disheveled atoms tear along at a hundred miles  
a second, their normal array of electrons being torn from

them in the scrimmage. The lost electrons are speeding a  
hundred times faster to find new resting places...

*Stars and Atoms*

Lecture I (p. 26)

Yale University Press. London, England. 1927

Our object in diving into the interior [of a star] is not  
merely to admire a fantastic world with conditions tran-  
scending ordinary experience; it is to get at the inner  
mechanism which makes stars behave as they do. If we  
are to understand the surface manifestations, if we are to  
understand why “one star differeth from another star in  
glory,” we must go below to the engine-room — to trace  
the beginning of the stream of heat and energy which  
pours out through the surface.

*Stars and Atoms*

Lecture I (p. 20)

Yale University Press. London, England. 1927

I am aware that many critics consider the conditions in  
the stars not sufficiently extreme...the stars are not hot  
enough. The critics lay themselves open to an obvious  
retort: we tell them to go and find a hotter place.

*Stars and Atoms*

Lecture III (p. 102)

Yale University Press. London, England. 1927

...it is reasonable to hope that in a not too distant future  
we shall be competent to understand so simple a thing  
as a star.

*The Internal Constitution of the Stars*

Chapter XIII (p. 393)

At The University Press. Cambridge, England. 1930

**Eliot, George (Mary Ann Evans Cross)** 1819–80

English novelist

The stars are golden fruit upon a tree  
All out of reach.

*The Spanish Gypsy*

Book II

Blackwood and Sons. Edinburgh, Scotland. 1868

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

The stars awaken a certain reverence, because though  
always present, they are inaccessible...

*The Complete Works of Ralph Waldo Emerson* (Volume 1)

Nature: Addresses and Lectures

Chapter I (p. 7)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

But every night comes out the envoys of beauty, and light  
the universe with their admonishing smile.

*Ralph Waldo Emerson: Essays and Lectures*

Nature: Addresses, and Lectures

Nature (p. 9)

The Library of America. New York, New York, USA. 1983

If a man would be alone, let him look at the stars. The  
rays that come from those heavenly worlds, will separate

between him and what he touches. One might think the atmosphere was made transparent with this design, to give man, in the heavenly bodies, the perpetual presence of the sublime. Seen in the streets of cities, how great they are!

*Ralph Waldo Emerson: Essays and Lectures*

Nature: Addresses and Lectures

Nature (p. 9)

The Library of America. New York, New York, USA. 1983

If the stars should appear one night in a thousand years, how would men believe and adore and preserve for many generations the remembrance of the city of God which had been shown.

*Ralph Waldo Emerson: Essays and Lectures*

Nature: Addresses, and Lectures

Nature (p. 9)

The Library of America. New York, New York, USA. 1983

### **Flecker, James Elroy** 1884–1915

English poet and playwright

West of these out to seas colder than the Hebrides I must go

Where the fleet of stars is anchored and the young Star-captains glow.

The Dying Patriot

Martin Secker. London, England. 1916

### **Fraunhofer, Joseph von** 1787–1826

German optician and physicist

*Approximavit sidera*

He brought the stars closer

*Epitaph on his gravestone*

### **Frost, Robert** 1874–1963

American poet

They cannot scare me with their empty spaces

Between stars — on stars where no human race is.

*Complete Poems of Robert Frost*

Desert Places

Henry Holt & Company. New York, New York, USA. 1949

I could be worse employed

Than as a watcher of the void,

Whose part should be to tell

What star if any fell.

Suppose some seed-pearl sun

Should be the only one;

Yet still I must report

Some cluster one star short.

I should justly hesitate

To frighten church or state

By announcing a star down

From, say, the Cross or Crown.

To make sure what star I missed

I should have to check on my list

Every star in sight.

It might take me all night.

*Complete Poems of Robert Frost*

On Making Certain Anything Has Happened

Henry Holt & Company. New York, New York, USA. 1949

### **Gamow, George** 1904–68

Russian-born American physicist

Twinkle, twinkle, quasi-star

Biggest puzzle from afar

How unlike the other ones

Brighter than a billion suns

Twinkle, twinkle, quasi-star

How I wonder what you are.

In Louis Berman

*Exploring the Cosmos*

Chapter 14 (p. 311)

Little, Brown & Company. Boston, Massachusetts, USA. 1973

Whereas all humans have approximately the same life expectancy, the life expectancy of stars varies as much as from that of a butterfly to that of an elephant.

*A Star Called the Sun* (p. 145)

The Viking Press. New York, New York, USA. 1964

### **Goddard, Robert H.** 1882–1945

American physicist

There can be no thought of finishing, for “aiming at the stars,” both literally and figuratively, is a problem to occupy generations, so that no matter how much progress one makes, there is always the thrill of just beginning.

In Eugene Mallove and Gregory Matloff

*The Starflight Handbook*

Letter to H.G. Wells, April 20, 1932 (p. 1)

John Wiley & Sons, Inc. New York, New York, USA. 1989

### **Goodenough, Ursula** 1943–American biologist

I lie on my back under the stars and the unseen galaxies and I let their enormity wash over me. I assimilate the vastness of the distances, the impermanence, the fact of it all. I go all the way out and then I go all the way down, to the fact of photons without mass and gauge bosons that become massless at high temperatures. I take in the abstractions about forces and symmetries and they caress me, like Gregorian chants because the words are so haunting.

*The Sacred Depths of Nature*

Chapter I. Reflections (pp. 12–13)

Oxford University Press, Inc. New York, New York, USA. 1998

### **Greenstein, George** 1940–

American astronomer

Overhead, the stars are strewn across a darkness, a blackness so profound that for a moment, for the barest flicker of an instant, I can almost sense their inconceivable

distance. In a sudden; exalting burst of vertigo I fancy  
what it would be like to fly, to fall up and into that ocean.

*The Symbiotic Universe*

Prologue (p. 29)

William Morrow & Company, Inc. New York, New York, USA. 1988

### **Gronal, Florence Armstrong**

American astronomer and photographer

If all the diamonds in the world were melted into one  
huge magical jewel, its sparkling brilliance would pale  
beside Sirius, the diamond of the heavens.

*The Music of the Spheres: A Nature Lover's Astronomy*

Chapter VIII (p. 159)

The Macmillan Company. New York, New York, USA. 1926

...if all the wondrous phenomena of visible stars could  
be seen on but one of the nights of our long ride about  
the sun, the civilized world would spend its last cent on  
glasses and sit up until dawn to feast its eyes on the sub-  
limity of the spectacle.

*The Music of the Spheres: A Nature Lover's Astronomy*

Chapter II (p. 16)

The Macmillan Company. New York, New York, USA. 1926

### **Guiterman, Arthur** 1871–1943

Austrian-American poet

When the bat's on the wing and the bird's in the tree,  
Comes the starlighter, whom none may see.  
First in the West where the low hills are,  
He touches his wand to the Evening Star.  
Then swiftly he runs on his rounds on high,  
Till he's lit every lamp in the dark blue sky.

*Gaily the Troubadour*

The Starlighter (p. 190)

E.P. Dutton & Company, Inc. New York, New York, USA. 1936

While poets feign that, passing earthly bars,  
We Fireflies shall someday shine as Stars,  
Our scientists, more plausibly surmise  
That Stars are underdeveloped Fireflies.

*Gaily the Troubadour*

My Firefly Stars (p. 187)

E.P. Dutton & Company, Inc. New York, New York, USA. 1936

### **Habington, William** 1605–54

English poet

The starres, bright cent'nels of the skies.

*The Poems of William Habington*

Dialogue between Night and Araphil, l. 3

University Press of Liverpool. Liverpool, England. 1948

### **Hardy, Thomas** 1840–1928

English poet and regional novelist

The sky was clear — remarkably clear — and the twin-  
kling of all the stars seemed to be but throbs of one body,  
timed by a common pulse.

*Far from the Madding Crowd*

Chapter 2 (p. 9)

Harper & Row, Publishers. New York, New York, USA. No date

The sovereign brilliance of Sirius pierced the eye with a  
steely glitter, the star called Capella was yellow, Aldeba-  
ran and Betelgueseux shone with a fiery red. To persons  
standing alone on a hill during a clear midnight such as  
this, the roll of the world eastward is almost a palpable  
movement.

*Far from the Madding Crowd*

Chapter 2 (p. 9)

Harper & Row, Publishers. New York, New York, USA. No date

### **Harjo, Joy** 1951–

Native American poet

I can hear the sizzle of newborn stars, and know anything  
of meaning, of the fierce magic emerging here. I am wit-  
ness to flexible eternity, the evolving past, and I know we  
will live forever, as dust or breath in the face of stars, in  
the shifting pattern of winds.

*Secrets from the Center of the World* (p. 56)

The University of Arizona Press, Tucson, Arizona. 1989

### **Hearn, Lafcadio** 1850–1904

Greek-born American writer

The infinite gulf of blue above seems a shoreless sea,  
whose foam is stars, a myriad million lights are throbb-  
ing and flickering and palpitating...

In Elizabeth Bisland

*The Life and Letters of Lafcadio Hearn* (Volume 1)

Letter to H.E. Krehbiel, 1877 (p. 170)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1900

### **Hegel, Georg Wilhelm Friedrich** 1770–1831

German philosopher

The stars are not pulled this way and that by mechanical  
forces; theirs is a free motion. They go on their way, as  
the ancients said, like the blessed gods.

*Werke*

Bd. 7, Abt. I (p. 97)

Publisher undetermined

### **Hein, Robert**

No biographical data available

The stars are luminous dandruff from the deity's beard.

When the god-head combs his hair

A new star appears in the sky;

Yet God is not almost bald...

*Quest of the Singing Tree*

Stanzas on the Stars

H. Harrison. New York, New York, USA. 1938

### **Heine, Heinrich** 1797–1856

German poet

Perhaps the stars in the sky only appear to us to be so  
beautiful and pure because we are so far away from  
them and do not know their intimate lives. Up above  
there are certainly a few stars that lie and beg; stars that  
put on airs; stars that are forced to commit all possible

transgressions; stars that kiss and betray each other; stars that flatter their enemies and, what is even more painful, their friends, just as we do here below.

*The Romantic School and Other Essays*

Continuum. New York, New York, USA. 1985

**Heppenheimer, T. A.** 1947–

American space aviation writer

From the stars has come the matter of our world and of our bodies, and it is to the stars that we will someday return.

*Toward Distant Suns*

Preface (p. 13)

Stackpole Books. Harrisburg, Pennsylvania, USA. 1979

**Herrick, Robert** 1591–1674

English poet

The starres of the night

Will lend thee their light

Like Tapers cleare without number.

In J. Max Patrick (ed.)

*The Complete Poetry of Robert Herrick*

The Night-Piece, to Julia, Stanza 3

W.W. Norton & Company, Inc. New York, New York, USA. 1968

**Herschel, Friedrich Wilhelm** 1738–1822

English astronomer

“We ought perhaps,” says [Sir John Frederick William]Herschel, “to look upon certain clusters of stars, and the destruction of a star now and then in some thousands of ages, as the very means by which the whole is preserved and renewed. These clusters may be the laboratories of the universe, wherein the most salutary remedies for the decay of the whole are prepared.”

*Philosophical Transactions of the Royal Society of London*, 1785 (p. 217)

**Herschel, Sir John Frederick William** 1792–1871

English astronomer and chemist

The stars are the land-marks of the universe...

*Essays from the Edinburgh and Quarterly Reviews with Addresses and Other Pieces*

An Address

April 11, 1827 (p. 469)

Longman, Brown, Green, Longmans & Roberts. London, England. 1857

If it were not perhaps too hazardous to pursue a former surmise of a renewal in what I figuratively called the Laboratories of the universe, the stars forming these extraordinary nebulae, by some decay or waste of nature, being no longer fit for their former purposes, and having their projectile forces, if any such they had, retarded in each other's atmosphere, may rush at last together, and either in succession, or by one general tremendous shock, unite into a new body. Perhaps the extraordinary and sudden blaze of a new star in Cassiopeia's chair, in 1572, might possibly be of such a nature.

On the Construction of the Heavens

*Philosophical Transactions of the Royal Society of London*, Volume 75, 1785

**Hodgson, Ralph** 1871–1962

English poet

I stood and stared, the sky was lit,

The sky was stars all over it,

I stood, I knew not why,

Without a wish, without a will,

I stood upon that silent hill

And stared into the sky until

My eyes were blind with stars and still

I stared into the sky.

*Collected Poems*

The Song of Honour

Macmillan & Company Ltd. London, England. 1961

**Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

And Science lifts her still unanswered cry:

“Are all these worlds, that speed their circling flight,

Dumb, vacant, soulless — baubles of the night?”

...Or rolls a sphere in each expanding zone

Crowned with a life as varied as our own?

*The Poems of Oliver Wendell Holmes: With Numerous Illustrations*

The Secret of The Stars

Houghton Mifflin Company. Boston, Massachusetts, USA. 1887

**Hopkins, Gerard Manley** 1844–89

English poet and Jesuit priest

Look at the stars! look, look up at the skies!

O look at all the fire-folk sitting in the air!

In Norman H. MacKenzie (ed.)

*The Poetical Works of Gerard Manley Hopkins*

The Starlight Night

Clarendon Press. Oxford, England. 1990

**Horace (Quintus Horatius Flaccus)** 65 BCE–8 BCE

Roman philosopher and dramatic critic

With my head exalted I shall touch the stars.

*Carmina*

I, I, 36

Rupert Hart-Davis. London, England. 1963

**Hovey, Richard** 1864–1900

American composer, poet, and artist

The dawn is lonely for the sun,

And chill and drear;

The one lone star is pale and wan,

As one in fear.

*Along the Trail: A Book of Verse*

Chanson de Rosemonde

Small, Maynard & Company. Boston, Massachusetts, 1898

**Hoyle, Sir Fred** 1915–2001

English mathematician and astronomer

The stars are best seen as a spectacle, not from everyday surroundings where trees and buildings, to say nothing of street lighting, distract the attention too much, but from a steep mountainside on a clear night, or from a ship at sea. Then the vault of heaven appears incredibly large and seems to be covered by an uncountable number of fiery points of light.

*The Nature of the Universe*

Chapter 3 (p. 51)

The University Press. Cambridge. 1933

It is unlikely that stars die without a spectacular protest.

*Frontiers of Astronomy*

Chapter Nine (p. 160)

Harper & Row, Publishers. New York, New York, USA. 1955

**Hugo, Victor** 1802–85

French author, lyric poet, and dramatist

An ant weighs upon the earth; a star can well weigh upon the universe.

Translated by Isabel F. Hapgood

*The Toilers of the Sea*

Part II, Book Third, Chapter III (p. 409)

The Heritage Press. New York, New York, USA. 1961

**Huxley, Julian** 1887–1975

English biologist, philosopher, and author

And all about the cosmic sky,  
The black that lies beyond our blue,  
Dead stars innumerable lie,  
And stars of red and angry hue  
Not dead but doomed to die.

*The Captive Shrew and Other Poems of a Biologist*

Cosmic Death

Harper & Brothers. New York, New York, USA. 1933

**Huygens, Christiaan** 1629–95

Dutch mathematician, astronomer, and physicist

For if 25 years are required for a Bullet out of a Cannon, with its utmost Swiftmess, to travel from the Sun to us... such a Bullet would spend almost seven hundred thousand years in its Journey between us and the fix'd Stars. And yet when in a clear night we look upon them, we cannot think them above some few miles over our heads.

*Planetary Worlds, Their Inhabitants and Productions* (pp. 154–155)

Printed for T. Childe. London, England. 1698

**Jacobson, Ethel** 1877–1965

New Zealand teacher, newspaper editor, and journalist

Crystal fish

Caught in the seine

Of the trawler, Night.

Stars

*Nature Magazine*, May 1958 (p. 260)

**Jeans, Sir James Hopwood** 1877–1946

English physicist and mathematician

The ages of the stars are not the same thing as the age of the universe, nor even are they necessarily comparable with that age. The star may be likened to icebergs coming down from the North and melting as they drift into tropical waters. We can estimate the age of the icebergs within our vision, but we can not say for how long the stream of icebergs has been drifting down from the pole to equator nor for how long new icebergs will continue to form and come down to replace those that pass southward to their doom.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1926*

The New Outlook in Cosmogony (p. 159)

Government Printing Office. Washington, D.C. 1928

Empty Waterloo Station of everything except six specks of dust and it is still far more crowded with dust than space is with stars.

*The Universe Around Us*

Chapter I (p. 84)

The Macmillan Company. New York, New York, USA. 1929

Any small bit of the sky does not look very different from what it would if bright and faint stars had been sprinkled out of a celestial pepper pot.

*The Universe Around Us*

Chapter I (p. 37)

The Macmillan Company. New York, New York, USA. 1929

**Jeffers, Robinson** 1887–1962

American poet

We know the stars, hotter and more fatal than earth; we have learned lately the fire-wheel galaxies,  
Infinite in number or all but infinite, among which our great sun's galaxy's  
Flight is as a gnat's, one grain of sand in the Sahara: it is necessary to stretch our minds

To these dimensions...

In Tim Hunt (ed.)

*The Collected Poetry of Robinson Jeffers* (Volume 4)

Not Solid Earth (p. 538)

Stanford University Press. Stanford, California. USA. 1988

Antares reddens

The great one, the ancient torch, a lord among lost children,

The earth's orbit doubled would not girdle his greatness,  
one fire

Globed, out of grasp of the mind enormous; but to you  
O Night

What? Not a spark?...

In Tim Hunt (ed.)

*The Collected Poetry of Robinson Jeffers* (Volume 1)

Night (p. 115)

Stanford University Press. Stanford, California. USA. 1988

**Joyce, James** 1882–1941

Irish expatriate writer and poet

...of the parallax or parallactic drift of so called fixed stars, in reality ever moving wanderers from immeasurably

remote eons to infinitely remote futures in comparison with which the years threescore and ten, of allotted life formed a parenthesis of infinitesimal brevity.

*Ulysses* (p. 683)

Random House, Inc. New York, New York, USA. 1946

**Keats, John** 1795–1821

English Romantic lyric poet

Bright star, would I were steadfast as thou art —  
Not in lone splendor hung aloft the night  
And watching, with eternal lids apart,  
Like Nature's patient, sleepless Eremite,  
The moving waters at their priest-like task  
Of pure ablution round earth's human shores.

*The Complete Poetical Works and Letters of John Keats*

Bright Star

Houghton Mifflin Company. Boston, Massachusetts, USA. 1890

**Keill, John** 1671–1721

Scottish mathematician and natural philosopher

The fixed stars appear to be of different bignesses, not because they really are so, but because they are not all equally distant from us; those that are nearest will excel in Luster and Bigness; the more remote stars will give a fainter Light, and appear smaller to the Eye.

*An Introduction to the True Astronomy*

Lecture VI (p. 47)

Printed for Bernard Lintot. London, England. 1721

**Krutch, Joseph Wood** 1893–1970

American naturalist, conservationist, and writer

The stars are little twinkling rogues who light us home sometimes when we are drunk but care for neither you nor me nor any man.

*The Twelve Seasons*

June (p. 46)

W. Sloane Associates. New York, New York, USA. 1949

**Lambert, Johann Heinrich** 1728–77

Swiss-German mathematician and astronomer

While we raise our eyes to the firmament, we see the whole of the stars attached, as it were, to the same vaulted surface; this, however, is an optical illusion; they are, in reality, at very different distances from us, as well as from the Sun, which is the fixed star of our system.

Translated by James Jacque

*Kosmologischen Brief*

1761

**Lee, Nathaniel** 1653?–92

English dramatist

The stars, heav'n sentry, wink and seem to die.

*Theodosius*

Printed for Tho. Chapman. London, England. 1692

**Levy, David H.** 1948–

Canadian astronomer and science writer

Our fondness for the stars has touched our souls. We all share the feeling of discovery, whether the object we have found is new to all or new only to us. The thrill penetrates our being, as we try to describe...how we have been changed by the universe sharing a secret with us.

*David Levy's Guide to the Night Sky*

A Miscellany (p. 322)

Cambridge University Press. Cambridge, England. 2000

...observing is an activity that can rapidly become your outlet to relax, your means to commune with the universe, and a vital key to knowing yourself...a voyage on a magic carpet that takes you to other places and other times. Even a casual look at the stars gives you a share in the company of timelessness that they represent. Look through your telescope thoughtfully...for it is more than starlight that the mirror will reflect. Through the vastness of space and time will return also a part of yourself.

*The Royal Astronomical Society of Canada*

The Joy of Gazing, 1982, Montreal Centre

**Longfellow, Henry Wadsworth** 1807–82

American poet

Silently one by one, in the infinite meadows of heaven Blossomed the lovely stars, the forget-me-nots of the angels.

*The Poetical Works of Henry Wadsworth Longfellow*

Evangeline, Part iii

Houghton, Mifflin Company. Boston, Massachusetts, USA. 1883

The stars arise, and the night is holy.

*The Poetical Works of Henry Wadsworth Longfellow*

Hyperion, Book I, Chapter 1

Houghton, Mifflin. Boston, Massachusetts, USA. 1883

**Lowell, Percival** 1855–1916

American astronomer

Bright points in the sky or a blow on the head will equally cause one to see stars.

*Mars*

Chapter IV (p. 159)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1895

**Macfie, Ronald Campbell** 1867–1931

Scottish poet and physician

One thing is certain, that space is full of millions and millions of shining suns, wherever they came from and however they were evolved, and that there are millions and millions more of dead, dark stars we cannot see. One is apt to forget the dead, dark stars, but they far outnumber those that shine — so much so that Sir Robert Ball says that luminous stars are but the glowworms and fireflies of the universe as compared with the myriads of other animals.

Science, Matter and Immortality

Chapter XI (p. 131)

William & Norgate. London, England. 1909

**Mandino, Og** 1923–96  
American sales guru and author

I will love the light for it shows me the way; yet I will  
love the darkness for it shows me the stars.

*The Greatest Salesman in the World*

Chapter Nine (p. 59)

Bantam Trade Edition. New York, New York, USA. 1985

**Milton, John** 1608–74  
English poet

Witness this new-made World, another Heav'n  
from Heaven Gate not farr, founded in view  
On the clear Hyaline, the Glassie Sea;  
Of amplitude almost immense, with starr's  
Numerous, and every Starr perhaps a World  
Of destined habitation.

In *Great Books of the Western World* (Volume 32)

*Paradise Lost*

Book VII, l. 617–622

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

So sinks the day-star in the ocean-bed,  
And yet anon repairs his drooping head,  
And tricks his beams, and with new-spangled ore  
Flames in the forehead of the morning sky.

*Lycidas*, l. 168–171

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

...the stars,  
That nature hung in heaven, and filled their lamps  
with everlasting oil, to give due light  
To the misled and lonely traveler.

*Comus*, l. 197–200

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Mitchell, Maria** 1818–89  
American astronomer and educator

When we are chaffed and fretted by small cares, a look at  
the stars will show us the littleness of our own interests.

In Phebe Mitchell Kendall

*Maria Mitchell: Life, Letters, and Journals*

Chapter VII (p. 138)

Lee & Shepard. Boston, Massachusetts, USA. 1896

We call the stars garnet and sapphire; but these are, at  
best, vague terms. Our language has not terms enough to  
signify the different delicate shades; our factories have  
not the stuff whose hues might make a chromatic scale  
for them.

In Phebe Mitchell Kendall

*Maria Mitchell: Life, Letters, and Journals*

Chapter XI (p. 235)

Lee & Shepard. Boston, Massachusetts, USA. 1896

**Moore, Thomas** 1779–1852  
Irish poet

Thus, when the lamp that lighted  
The traveler at first goes out,

He feels awhile benighted,  
And looks around in fear and doubt.

But soon, the prospect clearing,  
By cloudless starlight on he treads,  
And thinks no lamp so cheering  
As that light which Heaven sheds.

*The Poetical Works of Thomas Moore*

I'd Mourn the Hopes

Lee & Shepard. Boston, Massachusetts, USA. 1873

**Mullaney, James**

Astronomy writer, lecturer, and consultant

The telescope is not just another gadget or material pos-  
session, but a magical gift to humankind — a window  
on creation, a time machine, a spaceship of the mind that  
enables us to roam the universe in a way that is surely the  
next best thing to being out there.

Focal Point

*Sky & Telescope*, March 1990 (p. 244)

...metaphysical aspects of star gazing — its potential as a  
vehicle for therapeutic relaxation, meditation, and spiri-  
tual contact with the awesome creative power manifests  
in all of nature but is pinnacled in the stars.

Focal Point,

*Sky & Telescope*, March 1990 (p. 244)

**Noyes, Alfred** 1880–1958  
English poet

Could new stars be born?  
Night after night he watched that miracle  
Growing and changing colour as it grew...

*The Torch Bearers: Watchers of the Sky*

Tycho Brahe, IV (p. 57)

Frederick A. Stokes Company. New York, New York, USA. 1922

And all those glimmerings where the abyss of space  
Is powdered with a milky dust, each grain  
A burning sun, and every sun the lord  
Of its own darkling planets...

*The Torch Bearers: Watchers of the Sky*

Prologue (p. 8)

Frederick A. Stokes Company. New York, New York, USA. 1922

**Old Woman**

The stars I know and recognize and even call by name.  
They are my names, of course; I don't know what others  
call the stars. Perhaps I should ask the priest. Perhaps the  
stars are God's to name, not ours to treat like pets...

American astronomer

Twinkle, twinkle, pulsing star

Newest puzzle from afar.

Beeping on and on you sing —

Are you saying anything?

Twinkle, twinkle more, pulsar,

How I wonder what you are.

Pulsars in Poetry

*Physics Today*, Volume 22, February 1969 (p. 19)

**Peltier, Leslie C.** 1900–80

American comet hunter

So clear and sparkling is this autumn night that, with averted vision, I can see quite readily the wraithlike wisps of nebulaosity that festoon and enmesh this entire little cluster.

*Starlight Nights*

Chapter 1 (p. 5)

Harper & Row, Publishers. New York, New York, USA. 1965

The skies were full of stars for me to learn.

*Starlight Nights*

Chapter 6 (p. 39)

Harper & Row, Publishers. New York, New York, USA. 1965

**Peattie, Donald Culrose** 1896–1964

American botanist, naturalist, and author

Star gazing is a common name for harmless futility.

*An Almanac for Moderns*

August Seventeenth (p. 161)

G.P. Putnam's Sons. New York, New York, USA. 1935

**Piechowski, Otto Rushe**

Astronomy writer

For most of us stargazing remains a soothing balm and intellectual uplift — even if it isn't cutting edge science. It satisfies human needs. Sometimes out of embarrassment, we might shroud these deeper yearnings with scientific talk. But we shouldn't need such "covers." If our romantic encounters with stars reach some psychological, emotional, or spiritual level, so be it.

*Sky & Telescope*, February 1993

**Plato** 428 BCE–347 BCE

Greek philosopher

Vain would be the attempt of telling all the figures of them circling as in a dance, and their juxtapositions, and the return of them in their revolutions upon themselves, and their approximations...

In *Great Books of the Western World* (Volume 7)

*Timaeus*

Section 40 (p. 452)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

...he who has not contemplated the mind of nature which is said to exist in the stars, and gone through the previous training, and seen the connection of music with these things, and harmonized them all with laws and institutions, is not able to give a reason of such things as have a reason.

In *Great Books of the Western World* (Volume 7)

*Laws*

Book XII, 967 (p. 798)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Poe, Edgar Allan** 1809–49

American short story writer

Were the succession of stars endless, then the background of the sky would present us a uniform luminosity, like that displayed by the galaxy — since there could be absolutely no point, in all that background, at which would not exist a star. The only mode, therefore, in which, under such a state of affairs, we could comprehend the voids which our telescopes find in innumerable directions, would be by supposing the distance of the invisible background so immense that no ray from it has yet been able to reach us at all.

*Eureka*

Line 12 (p. 100)

Geo. P. Putnam. New York, New York, USA. 1848

Look down into the abysmal distances! — attempt to force the gaze down the multitudinous vistas of the stars, as we sweep slowly through them thus — and thus — and thus! Even the spiritual vision, is it not all points arrested by the continuous golden walls of the universe? — the walls of the myriads of the shining bodies that mere number has appeared to blend into unity?

In H. Beaver (ed.)

*The Science Fiction of Edgar Allan Poe*

The Power of Words (p. 171)

Penguin Books. Hammondsworth, England. 1976

**Poincaré, Henri** 1854–1912

French mathematician and theoretical astronomer

The stars are majestic laboratories, gigantic crucibles, such as no chemist could dream.

*The Foundations of Science*

The Value of Science, Astronomy (p. 295)

The Science Press. New York, New York, USA. 1913

**Pope, Alexander** 1688–1744

English poet

The Dog-star rages!

*The Complete Poetical Works*

Epistle to Dr. Arbuthnot

Houghton Mifflin Company. New York, New York, USA. 1903

**Ptolemy** 85–165

Greek astronomer

I know that I am mortal and ephemeral. But when I search for the close-knit encompassing convolutions of the stars, my feet no longer touch the earth, but in the presence of Zeus himself I take my fill of ambrosia which the gods produce.

In Johannes Kepler

*Mysterium Cosmographicum*

Title page

**Raymo, Chet** 1936–

American physicist and science writer

We are not ruled by stars; we and the stars are one.

*The Virgin and the Mousetrap: Essays in Search of the Soul of Science*

Chapter 21 (p. 196)

The Viking Press. New York, New York, USA. 1991

I weigh out nebulas. I dam up the Milky Way and use it to grind my grain. I put up summer stars like vegetables in jars for my delectation in winter. I have winter stars folded in boxes in the attic for cloudy summer nights.

Night Brought to Numbers

*Sky & Telescope*, Volume 71, Number 6, June 1966 (p. 555)

**Rhodes, Cecil** 1853–1902

British-born South African businessman, mining magnate, and politician

The world is nearly all parceled out, and what there is left of it is being divided up, conquered and colonized. To think of these stars that you see overhead at night, these

vast worlds which we can never reach. I would annex the planets if I could; I often think of that. It makes me sad to see them so clear and yet so far.

*The Last Will and Testament of Cecil John Rhodes: With Elucidatory Notes to Which Are Added Some Chapters Describing the Political and Religious Ideas of the Testator*

Part III (p. 190)

“Review of Reviewers” Office. London, England. 1902

**Rilke, Ranier Maria** 1875–1926

Czech-born German language poet and novelist

...between stars, what distances...

*Sonnets to Orpheus*

British poet and editor

...The fixed stars

Are moving really, and the whole Galaxy turning

Round and round on its own axis agitatedly...

*All for the Wolves*

Elegiac

Black Swan Books. Redding Ridge, Connecticut, USA. 1971

**Sagan, Carl** 1934–96

American astronomer and science writer

It will not be we who reach Alpha Centauri and the other nearby stars. It will be a species very much like us, but with more of our strengths and fewer of our weaknesses, a species returned to circumstances more like those for which it was originally evolved, more confident, farseeing, capable, and prudent — the sorts of beings we would want to represent us in a Universe that, for all we know, is filled with species much older, much more powerful, and very different.

*Pale Blue Dot: A Vision of the Human Future in Space*

Chapter 19 (p. 329)

Random House, Inc. New York, New York, USA. 1994

If we long to believe that the stars rise and set for us, that we are the reason there is a Universe, does science do us a disservice by deflating our conceits?

*The Demon-Haunted World: Science as a Candle in the Dark*

Chapter 1 (p. 12)

Random House, Inc. New York, New York, USA. 1995

**Sagan, Carl** 1934–96

American astronomer and science writer

**Druyan, Ann** 1949–

American author and television producer

Nothing lives forever, in Heaven as it is on Earth. Even the stars grow old, decay, and die. They die, and they are born. There was once a time before the Sun and Earth existed, a time before there was day or night, long, long before there was anyone to record the Beginning for those who might come after.

*Shadows of Forgotten Ancestors: A Search for Who We Are*  
Chapter 1 (p. 11)  
Random House, Inc. New York, New York, USA. 1992

**Seneca (Lucius Annaeus Seneca)** 4 BCE–65 AD  
Roman playwright

As long as the ordinary course of heaven runs on, custom robs it of its real size. Such is our constitution that objects of daily occurrence pass us unnoticed even when most worthy of our admiration. On the other hand, the sight even of trifling things is attractive if their appearance is unusual. So this concourse of stars, which paints with beauty the spacious firmament on high, gathers no concourse of the nation. But when there is any change in the wonted order, then all eyes are turned to the sky.

*Physical Science in the Time of Nero, Being a Translation of the Quæstiones Naturales of Seneca*  
Book VII, Chapter I (p. 271)  
Macmillan & Company Ltd. London, England. 1910

*Non est ad astra mollis e terris via.*

There is no easy way to the stars from the earth.

*Hercules Furens*  
Act II, 437

Cornell University Press. Ithaca, New York, USA. 1987

**Service, Robert William** 1874–1958  
Canadian poet and novelist

The waves have a story to tell me,  
As I lie on the lonely beach;  
Chanting aloft in the pine-tops,  
The wind has a lesson to teach;  
But the stars sing an anthem of glory  
I cannot put into speech.

*Collected Poems of Robert Service*  
The Three Voices

Dodd, Mead & Company New York, New York, USA. 1961

**Serviss, Garrett P.** 1851–1929  
American science fiction writer

Regarded in their broader relations and constraints, the stars as a whole possess a marvelous harmony of effect. It is the true music of the spheres, for who shall say that the universally felt influence of the star-bedight heavens does not arise from our instinctive, but as yet uneducated, perception of a concord which is not of “sweet sounds,” but of light and color, whose range of vibrations in the ether infinitely exceeds that of sonant oscillations in the atmosphere?

*Astronomy with the Naked Eye*  
Chapter I (p. 13)

Harper & Brothers. New York, New York, USA. 1908

The stars are the true landmarks which are never changed.

*Astronomy with the Naked Eye*  
Chapter I (p. 1)

Harper & Brothers. New York, New York, USA. 1908

It was the friendly stars that first led men round the globe. As long as those well-known sentinels shone, tranquil and steadfast overhead, they had courage to go on and on. If the stars had deserted, even Columbus would have lost heart.

*Astronomy with the Naked Eye*

Chapter I (p. 1)

Harper & Brothers. New York, New York, USA. 1908

As long as men have eyes to see and minds to think, it needs but a word, a hint, a glance, to turn them with rapt and ever increasing attention to the wonders overhead.

*Astronomy with the Naked Eye*

Chapter I (p. 15)

Harper & Brothers. New York, New York, USA. 1908

**Shakespeare, William** 1564–1616

English poet, playwright, and actor

Look, th’ unfolding star calls up the shepherd.

*In Great Books of the Western World (Volume 27)*

*The Plays and Sonnets of William Shakespeare (Volume 2)*

Measure for Measure

Act IV, Scene iii, l. 218

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

But I am constant as the northern star,  
Of whose true-fix’d and resting quality  
There is no fellow in the firmament.  
The skies are painted with unnumber’d sparks,  
They are all fire and every one doth shine;  
But there’s but one in all doth hold his place.

*In Great Books of the Western World (Volume 26)*

*The Plays and Sonnets of William Shakespeare (Volume 1)*

Julius Caesar

Act III, Scene i, l. 60–65

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Sherrod, P. Clay**

American astronomer and educator

Above us, the sparkling stars of the night skies stretch out like thousands of diamonds suspended on the curtain of space. Unfolding through the beauty and the mysteries of this seemingly endless expanse are patterns and answers familiar to those willing to study them...

There is an affinity for the eternity of space experienced by all mankind, a kind of motherhood in the stars to those who study space.

*A Complete Manual of Amateur Astronomy*

Preface (p. xii)

Prentice-Hall, Inc., Englewood Cliffs, New Jersey, USA. 1981

**Smith, Logan Pearsall** 1865–1946

American author

“But what are they really? What do they say they are?”  
the young lady asked me. We were looking up at the Stars.

*Trivia*

Book I, The Starry Heaven (p. 51)  
Doubleday, Page & Company. Garden City, New York, USA. 1917

**Smythe, Daniel** 1908–81

American poet

The years of sky are now galactic,  
So deep that we have little trace.  
Our spectrographs, cool and emphatic,  
Betray the depths of stars and space.  
What do we seek on dizzying borders  
Or groups of systems we have classified?  
We cannot search in these huge orders  
And find the answers they have passed.

Strange Horizons

*Nature Magazine*, February 1958 (p. 101)

**Spenser, Edmund** 1552–99

English poet

He that strives to touch the stars  
Oft stumbles at a straw.

*The Complete Poetical Works of Edmund Spenser*

The Shepherdess Calendar

Houghton Mifflin Company. Boston, Massachusetts, USA. 1908

**Stapledon, Olaf** 1886–1950

English author

Very soon the heavens presented an extraordinary appearance, for all the stars directly behind me were now deep red, while those directly ahead were violet. Rubies lay behind me, amethysts ahead of me. Surrounding the ruby constellations there spread an area of topaz stars, and round the amethyst constellations an area of sapphires.

*Last and First Men, and Star Maker*

Chapter II (p. 262)

Dover Publications, Inc. New York, New York, USA. 1968

Great are the stars, and man is of no account of them.

*Last and First Men*

Chapter XVI (p. 303)

Jeremy P. Tarcher, Inc. Los Angeles, California, USA. 1988

**Tagore, Rabindranath** 1861–1941

Indian poet and philosopher

Kind Nature has held before our eyes the smoked glass of the night and of the distance. And what do we see through it? We see that the world of stars is still. For we see these stars in their relation to each other, and they appear to us like chains of diamonds hanging on the neck of some god of silence. But Astronomy like a curious child plucks out an individual star from that chain and then we find it rolling about.

*Personality*

The World of Personality (p. 59)

The Macmillan Company. New York, New York, USA. 1917

**Taylor, Anne** 1782–1866

English poet and children's author

Twinkle, twinkle, little star!  
How I wonder what you are.  
Up above the world so high,  
Like a diamond in the sky...

*Rhymes for the Nursery*

The Star

Printed and sold by Peter B. Gleason & Company. Hartford, Connecticut, USA. 1813

**Taylor, Bayard** 1825–78

American journalist and author

Each separate star  
Seems nothing, but a myriad scattered stars  
Break up the night, and make it beautiful.

*Lars: A Pastoral of Norway*

Book III, Conclusion

James R. Osgood & Company. Boston, Massachusetts, USA. 1873

**Teasdale, Sara** 1884–1933

American writer and poet

Stars over snow,  
And in the west a planet  
Swinging below a star —  
Look for a lovely thing and you will find it  
It is not far — It will never be far.

*The Collected Poems of Sara Teasdale*

Night (p. 197)

Collier Books. New York, New York, USA. 1966

**Tennyson, Alfred (Lord)** 1809–92

English poet

“The stars,” she whispers, “blindly run:  
A web is wov’n across the sky;  
From our waste places comes a cry,  
And murmurs from the dying sun.”

*Alfred Tennyson's Poetical Works*

In Memoriam A.H.H., Section III, Stanza II

Oxford University Press, Inc. London, England. 1953

Many a night I saw the Pleiades, rising  
thro’ the mellow shade,  
Glitter like a swarm of fireflies, tangled in  
a silver braid.

*Alfred Tennyson's Poetical Works*

Locksley Hall, Stanza 5

Oxford University Press, Inc. London, England. 1953

...the fiery Sirius alters hue  
And bickers into red and emerald.

*Alfred Tennyson's Poetical Works*

The Princess, Part Fifth, l. 252–253

Oxford University Press, Inc. London, England. 1953

**The Bible**

Lift up your eyes to the heavens; consider who created these, led out their host one by one, and summoned each by name. Through his great might, his strength and power, not one is missing.

*The Revised English Bible*

Isaiah 40:26

Oxford University Press, Inc. Oxford, England. 1989

...the morning stars sang in chorus,  
and the sons of God all shouted for joy...

*The Revised English Bible*

Oxford University Press, Inc. Oxford, England. 1989

Can you bind the cluster of Pleiades or loose Orion's  
belt?

*The Revised English Bible*

Job 38:31

Oxford University Press, Inc. Oxford, England. 1989

### The Hon. Mrs. Ward

No biographical data available

Stars — each, perhaps a sun! Far, far away from the earth  
and its troubles is the mind carried by such thoughts and  
remembrances.

*The Telescope*

Preface, Dedication to William Parsons, the Earl of Rosse 1870

### Thompson, Francis 1859–1907

English writer

Thou canst not stir a flower

Without troubling of a star.

*Complete Poetical Works of Francis Thompson*

The Mistress of Vision, Stanza XXII

Boni & Liveright, Inc. New York, New York, USA. 1923

### Thomson, James 1700–48

Scottish poet

But who can count the stars of Heaven?

*Seasons*

Winter, l. 528

Printed by John Mycall. Newburyport, Massachusetts, USA. 1790

### Thoreau, Henry David 1817–62

American essayist, poet, and practical philosopher

Truly the stars were given for a consolation to man.

*The Writings of Henry David Thoreau* (Volume 9)

A Walk to Wachusett (p. 178)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

When I consider how, after sunset, the stars come out  
gradually in troops from behind the hills and woods, I  
confess that I could not have contrived a more curious  
and inspiring night.

*Journal* (Volume 11)

July 26, 1840 (p. 158)

Princeton University Press. Princeton, New Jersey, USA. 1981

When I look at the stars, nothing which the astronom-  
ers have said attaches to them, they are so simple and  
remote.

In Bradford Torrey and Francis H. Allen (eds.)

*The Journal of Henry D. Thoreau* (Volume 7)

September 29, 1854, The Red of the Young Oak (p. 60)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1949

The stars are the apexes of what wonderful triangles!  
What distant and different beings in the various man-  
sions of the universe are contemplating the same one at  
the same moment!

*The Writings of Henry David Thoreau* (Volume 2)

Walden

Chapter I (p. 19)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

### Thorne, Kip S. 1940–

American theoretical physicist

A star is only a glowing pause in the inescapable contrac-  
tion of a gas cloud to an uncertain, sometimes fantastic  
end.

*The Death of a Star*

*The Physics Teacher*, Volume 9, Number 6, June 1971 (p. 326)

### Travers, Pamela Lyndon 1899–1996

Australian-born English writer

[Jane] was watching Mrs. Corry splashing the glue on the  
sky and Mary Poppins sticking on the star...

“What I want to know,” said Jane, “is this: Are the stars  
gold paper or is the gold paper stars?”

There was no reply to her question and she did not expect  
one. She knew that only someone very much wiser than  
Michael could give her the right answer.

*Mary Poppins* (Revised edition)

Chapter 8 (p. 128)

Harcourt, Inc. San Diego, California, USA. 1981

### Trevelyan, George Macaulay 1876–1962

English historian

The stars out there rule the sky more than in England, big  
and lustrous with the honour of having shone upon the  
ancients and been named by them.

*Clio, A Muse, and Other Essays*

Walking

Longmans, Green & Company London, England. 1930

### Twain, Mark (Samuel Langhorne Clem- ens) 1835–1910

American author and humorist

There are too many stars in some places and not enough  
in others, but that can be remedied presently, no doubt.

*Eve's Diary*

Sunday (p. 7)

Harper & Brothers. New York, New York, USA. 1906

There's another trouble about theories: there's always a  
hole in them somewheres, sure, if you look close enough.  
It's just so with this one of Jim's. Look what billions and  
billions of stars there is. How does it come that there was  
just exactly enough star-stuff, and none left over? How  
does it come there ain't no sand-pile up there?

*The Complete Works of Mark Twain* (Volume 14)

Tom Sawyer Abroad (pp. 78–79)  
Harper & Brothers Publishers. New York, New York, USA. 1899

Stars are good, too. I wish I could get some to put in my hair. But I suppose I never can.

*Eve's Diary*

Saturday (p. 11)

Harper & Brothers. New York, New York, USA. 1906

The stars ain't so close together as they look to be.

*Collected Tales, Sketches, Speeches, & Essays 1891–1910*

Extract from Captain Stormfield's Visit to Heaven (pp. 829–830)

The Library of America. New York, New York, USA. 1992

It's lovely to live on a raft. We had the sky, up there, all speckled with stars, and we used to lay on our backs and look up at them, and discuss about whether they was made, or only just happened — Jim he allowed they was made, but I allowed they happened; I judged it would have took too long to make so many. Jim said the moon could have a laid them; well, that looked kind of reasonable, so I didn't say nothing against it because I've seen a frog lay most as many, so of course it could be done. We used to watch the stars that fell, too, and see them streak down. Jim allowed they'd got spoiled and was hove out of the nest.

*The Adventures of Huckleberry Finn*

Chapter XIX (pp. 153–154)

Grosset & Dunlap Publishers. New York, New York, USA. 1948

**Updike, John** 1932–

American novelist, short story writer, and poet

Welcome, welcome, little star

I'm delighted that you are

Up in Heaven's vast extent,

No bigger than a continent.

*Telephone Poles and Other Poems*

White Dwarf (p. 10)

Alfred A. Knopf. New York, New York, USA. 1969

When, on those anvils at the center of stars,  
and those even more furious anvils  
of the exploding supernovae,  
the heavy elements were beaten together  
to the atomic number 94...

*Facing Nature*

Ode to Crystallization

Alfred A. Knopf. New York, New York, USA. 1985

**van Gogh, Vincent Willem** 1853–90

Dutch painter

To express hope by some star, the eagerness of a soul by a sunset.

*The Complete Letters of Vincent Van Gogh with Reproductions of All the Drawings in the Correspondence* (Volume 3)

Letter 531 (p. 26)

New York Graphic Society. Greenwich, Connecticut, USA. 1958

One night I went for a walk by the sea along the empty shore. It was not gay, but neither was it sad — it was —

beautiful. The deep blue sky was flecked with clouds of a blue deeper than the fundamental blue of intense cobalt, and others of a clearer blue, like the blue whiteness of the Milky Way. In the blue depth the stars were sparkling, greenish, yellow, white, rose, brighter, flashing, more like jewels, than they do at home — even in Paris.

*The Complete Letters of Vincent Van Gogh with Reproductions of All the Drawings in the Correspondence* (Volume 2)

Letter 499 (p. 589)

New York Graphic Society. Greenwich, Connecticut, USA. 1958

That does not prevent me from having a terrible need of — shall I say the word? — of religion. Then I go out and paint the stars...

*The Complete Letters of Vincent Van Gogh with Reproductions of All the Drawings in the Correspondence* (Volume 3)

Letter 543 (p. 56)

New York Graphic Society. Greenwich, Connecticut, USA. 1958

Stars, you are unfortunate, I pity you,

Beautiful as you are, shining in your glory...

*Night Thoughts*

Printed by R. Nobels for R. Edwards. London, England. 1797

**Vaughan, Henry** 1621–95

English metaphysical poet

The Jewel of the Just,

Shining nowhere but in the dark;

What mysteries do lie beyond thy dust,

Could man outlook that mark!

*Poetry and Selected Prose*

Accession Hymn

Oxford University Press, Inc. London, England. 1963

**Weil, Simone** 1909–43

French philosopher and mystic

The stars, those marvelous, brilliant, inaccessible objects, at least as remote as the horizon, which we can neither change nor touch, and which in their turn, touch only our eyes, are what is furthest away from us and closest to us.

*On Science, Necessity, and the Love of God*

Classified Science and After (p. 40)

Oxford University Press, Inc. London, England. 1968

**Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

Looking at these stars suddenly dwarfed my own troubles and all the gravities of terrestrial life. I thought of their unfathomable distance, and the slow inevitable drift of their movements out of the unknown past into the unknown future.

In Robert M. Hutchins and Mortimer J. Adler (eds.)

*The Great Ideas Today, 1971*

The Time Machine

Chapter Seven (p. 484)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1971

**Whitman, Walt** 1819–92

American poet, journalist, and essayist

I believe a leaf of grass is no less than the journey-work  
of the stars.

*Complete Poems and Collected Prose*

Song of Myself

Section 31

The Library of America. New York, New York, USA. 1982

I was thinking the day most splendid till I saw what the  
not-day exhibited;

I was thinking of this globe enough till there sprang out  
so noiseless around me myriads of other globes.

*Complete Poetry and Collected Prose*

Night on the Prairies

The Library of America. New York, New York, USA. 1982

**Wilcox, Ella Wheeler** 1850–1919

American poet and journalist

Since Sirius crossed the Milky Way  
Full sixty thousand years have gone,  
Yet hour by hour and day by day  
This tireless star speeds on and on.

In Garrett P. Serviss

*Astronomy with the Naked Eye*

Chapter III (p. 43)

Harper & Brothers New York, New York, USA. 1908

**Wilde, Oscar** 1854–1900

Irish wit, poet, and dramatist

LORD DARLINGTON: We are all in the gutter, but  
some of us are looking at the stars.

*The Works of Oscar Wilde* (Volume 5)

Lady Windermere's Fan

Act Three

Lamb Publishing Company. New York, New York, USA. 1909

**Williams, Sarah** 1837–68

American poet

I have loved the stars too fondly to be fearful of the  
night.

*The Best Loved Poems of the American People*

The Old Astronomer to His Pupil

Garden City publishing Company. Garden City, New York USA. 1936

**Wordsworth, William** 1770–1850

English poet

The stars are mansions built by Nature's hand,  
And, haply, there the spirits of the blest  
Dwell clothed in radiance, their immortal vest...

*The Complete Poetical Works of William Wordsworth*

Miscellaneous Sonnets, XXV

Crowell. New York, New York, USA. 1888

Look for the stars, you'll say that there are none;  
Look up a second time, and, one by one,  
You mark them twinkling out with silvery light,  
And wonder how they could elude the sight!

*The Complete Poetical Works of William Wordsworth*

Calm Is the Fragrant Air

Crowell. New York, New York, USA. 1888

**Yeats, William Butler** 1865–1939

Irish poet and playwright

Under the passing stars, foam of the sky

Live on this lonely face.

*The Collected Poems of W.B. Yeats*

The Rose of the World (p. 36)

The Macmillan Company. New York, New York, USA. 1956

**Young, Edward** 1683–1765

English poet and dramatist

How distant some of these nocturnal Suns?

So distant (says the Sage) 'twere not absurd

To doubt, if Beams, set out at Nature's Birth,

Are yet arriv'd at this so foreign World...

*Night Thoughts*

Night IX, l. 1226–1229

Printed by R. Nobels for R. Edwards. London, England. 1797

## STARLIGHT

**Hale, George Ellery** 1868–1938

American astronomer

Starlight is falling on every square mile of the earth's  
surface, and the best we can do at present is to gather up  
and concentrate the rays that strike an area 100 inches in  
diameter.

The Possibilities of Large Telescopes

*Harper's Weekly*, April 1928 (p. 640)

**Huggins, Sir William** 1824–1910

English astronomer

Within this unraveled starlight exists a strange cryptog-  
raphy. Some of the rays may be blotted out, others may  
be enhanced in brilliancy. Their differences, countless in  
variety, form a code of signals, in which is conveyed to  
us, when once we have made out the cipher in which it is  
written, information of the chemical nature of the celest-  
tial gases.... It was the discovery of this code of signals,  
and of its interpretation, which made possible the rise of  
the new astronomy.

In D.R. Danielson

*The Book of the Cosmos: Imaging the Universe from Heraclitus to  
Hawking*

Chapter 52 (p. 319)

Perseus Publishing. Cambridge, Massachusetts, USA. 2000

**Stein, Gertrude** 1874–1946

American writer

Star-light, what is star-light, star-light is a little light that  
is not always mentioned with the sun, it is mentioned  
with the moon and the sun, it is mixed up with the rest  
of the time.

Rooms (p. 295)

Penguin Putnam, Inc. New York, New York, USA. 2003

## STATISTICAL TEST

**Anscombe, Francis John** 1918–2001  
English-born American statistician

Rejection rules are not significance tests.  
Rejection of Outliers  
*Technometrics*, Volume 2, 1960 (p. 126)

**Chatfield, Christopher**  
British statistician

The result is that non-statisticians tend to place undue reliance on single “cookbook” techniques, and it has for example become impossible to get results published in some medical, psychological and biological journals without reporting significance values even if of doubtful validity. It is sad that students may actually be more confused and less numerate at the end of a “service course” than they were at the beginning, and more likely to over-look a descriptive approach in favor of some inferential method which may be inappropriate or incorrectly executed.

The Initial Examination of Data  
*Journal of the Royal Statistical Society*, Series A, Volume 148, 1985

**Clark, C. A.**  
No biographical data available

The null hypothesis of no difference has been judged to be no longer a sound or fruitful basis for statistical investigation.... Significance tests do not provide the information that scientists need, and, furthermore, they are not the most effective method for analyzing and summarizing data.

Hypothesis Testing in Relation to Statistical Methodology  
*Review of Educational Research*, Volume 33, 1963

**Cochran, William G.** 1909–80  
Scottish-born American statistician

**Cox, Gertrude M.** 1900–78  
American statistician

A useful property of a test of significance is that it exerts a sobering influence on the type of experimenter who jumps to conclusions on scanty data, and who might otherwise try to make everyone excited about some sensational treatment effect that can well be ascribed to the ordinary variation in his experiment.

*Experimental Designs* (2<sup>nd</sup> edition)  
Chapter 1 (p. 5)  
John Wiley & Sons, Inc. New York, New York, USA. 1992

**Cohen, Jacob** 1923–  
American behavioral psychologist and statistical analyst

After four decades of severe criticism, the ritual of null hypothesis significance testing — mechanical dichotomous decisions around a sacred .05 criterion — still

persist. This article reviews the problems with this practice.... What’s wrong with [null hypothesis significance testing]? Well, among many other things, it does not tell us what we want to know, and we so much want to know what we want to know that, out of desperation, we nevertheless believe that it does!

The Earth Is Round (p < .05)  
*American Psychologist*, Volume 49, December 1994 (p. 997)

A little thought reveals a fact widely understood among statisticians: The null hypothesis, taken literally (and that’s the only way you can take it in formal hypothesis testing), is always false in the real world.... If it is false, even to a tiny degree, it must be the case that a large enough sample will produce a significant result and lead to its rejection. So if the null hypothesis is always false, what’s the big deal about rejecting it?

Things I Have Learned (So Far)  
*American Psychologist*, December 1990 (p. 1308)

**Cox, Sir David Roxbee** 1924–  
English statistician

It has been widely felt, probably for thirty years and more, that significance tests are overemphasized and often misused and that more emphasis should be put on estimation and prediction. While such a shift of emphasis does seem to be occurring, for example in medical statistics, the continued very extensive use of significance tests is on the one hand alarming and on the other evidence that they are aimed, even if imperfectly, at some widely felt need.

Some General Aspects of the Theory of Statistics  
*International Statistical Review*, Volume 54, 1986

**Deming, William Edwards** 1900–93  
American statistician, educator, and consultant

Under the usual teaching, the trusting student, to pass the course must forsake all the scientific sense that he has accumulated so far, and learn the book, mistakes and all.  
On Probability as Basis for Action  
*American Statistician*, Volume 29, Number 4, November 1975

Pencil and paper for construction of distributions, scatter diagrams, and run-charts to compare small groups and to detect trends are more efficient methods of estimation than statistical inference that depends on variances and standard errors, as the simple techniques preserve the information in the original data.

On Probability as Basis for Action  
*American Statistician*, Volume 29, Number 4, November 1975

**Devons, Ely** 1913–67  
English economist

I cannot oscillate a time series or properly analyze a variance...

*Essays in Economics*

Chapter 6 (p. 105)  
Greenwood Press, Publishers, Westport, Connecticut, USA. 1961

**Fisher, Sir Ronald Aylmer** 1890–1962  
English statistician and geneticist

There is no more pressing need in connection with the examination of experimental results than to test whether a given body of data is or is not in agreement with any suggested hypothesis.

*Statistical Methods for Research Workers*  
Chapter VIII (p. 256)  
Oliver & Boyd, Edinburgh, Scotland. 1938

**McCloskey, D. N.**

Economist

**Ziliak, S. T.**

No biographical data available

The low and falling cost of calculation, together with a widespread though unarticulated realization that after all the significance test is not crucial to scientific questions, has meant that statistical significance has been valued at its cost. Essentially no one believes a finding of statistical significance or insignificance. This is bad for the temper of the field. My statistical significance is a “finding”; yours is an ornamented prejudice.

The Standard Error of Regressions  
*Journal of Economic Literature*, Volume 34, 1996

**Morrison, D. E.**

No biographical data available

**Henkel, R. E.**

No biographical data available

What do we do without the tests, then? What we do without the tests has always in some measure been done in behavioral science and needs only to be done more and better: the application of imagination, common sense, and informed judgment, and the appropriate remaining research methods to achieve the scope, form, process, and purpose of scientific inference.

*The Significance Test Controversy — A Reader*  
Significance Tests in Behavioral Research: Skeptical Conclusions and Beyond  
Aldine Publishing Company, Chicago, Illinois, USA. 1970

**Parkhurst, D. F.**

No biographical data available

Failing to reject a null hypothesis is distinctly different from proving a null hypothesis; the difference in these interpretations is not merely a semantic point. Rather, the two interpretations can lead to quite different biological conclusions.

Interpreting Failure to Reject a Null Hypothesis  
*Bulletin of the Ecological Society of America*, Volume 66, 1985

**Rozeboom, W. W.**

No biographical data available

The statistical folkways of a more primitive past continue to dominate the local scene.

The Fallacy of the Null-Hypothesis Significance Test  
*Psychological Bulletin*, Volume 57, 1960

**Salsburg, David S.**

No biographical data available

Most readers of this journal will recognize the limited value of hypothesis testing in the science of statistics. I am not sure that they all realize the extent to which it has become the primary tool in the religion of Statistics. Since the practitioners of that faith seem unable to cure their own folly, it is time we priests of the faith brought them around to realizing that there are more appropriate ways to get useful answers.

The Religion of Statistics as Practiced in Medical Journals  
*American Statistician*, Volume 39, 1985

**Schmidt, Frank L.**

American industrial and organizational psychology researcher

I believe that...false beliefs are a major cause of the addiction of researchers to significance tests. Many researchers believe that statistical significance testing confers important benefits that are in fact completely imaginary.

Statistical Significance Testing and Cumulative Knowledge in Psychology: Implications for Training of Researchers  
*Psychological Methods*, Volume 1, Number 2, 1996

If the null hypothesis is not rejected, [Sir Ronald] Fisher's position was that nothing could be concluded. But researchers find it hard to go to all the trouble of conducting a study only to conclude that nothing can be concluded.

Statistical Significance Testing and Cumulative Knowledge in Psychology: Implications for Training of Researchers  
*Psychological Methods*, Volume 1, Number 2, 1996

**Yates, Frances** 1899–1981

English historian

The most commonly occurring weakness in the application of Fisherian methods is, I think, undue emphasis on tests of significance, and failure to recognize that in many types of experimental work, estimates of the treatment effects, together with estimates of the error to which they are subject, are the quantities of primary interest.

Sir Ronald Fisher and the Design of Experiments  
*Biometrics*, Volume 20, 1964

## STATISTICIAN

**Bailey, W. B.** 1873–?

No biographical data available

**Cummings, John**

No biographical data available

While, therefore, tabulation is a final process, the formulation of the scheme of tabulation should be the initial process, preceding even the formulation of the schedule, which should be determined by the character of the tables to be produced. Failure to observe this fundamental principle in statistical practice, perhaps more than any other characteristic, distinguishes the work of the amateur from that of the expert, the work of the untrained social investigator from that of the experienced scientific statistician.

*Statistics* (p. 26)

A.C. McClurg & Company. Chicago, Illinois, USA. 1917

**Balchin, Nigel** 1908–70

English novelist

He divided people into statisticians, people who knew about statistics, and people who didn't. He liked the middle group best. He didn't like the real statisticians much because they argued with him, and he thought people who didn't know any statistics were just animal life.

*The Small Back Room* (p. 137)

Collins. London, England. 1943

**Belloc, Hilaire** 1870–1953

French-born poet and historian

The statistician was let loose.

*The Silence of the Sea*

On Statistics (p. 172)

Sheed & Ward. New York, New York, USA. 1940

**Bellow, Saul** 1915–

American novelist

An utterly steady, reliable woman, responsible to the point of grimness. Daisy was a statistician for the Gallup Poll.

*Herzog* (p. 221)

The Viking Press. New York, New York, USA. 1964

**Blodgett, James H.**

American statistician

The individual statistician must scan closely the authority on which he rests, and guard his statements with all the cautionary words which imperfect knowledge requires, or some mere child will point out the errors in his statements and his conclusions and set people wondering of what value the rest of his work may be.

Obstacles to Accurate Statistics

*Journal of the American Statistical Association*, New Series Number 41, March 1898 (p. 19)

**Bowley, Arthur L.** 1869–1957

English statistician and economist

Perhaps statisticians themselves have not always fully recognized the limitations of their work.

*Elements of Statistics*

Part I, Chapter I (p. 13)

P.S. King & Son Ltd. London, England. 1937

**Chernoff, H.** 1923–

American mathematician and statistician

**Moses, L. E.** 1921–

American statistician and social scientist

Years ago a statistician might have claimed that statistics deals with the processing of data...today's statistician will be more likely to say that statistics is concerned with decision making in the face of uncertainty.

*Elementary Decision Theory*

Introduction (p. 1)

John Wiley & Sons, Inc. New York, New York, USA. 1959

**Deming, William Edwards** 1900–93

American statistician, educator, and consultant

The minute a statistician steps into the position of the executive who must make decisions and defend them, the statistician ceases to be a statistician.

*Sample Design in Business Research* (p. 13)

John Wiley & Sons, Inc. New York, New York, USA. 1960

The statistician accepts in any engagement certain responsibilities and obligations to his client and to the people that he works with. In the first place, he is the architect of a survey or experiment. It is his business to fit the various skills together to make them effective. It is important that he clarify the various responsibilities at the outset of the study.

*Sample Design in Business Research* (p. 10)

John Wiley & Sons, Inc. New York, New York, USA. 1960

The only useful function of a statistician is to make predictions, and thus to provide a basis for action.

In W.A. Wallis

The Statistical Research Group

*Journal of the American Statistical Association*, 1942–1945, Volume 75, Number 370, June 1980 (p. 321)

It should be emphasized that the statistician is not necessarily abler at handling data than his colleagues trained in economics, sociology, engineering, physics, business, etc. However, because of the high transferability of the statistician's mathematical techniques, and because he acquires a broad knowledge in many fields, he is frequently adept at discovering and measuring errors in data and determining the source of the errors. He avoids drawing wrong conclusions from data whether the data be good or bad.

On the Classification of Statisticians

*The American Statistician*, Volume 2, Number 2, April 1948 (p. 16)

A statistician's responsibility is not confined to plans: he must also seek assurance of cooperation in field and

office, and maintain constant touch with the work, also with the interpretation of the results.

*Some Theory of Sampling* (p. 8)

John Wiley & Sons, Inc. New York, New York, USA. 1950

### Finney, D. J.

English biometric statistician

Too often, in many fields of science, the statistician is regarded as someone who comes on stage after data have been collected, performs standard calculations, delivers a verdict “Significant” or “Not Significant”, and then departs.

The Questioning Statistician

*Statistics in Medicine*, Volume 1, 1982 (p. 5)

### Fisher, Sir Ronald Aylmer 1890–1962

English statistician and geneticist

We have the duty of formulating, of summarizing, and of communicating our conclusions, in intelligible form, in recognition of the right of other free minds to utilize them in making their own decisions.

B, Statistical methods and scientific induction

*Journal of the Royal Statistical Society*, Volume 17, 1955

The statistician cannot evade the responsibility for understanding the process he applies or recommends.

*The Design of Experiments*

Introduction (p. 1)

Hafner Publishing Company. New York, New York, USA. 1971

The statistician cannot excuse himself from the duty of getting his head clear on the principles of scientific inference, but equally no other thinking man can avoid a like obligation.

*The Design of Experiments*

Introduction (p. 2)

Hafner Publishing Company. New York, New York, USA. 1971

### Fleiss, Joseph L.

American statistician

There was a statistician from Needham,  
Who was so bright, his clients would heed him.

Yet his embarrassed confession

Was that, in linear regression,

He'd never subtract an extra degree of freedom.

Letters to the Editor

*The American Statistician*, Volume 21, Number 4, October 1967 (p. 49)

There was a statistician from Knossus,

Who had a nonnormal neurosis.

With techniques of newness, He'd measure the skewness,

And also the data's kurtosis.

Letters to the Editor

*The American Statistician*, Volume 21, Number 4, October 1967 (p. 49)

There was a biometrician named Mabel,  
Who'd never look at populations unstable.

Using intricate relations,

She'd find life expectations,

From the lx's of the life table.

Letters to the Editor

*The American Statistician*, Volume 21, Number 4, October 1967 (p. 49)

### Forster, E. M. (Edward Morgan) 1879–1970

English novelist

We are not concerned with the very poor. They are unthinkable, and only to be appreciated by the statistician or the poet.

*Howards End*

Chapter VI (p. 45)

Vintage Books. New York, New York, USA. 1954

### Good, I. J. 1916–

English statistician and cryptographer

The mathematician, the statistician, and the philosopher do different things with a theory of probability. The mathematician develops its formal consequences, the statistician applies the work of the mathematician and the philosopher describes in general terms what this application consists in. The mathematician develops symbolic tools without worrying overmuch what the tools are for; the statistician uses them; the philosopher talks about them. Each does his job better if he knows something about the work of the other two.

Kinds of Probability

*Science*, Volume 129, Number 3347, February 20, 1959 (p. 443)

### Hooke, Robert 1635–1703

English physicist

It is commonly believed that anyone who tabulates numbers is a statistician. This is like believing that anyone who owns a scalpel is a surgeon.

*How to Tell the Liars from the Statisticians*

Chapter 1 (p. 1)

Marcel-Dekker, Inc. New York, New York, USA. 1983

### Hopkins, Harry

No biographical data available

Increasingly, we find ourselves caught up in the new contemporary dualism; there is the muddling-on, verbalizing, impressionistic, human old world down there, and there is that Other, Finer, Rational World to which the better statisticians have already been called. Communications between the two can be tenuous.

*The Numbers Game: The Bland Totalitarianism*

Chapter 6 (p. 134)

Little, Brown & Company. Boston, Massachusetts, USA. 1973

### Kerridge, D. F.

No biographical data available

It is not primarily the responsibility of a statistician to make decisions for other people — not in general at any rate... It is for someone else to say what decisions should

be made with [inferential]...information. In other words, ideally, it is the statisticians job to inform not to decide.

Discussion on Paper by Dr. Marshall and Professor Olkin  
*Journal of the Royal Statistical Society, Series B, Volume 30, 1968*  
 (p. 440)

**Kruskal, William** 1919–2005

American mathematician and statistician

An occupational hazard to which we statisticians are exposed occurs in the context of a social occasion, perhaps a dinner party. I am, let us say, seated next to a charming lady whom I have just met, and, as an initial conversational ice-breaking, she turns to me with a winning smile and says: “Now tell me what is it you do?” We must tell the truth, of course, so I reply that I am a statistician. That usually ruins a fine conversation, for in 8.6 cases out of 10 the lady’s smile disappears, she turns to my rival on her other side, and I attack the fried chicken in lonely, misunderstood dignity.

Statistics, Moliere, and Henry Adams  
*American Scientist Magazine, 1967* (p. 416)

**Miksch, W. F.** 1861–1927

No biographical data available

A couple of government statisticians recently threw dust on the wedding ring business by coming right out with the fact that for every male there are 1.03 females. It’s about time they stop shoving the American taxpayer behind decimal points.

The Average Statistician  
*Collier’s, Volume 125 June 17, 1950* (p. 10)

**Moroney, M. J.**

American statistician

There is more than a germ of truth in the suggestion that, in all society where statisticians thrive, liberty and individuality are likely to be emasculated.

*Facts from Figures*  
 Statistics Undesirable (p. 1)  
 Penguin Books Ltd., Harmondsworth, England. 1951

The statistician’s job is to draw general conclusions from fragmentary data. Too often the data supplied to him for analysis are not only fragmentary but positively incoherent, so that he can do next to nothing with them. Even the most kindly statistician swears heartily under his breath whenever this happens.

*Facts from Figures*  
 What Happens When We Take a Sample (p. 120)  
 Penguin Books Ltd., Harmondsworth, England. 1951

**Sarton, George** 1884–1956

Belgian-born American scholar and writer

I like to think of the constant presence in any sound Republic of two guardian angels: the Statistician and the Historian of Science. The former keeps his finger on the pulse of Humanity...

*Sarton on the History of Science*

Quetelet (p. 241)  
 Harvard University Press. Cambridge, Massachusetts, USA. 1962

**Seaton, G. L.**

No biographical data available

...as the job of finding the truth and explaining it continues to become more complex and more difficult, management again casts a doubtful eye at the statistician, for a different reason. Management’s big question is no longer “What can the statistician do for us that we can’t do just as well ourselves?”; the question now is, “Do our statisticians have the tools and the capacity and the experience and the persistence and the breadth of vision to seek the truth and to know it when they have found it?”

The Statistician and Modern Management  
*The American Statistician, Volume 2, Number 6, December 1948* (p. 10)

**Snedecor, G. W.**

Statistician

The characteristic which distinguishes the present-day professional statistician, is his interest and skill in the measurement of the fallibility of conclusions.

On a Unique Feature of Statistics  
 Presidential Address to the American Statistical Association, December 1948  
*Journal of the American Statistical Association, Volume 44, Number 245, March 1949*

**Stamp, Josiah** 1880–1941

English economist and financier

Most of you would as soon be told that you are cross-eyed or knock-kneed as that you are destined to be a statistician...

*Some Economic Factors in Modern Life*  
 Chapter VIII (p. 253)  
 P.S. King & Son Ltd. London, England. 1929

I sometimes think that statisticians do not deserve quite all the hard things that are said about them. They are supposed to be cold, unemotional, bloodless and steely-eyed. But, as a matter of fact, we are all statisticians nowadays. We are either forming opinions on other people’s statistics, whether we like it or not, or we are providing the raw material of statistics.

*Some Economic Factors in Modern Life*  
 Chapter VIII (p. 253)  
 P.S. King & Son Ltd. London, England. 1929

**Thurber, James** 1894–1961

American writer and cartoonist

Though statisticians in our time have never kept the score, Man wants a great deal here below and Women even more.

*Further Fables of Our Times*  
 The Godfather and His Godchild  
 Simon & Schuster. New York, New York, USA. 1956

**Tukey, John W.** 1915–2000  
American statistician

Predictions, prophecies, and perhaps even guidance — those who suggested this title to me must have hoped for such — even though occasional indulgences in such actions by statisticians has undoubtedly contributed to the characterization of a statistician as a man who draws straight lines from insufficient data to foregone conclusions!

Where Do We Go From Here?

*Journal of the American Statistical Association*, Volume 55, Number 289, March 1960 (p. 80)

The most important maxim for data analysis to heed, and one which many statisticians seem to have shunned is this: “Far better an approximate answer to the right question, which is often vague, than an exact answer to the wrong question, which can always be made precise.” Data analysis must progress by approximate answers, at best, since its knowledge of what the problem really is will at best be approximate.

The Future of Data Analysis

*Annals of Mathematical Statistics*, Volume 33, Number 1, March 1962 (pp. 13–14)

(The experimental statistician dare not shrink from the war cry of the analyst “Only a fool would use it, but it’s better than we used to use!”)

Unsolved Problems of Experimental Statistics

*Journal of the American Statistical Association*, Volume 49, Number 268, December 1954 (p. 718)

**Wang, Chamont** 1949–  
American statistician

Flip a coin 100 times. Assume that 99 heads are obtained. If you ask a statistician, the response is likely to be: “It is a biased coin.” But if you ask a probabilist, he may say: “Woow, what a rare event.”

*Sense and Nonsense of Statistical Inference: Controversy, Misuse, and Subtlety*

Chapter 6 (p. 154)

Marcel-Dekker, Inc. New York, New York, USA. 1993

**Wells, H. G. (Herbert George)** 1866–1946  
English novelist, historian and sociologist

Behind the adventurer, the speculator, comes that scavenger of adventurers, the statistician.

*The Work, Wealth and Happiness of Mankind*

Chapter Nine, Part 10 (p. 390)

Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1931

...the movement of the last hundred years is all in favor of the statistician.

*The Work, Wealth and Happiness of Mankind*

Chapter Nine, Part 10 (p. 391)

Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1931

**Wigner, Eugene Paul** 1902–95  
Hungarian-born American physicist

There is a story about two friends, who were classmates in high school, talking about their jobs. One of them became a statistician and was working on population trends. He showed a reprint to his former classmate. The reprint started, as usual with the Gaussian distribution and the statistician explained to his former classmate the meaning of the symbols for the actual population, for the average population, and so on. His classmate was a bit incredulous and was not quite sure whether the statistician was pulling his leg

The Unreasonable Effectiveness of Mathematics in the Natural Sciences  
*Communications on Pure and Applied Mathematics*, Volume 13, Number 1, February 1960 (p. 1)

**Yule, G. U.** 1871–1951  
Scottish statistician

Since the statistician can seldom or never make experiments for himself, he has to accept the data of daily experiences, and discuss as best he can the relations of a whole group of changes...

On the Theory of Correlation

*Journal of the Royal Statistical Society*, Volume LX, December 1897 (p. 812)

## STATISTICS

**Adams, Henry Brooks** 1838–1918  
American man of letters

History has never regarded itself as a science of statistics. It was the Science of Vital Energy in relation with time; and of late this radiating center of life has been steadily tending, — together with every form of physical and mechanical energy, — toward mathematical expression.

*A Letter to American Teachers of History*

Chapter I (p. 115)

Press of J.H. Furst Company. Washington, D.C. 1910

## Advertisement

...and you thought “impressive” statistics were 36–24–36.

*The American Statistician*, Volume 33, Number 4, November 1979 (p. 248)

**Allen, Roy George Douglas** 1906–83  
English economist and mathematician

A knowledge of statistical methods is not only essential for those who present statistical arguments it is also needed by those on the receiving end.

*Statistics for Economists*

Chapter I (p. 9)

Hutchinson’s University Library. London, England. 1951

**Angell, Roger** 1920–  
American fiction writer and essayist

Statistics are the food of love.

Chapter 1 (p. 9)

Simon & Schuster. New York, New York, USA. 1982

**Baines, J. A.**

No biographical data available

Once again, but not I hope, too often, or for the last time, do I dip into the well of Mr. Courtney’s sagacity:—

“We may quote to one another with a chuckle the words of the Wise Statesman, lies, damned lies and statistics, still there are some easy figures which the simplest must understand but the astutest cannot wriggle out of.”

Parliamentary Representation in England Illustrated by the Elections of 1892 and 1895

*Journal of the Royal Statistical Society*, Volume 59, 1896 (p. 87)

**Balchin, Nigel** 1908–70

English novelist

Organic chemist!” said Tilley expressively. “Probably knows no statistics whatever.”

*The Small Back Room* (p. 136)

Collins. London, England. 1943

**Bailey, W. B.** 1873–?

No biographical data available

**Cummings, John**

No biographical data available

Statistical tables are essentially specific in their meaning, and they require data that are uniformly specific in the same kind and degree.

*Statistics* (p. 33)

McClurg. Chicago, Illinois, USA. 1917

**Barrett-Browning, Elizabeth** 1806–61

English poet

There’s too much abstract willing, purposing,  
In this poor world. We talk by aggregates,  
And think by systems and being used to face  
Our evils in statistics, are inclined  
To cap them with unreal remedies  
Drawn out in haste on the other side.

*The Complete Poetical Works of Elizabeth Barrett Browning*

Aurora Leigh, Eighth Book, l. 800

Houghton Mifflin Company. Boston, Massachusetts, USA. 1900

**Bartlett, Maurice Stevenson** 1910–2002

English statistician

[Statistics] is concerned with things we can count. In so far as things, persons, are unique or ill-defined, statistics are meaningless and statisticians silenced; in so far as things are similar and definite — so many workers over 25, so many nuts and bolts made during December — they can be counted and new statistical facts are born.

*Essays on Probability and Statistics*

Some Remarks on the Theory of Statistics (p. 11)

Methuen & Company Ltd. London, England. 1962

**Baudrillard, Jean** 1929–

French cultural theorist

Like dreams, statistics are a form of wish fulfillment.

Translated by Chris Turner

*Cool Memories*

October 1983 (p. 147)

Verso. London, England. 1990

**Bell, E. T. (Eric Temple)** 1883–1960

Scottish-American mathematician and educator

The statistical method is social mathematics par excellence.

*The Development of Mathematics* (p. 582)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1945

Mankind in the mass is more despotically governed by the laws of chance than it ever was by the decrees of any tyrant. If our shambling race is ever to get anything but suicidal destruction out of science, it may be a necessary first step that half a dozen human beings in every hundred thousand understand the mass-reactions of creatures who, as individuals, occasionally show that they can stand erect and walk like men. To grasp and analyze mass-reactions, whether of atoms or of human beings, a mastery of the modern statistical method is essential.

*The Development of Mathematics* (p. 582)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1945

**Belloc, Hilaire** 1870–1953

French-born poet and historian

It has long been recognized by public men of all kinds... that statistics come under the head of lying, and that no lie is so false or inconclusive as that which is based on statistics.

*The Silence of the Sea*

On Statistics (p. 170)

Sheed & Ward. New York, New York, USA. 1940

Before the curse of statistics fell upon mankind we lived a happy, innocent life, full of merriment and go, and informed by fairly good judgment.

*The Silence of the Sea*

On Statistics (p. 171)

Sheed & Ward. New York, New York, USA. 1940

Statistics are the triumph of the quantitative method, and the quantitative method is the victory of sterility and death.

*The Silence of the Sea*

On Statistics (p. 173)

Sheed & Ward. New York, New York, USA. 1940

**Berger, J. O.**

No biographical data available

**Berry, D. A.**

No biographical data available

...to acknowledge the subjectivity inherent in the interpretation of data is to recognize the central role of statistical analysis as a formal mechanism by which new evidence can be integrated with existing knowledge. Such a view of statistics as a dynamic discipline is far from the common perception of a rather dry, automatic technology for processing data.

Statistical Analysis and the Illusion of Objectivity  
*American Scientist*, Volume 76, 1988 (p. 159)

**Bernard, Claude** 1813–78

French physiologist

Only when a phenomenon includes conditions as yet undefined, can we compile; we must learn, therefore, that we compile statistics only when we cannot possibly help it.

Translated by Henry Copley Greene  
*An Introduction to the Study of Experimental Medicine*  
Part Two, Chapter II, Section IX (p. 137)  
Henry Schuman, Inc. New York, New York, USA. 1927

I do not understand how we can teach practical and exact science on the basis of statistics.

Translated by Henry Copley Greene  
*An Introduction to the Study of Experimental Medicine*  
Part Two, Chapter II, Section ix (p. 138)  
Henry Schuman, Inc. New York, New York, USA. 1927

**Billings, John Shaw** 1838–1913

American surgeon and librarian

Statistics are somewhat like old medical journals, or like revolvers in newly opened mining districts. Most men rarely use them, and find it troublesome to preserve them so as to have them easy of access; but when they do want them, they want them badly.

On Vital and Medical Statistics  
*Medical Record*, Volume 36, 1889

**Blalock, Jr., Hubert M.** 1927–91

American sociologist and statistical methods researcher

The manipulation of statistical formulas is no substitute for knowing what one is doing.

*Social Statistics*  
Chapter 19 (p. 448)  
McGraw-Hill Book Company, Inc. New York, New York, USA. 1960

**Bloch, Arthur** 1948–

American humorist

If enough data is collected, anything may be proved by statistical methods.

*Murphy's Law*  
William and Holland's Law (p. 47)  
Price/Stern/Sloan, Publishers. Los Angeles, California, USA. 1981

**Blodgett, James H.**

American statistician

In statistical work we should be able to presume upon honesty, fidelity, and diligence.

Obstacles to Accurate Statistics  
*Journal of the American Statistical Association*, New Series Number 41,  
March 1898 (p. 1)

**Boorstin, Daniel J.** 1914–2004

American historian

...statistics have tended to make facts into norms.

*The Decline of Radicalism*  
Chapter I (p. 18)  
Random House, Inc. New York, New York, USA. 1969

...statistics, which first secured prestige here by a supposedly impartial utterance of stark fact, have enlarged their dominion over the American consciousness by becoming the most powerful statement of the "ought" — displacers of moral imperatives, personal ideals, and unfulfilled objectives.

*The Decline of Radicalism*  
Chapter I (p. 19)  
Random House, Inc. New York, New York, USA. 1969

**Bowley, Arthur L.** 1869–1957

English statistician and economist

Some of the common ways of producing a false statistical argument are to quote figures without their context, omitting the cautions as to their incompleteness, or to apply them to a group of phenomena quite different to that to which they in reality relate; to take these estimates referring to only part of a group as complete; to enumerate the events favorable to an argument, omitting the other side; and to argue hastily from effect to cause, this last error being the one most often fathered on to statistics. For all these elementary mistakes in logic, statistics is held responsible.

*Elements of Statistics*  
Part I, Chapter I (pp. 12–13)  
P.S. King & Son Ltd. London, England. 1937

A statistical estimate may be good or bad, accurate or the reverse; but in almost all cases it is likely to be more accurate than a casual observer's impression, and the nature of things can only be disproved by statistical methods.

*Elements of Statistics*  
Part I, Chapter I (p. 9)  
P.S. King & Son Ltd. London, England. 1937

Great numbers are not counted correctly to a unit, they are estimated; and we might perhaps point to this as a division between arithmetic and statistics, that whereas arithmetic attains exactness, statistics deals with estimates, sometimes very accurate, and very often sufficiently so for their purpose, but never mathematically exact.

*Elements of Statistics*

Part I, Chapter I (p. 3)  
P.S. King & Son Ltd. London, England. 1937

A knowledge of statistics is like a knowledge of foreign languages or of algebra; it may prove of use at any time under any circumstances.

*Elements of Statistics*

Part I, Chapter I (p. 4)  
P.S. King & Son Ltd. London, England. 1937

**Bowman, Scotty** 1933–  
Canadian Hockey Coach

**Bowley, Arthur L.** 1869–1957  
English statistician and economist

Statistics are for losers.  
A Lot More Where They Come From  
*Sports Illustrated*, April 2, 1973

**Bowman, W. E.** 1912–1985  
English amateur hill hiker and satirist

The various estimates of the height of the true summit vary considerably, but by taking an average of these figures it is possible to say confidently that the summit of Rum Doodle is 40,000 1/2 feet above sea level.  
*The Ascent of Rum Doodle*  
Chapter 3 (pp. 32–33)  
The Vanguard Press. New York, New York, USA. 1956

**Buchner, Ludwig** 1824–99  
German physician and philosopher

The science of statistics, which has only been turned to proper account in modern times, has the great honor of having proved the existence of definite rules in a number of phenomena, which had hitherto been looked upon as merely accidental or as owing their origin to an arbitrary power.  
*Force and Matter*  
Free Will (p. 367)  
Truth Seeker. New York, New York, USA. 1950

**Burgess, Robert W.** 1887–1969  
American statistician

The fundamental gospel of statistics is to push back the domain of ignorance, prejudice, rule-of-thumb, arbitrary or premature decisions, tradition, and dogmatism and to increase the domain in which decisions are made and principles are formulated on the basis of analyzed quantitative facts.  
The Whole Duty of the Statistical Forecaster  
*Journal of the American Statistical Association*, Volume 32, Number 200, December 1937 (p. 636)

**Burnan, Tom**  
No biographical data available

No matter how much reverence is paid to anything purporting to be “statistics,” the term has no meaning unless the source, relevance, and truth are all checked.  
*The Dictionary of Misinformation*  
Statistics, Use, Misuse, and Abuse Of (p. 271)  
Ballantine Books. New York, New York, USA. 1975

...the worship of statistics has had the particularly unfortunate result of making the job of the plain, outright liar that much easier.  
*The Dictionary of Misinformation*  
Statistics, Use, Misuse, and Abuse Of (p. 274)  
Ballantine Books. New York, New York, USA. 1975

**Carlyle, Thomas** 1795–1881  
English historian and essayist

Statistics is a science which ought to be honorable, the basis of many most important sciences; but it is not to be carried on by steam, this science, any more than others are; a wise head is requisite for carrying it on.  
*English and Other Critical Essays*  
Chartism (p. 170)  
J.M. Dent & sons Ltd. London, England. 1950

Statistics is a science which ought to be honourable, the basis of many most important sciences; but it is not to be carried on by steam, this science, any more than others are; a wise hand is requisite for carrying it on. Conclusive facts are inseparable from unconclusive except by a head that already understands and knows.  
*Critical and Miscellaneous Essays*  
Chartism, II  
D. Appleton & Company. New York, New York, USA. 1860

Statistics, one may hope, will improve gradually, and become good for something. Meanwhile, it is to be feared the crabbed satirist was partly right, as things go.  
*English and Other Critical Essays*  
Chartism, Chapter II (p. 171)  
J.M. Dent & sons Ltd. London, England. 1950

**Carroll, Lewis (Charles Dodgson)** 1832–98  
English writer and mathematician

“And on the dead level our pace is — ?” the younger suggested; for he was weak in statistics, and left all such details to his aged companion.  
*The Complete Works of Lewis Carroll*  
A Tangled Tale  
Knot I (p. 983)  
The Modern Library. New York, New York, USA. 1936

**Chatfield, Christopher**  
British statistician

Thus statistics should generally be taught more as a practical subject with analyses of real data. Of course some theory and an appropriate range of statistical tools need to be learnt, but students should be taught that Statistics is much more than a collection of standard prescriptions.

The Initial Examination of Data  
*Journal of the Royal Statistical Society*, Series A, Volume 148, 1985

**Cogswell, Theodore R.** 1918–87

American science fiction author

Statistics show that you have nothing to worry about.

In Harry Harrison

*Astounding: John W. Campbell Memorial Anthology*

Probability Zero (p. 329)

Random House, Inc. New York, New York, USA. 1973

**Cohen, Jacob** 1923–

American behavioral psychologist and statistical analyst

Since statistical significance is so earnestly sought and devoutly wished for by behavioral scientists, one would think that the a priori probability of its accomplishment would be routinely determined and well understood.

Quite surprisingly, this is not the case.

*Statistical Power Analysis for the Behavioral Sciences*

Chapter 1 (p. 1)

Lawrence Erlbaum Associates. Hillsdale, New Jersey,

USA. 1988

I have learned repeatedly, however, that the typical behavioral scientist approaches applied statistics with considerable uncertainty (if not actual nervousness), and requires a verbal-intuitive exposition, rich in redundancy and with many concrete illustrations.

*Statistical Power Analysis for the Behavioral Sciences*

Preface to the Original Edition (p. xx)

Lawrence Erlbaum Associates, Publishers. Hillsdale, New Jersey, USA.

1988

**Cox, Sir David Roxbee** 1924–

English statistician

**Hinkley, D. V.** 1924–

English statistician

Statistical methods of analysis are intended to aid the interpretation of data that are subject to appreciable hazard variability.

*Theoretical Statistics* (p. 1)

Introduction (p. 1)

Chapman & Hall. London, England. 1974

**Crichton, Michael** 1942–

American novelist

Conversation and statistics. Really boring.

*Rising Sun*

Second Day (p. 254)

Ballantine Books. New York, New York, USA. 1993

**Darwin, Charles Robert** 1809–82

English naturalist

One has, however, no business to feel so much surprise of one's ignorance, when one knows how impossible it is without statistics to conjecture the duration of life and percentage of deaths to births in mankind.

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 1)

C. Darwin to L. Jenyns, [1845?] (p. 394)

D. Appleton & Company. New York, New York, USA. 1896

**Davies, John Tasman** 1924–?

Chemist

Operational research is the application of methods of the research scientist to various rather complex practical operations.... A paucity of numerical data with which to work is a usual characteristic of the operations to which operational research is applied.

*The Scientific Approach*

Chapter 7 (p. 86)

Academic Press. London, England. 1965

**Davis, Joseph S.**

No biographical data available

Statistics are proverbially dry — forgive me if I say they are far better dry than “wet” — but to give them optimum moisture content is simply a matter of mastering fundamentals that no one should hold in contempt.

Statistics and Social Engineering

*Journal of the American Statistical Association*, Volume 32, Number

197, March 1937 (p. 6)

**Dawkins, Richard** 1941–

British ethologist, evolutionary biologist, and popular science writer

The essence of life is statistical improbability on a colossal scale.

*The Blind Watchmaker*

Chapter 11 (p. 317)

W.W. Norton & Company, Inc. New York, New York, USA. 1986

**de Jonnes, Moreau**

No biographical data available

Statistics are like the hieroglyphics of ancient Egypt, where the lessons of history, the precepts of wisdom, and the secrets of the future were concealed in mysterious characters.

*Elements de Statistique* (p. 5)

**de Leeuw, A. L.**

No biographical data available

The method used by the scientist to find probable exact truth is what he calls “the method of least squares.”

*Rambling Through Science*

Gambling (p. 88)

Whittlesey House. London, England. 1932

**de Madariaga, Salvador** 1886–1978

Spanish writer and statesman

Statistics only work well when they dwell on large numbers of absolutely free motions, or what has been described as “perfect disorder.” If an element of deliberate direction, of conscious “order”, meddles with their

utter “innocence”, the facts in question cease to follow statistical laws.

*Essays with a Purpose*  
Freedom and Science (p. 50)  
Hollis & Carter. London, England. 1954

**Deming, William Edwards** 1900–93  
American statistician, educator, and consultant

You need not be a mathematical statistician to do good statistical work, but you will need the guidance of a first class mathematical statistician.

Some Principles of the Shewhart Method of Quality Control  
*Mechanical Engineering*, Volume 66, March 1944

A good engineer, or a good economist, or a good chemist, already has a good start, because the statistical method is only good science brought up to date by the recognition that all laws are subject to the variations which occur in nature.

Some Principles of the Shewhart Method of Quality Control  
*Mechanical Engineering*, Volume 66, March 1944

Your study of statistical methods will not displace any other knowledge that you have; rather, it will extend your knowledge of engineering, chemistry, or economics, and make it more useful.

Some Principles of the Shewhart Method of Quality Control  
*Mechanical Engineering*, Volume 66, March 1944

Statistical research is particularly necessary in the government service because of the high level of quality and economy that the public has the right to expect in government statistics.

*Some Theory of Sampling* (p. viii)  
John Wiley & Sons, Inc. New York, New York, USA. 1950

The statistical method is more than an array of techniques. The statistical method is a Mode of Thought; it is Sharpened Thinking; it is Power.

Paper presented at meeting of the International Statistical Institute, September 1953

Unfortunately and inadvertently, intellectual gulfs have grown up between writers in statistics, least squares, and curve fitting. Each of the three groups has gone its own way, rediscovering developments long since discovered by the others, or — what is worse — not rediscovering them.

*Statistical Adjustment of Data* (p. iv)  
John Wiley & Sons, Inc. New York, New York, USA. 1938

**Devons, Ely** 1913–67  
English economist

The experience of falling in love could be adequately described in terms of statistics. A record of heart beats per minute, the stammering and hesitation in speech, the number of calories consumed per day, the heightening of poetic vision, measured by the number of lines of poetry

written to the beloved — I won’t go on; no doubt you can think of further measures.

*Essays in Economics*  
Chapter 6 (p. 105)  
Greenwood Press, Publishers, Westport, Connecticut, USA. 1961

The two most important characteristics of the language of statistics are first, that it describes things in quantitative terms, and second, that it gives this description an air of accuracy and precision.

*Essays in Economics*  
Chapter 6 (p. 106)  
Greenwood Press, Publishers, Westport, Connecticut, USA. 1961

How to use a language which by its very nature implies objectivity, precision and accuracy, in such a way that the subjective element of judgment, imprecision and inaccuracy are fully taken into account? It is because this task is so difficult and so rarely achieved that statistics are frequently referred to as “the hard facts”, and yet we talk of three kinds of lies — “lies, damn lies, and statistics.”

*Essays in Economics*  
Chapter 6 (p. 111)  
Greenwood Press, Publishers, Westport, Connecticut, USA. 1961

...“statistics are only for the statistician”, and even then, I might add, only for the good statistician.

*Essays in Economics*  
Chapter 6 (p. 118)  
Greenwood Press, Publishers, Westport, Connecticut, USA. 1961

This exaggerated influence of statistics resulting from willingness, indeed eagerness, to be impressed by the “hard facts” provided by the “figures”, may play an important role in decision-making.

*Essays in Economics*  
Chapter 7 (p. 134)  
Greenwood Press, Publishers, Westport, Connecticut, USA. 1961

**Devons, Ely** 1913–67  
English economist

There are those who are so impressed by the notion that “quantification” is the only form of scientific knowledge, that they see no danger in the distorted, misleading, or simply ineffective picture that a statistical description of events may give. To such people the statistical picture is always to be preferred as the most meaningful and objective. It is indeed because this view is so widespread, that an argument stated in statistical terms has such a powerful influence in policy decision, and induces everyone to try to impress their case on public attention by peppering it with statistics.

*Essays in Economics*  
Chapter 6 (p. 106)  
Greenwood Press, Publishers. Westport, Connecticut, USA. 1961

Statistical magic, like its primitive counterpart, is a mystery to the public; and like primitive magic it can never be proved wrong.... The oracle is never wrong; a mistake merely reinforces the belief in magic.

*Essays in Economics*

Chapter 7 (p. 135)

Greenwood Press, Publishers. Westport, Connecticut, USA. 1961

**Dewey, John** 1859–1952

American philosopher and educator

Factual science may collect statistics, and make charts. But its predictions are, as has been well said, but past history reversed.

*Art as Experience*

Chapter XIV (p. 346)

Milton, Balch and Company. New York, New York, USA. 1934

**Dickens, Charles** 1812–70

English novelist

Mr. Gradgrind sat writing in the room with the deadly statistical clock, proving something no doubt — probably, in the main, that the Good Samaritan was a bad economist.

*Hard Times*

Book the Second, Chapter XII (p. 192)

J.M. Dent & Sons Ltd. London, England. 1966

**Edgeworth, Francis Ysidro** 1845–1926

Irish economist and statistician

...Statistics reigns and revels in the very heart of Physics.

On the Use of the Theory of Probabilities in Statistics Relating to Society

*Journal of the Royal Statistical Society*, January 1913 (p. 167)

**Edwards, A. W. F.** 1935–

English statistician, geneticist, and evolution biologist

There comes a time in the life of a scientist when he must convince himself either that his subject is so robust from a statistical point of view that the finer points of statistical inference he adopts are irrelevant or that the precise mode of inference he adopts is satisfactory.

*Likelihood* (p. xi)

Cambridge University Press. Cambridge, England. 1972

**Edwards, Tyron** 1809–94

American theologian

Statistics is the science of learning from experiences, especially experiences that arrive a little bit at a time.

*An Introduction to the Bootstrap*

Chapter I (p. 1)

Chapman & Hall. New York, New York, USA. 1993

**Efron, Bradley** 1938–

American statistician

**Tibshirani, Robert J.**

No biographical data available

Statistics is a subject of amazingly many users and surprisingly few effective practitioners.

*An Introduction to the Bootstrap*

Preface (p. xiv)

Chapman & Hall. New York, New York, USA. 1993

**Einstein, Albert** 1879–1955

German-born physicist

**Infeld, Leopold** 1898–1968

Polish physicist

By applying the statistical method we cannot foretell the behavior of an individual in a crowd. We can only foretell the chance, the probability, that it will behave in some particular manner.

*The Evolution of Physics*

Probability Waves (p. 284)

Simon & Schuster. New York, New York, USA. 1961

**Eisenhart, Churchill** 1913–94

American statistician

The primary function of a statistical consultant in a research organization is to furnish advice and guidance in the collection and use of numerical data to provide quantitative foundations for decisions.

The Role of a Statistical Consultant in a Research Organization

*The American Statistician*, Volume 2, Number 2, April 1948 (p. 6)

**Ellis, Havelock** 1859–1939

English sexuality researcher

...the methods of statistics are so variable and uncertain, so apt to be influenced by circumstances, that it is never possible to be sure that one is operating with figures of equal weight.

*The Dance of Life*

Chapter VII, I (p. 286)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1923

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

One more fagot of these adamantine bandages is the new science of Statistics.

*Ralph Waldo Emerson: Essays and Lectures*

The Conduct of Life

Fate (p. 950)

The Library of America. New York, New York, USA. 1983

**Farr, William** 1807–83

English statistician

You complain that your report would be dry. The dryer the better. Statistics should be the driest of all reading.

Nightingale on Quetelet

*Journal of the Royal Statistical Society*, Series A, 1981 (p. 144)

**Ferguson, Kitty**

Science writer

Compared with the adventure of discovering them, the statistics themselves often seem terribly dry.

*Measuring the Universe: Our Historic Quest to Chart the Horizons of Space and Time*  
 Prologue (p. 3)  
 Walker & Company. New York, New York, USA. 1999

**Fienberg, Stephen E.** 1942–  
 American statistician

Although advice on how and when to draw graphs is available, we have no theory of statistical graphics...  
 Graphical Methods in Statistics  
*The American Statistician*, Volume 13, Number 4, November 1979 (p. 165)

**Fisher, Sir Ronald Aylmer** 1890–1962  
 English statistician and geneticist

This rather tumultuous overflow of statistical techniques from the quiet backwaters of theoretical methodology... into the working part of going concerns of the largest size, suggest that hidden causes have been at work...preparing men’s minds, and shaping the institutions through which they work...  
 The Expansion of Statistics  
*American Scientist Magazine*, Volume 42, Number 2, April 1954 (p. 277)

Statistical procedure and experimental design are only two different aspects of the same whole, and that whole is the logical requirements of the complete process of adding to natural knowledge by experimentation.  
*The Design of Experiments*  
 Introduction (p. 3)  
 Hafner Publishing Company. New York, New York, USA. 1971

In the original sense of the word, “statistics” was the science of Statecraft: to the political arithmetician of the eighteenth century, its function was to be the eyes and ears of the central government.  
 Presidential Address, First Indian Statistical Conference  
*Sankhya*, 1938, Volume 4, 1938 (p. 14)

Part 3, Chapter 11 (p. 385)

Doubleday &amp; Company, Inc. Garden City, New York, USA. 1968

**Hancock, William Keith** 1808–?

Australian author

Oratory is dying; a calculating age has stabbed it to the heart with innumerable dagger-thrusts of statistics.

*Australia* (p. 146)

E. Benn Ltd. London, England. 1945

**Hand, D. J.**

No biographical data available

Statistics has been likened to a telescope. The latter enables one to see further and to make clear objects which were diminished or obscured by distance. The former enables one to discern structure and relationships which were distorted by other factors or obscured by random variation.

The Role of Statistics in Psychiatry

*Psychological Medicine*, Volume 15, 1985 (p. 471)**Hawkins, Francis Bisset** 1796–1894

No biographical data available

Statistics has become the key to several sciences...and there is reason to believe, that a careful cultivation of it, would materially assist the completion of a philosophy of medicine.... Medical statistics affords the most convincing proofs of the efficacy of medicine.

*Elements of Medical Statistics* (pp. 2–3)

Longman. London, England. 1829

**Hayford, F. Leslie**

No biographical data available

In the everyday use of statistics in business, complicated statistical methods rarely are necessary and always are to be avoided if possible. Simplicity of treatment and presentation is a requisite in the making of statistics useful in executive control.

Some Uses of Statistics in Executive Control

*Journal of the American Statistical Association*, Volume 31, Number 193, March 1936 (p. 36)

...neither statistics nor the statistician can ordinarily give the executive the final answer to his problems.

Some Uses of Statistics in Executive Control

*Journal of the American Statistical Association*, Volume 31, Number 193, March 1936 (p. 36)**Heinlein, Robert A.** 1907–88

American science fiction writer

Oh, the hell with! — it did not change the statistical outcome.

*Time Enough for Love*

Chapter VI (p. 208)

G.P. Putnam's Sons. New York, New York, USA. 1973

**Hoel, P. G.**

Statistician

Statistical methods are essentially methods for dealing with data that have been obtained by repetitive operations.

*Introduction to Mathematical Statistics*

Chapter 1 (p. 1)

John Wiley &amp; Sons, Inc. New York, New York, USA. 1954

**Hogben, Lancelot** 1895–1975

English zoologist

Acceptability of a statistically significant result of an experiment on animal behavior in contradistinction to a result which the investigator can repeat before a critical audience naturally promotes a high output of publication. Hence, the argument that the techniques work has a tempting appeal to young biologists.

*Statistical Theory: The Relationship of Probability, Credibility and Error* (p. 27)

George Allen &amp; Unwin Ltd. London, England. 1957

The word statistics has at least six different meanings in current use, four in the context of statistical theory alone.

*Science in Authority*

The Present Crisis in Statistical Theory (pp. 94–95)

Unwin University Books. London, England, USA. 1963

**Holmes, Jr., Oliver Wendell** 1841–1935

American jurist

For the rational study of the law the black-letter man may be the man of the present, but the man of the future is the man of statistics and the master of economics.

Path of the Law

*The Harvard Law Review*, Volume 10, 1897

**Hooke, Robert** 1635–1703  
English physicist

Don't waste time arguing about the merits or demerits of something if you can gather some statistics that will answer the question realistically.

In J.M. Tanur

*Statistics: A Guide to the Unknown*

Statistics, Sports, and Some Other Things (p. 195)

Wadsworth & Brooks. Pacific Grove, California, USA. 1989

Do remember that your experiment is merely a hedge-podge of statistics, consisting of those cases that you happen to remember. Because these are necessarily small in number and because your memory may be biased toward one result or another, your experience may be far less dependable than a good set of statistics.

In J.M. Tanur

*Statistics: A Guide to the Unknown*

Statistics, Sports, and Some Other Things (p. 195)

Wadsworth & Brooks. Pacific Grove, California, USA. 1989

**Hopkins, Harry**

Part I, Chapter I (p. 8)  
P.S. King & Son Ltd. London, England. 1926

**Maxwell, James Clerk** 1831–79  
Scottish physicist

...molecular science teaches us that our experiments can never give us anything more than statistical information, and that no law deduced from them can pretend to absolute precision. But when we pass from the contemplations of our experiment to that of the molecules themselves, we leave the world of chance and change, and enter a region where everything is certain and immutable.

In W.D. Niven (ed.)  
*The Scientific Papers of James Clerk Maxwell* (Volume 2)  
Molecules (p. 374)  
At The University Press. Cambridge, England. 1890

**Meitzen, August** 1822–1910  
German geographer

No statistical judgment deals with the unit, but strictly and only with the aggregate. The variable elements of persons and things otherwise typical, that are enumerated, are always counted in a specific aggregate and under certain specific circumstances. The qualities of the objects themselves, so far as they are not typical, or the subject of the investigation, are completely unknown.

History, Theory and Techniques of Statistics  
*American Academy of Political and Social Sciences*, May 1898 (p. 168)

No matter what the statistical problem may be, it must proceed according to a plan. It is always a specific question which may be answered in several more or less accurate ways. The end in view and the reasoning which can be drawn upon will indicate in which manner and within which limits the answer is to be given. According to the choice made, it may be very simple or very complicated. But under all circumstances a definite plan providing for all the detail is an absolute prerequisite.

History, Theory and Techniques of Statistics  
*American Academy of Political and Social Sciences*, May 1898 (p. 168)

**Meyers, Jr., G. J.**  
No biographical data available

Statistical methods serve as land marks which point to further improvement beyond that deemed obtainable by experienced manufacturing men. Hence, after all obvious correctives have been exhausted and all normal logic indicates no further gain is to be made, statistical methods still point toward a reasonable chance for

yet further gains; thereby giving the man who is doing trouble shooting sufficient courage of his convictions to cause him to continue to the ultimate gain, in spite of expressed opinion on all sides that no such gain exists.

A statistical analysis, properly conducted, is a delicate dissection of uncertainties, a surgery of suppositions.

*Facts from Figures*  
Statistics Undesirable (p. 3)  
Penguin Books Ltd. Harmondsworth, England. 1951

Historically, Statistics is no more than State Arithmetic, a system of computation by which differences between individuals are eliminated by the taking of an average. It has been used — indeed, still is used — to enable rulers to know just how far they may safely go in picking the pockets of their subjects.

*Facts from Figures*  
Statistics Undesirable (p. 1)  
Penguin Books Ltd. Harmondsworth, England. 1951

If you are young, then I say: Learn something about statistics as soon as you can. Don't dismiss it through ignorance or because it calls for thought... If you are older and already crowned with the laurels of success, see to it that those under your wing who look to you for advice are encouraged to look into this subject. In this way you will show that your arteries are not yet hardened, and you will be able to reap the benefits without doing overmuch work yourself. Whoever you are, if your work calls for the interpretation of data, you may be able to do without statistics, but you won't do as well.

*Facts from Figures*  
Statistics Desirable (p. 463)  
Penguin Books Ltd., Harmondsworth, England. 1951

**Mr. Gregory**  
Fictional character

Well, statistics prove that you're far safer in a modern plane than in a bathtub.

Simon & Schuster. New York, New York, USA. 1956

**O. Henry (William Sydney Porter)** 1862–10

American short story writer and journalist

His mathematics carried with it a momentary qualm and a lesson. The thought had not occurred to him that the thought could possibly occur to me not to ride at his side on that red road to revenge and justice. It was the higher calculus. I was booked for the trail. I began to eat more beans.

*Tales of O. Henry*

A Technical Error (p. 1059)

Doubleday & Company, Inc. Garden City, New York, USA. 1953

“What you’ve got,” says Idaho, “is statistics, the lowest grade of information that exists. They poison your mind...”

*Tales of O. Henry*

The Handbook of Hymen (p. 113)

Doubleday & Company, Inc. Garden City, New York, USA. 1969

**Orwell, George (Eric Arthur Blair)** 1903–50

English novelist and essayist

The fabulous statistics continued to pour out of the television. As compared with last year there was more food, more clothes, more houses, more furniture, more cooking pots, more fuel, more ships, more helicopters, more books, more babies — more of everything except disease, crime, and insanity.

*Nineteen Eighty-Four*

Part One, Chapter V (p. 59)

Buccaneer Books. Cutchogue, New York, USA. 1949

Statistics were just as much a fantasy in their original version as in their rectified version. A great deal of the time you were expected to make them up out of your head. For example, the Ministry of Plenty’s forecast had estimated the output of boots for the quarter at a hundred and forty-five millions pairs. The actual output was given as sixty-two millions. Winston, however, in rewriting the forecast, marked the figure down to fifty-seven millions, so as to allow for the usual claim that the quota had been overfilled. In any case, sixty-two millions was no nearer the truth than fifty-seven millions, or a hundred and forty-five millions. Very likely no boots had been produced at all. Likelier still, nobody knew how many had been produced, much less cared.

*Nineteen Eighty-Four*

Part One, Chapter IV (pp. 41–42)

Buccaneer Books. Cutchogue, New York, USA. 1949

**Paulos, John Allen** 1945–

American mathematician

It’s been estimated that, because of the exponential growth of the world’s population, between 10 and 20 percent of all the human beings who have ever lived are alive now. If this is so, does this mean that there isn’t enough statistical evidence to conclusively reject the hypothesis of immortality?

*Innumeracy*

5 Statistics, Trade-offs, and Society (p. 99)

Hill & Wang. New York, New York, USA. 1988

No biographical data available

...it is a function of statistical method to emphasize that precise conclusions cannot be drawn from inadequate data.

*Biometrika Tables for Statisticians* (Volume 1) (p. 83)

**Pearson, Karl** 1857–1936

English mathematician

There is much value in the idea of the ultimate laws being statistical laws, though why the fluctuations should be attributed to a Lucretian “Chance”, I cannot say. It is not an exactly dignified conception of the Deity to suppose him occupied solely with first moments and neglecting second and higher moments!

*The History of Statistics in the 17<sup>th</sup> and 18<sup>th</sup> Centuries Against the Changing Background of Intellectual, Scientific, and Religious Thought* (p. 160)

[Florence Nightingale’s] statistics were more than a study, they were indeed her religion. For her Quetelet was the hero as scientist, and the presentation copy of his *Physique sociale* is annotated by her on every page. Florence Nightingale believed — and in all the actions of her life acted upon the belief — that the administrator could only be successful if he were guided by statistical knowledge. The legislator — to say nothing of the politician — too often failed for want of this knowledge.

*Life, Letters and Labours of Francis Galton* (Volume 2) (p. 57)

At The University Press. Cambridge, England. 1914–30

[Florence Nightingale]...held that the universe — including human communities — were evolving in accordance with a divine plan; that it was man’s business to endeavor to understand this plan and guide his actions in sympathy with it. But to understand God’s thoughts, she held we must study statistics, for these are the measure of His purpose. Thus, the study of statistics was for her a religious duty.

*Life, Letters and Labours of Francis Galton* (Volume 2) (p. 57)

At The University Press. Cambridge, England. 1914–30

**Perrin, Jean** 1870–1945

French physicist

It is thus that statistics reveals more and more the incon-  
stancy and the irregularity of much social phenomena,  
when in lieu of applying it to a great nation altogether,  
one descends to a province, a town, a village.

In Mary Jo Nye

*Molecular Reality: A Perspective on the Scientific Work of Jean Perrin*  
(p. 25)

MacDonald. London, England. 1972

**Playfair, William** 1759–1823

English publicist

No study is less alluring or more dry and tedious than  
statistics, unless the mind and imagination are set to, or  
that the person studying is particularly interested in, the  
subject; which last can seldom be the case with young  
men in any rank of life.

*The Statistical Breviary* (p. 16)

J. Wallis. London, England. 1801

Statistical knowledge, though in some degree searched  
after in the most early ages of the world, has not till within  
these last 50 years become a regular object of study.

*The Statistical Breviary*

J. Wallis. London, England. 1801

**Price, Derek John de Solla** 1922–83

English science historian and information scientist

His passion was to count everything and reduce it to  
statistics.

*Little Science, Big Science*

Chapter 2 (p. 33)

Columbia University Press. New York, New York, USA. 1963

**Proschan, Frank**

American statistician

Pronouncing each word with great deliberateness, Rep.  
Resent asked, “Are you now, or have you ever been, a  
member of the American Statistical Association?”

...

Looking Rep. Resent straight in the eye, Minnie defiantly  
replied, “I refuse to answer on the grounds that it might  
incriminate me.”

Investigation of Latin Squares

*Industrial Quality Control*, Volume 11, Number 1, July 1954 (p. 31)

**Puckett, Andrew**

British crime novelist

They were in monthly columns. I added them and then  
compared the two tables. Well, there was a difference, and  
a difference on the right side, more blood packs had been  
separated in the Centre than plasma packs had arrived  
in CPPL, but it wasn't as large as I would have thought.  
I stared at the figures for a moment, then I worked out  
a statistical error rate on them. The difference between

them was not significant; it could be explained by random  
error. Statistics don't lie, not in the right hands.

*Bloodstains* (p. 79)

Doubleday & Company, Inc. Garden City, New York, USA. 1987

For the first five months they were virtually identical, but  
for the past four, they showed an increasing difference!  
With shaking fingers, I worked out a Standard Deviation  
on the sets of totals. There was no doubt: the difference[s]  
between the Centre's and CPPL's totals were significant.  
Statistics don't lie...

*Bloodstains* (p. 80)

Doubleday & Company, Inc. Garden City, New York, USA. 1987

**Puzo, Mario** 1920–99

American novelist and screenwriter

“You got a ninety percent chance,” he said.

Osno said quickly, “How do you get that figure?” He  
always did that whenever somebody pulled a statistic on  
him. He hated statisticians.

*Fools Die: A Novel*

Chapter 24 (p. 270)

Putnam. New York, New York, USA. 1978

**Pynchon, Thomas** 1937–

American novelist

“I'm sorry. That's the Monte Carlo Fallacy. No matter  
how many have fallen inside a particular square, the odds  
remain the same as they always were. Each hit is inde-  
pendent of all the others. Bombs are not dogs. No link.  
No memory. No conditioning.”

*Gravity's Rainbow*

Part 1 (p. 56)

The Viking Press. New York, New York, USA. 1973

That he must always be lovable, in need of her and never,  
as now, the hovering statistical cherub who's never quite  
been to hell but speaks as if he's one of the most fallen.

*Gravity's Rainbow*

...statistics — whatever their mathematical sophistica-  
tion and elegance — cannot make bad variables into  
good ones.

*Analysis of Nominal Data*

Chapter 1 (p. 8)

Sage Publications. Beverly Hills, California, USA. 1977

**Rogers, Will** 1879–1935

American actor and humorist

Everything is figured out down to a Gnat's tooth accord-  
ing to some kind of statistics.

*The Writings of Will Rogers*

Volume 4-3 (p. 254)

Oklahoma State University Press. Stillwater, Oklahoma, USA. 1973

**Romanoff, Alexis Lawrence** 1892–1980  
Russian soldier and scientist

Statistics can provide a ready proof  
For doubtful facts which ought to stay aloof.  
*Encyclopedia of Thoughts*  
Couplets  
Ithaca Heritage Books. Ithaca, New York, USA. 1975

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

Statistics, ideally, are accurate laws about large groups;  
they differ from other laws only in being about groups,  
not about individuals.  
*The Analysis of Matter*  
Chapter XIX (p. 191)  
Harcourt, Brace & Company, Inc. New York, New York, USA. 1927

**Samuels, Ernest** 1903–96  
American biographer and lawyer

No honest historian can take part with — or against —  
the forces he has to study. To him even the extinction of  
the human race should be merely a fact to be grouped  
with other vital statistics.  
In Ernest Samuels (ed.)  
*The Education of Henry Adams*  
Chapter XXX (p. 447)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1974

Taking for granted that the alternative to art was arith-  
metic, he plunged deep into statistics, fancying that  
education would find the surest bottom there; and the  
study proved the easiest he had ever approached. Even  
the Government volunteered unlimited statistics, endless  
columns of figures, bottomless averages merely for the  
asking. At the Statistical Bureau, Worthington Ford sup-  
plied any material that curiosity could imagine for filling  
the vast gaps of ignorance, and methods for applying the  
plasters of fact.  
In Ernest Samuels (ed.)  
*The Education of Henry Adams*  
Chapter XXIII (p. 351)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1974

**Schölzer, Ludwig** 1735–1809  
No biographical data available

History is statistics in a state of progression; statistics is  
history at a stand.  
Transactions of the Statistical Society of London  
Article II, Footnote on page 72  
*Westminster Review*, Volume 1, Part I, April-August 1838

History is for him continuous statistics, statistics  
stationary history.  
In August Meitzen  
*History, Theory, and Technique of Statistics* (p. 37)  
American Academy of Political Science. Philadelphia, Pennsylvania,  
USA. 1891

**Segal, Erich** 1937–  
American novelist

The emergency room was a madhouse. The stormy holi-  
day roads had yielded more than the statistical expecta-  
tion of traffic accidents.  
*Man, Woman and Child*  
Chapter 26 (p. 191)  
Harper & Row, Publishers. New York, New York, USA. 1980

“How are you, Mrs. Coleman?”  
“Not too bad. How’s yer statistics?”  
*Man, Woman and Child*  
Chapter 1 (p. 8)  
Harper & Row, Publishers. New York, New York, USA. 1980

He turned over on his side and picked up the American  
Journal of Statistics. Better than a sleeping pill. He idly  
leafed through a particularly unoriginal piece on stochastic  
processes, and thought, Christ, I’ve said this stuff a million  
times. And then he realized that he himself was the author.  
*Man, Woman and Child*  
Chapter 5 (p. 42)  
Harper & Row, Publishers. New York, New York, USA. 1980

“I mean, here you are a professor of statistics.”  
“So?”  
“So you have one lousy affair in your whole life.  
For a few lousy days. And you get a kid as evidence.  
Christ, what are the odds of that happening to any-  
body?”  
“Oh,” said Bob bitterly, “about a billion to one.”  
*Man, Woman and Child*  
Chapter 13 (p. 109)  
Harper & Row, Publishers. New York, New York, USA. 1980

“I am Professor Beckworth,” he pronounced in a kind  
of soprano-baritone. “Would you like to ask me some  
statistics, sir?”  
“Yes,” replied Bob. “What are the chances of this damn  
rain stopping today, Professor?”  
“Mmm,” said Jean-Claude, pondering earnestly, “You’ll  
have to see me tomorrow about that.”  
*Man, Woman and Child* (p. 178)  
Harper & Row, Publishers. New York, New York, USA. 1980

**Shapiro, Karl Jay** 1913–2000  
American poet

We ask for no statistics of the killed,  
For nothing political impinges on  
This single Casualty, or all those gone,  
Missing or healing, sinking or dispersed,  
Hundreds of thousands counted, millions lost.  
*Collected Poems 1940–1978*  
Elegy for a Dead Soldier  
Stanza V (p. 90)  
Random House, Inc. New York, New York, USA. 1978

**Shaw, George Bernard** 1856–1950  
Irish comic dramatist and literary critic

Even trained statisticians often fail to appreciate the extent to which statistics are vitiated by the unrecorded assumptions of their interpreters.

*The Doctor's Dilemma*

Preface on Doctors

Statistical Illusions (p. lxii)

Brentano's. New York, New York, USA. 1920

**Smith, Reginald H.** 1889–1966

American lawyer and social activist

Lawyers like words and dislike statistics.

A Sequel: The Bar Is Not Overcrowded

*American Bar Association Journal*, Volume 45, September 1959 (p. 945)

**Spengler, Oswald** 1880–1936

German philosopher

Statistics belong, like chronology, to the domain of the organic, to fluctuating Life, to Destiny and Incident, and not to the world of laws and timeless causality.

*The Decline of the West*

Chapter X (p. 218)

Alfred A. Knopf. New York, New York, USA. 1962

**Stalin, Joseph** 1879–1953

Soviet Russian political leader and general secretary of Communist Party

A single death is a tragedy, a million deaths is a statistic.

Quoted by Anne Fremantle

*The New York Times Book Review*

Unwritten Pages at the End of the Diary, September 28, 1958 (p. 3)

**Stamaty, Mark Alan**

American cartoonist and children's book writer

I propose that infinitely refutable statistics be declared the official language of politics.

Washington

*Time*, September 25, 1995 (p. 21)

**Stamp, Josiah** 1880–1941

English economist and financier

You cannot escape the statistical method, so you may as well make friend with it. You think it is cold and inhuman and impersonal, but, as a matter of fact, it is fuller of red blood and human nature than half the descriptive literature in the world.

*Some Economic Factors in Modern Life*

Chapter VIII (p. 256)

P.S. King & Son Ltd. London, England. 1929

**Stekel, Wilhelm** 1868–1940

Austrian psychoanalyst

Statistics is the art of lying by means of figures.

*Marriage at the Crossroads*

Chapter II (p. 20)

W. Godwin, Inc. New York, New York, USA. 1931

**Sterne, Laurence** 1713–68

English novelist and humorist

It was demonstrated however very satisfactorily, that such a ponderous mass of heterogeneous matter could not be congested and conglomerated to the nose, whilst the infant was *in Utero*, without destroying the statistical balance of the foetus, and throwing it plump upon its head nine months before the time.

*The Life and Opinions of Tristram Shandy, Gentleman, and A Sentimental Journey Through France and Italy* (Volume 1)

Book IV (p. 228)

Macmillan & Company Ltd. London, England. 1900

**Stevenson, Robert Louis** 1850–94

Scottish essayist and poet

Here he comes, big with statistics...

*The Complete Poems of Robert Louis Stevenson*

Troubled and sharp about fac's, LXVI

Charles Scribner's Sons. New York, New York, USA. 1923

**Stigler, Stephen M.** 1941–

American historian and statistician

...elementary statistics texts tell us that the method of least squares was first discovered about 1805. Whether it had one or two or more discoverers can be argued; still the method dates from no later than 1805. We also read that Sir Francis Galton discovered regression about 1885, in studies of heredity. Already we have a puzzle — a modern course in regression analysis is concerned almost entirely with the method of least squares and its variations. How could the core of such a course date from both 1805 and 1885? Is there more than one way a sum of squared deviations can be made small?

*The History of Statistics*

Introduction (p. 2)

Harvard University Press. Cambridge, Massachusetts, USA. 1986

**Stout, Rex** 1886–1975

American writer

There are two kinds of statistics, the kind you look up and the kind you make up.

*Death of a Doxy* (p. 90)

Bantam Book. New York, New York, USA. 1967

Statistics show that seventy-four per cent of wives open letters, with or without a teakettle.

*Death of a Doxy* (p. 120)

Bantam Book. New York, New York, USA. 1967

**Strunsky, Simeon** 1879–1948

American essayist

Statistics are the heart of democracy.

*Topics of The Times*, November 30, 1944

**Tchekhov, Anton** 1860–1904

Russian writer

Everything is quiet, peaceful and against it all is only the silent protest of statistics...

*Tchekhov's Plays and Stories*

Gooseberries

J.M. Dent & Sons Limited. London, England. 1958

### The Editors

To some people, statistics is “quartered pies, cute little battleships and tapering rows of sturdy soldiers in diversified uniforms.” To others, it is columns and columns of numerical facts. Many regard it as a branch of economics. The beginning student of the subject considers it to be largely mathematics.

Statistics, the Physical Sciences and Engineering

*The American Statistician*, Volume 11, Number 4, August 1948

### Thoreau, Henry David 1817–62

American essayist, poet, and practical philosopher

But lo! men have become the tools of their tools.

*The Writings of Henry David Thoreau* (Volume 2)

Walden

Chapter I (p. 61)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

### Thorn, John 1947–

Sports historian

While he is racing to the hole, the shortstop is figuring: Based on the speed of the runners and how hard the ball is hit, he probably has no chance of a double play; he may have a little chance of a play at second; and he almost certainly has no play at first. He throws to third because the distance from the hole to the bag is short, his calculation of the various probabilities led him to conclude that this was his “percentage play.” Now not so much as a glimmer of any number entered the shortstop’s head in this time, yet he was thinking statistically.

*The Hidden Game of Baseball: A Revolutionary Approach to Baseball and Its Statistics* (p. 5)

Doubleday & Company Inc. Garden City, New York, USA. 1984

### Thurstone, Louis Leon 1887–1955

American psychologist and psychometrician

Factor analysis is useful especially in those domains where basic and fruitful concepts are essentially lacking and where crucial experiments have been difficult to conceive. ... They enable us to make only the crudest first map of a new domain. But if we have scientific intuition and sufficient ingenuity, the rough factorial map of a new domain will enable us to proceed beyond the factorial stage to the more direct form of psychological exploration in the laboratory.

Current Issues in Factor Analysis

*Psychological Bulletin*, Volume 37, April 1940 (p. 189)

It is not wise for a statistician who knows factor analysis to attempt problems in a science which he has not himself mastered.

Current Issues in Factor Analysis

*Psychological Bulletin*, Volume 37, April 1940 (p. 235)

### Trollope, Anthony 1815–82

English novelist

We have no statistics to tell us whether there be any such disproportion in class where men do not die early from overwork.

*The Eustace Diamond* (Volume 1)

Chapter XXIV (p. 223)

Oxford University Press, Inc. London, England. 1973

As one of the legislators of the country I am prepared to state that statistics are always false.

*The Eustace Diamond* (Volume 1)

Chapter XXIV (p. 223)

Oxford University Press, Inc. London, England. 1973

### Tukey, John W. 1915–2000

American statistician

A sort of question that is inevitable is: “someone taught my students exploratory, and now (boo hoo) they want me to tell them how to assess significance or confidence for all these unusual functions of the data. (Oh, what can we do?)” To this there is an easy answer: TEACH them the JACKKNIFE.

*The American Statistician*, Volume 34, Number 1, February 1980 (p. 25)

### Twain, Mark (Samuel Langhorne

Clemens) 1835–1910

American author and humorist

Personally, I never care for fiction or story-books. What I like to read about are facts and statistics of any kind.

In Rudyard Kipling

*From Sea to Sea*

An Interview with Mark Twain

Macmillan & Company Ltd. London, England. 1900

Sometimes, half a dozen figures will reveal, as with a lighting-flash, the importance of a subject which ten thousand labored words with the same purpose in view, had left at last but dim and uncertain.

*Life on the Mississippi*

Chapter XXVIII (p. 241)

Harper & Row, Publishers. New York, New York, USA. 1951

July 4. Statistics show that we lose more fools on this day than in all the other days of the year put together.

*Pudd'nhead Wilson*

Chapter XVII (p. 164)

Harper & Brothers Publishers. New York, New York, USA. 1904

I was deducing from the above that I have been slowing down steadily in these thirty-six years, but I perceive that my statistics have a defect: 3,000 words in the spring of 1868, when I was working seven or eight or nine hours at a sitting, has little or no advantage over the sitting of today, covering half the time and producing

half the output. Figures often beguile me, particularly when I have the arranging of them myself; in which case the remark attributed to Disraeli would often apply with justice and force:

“There are three kinds of lies: lies, damned lies, and statistics.”

In Albert Bigelow Paine (ed.)

*Mark Twain's Autobiography* (Volume 1)

Chapters Added in Florence (p. 246)

Harper & Brothers Publishers. New York, New York, USA. 1924

**van der Post, Laurens** 1906–96

Afrikaner author

Thinking has its place...but, only when one is confronted with known facts and statistics. When you're in the unknown and the dark...you surrender your thinking in trust to the feelings that come to you out of the bush.

*A Far-Off Place*

Chapter 9 (p. 183)

The Hogarth Press. London, England. 1974

**von Mises, Richard** 1883–1953

Austrian-born American mathematician

The problems of statistical physics are of the greatest in our time, since they lead to a revolutionary change in our whole conception of the universe.

*Probability, Statistics, and Truth*

Sixth Lecture (p. 219)

Dover Publications, Inc. New York, New York, USA. 1981

**Walcott, Derek** 1930–

West Indian dramatist and poet

Statistics justify and scholars seize

The salients of colonial policy.

*Collected Poems*

A Far Cry from Africa, l. 7–8

Farrar, Straus & Giroux. New York, New York, USA. 1986

**Walker, Marshall John**

American physicist

Statistics provides a quantitative example of the scientific process usually described qualitatively by saying that scientists observe nature, study the measurements, postulate models to predict new measurements, and validate the model by the success of prediction.

*The Nature of Scientific Thought*

Chapter IV (p. 46)

Prentice-Hall, Inc., Englewood Cliffs, New Jersey, USA. 1963

Mathematical statistics provides an exceptionally clear example of the relationship between mathematics and the external world. The external world provides the experimentally measured distribution curve; mathematics provides the equation (the mathematical model) that corresponds to the empirical curve. The statistician may be guided by a thought experiment in finding the corresponding equation.

*The Nature of Scientific Thought*

Chapter IV (p. 50)

Prentice-Hall, Inc., Englewood Cliffs, New Jersey, USA. 1963

**Wang, Chamont** 1949–

American statistician

Statistics has been called a science. It is said to connect its facts by a chain of causation: if it did so, it would be a science, though even then not a distinct and separate science. But the observations of astronomy may be called the science of astronomy as properly as statistics may be denominated a science. No mere record and arrangement of facts can constitute a science.

Transactions of the Statistical Society of London, Art II

*Westminster Review*, Volume I, Part I, 1838 (p. 69)

As a matter of fact, the whole notion of “statistical inference” often is more of a plague and less of a blessing to research workers.

*Sense and Nonsense of Statistical Inference: Controversy, Misuse, and Subtlety*

Chapter 2 (p. 29)

Marcel Dekker. New York, New York, USA. 1993

But statistics is not a science, and cannot be one. Studied as the statistical council have decreed statistics shall be studied, no department of human knowledge ever could become a science — a collection of theories — because they have put their veto on theorizing. But statistics is not even a department of human knowledge; it is merely a form of knowledge — a mode of arranging and stating facts which belong to various sciences.

Transactions of the Statistical Society of London, Art II

*Westminster Review*, Volume I, Part I, 1838 (p. 70)

**Waugh, Evelyn** 1903–66

English author of satirical novels

O god thou has appointed three score years and ten as man's allotted span but O god statistics go to prove that comparatively few ever attain that age...

In Mark Amory

*The Letters of Evelyn Waugh*

Letter to Laura Herbert, dated October 1935 (p. 99)

Weidenfeld & Nicolson. London, England. 1980

**Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian and sociologist

Satan delights equally in statistics and in quoting scripture.

*The Undying Fire*

Chapter the First Section 3 (p. 9)

The Macmillan Company. New York, New York, USA. 1919

Statistical thinking will one day be as necessary for efficient citizenship as the ability to read and write.

In Warren Weaver

Statistics

*Scientific American*, Volume 186, Number 1, January 1952 (p. 60)

**White, William Frank** 1872–1952

No biographical data available

Just as data gathered by an incompetent observer are worthless — or by a biased observer, unless the bias can be measured and eliminated from the result — so also conclusions obtained from even the best data by one unacquainted with the principles of statistics must be of doubtful value.

*A Scrap-Book of Elementary Mathematics: Notes, Recreations, Essays*  
The Mathematical Treatment of Statistics (p. 156)  
The Open Court Publishing Company. La Salle, Illinois, USA. 1942

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

There is a curious misconception that somehow the mathematical mysteries of Statistics help Positivism to evade its proper limitation to the observed past. But statistics tell you nothing about the future unless you make the assumption of the permanence of statistical form. For example, in order to use statistics for prediction, assumptions are wanted as to the stability of the mean, the mode, the probable error, and the symmetry or skewness of the statistical expression of functional correlation.

*Adventures of Ideas*  
Chapter VIII (p. 161)  
The Macmillan Company. New York, New York, USA. 1956

**Wigner, Eugene Paul** 1902–95

Hungarian-born American physicist

With classical thermodynamics, one can calculate almost everything crudely; with kinetic theory, one can calculate fewer things, but more accurately; and with statistical mechanics, one can calculate almost nothing exactly.

In Edward B. Stuart, Benjamin Gal-Or, and Alan J. Brainard (eds.)  
*A Critical Review of Thermodynamics* (p. 205)  
Publisher undetermined

**Wilson, Edwin B.** 1879–1964

American statistician

Figures may not lie, but statistics compiled unscientifically and analyzed incompetently are almost sure to be misleading, and when this condition is unnecessarily chronic the so-called statisticians may be called liars.

*Bulletin of the American Mathematical Society*, Volume 18, 1912

**Wolfowitz, J.** 1910–

No biographical data available

Except perhaps for a few of the deepest theorems, and perhaps not even these, most of the theorems of statistics would not survive in mathematics if the subject of statistics itself were to die out. In order to survive the subject must be more responsive to the needs of application.

In R.C. Bose and others (eds.)  
*Essays In Probability and Statistics* (p. 748)  
University of North Carolina Press. Chapel Hill, North Carolina, USA. 1970

**Wonnacott, Ronald J.**

“Those Platonists are a curse.” he said,  
“God’s fire upon the wan,  
A diagram hung there instead,  
More women born than men.”

*The Collected Poems of W.B. Yeats*  
Statistics  
The Macmillan Company. New York, New York, USA. 1940

**Yates, Frances** 1899–1981

English historian

It is very easy to devise different tests which, on the average, have similar properties, ...they behave satisfactorily when the null hypothesis is true and have approximately the same power of detecting departures from that hypothesis. Two such tests may, however, give very different results when applied to a given set of data. The situation leads to a good deal of contention amongst statisticians and much discredit of the science of statistics. The appalling position can easily arise in which one can get any answer one wants if only one goes around to a large enough number of statisticians.

Discussion on the Paper by Dr. Box and Dr. Andersen  
*Journal of the Royal Statistical Society*, Series B, Volume 17, 1955 (p. 31)

**STATISTICS AND MEDICINE**

**Bernard, Claude** 1813–78

French physiologist

[S]tatistics...are given a great role in medicine, and they therefore raise a medical question which we should examine here. The first requirement in using statistics is that the facts treated shall be reduced to comparable units. Now this is very often not the case in medicine. Everyone familiar with hospitals knows what errors may mark the definitions on which statistics are based. The names of diseases are very often given are haphazard, either because the diagnosis is obscure, or because the cause of death is carelessly recorded by a student who has not seen the patient, or by an employee unfamiliar with medicine. For this reason pathological statistics can be valid only when compiled from data collected by the statistician himself.

Translated by Henry Copley Greene  
*An Introduction to the Study of Experimental Medicine*  
Part Two, Chapter II, Section ix (p. 136)  
Henry Schuman, Inc. New York, New York, USA. 1927

...the goal of scientific physicians...is to reduce the indeterminate. Statistics therefore apply only to cases in which the cause of the facts observed is still indeterminate.

Translated by Henry Copley Greene  
*An Introduction to the Study of Experimental Medicine*  
Part Two, Chapter II, Section IX (p. 139)  
Henry Schuman, Inc. New York, New York, USA. 1927

When a physician is called to a patient, he should decide on the diagnosis, then the prognosis, and then the treatment. . . . Physicians must know the evolution of the disease, its duration and gravity in order to predict its course and outcome. Here statistics intervene to guide physicians, by teaching them the proportion of mortal cases; and if observation has also shown that the successful and unsuccessful cases can be recognized by certain signs, then the prognosis is more certain.

Translated by Henry Copley Greene

*An Introduction to the Study of Experimental Medicine*

Part Three, Chapter IV, Section III (p. 213)

Henry Schuman, Inc. New York, New York, USA. 1927

**Blane, Gilbert Sir** 1749–1834

Scottish physician

There is...a great difficulty attending all practical inquiries in medicine; for in order to ascertain truth, in a manner that is satisfactory to a mind habituated to chaste investigation, there must be a series of patient and attentive observations upon a great number of cases, and the different trials must be varied, weighed, and compared, in order to form a proper estimate of the real efficacy of different remedies and modes of treatment.

*Observations on the Diseases Incident to Seamen* (p. ix)

Joseph Cooper. London, England. 1785

**Fenger, Carl Emil** 1814–84

Danish physician and politician

The use of the numerical method in medicine is not essentially new. From the time of Hippocrates to our day any doctor would say that this symptom is rare in a particular disease, but that one common; that this cause is more common than that one; that this treatment cures more patients than that one. All these expressions rare, common, more, etc. are indeterminate numerical expressions and presuppose a count, be it methodical or not.

Om den numeriske metode

*Ugeskr Laeger*, Volume 1, 1839

**Salsburg, David S.**

No biographical data available

After 17 years of interacting with physicians, I have come to realize that many of them are adherents of a religion they call Statistics. Statistics refers to the seeking out and interpretation of p values. Like any good religion, it involves vague mysteries capable of contradictory and irrational interpretation. It has a priesthood and a class of mendicant friars. And it provides Salvation: Proper invocation of the religious dogmas of Statistics will result in publication in prestigious journals.

The Religion of Statistics as Practiced in Medical Journals

*The American Statistician*, Volume 39, Number 3, August 1985 (p. 220)

**STATISTICS AND SOCIETY**

**Boorstin, Daniel J.** 1914–2004

American historian

The science of statistics is the chief instrumentality through which the progress of civilization is now measured and by which its development hereafter will be largely controlled.

*The Decline of Radicalism*

Chapter I (p. 8)

Random House, Inc. New York, New York, USA. 1969

**Coats, R. H.**

Beginning softly, statistics has long been handmaid to these exact sciences, apprenticed in the scullery, but now risen housekeeper, eating with the family.

Science and Society

*Journal of the American Statistical Association*, Volume 34, Number 205, March 1939 (p. 3)

**Devons, Ely** 1913–67

English economist

What more tempting facade of rationality than the portrayal of some statistics that seem to point to policy in one direction rather than another?

*Essays in Economics*

Chapter 7 (p. 134)

Greenwood Press, Publishers, Westport, Connecticut, USA. 1961

No Chancellor of the Exchequer could introduce his proposals for monetary and fiscal policy in the House of Commons by saying “I have looked at all the forecasts, some go one way, some another; so I decided to toss a coin and assume inflationary tendencies if it came down heads and deflationary if it came down tails....” And statistics, however uncertain, can apparently provide some basis.

*Essays in Economics*

Chapter 7 (p. 134)

Greenwood Press, Publishers, Westport, Connecticut, USA. 1961

...there seems to be striking similarities between the role of economic statistics in our society and some of the functions which magic and divination play in primitive society.

*Essays in Economics*

Chapter 7 (p. 135)

Greenwood Press, Publishers, Westport, Connecticut, USA. 1961

Doubleday, Page & Company. Garden City, New York, USA. 1917

## STETHOSCOPE

**Byford, W. H.** 1817–90  
No biographical data available

The flexible stethoscope is a very handy instrument to relieve us from a fatiguing and not very delicate posture.

Advantages of the Prone Position in Examining the Foetal Circulation as a Diagnostic Sign of Pregnancy  
*Chicago Medical Journal*, Volume 15, 1858

**Laennec, René-Théophile-Hyacinthe** 1781–1826  
French physician

I had not imagined it would be necessary to give a name to such a simple device, but others thought differently. If one wants to give it a name, the most suitable would be “stethoscope.”

*Traité de l'Auscultation Médiate*  
Volume 1 (p. 11)  
J.A. Brosson & J.S. Chaude. Paris, France. 1819

**Stokes W.**  
No biographical data available

The stethoscope is an instrument, not, as some represent it, the bagatelle of a day, the brain-born fancy of some speculative enthusiast, the use of which, like the universal medicine of animal magnetism, will be soon forgotten, or remembered only to be ridiculed. It is one of those rich and splendid gifts which Science now and then bestows upon her most favored votaries, which, while they extended our views and open to us wide and fruitful fields of inquiry, confer in the meantime the richest benefits and blessings on mankind.

*An Introduction to the Use of the Stethoscope*  
Machlachlan & Stewart. Edinburgh, Scotland. 1825

## STOMACH

**Athenaeus** ca. 200  
Greek writer

Every investigation which is guided by principles of Nature fixes its ultimate aim entirely on gratifying the Stomach.

*The Deipnosophists*  
VII

## STONE

**Linnaeus, Carl (von Linné)** 1707–78  
Swedish botanist and explorer

My mind reels when, on this height, I look down on the long ages that have flowed by like waves in the sound and have left traces of the ancient world, traces so nearly obscured that they can only whisper now that everything else has been silenced.

In A.G. Nathorst  
*Annual Report of the Board of Regents of the Smithsonian Institution, 1908*  
Carl von Linné as a Geologist (p. 738)  
Government Printing Office. Washington, D.C. 1909

**Parkinson, Cornelia**  
No biographical data available

Was it a flash of divine insight, or the slower process of observation and deduction, that led human beings to perceive [an] esoteric quality in stones? They saw beauty in the sunrise; but the sun became blinding by midday. There was color in leaves and flowers, until they withered. Water sparkled, but it could not be worn for long. Of all the natural wonders of the earth, only the stones endured. They must indeed be magical; and those who possess magical things can sometimes put to work the magic in them.

*Gem Magic: The Wonder of Your Birthstone*  
Ballentine Books. New York, New York, USA. 1988

## STORM

**Conrad, Joseph** 1857–1924

Polish-born English novelist

An earthquake, a landslide, an avalanche, overtake a man incidentally, as it were — without passion. A furious gale attacks him like a personal enemy, tries to grasp his limbs, fastens upon his mind, seeks to rout his very spirit out of him.

*Typhoon*  
Chapter X (p. 77)  
Doubleday, Page & Company. Garden City, New York, USA. 1920

**Muir, John** 1838–1914

American naturalist

Even the storms are friendly and seem to regard you as a brother, their beauty and tremendous fateful earnestness charming alike.

*Our National Parks*  
Chapter IV (p. 99)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

## STRATIGRAPHY

**Brown, Hugh Auchincloss** 1878–1975

Electrical engineer

Each single layer of earth  
Tells a story that's all its own;  
The sands of the ancient beaches  
Have changed into strata of stone.

*Cataclysms of the Earth*  
The Earth Is a Great Stone Book (p. 275)  
Twayne Publishers. New York, New York, USA. 1967

**Chandler, Mary**

No biographical data available

The shatter'd Rocks and Strata seem to say,  
"Nature is old, and tends to her Decay":  
Yet, lovely in Decay and green in Age,  
Her Beauty lasts to her latest Stage.

In Robert Arnold Aubin  
*Topographical Poetry in XVIII Century England*

Chapter IV (p. 164)

The Modern Language Association of America. New York, New York, USA. 1936

**Savage, D. E.**

American paleontologist

The fossil-mammal worker accepts that many mammals, marine or nonmarine, contributed fossils which are admirable tools for paleontologic stratigraphy and geochronology, and especially for age-magnitude correlations from continent to continent.

In E. Kauffman and J.E. Hazel (eds.)  
*Concepts and Methods of Biostratigraphy*  
Aspects of Vertebrate Paleontological Stratigraphy and Geochronology  
Dowden, Hutchinson & Ross. Stroudsburg, Pennsylvania, USA. 1977

**Shaw, Alan**

No biographical data available

Preoccupation with the unattainable is a stultifying approach to any problem. Practical paleontology cannot be concerned with any of the fossils we cannot find. Geologically, we can only be interested in finding the total stratigraphic range through which a species is preserved. While the life and death of millions of unrepresented individuals is of theoretical interest, we cannot gain practically useful information from them.

*Time in Stratigraphy*  
Chapter 17 (p. 103)  
McGraw-Hill Book Company. New York, New York, USA. 1964

## STREAM

**Muir, John** 1838–1914

American naturalist

...silvery branches interlacing on a thousand mountains,  
singing their way home to the sea...

*Our National Parks*  
Chapter VIII (p. 241)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

...ungovernable energy, rushing down smooth inclines  
in wide foamy sheets fold over fold, springing up here  
and there in magnificent whirls, scattering crisp clashing  
spray for the sunbeams to iris, bursting with hoarse reverberating  
roar through ragged gorges and boulder dams,  
booming in falls, gliding, glancing with cool soothing,  
murmuring...

*Our National Parks*  
Chapter VIII (p. 242)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

## STREPTOMYCIN

**Waksman, Selman A.** 1888–1973

Ukrainian-born American biochemist

The highest scientific award and honor presented to me the day before yesterday gives me the opportunity to summarize briefly the discovery and utilization of streptomycin for disease control, notably in the treatment of tuberculosis, the “Great White Plague” of man.

*Nobel Lectures, Physiology or Medicine 1942–1962*

Nobel lecture for award received in 1952

Streptomycin: Background, Isolation, Properties, and Utilization (p. 370)

Elsevier Publishing Company. Amsterdam, Netherlands. 1964

## STRING THEORY

### Amati, Danielle

Italian physicist

String theory is twenty-first century physics that fell accidentally into the twentieth century.

*Attributed*

### Ferris, Timothy 1944–

American science writer

The odd thing about string theory was very odd indeed. It required that the universe have at least ten dimensions. As we live in a universe of only four dimensions, the theory postulated that the other dimensions...had collapsed into structures so tiny that we do not notice them.

*Coming of Age in the Milky Way*

Chapter 16 (p. 331)

William Morrow & Company, Inc. New York, New York, USA. 1988

## STRUCTURE

### Agassiz, Jean Louis Rodolphe 1807–73

Swiss-born American naturalist, geologist, and teacher

It is much more important for a naturalist to understand the structure of a few animals than to command the whole field of scientific nomenclature.

In Burt G. Wilder

Louis Agassiz, Teacher

*The Harvard Graduate's Magazine*, June, 1907

### Clark, R. B. 1923–

Zoologist

It is an indispensable principle that structure must be considered in relation to function; in isolation it is meaningless.

*Dynamics in Metazoan Evolution: The Origin of the Coelom and Segments*

Conclusion (p. 260)

Clarendon Press. Oxford, England. 1964

## STUDENT

### Kleiner, Israel 1948–

Ukrainian-born author

Can we not at least have a better appreciation of students' difficulties...having witnessed mathematicians of the first rank make mistakes, “prove” erroneous theorems, and often come to the right conclusions for insufficient or invalid reasons?

Thinking the Unthinkable: The Story of Complex Numbers (with a Moral)

*Mathematics Teacher*, October 1988

### Osler, Sir William 1849–1919

Canadian physician and professor of medicine

Learn to love the freedom of the student life, only too quickly to pass away; the absence of the coarser cares of after days, the joy in comradeship, the delight in new work, the happiness in knowing that you are making progress. Once only can you enjoy these pleasures.

*Aequanimitas, with Other Addresses to Medical Students, Nurses, and Practitioners of Medicine*

The Master-Word in Medicine (p. 362)

The Blakiston Company. Philadelphia, Pennsylvania, USA. 1932

## STUDY

### Agassiz, Jean Louis Rodolphe 1807–73

Swiss-born American naturalist, geologist, and teacher

Lay aside all conceit. Learn to read the book of nature for yourself. Those who have succeeded best have followed for years some slim thread which has once in a while broadened out and disclosed some treasure worth a life-long search.

In David Stair Jordan

*Popular Science Monthly*, Volume 40, 1891/92

### Bacon, Sir Francis 1561–1626

English lawyer, statesman, and essayist

Studies serve for delight, for ornament, and for ability.

In C.W. Eliot (ed.)

*The Harvard Classics*, Volume 3

Of Studies

P.F. Collier & Son. New York, New York, USA. 1909–10

### Einstein, Albert 1879–1955

German-born physicist

Never regard your study as a duty, but as the enviable opportunity to learn to know the liberating influence of beauty in the realm of the spirit for your own personal joy and to the profit of the community to which your later work belongs.

In Helen Dukas and Banesh Hoffman

*Albert Einstein: The Human Side: New Glimpses from His Archives* (p. 96)

Princeton University Press. Princeton, New Jersey, USA. 1979

### Platt, John R.

No biographical data available

We praise the “lifetime of study,” but in dozens of cases, in every field, what was needed was not a lifetime but

rather a few short months or weeks of analytical inductive inference. In any new area we should try, like Roentgen, to see how fast we can pass from the general survey to analytical inductive inference. We should try, like Pasteur, to see whether we can reach strong inferences that encyclopedism could not discern.

Strong Inference

*Science*, Volume 146, Number 3641, 16 October 1964 (p. 251)

**Rowland, Henry Augustus** 1848–1901

American physicist

The whole universe is before us to study. The greatest labor of the greatest minds has only given us a few pearls; and yet the limitless ocean, with its hidden depths filled with diamonds and precious stones, is before us. The problem of the universe is yet unsolved, and the mystery involved in one single atom yet eludes us. The field of research only opens wider and wider as we advance, and our minds are lost in wonder and astonishment at the grandeur and beauty unfolded before us.

*The Physical Papers of Henry Augustus Rowland*

A Plea for Pure Science (p. 613)

Johns Hopkins Press. Baltimore, Maryland, USA. 1902

**Skinner, B. F. (Burrhus Frederick)** 1904–90

American psychologist

When you run into something interesting, drop everything else and study it.

*Cumulative Record*

A Case History in Scientific Method (p. 81)

Appleton-Century-Crofts, Inc. New York, New York, USA. 1959

**Tsiolkovsky, Konstantin Eduardovich** 1857–1935

Russian research scientist

To place one's feet on the soil of asteroids, to lift a stone from the moon with your hand, to construct moving stations in ether space, to organize inhabited rings around Earth, moon and sun, to observe Mars at the distance of several tens of miles, to descend to its satellites or even to its own surface — what could be more insane! However, only at such a time when reactive devices are applied, will a great new era begin in astronomy: the era of more intensive study of the heavens.

In M.K. Tikhonravov (ed.)

*Works on Rocket Technology*

The Investigation of Universal Space by Means of Reactive Devices

(p. 95)

Publisher undetermined

**von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

The universe is a harmonious whole, each creature is but a note, a shade of a great harmony, which man must study in its entirety and greatness, lest each detail should remain a dead letter.

Letter to C.L. Knebel, November 17, 1784

## STUPIDITY

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

I am an Evolutionist, not a Multiplicationist. It seems rather stupid to keep doing the same thing over and over again.

*The Nature of the Physical World*

Chapter IV (p. 86)

The Macmillan Company. New York, New York, USA. 1930

**Einstein, Albert** 1879–1955

German-American physicist

Everyone has to sacrifice at the altar of stupidity from time to time, to please the Deity and the human race.

In Max Born

*The Born–Einstein Letters: Correspondence Between Albert Einstein and Max and Hedwig Born from 1916 to 1955*

Letter 219 September, 1920 (p. 35)

Walker & Company. New York, New York, USA. 1971

**Levi, Primo** 1919–87

Italian writer and chemist

To accuse another of having weak kidneys, lungs, or heart, is not a crime; on the contrary, saying he has a weak brain is a crime. To be considered stupid and to be told so is more painful than being called gluttonous, mendacious, violent, lascivious, lazy, cowardly: every weakness, every vice, has found its defenders, its rhetoric, its ennoblement and exaltation, but stupidity hasn't.

*Other People's Trades*

The Irritable Chess-Players

Summit Books. New York, New York, USA. 1989

## SUBSTANCE

**Jeans, Sir James Hopwood** 1877–1946

English physicist and mathematician

...we now know that there is, in principle, no permanence in substance; it is mere bottled energy, and possesses no more inherent permanence than bottled beer...

*Physics and Philosophy*

Chapter II (p. 41)

Dover Publications, Inc. New York, New York, USA. 1981

## SUBTERRANEAN

**Clarke, John**

No biographical data available

Beneath the earth likewise there are laws of nature, less familiar to us, but no less fixed. Be assured that there exists below everything that you see above. There, too, there are antres vast, immense recesses, and vacant spaces, with mountains overhanging on either hand.

There are yawning gulfs stretching down into the abyss, which have buried in their depths their mighty ruins. These retreats are filled with air, for nowhere is there a vacuum in nature; through their ample spaces stretch marshes over which darkness ever broods. Animals also are produced in them, but they are slow-paced and shapeless; the air that conceived them is dark and clammy, the waters are torpid through inaction.

*Physical Science in the Time of Nero, Being a Translation of the *Quaestiones Naturales* of Seneca*

Book III, Chapter XVI (pp. 128–129)

Macmillan & Company Ltd. London, England. 1910

**Cloos, Hans** 1885–1951

German geologist

A subterranean landscape is the ramified labyrinth of crevices and caves, of pores and seams, through which the trolls and earth-sprites climb up and down.

*Conversations with the Earth*

Chapter IV (p. 48)

Alfred A. Knopf. New York, New York, USA. 1953

**Deetz, James** 1930–2000

American archaeologist

Archaeology by its formal etymology, is the study of the old; and the old, more often than not, is buried. As a result, archaeologists have traditionally been concerned with the subterranean world. Like Lewis Carroll's Alice, they are confronted with the curious underground world, and attempt to understand and explain it.

In James Deetz (ed.)

*Man's Imprint from the Past: Readings in the Methods of Archaeology*

Chapter 1 (p. 4)

Little, Brown & Company. Boston, Massachusetts, USA. 1971

## SUN

**Adams, Douglas** 1952–2001

English author, comic radio dramatist, and musician

Several billion trillion tons of super hot exploding hydrogen nuclei rose slowly above the horizon and managed to look small, cold and slightly damp.

*The Ultimate Hitchhiker's Guide to the Galaxy*

Life, the Universe, and Everything

Chapter 7 (p. 349)

Ballantine Books. New York, New York, USA. 2002

**Allen, Woody** 1935–

American film director and actor

The sun, which is made of gas, can explode at any moment, sending our entire planetary system hurtling to destruction; students are advised what the average citizen can do in such a case.

*Getting Even*

Spring Bulletin (p. 58–59)

Random House, Inc. New York, New York, USA. 1971

**Bailey, Philip James** 1816–1902

English poet

The sun, bright keystone of Heaven's world-built arch...

*Festus: A Poem*

Scene 1 (p. 32)

George Routledge & Sons, Ltd. London, England. 1893

**Bourdillon, Francis William**

The night has a thousand eyes,

And the day but one;

Yet the light of the bright world dies,

With the dying Sun.

*Among the Flowers, and Other Poems*

The Night Has a Thousand Eyes

Marcus Ward & Company. London, England. 1878

**Bradley, Jr., John Hodgdon** 1898–1962

American geologist

Since a time so remote that imagination falters in the attempt to conceive it, the sun has mothered her brood of planets.

*Autobiography of Earth*

Chapter V (p. 133)

Coward-McCann, Inc. New York, New York, USA. 1935

**Cook, J. Gordon** 1916–

No biographical data available

The darkness of night is dissolving in light that flows steadily across the sky. Over the eastern horizon a curved shoulder of fire appears; our sun has arrived, bringing with it another day of glorious light.

*We Live by the Sun*

Chapter 2 (p. 18)

The Dial Press. New York, New York, USA. 1957

**Copernicus, Nicolaus** 1473–1543

Polish astronomer

Since the newness of the hypotheses of this work — which sets the earth in motion and puts an immovable sun at the centre of the universe — has already received a great deal of publicity, I have no doubt that certain of the savants have taken grave offense and think it wrong to raise any disturbance among liberal disciplines which have had the right set-up for a long time now.

In *Great Books of the Western World* (Volume 16)

*On the Revolutions of the Heavenly Spheres*

Introduction, to the Reader Concerning the Hypothesis of this Work (p. 505)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

In the center of all rests the sun. For who would place this lamp of a very beautiful temple in another or better place than this wherefrom it can illuminate everything at the same time? As a matter of fact, not unhappily do some call it the lantern; others, the mind and still others, the

pilot of the world. Trismegistus calls it a “visible god”; Sophocles’ Electra, “that which gazes upon all things.” And so the sun, as if resting on a kingly throne, governs the family of stars which wheel around.

In *Great Books of the Western World* (Volume 16)  
*On the Revolutions of the Heavenly Spheres*  
Book One, Chapter 10 (pp. 526–528)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Fragment 228 (p. 202)

At the University Press. Cambridge, England. 1963

**Kelvin, Lord William Thomson** 1824–1907  
Scottish engineer, mathematician, and physicist

Now, if the sun is not created a miraculous body, to shine on and give out heat forever, we must suppose it to be a body subject to the laws of matter (I do not say there may not be laws which we have not discovered) but, at all events, not violating any laws we have discovered or believe we have discovered. We should deal with the sun as we should with any large mass of molten iron, or silicon, or sodium.

*On Geological Time* (p. 18)

Address

Geological Society of Glasgoe

February 27, 1868

It seems, therefore, on the whole most probable that the sun has not illuminated the earth for 100,000,000 years, and almost certain that he has not done so for 500,000,000 years. As for the future, we may say, with equal certainty, that inhabitants of the earth can not continue to enjoy the light and heat essential to their life for many million years longer unless sources now unknown to us are prepared in the great storehouse of creation.

The Age of the Sun's Heat

*Macmillan's Magazine*, March 5, 1862 (p. 293)

**Langley, Samuel Pierpont** 1834–1906  
American astronomer and aviation pioneer

As the thought of man is widened with the process of the suns, let us hope that we shall one day know more.

The New Astronomy

*The Century Illustrated Monthly Magazine*, Volume 28, New Series

Volume 6 (p. 936)

...the fields glitter with snow-crystals in the winter noon, and the eye is dazzled with a reflection of the splendor which the sun pours so fully into every nook that by it alone we appear to see everything.

The New Astronomy

*The Century Illustrated Monthly Magazine*, Volume 28, New Series, Volume 6 (p. 922)

**Longfellow, Henry Wadsworth** 1807–82  
American poet

Down sank the great red sun, and in golden glimmering vapours

Veiled the light of his face, like the Prophet descending from Sinai.

*The Poetical Works of Henry Wadsworth Longfellow*

Evangeline, Part I, Section 4

Houghton Mifflin Company. Boston, Massachusetts, USA. 1883

**Macpherson, James** 1736–1796  
Scottish poet

Whence are thy beams, O sun! thy everlasting light! Thou comest forth in thy awful beauty; the stars hide themselves in the sky; the moon, cold and pale, sinks in the western wave; but thou thyself movest alone.

*The Poems of Ossian*

Carthon (p. 233)

The riddles the sun presents are signposts to new horizons.

The Sun  
*Scientific American*, Volume 233, Number 3, September 1975 (p. 50)

**Pascal, Blaise** 1623–62  
French mathematician and physicist

Let man then contemplate the whole of nature in her full and grand majesty, and turn his vision from the low objects which surround him. Let him gaze on that brilliant light, set like an eternal lamp to illumine the universe.

In *Great Books of the Western World* (Volume 33)  
*Pensées*  
Section II, 72  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Plato** 428 BCE–347 BCE  
Greek philosopher

That there might be some visible measure of their relative swiftness and slowness as they proceeded in their eight courses, God lighted a fire, which we now call the sun, in the second from the earth of these orbits...

In *Great Books of the Western World* (Volume 7)  
*Timaeus*  
Section 39 (p. 451)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Raymo, Chet** 1936–  
American physicist and science writer

For 5 billion years the sun has exhaled a faint breath as it burns, bathing the Earth in the flux of its exhalations, a wind of atoms and subatomic particles that feeds the Earth's atmosphere and ignites auroras.

*The Soul of the Night*  
Chapter 8 (p. 81)  
Prentice-Hall, Inc. Englewood Cliffs, New Jersey, USA. 1985

**Riley, James Whitcomb** 1849–1916  
American poet

And the sun had on a crown  
Wrought of gilded thistle-down,  
And a scarf of velvet vapor  
And a raveled rainbow gown;  
And his tinsel-tangled hair  
Tossed and lost upon the air  
Was glossier and flossier  
Than any anywhere.

*The Complete Works of James Whitcomb Riley in Ten Volumes* (Volume 4)  
The South Wind and the Sun  
Harper & Brothers Publishers. New York, New York, USA. 1916

**Rutherford, Mark (William Hale White)** 1831–1913  
English writer

The sun, we say, is the cause of heat, but the heat is the sun, hence on this window-ledge.

*More Pages from a Journal*  
Notes (p. 120)  
H. Frowde. London, England. 1910

**Sagan, Carl** 1934–96  
American astronomer and science writer

**Druyan, Ann** 1949–  
American author and television producer

The immense, overpowering blackness is relieved here and there by a faint point of light — which, upon closer approach, is revealed to be a mighty sun, blazing with thermonuclear fire and warming a small surrounding volume of space.

*Shadows of Forgotten Ancestors: A Search for Who We Are*  
Prologue (p. 3)  
Random House, Inc. New York, New York, USA. 1992

**Shakespeare, William** 1564–1616  
English poet, playwright, and actor

...the glorious sun,  
Stays in his course and plays the alchemist,  
Turning with splendor of his precious eye  
The meagre cloddy earth to glittering gold.

In *Great Books of the Western World* (Volume 27)  
*The Plays and Sonnets of William Shakespeare* (Volume 2)  
The Twelfth Night  
Act V, Scene i, l. 77–80  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Smart, Christopher** 1722–71  
English poet

Glorious the sun in mid-career;  
Glorious th' assembled fires appear.

*Collected Poems*

A Song to David, LXXXIV

Routledge & Kegan Paul. London, England. 1949

It has always been easier to record and describe solar events than to provide theoretical explanations for them.

The Circulation of the Sun's Atmosphere

*Scientific American*, Volume 218, Number 1, January 1968 (p. 100)

**Stoppard, Tom** 1937–

Czech-born English playwright

Meeting a friend in a corridor, Wittgenstein said: "Tell me, why do people always say it was natural for men to assume that the sun went round the earth, rather than that the earth was rotating?" His friend said, "Well, obviously, because it looks as if the sun is going round the earth." To which the philosopher replied, "Well, what would it have looked like if it had looked as if the earth was rotating?"

*Jumpers*

Act Two (p. 65)

Grove Press, Inc. New York, New York, USA. 1972

**Swift, Jonathan** 1667–1745

Irish-born English writer

These people [Laputians] are under continual disquietudes, never enjoying a minute's peace of mind; and their disturbances proceed from causes which very little affect the rest of mortals. Their apprehension arises from several changes they dread in the celestial bodies. For instance...that the sun, daily spending its rays without any nutriment to supply them, will at last be wholly consumed and annihilated; which must be attended with the destruction of this earth, and all the planets that receive their light from it.

In *Great Books of the Western World* (Volume 36)

*Gulliver's Travels*

Part III, Chapter II (p. 98)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

## SUNSPOT

**Birrell, Augustine** 1850–1933

English author and politician

The sun is not all spots.

*Obiter Dicta*

Second Series

John Milton

Elliot Stock. London, England. 1884

**Galilei, Galileo** 1564–1642  
Italian physicist and astronomer

Neither the satellites of Jupiter nor any other stars are spots or shadows, nor are the sunspots stars. It is indeed true that I am quibbling over names, while I know that anyone may impose them to suit himself. So long as a man does not think that by names he can confer inherent and essential properties on things, it would make little difference whether he calls these “stars.”

Translated by Stillman Drake

*Discoveries and Opinions of Galileo*

Letters on Sunspots, Third Letter on Sunspots, From Galileo Galilei to Mark Welsler (p. 139)

Doubleday & Company, Inc. New York, New York, USA. 1957

**Harris, John** 1667?–1719  
No biographical data available

Spots! Said she, What, are there Spots in the Sun, which sometimes appear there, and sometimes not; for God’s sake what are those Spots?

*Astronomical Dialogues Between a Gentleman and a Lady* (p. 74)

Printed by T. Wood for Benj. Cowse. London, England. 1719

**Zirin, Harold**  
Astrophysicist

Just like the green fields and virgin forests, the granules, the sunspots, the elegant prominences reflect the pure beauty of nature. They offer aesthetic pleasure, as well as scientific challenge, to those who study them.

*Astrophysics of the Sun*

Preface (p. ix)

Cambridge University Press. Cambridge, England. 1988

## SUPERNOVA

**Crowley, Abraham** 1618–67  
English poet

So when by various Turns of the Celestial Dance,  
In many thousand years,

A Star, so long unknown, appears,

Though Heaven it self more beauteous by it grow,

It troubles and alarms the World below,

Does to the Wise a Star, to Fools a Meteor show.

In Thomas Sprat

*The History of the Royal-Society of London for Improving of Natural Knowledge*

To the Royal Society

Printed for A. Millar. London, England. 1756–1757

**Schaaf, Fred**  
No biographical data available

...a star gone to seed — a star spectacularly sowing space with heavy elements and the promise of new stars, worlds, life, and eyes.

*The Starry Room: Naked Eye Astronomy in the Intimate Universe*

Chapter 11 (p. 194)

John Wiley & Sons, Inc. New York, New York, USA. 1988

**Woosley, Stan**  
No biographical data available

**Weaver, Tom**

No biographical data available

The collapse and explosion of a massive star is one of nature’s grandest spectacles. For sheer power nothing can match it. During the supernova’s first 10 seconds...it radiates as much energy from a central region 20 miles across as all the other stars and galaxies in the rest of the visible universe combined.... It is a feat that stretches even the well-stretched minds of astronomers.

The Great Supernova of 1987

*Scientific American*, Volume 261, Number 2, August 1989 (p. 32)

## SUPERSTITION

**Gell-Mann, Murray** 1929–  
American physicist

Unscientific approaches to the construction of models of the world around us have characterized much of human thinking since the time immemorial, and they are still widespread. Take, for example, the version of sympathetic magic based on the idea that similar things must be connected. It seems natural to many people around the world that, when in need of rain, they should perform a ceremony in which water is procured and poured on the ground.

*The Quark and the Jaguar: Adventures In the Simple and the Complex* (p. 89)

W.H. Freeman & Company. New York, New York, USA. 1994

**Laplace, Pierre Simon** 1749–1827  
French mathematician, astronomer, and physicist

...the beauty of the universe and the order of celestial things force us to recognize some superior nature which ought to be remarked and admired by the human race. But as far as it is proper to propagate religion, which is joined to the knowledge of nature, so far it is necessary to work toward the extirpation of superstition, for it torments one, importunes one, and pursues one continually and in all places.

*A Philosophical Essays on Probabilities*

Chapter XVI (p. 174)

Dover Publications, Inc. New York, New York, USA. 1951

**Van Sloan, Edward** 1882–1964  
American actor

Superstition? Who can define the boundary line between the superstition of yesterday and the scientific fact of tomorrow?

*Dracula’s Daughter*

Film (1936)

## SUPERSTRING

**Dyson, Freeman J.** 1923–  
American physicist and educator

Superstrings and butterflies are examples illustrating two different aspects of the universe and two different notions of beauty. Superstrings come at the beginning and butterflies at the end because they are extreme examples. Butterflies are at the extreme of concreteness, superstrings at the extreme of abstraction. They mark the extreme limits of the territory over which science claims jurisdiction. Both are, in their different ways, beautiful. Both are, from a scientific point of view, poorly understood. Scientifically speaking, a butterfly is at least as mysterious as a superstring....

*Infinite in All Directions*

Part One, Chapter Two (p. 14)

HarperCollins Publisher, Inc. New York, New York, USA. 1988

## SUPPOSITION

**Stoney, George Johnstone** 1826–1911  
Irish physicist

A theory is a supposition which we hope to be true, a hypothesis is a supposition which we expect to be useful; fictions belong to the realm of art; if made to intrude elsewhere, they become either makebelieves or mistakes.

In Sir William Ramsay

*Essays Biographical and Chemical*

Chemical Essays

Radium and Its Products (p. 179)

Archibald Constable & Company Ltd. London, England. 1908

## SURFACE TENSION

**Roth, V. Louise**  
American zoologist

You may have inner tranquility, but you can't escape surface tension.

In Steven Vogel

*Life's Devices: The Physical World of Animal and Plants*

Chapter 5 (p. 82)

Princeton University Press. Princeton, New Jersey, USA. 1988

## SURGEON

### Author undetermined

A good surgeon must have an eagle's eye, a lion's heart, and a lady's hand.

In John Timbs

*Doctors and Patients, or, Anecdotes of the Medical World and*

*Curiosities of Medicine* (Volume 2) (p. 155)

Richard Bentley & Son. London, England. 1873

**Aylett, Robert** 1583–1655?  
Religious poet

For Mercy doth like skilfull Surgeon deal,  
That hath for ev'ry sore a remedy:

If gentle drawing plaisters cannot heal  
The wound, because it festreth inwardly,  
He sharper corrasives must then apply,  
And as he oft cuts off some member dead,  
Or rotten, lest the rest should putrifie,  
So Mercy wicked Members off doth shred,  
Lest they should noysome prove to body and the head.

*Peace with Her Four Gardners*

The Brides Ornaments, Meditation III, l. 307–315

### Caldwell, George W.

Who is the man in sterile white  
Delving deep at the point of light,  
With nurses, trained, at left and right?

*Poet Physician: An Anthology of Medical Poetry Written by Physicians*  
The Surgeon (p. 136)

C.C. Thomas. Springfield, Illinois, USA. 1945

**Carnochan, John Murray** 1817–87  
American surgeon

While respect for life will dictate to the surgeon the greatest prudence — will counsel him to attempt no operation which he would not be willing to perform on his own child — it will also teach him, that if the extremes of boldness are to be shunned, pusillanimity is not the necessary alternative.

*Contributions to Operative Surgery and Surgical Pathology*

Preface

Lindsay & Blakiston. Philadelphia, Pennsylvania, USA. 1857

**Celsus, Aulus Cornelius** fl. 14 AD  
Roman medical writer

A surgeon ought to be young, or at any rate, not very old; his hand should be firm and steady, and never shake; he should be able to use his left hand with as much dexterity as his right; his eye-sight should be acute and clear; his mind intrepid, and so far subject to pity as to make him desirous of the recovery of his patient, but not so far as to suffer himself to be moved by his cries; he should neither hurry the operation more than the case requires, nor cut less than is necessary, but do everything just as if the other's screams made no impression upon him.

In Samuel Evans Massengill

*A Sketch of Medicine and Pharmacy and a View of Its Progress by the*  
*Massengill Family from the Fifteenth to the Twentieth Century* (p. 30)

The S.E. Massengill Company. Bristol, Tennessee, USA. 1943

**Crichton-Browne, Sir James** 1840–1938  
English physician

“Oh, sir, we made a terrible mistake in the case of that man yesterday! We amputated the wrong leg!”

“Ah well,” the surgeon replied, complacently, “it’s of no consequence, for I have just been looking at the other leg, and it’s going to get better.”

*The Doctor’s After Thoughts* (p. 15)

E. Benn Ltd. London, England. 1932

Every great surgeon, it used to be said, shakes, swears or sweats when he operates.

*The Doctor Remembers*

Printed by M.S. for Lodowick Lloyd. London, England. 1657

**Cvikota, Raymond J.**

Surgeon: Fee lancer.

*Quote, the Weekly Digest*, June 9, 1968 (p. 457)

**da Costa, J. Chalmers** 1863–1933

American physician

A vain surgeon is like a milking stool; of no use except when sat upon.

*The Trials and Triumphs of the Surgeon* (p. 17)

Dorrance & Company. Philadelphia, Pennsylvania, USA. 1944

A surgeon is like a postage stamp. He is useless when stuck on himself.

*The Trials and Triumphs of the Surgeon* (p. 17)

Dorrance & Company. Philadelphia, Pennsylvania, USA. 1944

**Davies, Robertson** 1913–95

Canadian novelist

A man mentioned casually to me this afternoon that his brother was in a hospital, having his appendix removed. This operation is now undertaken without qualm; surgeons regard it as a pastime, something to keep the hands busy, like knitting or eating salted nuts.

*The Table Talk of Samuel Marchbanks* (p. 176)

Clarke, Irwin. Toronto, Ontario, Canada. 1949

**de Chauliac, Guy**

No biographical data available

The surgeon should be learned, skilled, ingenious, and of good morals. Be bold in things that are sure, cautious in dangers; avoid evil cures and practices; be gracious to the sick, obliging to his colleagues, wise in his predictions. Be chaste, sober, pitiful, and merciful; not covetous nor extortionate of money, but let the recompense be moderate, according to the work, the means of the sick, the character of the issue or event, and its dignity.

In Samuel Evans Massengill

*A Sketch of Medicine and Pharmacy and a View of Its Progress by the Massengill Family from the Fifteenth to the Twentieth Century* (p. 262)

The S. E. Massengill Company. Bristol, Tennessee, USA. 1943

**de Mondeville, Henri** 1260–1320

French pioneer surgeon

The surgeon should be fairly audacious [yet] he should operate with prudence and sagacity; he should never commence perilous operations unless he has provided everything in order to avoid danger; ...he should not sing his own praises; he should not cover his colleagues with blame; he should not cause envy among them; he should work always with the idea of acquiring a reputation of probity; he should be reassuring to his patients by kind words and acquiesce to their requests when nothing harmful will result from them as to their cure.

In C.G. Cumston

Henry de Mondeville, the Man and His Writings, with Translations of Several Chapters of His Works

*Buffalo Medical Journal*, Volume 42, 1903

A Surgeon ought to be fairly bold. He ought not to quarrel before the laity, and although he should operate wisely and prudently, he should never undertake any dangerous operation unless he is sure that it is the only way to avoid a greater danger. His limbs, and especially his hands, should be well shaped with long, delicate and supple fingers which must not be tremulous.

In John Arderne

*Treatise of Fistula in Ano* (pp. xx)

**Dickens, Charles** 1812–70

English novelist

What! don’t you know what a Sawbones is, Sir? inquired Mr. Weller. I thought everybody know’d as a Sawbones was a Surgeon.

*The Posthumous Papers of the Pickwick Club*

Chapter XXX (p. 348)

Dodd, Mead & Company. New York, New York, USA. 1944

**Dickinson, Emily** 1830–86

American lyric poet

Surgeons must be very careful

When they take the knife!

Underneath their fine incisions

Stirs the Culprit, — Life!

*The Complete Poems of Emily Dickinson*

No. 108 (p. 52)

Little, Brown & Company. Boston, Massachusetts, USA. 1960

**Dimmick, Edgar L.**

No biographical data available

The public views his *status regas*,  
In the profession he’s “The Eagle.”

With super-supple fingers slim

(Pus, blood, and guts don’t bother him),

Up to his elbows, filled with glee,  
 With snick and slice sadistically,  
 Into a jar, up on a shelf  
 He puts a fragment of yourself.  
 For him no diagnostic doubt —  
 He'll operate, and so find out.

The In-Side of Two

*Journal of the American Medical Association*, Volume 199, Number 6,  
 1967 (p. 274)

**Dunlop, William** 1766–1839

American dramatist and theatrical manager

There is hardly on the face of the earth a less enviable  
 situation than that of an Army Surgeon after a battle...

*Recollection of the American War, 1812–1814*

Chapter III (p. 54)

Historical Publishing Company. Toronto, Ontario, Canada. 1906

**Eliot, T. S. (Thomas Stearns)** 1888–1965

American expatriate poet and playwright

The wounded surgeon plies the steel  
 That questions the distempered part;  
 Beneath the bleeding hands we feel  
 The sharp compassion of the healer's art  
 Resolving the enigma of the fever chart.

*The Collected Poems and Plays 1909–1950*

East Coker, Part IV (p. 127)

Harcourt, Brace & World, Inc. New York, New York, USA. 1952

**Findley, Thomas**

Physician

The surgeon...is a man of action. He lives in an exhilarating world of knives, blood, and groans. His tempo is of necessity rapid. He is inclined to look at his less kinetic colleague with an air of puzzled condescension but may, in a relaxed moment, admit that the medical man is occasionally able to assist uncomfortable dowagers in the selection of a cathartic.

The Obligations of an Internist to a General Surgeon

**Gilbertus, Anglicus**

No biographical data available

Why in God's name is there such a great difference  
 between a physician and a surgeon?

Surgery

*Time*, May 3, 1963 (p. 44)

**Gogarty, Oliver St. John** 1878–1957

Irish author

Let Surgeon MacCardle confirm you in Hope.  
 A jockey fell off and his neck it was broke.  
 He lifted him up like a fine, honest man;  
 And he said "He is dead; but I'll do all I can."

*The Collected Poems of Oliver St. John Gogarty*

The Three (p. 109)

Constable. London, England. 1951

**Gross, S. D.** 1805–84

American emeritus professor of surgery

It is impossible for any man to be a great surgeon if he is destitute...of the finer feelings of our nature... I do not think that it is possible for a criminal to feel much worse the night before his execution than a surgeon when he knows that upon his skill and attention must depend the fate of a valuable citizen, husband, father, mother or child. Surgery under such circumstances is a terrible task master, feeding like a vulture upon a man's vitals.

*Autobiography of Samuel D. Gross, MD.* (p. 172)

George Barrie. Philadelphia, Pennsylvania, USA. 1887

**Hazlitt, William Carew** 1834–1913

English bibliographer

An ignorant drunken Surgeon that kil'd all men that came under his hands, boasted himself a better man than the Parson; for, said he, your Cure maintains but yourself, but my Cures maintaine all the Sextons in the Towne.

*Shakespeare Jest Books* (Volume 3)

Conceit, Clichés, Flashes and Whimzies, Number 163

Willis & Sotheran. London, England. 1864

**Helmuth, William Tod** 1833–1902

American physician

...doctors are the Devil's progeny,

While surgeons come directly down from God!

*Scratches of a Surgeon*

Surgery vs. Medicine (p. 66)

W.A. Chatterton & Company. Chicago, Illinois, USA. 1879

**Jones J.**

No biographical data available

It might...be of singular advantage to young surgeons, particularly before they begin an operation to go through every part of it attentively in their own minds to consider every possible accident which may happen and to have the proper remedies at hand in case they should; and in all operations of delicacy and difficulty to act with deliberation...

*Plain, concise, practical remarks on treatment of wounds and fractures; to which is added, a short appendix on camp and military hospitals; principally designed for the use of young military surgeons in North America* (pp. 39–40)

John Holt. New York, New York, USA. 1775

**Kafka, Franz** 1883–1924

German-language novelist

That is what people are like in my district. Always expecting the impossible from the doctor. They have lost their ancient beliefs; the parson sits at home and unravels his vestments, one for another; but the doctor is supposed to be omnipotent with his merciful surgeon's hands. Well, as it pleases them; I have not thrust my services on them...

*The Complete Stories*

A Country Doctor (p. 224)  
Schocken Books. New York, New York, USA. 1971

**Massinger, Philip** 1583–1640  
English dramatic poet

WELL.: Thou wert my surgeon; you must tell no tales;  
Those days are done.

I will pay you in private.

*A New Way to Pay Old Debts*  
Act IV, Scene II (p. 123)

**Ogilvie, Sir Heneage** 1887–1971  
English physician

A surgeon conducting a difficult case is like the skipper of an ocean-going racing yacht. He knows the port he must make, but he cannot foresee the course of the journey.

*A Surgeon's Life*  
*The Lancet*, Volume 255, July 3, 1948 (p. 1)

**Paretsky, Sara** 1947–  
American author

Heart surgeons do not have the world's smallest egos: when you ask them to name the world's three leading practitioners, they never can remember the names of the other two.

In Marilyn Wallace (ed.)  
*Sisters in Crime* (Volume 1)  
The Case of the Pietro Andromache II (p. 116)  
Berkley Books. New York, New York, USA. 1989

**Selzer, Richard** 1928–  
American physician and essayist

In the operating room the patient must be anaesthetized in order that he or she feel no pain. The surgeon too must be anaesthetized, insulated against the emotional heat of the event so that he can perform this act of laying open the body of a fellow human being, which, take away the purpose for which it is being done, is no more than an act of assault and battery. A barbaric act. So the surgeon dons a carapace which keeps him from feeling. It is what gives many surgeons the appearance of insensitivity.

Speech  
Humanities Symposium, Dalhousie University, 1991

**Shadwell, Thomas** 1642?–92  
English dramatist and poet

Oh this Surgeon! this damn'd Surgeon, will this Villainous Quack never come to me? Oh this Plaster on my Neck! It gnaws more than Aqua-Fortis: this abominable Rascle has mistaken sure, and given me the same Caustick he appli'd to my Shins, when they were open'd last.

*The Complete Works of Thomas Shadwell* (Volume 1)

The Fortune Press. London, England. 1927

**Twain, Mark (Samuel Langhorne Clemens)** 1835–1910  
American author and humorist

It is a gratification to me to know that I am ignorant of art, and ignorant also of surgery. Because people who understand art find nothing in pictures but blemishes, and surgeons and anatomists see no beautiful women in all their lives, but only a ghastly stack of bones with Latin names to them, and a network of nerves and muscles and tissues.

*Mark Twain's Travels with Mr. Brown*  
Academy of Design (p. 238)  
Alfred A. Knopf. New York, New York, USA. 1946

## SURGERY

**Clendening, Logan** 1884–1945  
No biographical data available

Surgery does the ideal thing — it separates the patient from his disease.

*Modern Methods of Treatment*  
Part I, Chapter I (p. 17)  
The C.V. Mosby Company. St. Louis, Missouri, USA. 1924

**Dennis, F. S.**  
No biographical data available

There is no science that calls for greater fearlessness, courage, and nerve than that of surgery, none that demands more of self-reliance, principle, independence and the determination in the man. These were the characteristics which were chiefly conspicuous in the early settlers of this country. And it is these old-time Puritan qualities, which descending to them in succeeding generations, have passed into surgeons of America, giving them boldness in their art, and enabling them to win that success in surgery, which now commands the admiration of the civilized world.

Address  
The History and Development of Surgery during the Past Century,  
International Congress of Arts and Sciences  
St. Louis, Missouri, September 1904

**Fenger, Carl Emil** 1814–84  
Danish physician and politician

We must naturally ask ourselves: Does suffering humanity gain anything by this operation? or, in other words, Does the operation enable us to save, or only to prolong life, and is it worth while for patients having uterine cancer to undergo this severe operation?

*The Total Extirpation of the Uterus Through the Vagina*  
*American Journal of Medical Science*, Volume 83, January 1883 (p. 45)

**Giles, Roscoe C.**

No biographical data available

It cannot be too often emphasized, however, that the post-operative treatment is as essential as the operation, and the surgeon is as much responsible for the post-operative treatment as for the operation.

Rickets, the Surgical Treatment of the Chronic Deformities of, with Emphasis on Bow-Legs and Knock-Knees  
*Journal of the National Medical Association*, Volume 14, 1922

**Helmuth, William Tod** 1833–1902

American physician

There is not one man in a hundred outside of the medical profession, and scarcely one man in ten in it, who understands and appreciates the marvels of modern surgery.

*Scratches of a Surgeon*  
Some of the Wonders of Modern Surgery (p. 42)  
W.A. Chatterton & Company. Chicago, Illinois, USA. 1879

**Hippocrates** 460 BCE–377 BCE

Greek physician

The prime object of the physician in the whole art of medicine should be to cure that which is diseased; and if this can be accomplished in various ways, the least troublesome should be selected; for this is more becoming a good man, and one well skilled in the art, who does not covet popular coin of base alloy.

In *Great Books of the Western World* (Volume 10)  
*Hippocratic Writings*  
On the Articulations, 78 (p. 119)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

The things relating to surgery, are — the patient; the operator; the assistants; the instruments; the light, where and how; how many things, and how; where the body, and the instruments; the time; the manner; the place.

In *Great Books of the Western World* (Volume 10)  
*Hippocratic Writings*  
On the Surgery, 2 (p. 70)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Hubbard, Elbert** 1856–1915

American editor, publisher, and author

**SURGERY:** An adjunct, more or less valuable to the diagnostician.

*The Roycroft Dictionary Concocted by Ali Baba and the Bunch on Rainy Days* (p. 143)  
The Roycrofters. East Aurora, New York, USA. 1914

**Johnson, Ernest**

No biographical data available

[Back fusions are] like killing a fly on a windowpane with a sledgehammer. The fly is dead, but you've also broken the glass.

That Aching Back  
*Time*, 14 July 1980 (p. 34)

**Jones J.**

No biographical data available

The exterior of this science, has nothing pleasing or attractive in it, but is rather disgusting to nice, timid, and delicate persons; Its objects too, except in time of war, lying chiefly among the poor and lower classes of mankind, do not excite the industry of the ambitious or avaricious, who find their best account among the rich and great.

*Plain, concise, practical remarks on treatment of wounds and fractures; to which Is added, a short appendix on camp and military hospitals; principally designed for the use of young military surgeons in North America* (pp. ii–iii)  
John Holt. New York, New York, USA. 1775

**Kirklin, John** 1917–2004

American cardiovascular surgeon

Surgery...is always second best. If you can do something else, it's better. Surgery is limited. It is operating on someone who has no place else to go.

Surgery  
*Time*, May 3, 1963 (p. 60)

**Mayo, William J.** 1861–1939

American physician

Surgery is more a matter of mental grasp than it is of handicraftsmanship.

Master Surgeons of America; Frederic S. Dennis  
*Surgery, Gynecology and Obstetrics*, Volume 67, October 1938

**Ogilvie, Sir Heneage** 1887–1971

English physician

Surgery thus attracts the man whose interest in medicine is humanitarian rather than scientific, who loves his fellow men, who wishes to help them and to see that his help is effective. It appeals to the craftsman who enjoys the use of his hands, to the artist whose mind works on visual images, to the romantic who enjoys the drama of life, particularly when it affords him the opportunity to play a decisive role, to the extrovert.

A Surgeon's Life  
*The Lancet*, Volume 255, July 3, 1948 (p. 1)

**O'Malley, Austin** 1858–1932

American physician and humorist

**Surgery:** by far the worst snob among the handicrafts.

In Herbert V. Prochnow and Herbert V. Prochnow, Jr.  
*A Treasury of Humorous Quotations: For Speakers, Writers, and Home Reference*  
#5724 (p. 322)  
Harper & Row, Publishers. New York, New York, USA. 1969

**Ovid** 43 BCE–17 AD

Roman poet

But that which is incurable must be cut away with the knife, lest the untainted part also draw infection.

Translated by Frank Justus Miller

*Metamorphoses* (Volume 1)  
Book I, l. 190–191 (p. 15)  
William Heinemann. London, England. 1916

**Selzer, Richard** 1928–  
American physician and essayist

One enters the body in surgery, as in love, as though  
one were an exile returning at last to his hearth, daring  
uncharted darkness in order to reach home.

*Mortal Lessons*  
The Surgeon as Priest (p. 25)  
Simon & Schuster. New York, New York, USA. 1976

...surgery is the red flower that blooms among the leaves  
and thorns that are the rest of Medicine.

*Letters to a Young Doctor*  
Letter II (p. 510)  
Simon & Schuster, Inc. New York, New York, USA. 1982

**Shaw, George Bernard** 1856–1950  
Irish comic dramatist and literary critic

We do not go to the operating table as we go to the theatre,  
to the picture gallery, to the concert room, to be entertained  
and delighted; we go to be tormented and maimed, lest a worse  
thing should befall us.... The experts on whose assurance we  
face this horror and suffer this mutilation should have no interests  
but our own to think of; should judge our cases scientifically; and  
should feel about them kindly.

*The Doctor's Dilemma*  
Preface on Doctors  
Psychology of Self Respect in Surgeons (p. xxii)  
Brentano's. New York, New York, USA. 1920

The notion that therapeutics or hygiene or surgery is any more  
or less scientific than making or cleaning boots is entertained  
only by people to whom a man of science is still a magician who  
can cure diseases, transmute metals, and enable us to live forever.

*The Doctor's Dilemma*  
Preface on Doctors  
The Technical Problem (p. lxxxii)  
Brentano's. New York, New York, USA. 1920

**Sigerist, Henry E.** 1891–1957  
German-born medical historian

Ignorance is more immediately fatal in surgery than in medicine,  
or rather, mistakes are more easily apparent to the layman.

*A History of Medicine* (Volume 2)  
Chapter III, Section 1 (p. 203)  
Oxford University Press, Inc. New York, New York, USA. 1961

**Yeo, R.**  
No biographical data available

The work was in a moment done.  
If possible, without a groan:  
So swift thy hand, I could not feel

The progress of the cutting steel....  
For quicker e'en than sense, or thought,  
The latent ill view was brought;  
And I beheld with ravish'd eyes,  
The cause of all my agonies.  
And above all the race of men,  
I'll bless my GOD for Cheselden.  
The Grateful Patient  
*Gentlemen's Magazine*, Volume 2, 1732 (p. 769)

## SURPRISE

**Faraday, Michael** 1791–1867  
English physicist and chemist

Let us now consider, for a little while, how wonderfully we stand upon this world. Here it is we are born, bred, and live, and yet we view these things with an almost entire absence of wonder to ourselves respecting the way in which all this happens. So small, indeed, is our wonder, that we are never taken by surprise.

*On the Various Forces of Nature and Their Relations to Each Other: A Course of Lectures Delivered Before a Juvenile Audience at the Royal Institution*  
Lecture I (p. 14)  
George Routledge & Sons. New York, USA. 1874

**Planck, Max** 1858–1947  
German physicist

...compared with immeasurably rich, ever young Nature, advanced as man may be in scientific knowledge and insight, he must forever remain the wondering child and must constantly be prepared for new surprises.

*Scientific Autobiography and Other Papers*  
The Meaning and Limits of Exact Science, Part IV (p. 117)  
Philosophical Library. New York, New York, USA. 1949

**Thomas, Lewis** 1913–93  
American physician and biologist

The safest and most prudent of bets to lay money on is surprise. There is a very high probability that whatever astonishes us in biology today will turn out to be useable, and useful, tomorrow.

*The Medusa and the Snail: More Notes of a Biology Watcher*  
Medical Lessons from History (p. 172)  
The Viking Press. New York, New York, USA. 1979

**Watson, Sir William** 1858–1935  
English author of lyrical and political verse

Strange the world about me lies,  
Never yet familiar grown — Still disturbs me with surprise,  
Haunts me like a face half known.

*The Poems of William Watson*  
World Stangeness  
The Macmillan Company. New York, New York, USA. 1939

## SURVEY

### Deming, William Edwards 1900–93

American statistician, educator, and consultant

A perfect survey is a myth.

*Some Theory of Sampling* (p. 24)

John Wiley & Sons, Inc. New York, New York, USA. 1950

A questionnaire is never perfect: some are simply better than others.

*Some Theory of Sampling* (p. 31)

John Wiley & Sons, Inc. New York, New York, USA. 1950

The only excuse for taking a survey is to enable a rational decision to be made on some problem that has arisen and on which decision, right or wrong, will be made.

*Some Theory of Sampling* (p. 545)

John Wiley & Sons, Inc. New York, New York, USA. 1950

### Deutscher, I.

No biographical data available

...neither the interviewer nor the instrument should act in any way upon the situation. The question, ideally, should be so put and so worded as to be unaffected by contextual contaminations. The interviewer must be an inert agent who exerts no influence or response by tone, expression, stance, or statement. The question must be unloaded in that it does not hint in any way that one response is more desirable or more correct than any other response. It must be placed in the sequence of the instrument in such a way that the subject's response is not affected by previous queries or by his own previous responses.

In S.Z. Nagi and R.G. Corwin

*The Social Contexts of Research*

Public and Private Opinions: Social Situations and Multiple Realities (p. 325)

John Wiley & Sons, Inc. New York, New York, USA. 1972

### Fisher, Sir Ronald Aylmer 1890–1962

English statistician and geneticist

No aphorism is more frequently repeated with field trial, than that we must ask Nature few questions or, ideally, one question at a time. The writer is convinced that this view is wholly mistaken. Nature, he suggests, will best respond to a logical and carefully thought out questionnaire; indeed, if we ask her a single question, she will often refuse to answer until some other topic has been discussed.

*Journal of the Ministry of Agriculture of Great Britain*, Volume 33 (p. 511)

### Heinlein, Robert A. 1907–88

American science fiction writer

But what is the purpose of your survey? he asked.

“Does it need a purpose? I tell you, I just made it up.”

“But your numbers are too few to be significant. You can't fair a curve with so little data. Besides, your conditions are uncontrolled. Your results don't mean anything.”

*Beyond this Horizon*

Chapter One (p. 2)

Gregg Press. Boston, Massachusetts, USA. 1981

### Norton, John K.

No biographical data available

The time of busy people is sometimes wasted by time-consuming questionnaires dealing with inconsequential topics, worded so as to lead to worthless replies, and circulated by untrained and inexperienced individuals, lacking in facilities for summarizing and disseminating any worthwhile information which they may obtain.

In Douglas R. Berdie and John F. Anderson

*Questionnaires: Design and Use* (p. ix)

The Scarecrow Press, Inc. Metuchen, New Jersey, USA. 1974

### Oppenheim, Abraham Naftali 1924–

No biographical data available

A questionnaire is not just a list of questions or a form to be filled out. It is essentially a scientific instrument for measurement and for collection of particular kinds of data. Like all such instruments, it has to be specifically designed according to particular specifications and with specific aims in mind, and the data it yields are subject to error. We cannot judge a questionnaire as good or bad, efficient or inefficient, unless we know what job it was meant to do. This means that we have to think not merely about the wording of particular questions, but first and foremost, about the design of the investigation as a whole.

*Questionnaire Design and Attitude Measurement*

Chapter 1 (pp. 2–3)

Basic Books, Inc. New York, New York, USA. 1966

### Perelman, Sidney Joseph 1904–79

American comic writer

There is nothing like a good, painstaking survey full of decimal points and guarded generalizations to put a glaze like a Sung vase on your eyeballs.

*Keep it Crisp*

Sleepy-Time Extra (p. 173)

Random House, Inc. New York, New York, USA. 1946

### Strong, Lydia

No biographical data available

Your sales last year just paralleled the sales of rum cokes in Rio de Janeiro, as modified by the sum of the last digits of all new telephone numbers in Toronto. So, why bother with surveys of your own market? Just send away for the data from Canada and Brazil.

Sales Forecasting: Problems and Prospects

*Management Review*, September 1956 (p. 803)

## SURVIVAL

**Arnold, Sir Edwin** 1832–1904  
English poet

How lizard fed on ant, and snake on him,  
And kite on both; and how the fish-hawk robbed  
The fish-tiger of that which it had seized;  
The shrike chasing the bulbul, which did chase  
The jeweled butterflies; till everywhere  
Each slew a slayer and in turn was slain,  
Life living upon death.

*Edwin Arnold's Poetical Works* (Volume 1)  
The Light of Asia, Book the First (p. 21)  
Roberts Brothers. Boston, Massachusetts, USA. 1889

**Darwin, Charles Robert** 1809–82  
English naturalist

What a trifling difference must often determine which  
shall survive, and which shall perish.

In Francis Darwin (ed.)  
*The Life and Letters of Charles Darwin* (Volume 1)  
Darwin to Asa Gray, September 5, 1857 (p. 480)  
D. Appleton & Company. New York, New York, USA. 1896

I should premise that I use this term [Struggle for Existence] in a large and metaphorical sense including dependence of one being on another, and including (which is more important) not only the life of the individual, but success in leaving progeny. . . .

In *Great Books of the Western World* (Volume 49)  
*The Origin of Species by Means of Natural Selection*  
Chapter III (p. 33)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Sagan, Carl** 1934–96  
American astronomer and science writer

If we have a profound respect for other human beings as co-equal recipients of this precious patrimony of 4.5 billion years of evolution, why should the identification not apply also to all the other organisms on Earth which are equally the product of 4.5 billion years of evolution? We care for a small fraction of the organisms on Earth — dogs, cats, and cows, for example — because they are useful or because they flatter us. But spiders and salamanders, salmon and sunflowers are equally our brothers and sisters.

*The Cosmic Connection: An Extraterrestrial Perspective*  
Chapter 1 (p. 7)  
Dell Publishing, Inc. New York, New York, USA. 1975

**Thomson, J. Arthur** 1861–1933  
Scottish biologist

The shore is almost noisy with the conjugation of the verb to eat in its many tenses.

*The Outline of Science* (Volume 1)  
Chapter III (p. 117)  
G.P. Putnam's Sons. New York, New York, USA. 1937

**Walker, Marshall**  
American physicist

The survival technique of the tyrannosaurus was ferocity; it is extinct. The survival technique of the dodo was passive resistance; it is extinct. The survival technique of man is science. . . .

*The Nature of Scientific Thought*  
Chapter XV (p. 179)  
Prentice-Hall, Inc., Englewood Cliffs, New Jersey, USA. 1963

## SYMBIOTICISM

**Wallin, Ivan E.** 1883–1969  
American anatomist

Their universal presence in the cell, coupled with the known properties of bacteria, appear to indicate that mitochondria represent the end adjustment of a fundamental biologic process. The establishment of intimate microsymbiotic complexes has been designated “symbioticism” by the author. . . .

*Symbioticism and the Origin of Species*  
Chapter I (p. 8)  
Williams & Wilkins Company. Baltimore, Maryland, USA. 1927

Symbioticism, then is proposed as the fundamental factor or the cardinal principle involved in the origin of species.

*Symbioticism and the Origin of Species*  
Chapter I (p. 8)  
Williams & Wilkins Company. Baltimore, Maryland, USA. 1927

## SYMBIOSIS

**de Bary, Anton** 1831–88  
German scientist and physician

Parasitism, mutualism, lichenism, etc., are each special cases of that one general association for which the term symbiosis is proposed as the collective name.

*Vortrag auf der Versammlung der Naturforscher und Ärzte zu Cassel*  
Die Erscheinung der Symbiose (p. 21)  
Publisher undetermined

**Merezhkovskii, Konstantine** 1855–1921  
Russian biologist

Above all, a plant, an oak for example, is an animal. An enormous animal in which live parasites or rather symbionts, an infinite multitude of small microscopic green organisms, of the species of unicellular “algae,” cyanophyceae.

In Jan Sapp  
*Evolution by Association: A History of Symbiosis*  
Chapter 4 (p. 47)  
Oxford University Press, Inc. New York, New York, USA. 1994

**Pound, Roscoe** 1870–1964  
American jurist

Ethically, there is nothing in the phenomena of symbiosis to justify the sentimentalism they have excited in certain writings. Practically, in some instances, symbiosis seems to result in mutual advantage. In all cases it results advantageously to one of the parties, and we can never be sure that the other would not have been nearly as well off, if left to itself.

Symbiosis and Mutualism

*The American Naturalist*, Volume 27, Number 318, June 1893 (p. 520)

### Sapp, Jan

No biographical data available

We have located studies of symbiosis peering through the cracks and creeping across the boundaries which separated ecology from evolution, plants from animals, health from disease, nurture from nature, and the individual from the community. In doing so, we have uncovered layers of oppositions, doctrines and disciplines, and diverse phenomena that have led to disparate interpretations of symbiosis, its scope and significance. In summarizing them here, we see that this history is not a matter of peeling off obstacles to come closer to some hidden core of naked truth. Symbiosis is as much like an onion today as it was a century ago.

*Evolution by Association: A History of Symbiosis*

Concluding Remarks (p. 205)

Oxford University Press, Inc. New York, New York, USA. 1994

## SYMBIOTE

### Portier, Paul 1866–1922

French biologist

All Living beings, all animals from Amoeba to Man, all plants from Cryptogams to Dicotyledons are constituted by an association, the “*emboîtement*” of two different beings.

Each living cell contains in its protoplasm formations which histologists designate by the name of “mitochondria.” These organelles are, for me, nothing other than symbiotic bacteria, which I call “symbiotes.”

*Les Symbiotes* (p. vii)

Masson. Paris, France. 1918

## SYMBOL

### Brodie, Sir Benjamin Collins 1817–80

English chemist

A symbol, however, should be something more than a convenient and compendious expression of facts. It is, in the strictest sense, an instrument for the discovery of facts, and is of value mainly with reference to this end, by its adaptation to which it is to be judged.

The Calculus of Chemical Observations

*Philosophical Transactions of the Royal Society of London*, Volume 156, 1866 (p. 857)

### Buchanan, Scott 1895–1968

American educator and philosopher

Symbols, formulae and proofs have another hypnotic effect. Because they are not immediately understood, they, like certain jokes, are suspected of holding in some sort of magic embrace the secret of the universe, or at least some of its more hidden parts.

*Poetry and Mathematics*

Chapter 1 (p. 37)

The University of Chicago Press. Chicago, Illinois, USA. 1975

Each symbol used in mathematics, whether it be a diagram, a numeral, a letter, a sign, or a conventional hieroglyph, may be understood as a vehicle which someone has used on a journey of discovery.

*Poetry and Mathematics*

Chapter 2 (p. 47)

The University of Chicago Press. Chicago, Illinois, USA. 1975

### Butler, James Newton

No biographical data available

### Bobrow, Daniel Gureasko

No biographical data available

“When I use a symbol, it means just what I choose it to mean — neither more nor less.”

“The question is, whether you can make symbols mean so many different things?”

“The question is, which is to be master — that’s all.”

*The Calculus of Chemistry*

Chapter 2 (p. 7)

W.A. Benjamin, Inc. New York, New York, USA. 1965

### Eddington, Sir Arthur Stanley 1882–1944

English astronomer, physicist, and mathematician

The symbol A is not the counterpart of anything in familiar life. To the child the letter A would seem horribly abstract; so we give him a familiar conception along with it.

*The Nature of the Physical World*

Introduction (p. xiv)

The Macmillan Company. New York, New York, USA. 1930

### Goldstein, Herbert 1922–2005

American Physicist and author

It has been remarked in a jocular vein that if H stands for the Hamiltonian, K must stand for the Kamiltonian!

*Classical Mechanics* (2<sup>nd</sup> edition)

Classical Transformations (p. 380)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1980

### Hilbert, David 1862–1943

German mathematician

Arithmetical symbols are written diagrams and geometrical figures are graphic formulas.

*Bulletin of the American Mathematical Society*

Mathematical Problems, Volume 8, July 1902 (p. 443)

In the beginning there was the symbol.

In Walter R. Fuchs

*Mathematics for the Modern Mind*

Chapter 7, Section 7.1 (p. 164)

The Macmillan Company. New York, New York, USA. 1967

**Huxley, Aldous** 1894–1963

English writer and critic

...some of the greatest advances in mathematics have been due to the invention of symbols, which it afterwards became necessary to explain; from the minus sign proceeded the whole theory of negative quantities.

*Jesting Pilate*

India and Burma (p. 108)

Chatto & Windus. London, England. 1926

**Jung, Carl G.** 1875–1961

Swiss psychiatrist and founder of analytical psychology

Thus a word or an image is symbolic when it implies something more than its obvious and immediate meaning. It has a wider “unconscious” aspect that is never precisely defined or fully explained.... As the mind explores the symbols it is led to ideas that lie beyond the grasp of reason.

*Man and His Symbols*

Part I. The Importance of Dreams (p. 20)

Doubleday & Company, Inc. Garden City, New York, USA. 1964

The Sign is always less than the concept it represents, while a symbol always stands for something more than its obvious and immediate meaning. Symbols, moreover, are natural and spontaneous products.

*Man and His Symbols*

Part I. The Analysis of Dreams (p. 50)

Doubleday & Company, Inc. Garden City, New York, USA. 1964

**Nicholas of Cusa** 1401–64

German philosopher, mathematician, and physician

If we approach the Divine through symbols, then it is most suitable that we use mathematical symbols, these have an indestructible certainty.

In Stanley Gudder

*A Mathematical Journey* (p. 349)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1976

**Tillyard, E. M. W.** 1889–1962

English classical scholar

**Lewis, C. S. (Clive Staples)** 1898–1963

English author

Two kinds of symbol must surely be distinguished. The algebraic symbol comes naked into the world of mathematics and is clothed with value by its masters. A poetic symbol — like the Rose, for Love, in Guillaume de Lorris — comes trailing clouds of glory from the real world, clouds whose shape and colour largely determine and explain its poetic use. In an equation,  $x$  and  $y$  will do as well as  $a$  and  $b$ ; but the Romance of the Rose could not,

without loss, be re-written as the Romance of the Onion, and if a man did not see why, we could only send him back to the real world to study roses, onions, and love, all of them still untouched by poetry, still raw.

*The Personal Heresy: A Controversy*

Chapter V (p. 97)

Oxford University Press, Inc. London, England. 1939

**Truesdell, Clifford** 1919–2000

American mathematician, mathematics historian, and natural philosopher

There is nothing that can be said by mathematical symbols and relations which cannot also be said by words. The converse, however, is false. Much that can be and is said by words cannot successfully be put into equations, because it is nonsense.

*Six Lectures on Modern Natural Philosophy*

III, Thermodynamics of Visco-Elasticity (p. 35)

Springer-Verlag. Berlin, West Germany. 1966

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

There is an old epigram which assigns the empire of the sea to the English, of the land to the French, and of the clouds to the Germans. Surely it was from the clouds that the Germans fetched + and –; the ideas which these symbols have generated are much too important to the welfare of humanity to have come from the sea or from the land.

*An Introduction to Mathematics*

Chapter 6 (p. 60)

Oxford University Press, Inc. New York, New York, USA. 1958

Mathematics is often considered a difficult and mysterious science, because of the numerous symbols which it employs. Of course, nothing is more incomprehensible than a symbolism which we do not understand. Also a symbolism, which we only partially understand and are unaccustomed to use is difficult to follow. In exactly the same way the technical terms of any profession or trade are incomprehensible to those who have never been trained to use them. But this is not because they are difficult in themselves. On the contrary they have invariably been introduced to make things easy.

*An Introduction to Mathematics*

Chapter 5 (p. 40)

Oxford University Press, Inc. New York, New York, USA. 1958

...in mathematics, granted that we are giving any serious attention to mathematical ideas, the symbolism is invariably an immense simplification.

*An Introduction to Mathematics*

Chapter 5 (p. 40)

Oxford University Press, Inc. New York, New York, USA. 1958

## SYMBOLIC LOGIC

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

Symbolic Logic has been disowned by many logicians on the plea that its interest is mathematical, and by many mathematicians on the plea that its interest is logical.

*Universal Algebra*

Preface (p. 6)

Cambridge University Press. Cambridge, England. 1898

## SYMMETRY

**Aristotle** 384 BCE–322 BCE

Greek philosopher

A rose which varies from the ideal of straightness to a hook or snub may still be of good shape and agreeable to the eye.

*Politics*

Book V, Chapter 9, 1309b [20]

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Blake, William** 1757–1827

English poet, painter, and engraver

Tyger, Tyger, burning bright

In the forest of the night,

What immortal hand or eye

Could frame thy fearful symmetry?

*The Complete Poetry and Prose of William Blake*

The Tyger

University of California Press. Berkeley, California, USA. 1982

**Borges, Jorge Luis** 1899–1986

Argentine writer

...reality favors symmetry.

In Richard Burgin

*Conversations with Jorge Luis Borges*

Chapter VI (p. 109)

Holt, Rinehart & Winston. New York, New York, USA. 1969

**Bulwer, John** 1606–56

English physician and writer

True and native beauty consists in the just composure and symmetry of the parts of the body.

*Anthropometamorphosis*

**Carroll, Lewis (Charles Dodgson)** 1832–98

English writer and mathematician

You boil it in saw dust: you salt it in glue:

You condense it with locust and tape:

Still keeping one principle object in view —

To preserve its symmetrical shape.

*The Complete Works of Lewis Carroll*

Perhaps Looking-glass milk isn't good to drink...

*The Complete Works of Lewis Carroll*

Through the Looking-Glass

Chapter I (p. 147)

The Modern Library. New York, New York, USA. 1936

**Chesterton, G. K. (Gilbert Keith)** 1874–1936

English author

Suppose some mathematical creature from the moon were to reckon up the human body; he would at once see that the essential thing about it was that it was duplicate. A man is two men, he on the right exactly resembling him on the left. Having noted that there was an arm on the right and one on the left, a leg on the right and one on the left, he might go further and still find on each side the same number of fingers, the same number of toes, twin eyes, twin ears, twin nostrils, and even twin lobes of the brain. At last he would take it as a law; and then, where he found a heart on one side, would deduce that there was another heart on the other. And just then, where he most felt he was right, he would be wrong.

*Orthodoxy*

Chapter VI (p. 149)

John Lane Company. New York, New York, USA. 1918

**Descartes, René** 1596–1650

French philosopher, scientist, and mathematician

Anyone who, upon looking down at his bare feet, doesn't laugh, has either no sense of symmetry or no sense of humor.

Mr. Fortune's Maggot (p. 115)

New York Review of Books. New York, New York, USA. 1927

**Weyl, Hermann** 1885–1955

German mathematician

Symmetry, as wide or as narrow as you may define its meaning, is one idea by which man through the ages has tried to comprehend and create order, beauty, and perfection.

*Symmetry*

Bilateral Symmetry (p. 5)

Princeton University Press. Princeton, New Jersey, USA. 1960

As far as I can see, all a priori statements in physics have their origin in symmetry.

*Symmetry*

Crystals. The General Mathematical Idea of Symmetry (p. 126)  
Princeton University Press. Princeton, New Jersey, USA. 1952

Symmetry is a vast subject, significant in art and nature. Mathematics lies at its root, and it would be hard to find a better one on which to demonstrate the working of the mathematical intellect.

*Symmetry*

Crystals: The General Mathematical Idea of Symmetry (p. 145)  
Princeton University Press. Princeton, New Jersey, USA. 1960

### Wickham, Anna (Edith Alice Mary

**Harper)** 1884–1947

English poet

God, Thou great symmetry,  
Who put a biting lust in me  
From whence my sorrows spring  
For all the frittered days  
That I have spent in shapeless ways  
Give me one perfect thing.

*The Contemplative Quarry, and The Man with a Hammer*

Envoi

Harcourt Brace. New York, USA. 1921

### Yang, Chen Ning 1922–

Chinese-born American theoretical physicist

Nature seems to take advantage of the simple mathematical representations of the symmetry laws. When one pauses to consider the elegance and the beautiful perfection of the mathematical reasoning involved and contrast it with the complex and far-reaching physical consequences, a deep sense of respect for the power of the symmetry laws never fails to develop.

*Nobel Lectures, Physics 1942–1962*

Nobel lecture for award received in 1957

The Law of Parity Conservation and Other Symmetry Laws of Physics (p. 394)

Elsevier Publishing Company. Amsterdam, Netherlands. 1964

### Zee, Anthony

Chinese-American physicist and author

Pick your favorite group: write down the Yang-Mills theory with your groups as its local symmetry group; assign quark fields, lepton fields, and Higgs fields to suitable representations; let the symmetry be broken spontaneously. Now watch to see what the symmetry breaks down to. ...that, essentially, is all there is to it. Anyone can play. To win, one merely has to hit on the choice used by the Greatest Player of all time. The prize? Fame and glory, plus a trip to Stockholm.

*Fearful Symmetry*

Chapter 14 (pp. 253–254)

Macmillan Publishing Company. New York, New York, USA. 1986

## SYMPTOM

### Hare, Hobart Amory 1862–1931

American physician

A clear understanding by the physician of the value of the symptoms of disease which he sees and of those described by the patient is of vital importance for the purpose of diagnosis and treatment, and one of the advantages of older physicians over their younger brethren is the ability which they have gained through long training to grasp the essential details of a case almost at their first glance at the patient.

*Practical Diagnosis*

Introduction (p. 17)

Lea Brothers & Company. Philadelphia, Pennsylvania, USA. 1902

### Latham, Peter Mere 1789–1875

English physician

It is by symptoms, and by symptoms only, that we can learn the existence, and seat, and nature, of diseases in the living body, or can direct and methodize their treatment.

In William B. Bean

*Aphorisms from Latham* (p. 59)

Prairie Press. Iowa City, Iowa, USA. 1962

## SYNTHESIS

### Berthelot, Marcellin 1827–1907

French chemist

The domain in which chemical synthesis exercises its creative power is vaster than that of nature herself.

In Philip Ball

*Designing the Molecular World: Chemistry at the Frontier* (p. 13)

Princeton University Press. Princeton, New Jersey, USA. 1994

### Dalton, John 1766–1844

English chemist and physicist

Chemical analysis and synthesis go no farther than the separation of particles one from another, and their reunion. No new creation or destruction of matter is within the reach of chemical agency. We might as well attempt to introduce a new planet into the solar system, or to annihilate one already in existence, as to create or destroy a particle of hydrogen.

*A New System of Chemical Philosophy* (Volume 1)

Part I, Chapter III (p. 212)

R. Bickerstaff. London, England. 1810

### Mayr, Ernst 1904–2005

German-born American biologist

What is still lacking is a critical analysis of the writings of the architects of the synthesis.

*The Growth of Biological Thought: Diversity, Evolution, Inheritance*

Chapter 12 (p. 568)

Harvard University Press. Cambridge, Massachusetts, USA. 1982

We didn't sit down together and forge a synthesis. We all knew each other's writings; all spoke with each other. We all had the same goal, which was simply to understand fully the evolutionary process. ... By combining our knowledge, we managed to straighten out all the conflicts and disagreements so that finally a united picture of evolution emerged.

In Pamela Weintraub (ed.)

*The Omni Interviews*

Darwin Flights (p. 47)

Ticknor & Fields. New York, New York, USA. 1984

The term "evolutionary synthesis" was introduced by Julian Huxley in *Evolution: The Modern Synthesis* to designate the general acceptance of two conclusions: gradual evolution can be explained in terms of small genetic changes ("mutations") and recombination, and the ordering of this variation by natural selection; and the observed evolutionary phenomena, particularly macro-evolutionary processes and speciation, can be explained in a manner that is consistent with the known genetic mechanisms.

*The Evolutionary Synthesis*

Prologue: Some Thoughts on the History of Evolutionary Synthesis (p. 1)

Harvard University Press. Cambridge, Massachusetts, USA. 1980

### Seebach, D.

No biographical data available

No matter what the narrow goal of any particular project, whether the work involved is groundbreaking or of a more routine nature, synthesis and analysis are crucial to every chemist's activities.

Organic Synthesis — Where Now?

*Angewandete Chemie International Edition in English*, Volume 29, 1990 (p. 1321)

### Vivilov, N. I.

No biographical data available

We are now entering an epoch of differential ecological, physiological and genetic classification. It is an immense work. The ocean of knowledge is practically untouched by biologists. It requires the joint labors of many different specialists — physiologists, cytologists, geneticists, systematists, and biochemists. It requires international spirit, the cooperative work of investigators throughout the whole world...it will bring us logically to the next step: integration and synthesis.

In Julian Huxley

*The New Systematics*

The New Systematics of Cultivated Plants (p. 565)

University Press. Oxford, England. 1940

### von Goethe, Johann Wolfgang 1749–1832

German poet, novelist, playwright, and natural philosopher

"Affinities begin really to interest only when they bring about separations."

"What...is that miserable word, which unhappily we hear so often now-a-days — in the world; is that to be found in nature's lessons too?"

"Most certainly," answered Edward; "the title with which chemists were supposed to be most honorably distinguished was, artists of separation."

"It is not so any more," replied Charlotte; "and it is well that it is not. It is a higher art, and it is a higher merit, to unite. An artist of union is what we should welcome in every province of the universe."

*Elective Affinities*

Chapter IV (p. 38)

Frederick Unger Publishing Company. New York, New York, USA.

1962

### Woodward, Robert Burns 1917–79

American chemist

The structure known, but not yet accessible by synthesis, is to the chemist what the unclimbed mountain, the uncharted sea, the untilled field, the unreachd planet, are to other men.... The unique challenge which chemical synthesis provides for the creative imagination and the skilled hands ensures that it will endure as long as men write books, paint pictures, and fashion things which are beautiful, or practical, or both.

In William H. Brock

*The Norton History of Chemistry*

Chapter 16 (p. 633)

W.W. Norton & Company, Inc. New York, New York, USA. 1993

[S]ynthetic objectives are seldom if ever taken by chance, nor will the most painstaking, or inspired, purely observational activities suffice. Synthesis must always be carried out by plan, and the synthetic frontier can be defined only in terms of the degree to which realistic planning is possible, utilizing all of the intellectual and physical tools available. It can scarcely be gainsaid that the successful outcome of a synthesis of more than thirty stages provides a test of unparalleled rigor of the predictive capacity of the science, and of the degree of its understanding of its portion of the environment.

In A.R. Todd (ed.)

*Perspectives in Organic Chemistry*

Synthesis (p. 155)

Interscience, Inc. New York, New York, USA. 1956

## SYSTEM

### Coates, Robert M.

No biographical data available

He has so clearly laid open and set before our eyes the most beautiful frame of the System of the World, that if King Alphonse were now alive he would not complain for want of the graces of simplicity or of harmony in it.

In Robert H. March

*Physics for Poets*

Preface to the Principia (p. 35)  
McGraw-Hill, Inc. New York, New York, USA. 1996

**Lavoisier, Antoine Laurent** 1743–94  
French chemist

Systems in physical science...are no more than appropriate instruments to aid the weakness of our organs: they are, properly speaking, approximate methods which put us on the path to the solution of the problem; these are the hypotheses which, successively modified, corrected, and changed in proportion as they are found false, should lead us infallibly one day, by a process of exclusion, to the knowledge of the true laws of nature.

*Mémoires de l'Académie Royale des Sciences 1777*  
Memoir on Combustion in General (p. 592)

Facts, observations, experiments — these are the materials of a great edifice, but in assembling them we must combine them into classes, distinguish which belongs to which order and to which part of the whole each pertains.

*Mémoires de l'Académie Royale des Sciences 1777*  
Memoir on Combustion in General (p. 592)

As dangerous as is the desire to systematize in the physical sciences, it is, nevertheless, to be feared that in storing without order a great multiplicity of experiments we obscure the science rather than clarify it, render it difficult of access to those desirous of entering upon it, and finally, obtain at the price of long and tiresome work only disorder and confusion.

*Mémoires de l'Académie Royale des Sciences 1777*  
Memoir on Combustion in General (p. 592)

**Peacock, Thomas Love** 1785–1866  
English writer

All philosophers who find  
Some favorite system to their mind,  
In every point to make it fit  
Will force all nature to submit.

*Headlong Hall* (p. 44)  
J.M. Dent & Company London, England. No date

**Thomas, Lewis** 1913–93  
American physician and biologist

You cannot meddle with one part of a complex system from the outside without the almost certain risk of setting off disastrous events that you hadn't counted on in other, remote parts.

*The Medusa and the Snail: More Notes of a Biology Watcher*  
On Meddling (p. 110)  
The Viking Press. New York, New York, USA. 1979

**Thompson, W. R.** 1887–?  
Canadian entomologist

The good systematist develops what the medieval philosophers called a habitus, which is more than a habit and

is better designated by its other name of *secunda natura*. Perhaps, like a tennis player or a musician, he works best when he does not get too introspective about what he is doing.

The Philosophical Foundation of Systematics  
*Canadian Entomology*, Volume 84, 1952 (p. 5)

**von Goethe, Johann Wolfgang** 1749–1832  
German poet, novelist, playwright, and natural philosopher

Natural system — a contradiction in terms. Nature has no system; she has, she is life and its progress from an unknown center toward an unknowable goal. Scientific research is therefore endless, whether one proceed analytically into minutiae or follow the trail as a whole, in all its breadth and height.

*Goethe's Botanical Writings*  
Problems (p. 116)  
University of Hawaii Press. Honolulu, Hawaii, USA. 1952

## SYSTEMATICS

**Darwin, Charles Robert** 1809–82  
English naturalist

Systematize and study affinities.

*The Autobiography of Charles Darwin, 1809–1882: With Original Omissions Restored*  
Appendix, Quotations (p. 160)

**de Queiroz, K.**

Phylogeneticist

**Donoghue, M. J.**

Phylogeneticist

If the goal of systematics is to depict relationships accurately, then any tradition that interferes with this goal should be abandoned.

Phylogenetic Systematics of Nelson's Version of Cladistics  
*Cladistics*, Volume 4, Number 4, December 1988 (p. 332)

**Elton, Charles S.** 1900–91  
English biologist

The extent to which progress in ecology depends upon accurate identification and upon the existence of sound systematic groundwork for all groups of animals, cannot be too much impressed upon the beginner in ecology. This is the essential basis of the whole thing; without it the ecologist is helpless, and the whole of his work may be rendered useless.

*Animal Ecology*  
Chapter XI (p. 165)  
Sidgwick & Jackson, Ltd. London, England. 1927

**Hennig, W.**

No biographical data available

In order to be able to judge correctly the position of systematics in the field of biology and the role that it is called upon to play in the solution of the basic problems of this science, one must first make clear that there is a systematics not only in biology, but that it is rather an integrating part of any science whatever. It is surprising and peculiar to see to what degree the original significance of this concept has been forgotten in biology in the course of the fundamentally inadmissible but now general limitation of the concept of systematics to a particular subdivision of the science as a whole.

In George Gaylord Simpson  
*Principles of Animal Taxonomy*  
Systematics, Taxonomy, Classification, Nomenclature (p. 6)  
Columbia University Press. New York, New York, USA. 1961

**Hutton, James** 1726–97  
Scottish geologist, chemist, and naturalist

...the system of this earth has either been intentionally made imperfect, or has not been the work of infinite power and wisdom.

*The Theory of the Earth* (Volume 1)  
Part I, Chapter I, Section I (p. 17)  
Messrs Cadwell, Junior, and Davies. London, England. 1795

**Mayr, Ernst** 1904–2005  
German-born American biologist

The amount of diversity in the living world is staggering. About 1 million species of animals and half a million species of plants have already been described, and esti-

mates on the number of still undescribed species range from 3 to 10 million.... It would therefore be impossible to deal with this enormous diversity if it were not ordered and classified. Systematic zoology endeavors to order the rich diversity of the animal world and to develop methods and principles to make this task possible.

*Principles of Systematic Zoology*  
Chapter 1 (p. 1)  
McGraw-Hill Book Company, Inc. New York, New York, USA. 1969

The systematist who studies the factors of evolution wants to find out how species originate, how they are related, and what this relationship means. He studies species not only as they are, but also their origin and changes. He tries to find his answers by observing the variability of natural populations under different external conditions and he attempts to find out which factors promote and which inhibit evolution. He is helped in this endeavor by his knowledge of the habits and the ecology of the studied species.

*Systematics and the Origin of Species*  
Chapter I (p. 11)  
Harvard University Press. Cambridge, Massachusetts, USA. 1942

**Simpson, George Gaylord** 1902–84  
American paleontologist

Systematics is the scientific study of the kinds and diversity of organisms and of any and all relationships among them.

*Principles of Animal Taxonomy*  
Systematics, Taxonomy, Classification, Nomenclature (p. 7)  
Columbia University Press. New York, New York, USA. 1961

## T

### TABLE

#### **Carlyle, Thomas** 1795–1881

English historian and essayist

Tables are like cobwebs, like the sieve of the Danaides; beautifully reticulated, orderly to look upon, but which will hold no conclusion. Tables are abstractions.... There are innumerable circumstances; and one circumstance left out may be the vital one on which all turned.... Conclusive facts are inseparable from inconclusive except by a head that already understands and knows.

*English and Other Critical Essays*

Chartism, Chapter II (p. 170)

J.M. Dent & Sons Ltd. London, England. 1950

#### **Devons, Ely** 1913–67

English economist

The way statistics are presented, their arrangement in a particular way in tables, the juxtaposition of sets of figures, in itself reflects the judgment of the author about what is significant and what is trivial in the situation which the statistics portray.

*Essays in Economics*

Chapter 6 (p. 109)

Greenwood Press, Publishers. Westport, Connecticut, USA. 1961

#### **Fisher, Sir Ronald Aylmer** 1890–1962

English statistician and geneticist

[Referring to] ...witty comments made by A.L. Bowley] (a) The terms used in the headings and margins of the table are all employed in a technical sense, known only to the officers who compiled it, and which they are unable for official reasons to divulge. (b) The sub-divisions of the table and the region to which it refers have been changed since the last return was published. (c) Before tabulation the data have been subjected to numerous adjustments, allowances and other corrections, of a kind to vitiate any tests of significance which the reader may be tempted to apply to them.

Presidential Address, First Indian Statistical Conference, 1938

*Sankhya*, Volume 4, 1938 (p. 15)

#### **Playfair, William** 1759–1823

English publicist

Information that is imperfectly acquired, is generally as imperfectly retained; and a man who has carefully investigated a printed table, finds, when done, that he has only a very faint and partial idea of what he has read; and that like a figure imprinted on sand, is soon totally erased and defaced.

*The Commercial and Political Atlas* (p. 3)

Printed for J. Debrett. London, England. 1786

### TACHYON

#### **Herbert, Nick**

American physicist

Although most physicists today place the probability of the existence of tachyons only slightly higher than the existence of unicorns, research into the properties of these hypothetical FTL [faster than light] particles has not been entirely fruitless.

*Faster Than Light: Superluminal Loopholes in Physics*

Chapter 7 (p. 137)

New American Library. New York, New York, USA. 1988

#### **Nahin, Paul J.**

American electrical engineering professor and author

...if tachyons are one day discovered...the day before the momentous occasion a notice from the discoverers should appear in newspapers announcing "tachyons have been discovered tomorrow."

*Time Machines: Time Travel in Physics, Metaphysics, and Science Fiction*

Notes and References, Note 36 (p. 408)

Springer-Verlag. New York, New York, USA. 1993

### TAXONOMIST

#### **Moss, W. W.**

No biographical data available

Taxonomists have always had the reputation of being difficult. Intransigence may be rooted in the necessity of defending prolonged self-immersion in a taxon that others find a total bore; it is frustrating to have one's work greeted with a yawn.

In J. Felsenstein (ed.)

*Numerical Taxonomy*

Taxa, Taxonomists, and Taxonomy (p. 73)

Springer-Verlag. New York, New York, USA. 1983

Numerical taxonomists have proved to be just as prickly as conventional taxonomists, possibly more so because some of the brightest people in systematics are involved in the current taxonomic battles. The political maneuvering and character assassination that characterize certain taxonomists today may not be atypical for science; they certainly provide a fine example of its seamier side. If Feyerabend is correct, it may even be a requirement of human nature that scientific progress occur in this manner.

In J. Felsenstein (ed.)

*Numerical Taxonomy*

Taxa, Taxonomists, and Taxonomy (p. 73)

Springer-Verlag. New York, New York, USA. 1983

## TAXONOMY

**Abbott, Donald Putnam** 1920–86  
American marine biologist and professor

You'll be tempted to grouse about the instability of taxonomy: but stability occurs only where people stop thinking and stop working.

In Galen Howard Hilgard (ed.)

*Observing Marine Invertebrates: Drawings from the Laboratory*

Author's Preface (p. xvi)

Stanford University Press. Stanford, California, USA. 1987

**Blackwelder, R. E.**

No biographical data available

Much has been written in recent decades about subspecies and their use in taxonomy. There are strong feelings that they are usable, useful and desirable. There are also strong feelings that they are not really relevant to taxonomy and are an unnecessary encumbrance to classification and nomenclature.

*Taxonomy: A Text and Reference Book* (p. 171)

John Wiley & Sons, Inc. New York, New York, USA. 1967

**Brew, John O.** 1906–88

American archaeologist

...classificatory systems are merely tools, tools of analysis, manufactured and employed by students, just as shovels, trowels and whisk brooms are tools of excavation.

Papers of the Peabody Museum of American Archaeology and Ethnology

*The Archaeology of Alkali Ridge, Southeastern Utah*

The Use and Abuse of Taxonomy, Volume 21 (p. 46)

Peabody Museum. Cambridge, Massachusetts, USA. 1946

**Burt, B. L.**

No biographical data available

Numerical taxonomy uses statistical methods to form groups whereas traditional taxonomy only uses them to discriminate more precisely between groups already perceived. If it becomes increasingly apparent that there is a fundamental divergence here, let us remember Whitehead's dictum, that a clash of doctrines is not a disaster — it is an opportunity.

Andanson and Modern Taxonomy

*Edinburgh Royal Botanic Gardens, Notes*, Volume 26, 1966

**Cain, A. J.**

Taxonomist

It is not extraordinary that young taxonomists are trained like performing monkeys, almost wholly by imitation, and that in only the rarest cases are they given any instruction in taxonomic theory.

In George Gaylord Simpson

*Principles of Animal Taxonomy*

Preface (p. vii)

Columbia University Press. New York, New York, USA. 1961

**Constance, L.**

No biographical data available

Plant taxonomy has not outlived its usefulness: it is just getting under way on an attractively infinite task.

Plant Taxonomy in an Age of Experiment

*American Journal of Botany*, Volume 44, Number 1, January 1957

(p. 92)

**Gould, Stephen Jay** 1941–2002

American paleontologist and evolutionary biologist

Parochial taxonomies are a curse of intellectual life.

*Time's Arrow, Time's Cycle: Myth and Metaphor in the Discovery of Geological Time*

Chapter 1 (p. 3)

Harvard University Press. Cambridge, Massachusetts, USA. 1987

Taxonomy (the science of classification) is often undervalued as a glorified form of filing — with each species in its folder, like a stamp in its prescribed place in an album; but taxonomy is a fundamental and dynamic science, dedicated to exploring the causes of relationships and similarities among organisms. Classifications are theories about the basis of natural order, not dull catalogues compiled only to avoid chaos.

*Wonderful Life: The Burgess Shale and the Nature of History*

Chapter III (p. 98)

W.W. Norton & Company, Inc. New York, New York, USA. 1989

**Heywood, V. H.** 1947–

No biographical data available

In these days when Molecular Biology is beginning to be seen as a restricted science, narrowing our vision by concentrating on the basic uniformity of organisms at the macromolecular level, the need for taxonomists to draw attention to the enormous diversity and variation of this earth's biota becomes more and more pressing.

In Tod. F. Stuessy

*Plant Taxonomy: The Systematic Evaluation of Comparative Data*

Plant Taxonomy (p. xvii)

Columbia University Press. New York, New York, USA. 1990

**Jeffrey, C.** 1866–1952

Canadian-American botanist

The bringing to light of overlooked names in the old literature is perhaps nearing completion...it is hoped that this will lead to name-changes for nomenclature reasons becoming ever fewer and fewer until eventually they cease to trouble us. Unfortunately, the same cannot be said of name-changes that become necessary for taxonomic reasons. These arise from taxonomic research itself and are inevitable accompaniments of our systems of classifications.

*Biological Nomenclature* (3<sup>rd</sup> edition) (p. 31)

Edward Arnold. London, England. 1989

**Kevan, D. Keith McE.** 1920–1991  
British ethnoentomologist

Bad taxonomy, of which there has been plenty, persists. Unlike bad chemistry or bad physiology, of which there has probably been equally as much, it cannot be ignored; it must be undone and redone. Poor taxonomy is not only an ill unto itself; it is contagious, often with a very long incubation period.... One assumes that when [experimental biologists] state that they used 5 ml ethanol, they were not using 6 ml of methanol; and yet, if the experimental animal is wrongly identified, what are the grounds for such an assumption?

The Place of Classical Taxonomy in Modern Systematic Entomology  
*Canadian Entomology*, Volume 105, 1973 (p. 1212)

**Rollins, R. C.** 1911–1998  
No biographical data available

In other words, the field of taxonomy in a way epitomizes the work of all other branches of biology centered on the organism itself, and brings the varied factual information from them to bear on the problems of interrelationship, classification and evolution. Thus taxonomy, as has been aptly remarked, is at once the alpha and omega of biology.

Taxonomy of the Higher Plants  
*American Journal of Botany*, Volume 44, Number 1, January 1957 (p. 188)

**Simpson, George Gaylord** 1902–84  
American paleontologist

Taxonomy is a science, but its application to classification involves a great deal of human contrivance and ingenuity, in short, of art. In this art there is leeway for personal taste, even foibles, but there are also canons that help to make some classifications better, more meaningful, more useful than others.

*Principles of Animal Taxonomy*  
From Taxonomy to Classification (p. 107)  
Columbia University Press. New York, New York, USA. 1961

**Stace, C.** 1938–  
English botanist and author

The species is the lowest rank which it is essential to recognize for general taxonomic purposes. It is not, however, the lowest rank which it is desirable and useful to recognize.

*Plant Taxonomy and Biosystematics* (2<sup>nd</sup> edition) (p. 192)  
Edward Arnold Publishers Ltd. London, England. 1989

**Stuessy, Tod F.** 1943–  
No biographical data available

We as taxonomists celebrate diversity. We celebrate the wildness of the planet. We celebrate the numerous human attempts to understand this wilderness, and we mourn its loss through human miscalculation. We sense

the aesthetic of life and much of our efforts are aimed at reflecting this composition. Above all we celebrate the challenges of being alive and dealing with the living world. There is no greater responsibility, privilege, nor satisfaction.

*Plant Taxonomy: The Systematic evaluation of Comparative Data Epilogue* (p. 406)  
Columbia University Press. New York, New York, USA. 1990

The rise beyond the generic level in classification is to enter a world of much greater uncertainty.... Taxa at higher levels will be well-defined or ill-defined depending on the group in question.

*Plant Taxonomy: The Systematic Evaluation of Comparative Data* (p. 207)  
Columbia University Press. New York, New York, USA. 1990

**Wald, George** 1906–97  
American biologist and biochemist

The most important thing about a name, after all, is that it remain attached to the thing it designates. One wishes that once a name had come into common use for an organism, it could be stabilized for the use of busy persons who want nothing but that each animal have a name.

In E.S. Guzman Barron (ed.)  
*Modern Trends in Physiology and Biochemistry*  
Biochemical Evolution (fn p. 339)  
Academic Press, Inc. New York, New York, USA. 1952

## TEACHER

**Alexander, Burton F.**  
American mathematics teacher

The responsibility of developing and improving the general and technical vocabularies that are associated with elementary mathematics lies in the hand of the subject teacher.

Language Development in Mathematics Through Vocabularies  
*The Mathematics Teacher*, Volume 40, Number 8, December 1947 (p. 389)

**Nunn, T. F.**  
No biographical data available

It is not sufficient that the teacher should have a competent knowledge of the subject which he professes...he must (in addition) have considered his science from the point of view at which it appears as a human acquisition.

In Lloyd William Taylor  
*Physics: The Pioneer Science* (Volume 1)  
Chapter 8 (p. 111)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1941

## TEACHING

**Acton, F. S.**  
No biographical data available

When an engineer apologetically approaches a statistician, graph in hand, and asks how he should fit a straight line to these points, the situation is not unlike the moment when one's daughter inquires where babies come from. There is a need for tact, there is a need for delicacy, but here is opportunity for enlightenment and it must not be discarded casually — or destroyed with the glib answer.

*National Bureau of Standards Report 12-10-51* (p. 1)  
U.S. Government Printing Office, Washington, D.C. 1951

### Author undetermined

It is not needful in the present day to discourage thinkers, they are not too numerous.

Exclusion of Opinion  
*Westminster Review*, Volume 29, 1838 (p. 49)

### Barzun, Jacques 1907–

French-born American educator, historian, and author

To begin with, no school subject should be treated like a bitter pill that will go down only if sugar-coated. The merest hint of this confirms the pupil's belief that he faces something dreadful and is a victim.

*Begin Here: The Forgotten Conditions of Teaching and Learning* (p. 81)  
University of Chicago Press, Chicago, Illinois, USA. 1992

### Berrill, Norman John 1903–96

English-born American biologist

A great teacher is not simply one who imparts knowledge to his students but is one who awakens their interest in the subject and makes them eager to pursue it for themselves. An outstanding teacher is a spark plug, not a fuel line.

In B.W. Rossiter  
*Journal of Chemical Education*, Volume 49, 1972 (p. 388)

### Blake, William 1757–1827

English poet, painter, and engraver

To teach doubt and Experiment  
Certainly was not what Christ meant.

*The Complete Writings of William Blake*  
The Everlasting Gospel, d, l. 49  
Houghton Mifflin Company, Boston, Massachusetts, USA. 1904–1917

### Boerhaave, Herman 1668–1738

Dutch Chemist, physician, and botanist

As you have put your selves under my care, to instruct you in the knowledge of Chemistry, I shall think it my duty to endeavor as much as possible to answer your expectations.

*Elements of Chemistry* (Volume 1)  
The Design (p. 1)  
Printed for J. & J. Pemberton. London, England. 1735

### Bruner, Jerome Seymour 1915–

American psychologist

The teaching of probabilistic reasoning, so very common and important a feature of modern science, is hardly developed in our educational system before college.

*The Process of Education*  
Chapter 3 (p. 45)  
Harvard University Press, Cambridge, Massachusetts, USA. 1961

### Darwin, Charles Robert 1809–82

English naturalist

I am inclined to give up the attempt as hopeless. Those who do not understand, it seems cannot be made to understand.

In Francis Darwin (ed.)  
*The Life and Letters of Charles Darwin* (Volume 2)  
Darwin to Hooker, June 5<sup>th</sup>, 1860 (p. 110)  
D. Appleton & Company, New York, New York, USA. 1896

### Ehrensvärd, Gosta Carl Henrik 1910–1980

Swedish biochemist

...consciousness will always be one dimension above comprehensibility.

Translated by Lennart Rodén  
*Man on Another World*  
Chapter X (p. 151)  
The University of Chicago Press, Chicago, Illinois, USA. 1961

### Eldridge, Paul 1888–1982

American educator

What difference does it make how often we lower and raise the bucket into the well if the bucket has no bottom?

*Maxims for a Modern Man*  
484  
T. Yoseloff, New York, New York, USA. 1965

### Faraday, Michael 1791–1867

English physicist and chemist

The most prominent requisite to a lecturer, though perhaps not really the most important, is a good delivery; for though to all true philosophers science and nature will have charms innumerable in every dress, yet I am sorry to say that the generality of mankind cannot accompany us one short hour unless the path is strewn with flowers.

In J.M. Thomas  
*Michael Faraday — and the Royal Institution*  
Chapter 5 (p. 97)  
Adam Hilger, Bristol, England. 1991

...a truly popular lecture cannot teach, and a lecture that truly teaches cannot be popular.

In J.M. Thomas  
*Michael Faraday — and the Royal Institution*  
Chapter 8 (p. 192)  
Adam Hilger, Bristol, England. 1991

A lecturer should appear easy and collected, undaunted and unconcerned, his thoughts about him and his mind

clear for the contemplation and description of his subject. His action should be slow, easy and natural consisting principally in changes of posture of the body, in order to avoid the air of stiffness or sameness that would otherwise be unavoidable.

In J.M. Thomas

*Michael Faraday — and the Royal Institution*

Chapter 3 (p. 18)

Adam Hilger. Bristol, England. 1991

**Feyerabend, Paul K.** 1924–94

Austrian-born American philosopher of science

A good teacher will not just make people accept a form of life, he will also provide them with means of seeing it in perspective and perhaps of even rejecting it.

In Gerard Radnitzky and Gunnar Andersson

*The Structure and Development of Science*

Dialogue on Method (p. 86)

D. Ridel Publishing Company. Dordrecht, Germany. 1979

**Feynman, Richard P.** 1918–88

American theoretical physicist

What I am going to tell you about is what we teach our physics students in the third or fourth year of graduate school.... It is my task to convince you not to turn away because you don't understand it. You see my physics students don't understand it.... That is because I don't understand it. Nobody does.

*QED: The Strange Theory of Light and Matter*

Chapter 1 (p. 9)

Princeton University Press. Princeton, New Jersey, USA. 1985

**Gauss, Johann Carl Friedrich** 1777–1855

German mathematician, physicist, and astronomer

I am giving this winter two courses of lectures to three students, of which one is only moderately prepared, the other less than moderately, and the third lacks both preparation and ability. Such are the onera of a mathematical profession.

*Briefwechsel zwischen Gauss und Bessel*

Letter 4, Letter to Bessel, January 7, 1810 (p. 107)

**Heiss, E. D.** 1899–?

No biographical data available

**Osborn, E. S.** 1897–?

No biographical data available

Science teaching has long concerned itself chiefly with the mastery of laws, facts, and principles to the neglect of certain of the less tangible, but non the less desirable outcomes, such as attitude of mind.

*Modern Methods and Materials for Teaching Science*

Chapter 2 (p. 15)

The Macmillan Company. New York, New York, USA. 1940

**Herbert, George** 1593–1633

English metaphysical poet

Teach me, my God and King,  
In all things thee to see,  
And what I do in any thing,  
To do it as for thee...

*The Elixir*

**Hutchison, Sir Robert Grieve** 1871–1960

English radiologist

Those of us who have the duty of training the raising generation of doctors...must not inseminate the virgin minds of the young with the tares of our own fads. It is for this reason that it is easily possible for teaching to be top "up to date." It is always well, before handing the cup of knowledge to the young, to wait until the froth has settled.

*British Medical Journal*, Volume 1, 1925 (p. 995)

**Huxley, Aldous** 1894–1963

English writer and critic

Ram it in, ram it in!  
Children's heads are hollow.  
Ram it in, ram it in!  
Still there's more to follow.

*Proper Studies*

Education (p. 111)

Chatto & Windus. London, England. 1957

**Huxley, Thomas Henry** 1825–95

English biologist

Therefore, the great business of the scientific teacher is, to imprint the fundamental, irrefragable facts of his science, not only by words upon the mind, but by sensible impressions upon the eye, and ear, and touch of the student, in so complete a manner, that every term used, or law enunciated, should afterwards call up vivid images of the particular structural, or other, facts which furnished the demonstration of the law, or the illustration of the term.

*Lay Sermons, Addresses and Reviews*

On the Study of Zoology (p. 112)

New York, New York, USA. 1872

**Jaffe, Bernard** 1896–1968

Freelance science writer

An effective way to teach the methods of science is to show how our great scientists reached their goals and how their minds worked in the process.

*Journal of Chemical Education*, Volume 15, 1938 (p. 383)

**Milne, A. A. (Alan Alexander)** 1882–1956

English poet, children's writer, and playwright

He learns.

He becomes educated.... He instigates knowledge.

American statistician

Teaching data analysis is not easy, and the time allowed is always far from sufficient.

The Future of Data Analysis

*Annals of Mathematical Statistics*, Volume 33, Number 1, March 1962

(p. 11)

**Weinberg, Alvin Martin** 1915–

American physicist

Very typically a field that was once fashionable eventually ceases to command the interest of the scientists in that field and becomes the concerns of scientists in another field. Nuclear chemistry is a good example of this trend: it began as nuclear physics, was taken over by the chemists, and now, insofar as nuclear properties of radionuclide are important for technology, parts of nuclear chemistry are being taken over by engineers. This tendency for fashions in science to come and go greatly complicates the teaching of science. For, as science proliferates, the discrepancy tends to widen between the older, consolidated body of scientific knowledge and the parts of science that excite the active researcher.

*Reflections on Big Science*

Chapter II (p. 46)

The MIT Press. Cambridge, Massachusetts, USA. 1967

**Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

No man can be a good teacher when his subject becomes inexplicable.

*Experiment in Autobiography*

Chapter 5, Section 2 (p. 176)

The Macmillan Company. New York, New York, USA. 1934

**Wilde, Oscar** 1854–1900

Irish wit, poet, and dramatist

Education is an admirable thing, but it is well to remember from time to time that nothing that is worth knowing can be taught.

...in teaching the science of chemistry it is preferable, first, to enumerate the facts in language independent

of any hypothesis, and then to enunciate the various hypotheses that have been and are held, showing how far each is in accordance or contradiction with the observed facts; rather than to mix up from the outset one particular hypothesis with the facts, so as finally to impress on the mind the manifestly erroneous conclusion that the facts have no evidence apart from the hypothesis that more or less clearly explains them.

Atoms

*The Athenaeum*, Number 2398, 11 October 1873 (p. 468)

## TECHNOLOGY

**Abbey, Edward** 1927–89

American environmentalist and nature writer

High technology has done us one great service: It has retaught us the delight of performing simple and primordial tasks — chopping wood, building a fire, drawing water from a spring...

*A Voice Crying in the Wilderness: Notes from a Secret Journal*

Chapter 10 (p. 92)

St. Martin's Press. New York, New York, USA. 1989

**Adler, Alfred** 1870–1937

Austrian psychiatrist

The confusion of science with technology is understandable. Certainly the two often appear to be aspects of a single larger process, as when science proposes new laws of physics, which inspire the development of a technology for their exploration, which in turn exposes inaccuracies in the laws and forces science to seek a more profound level of theory. But in fact their divergence is great. It is in the divergence of engagement from fulfillment, of means from ends...

*Atlantic Monthly*, Volume 279, Number 2, February 1997 (p. 16)

If truth is a path, then science explores it, and the brief stops along the way are where technologies begin (they build towns and pave a highway). Technology is results, science is process; though the two fuse and separate and then fuse once more, as ends and means must, their opposition is profound.

*Atlantic Monthly*, Volume 279, Number 2, February 1997 (p. 16)

**Allen, Charles M.**

American academic

If the human race wants to go to hell in a basket, technology can help it get there by jet. It won't change the desire or the direction, but it can greatly speed the passage.

Speech

Wake Forest University, Winston-Salem, North Carolina, April 25, 1967

**Ashby, Sir Eric** 1904–82

British botanist and educator

The habit of apprehending a technology in its completeness: this is the essence of technological humanism, and this is what we should expect education in the higher technology to achieve. I believe it could be achieved by making specialists' studies the core around which are grouped liberal studies which are relevant to these specialist studies. But they must be relevant; the path to culture should be through a man's specialism, not by-passing it.

*Technology and the Academics: An Essay on Universities and the Scientific Revolution*

Chapter 4 (p. 84)

St. Martin's Press. New York, New York, USA. 1959

A student who can weave his technology into the fabric of society can claim to have a liberal education; a student who cannot weave his technology into the fabric of society cannot claim even to be a good technologist.

*Technology and the Academics: An Essay on Universities and the Scientific Revolution*

Chapter 4 (p. 85)

**Cross, Hardy** 1885–1959

American engineer

Technological invention and innovation are the business of engineering. They are embodied in engineering change.

*Education for Innovation*

Introduction (p. 4)

Pergamon Press. New York, New York, USA. 1968

**Drexler, K. Eric** 1955–

American nanotechnology engineer and researcher, and futurist

The promise of technology lures us onward, and the pressure of competition makes stopping virtually impossible. As the technology race quickens, new developments sweep toward us faster, and a fatal mistake grows more likely. We need to strike a better balance between our foresight and our rate of advance. We cannot do much to slow the growth of our technology, but we can speed growth of foresight. And with better foresight, we will have a better chance to steer the technology race in safe directions.

*Engines of Creation*

Finding the Facts (p. 203)

Anchor Press/Doubleday. Garden City, New York, USA. 1986

**Dubos, René Jules** 1901–82

French-born American microbiologist and environmentalist

The idealistic and the demonic forces in nationalism are as powerful today as they were in the past but their expressions are changing, because human history is moving from its hallowed parochial traditions to the era of global technology.... The one credo of technology which has been accepted practically all over the world is that nature is to be regarded as a source of raw materials to be exploited for human ends rather than as an entity to be appreciated for its own value.

*A God Within*

Chapter 10 A Demon Within (p. 204)

Charles Scribner's Sons. New York, New York, USA. 1972

**Dyson, Freeman J.** 1923–

American physicist and educator

If we had a reliable way to label our toys good and bad, it would be easy to regulate technology wisely. But we can rarely see far enough ahead to know which road leads to damnation. Whoever concerns himself with big technology, either to push it forward or to stop it, is gambling in human lives.

*Disturbing the Universe*

Chapter 1 (p. 7)

Basic Books, Inc. New York, New York, USA. 1979

**Editorial**

Technology, when misused, poisons air, soil, water and lives. But a world without technology would be prey to something worse: the impersonal ruthlessness of the natural order, in which the health of a species depends on relentless sacrifice of the weak.

*New York Times*

29 August 1986

**Embree, Alice** 1945–

American peace and women's rights activist

America's technology has turned in upon itself; its corporate form makes it the servant of profits, not the servant of human needs.

Media Images 1 (p. 211)

Random House, Inc. New York, New York, USA. 1970

**Feynman, Richard P.** 1918–88

American theoretical physicist

For a successful technology, reality must take precedence over public relations, for Nature cannot be fooled.

*What Do You Care What Other People Think?*

Appendix F (p. 237)

W.W. Norton & Company, Inc. New York, New York, USA. 1988

**Frisch, Max** 1911–

Novelist, playwright and diarist

We live technologically, with man as the master of nature, man as the engineer, and let anyone who raises his voice against it stop using bridges not built by nature.... No electric light bulbs, no engines, no atomic energy, no calculating machines, no anesthetics — back to the jungle.

Translated by Michael Bullock

*Homo Faber: A Report* (p. 103)

Harcourt Brace Jovanovich. San Diego, California, USA. 1959

Technology is the knack of so arranging the world that we don't have to experience it.

In Rollo May

*The Cry for Myth*

Chapter Three (p. 57)  
W.W. Norton & Company, Inc. New York, New York, USA. 1991

**Gäbor, Dennis** 1900–79  
Hungarian-English physicist

The most important and urgent problems of the technology of today are no longer the satisfactions of the primary needs or of archetypal wishes, but the reparation of the evils and damages by technology of yesterday.

*Innovations: Scientific, Technological and Social*  
Introduction (p. 9)  
Oxford University Press, Inc. Oxford, England. 1970

**Galbraith, John Kenneth** 1908–2006  
Canadian-American economist

The imperatives of technology and organization, not the images of ideology, are what determine the shape of economics.

*The New Industrial State*  
Chapter I, Section 3 (p. 7)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1967

It is a commonplace of modern technology that there is a high measure of certainty that problems have solutions before there is knowledge of how they are to be solved.

*The New Industrial State*  
Chapter II, Section 4 (p. 19)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1967

**Gore, Al** 1948–  
45<sup>th</sup> vice-president of the United States and environmentalist

Mistakes in our dealings with Mother Nature can now have much larger unintended consequences, because many of our new technologies confer upon us new power without automatically giving us new wisdom.

*An Inconvenient Truth: The Planetary Emergency of Global Warming and What We Can Do About It* (p. 247)  
Rodale. New York, New York, USA. 2006

**Hanham, H. J.**  
No biographical data available

Great technological advances are always around the corner.  
Clio's Weapons  
*Daedalus*, Spring 1971 (p. 509)

**Heidegger, Martin** 1889–1976  
German philosopher

...the essence of technology...is nothing technological.

*Basic Writings*  
The Question Concerning Technology (p. 285)  
Harper & Row. New York, New York, USA. 1977

**Hoffer, Eric** 1902–83  
American longshoreman and philosopher

Where there is the necessary technical skill to move mountains, there is no need for the faith that moves mountains.

*The Passionate State of Mind, and Other Aphorisms*  
No. 12  
Harper & Brothers. New York, New York, USA. 1955

**Hoyle, Sir Fred** 1915–2001  
English mathematician and astronomer

Science is unique to human activities in that it possesses vast areas of certain knowledge. The collective opinion of scientists in these areas about any problem covered by them will almost always be correct. It is unlikely that much in these areas will be changed in the future, even in a thousand years. And because technology rests almost exclusively on these areas the products of technology work as they are intended to do.

*The Origin of the Universe and the Origin of Religion* (p. 17)  
Moyer Bell. Wakefield, Rhode Island, USA. 1993

**Huxley, Aldous** 1894–1963  
English writer and critic

Advances in technology do not abolish the institution of war; they merely modify its manifestations.

*Science, Liberty and Peace*  
Chapter II (p. 47)  
William Morrow & Company, Inc. New York, New York, USA. 1967

**Jones, Barry**  
No biographical data available

The reality is that many of the changes in science and technology are complex because of the complexity of them.

Sayings of the Week  
*Sydney Morning Herald*, 12 July 1986

**Kaysen, Carl** 1920–  
American economist

...the advance of technology, like the growth of population and industry, has also been proceeding exponentially.

Limits to Growth  
*Foreign Affairs*, Volume 50, Number 4, July 1972 (p. 664)

**Krutch, Joseph Wood** 1893–1970  
American naturalist, conservationist, and writer

Technology made large populations possible; large populations now make technology indispensable.

*Human Nature and the Human Condition*  
Chapter VIII (p. 145)  
Random House, Inc. New York, New York, USA. 1959

**Lerner, Max** 1902–92  
American educator and author

...a world technology means either a world government or world suicide.

*Actions and Passions: Notes on the Multiple Revolution of Our Time*  
The Imagination of H.G. Wells (p. 17)  
Simon & Schuster. New York, New York, USA. 1949

**Lilienthal, David E.** 1899–1981  
American businessman and Tennessee Valley Authority administrator

The machine that frees man's back of drudgery does not thereby make his spirit free. Technology has made us more productive, but it does not necessarily enrich our lives. Engineers can build us great dams, but only great people make a valley great. There is no technology of goodness. Men must make themselves spiritually free.

*TVA: Democracy on the March* (p. 218)  
Harper & Brothers. New York, New York, USA. 1944

**Lovins, Amory B.** 1947–  
American physicist and industry consultant

Any demanding high technology tends to develop influential and dedicated constituencies of those who link its commercial success with both the public welfare and their own. Such sincerely held beliefs, peer pressures, and the harsh demands that the work itself places on time and energy all tend to discourage such people from acquiring a similarly thorough knowledge of alternative policies and the need to discuss them.

*Energy Strategy*  
*Foreign Affairs*, Volume 55, Number 1, October 1976 (p. 93)

**Meadows, Donella H.** 1941–2001  
American scientist, sustainability advocate, and writer

**Meadows, Dennis L.**

American professor of systems science

Technology can relieve the symptoms of a problem without affecting the underlying causes. Faith in technology as the ultimate solution to all problems can thus divert our attention from the most fundamental problem — the problem of growth in a finite system — and prevent us from taking effective action to solve it.

*The Limits to Growth: The 30 Year Update*  
Chapter IV (p. 154)  
Chelsea Green Publishing. White River Junction, Vermont, USA. 2004

**Oppenheimer, J. Robert** 1904–67  
American theoretical physicist

The open society, the unrestricted access to knowledge, the unplanned and uninhibited association of men for its furtherance — these are what may make a vast, complex, ever growing, ever changing, ever more specialized and expert technological world, nevertheless a world of human community.

*Science and the Common Understanding*  
Chapter 6 (p. 95)  
Simon & Schuster. New York, New York, USA. 1953

In fact, most people — when they speak of Science as a good thing — have in mind such Technology as has altered the condition of their life.

*The Sacred Beetle and Other Great Essays in Science*

*Physics in the Contemporary World* (p. 194)  
Prometheus Books. Buffalo, New York, USA. 1984

## Organisation for Economic Co-Operation and Development

Science and technology...have a number of distinguishing characteristics [that] cause special problems or complications. One...is ubiquity: they are everywhere. They are at the forefront of social change. They not only serve as agents of change, but provide the tools for analysing social change. They pose, therefore, special challenges to any society seeking to shape its own future and not just to react to change or to the sometimes undesired effects of change.

*Technology on Trial: Public Participation in Decision-Making Related to Science and Technology*  
Chapter I, Section B (p. 16)  
Organization for Economic Co-operation and Development. Paris, France. 1979

**Pirsig, Robert M.** 1928–  
American writer

The way to solve the conflict between human values and technological needs is not to run away from technology, that's impossible. The way to resolve the conflict is to break down the barriers of dualistic thought that prevent a real understanding of what technology is — not an exploitation of nature, but the fusion of nature and the human spirit into a new kind of creation that transcends both.

*Zen and the Art of Motorcycle Maintenance: An Inquiry into Values*  
Part III, Chapter 25 (p. 291)  
William Morrow & Company, Inc. New York, New York, USA. 1974

**Pope Pius XII** 1876–1958  
Bishop of Rome

The Church welcomes technological progress and receives it with love, for it is an indubitable fact that technological progress comes from God and, therefore, can and must lead to Him.

Christmas message, 1953

**Reich, Charles A.**  
No biographical data available

Technology and production can be great benefactors of man, but they are mindless instruments, and if undirected they careen along with a momentum of their own. In our country, they pulverize everything in their path: the landscape, the natural environment, history and tradition, the amenities and civilities, the privacy and spaciousness of life, beauty, and the fragile, slow-growing social structures which bind us together.

*The Greening of America*  
Chapter 1 (pp. 5–6)  
Bantam Books. New York, New York, USA. 1971

**Rickover, Hyman G.** 1900–86

American naval nuclear engineer

...technology can have no legitimacy unless it inflicts no harm.

A Humanistic Technology

*Mechanical Engineering*, November 1982 (p. 45)

**Sagan, Carl** 1934–96

American astronomer and science writer

Many visionary leaders have imagined a time when the allegiance of an individual human being is not to his particular nation-state, religion, race, or economic group, but to mankind as a whole; when the benefit to a human being of another sex, race, religion, or political persuasion ten thousand miles away is as precious to us as to our neighbor or our brother. The trend is in this direction, but is agonizingly slow. There is a serious question whether such a global self-identification of mankind can be achieved before we destroy ourselves with the technological forces our intelligence has unleashed.

*The Cosmic Connection: An Extraterrestrial Perspective*  
Chapter 1 (p. 6)

Dell Publishing, Inc. New York, New York, USA. 1975

The so-called generation gap is a consequence of the rate of social and technological change.

Even within a human lifetime, the change is so great that many people are alienated from their own society. Margaret Mead had described older people as involuntary immigrants from the past to the present.

*The Cosmic Connection: An Extraterrestrial Perspective*  
Chapter 5 (p. 36)

Dell Publishing, Inc. New York, New York, USA. 1975

**Schumacher, Ernst Friedrich** 1911–77

German-born British economist

...the system of nature, of which man is a part, tends to be self-balancing, self-adjusting, self-cleansing. Not so with technology. ... The technology of mass production is inherently violent, ecologically damaging, self-defeating in terms of non-renewable resources, and stultifying for the human person.

*Small Is Beautiful*

Part II, Chapter V (p. 145)

Harper & Row, Publishers. New York, New York, USA. 1973

**Snow, Charles Percy** 1905–80

English novelist and scientist

Technology...is a queer thing. It brings you great gifts with one hand, and it stabs you in the back with the other.

*New York Times*, 15 March 1971

**Sophocles** 496 BCE–406 BCE

Greek playwright

Wonders are many, and none is more wonderful than man; the power that crosses the white sea, driven by the stormy south-wind, making a path under surges that threaten to engulf him...turning the soil with the offspring of horses, as the ploughs go to and fro from year to year. ... And speech, and windswift thought, and all the moods that mould a state, hath he taught himself; and how to flee the arrows of the frost, when 'tis hard lodging under the clear sky, and the arrows of the rushing rain; yea, he hath resource for all....

In *Great Books of the Western World* (Volume 5)

*The Plays of Sophocles*

Antigone, l. 333–340, 349–354

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Soulé, Michael E.**

American conservation biologist

Since we have no choice but to be swept along by this vast technological surge, we might as well learn to surf.

In David Western and Mary C. Pearl

*Conservation for the Twenty-First Century*

Conservation Biology in the Twenty-First Century: Summary and Outlook (p. 303)

Oxford University Press. New York, New York, USA. 1989

**Stevenson, Adlai E.** 1900–65

American political leader and diplomat

Technology, while adding daily to our physical ease, throws daily another loop of fine wire around our souls. It contributes hugely to our mobility, which we must not confuse with freedom. The extensions of our senses, which we find so fascinating, are not adding to the discrimination of our minds, since we need increasingly to take the reading of a needle on a dial to discover whether we think something is good or bad, or right or wrong.

My Faith in Democratic Capitalism

*Fortune Magazine*, October, 1955 (p. 156)

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

Our inventions are wont to be pretty toys, which distract our attention from serious things. They are but improved means to an unimproved end.

*The Writings of Henry David Thoreau* (Volume 2)

Walden

Chapter I (p. 84)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

**Toffler, Alvin** 1928–

American writer and futurist

...[a] great, growling engine of change — technology.

*Future Shock*

Chapter 2 (p. 25)

Random House, Inc. New York, New York, USA. 1979

...technology feeds on itself. Technology makes more technology possible...

*Future Shock*

Chapter 2 (p. 27)

Random House, Inc. New York, New York, USA. 1979

If technology...is to be regarded as a great engine, a mighty accelerator, then knowledge must be regarded as its fuel. And we thus come to the crux of the accelerative process in society, for the engine is being fed a richer and richer fuel every day.

*Future Shock*

Chapter 2 (pp. 29–30)

Random House, Inc. New York, New York, USA. 1979

**Wilkins, Maurice** 1916–2004

New Zealand-born English molecular biologist

Science, with technology, is the only way we have to avoid starvation, disease, and premature death. The misapplication of science and technology is due to the fact that the politics are wrong. Now my own view is that the politics are indeed wrong; but politics and science are so closely interrelated that they can hardly be separated.

In Horace Freeland Judson

*The Eighth Day of Creation: Makers of the Revolution in Biology*

DNA, You Know, Is Midas' Gold (p. 97)

Simon & Schuster. New York, New York, USA. 1979

## TEETH

**Alison, Richard** fl. 1606

English poet

Those cherries fairly do enclose  
Of orient pearl a double row,  
Which, when her lovely laughter shows,  
They look like rosebuds fill'd with snow.

*An Howre's Recreation in Musike*

**Berry, James H.**

No biographical data available

Brush them and floss them and take them to the dentist,  
Care for them and they will stay with you. Ignore them,  
and they'll go away.

Special Advertising Section

Irish-born English writer

...sweet Things are bad for the Teeth.

*The Prose Works of Jonathan Swift* (Volume the Fourth)

Polite Conversation, Dialogue II (p. 181)

Printed at the Shakespeare Head Press. Oxford, England. 1939–1968

**Twain, Mark (Samuel Langhorne**

**Clemens)** 1835–1910

American author and humorist

Adam and Eve had many advantages, but the principal  
one was that they escaped teething.

*The Tragedy of Pudd'nhead Wilson*

Chapter IV (p. 39)

New American Library. New York, New York, USA. 1980

**Wheeler, Hugh** 1912–87

English-born playwright

To lose a lover or even a husband or two during the  
course of one's life can be vexing. But to lose one's teeth  
is a catastrophe.

*Four by Sondheim*

A Little Night Music

Act II, Scene I (p. 269)

Applause. New York, New York, USA. 2000

## TEKTITES

**Faul, Henry** 1920–81

Czech-American geochronologist

To anyone who has worked with them, tektites are  
probably the most frustrating stones ever found on  
Earth.

Tektites are Terrestrial

*Science*, Volume 152, Number 3727, 3 June 1966 (p. 1341)

## TELEOLOGY

**Ayala, Francisco J.** 1934–

Spanish-American biologist and philosopher

Biological evolution can however be explained with-  
out recourse to a Creator or a planning agent external  
to the organisms themselves. The evidence of the fos-  
sil record is against any directing force, external or  
immanent, leading the evolutionary process toward  
specified goals. Teleology in the stated sense is, then,  
appropriately rejected in biology as a category of  
explanation.

Biology as an Autonomous Science

*American Scientist*, Volume 56, Number 3, Autumn 1968 (p. 213)

**Butler, Samuel** 1612–80

English novelist, essayist, and critic

Of all the questions now engaging the attention of those  
whose destiny has commanded them to take more or less  
exercise of mind, I know of none more interesting than  
that which deals with what is called teleology — that is to  
say, with design or purpose, as evidenced by the different  
parts of animals and plants.

*Evolution, Old and New*

Chapter I (p. 1)

Hardwicke & Bogue. London, England. 1879

**Reichenbach, Hans** 1891–1953

German philosopher of science

Teleology is analogism, is pseudo explanation; it belongs  
in speculative philosophy, but has no place in scientific  
philosophy.

*The Rise of Scientific Philosophy*

Chapter 12 (p. 195)

University of California Press. Berkeley, California, USA. 1951

**von Brücke, Ernst** 1819–92

German-born physicist and physiologist

Teleology is a lady without whom no biologist can  
live. Yet he is ashamed to show himself with her in  
public.

In W.I.B. Beveridge

*The Art of Scientific Investigation*

Chapter Five (p. 61)

W.W. Norton & Company, Inc. New York, New York, USA. 1957

**TELESCOPE**

**Bierce, Ambrose** 1842–1914  
American newspaperman, wit, and satirist

Telescope (n): A device having a relation to the eye similar to that of a telephone to the ear, enabling distant objects to plague us with a multitude of needless details.

*The Devil's Dictionary*

Doubleday & Company, Inc. Garden City, New York, USA. 1967

**Brecht, Bertolt** 1898–1956  
German writer

LUDOVICO: ...look at that queer tube thing they're selling in Amsterdam. I gave it a good looking-over. A green leather casing and a couple of lenses, one this way [he indicates a concave lens]. ... One of them's supposed to magnify and the other reduces. Anyone in his right mind would expect them to cancel out. They don't. The thing makes everything appear five times the size. That's science for you.

Translated by John Willett

*Life of Galileo*

Scene 1 (pp. 12–13)

Arcade Publishing. New York, New York, USA. 1994

**Butler, Samuel** 1612–80  
English novelist, essayist, and critic

And now the lofty telescope, the scale  
By which they venture Heav'n itself t' assail,  
Was raised, and planted full against the Moon...

*The Poetical Works of Samuel Butler* (Volume 2)

Elephant in the Moon

Bell & Daldy. London, England. 1835

**Carroll, Lewis (Charles Dodgson)** 1832–98  
English writer and mathematician

All this time the Guard was looking at her, first through a telescope, then through a microscope, and then through an opera-glass.

*The Complete Works of Lewis Carroll*

Through the Looking-Glass

Chapter III (pp. 169–170)

The Modern Library. New York, New York, USA. 1936

**Cedering, Siv** 1939–  
Swedish-American poet, painter, and sculptor

I have helped him polish the mirrors and lenses of our new telescope. It is the largest in existence. Can you imagine the thrill of turning it to some new corner of the heavens to see something never before seen from the earth?

*Science 84*

Letter from Caroline Herschel (1750–1840)

**Copeland, Leland S.** 1886–?  
American poet and writer

Then outward turn an optic tube

From some high, lonely hill,  
That we may glance at cosmic nooks  
And marvels rich, until  
The morning glow conceals those realms  
Where precious things distill,  
Far-forth beyond the utmost reach  
Of human hope and will.

*All Night with the Stars*

*Sky & Telescope*, November 1949

Many of us find that to leave bright room and cozy chair for the dark world outside is contrary to nature, like a moth flying from the light. As a bather plunges into cold water, so the sky hunter must immerse himself in darkness before he will find it comfortable in the night.... So rich is this nocturnal wonderland that even for smallest telescopes numerous objects await observation. A larger lens or mirror is not an assured benefit. Devotion and patience are as important as light grasp.

*All Night with the Stars*

*Sky & Telescope*, November 1949

**de Grasse Tyson, Neil** 1958–  
American astrophysicist and writer

The most famous telescope in modern times is, of course, the Hubble, known to the public primarily through the beautiful, full-color, high-resolution images it has produced of objects in the universe. The problem here is that after viewing such exhibits, you wax poetic about the beauty of the universe yet are no closer than before to understanding how it all works. ...

*Over the Rainbow*

*Natural History*, Volume 110, Number 7, September 2001 (p. 34)

While much good science has come from the Hubble telescope (including the most reliable measure to date for the expansion rate of the universe), you would never know from media accounts that the foundation of our cosmic knowledge continues to flow primarily from the analysis of spectra and not from looking at pretty pictures.

*Over the Rainbow*

*Natural History*, Volume 110, Number 7, September 2001 (p. 34)

**Dressler, Alan**  
American astronomer

To look into space is to look back into time, and telescopes are time machines we can ride nearly all the way back to creation itself.

*Observing Galaxies Through Time*

*Sky and Telescope*, Volume 82, Number 2, August 1991 (p. 126)

**Emerson, Ralph Waldo** 1803–82  
American lecturer, poet, and essayist

The sight of a planet through a telescope is worth all the course on astronomy...

*Ralph Waldo Emerson: Essays and Lectures*

Essays: Second Series  
New England Reformers (p. 594)  
The Library of America. New York, New York, USA. 1983

**Everett, Edward** 1794–1865  
American statesman, educator, and orator

The telescope may be likened to a wondrous cyclopean eye, endued with superhuman power, by which the astronomer extends the reach of his vision to the further heavens, and surveys galaxies and universes compared with which the solar system is but an atom floating in the air.

An Oration  
The Uses of Astronomy, Versility of Genius, Albany, New York, 28 July 1856 (p. 22)  
Ross & Tousey. New York, New York, USA. 1856

**Ferris, Timothy** 1944–  
American science writer

Telescopes are like musical instruments, in that you get out of them what you put into them.

*Seeing in the Dark*  
Appendix A (p. 299)  
Simon & Schuster. New York, New York, USA. 2002

**Frost, Robert** 1874–1963  
American poet

Man acts more like the poor bear in a cage  
That all day fights a nervous inward rage...  
The toenail click at the shuffle of his feet,  
The telescope at one end of his beat,  
And at the other end the microscope,  
Two instruments of nearly equal hope...

*Complete Poems of Robert Frost*  
The Bear  
Henry Holt & Company. New York, New York, USA. 1949

He burned his house down for the fire insurance  
And spent the proceeds on a telescope  
To satisfy a lifelong curiosity  
About our place among the infinities.

*Complete Poems of Robert Frost*  
The Star Splitter  
Henry Holt & Company. New York, New York, USA. 1949

**Galilei, Galileo** 1564–1642  
Italian physicist and astronomer

O telescope, instrument of much knowledge, more precious than any scepter! Is not he who holds thee in his hand made king and lord of the works of God?

In William H. Jefferys and R. Robert Robbins  
*Discovering Astronomy* (p. 174)  
John Wiley & Sons, Inc. New York, New York, USA. 1995

**Gamow, George** 1904–68  
Russian-born American physicist

My telescope  
Has dashed your hope;

Your tenets are refuted.

Let me be terse:

Our universe

Grows daily more diluted!

*Mr. Tompkins in Paperback*  
Chapter 6 (p. 63)  
At The University Press. Cambridge, England. 1965

**Hankins, Arthur Preston** 1880–1932  
No biographical data available

Midnight — with Cole of Spyglass Mountain seated high up on his ladder, his far-seeing blue-gray eye glued to the powerful five-hundred-diameter eye-piece of his telescope. Unnoticeably the refractor followed the planet in its endless flight. The driving clock purred softly, the only sound on Spyglass Mountain — cold and still and fraught with uncanny tensity.

*Cole of Spyglass Mountain* (p. 302)  
Dodd, Mead & Company. New York, New York, USA. 1923

**Hastings, C. S.**  
No biographical data available

Let us therefore congratulate the possessors of this noble instrument, wish them God speed in their search after knowledge, while we remind them that although no astronomer can ever make another discovery that will rival that made by the insignificant tube first directed toward the heavens by the Paduan philosopher, yet no mind can weigh the importance of any truth, however trivial in appearance, which may be added to that store which we call “science.”

*Annual Report of the Board of Regents of the Smithsonian Institution, 1893*  
The History of the Telescope (p. 109)  
Government Printing Office. Washington, D.C. 1894

**Herschel, Friedrich Wilhelm** 1738–1822  
English astronomer

In the old Telescope’s tube we sit,

And the shades of the past around us flit...

*Herschel at the Cape*  
Introduction (p. xix)  
University of Texas Press. Austin, Texas, USA. 1969

I will make such telescopes and see such things!

In Grant Allen  
*Biographies of Working Men*  
Chapter IV

**Holmes, Oliver Wendell** 1809–94  
American physician, poet, and humorist

I was riding on the outside of a stage-coach from London to Windsor, when all at once a picture familiar to me from my New England village childhood came upon me like a reminiscence rather than a revelation. It was a mighty bewilderment of slanted masts and spars and ladders and

ropes, from the midst of which a vast tube, looking as if it might be a piece of ordnance such as the revolted angels battered the walls of Heaven with, according to Milton, lifted its muzzle defiantly towards the sky.

*The Poet at the Breakfast-Table*

Chapter VIII (p. 219)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1895

I love all sights of earth and skies,  
From flowers that grow to stars that shine;  
The comet and the penny show,  
All curious things above, below...  
But most I love the tube that spies  
The orbs celestial in their march;  
That shows the comet as it whisks  
Its tail across the planet's disk,  
Or wheels so close against the sun  
We tremble at the thought of risks  
Our little spinning ball may run.

*The Complete Poetical Works of Oliver Wendell Holmes*

The Flaneur

Houghton Mifflin Company. Boston, Massachusetts, USA. 1899

### **Hubble, Edwin Powell** 1889–1953

American astronomer

The exploration of space is an achievement of great telescopes.

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### **Mitchell, Maria** 1818–89

American astronomer and educator

The tube of Newton's first telescope...was made from the cover of an old book—a little glass at one end of the tube and a large brain at the other...

In Helen Wright

*Sweeper in the Sky*

Chapter 9 (p. 168)

Macmillan & Company. New York, New York, USA. 1949

### **Moulton, Forest Ray** 1872–1952

American astronomer

The eye of the fabled Cyclops was not even prophetic of the great telescope at Mt. Wilson, the pupil of whose eye, so to speak, is 100 inches in diameter.

In H.H. Newman (ed.)

*The Nature of the World and of Man*

Astronomy (p. 1)

The University of Chicago Press. Chicago, Illinois, USA. 1927

**Mullaney, James**

American astronomy writer, lecturer, and consultant

The telescope in particular need to be regarded as not just another gadget or material possession but a wonderful, magical gift to humankind — a window on creation, a time machine, a spaceship of the mind that enables us to roam the universe in a way that is surely the next best thing to being out there.

Focal Point

*Sky & Telescope*, March 1990 (p. 244)

**Newton, Sir Isaac** 1642–1727

English physicist and mathematician

If the theory of making telescopes could at length be fully brought into practice, yet there would be certain bounds beyond which telescopes could not perform. For the air through which we look upon the stars is in a perpetual tremor; as may be seen by the tremulous motion of shadows cast from high towers, and by the twinkling of the fixed stars.... The only remedy is a most serene and quiet air, such as may perhaps be found on the tops of the highest mountains above the gossamer clouds.

In *Great Books of the Western World* (Volume 34)

English poet

My periwig's askew, my ruffle stained

With grease from my new telescope!

*The Torch Bearers: Watchers of the Sky*

William Herschel Conducts (p. 231)

Frederick A. Stokes Company. New York, New York, USA. 1922

**Panek, Richard**

No biographical data available

The relationship between the telescope and our understanding of the dimensions of the universe is in many ways the story of modernity. It's the story of how the development of one piece of technology has changed the way we see ourselves and of how the way we see ourselves has changed this piece of technology, each set of changes reinforcing the other over the course of centuries until, in time, we've been able to look back and say with some certainty that the pivotal division between the world we inhabit today and the world of our ancestors was the invention of this instrument.

*Seeing and Believing: How the Telescope Opened Our Eyes and Minds to the Heavens*

Prologue (p. 4)

The Viking Press. New York, New York, USA. 1998

**Peltier, Leslie C.** 1900–80

American comet hunter

Old telescopes never die, they are just laid away.

*Starlight Nights*

Chapter 28 (p. 232)

Harper & Row, Publishers. New York, New York, USA. 1965

**Rowan-Robinson, Michael** 1942–

English astronomer, astrophysicist, and professor

Once it was the navigators crossing the oceans to find new continents and new creatures, the globe opening up before their eyes, and at the same time the unknown areas, white on the map, shrinking.

Now it is the astronomers' telescopes penetrating the void to find new worlds, voyages of discoveries made with giant metal eyes, seeing light we cannot see.

*Our Universe: An Armchair Guide*

Cosmic Landscape

After Preface

W.H. Freeman & Company. New York, New York, USA. 1990

**Ryder-Smith, Roland**

Part 2 (p. 119)

Random House, Inc. New York, New York, USA. 1996

## TEMPERATURE

### **Feynman, Richard P.** 1918–88

American theoretical physicist

John and his father go out to look at the stars. John sees two blue stars and a red star. His father sees a green star, a violet star, and two yellow stars. What is the total temperature of the stars seen by John and his father?

*Surely You're Joking, Mr. Feynman!: Adventures of a Curious Character*

Judging Books by Their Covers (p. 293)

W.W. Norton & Company, Inc. New York, New York, USA. 1985

## TEMPLE OF SCIENCE

### **Einstein, Albert** 1879–1955

German-born physicist

Many kinds of men devote themselves to Science, and not all for the sake of Science herself. There are some who come into her temple because it offers them the opportunity to display their particular talents. To this class of men science is a kind of sport in the practice of which they exult, just as an athlete exults in the exercise of his muscular prowess. There is another class of men who come into the temple to make an offering of their brain pulp in the hope of securing a profitable return. The men are scientists only by the chance of some circumstance which offered itself when making a choice of career... it is clear that if the men who have devoted themselves to science consisted only of the two categories I have mentioned, the edifice could never have grown to its present proud dimensions. ...

In Max Planck

*Where Is Science Going?*

Prologue (p. 7)

W.W. Norton & Company, Inc. New York, New York, USA. 1932

I am inclined to agree with Schopenhauer in thinking that one of the strongest motives that lead people to give their lives to art and science is the urge to flee from everyday life, with its drab and deadly dullness, and thus to unshackle the chains of one's own transient desires, which supplant one another in interminable succession so long as the mind is fixed on the horizon of daily environment.

In Max Planck

*Where Is Science Going?*

Prologue (p. 7)

W.W. Norton & Company, Inc. New York, New York, USA. 1932

In the temple of science are many mansions, and various indeed are they that dwell therein and the motives that have led them thither. Many take to science out of a joyful sense of superior intellectual power; science is their own special sport to which they look for vivid experience and the satisfaction of ambition; many others are to be found in the temple who have offered the products of their brains on this altar for purely utilitarian purposes. Were an angel of the Lord to come and drive all the people belonging to these two categories out of the temple, the assemblage would be seriously depleted, but there would still be some men, of both present and past times, left inside.

*Ideas and Opinions*

Principles of Research (p. 224)

Crown Publishers, Inc. New York, New York, USA. 1954

**Gregory, Sir Richard Arman** 1864–1952

British science writer and journalist

To qualify for admission into the temple of science it is necessary to offer sacrifices at the altar of knowledge; and only those with sincere regard for truth will find their gifts acceptable.

*Discovery; or, The Spirit and Service of Science*

Chapter III (p. 54)

Macmillan & Company Ltd. London, England. 1918

**Pasteur, Louis** 1822–95

French chemist

Preconceived ideas are like searchlights which illuminate the path of the experimenter and serve him as a guide to interrogate nature. They become a danger only if he transforms them into fixed ideas — this is why I should like to see these profound words inscribed on the threshold of all the temples of science: “The greatest derangement of the mind is to believe in something because one wishes it to be so”...

In René Dubos

*Louis Pasteur: Free Lance of Science*

Speech to the French Academy of Medicine, July 18, 1876, Chapter XIII (p. 376)

Little, Brown & Company. Boston, Massachusetts, USA. 1950

**Planck, Max** 1858–1947

German physicist

Anybody who has been seriously engaged in scientific work of any kind realizes that over the entrance to the gates of the temple of science are written the words: *Ye must have faith*. It is a quality which the scientist cannot dispense with.

*Where Is Science Going?*

Epilogue (p. 214)

W.W. Norton & Company, Inc. New York, New York, USA. 1932

**TENSOR****Bell, E. T. (Eric Temple)** 1883–1960

Scottish-American mathematician and educator

...the tensor calculus that cost Einstein an effort to master is now a regular part of an undergraduate course in the better technical schools. The subject has been so thoroughly emulsified that even an eighteen-year-old can swallow it without regurgitating. But this does not prove that wither his brain or his stomach is stronger than Einstein's was.

*Mathematics: Queen and Servant of Science*

A Metrical Universe (p. 211)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1951

**Benford, Gregory** 1941–

American physicist and science fiction novelist

There was a blithe certainty that came from first comprehending the full Einstein field equations, arabesques of Greek letters clinging tenuously to the page, a gossamer web. They seemed insubstantial when you first saw them, a string of squiggles. Yet to follow the delicate tensors as they contracted, as the superscripts paired with subscripts, collapsing mathematically into concrete classical entities — potential; mass; forces vectoring in a curved geometry — that was a sublime experience. The iron fist of the real, inside the velvet glove of airy mathematics.

*Timescape*

Chapter 15 (pp. 175–176)

Simon & Schuster. New York, New York, USA. 1980

**Bester, Alfred** 1913–87

American science fiction writer

Tensor, said the Tensor

Tensor, said the Tensor

Tensor, apprehension,

And dissension have begun.

*The Demolished Man*

Chapter iii (p. 48)

Shasta Publishers. Chicago, Illinois, USA. 1953

**Einstein, Albert** 1879–1955

German-born physicist

...the energy tensor can be regarded only as a provisional means of representing matter. In reality, matter consists of electrically charged particles...

*The Meaning of Relativity* (p. 82)

Princeton University Press. Princeton, New Jersey, USA. 1945

...in the case of the equations of gravitation it is the four-dimensionality and the symmetric tensor as expression for the structure of space that, together with the invariance with respect to the continuous transformation group, determine the equations all but completely.

Translated by Paul Arthur Schlipp

*Albert Einstein: Autobiographical Notes* (p. 85)

The Open Court Publishing Company. La Salle, Illinois, USA. 1979

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

We want to express physical laws in such a way that it shall be obvious when we are expressing the same law by reference to two different systems of co-ordinates, so that we shall not be misled into supposing we have different laws when we have one law in different words. This is accomplished by the method of tensors.

*The ABC of Relativity*

Chapter XII (p. 110)

George Allen & Unwin Ltd. London, England. 1958

**van Dine, S. S.** 1888–1939

American art critic and author

The tensor is known to all advanced Mathematicians. It is one of the technical expressions used in non-Euclidean geometry; and though it was discovered by Riemann in connection with a concrete problem in physics, it has now become of widespread importance in the mathematics of relativity. It's highly scientific in the abstract sense, and can have no direct bearing on Sprigg's murder.

*The Bishop Murder Case*

Chapter 9

Charles Scribner's Sons. New York, New York, USA. 1929

**Weyl, Hermann** 1885–1955

German mathematician

The conception of tensors is possible owing to the circumstance that the transition from one co-ordinate system to another expresses itself as a linear transformation in the differentials. One here uses the exceedingly fruitful mathematical device of making a problem “linear” by reverting to infinitely small quantities.

Translated by Henry L. Brose

*Space — Time — Matter*

Chapter II, Section 13 (p. 104)

Dover Publications, Inc. New York, New York, USA. 1922

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

The idea that physicists would in future have to study the theory of tensors created real panic amongst them following the first announcement that Einstein's predictions had been verified.

In Jean-Pierre Luminet

*Black Holes* (p. 47)

Cambridge University Press. New York, New York, USA. 1992

## TESTING

**Colton, Charles Caleb** 1780–1832

English sportsman and writer

Examinations are formidable, even to the best prepared, for the greatest fool may ask more than the wisest man can answer.

*Lacon; or Many Things in a Few Words* (p. 170)

William Gowans. New York, New York, USA. 1849

**da Vinci, Leonardo** 1452–1519

Italian High Renaissance painter and inventor

It is by testing that we discern fine gold.

*Leonardo da Vinci's Note Books* (p. 60)

Duckworth & Company. London, England. 1906

**Raleigh, Sir Walter** 1552–1618

Renaissance English courtier and poet

No instrument smaller than the World is fit to measure men and women: Examinations measure Examinees.

*Laughter from a Cloud*

Some Thoughts on Examinations (p. 120)

Constable. London, England. 1923

**Wilde, Oscar** 1854–1900

Irish wit, poet, and dramatist

Examinations are pure humbug from beginning to end.

*Epigrams: Phrases and Philosophies for the Use of the Young*

Oscariana

A.R. Keller. London, England. 1907

In examinations the foolish ask questions that the wise cannot answer.

Phrases and Philosophies

A.R. Keller. London, England. 1907

## THEOREM

**Feynman, Richard P.** 1918–88

American theoretical physicist

We decided that “trivial” means “proved.” So we joked with the mathematicians: “We have a new theorem — that mathematicians can prove only trivial theorems, because every theorem that's proved is trivial.”

*Surely You're Joking, Mr. Feynman!: Adventures of a Curious Character*

A Map of a Cat? (p. 70)

W.W. Norton & Company, Inc. New York, New York, USA. 1985

**Hofstadter, Douglas R.** 1945–

American academic

All the limitative Theorems of metamathematics and the theory of computation suggest that once the ability to represent your own structure has reached a certain critical point, that is the kiss of death: it guarantees that you can never represent yourself totally. Gödel's Incompleteness Theorem, Church's Undecidability Theorem, Turing's Halting Theorem, Tarski's Truth Theorem — all have the flavor of some ancient fairy tale which warns you that “To seek self-knowledge is to embark on a journey which...will always be incomplete, cannot be charted on any map, will never halt, cannot be described.”

*Gödel, Escher, Bach: An Eternal Golden Braid*

Part II, Chapter XX (p. 697)

Basic Books, Inc. New York, New York, USA. 1979

**Howe, Roger** 1945–

American mathematician

Everybody knows that mathematics is about Miracles, only mathematicians have a name for them: Theorems.

MAA address, Baltimore, January 9, 1998

**Huxley, Aldous** 1894–1963

English writer and critic

Too much theorizing, as we all know, is fatal to the soul...

*Tomorrow and Tomorrow and Tomorrow and Other Essays*

The Education of an Amphibian (p. 7)  
Harper & Brothers. New York, New York, USA. 1956

**Papert, Seymour** 1928–  
South African mathematician

For what is important when we give children a theorem to use is not that they should memorize it. What matters most is that by growing up with a few very powerful theorems one comes to appreciate how certain ideas can be used as tools to think with over a lifetime. One learns to enjoy and to respect the power of powerful ideas. One learns that the most powerful idea of all is the idea of powerful ideas.

*Mindstorms: Children, Computers and Powerful Ideas*  
Chapter 3 (p. 76)  
Basic Books, Inc. New York, New York, USA. 1980

**Planck, Max** 1858–1947  
German physicist

...Leibniz's theorem...sets forth fundamentally that of all the worlds that may be created, the actual world is that which contains, besides the unavoidable evil, the maximum good.

Translated by R. Jones and D.H. Williams  
*A Survey of Physics: A Collection of Lectures and Essays*  
The Principle of Least Action (p. 71)  
Methuen & Company Ltd. London, England. 1925

**Poincaré, Henri** 1854–1912  
French mathematician and theoretical astronomer

I beg your pardon; I am about to use some technical expressions, but they need not frighten you for you are not obliged to understand them. I shall say, for example, that I have found the demonstration of such a theorem under such circumstances. This theorem will have a barbarous name unfamiliar to many, but that is unimportant; what is of interest for the psychologist is not the theorem but the circumstances...

*The Foundations of Science*  
Science and Method. Book I  
Chapter III (p. 387)  
The Science Press. New York, New York, USA. 1913

**Sylvester, James Joseph** 1814–97  
English mathematician

No mathematician now-a-days sets any store on the discovery of isolated theorems, except as affording hints of an unsuspected new sphere of thought, like meteorites detached from some undiscovered planetary orb of speculation.

*The Collected Mathematical Papers of James Joseph Sylvester* (Volume 2)  
Notes to the Exeter Association Address (p. 717)  
University Press. Cambridge, England. 1904–1912

**Truesdell, Clifford** 1919–2000  
American mathematician, natural philosopher, historian of mathematics

**Noll, Walter**  
Mathematician

Pedantry and sectarianism aside, the aim of theoretical physics is to construct mathematical models such as to enable us, from the use of knowledge gathered in a few observations, to predict by logical processes the outcomes in many other circumstances. Any logically sound theory satisfying this condition is a good theory, whether or not it be derived from "ultimate" or "fundamental" truth. It is as ridiculous to deride continuum physics because it is not obtained from nuclear physics as it would be to reproach it with lack of foundation in the Bible.

*The Non-Linear Field Theories of Mechanics* (2<sup>nd</sup> edition)  
Introduction, Section 2 (p. 4)  
Springer-Verlag. Berlin, Germany. 1992

**Veblen, Oswald** 1880–1960  
American mathematician

The abstract mathematical theory has an independent, if lonely existence of its own. But when a sufficient number of its terms are given physical definitions it becomes a part of a vital organism concerning itself at every instant with matters full of human significance. Every theorem can be given the form "if you do so and so, such and such will happen."

Remarks on the Foundation of Geometry  
*Bulleting of the American Mathematical Association*, Volume 31, 1925  
(p. 135)

## THEORIST

**Boltzmann, Ludwig Edward** 1844–1906  
Austrian physicist

A friend of mine has defined the practical man as one who understands nothing of theory and the theoretician as an enthusiast who understands nothing at all.

*Theoretical Physics and Philosophical Problems. Selected Writings*  
On the Significance of Theories (p. 33)  
Reidel Publishing Company. Boston, Massachusetts, USA. 1974

**Cardozo, Benjamin N.** 1870–1938  
American jurist

The theorist has a hard time to make his way in an ungrateful world. He is supposed to be indifferent to realities; yet his life is spent in the exposure of realities, which, till illuminated by his searchlight, were hidden and unknown.

*The Growth of the Law*  
Chapter II (p. 21)  
Yale University Press. New Haven, Connecticut, USA. 1924

**Crick, Francis Harry Compton** 1916–2004  
English biochemist

Theorists almost always become too fond of their own ideas, often simply by living with them too long. It is difficult to believe that one's cherished theory, which really works rather nicely in some respects, may be completely false.

*What Mad Pursuit: A Personal View of Scientific Discovery*  
Chapter 13 (p. 141)  
Basic Books, Inc. New York, New York, USA. 1988

Theorists will often complain that experimentalists ignore their work. Let a theorist produce just one theory of the type sketched above (i.e., one that makes non-obvious verified predictions) and the world will jump to the conclusion (not always true) that he has a special insight into difficult problems.

*What Mad Pursuit: A Personal View of Scientific Discovery*  
Chapter 13 (p. 142)  
Basic Books, Inc. New York, New York, USA. 1988

[I]t is virtually impossible for a theorist, by thought alone, to arrive at the correct solution to a set of biological problems.... The best a theorist can hope to do is to point an experimentalist in the right direction....

*What Mad Pursuit: A Personal View of Scientific Discovery*  
Chapter 10 (pp. 109–110)  
Basic Books, Inc. New York, New York, USA. 1988

**Lederman, Leon** 1922–  
American high-energy physicist

The sequence of theorist, experimenter, and discovery has occasionally been compared to the sequence of farmer, pig, truffle. The farmer leads the pig to an area where there might be truffles. The pig searches diligently for the truffles. Finally, he locates one, and just as he is about to devour it, the farmer snatches it away.

*The God Particle: If the Universe Is the Answer, What Is the Question?*  
Chapter 1 (p. 16)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1993

**Marshall, Alfred** 1842–1924  
English economist

...the most reckless and treacherous of all theorists is he who professes to let facts and figures speak for themselves.

In A.C. Pigou (ed.)  
*Memorials of Alfred Marshall*  
Chapter VI (p. 168)  
Macmillan & Company Ltd. London, England. 1925

**Spencer-Brown, George** 1923–  
English mathematician and polymath

A theorem is no more proved by logic and computation than a sonnet is written by grammar and rhetoric, or than a sonata is composed by harmony and counterpoint, or a picture painted by balance and perspective. ...[T]hese forms are, in the final analysis, parasitic on — they have no existence apart from — the creativity of the work

itself. Thus the relation of logic to mathematics is seen to be that of an applied science to its pure ground, and all applied science is seen as drawing sustenance from a process of creation with which it can combine to give structure, but which it cannot appropriate.

*Laws of Form*  
Chapter 12 (p. 102)  
George Allen & Unwin Ltd. London, England. 1969

**Truesdell, Clifford** 1919–2000  
American mathematician, natural philosopher, historian of mathematics  
**Noll, Walter**  
Mathematician

The task of the theorist is to bring order into the chaos of the phenomena of nature, to invent a language by which a class of these phenomena can be described efficiently and simply.

*The Non-Linear Field Theories of Mechanics* (2nd edition)  
Introduction, Section 2 (p. 4)  
Berlin: Springer-Verlag. 1992

## THEORY

**Adams, Douglas** 1952–2001  
English author, comic radio dramatist, and musician

There is a theory which states that if ever anyone discovers exactly what the Universe is for and why it is here, it will instantly disappear and be replaced by something even more bizarre and inexplicable.

There is another which states that this has already happened.

*The Ultimate Hitchhiker's Guide to the Galaxy*  
The Restaurant at the End of the Universe  
Chapter 1 (p. 148)  
Ballantine Books. New York, New York, USA. 2002

**Asimov, Isaac** 1920–92s  
American writer and biochemist

Theories are not so much wrong as incomplete.

*The Relativity of Wrong*  
The Relativity of Wrong (p. 222)  
Doubleday & Company, Inc. New York, New York, USA. 1988

Once we learn to expect theories to collapse and to be supplanted by more useful generalizations, the collapsing theory becomes not the gray remnant of a broken today, but the herald of a new and brighter tomorrow.

In Timothy Ferris (ed.)  
*The World Treasury of Physics, Astronomy, and Mathematics*  
The Nature of Science (p. 783)  
Little, Brown & Company. Boston, Massachusetts, USA. 1991

Scientific theories have a tendency to fit the intellectual fashions of the time.

*Asimov on Chemistry*  
The Weighting Game (p. 3)  
Anchor Press/Doubleday. Garden City, New York, USA. 1974

**Ayer, Alfred Jules** 1910–89  
English philosopher

There never comes a point where a theory can be said to be true. The most that one can claim for any theory is that it has shared the successes of all its rivals and that it has passed at least one test which they have failed.

*Philosophy in the Twentieth Century*  
Chapter IV (p. 133)  
Random House, Inc. New York, New York, USA. 1982

**Berkeley, Edmund C.** 1909–88  
American computer theoretician

The World is more complicated than most of our theories make it out to be.

Right Answers — A Short Guide for Obtaining Them  
*Computers and Automation*, Volume 18, Number 10, September 1969 (p. 20)

**Bernard, Claude** 1813–78  
French physiologist

A theory is merely a scientific idea controlled by experiment.

Translated by Henry Copley Greene  
*An Introduction to the Study of Experimental Medicine*  
Part One, Chapter I, Section vi (p. 26)  
Henry Schuman, Inc. New York, New York, USA. 1927

**Bernstein, Jeremy** 1929–  
American physicist, educator, and writer

I would insist that any proposal for a radically new theory in physics or in any other science, contain a clear explanation of why the precedent science worked. What new domain of experience is being explored by the new science, and how does it meld with the old?

*Cranks, Quarks, and the Cosmos: Writings on Science*  
Chapter I (p. 18)  
Basic Books, Inc. New York, New York, USA. 1993

**Berzelius, Jöns Jacob** 1779–1848  
Swedish chemist

All our theory is but a means of consistently conceptualizing the inward processes of phenomena, and it is presumable and adequate when all scientifically known facts can be deduced from it.

In Edward O. Wilson  
*The Diversity of Life*  
Chapter One (p. 8)  
W.W. Norton & Company, Inc. New York, New York, USA. 1992

This mode of conceptualization [theorizing] can...well be false and...is so frequently. Even though, at a certain period in the development of science, it may match the purpose just as well as a true theory. Experience is augmented, facts appear which do not agree with it, and one is forced to go in search of a new mode of conceptualization within which these facts can also be accommodated;

and in this manner, no doubt, modes of conceptualization will be altered from age to age, as experience is broadened, and the complete truth may ever be attained.

In Edward O. Wilson  
*The Diversity of Life*  
Chapter One (pp. 8–9)  
W.W. Norton & Company, Inc. New York, New York, USA. 1992

**Bethe, Hans** 1906–2005  
American physicist

Scientific theories are not overthrown; they are expanded, refined, and generalized.

In Victor F. Weisskopf  
*Physics in the Twentieth Century: Selected Essays*  
Forward (p. x)  
The MIT Press. Cambridge, Massachusetts, USA. 1972

**Bigelow, S. Lawrence** 1870–1947  
American physical chemistry professor

Our laws summarize our knowledge, our theories summarize our beliefs.... Laws codify established facts, they are history; theories contain the possibilities of the future. Theories may be considered as knowledge in the state of flux.

*Theoretical and Physical Chemistry*  
Section I, Chapter II (pp. 15–16)  
The Century Company. New York, New York, USA. 1917

**Bohr, Niels Henrik David** 1886–1962  
Danish physicist

...your theory is crazy. The question which divides us is whether it is crazy enough to have a chance of being correct.

In Martin Gardner  
*The Ambidextrous Universe* (p. 280)

**Bondi, Sir Hermann** 1919–2005  
English mathematician and cosmologist

No theory, however attractive, merits scientific consideration unless it sticks out its neck sufficiently to be disproved by experiment or observation.

In Robert M. Hutchins and Mortimer J. Adler (eds.)  
*The Great Ideas Today, 1966*  
Astronomy and the Physical Sciences (p. 263)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1966

**Born, Max** 1882–1970  
German-born English physicist

The human mind is conservative, and the scientist makes no exception from this rule. He will accept a new theory only if it stands the trial of many experimental tests.

*Les Prix Nobel. The Nobel Prizes in 1954*  
Nobel banquet speech for award received in 1954  
Nobel Foundation. Stockholm, Sweden. 1955

A theory, to be of any real use to us, must satisfy two tests. In the first place, it must not make use of any ideas which

are not confirmed by experiment. Special assumptions must not be dragged in merely to meet some particular difficulty. In the second place, the theory must not only explain all the facts known already, but must also enable us to foresee other facts which were not known before and can be tested by further experiment.

*The Restless Universe*

Chapter I (pp. 5–6)

Dover Publications, Inc. New York, New York, USA. 1951

### **Bradbury, Ray** 1920–

American writer

Theories are invigorating and tonic. Give me an ounce of fact and I will produce you a ton of theory by tea this afternoon.

American novelist

Most areas of intellectual life have discovered the virtues of speculation, and have embraced them wildly. In academia, speculation is usually dignified as theory.

Why Speculate  
Talk, International Leadership Forum, La Jolla, California, April 26, 2002

**Clarke, Arthur C.** 1917–  
English science and science fiction writer

"I'd be glad to settle without the theory," remarked Kimball, "if I could even understand what this thing is — or what it's supposed to do."

*The Lost Worlds of 2001*  
Chapter 31 (p. 179)  
New American Library. New York, New York, USA. 1972

**Colton, Charles Caleb** 1780–1832  
English sportsman and writer

Theory is worth little, unless it can explain its own phenomena, and it must effect this with out contradicting itself; therefore, the facts are sometimes assimilated to the theory, rather than the theory to the facts.

*Lacon; or Many Things in a Few Words* (p. 77)  
William Gowans. New York, New York, USA. 1849

Professors in every branch of the sciences prefer their own theories to truth: the reason is, that their theories are private property, but truth is common stock.

*Lacon; or Many Things in a Few Words* (p. 189)  
William Gowans. New York, New York, USA. 1849

**Cooper, Leon** 1930–  
American physicist

A theory is a well-defined structure that we hope is in correspondence with what we observe. It's an architecture, a cathedral.

In George Johnson  
*In the Palaces of Memory: How We Build the Worlds Inside Our Heads*  
The Memory Machine (pp. 114–115)  
Alfred A. Knopf. New York, New York, USA. 1991

**Couderc, Paul**  
No biographical data available

The only conceptions that succumb are those that pretend to fix the image of a profound reality: true relations among things survive, united to the true new relations in the burgeoning theory. Let us then rejoice at the massacre of old theories because this is the criterion of progress. There is, I think, no ground for fear that nature will undernourish the seekers. Nothing should diminish our enthusiasm for the experimental victories, decisive and definitive, of the past thirty years.

In Lucienne Felix  
*The Modern Aspect of Mathematics* (p. 31)  
Basic Books, Inc. New York, New York, USA. 1960

**Couper, Archibald Scott** 1831–92  
Scottish scientist

The end of chemistry is its theory. The guide in chemical research is a theory. It is therefore of the greatest importance to ascertain whether the theories at present adopted by chemists are adequate to the explanation of chemical phenomena, or are at least based upon the true principles which ought to regulate scientific research.

*The London, Edinburgh and Dublin Philosophical Magazine and Journal of Science*, Volume 16, Number 4, 1858

**Crease, Robert P.**  
American science historian  
**Mann, Charles C.**  
American journalist and science writer

[P.A.M.] Dirac said often he was beset by fears when he came up with his new theory.... [H]e soon discovered that his fear was justified. Quantum electrodynamics was indeed a great step forward, but it came at a great price. Dirac had set down the beginnings of the modern theory of electromagnetism — the first solid piece of the standard model — but he had also unwittingly let loose an onslaught of conceptual demons that would change our views of space and matter.

In T. Ferris (ed.)  
*World Treasury of Physics, Astronomy, and Mathematics*  
Uncertainty and Complementarity (p. 69)  
Little, Brown & Company. Boston, Massachusetts, USA. 1991

**Crick, Francis Harry Compton** 1916–2004  
English biochemist

...a theory will always command more attention if it is supported by unexpected evidence, particularly evidence of a different kind.

*What Mad Pursuit: A Personal View of Scientific Discovery*

Chapter 10 (p. 115)  
Basic Books, Inc. New York, New York, USA. 1988

**Cromer, Alan** 1935–  
American physicist and educator

The word theory, as used in the natural sciences, doesn't mean an idea tentatively held for purposes of argument — that we call a hypothesis. Rather, a theory is a set of logically consistent abstract principles that explain a body of concrete facts. It is the logical connections among the principles and the facts that characterize a theory as truth. No one element of a theory...can be changed without creating a logical contradiction that invalidates the entire system. Thus, although it may not be possible to substantiate directly a particular principle in the theory, the principle is validated by the consistency of the entire logical structure.

*Uncommon Sense: The Heretical Nature of Science*  
Chapter 7 (p. 137)  
Oxford University Press, Inc. New York, New York, USA. 1993

**d'Abro, Abraham**  
No biographical data available

...a theory of mathematical physics is not one of pure mathematics. Its aim and its *raison d'être* are not solely to construct the rational scheme of some possible world, but to construct that particular rational scheme of the particular real world in which we live and breathe. It is for this reason that a theory of mathematical physics, in contradistinction to one of pure mathematics, is constantly subjected to the control of experiment.

*The Evolution of Scientific Thought*  
Chapter XXI (p. 215)  
Dover Publications, Inc., New York, New York, USA. 1950

**Dark, K. R.**  
No biographical data available

It would be easy to imagine that archaeological theory is daunting, or irrelevant, or both. Theorists often use jargon-laden sentences, quote obscure works, discuss periods and areas distant from those of one's own interest, and are keen to promote their own views.

*Theoretical Archaeology*  
Introduction (p. 1)  
Duckworth & Company. London, England. 1995

**Darwin, Charles Robert** 1809–82  
English naturalist

Let theory guide your observations, but till your reputation is well established, be sparing in publishing theory. It makes persons doubt your observations.

In Francis Darwin (ed.)  
*More Letters of Charles Darwin* (Volume 2)  
Letter 646, Darwin to Scott, June 6, 1863 (p. 323)  
D. Appleton & Company. New York, New York, USA. 1903

In October 1838, that is, fifteen months after I had begun my systematic inquiry, I happened to read for amusement Malthus on Population, and being well prepared to appreciate the struggle for existence which everywhere goes on from long-continued observation of the habits of animals and plants, it at once struck me that under these circumstances favorable variations would tend to be preserved, and unfavorable ones to be destroyed. The results of this would be the formation of a new species. Here, then I had at last got a theory by which to work.

*Autobiography*  
...for without the making of theories I am convinced there would be no observation.

In Francis Darwin (ed.)  
*The Life and Letters of Charles Darwin* (Volume 2)  
C. Darwin to C. Lyell, June 1<sup>st</sup> [1860] (p. 108)  
D. Appleton & Company. New York, New York, USA. 1896

**Darwin, G. H.** 1809–82  
No biographical data available

A theory is, then, a necessity for the advance of science, and we may regard it as the branch of a living tree, of which facts are the nourishment.

Address to British Association, Section A  
*Nature*, Volume 34, Number 879, September 2, 1886 (p. 420)

**Davies, John Tasman** 1924–  
Chemist

Theories are generalizations and unifications, and as such they cannot logically follow only from our experiences of a few particular events. Indeed we often generalize from a single event, just as a dog does who, having once seen a cat in a certain driveway, looks eagerly around whenever he passes that place in future. Evidently this latter activity is equivalent to testing the theory...that "there is always a cat in that driveway."

*The Scientific Approach*  
Chapter 1 (p. 11)  
Academic Press. London, England. 1965

...a theory arises from a leap of the imagination...

*The Scientific Approach*  
Chapter 1 (p. 11)  
Academic Press. London, England. 1965

**Davies, Paul Charles William** 1946–  
British-born physicist, writer, and broadcaster

The basis of this theory is that in nature there is an inherent uncertainty or unpredictability that manifests itself only on an atomic scale. For example, the position of a subatomic particle such as an electron may not be a well-defined concept at all; it should be envisaged as jiggling around in a random sort of a way. Energy, too, becomes a slightly nebulous concept, subject to capricious and unpredictable changes.

*The Edge of Infinity: Where the Universe Came from and How It Will*

End

Chapter 4 (p. 90)

Simon & Schuster. New York, New York, USA. 1981

**Davis, Philip J.** 1923–

American mathematician

**Hersh, Reuben** 1927–

American mathematician

If the number of theorems is larger than one can possibly survey, who can be trusted to judge what is “important?” One cannot have survival of the fittest if there is no interaction.

*The Mathematical Experience*

Ulam’s Dilemma (p. 21)

Birkhäuser. Boston, Massachusetts, USA. 1981

**Davy, Sir Humphry** 1778–1829

English chemist

Theories ought to be made for time, and be considered capable of improvement.

*The Collected Works of Sir Humphry Davy* (Volume 1)

Memories of the Life of Sir Humphry Davy

Chapter II (p. 70)

London, England. 1839–1840

**de Fermat, Pierre** 1601–65

French mathematician

We have found a beautiful and most general proposition, namely, that every integer is either a square, or the sum of two, three or at most four squares. This theorem depends on some of the most recondite mysteries of number, and is not possible to present its proof on the margin of this page.

In Tobias Dantzig

*Number: The Language of Science* (4<sup>th</sup> edition) (p. 269)

The Macmillan Company. New York, New York, USA. 1954

I have found a very great number of exceedingly beautiful theorems.

In E.T. Bell

*Men of Mathematics* (p. 56)

Simon & Schuster. New York, New York, USA. 1937

**de Grasse Tyson, Neil** 1958–

American astrophysicist and writer

Scientific evidence in support of a theory sometimes takes you places where your senses have never been. Twentieth-century science has largely been built upon data collected with all manner of tools that enable us to see the universe in decidedly uncommon ways. As a consequence, while we have always required that a theory make mathematical sense, we no longer require that a theory make common sense. We simply demand that it be consistent with the results of observations and experiments....

In Defense of the Big Bang

*Natural History*, Volume 105, Number 12, December 1996 (p. 76)

A well-constructed theory must explain some of what is not understood, predict previously unknown phenomena, and, to be successful, have its predictions consistently confirmed. Furthermore, skeptics should not hesitate to question every possible assumption, no matter how basic.

In Defense of the Big Bang

*Natural History*, Volume 105, Number 12, December 1996 (p. 76)

**Dingle, Herbert** 1890–1978

English astrophysicist

Success in scientific theory is won, not by rigid adherence to the rules of logic, but by bold speculation which dares even to break those rules if by that means new regions of interest may be opened up.

*Through Science to Philosophy*

Part II, Chapter XV (p. 346)

At The Clarendon Press. Oxford, England. 1937

**Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

One forms provisional theories and waits for time or fuller knowledge to explode them. A bad habit, Mr. Ferguson, but human nature is weak.

In William S. Baring-Gould (ed.)

*The Annotated Sherlock Holmes* (Volume 2)

The Adventure of the Sussex Vampire (pp. 467–468)

Wings Books. New York, New York, USA. 1967

I don’t mean to deny that the evidence is in some ways very strong in favor of your theory, I only wish to point out that there are other theories possible.

In William S. Baring-Gould (ed.)

*The Annotated Sherlock Holmes* (Volume 2)

Adventures of the Norwood Builder (p. 421)

Wings Books. New York, New York, USA. 1967

**Duhem, Pierre-Maurice-Marie** 1861–1916

French physicist and mathematician

A physical theory is not an explanation. It is a system of mathematical propositions, deduced from a small number of principles, which aim...to represent as simply, as completely, and as exactly as possible a group of experimental laws.

*The Aim and Structure of Physical Theory*

Part I, Chapter II (p. 19)

Princeton University Press. Princeton, New Jersey, USA. 1954

The sole purpose of physical theory is to provide a representation and classification of experimental laws; the only test permitting us to judge a physical theory and pronounce it good or bad is the comparison between the consequences of this theory and the experimental laws it has to represent and classify.

*The Aim and Structure of Physical Theory*

Part II, Chapter VI (p. 180)

Princeton University Press. Princeton, New Jersey, USA. 1954

Unlike the reduction to absurdity employed by geometers, experimental contradiction does not have the power to transform a physical hypothesis into an indisputable truth; in order to confer this power on it, it would be necessary to enumerate completely the various hypotheses which may cover a determinate group of phenomena; but the physicist is never sure he has exhausted all the imaginable assumptions. The truth of a physical theory is not decided by heads or tails.

*The Aim and Structure of Physical Theory*

Part II, Chapter VI (p. 190)

Princeton University Press. Princeton, New Jersey, USA. 1954

When several taps of the beak break the shell of an egg from which the chick escapes, a child may imagine that this rigid and immobile mass, similar to the white shells he picks up on the edge of a stream, had suddenly taken life and produced the bird who runs away with a chirp; but just where his childish imagination sees a sudden creation, the naturalist recognizes the last stage of a long development; he thinks back to the first fusion of two microscopic nuclei in order to review next the series of divisions, differentiations, and reabsorptions which, cell by cell, have built up the body of the chick. The ordinary layman judges the birth of [scientific] theories as the child the appearance of the chick.

*The Aim and Structure of Physical Theory*

Part II, Chapter VII (p. 221)

Princeton University Press. Princeton, New Jersey, USA. 1954

Contemplation of a set of experimental laws does not, therefore, suffice to suggest to the physicist what hypotheses he should choose in order to give a theoretical representation of these laws; it is also necessary that the thoughts habitual with those among whom he lives and the tendencies impressed on his own mind by his previous studies come and guide him, and restrict the excessively great latitude left to this day a merely empirical form until circumstances prepare the genius of a physicist to conceive the hypothesis which will organize them into a theory!

*The Aim and Structure of Physical Theory*

Part II, Chapter VII (p. 255)

Princeton University Press. Princeton, New Jersey, USA. 1954

### **Duschl, Richard Alan** 1951–

American science education professor and researcher

In order to say we have developed a knowledge of science, we must be able to say we have an understanding of the function, structure, and generation of scientific theories.

*Restructuring Science Education: The Importance of Theories and Their Development*

Chapter 6 (p. 96)

Teachers College Press. New York, New York, USA. 1990

### **Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

... a reasoned theory is preferable to blind extrapolation.

*The Expanding Universe*

Chapter I, Section IV (p. 18)

The University Press. Cambridge. 1933

There was just one place where the theory did not seem to work properly, and that was — infinity. I think Einstein showed his greatness in the simple and drastic way in which he disposed of difficulties at infinity. He abolished infinity. He slightly altered his equations so as to make space at great distances bend round until it closed up. So that, if in Einstein's space you kept going right on in one direction, you do not get to infinity; you find yourself back at your starting-point again. Since there was no longer any infinity, there could be no difficulties at infinity. Q. E. D.

*The Expanding Universe*

Chapter I, Section V (pp. 21–22)

The University Press. Cambridge. 1933

The relativity theory of physics reduces everything to relations; that is to say, it is structure, not material, which counts. The structure cannot be built up without material; but the nature of the material is of no importance.

*Space, Time and Gravitation: An Outline of the General Relativity Theory*

Chapter XII (p. 197)

At The University Press. Cambridge, England. 1953

We have found a strange footprint on the shores of the unknown. We have devised profound theories, one after another to account for its origin. At last, we have succeeded in reconstructing the creature that made the footprint. And lo! It is our own.

*Space, Time and Gravitation: An Outline of the General Relativity Theory*

Chapter XII (p. 201)

At The University Press. Cambridge, England. 1921

### **Einstein, Albert** 1879–1955

German-born physicist

These fundamental concepts and postulates, which cannot be further reduced logically, form the essential part of a theory, which reason cannot touch. It is the grand object of all theory to make these irreducible elements as simple and as few in number as possible, without having to renounce the adequate representation of any empirical content whatever.

Translated by Alan Harris

*Essays in Science*

On the Method of Theoretical Physics (p. 15)

Philosophical Library. New York, New York, USA. 1934

No fairer destiny could be allotted to any physical theory, than that it should of itself point out the way to the introduction of a more comprehensive theory, in which it lives on as a limiting case.

Translated by Robert W. Lawson

*Relativity: The Special and General Theory*

Part II, Chapter 22 (pp. 98–99)  
Pi Press. New York, New York, USA. 2005

Of the general theory of relativity you will be convinced, once you have studied it. Therefore I am not going to defend it with a single word.

In Paul Arthur Schlipp (ed.)

*Albert Einstein: Philosopher-Scientist*

Letter to A. Sommerfeld, 8 February 1916 (p. 101)

The Library of Living Philosophers, Inc. Evanston, Illinois, USA. 1949

Physical theory has two ardent desires, to gather up as far as possible all pertinent phenomena and their connections, and to help us not only to know how Nature is and how her transactions are carried through, but also to reach as far as possible the perhaps utopian and seemingly arrogant aim of knowing why Nature is thus and not otherwise. Here lies the highest satisfaction of a scientific person.

In G. Holton

*Thematic Origins of Scientific Thought*

Chapter 8 (p. 242)

Harvard University Press. Cambridge, Massachusetts, USA. 1973

Theories are evolved and are expressed in short compass as statements of a large number of individual observations in the form of empirical laws, from which the general laws can be ascertained by comparison. Regarded in this way, the development of a science bears some resemblance to the compilation of a classified catalogue. It is, as it were, a purely empirical enterprise.

Translated by Robert W. Lawson

*Relativity: The Special and General Theory*

Appendix III, The Experimental Confirmation of the General Theory of Relativity

Pi Press. New York, New York, USA. 2005

For the creation of a theory the mere collection of recorded phenomena never suffices — there must always be added a free invention of the human mind that attacks the heart of the matter. And: the physicist must not be content with the purely phenomenological considerations that pertain to the phenomenon. Indeed, he should press on to the speculative method, which looks for the underlying pattern.

In Helen Dukas and Banesh Hoffman

*Albert Einstein: The Human Side: New Glimpses from His Archives*

Lecture at the Berlin Planetarium, 4 October 1931 (pp. 29–30)

Princeton University Press. Princeton, New Jersey, USA. 1979

The scientific theorist is not to be envied. For Nature, or more precisely experiment, is an inexorable and not very friendly judge of his work. It never says “Yes” to a theory. In the most favorable cases it says “Maybe,” and in the great majority of cases simply “No.” If an experiment agrees with a theory it means for the latter “Maybe,” and if it does not agree it means “No.” Probably every theory will some day experience its “No” — most theories [do], soon after conception.

In Helen Dukas and Banesh Hoffman

*Albert Einstein: The Human Side: New Glimpses from His Archives*

Note dated 11 November 1922 (p. 18)

Princeton University Press. Princeton, New Jersey, USA. 1979

If my theory of relativity is proven successful, Germany will claim me as a German and France will declare that I am a citizen of the world. Should my theory prove untrue, France will say that I am a German, and Germany will declare that I am a Jew.

*The Great Quotations*

Address at the Sorbonne (p. 226)

New York Times, 16 February 1930

A theory is the more impressive the greater the simplicity of its premises, the more different kinds of things it relates, and the more extended its area of applicability.

Translated by Paul Arthur Schlipp

*Albert Einstein: Autobiographical Notes* (p. 31)

Open Court. La Salle, Illinois, USA. 1979

I have learned something else from the theory of gravitation: no collection of empirical facts however comprehensive can ever lead to the setting up of such complicated equations. A theory can be tested by experience, but there is no way from experience to the construction of a theory. Equations of such complexity as are the equations of the gravitational field can be found only through the discovery of a logically simple mathematical condition that determines the equations completely or almost completely. Once one has obtained those sufficiently strong formal conditions, one requires only little knowledge of facts for the construction of the theory...

Translated by Paul Arthur Schlipp

*Albert Einstein: Autobiographical Notes* (p. 31)

Open Court. La Salle, Illinois, USA. 1979

**Einstein, Albert** 1879–1955

German-born physicist

**Infeld, Leopold** 1898–1968

Polish physicist

There are no eternal theories in science. It always happens that some of the facts predicted by a theory are disproved by experiment. Every theory has its period of gradual development and triumph, after which it may experience a rapid decline.

*The Evolution of Physics*

The Two Electric Fluids (p. 77)

Simon & Schuster. New York, New York, USA. 1961

Creating a new theory is not like destroying an old barn and erecting a skyscraper in its place. It is rather like climbing a mountain, gaining new and wider views, discovering unexpected connections between our starting point and its rich environment. But the point from which we started out still exists and can be seen, although it appears smaller and forms a tiny part of our broad view gained by the mastery of the obstacles on our adventurous way up.

*The Evolution of Physics*

The Mechanical Scaffold (pp. 158–159)

Simon &amp; Schuster. New York, New York, USA. 1961

**Eliot, George (Mary Ann Evans Cross)** 1819–80  
English novelist

The possession of an original theory which has not yet been assailed must certainly sweetens the temper of a man who is not beforehand ill-natured.

*Impressions of Theophrastus Such*

How We Encourage Research (p. 26)

William Blackwood. London, England. 1879

**Faraday, Michael** 1791–1867  
English physicist and chemist

The world little knows how many of the thoughts and theories which have passed through the mind of a scientific investigator have been crushed in silence and secrecy; that in the most successful instances not a tenth of the suggestions, the hopes, the wishes, the preliminary conclusions have been realized.

In W.I.B. Beveridge

*The Art of Scientific Investigation*

Chapter Five (p. 58)

W.W. Norton &amp; Company, Inc. New York, New York, USA. 1957

**Feynman, Richard P.** 1918–88  
American theoretical physicist

Another thing I must point out is that you cannot prove a vague theory wrong. If the guess that you make is poorly expressed and rather vague, and the method that you use for figuring out the consequences is a little vague — you are not sure, and you say, “I think everything’s right because it’s all due to so and so, . . . and I can sort of explain how this works” . . . then you see that this theory is good, because it cannot be proved wrong! Also if the process of computing the consequences is indefinite, then with a little skill any experimental results can be made to look like the expected consequences.

*The Character of Physical Law*

Chapter 7 (pp. 158–159)

BBC. London, England. 1965

If someone were to propose that the planets go around the sun because all planet matter has a kind of tendency for movement, a kind of motility, let us call it an “oomph,” this theory could explain a number of other phenomena as well. So this is a good theory, is it not? It is nowhere near as good as the proposition that the planets move around the sun under the influence of a central force which varies exactly inversely as the square of the distance from the center. The second theory is better because it is so specific; it is so obviously unlikely to be the result of chance. It is so definite that the barest error in the movement can show that it is wrong; but the planets could wobble all over the place, and, according

to the first theory, you could say, “Well, that is the funny behavior of the oomph.”

*The Meaning of It All: Thoughts of a Citizen Scientist*

Chapter I (pp. 19–20)

Perseus Books. Reading, Massachusetts, USA. 1998

This is the key of modern science and . . . the beginning of the true understanding of Nature — this idea to look at the thing, to record the details, and to hope that in the information thus obtained might lie a clue to one or another theoretical interpretation.

*The Character of Physical Law*

Chapter 1 (p. 15)

BBC. London, England. 1965

**Fischer, Martin H.** 1879–1962  
German-American physician

Don’t confuse hypothesis and theory. The former is a possible explanation; the latter, the correct one. The establishment of theory is the very purpose of science.

In Howard Fabing and Ray Marr

*Fischerisms*

C.C. Thomas. Springfield, Illinois, USA. 1944

**Frost, Robert** 1874–1963  
American poet

A theory if you hold it hard enough

And long enough gets rated as a creed. . . .

*Complete Poems of Robert Frost*

Etherealizing

Henry Holt &amp; Company. New York, New York, USA. 1949

**Gay-Lussac, Joseph Louis** 1778–1850  
French chemist and physicist

In order to draw any conclusion . . . it is prudent to wait until more numerous and exact observations have provided a solid foundation on which we may build a rigorous theory.

In Maurice Crosland

*Gay-Lussac: Scientist and Bourgeois*

Chapter 4 (p. 71)

Cambridge University Press. Cambridge, England. 1978

**George, William H.**  
No biographical data available

Theories come into fashion and theories go out of fashion, but the facts connected with them stay.

*The Scientist in Action: A Scientific Study of His Methods*

Chapter XII (p. 218)

Williams &amp; Norgate Ltd. London, England. 1936

**Gilbert, Sir William Schwenck** 1836–1911  
English playwright and poet

**Sullivan, Arthur** 1842–1900  
English composer

About binomial theorem I'm teeming with a lot o' news — With many cheerful facts about the square of the hypotenuse.

*The Complete Plays of Gilbert and Sullivan*

The Pirates of Penzance

Act I (p. 133)

W.W. Norton & Company, Inc. New York, New York, USA. 1976

**Glashow, Sheldon L.** 1932–  
American physicist

No matter how compelling or elegant it is, a theory of physics must be subjected to experimental verification or it differs little from medieval theology.

*Interactions: A Journey Through the Mind of a Particle Physicist and the Matter of This World*

Chapter 4 (p. 77)

Warner Books. New York, New York, USA. 1988

**Goddard, Robert H.** 1882–1945  
American physicist

In this present age of science, when no problem seems too baffling for the inventor, and no mysterious phenomenon too much in the dark for elucidation by the discoverer, it is surprising that so few fundamental scientific theories can be proved.

*The Papers of Robert H. Goddard* (Volume 1)

On Taking Things for Granted (p. 63)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1970

**Goldhaber, Maurice** 1911–  
Austrian-American physicist

Antaeus was the strongest person alive, invincible as long as he was in contact with his mother, the earth. Once he lost contact with the earth, he grew weak and was vanquished. Theories in physics are like that. They have to touch the ground for their strength.

In Robert P. Crease and Charles C. Mann

How the Universe Works

*The Atlantic Monthly*, August 1984 (p. 91)

**Goodman, Nicholas P.**  
No biographical data available

There are no deep theorems — only theorems that we have not understood very well.

Reflections on Bishops Philosophy of Mathematics

*The Mathematical Intelligence*, Volume 5, Number 3, 1983 (p. 63)

**Gould, Stephen Jay** 1941–2002  
American paleontologist and evolutionary biologist

As the new Darwinian orthodoxy swept through Europe, its most brilliant opponent, the aging embryologist Karl Ernst von Baer, remarked with bitter irony that every triumphant theory passes through three stages: first it is dismissed as untrue; then it is rejected as contrary to religion; finally, it is accepted as dogma and each scientist claims that he had long appreciated its truth.

*Ever Since Darwin: Reflections in Natural History*

Chapter 20. The Validation of Continental Drift (pp. 161–162)

W.W. Norton & Company, Inc. New York, New York, USA. 1977

I would say usually, theories act as straitjackets to channel observations toward their support, and to forestall data that might refute them. Such theories cannot be rejected from within, for we will not conceptualize the disapproving observations.

*Dinosaur in a Haystack: Reflections in Natural History*

Part Three, Chapter 12 (p. 151)

Random House, Inc. New York, New York, USA. 1995

All great theories are expansive, and all notions so rich in scope and implication are underpinned by visions about the nature of things. You may call these visions “philosophy,” or “metaphor,” or “organizing principle,” but one thing they are surely not — they are not simple inductions from observed facts of the natural world.

*Time's Arrow, Time's Cycle: Myth and Metaphor in the Discovery of Geological Time*

Chapter 1 (p. 9)

Harvard University Press. Cambridge, Massachusetts, USA. 1987

**Gratzer, Walter Bruno** 1932–  
English science writer

It is also of course difficult to renounce a cherished theory, the product of costly intellectual and emotional investment, and to accept the cost to ambition, reputation and pride of a humiliating retraction. As the economist J. K. Galbraith put it, “faced with the choice between changing one’s mind and proving that there is no need to do so, almost everyone gets busy with the proof.” And so a fatuous optimism triumphs over the caution that must guide all scientists through most of their working lives.

*The Undergrowth of Science: Delusion, Self-Deception and Human Frailty*

Chapter 3 (p. 81)

Oxford University Press, Inc. Oxford, England. 2000

**Gribbin, John** 1946–  
British science writer and astronomer

Good theories are the ones that get those predictions right; the best theories enable us to “get right” the calculation of how the Universe came into being and then exploded into its present form. But that doesn’t mean that they convey ultimate truth, or that there “really are” little hard particles rattling around against each other inside the atom. Such truth as there is in any of this work lies in the mathematics; the particle concept is simply a crutch ordinary mortals can use to help them towards an understanding of the mathematical laws.

*The Search of Superstrings, Symmetry, and the Theory of Everything* (pp. 51–52)

Little, Brown & Company. Boston, Massachusetts, USA. 1998

**Haldane, John Burdon Sanderson** 1892–1964  
English biologist

“The results so far obtained are consistent with the view that...” has taken the place of “Thus saith the Lord...” as an introduction to a new theory.

*Possible Worlds and Other Papers*

Chapter XXX (p. 223)

Harper & Brothers. New York, New York, USA. 1928

**Hamilton, Edith** 1868–1963

German-born classicist and educator

Theories that go counter to the facts of human nature are foredoomed.

*The Roman Way*

Comedy's Mirror

W.W. Norton & Company, Inc. New York, New York, USA. 1932

**Hawking, Stephen William** 1942–

English theoretical physicist

...a good theory is characterized by the fact that it makes a number of predictions that could in principle be disproved or falsified by observation.

*A Brief History of Time: The Updated and Expanded Edition*

Chapter 1 (p. 10)

Bantam Books. Toronto, Ontario, Canada. 1988

**Heaviside, Oliver** 1850–1925

English electrical engineer, mathematician, and physicist

Theory always tends to become more abstract as it emerges successfully from the chaos of facts by processes of differentiation and elimination, whereby the essentials and their connections become recognized, while minor effects are seen to be secondary or unessential, and are ignored temporarily, to be explained by additional means.

In J.W. Mellor

*Higher Mathematics for Students of Chemistry and Physics* (p. 370)

Dover Publications. New York, New York, USA. 1955

**Heinlein, Robert A.** 1907–88

American science fiction writer

Permit me to say, speaking from experience, all theories are empty.

*Time Enough for Love*

Chapter XIII (p. 390)

G.P. Putnam's Sons. New York, New York, USA. 1973

Modern theory did not arise from revolutionary ideas which have been, so to speak, introduced into the exact sciences from without. On the contrary, they have forced their way into research which was attempting consistently to carry out the program of classical physics — they arise out of its very nature.

In Heinz R. Pagels

*The Cosmic Code: Quantum Physics as the Language of Nature*

Part I, Chapter 3 (p. 67)

Simon & Schuster. New York, New York, USA. 1982

**Heitler, W.** 1904–1981

German theoretical physicist

It is usually the fate of good physical theory that after its initial success, difficulties or limitations of its applicability become apparent. Eventually it is superseded by a better theory in which some of the difficulties are removed or which has a wider field of application, as the case may be.

*The Quantum Theory of Radiation*

Introduction (p. xi)

At The Clarendon Press. Oxford, England. 1954

**Herschel, Sir John Frederick William** 1792–1871

English astronomer and chemist

A philosophical theory does not shoot up like the tall and spiry pine in graceful and unencumbered natural growth, but, like a column built by men, ascends amid extraneous apparatus and shapeless masses of materials...

*Essays from the Edinburgh and Quarterly Reviews with Addresses and Other Pieces*

Terrestrial Magnetism (p. 67)

Longman, Brown, Green, Longmans & Roberts. London, England. 1857

**Hilton, James** 1900–1954

English-born novelist

And I believe that the Binomial Theorem and a Bach Fugue are, in the long run, more important than all the battles of history.

*This Week Magazine*, 1937

**Holt, Michael**

No biographical data available

Nobody knows why, but [the only] scientific theories that really work are the mathematical ones.

*Mathematics in Art*

Chapter 2 (p. 33)

Studio Vista. London, England. 1971

**Horton, Robin**

British anthropologist and philosopher

To say of the traditional African thinker that he is interested in supernatural rather than natural causes makes little more sense...than to say of the physicist that he is interested in nuclear rather than natural causes. In fact, both are making the same use of theory to transcend the limited vision of natural causes provided by common sense.

*African Traditional Thought and Western Science*

*Africa*, Volume 37, Number 1, 1967 (p. 57)

**Hoyle, Sir Fred** 1915–2001

English mathematician and astronomer

It is true that we must not accept a theory on the basis of emotional preference but it is not an emotional preference to attempt to establish a theory that would place us in a position to obtain a complete understanding of the Universe. The stakes are high, and win or lose, are worth playing for.

*Frontiers of Astronomy*

Epilogue (pp. 354–355)  
Harper & Row, Publishers. New York, New York, USA. 1955

**Hoyle, Sir Fred** 1915–2001  
English mathematician and astronomer

**Hoyle, Geoffrey** 1942–  
English science fiction writer

Be suspicious of a theory if more and more hypotheses are needed to support it as new facts become available, or as new considerations are brought to bear.

*Evolution from Space* (p. 135)  
Simon & Schuster. New York, New York, USA. 1982

**Hubble, Edwin Powell** 1889–1953  
American astronomer

Many theories are formulated but relatively few endure the tests. The survivors, in general, must be occasionally revised to conform with the growing body of knowledge. The ability to theorize is highly personal; it involves art, imagination, logic, and something more. An outstanding genius may invent a successful new type of theory; first-rate men may follow the lead and develop other theories on the same pattern; less competent minds are embarrassed by the custom of testing predictions.

*The Realm of the Nebulae*  
Introduction (p. 5)  
Dover Publications, Inc. New York, New York, USA. 1958

No theory is sacred. When a theory fails to meet the test of verified predictions, it is modified to include the larger field, or, vary rarely, it may be abandoned completely.

*The Nature of Science and Other Lectures*  
Part I, Experiment and Experience (p. 41)  
The Huntington Library. San Marino, California, USA. 1954

**Huggins, Sir William** 1824–1910  
English astronomer

A theory which sweeps the astronomical horizon of so many mysteries must not only arouse our profound interest, but claim the respectful consideration of men of science.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1902*  
Stellar Evolution in the Light of Recent Research (p. 192)  
Government Printing Office. Washington, D.C. 1903

**Hutton, James** 1726–97  
Scottish geologist, chemist, and naturalist

But when, in framing a theory of the earth, a geologist shall indulge his fancy in framing, without evidence, that which had preceded the present order of things, he then either misleads himself, or writes a fable for the amusement of his reader.

*The Theory of the Earth* (Volume 1)  
Part I, Chapter III (pp. 280–281)  
Messrs. Cadwell, Junior & Davies. London, England. 1795

**Huxley, Thomas Henry** 1825–95  
English biologist

The struggle for existence holds as much in the intellectual as in the physical world. A theory is a species of thinking, and its right to exist is coextensive with its power of resisting extinction by its rivals.

*Collected Essays* (Volume 2)  
*Darwiniana*  
The Coming of Age of “The Origin of Species” (p. 229)  
Macmillan & Company Ltd. London, England. 1904

**James, William** 1842–1910  
American philosopher and psychologist

Theories thus become instruments, not answers to enigmas, in which we can rest. We don’t lie back upon them, we move forward, and, on occasion, make nature over again by their aid.

*Pragmatism: A New Name for Some Old Ways of Thinking*  
Lecture II (p. 53)  
Longmans, Green & Company London, England. 1914

...the classic stages of a theory’s career. First, you know, a new theory is attacked as absurd; then it is admitted to be true, but obvious and insignificant; finally it is seen to be so important that its adversaries claim that they themselves discovered it.

Lecture VI (p. 198)  
Longmans, Green & Company London, England. 1914

**Jastrow, Joseph** 1863–1944  
Polish-born psychologist

Theories without facts or based on uncritically selected facts are vain, and facts without theoretical interpretation, blind.

In Joseph Jastrow (ed.)  
*The Story of Human Error*  
Introduction (p. 33)  
D. Appleton-Century Company, Inc. New York, New York, USA. 1936

**Joos, Georg** 1894–1959  
German physicist

While it is true that theory often sets difficult, if not impossible tasks for the experiment, it does, on the other hand, often lighten the work of the experimenter by disclosing cogent relationships which make possible the indirect determination of inaccessible quantities and thus render difficult measurements unnecessary.

*Theoretical Physics*  
Introduction (p. 1)  
Blackie & Son Ltd. London, England. 1968

**Kelvin, Lord William Thomson** 1824–1907  
Scottish engineer, mathematician, and physicist

A scientific theory is a tool and not a creed.

In Richard Willstätter  
*From My Life: The Memoirs of Richard Willstätter*

Chapter 12 (p. 388)

W.A. Benjamin. New York, New York, USA. 1965

**Keyser, Cassius Jackson** 1862–1947  
American mathematician

For scientific theories are, each and all of them, and they will continue to be, built upon and about notions which, however sublimated, are nevertheless derived from common sense.

*Mathematics* (pp. 5–6)

Columbia University Press. New York, New York, USA. 1907

**Kitaigorodski, Aleksandr Isaakovich** 1914–  
No biographical data available

A first-rate theory predicts; a second-rate theory forbids and a third-rate theory explains after the event.

Lecture, ICU, Amsterdam, August 1975

**Koestler, Arthur** 1905–83  
Hungarian-born English writer

The history of cosmic theories...may without exaggeration be called a history of collective obsessions and controlled schizophrenias.

*The Sleepwalkers*

Preface (p. 15)

The Macmillan Company. New York, New York, USA. 1966

**Kuhn, Thomas S.** 1922–96  
American historian of science

The scientist must...be concerned to understand the world and to extend the precision and scope with which it has been ordered. That commitment must, in turn, lead them to scrutinize, either for themselves or through colleagues, some aspect of nature in great empirical detail. And, if that scrutiny displays pockets of apparent disorder, then these must challenge the scientist to a new refinement of their observational techniques or to a further articulation of their theories.

*The Structure of Scientific Revolutions*

Chapter IV (p. 42)

The University of Chicago Press. Chicago, Illinois, USA. 1970

...no theory ever solves all the puzzles with which it is confronted at a given time; nor are the solutions already achieved often perfect.

*The Structure of Scientific Revolutions*

Chapter XII (p. 146)

The University of Chicago Press. Chicago, Illinois, USA. 1970

One often hears that successive theories grow ever closer to, or approximate more and more closely to, the truth. Apparently generalizations like that refer not to the puzzle-solutions and the concrete predictions derived from a theory but rather to its ontology, to the match, that is, between the entities with which the theory populates nature and what is “really there.”

*The Structure of Scientific Revolutions*

Postscript–1969 (p. 206)

The University of Chicago Press. Chicago, Illinois, USA. 1970

**Lakatos, Imre** 1922–74  
Hungarian-born philosopher

No theory forbids some state of affairs specifiable in advance; it is not that we propose a theory and Nature may shout No. Rather, we propose a maze of theories, and Nature may shout INCONSISTENT.

Criticism and the Methodology of Scientific Research Programmes

*Proceedings of the Aristotelian Society*, Volume 69, 1968–1969 (p. 162)

Scientists want to make their theories respectable, deserving of the title “science”, that is genuine knowledge. Now the most relevant knowledge in the seventeenth century, when science was born, concerned God, the Devil, Heaven and Hell. If one got one’s conjectures about matters of divinity wrong, the consequences of one’s mistake was eternal damnation.

*The Methodology of Scientific Research Programmes* (p. 2)

Cambridge University Press. Cambridge, England. 1978

**Laszlo, E.**

No biographical data available

Ours is a complex world. But human knowledge is finite and circumscribed. “Nature does not come as clean as you can think it,” warned Alfred North Whitehead, and went on to propound an extremely clean and elegant cosmology. Since theories, like window panes, are clear only when they are clean, and the world does not come as cleanly as all that, we must know where we perform a clean-up operation.

*The Systems View of the World: The Natural Philosophy of the New Developments in the Sciences*

Chapter 1, Section 2 (p. 13)

George Braziller. New York, New York, USA. 1972

Scientific theories, while simpler than reality, must nevertheless reflect its essential structure. Science then must beware of rejecting the structure for the sake of simplicity; that would be to throw out the baby with the bath water.

*The Systems View of the World: The Natural Philosophy of the New Developments in the Sciences*

Chapter 1, Section 2 (p. 13)

George Braziller. New York, New York, USA. 1972

**Lauden, Larry** 1945–  
American philosopher of science

...the rationale for accepting or rejecting any theory is thus fundamentally based on the idea of problem-solving progress. If one research tradition has solved more important problems than its rivals, then accepting that tradition is rational precisely to the degree that we are aiming to “progress,” i.e., to maximize the scope of solved problems. In other words, the choice of one tradition over its rivals is a progressive (and thus a rational) choice

precisely to the extent that the chosen tradition is a better problem solver than its rivals.

*Progress and Its Problems: Toward a Theory of Scientific Growth*  
Chapter Three (p. 109)  
University of California Press. Berkeley, California, USA. 1977

**Lederman, Leon** 1922–  
American high-energy physicist

...a comment on the word “theory,” which lends itself to popular misconceptions. “That’s your theory” is a popular sneer. Or “That’s only a theory.” Our fault for sloppy use. The quantum theory and the Newtonian theory are well-established, well-verified components of our world view. They are not in doubt. It’s a matter of derivation. Once upon a time it was Newton’s (as yet unverified) “theory.” Then it was verified, but the name stuck. “Newton’s theory” it will always be. On the other hand, superstrings and GUTs are speculative efforts to extend current understanding, building on what we know.

*The God Particle: If the Universe Is the Answer, What Is the Question?*  
Chapter 9 (p. 389)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1993

The better theories are verifiable. Once upon a time that was the sine qua non of any theory. Nowadays, addressing events at the Big Bang, we face, perhaps for the first time, a situation in which a theory may never be experimentally tested.

*The God Particle: If the Universe Is the Answer, What Is the Question?*  
Chapter 9 (p. 389)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1993

**Lewontin, Richard C.** 1929–  
American evolutionary geneticist and philosopher of science

Theory generally should not be an attempt to say how the world is. Rather, it is an attempt to construct the logical relations that arise from various assumptions about the world.

In E. Mayr and W.B. Provine (eds.)  
*The Evolutionary Synthesis*

Part One, Chapter 1  
Theoretical Population Genetics in the Evolutionary Synthesis (p. 65)  
Harvard University Press. Cambridge, Massachusetts, USA. 1980

It is not always appreciated that the problem of theory building is a constant interaction between constructing laws and finding an appropriate set of descriptive state variables such that laws can be constructed.

*The Genetic Basis of Evolutionary Change*  
Chapter 1 (p. 8)  
Columbia University Press. New York, New York, USA. 1974

...we cannot go out and describe the world in any old way we please and then sit back and demand that an explanatory and predictive theory be built on that description.

*The Genetic Basis of Evolutionary Change*  
Chapter 1 (p. 8)  
Columbia University Press. New York, New York, USA. 1974

**Libes, Antoine** 1752–1832  
French physicist

Let us add a word in favor of theories, which certain physicists still dare to present as invincible obstacles to the discovery of truth. It is incontestable that experience and observation ought to serve as the basis of our physical knowledge. But without the help of theory the most well-certified experiments, the most numerous observations will be only isolated facts in the hands of the physicist, isolated facts which cannot serve for the advancement of physics. The man of genius must seize upon these scattered links and bring them together skillfully to form a continuous chain. This continuity constitutes the theory, which alone can give us a glimpse of the relations which bind the facts to one another and of their dependence on the causes which have produced them.

In Russell McCormach (ed.)  
*Historical Studies in the Physical Sciences* (Volume 4)  
In Robert H. Silliman  
Fresnel and the Emergence of Physics as a Discipline (p. 143)  
Princeton University Press. Princeton, New Jersey, USA. 1974

**Lichtenberg, Georg Christoph** 1742–99  
German physicist and satirical writer

This whole theory is good for nothing except disputing about.

*Lichtenberg: Aphorisms & Letters*  
Aphorisms (p. 57)  
Jonathan Cape. London, England. 1969

**Lindley, David** 1956–  
English astrophysicist and author

Theoretical physicists can invent theories in which the speed of light is not an absolute limit, but those theories do not correspond to the world we inhabit. The speed of light does not have to be finite, but in our world, as distinct from all the imaginary worlds a mathematician might invent, it is. Some things in the end can be determined only empirically, by looking at the world and figuring out how it works.

*The End of Physics: The Myth of a Unified Theory*  
Prologue (p. 6)  
Basic Books, Inc. New York, New York, USA. 1993

Ultimately, theories must be useful and accurate, and in that sense it does not matter whether they were arrived at through piercing insight or blind luck.

*The End of Physics: The Myth of a Unified Theory*  
Prologue (p. 10)  
Basic Books, Inc. New York, New York, USA. 1993

**Lodge, Sir Oliver** 1851–1940  
English physicist

A physical theory cannot take the whole universe into account; but if it is to be complete enough to be

satisfactory, and to make trustworthy predictions, it must take all relevant factors into account.

Contributions to a British Association Discussion on the Evolution of the Universe  
*Nature*, Supplement, October 24, 1931 (p. 722)

**Mach, Ernst** 1838–1916  
Austrian physicist and philosopher

The object of natural science is the connection of phenomena; but the theories are like dry leaves which fall away when they have long ceased to be the lungs of the tree of science.

*History and Root of the Principle of the Conservation of Energy*  
Chapter IV (p. 74)  
The Open Court Publishing Company, Chicago, Illinois, USA. 1911

**Maimonides, Moses** 1135–1204  
Spanish-born philosopher, jurist, and physician

Man knows only these poor mathematical theories about the heavens, and only God knows the real motions of the heavens and their causes.

In Phillip Frank  
*Modern Science and its Philosophy*  
Chapter 13 (p. 222)  
Harvard University Press, Cambridge, England. 1952

**Malthus, Thomas Robert** 1766–1834  
English economist

Each pursues his own theory, little solicitous to correct or improve it by an attention to what is advanced by his opponents.

In Robert M. Hutchins and Mortimer J. Adler (eds.)  
*The Great Ideas Today, 1961*  
Essays on the Principle of Population (p. 473)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1961

**Matthew, William Diller** 1871–1930  
Canadian-American paleontologist

Many a false theory gets crystallized by time and absorbed into the body of scientific doctrine through lack of adequate criticism when it is formulated.

Supplementary Note  
*Climate and Evolution* (Volume 1) (p. 159)  
Special Publications of the New York Academy of Sciences. December 1950

Criticism of Criticism of Criticism (p. 12)  
Alfred A. Knopf, New York, New York, USA. 1923

**Merezhkovskii, Konstantine** 1855–1921  
Russian biologist

The Germans compare German science to a lighthouse. I would as well, but then to a lighthouse without sacred fire to light up the world. The Germans carry stones to construct a solid base without which there would be no lighthouse, and in this task no other nation surpasses them. But, it is left for others to arrive and light the fire. Now, without fire, there is no lighthouse.

In Jan Sapp  
*Evolution by Association: A History of Symbiosis*  
Chapter 4 (p. 56)  
Oxford University Press, Inc. New York, New York, USA. 1994

**Neumann, John von** 1903–57  
Hungarian-American mathematician

It must be emphasized that it is not a question of accepting the correct theory and rejecting the false one. It is a matter of accepting that theory which shows greater formal adaptability for a correct extension. This is a formalistic esthetic criterion, with a highly opportunistic flavor.

*Collected Works* (Volume 6)  
Method in the Physical Sciences (p. 498)  
Pergamon Press, New York, New York, USA. 1961–1963

**Newell, A.**  
No biographical data available

Working with theories is not like skeet shooting, where theories are lofted up and bang, they are shot down with

a falsification bullet, and that's the end of that theory. Theories are more like graduate students—once admitted you try hard to avoid flunking them out, it being much better for them and for the world if they can become long-term contributors to society.

*Unified Theories of Cognition*

Introduction (p. 14)

Harvard University Press. Cambridge, Massachusetts, USA. 1990

**Nietzsche, Friedrich** 1844–1900

German philosopher

It is certainly not the least charm of a theory that it is refutable...

*Beyond Good and Evil*

Chapter I, 18 (pp. 18–19)

The Modern Library. New York, New York, USA. 1917

**Nizer, Louis** 1902–94

English-born American lawyer

The argument seemed sound enough, but when a theory collides with a fact, the result is a tragedy.

*My Life in Court* (p. 433)

Doubleday & Company, Inc. New York, New York, USA. 1961

**Novalis (Friederich von Hardenberg)** 1772–1801

German poet

Theories are like fishing: it is only by casting into unknown waters that you may catch something.

In Jean-Pierre Luminet

*Black Holes* (p. 1)

Cambridge University Press. New York, New York, USA. 1992

**Oman, John** 1860–1939

English Presbyterian theologian

To refuse to consider any possibility is merely the old habit of making theory the measure of reality.

*The Natural and the Supernatural*

Chapter XV (p. 269)

The Macmillan Company. New York, New York, USA. 1931

**Oppenheimer, J. Robert** 1904–67

American theoretical physicist

The theory of our modern technical [era] shows that nothing is as practical as theory.

*Reflex*, July 1977

**Papoulis, Athanasios** 1921–2002

Greek-American engineer and applied mathematician

Scientific theories deal with concepts, never with reality. All theoretical results are derived from certain axioms by deductive logic. In physical sciences the theories are so formulated as to correspond in some useful sense to the real world, whatever that may mean. However, this correspondence is approximate, and the physical justification of all theoretical conclusions is based on some form of inductive reasoning.

*Probability, Random Variables, and Stochastic Processes*

Chapter 1 (p. 3)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1965

**Parsons, Talcott** 1902–79

American sociologist

Theory not only formulates what we know but also tells us what we want to know, that is, the questions to which an answer is needed.

*The Structure of Social Action*

Part I, Chapter I (p. 9)

The Free Press. Glencoe, Illinois, USA. 1949

**Pasteur, Louis** 1822–95

French chemist

Without theory, practice is but routine born of habit. Theory alone can bring forth and develop the spirit of invention.

In René Dubos

*Louis Pasteur: Free Lance of Science*

Chapter I (p. 11)

Little, Brown & Company. Boston, Massachusetts, USA. 1950

**Petit, Jean-Pierre** 1937–

French astrophysicist

Sir, please believe me, it's the first time this has ever happened. Have another try, don't get upset. You know our Theorems are GUARANTEED.

*Euclid Rules OK?* (p. 11)

John Murray Ltd. London, England. 1982

**Playfair, John** 1748–1819

Scottish geologist, physicist, and mathematician

A theory is never more unfairly dealt with, than when those parts are separated which were meant to support one another, and each left to stand or fall by itself.

*Illustrations of the Huttonian Theory of the Earth*

Section 303 (p. 340)

Dover Publications, Inc. New York, New York, USA. 1964

The want of theory, then, does not secure the candor of an observer, and it may very much diminish his skill. The discipline that seems best calculated to promote both is a thorough knowledge of the methods of inductive investigation; an acquaintance with the history of physical discovery; and the careful study of those sciences in which the rules of philosophizing have been most successfully applied.

*Illustrations of the Huttonian Theory of the Earth*

Note XXVI, 459 (p. 528)

Dover Publications, Inc. New York, New York, USA. 1964

**Poincaré, Henri** 1854–1912

French mathematician and theoretical astronomer

It is not sufficient for a theory to affirm no false relations; it must not hide true relations.

*The Foundations of Science*

Science and Hypothesis, Part IV  
Chapter X (p. 145)  
The Science Press. New York, New York, USA. 1913

At the first blush it seems to us that theories last only a day and that ruins upon ruins accumulate.... But if we look more closely, we see that what thus succumb are the theories properly so called, those which pretend to teach us what things are. But there is in them something which usually survives. If one of them taught us a true relation, this relation is definitively acquired, and it will be found again under a new disguise in the other theories which will successively come to reign in place of the old.

*The Foundations of Science*  
The Value of Science, Science and Reality (p. 351)  
The Science Press. New York, New York, USA. 1913

**Popper, Karl R.** 1902–94  
Austrian/British philosopher of science

...scientific theories, if they are not falsified, for ever remain hypotheses or conjectures.

*Unended Quest: An Intellectual Autobiography*  
Chapter 16 (p. 79)  
Open Court Publishing Company. La Salle, Illinois, USA. 1976

The initial stage, the act of conceiving or inventing a theory, seems to me neither to call for logical analysis nor to be susceptible of it. The question how it happens that a new idea occurs to a man — whether it is a musical theme, or a dramatic conflict, or a scientific theory — may be of great interest to empirical psychology; but it is irrelevant to the logical analysis of scientific knowledge.

*The Logic of Scientific Discovery*  
Part I, Chapter I, Section 2 (p. 31)  
Basic Books, Inc. New York, New York, USA. 1959

Theories are nets cast to catch what we call “the world”: to rationalize, to explain, and to master it. We endeavor to make the mesh ever finer and finer.

*The Logic of Scientific Discovery*  
Part II, Chapter III (p. 59)  
Basic Books, Inc. New York, New York, USA. 1959

Never let yourself be goaded into taking seriously problems about words and their meanings. What must be taken seriously are questions of fact, and assertions about facts: theories and hypotheses; the problems they solve; and the problems they raise.

*Unended Quest: An Intellectual Autobiography*  
Chapter 7 (p. 19)  
Open Court Publishing Company. La Salle, Illinois, USA. 1976

Scientific theories are not the digest of observations, but they are inventions — conjectures boldly put forward for trial, to be eliminated if they clashed with observations; with observations which were rarely accidental, but as a rule undertaken with the definite intention of testing a theory by obtaining, if possible, a decisive refutation.

*Conjectures and Refutations: The Growth of Scientific Knowledge*  
Chapter 1, Section IV (p. 46)  
Harper & Row, Publishers. New York, New York, USA. 1963

As with our children, so with our theories, and ultimately with all the work we do: our products become largely independent of their makers. We may gain more knowledge from our children or from our theories than we ever imparted to them.

*Unended Quest: An Intellectual Autobiography*  
Chapter 40 (p. 196)  
Open Court Publishing Company. La Salle, Illinois, USA. 1976

Every “good” scientific theory is one which forbids certain things to happen; the more a theory forbids, the better it is.

In C.A. Mace (ed.)  
*British Philosophy in the Mid-Century*  
Philosophy of Science: A Personal Report I (p. 159)  
George Allen & Unwin Ltd. London, England. 1957

...our critical examinations of our theories lead us to attempts to test and to overthrow them; and these lead us further to experiments and observations of a kind which nobody would ever have dreamed of without the stimulus and guidance both of our theories and of our criticisms of them. For indeed, the most interesting experiments and observations were carefully designed in order to test our theories, especially our new theories.

*Conjectures and Refutations: The Growth of Scientific Knowledge*  
Chapter 10, Section I (pp. 215–216)  
Harper & Row, Publishers. New York, New York, USA. 1963

We have no reason to regard the new theory as better than the old theory — to believe that it is nearer to the truth — until we have derived from the new theory new predictions which were unobtainable from the old theory (the phases of Venus...) and until we have found that these new predictions were successful.

*Conjectures and Refutations: The Growth of Scientific Knowledge*  
Chapter 10 (p. 246)  
Harper & Row, Publishers. New York, New York, USA. 1963

...a high probability cannot be one of the aims of science. For the scientist is most interested in theories with a high content. He does not care for highly probable trivialities but for bold and severely testable (and severely tested) hypotheses. If (as Carnap tells us) a high degree of confirmation is one of the things we aim at in science, then degree of confirmation cannot be identified with probability. ...if high probability were an aim of science, then scientists should say as little as possible, and preferably utter tautologies only. But their aim is to “advance” science, that is to add to its content. Yet this means lowering its probability. And in view of the high content of universal laws, it is [not] surprising to find that their probability is zero...

*Conjectures and Refutations: The Growth of Scientific Knowledge*  
Chapter 11, Section VI (p. 286)  
Harper & Row, Publishers. New York, New York, USA. 1963

The dogmatic attitude of sticking to a theory as long as possible is of considerable significance. Without it we could never find out what is in a theory — we should give the theory up before we had real opportunity of finding out its strength; and in consequence no theory would ever be able to play its role of bringing order into the world, of preparing us for future events, of drawing our attention to events we should otherwise never observe.

*Conjectures and Refutations: The Growth of Scientific Knowledge*  
Chapter 15, fn 1 (p. 312)  
Harper & Row, Publishers. New York, New York, USA. 1963

**Pratchett, Terry** 1948–  
English author

...theories, diverse as they are, have two things in common. They explain the observed facts, and they are completely and utterly wrong.

American geophysicist and paleontologist

[A] new theory is guilty until proven innocent, and the pre-existing theory is innocent until proven guilty. ... Continental drift was guilty until proven innocent.

*The Nemesis Affair: A Story of the Death of the Dinosaurs and the Ways of Science*  
Chapter 12 (pp. 195, 205)  
W.W. Norton & Company, Inc. New York, New York, USA. 1986

**Reiser, Anton** 1628–86  
German Lutherischer theologian

Our experience and observations alone never lead to finalities. Theory, however, creates reliable roads over which we may pursue our journeys through the world of observations.

In Bernard Jaffe  
*New World of Chemistry*  
Chapter 11 (p. 133)  
Silver, Burdett & Company. New York, New York, USA. 1935

**Richards, Dickinson W.** 1895–1973  
American physician and physiologist

The problems are the ones that we have always known. The little gods are still with us, under different names. There is conformity: of technique, leading to repetition; of language, encouraging if not imposing conformity of thought. There is popularity: it is so easy to ride along on

an already surging tide; to plant more seed in an already well-ploughed field; so hard to drive a new furrow into stony ground. There is laxness: the disregard of small errors, of deviations, of the unexpected response; the easy worship of the smooth curve. There is also fear: the fear of speculation; the overprotective fear of being wrong. We are forgetful of the curious and wayward dialectic of science, whereby a well-constructed theory even if it is wrong, can bring a signal advance.

*Transactions of the Association of American Physicians*, Volume 75, 1962 (p. 1)

**Richet, Charles** 1850–1935  
French physiologist

I often recall to my students the history of Don Quixote, who, having constructed a helmet of cardboard and wood, wished to prove its solidity. Alas, the poor helmet flew to bits when his own good sword struck it. Then the knight, no whit discouraged, made a new and stronger helmet. He raised his sword.

*The Natural History of a Savant*  
Chapter II (p. 17)  
J.M. Dent & Sons Ltd. London, England. 1927

**Rota, Gian-Carlo** 1932–99  
Italian-born American mathematician

**Pringsheim, Alfred** 1850–1941  
German mathematician

Theorems are not to mathematics what successful courses are to a meal. The nutritional analogy is misleading.

In Philip J. Davis and Reuben Hersh  
*The Mathematical Experience*  
Introduction (pp. xviii–xix)  
Birkhäuser. Boston, Massachusetts, USA. 1981

**Rothman, Tony** 1953–  
American cosmologist

**Sudarshan, George** 1931–  
Indian physicist

The everyday usage of “theory” is for an idea whose outcome is as yet undetermined, a conjecture, or for an idea contrary to evidence. But scientists use the word in exactly the opposite sense. [In science] “theory”...refers only to a collection of hypotheses and predictions that is amenable to experimental test, preferably one that has been successfully tested. It has everything to do with the facts.

*Doubt and Certainty: The Celebrated Academy: Debates on Science, Mysticism, Reality, in General on the Knowable and Unknowable*  
First Debate (p. 2)  
Perseus Books. Reading, Massachusetts, USA. 1998

It is not difficult to calculate that if one inflated the world to keep up with the current rate of population growth, then after 2598 years the earth would be expanding at the speed of light. The growth of science is proceeding even faster. Several years ago, in physics at least, we crossed the point at which the expected lifetime of a theory became less than the lead time for publication in the average scientific journal. Consequently, most theories are born dead on arrival and journals have become useless, except as historical documents.

*A Physicist on Madison Avenue*  
Chapter 8 (p. 118)  
Princeton University Press. Princeton, New Jersey, USA. 1991

A theory is accepted only when the last of its opponents dies off. The Copernican Revolution was a great shift in mankind's thinking, but did not take place overnight.

*Instant Physics: From Aristotle to Einstein, and Beyond*  
Chapter 1 (p. 15)  
Ballantine Books. New York, New York, USA. 1995

**Russell, Bertrand Arthur William** 1872–1970  
British philosopher, logician, and social reformer

...it is only theory that makes men completely incautious.

Chapter 4 (p. 27)  
HarperPaperback. New York, New York, USA. 1995

**Schegel, Richard**  
No biographical data available

We must accept, I think, that there is an inherent limitation in the structure of science that prevents a scientific theory from ever giving us an adequate total explanation of the universe. Always, there is a base in nature (or, correspondingly, a set of assumptions in theory) which cannot be explained by reference to some yet more fundamental

property. This feature of science has been commented on by many writers in the philosophy of science; and, certainly the limitation is a point of difference between science and those religious or metaphysical systems in which there is an attempt to present a doctrine that gives answers for all ultimate questions.

*Completeness in Science*  
Chapter 14, Section 2 (p. 252)  
Appleton-Century-Crofts. New York, New York, USA. 1967

**Schiller, Ferdinand Canning Scott** 1864–1937  
English philosopher

It is the business of theories to forecast “facts”, and of facts to form points of departure for theories, which again, when verified by the new facts to which they have successfully led, will extend the borders of knowledge.

In Charles Singer (ed.)  
*Studies in the History and Method of Science* (Volume 1)  
Scientific Discovery and Logical Proof (p. 275)  
At The Clarendon Press. Oxford, England. 1917

**Schön, Donald A.** 1930–97  
American philosopher of practice and learning theory

...there is a high, hard ground where practitioners can make effective use of research-based theory and technique, and there is a swampy lowland where situations are confusing “messes” incapable of technical solution. ...[I]n the swamp are the problems of greatest human concern.

*The Reflective Practitioner: How Professionals Think in Action* (p. 42)  
Aldershot Press. Avebury, England. 1983

**Schramm, David N.** 1945–97  
American astrophysicist

**McKee, Christopher F.** 1942–  
American astrophysicist

When theory runs too far ahead of what can be measured, a field becomes more philosophy than science.

*Astronomy in the Mind and the Lab*  
*Sky and Telescope*, Volume 82, Number 4, October 1991 (p. 352)

**Seeger, Raymond J.**

It is noteworthy that the etymological root of the word theatre is the same as that of the word theory, namely a view. A theory offers us a better view.

*Journal of the Washington Academy of Sciences*, Volume 36, 1946 (p. 286)

**Shaw, George Bernard** 1856–1950  
Irish comic dramatist and literary critic

The weakness of the man who, when his theory works out into a flagrant contradiction of the facts, concludes “so much the worse for the facts: let them be altered,” instead of “so much the worse for my theory.”

*Liberty*

New York

A Degenerate's View of Nordau, July 27, 1895

### Silver, Brian L.

Israeli professor of physical chemistry

Some see the fragility of scientific theory as an indication of a basic inability of science to explain the universe. But scientific change is almost always accompanied by an increase in our ability to rationalize and predict the course of nature. Newton could explain far more than Aristotle, Einstein far more than Newton. Science frequently stumbles, but it gets up and carries on. The road is long.

*The Ascent of Science*

Preface (p. xiii)

Solomon Press Book. New York, New York, USA. 1998

Facts may be regarded as indisputable; theories are not.

*The Ascent of Science*

Part I, Chapter 2 (p. 19)

Solomon Press Book. New York, New York, USA. 1998

### Skolimowski, Henryk 1930–

Polish philosopher

Theories, like old soldiers, fade away rather than being killed on the scientific battlefield.

In A.J. Ayala (ed.)

*Studies in the Philosophy of Biology: Reduction and Related Problems*

Problems of Rationality in Biology (p. 217)

Macmillan & Company Ltd. London, England. 1974

### Slater, John C. 1900–76

American physicist and theoretical chemist

A theoretical physicist in these days asks just one thing of his theories: if he uses them to calculate the outcome of an experiment, the theoretical prediction must agree, within limits, with the result of the experiment. He does not ordinarily argue about philosophical implications of his theory. Almost his only recent contribution to philosophy has been the operational idea, which is essentially only a different way of phrasing the statement I have just made, that the one and only thing to be done with a theory is to predict the outcome of an experiment. As a physicist, I find myself very well satisfied with this attitude.

Electrodynamics of Ponderable Bodies

*Journal of the Franklin Institute*, Volume 225, Number 3, March 1938

(pp. 277–287)

Questions about a theory which do not affect its ability to predict experimental results correctly seem to me quibbles about words, rather than anything more substantial, and I am quite content to leave such questions to those who derive some satisfaction from them.

Electrodynamics of Ponderable Bodies

*Journal of the Franklin Institute*, Volume 225, Number 3, March 1938

(pp. 277–287)

### Slosson, Edwin E. 1865–1929

American chemist and journalist

The scientist does not abandon a theory because it has inconsistencies any more than he divorces his wife because she has inconsistencies.

*Easy Lesson in Einstein: A Discussion of the More Intelligible Features of the Theory of Relativity*

Scientific Versus Legal Laws (p. 106)

Harcourt, Brace & Company. New York, New York, USA. 1920

### Stenger, Victor J. 1935–

American physicist

The fact that a theory may eventually test wrong does not detract from its original merit as a worthy try. On the other hand, if an idea is poorly formulated, often because the terms used are not clearly defined, then how can we even test it? . . . We cannot determine that gibberish is anything but gibberish.

*Physics and Psychics: The Search for a World Beyond the Senses*

Chapter 3 (p. 58)

Prometheus Books. Buffalo, New York, USA. 1990

### Stevenson, Robert Louis 1850–94

Scottish essayist and poet

It is better to emit a scream in the shape of a theory than to be entirely insensible to the jars and incongruities of life and take everything as it comes in a forlorn stupidity.

*Virginibus Puerisque and Familiar Studies of Men and Books*

Crabbed Age and Youth (p. 42)

Argentinean-American mathematician

A mark of a good theory is that it proves even the most trivial results.

Gelfand Workshop

Rutgers University, February 11, 2002

### Synge, John L. 1897–1995

Irish mathematician and physicist

A well built theory has three merits: (i) it has an aesthetic appeal, (ii) it is comparatively easy to understand, and (iii), if its postulates are clearly stated, it may be taken out of its original physical context and applied in another.

The Hamiltonian Method and Its Application to Water Waves

*Proceedings of the Irish Academy*, Volume 63, Section A, Number 1,

May 1962 (p. 1)

### Teall, Sir J. J. Harris 1849–1924

British geologist

It is only when a theory has proved its usefulness as a coordinator of fact that it becomes worthy of the dignity of publication. It may be true or false, most likely the latter; but if it coordinates more facts than any other it is at any rate useful and may be conveniently retained until replaced by a better.

*Annual Report of the Board of Regents of the Smithsonian Institution*, 1902

The Evolution of Petrological Ideas (p. 289)  
Government Printing Office. Washington, D.C. 1903

**Toulmin, Stephen** 1922–  
English philosopher

It is part of the art of the sciences, which has to be picked up in the course of the scientist's training, to recognize the situations in which any particular theory or principle can be applied to, and when it will cease to hold.

*The Philosophy of Science: An Introduction*  
Chapter III (pp. 92–93)  
Harper & Row, Publishers. New York, New York, USA. 1960

**Turner, Michael S.**  
American astrophysicist

If all you have are observations, that's botany. If all you have is theory, that's philosophy.

In John Hogan  
Universal Truths  
*Scientific American*, Volume 264, Number 4, October 1990 (p. 117)

**Twain, Mark (Samuel Langhorne Clemens)** 1835–1910  
American author and humorist

...the trouble about arguments is, they ain't nothing but theories, after all, and theories don't prove nothing, they only give you a place to rest on, a spell, when you are tuckered out butting around and around trying to find out something there ain't no way to find out. ... There's another trouble about theories: there's always a hole in them somewhere, sure, if you look close enough.

*Tom Sawyer Abroad; Tom Sawyer, Detective and Other Stories, etc., etc.*  
Tom Sawyer Abroad  
Chapter IX (p. 70)  
Harper & Brothers. New York, New York, USA. 1902

**van Fraassen, Bas C.** 1941–  
Dutch-born philosopher

Science aims to give us, in its theories, a literally true story of what the world is like; and acceptance of a scientific theory involves the belief that it is true.

*The Scientific Image*  
Chapter 2, section 1.1 (p. 8)  
Clarendon Press. Oxford, England. 1990

...the success of current scientific theories is no miracle. It is not even surprising to the scientific (Darwinist) mind. For any scientific theory is born into a life of fierce competition, a jungle red in tooth and claw. Only the successful theories survive — the ones which in fact latched on to the actual regularities in nature.

*The Scientific Image*  
Chapter 2, Section 7 (p. 40)  
Clarendon Press. Oxford, England. 1980

**von Goethe, Johann Wolfgang** 1749–1832  
German poet, novelist, playwright and natural philosopher

No phenomenon can be explained in and of itself; only many comprehended together, methodically arranged, in the end yield something that could be regarded as theory.

In Karl J. Fink  
*Goethe's History of Science*  
Chapter 2 (p. 26)  
Cambridge University Press. Cambridge, England. 1991

Dear friend, all theory is grey  
And green the golden tree of life.

In *Great Books of the Western World* (Volume 47)

The First Part  
*Faust's Study* (2), I. 2038–2039  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Waddington, Conrad Hal** 1905–75  
British biologist and paleontologist

A scientific theory cannot remain a mere structure within the world of logic, but must have implications for action and that in two different ways. In the first place, it must involve the consequence that if you do so and so, such and such results will follow. That is to say it must give, or at least offer the possibility of controlling the process; and secondly — and this is a point not so often mentioned by those who discuss the nature of scientific theories — its value is quite dependent on its power of suggesting the next step in scientific advance.

*The Nature of Life*  
Chapter I (pp. 11–12)  
Harper & Row, Publishers. New York, New York, USA. 1960

**Weinberg, Steven** 1933–  
American nuclear physicist

This is often the way it is in physics — our mistake is not that we take our theories too seriously, but that we do not take them seriously enough.

*The First Three Minutes*  
Chapter VI (p. 131)  
Basic Books, Inc. New York, New York, USA. 1988

Our theories are very esoteric — necessarily so, because we are forced to develop these theories using a language, the language of mathematics, that has not become part of the general equipment of the educated public. Physicists generally do not like the fact that our theories are so esoteric. On the other hand, I have occasionally heard artists talk proudly about their work being accessible only to a band of cognoscenti and justify this attitude by quoting the example of physical theories like general relativity that also can be understood only by initiates. Artists like physicists may not always be able to make themselves understood by the general public, but esotericism for its own sake is just silly.

(p. 131)

...to come very near a true theory and to grasp its precise  
application are two very different things.

*The Organization of Thought*

Chapter VI (p. 127)

Greenwood Press Publishers. Westport, Connecticut, USA. 1974

**Wilson, Edward O.** 1929–  
American biologist and author

Nothing in science — nothing in life, for that matter,  
makes sense without theory. It is our nature to put all  
knowledge into context in order to tell a story, and to  
re-create the world by this means. ... We are enchanted by  
the beauty of the natural world. Our eye is caught by the  
dazzling visual patterns of polar star trails, for example,  
and the choreography of chromosomes in dividing root  
tip cells of plant. Both disclose processes that are also  
vital to our lives. In unprocessed form, however, with-  
out theoretical frameworks of heliocentric astronomy  
and Mendelian heredity, they are no more than beautiful  
patterns of light.

*Consilience: The Unity of Knowledge* (p. 58)

Alfred A. Knopf. New York, New York, USA. 1998

**Wisdom, John O.**  
No biographical data available

Sometimes [the word theory] is used for a hypothesis,  
sometimes for a confirmed hypothesis; sometimes for a  
train of thought; sometimes for a wild guess at some fact,  
or for a reasoned claim of what some fact is — or even  
for a philosophical speculation.

*Foundations of Inference in Natural Sciences*

Chapter III (p. 33)

Methuen & Company Ltd. London, England. 1952

**Woodbridge, Frederick James Eugene** 1867–1940  
American philosopher

It is a theory of nature, that system of things which allows  
a plant to grow, an animal to graze, and a man to think,  
fully as much as it allows the sun to be eclipsed or bodies  
to be in motion or at rest.

*Aristotle's Vision of Nature*

Chapter III (p. 49)

Columbia University Press. New York, New York, USA. 1965

**Woodger, Joseph Henry** 1894–1981  
English biologist

Theoretical statements, it is clear, cannot be verified  
because we can never know whether they are true. All  
we can do is to go on testing their consequences until  
an observation record turns up which contradicts them.  
Then we have the choice of two courses: we can say that  
the theoretical statement is false and reject it; or we can  
assume that we have been mistaken in our observation  
and retain the theoretical statements.

*Biology and Language*

Lecture II (p. 57)

*The Creation*

Chapter 2 (p. 23)

W.H. Freeman. San Francisco, California, USA. 1981

**Barnett, Lincoln** 1909–79

American science writer

Although it is true that the amount of matter in the universe is perpetually changing, the change appears to be mainly in one direction — toward dissolution. The sun is slowly but surely burning out, the stars are dying embers, and everywhere the cosmos heart is turning to cold; matter is dissolving into radiation, and energy is being dissipated into empty space. “The universe is thus progressing toward an ultimate ‘heat death’ or, as it is technically defined, a condition of maximum entropy” [quoting Einstein]... And there is no way of avoiding this destiny.

[T]he fateful principle known as the Second Law of Thermodynamics, which stands today as the principal pillar of classical physics left intact by the march of science, proclaims that the fundamental processes of nature are irreversible. Nature moves only one way.

*The Universe and Dr. Einstein*

Chapter 14 (p. 99)

William Sloane Associates. New York, New York, USA. 1948

Chapter 9 (p. 107)

Harper & Row, Publishers. New York, New York, USA. 1971

**Boltzmann, Ludwig Edward** 1844–1906

Austrian physicist

General thermodynamics proceeds from the fact that, as far as we can tell from our experience up to now, all natural processes are irreversible. Hence according to the principles of phenomenology, the general thermodynamics of the second law is formulated in such a way that the unconditional irreversibility of all natural processes is asserted as a so-called axiom.

Translated by Stephen G. Brush

*Lectures on Gas Theory* (pp. 444–445)

University of California Press. Berkeley, California, USA. 1964

The Second Law can never be proved mathematically by means of the equations of dynamics alone.

On Certain Questions of the Theory of Gases

*Nature*, Volume 51, 1895 (p. 413)

**Bridgman, Percy Williams** 1882–1961

American physicist

...the laws of thermodynamics have a different feel from most of the other laws of the physicist...they smell more of their human origin.

*The Nature of Thermodynamics*

Chapter I (p. 3)

Harvard University Press. Cambridge, Massachusetts, USA. 1941

**Cardenal, Ernesto** 1925–

Nicaraguan poet and Roman Catholic priest

The second law of thermodynamics!:

energy is indestructible in quantity

but continually changes in form.

And it always runs down like water.

Translated by John Lyons

*Cosmic Canticle*

Cantigua 3, Autumn Fugue (p. 29)

Curbstone Press. Willimantic, Connecticut, USA. 1993

**Dickerson, Richard E.**

American molecular biologist

It is possible to know thermodynamics without understanding it...

*Molecular Thermodynamics*

Chapter 7 (p. 387)

W.A. Benjamin. New York, New York, USA. 1969

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

The law of entropy always increases — the Second Law of Thermodynamics — holds, I think, the supreme position among the laws of Nature. If someone points out to you that your pet theory of the universe is in

disagreement with Maxwell's equation — then so much the worse for Maxwell's equations. If it is found to be contradicted by observation — well, these experimentalists do bungle things sometimes. But if your theory is found to be against the Second Law of Thermodynamics I can give you no hope; there is nothing for it but to collapse in deepest humiliation.

*The Nature of the Physical World*

Chapter IV (p. 74)

The Macmillan Company. New York, New York, USA. 1930

**Epstein, P. S.** 1883–1966

German-born physicist

Thermodynamics deals with systems which, in addition to mechanical and electromagnetic parameters, are described by a specifically thermal one, namely, the temperature or some equivalent of it. Thermodynamics is essentially a science about the conditions of equilibrium of systems and about the processes which can go on in states little different from the state of equilibrium.

*Textbook of Thermodynamics*

Chapter I (p. 2)

John Wiley & Sons, Inc. New York, New York, USA. 1937

**Feynman, Richard P.** 1918–88

American theoretical physicist

**Leighton, Robert B.** 1919–97

American physicist

**Sands, Matthew L.** 1919–

American physicist

In doing a problem involving a given mass of some substance, the condition of the substance at any moment can be described by telling what its temperature is and what its volume is. If we know the temperature and volume of a substance, and that the pressure is some function of the temperature and volume, then we know the internal energy. One could say, "I do not want to do it that way. Tell me the temperature and the pressure and I will tell you the volume. I can think of the volume as a function of temperature and pressure, and so on." That is why thermodynamics is hard, because everyone uses a different approach. If we could only sit down once and decide on our variables, and stick to them, it would be fairly easy.

*The Feynman Lectures on Physics* (Volume 1)

Chapter 44–5 (p. 44–9)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA.

1983

**Hoffmann, Roald** 1937–

Polish-born American chemist

My second law, your second law, ordains that local order, structure in space and time, be crafted in ever-so-losing contention with proximal disorder in this neat but getting messier universe.

*The Metamict State*

The Devil Teaches Thermodynamics (p. 3)  
University of Central Florida Press. Orlando, Florida, USA. 1987

**Hogan, Graig J.**

No biographical data available

Everything that happens in the universe consists of the same basic stuff, “mass-energy,” transfigured in space and time from one form into another.

Copernicus. New York, New York, USA. 1998

**Kelvin, Lord William Thomson** 1824–1907

Scottish engineer, mathematician, and physicist

It is impossible, by means of inanimate material agency, to derive mechanical effect from any portion of matter by cooling it below the temperature of the coldest of the surrounding objects.

On the Dynamical Theory of Heat, with Numerical Results Deduced from Mr. Joule’s Equivalent of a Thermal Unit, and M. Regnault’s Observations on Steam

*Transactions of the Royal Society of Edinburgh*, March 1851

**Lewis, Gilbert Newton** 1875–1946

American chemist

**Randall, Merle** 1888–1950

American chemist

The fascination of a growing science lies in the work of the pioneers at the very borderland of the unknown, but to reach this frontier one must pass over well traveled roads; of these one of the safest and surest is the broad highway of thermodynamics.

Revised by Kenneth S. Pitzer and Leo Brewer

*Thermodynamics* (p. x)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1961

The second law of thermodynamics not only is a principle of wide reaching scope and application, but also is one which has never failed to satisfy the severest test of experiment. The numerous quantitative relations derived from this law have been subjected to more and more accurate experimental investigation without the detection of the slightest inaccuracy.

*Thermodynamics* (p. 87)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1961

**Maxwell, James Clerk** 1831–79

Scottish physicist

I do not think...that the perfect identity which we observe between different portions [of molecules] of the same kind of matter can be explained on the statistical principle of the stability of the averages of large numbers of quantities each of which may differ from the mean. For if of the molecules of some substance such as hydrogen, some were of slightly greater mass than others, we have the means of producing a separation between molecules

of different masses, and in this way we should be able to produce two kinds of hydrogen, one of which would be somewhat denser than the other. As this cannot be done, we must admit that the equality which we assert to exist between the molecules of hydrogen applies to each individual molecule, and not merely to the average of groups of millions of molecules.

*Theory of Heat*

Limitation of the Second Law of Thermodynamics (p. 309)

Longmans, Green & Company. London, England. 1871

**Meixner, J.** 1908–94

German theoretical physicist

A careful study of the thermodynamics of electrical networks has given considerable insight into these problems and also produced a very interesting result: the non-existence of a unique entropy value in a state which is obtained during an irreversible process.... I would say, I have done away with entropy. The next step might be to let us also do away with temperature.

In Edward B. Stuart, Benjamin Gal-Or and Alan J. Brainard (eds.)

*A Critical Review of Thermodynamics: The Proceedings of the International Symposium*

University of Pittsburgh. Pittsburgh, Pennsylvania, April 7–8, 1969

**Morowitz, Harold J.** 1927–

American biophysicist

The use of thermodynamics in biology has a long history rich in confusion...

*Beginnings of Cellular Life: Metabolism Recapitulates Biogenesis*

Chapter 6 (p. 69)

Yale University Press. New Haven, Connecticut, USA. 1992

**Pippard, A. B.** 1920–

English physicist

It may be objected by some that I have concentrated too much on the dry bones [of thermodynamic theory], and too little on the flesh which clothes them, but I would ask such critics to concede at least that the bones have an austere beauty of their own.

*Classical Thermodynamics*

Preface (p. vii)

Cambridge University Press. Cambridge, England. 1966

**Reiss, H.**

No biographical data available

Almost all books on thermodynamics contain some errors which are not purely typographical.

*Methods of Thermodynamics*

Preface (p. ix)

Blaisdell Publishing Company, New York, New York, USA. 1965

...the almost certain truth [is] that nobody (authors included) understands thermodynamics completely. The writing of a book therefore becomes a kind of catharsis in which the author exorcises his own demon of incomprehension and prevents it from occupying the soul of another.

*Methods of Thermodynamics*

Preface (p. vii)

Blaisdell Publishing Company. New York, New York, USA. 1965

**Ross, John** 1920–

American physical chemist

I have written that there are no known violations of the second law of thermodynamics (*Chemical and Engineering News*, July 27, 1980). Unfortunately I have been intentionally misinterpreted by creationists who say that this quote proves that evolution is impossible. This is nonsense: evolution is in no way a violation of the second law.

Letter to Carl Gaither

19 June 2007

**Seifert, H. S.** 1911–77

American aeronautics and astronautics scientist

The first and second laws of thermodynamics are of course known to us as well as the Ten Commandments, and probably obeyed more consistently.

Can We Decrease Our Entropy?

*American Scientist*, Summer, June 1961 (p. 124A)

**Sommerfeld, Arnold** 1868–1951

German physicist

The science of thermodynamics introduces a new concept, that of temperature.

*Thermodynamics and Statistical Mechanics, Lectures on Theoretical Physics* (Volume 1)

Translated by J. Kestin (p. 1)

Academic Press. New York, New York, USA. 1956

**Stenger, Victor J.** 1935–

American physicist

Scientists speak of the Law of Inertia or the Second Law of Thermodynamics as if some great legislature in the sky once met and set down rules to govern the universe.

*Not by Design*

Chapter 1 (p. 14)

Prometheus Books. Buffalo, New York, USA. 1988

**Truesdell, Clifford** 1919–2000

American mathematician, natural philosopher, historian of mathematics

Every physicist knows exactly what the first and the second law mean, but...no two physicists agree about them.

In Mario Bunge (ed.)

*Delaware Seminar in the Foundations of Physics*

Foundations of Continuum Mechanics (p. 37)

...thermodynamics is the kingdom of deltas.

*The Tragicomical History of Thermodynamics*

Chapter 1 (p. 1)

Springer-Verlag. New York, New York, USA. 1980

## THERMOMETER

**Fahrenheit, Daniel Gabriel** 1686–1736

German physicist

It then came into my mind what that most careful observer of natural phenomena had written about the correction of the barometer; for he had observed that the height of the column of mercury in the barometer was a little (though sensibly enough) altered by the varying temperature of the mercury. From this I gathered that a thermometer might perhaps be constructed with mercury, which would not be so hard to construct, and by the use of which it might be possible to carry out the experiment which I so greatly desired to try.

*Experimenta Circa Gradum Caloris Liqueorum Nonnullorum*

*Ebullientium Instituta*

*Philosophical Transactions of the Royal Society of London*, Volume 33, Number 1, 1724

## THINKING

**Asimov, Isaac** 1920–92

American author and biochemist

Many adults, whether consciously or unconsciously, find it beneath their adult dignity to do anything as childish as read a book, think a thought, or get an idea. Adults are rarely embarrassed at having forgotten what little algebra or geography they once learned.

*The Roving Mind*

His Own Particular Drummer

Prometheus Books. Buffalo, New York, New York, USA. 1983

**Crick, Francis Harry Compton** 1916–2004

English biochemist

Some scientists work so hard there is no time left for serious thinking.

*What Mad Pursuit: A Personal View of Scientific Discovery*

Basic Books, Inc. New York, New York, USA. 1988

**Cromer, Alan** 1935–

American physicist and educator

Scientific thinking, which is analytic and objective, goes against the grain of traditional human thinking, which is associative and subjective.

*Uncommon Sense: The Heretical Nature of Science*

Chapter 1 (pp. 1–2)

Oxford University Press, Inc. New York, New York, USA. 1993

**Dewey, John** 1859–1952

American philosopher and educator

The first distinguishing characteristic of thinking is facing the facts — inquiry, minute and extensive scrutinizing, observation.

*Reconstruction in Philosophy*

Chapter VI (p. 140)

Beacon Press. Boston, Massachusetts, USA. 1920

Intelligent thinking means an increment of freedom in action — an emancipation from chance and fatality. “Thought” represents the suggestion of a way of response that is different from that which would have been followed if intelligent observation had not effected an inference as to the future.

*Reconstruction in Philosophy*

Chapter VI (p. 144)

Beacon Press. Boston, Massachusetts, USA. 1920

**Edison, Thomas** 1847–1931

American inventor

I am going to have a sign put up all over my plant, reading “There is no expedient to which a man will not resort to avoid the real labor of thinking.”

In Dogbert D. Runes (ed.)

*The Diary and Sundry Observations of Thomas Alva Edison*

Chapter XXIX (p. 167)

Philosophical Library. New York, New York, USA. 1948

**Einstein, Albert** 1879–1955

German-born physicist

Thinking for its own sake, as in music! When I have no special problem to occupy my mind, I love to reconstruct proofs of mathematical and physical theorems that have long been known to me. There is no goal in this, merely an opportunity to indulge in the pleasant occupation of thinking.

In Helen Dukas and Banesh Hoffman

**Harrington, John W.** 1918–

American naturalist

We cannot see without thinking; we cannot think without seeing.

*Dance of the Continents*

Epilogue (p. 232)

J.P. Tarcher. Los Angeles, California, USA. 1983

**Heisenberg, Werner Karl** 1901–76

German physicist and philosopher

...one extreme is the idea of an objective world, pursuing its regular course in space and time, independently of any kind of observing subject; this has been the guiding image from modern science. At the other extreme is the idea of a subject, mystically experiencing the unity of the world and no longer confronted by an object or by any objective world; this has been the guiding image of Asian mysticism. Our thinking moves somewhere in the middle, between these two limiting conceptions; we should maintain the tension resulting from these opposites.

Perseus Books. Reading, Massachusetts, USA. 1998

**Sagan, Carl** 1934–96

American astronomer and science writer

The scientific way of thinking is at once imaginative and disciplined. This is central to its success. Science invites us to let the facts in, even when they don't conform to our preconceptions. It counsels us to carry alternative hypotheses in our heads and see which best fit the facts. It urges on us a delicate balance between no-holds-barred openness to new ideas, however heretical, and the most rigorous skeptical scrutiny of everything — new ideas and established wisdom. This kind of thinking is also an essential tool for a democracy in an age of change.

Rudolf Steiner Press. London, England. 1999

## THOUGHT

**Baldwin, J. Mark** 1861–1934

American philosopher and psychologist

We do not scatter our thoughts as widely as possible in order to increase the chances of getting a true one; on the contrary, we call the man who produces the most thought-variations a “scatter-brain,” and expect nothing inventive from him... we succeed in thinking well by thinking hard; we get the valuable thought-variations by concentrating attention upon the body of related [data] which we already have; we discover new relations among the data of experience by running over and over the links and couplings of the apperceptive systems with which our minds are already filled.

On Selective Thinking

English historian and essayist

Thought once awakened does not again slumber.

*On Heroes and Hero Worship*

Lecture I (p. 24)

John B. Alden, Publisher. New York, New York, USA. 1887

And what is that Science, which the scientific head alone, were it screwed off, and (like the Doctor's in the Arabian Tale) set in a basin to keep it alive, could prosecute without a heart, but one other of the mechanical and menial handicrafts, for which the Scientific Head (having a Soul in it) is too noble an organ? I mean that Thought without Reverence is barren, perhaps poisonous; at best, dies like cookery with the day that called it forth; does not live, like sowing, in successive tilts and wider-spreading harvests, bringing food and plenteous increase to all Time.

*Sartor Resartus*

Sartor Resartus

**Coman, Dale Rex** 1906–

American research physician and wildlife writer

Thoughts are timid things. They are frightened away by noise and they make none themselves. They flutter as silently as do owls on soft-edged wings.

*The Endless Adventure*

Sanctuaries (p. 176)

Henry Regnery Company. Chicago, Illinois, USA. 1972

The Great London Chemists

Section II (pp. 47–48)

Archibald Constable &amp; Company Ltd. London, England. 1908

**Douglas, A. Vibert** 1894–1988

Canadian astronomer

Guided by some of the great thinkers of today, our thoughts have traversed aeons of time, contemplating some of the changes taking place with majestic

deliberation throughout the vastness of space. "Time rolls his ceaseless course." A million million years suffice for the birth of a star and its early development; a few hundred thousand years will tell the tale of the life of mankind upon this planet; and as for man, an individual man, the years of his life are three score years and ten, and yet such is the power of a great mind that, despite the brevity of its allotted span, it can wrestle with the problems of nature and learn something at least of the immensities of space and time.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1925*

Time and Space (p. 155)

Government Printing Office. Washington, D.C. 1926

**Einstein, Albert** 1879–1955

German-born physicist

Scientific thought is a development of pre-scientific thought.

Doubleday, Doran &amp; Company, Inc. Garden City, New York, USA. 1931

**Heisenberg, Werner Karl** 1901–76

German physicist and philosopher

...when new groups of phenomena compel changes in the pattern of thought...even the most eminent of physicists find immense difficulties. For the demand for change in

the thought pattern may engender the feeling that the ground is to be pulled from under one's feet. . . . I believe that the difficulties at this point can hardly be overestimated. Once one has experienced the desperation with which clever and conciliatory men of science react to the demand for a change in the thought pattern, one can only be amazed that such revolutions in science have actually been possible at all.

In Robert M. Augros & George N. Stanciu

 Chapter I (p. 9)  
 The University of Michigan Press. Ann Arbor, Michigan, USA. 1958

**Harrington, Thomas**  
 No biographical data available

The benefit which God designed for man by the Tides in giving a perpetual motion to the Waters was to prevent their corrupting, and thereby breeding any infection that might arise from too long a stagnation of them.

*Science Improved; or the Theory of the Universe*  
 Section III (p. 18)  
 Printed for the Author. London, England. 1774

**Kelvin, Lord William Thomson** 1824–1907  
 Scottish engineer, mathematician, and physicist

The subject on which I have to speak this evening is the tides, and at the outset I feel in a curiously difficult position. If I were asked to tell what I mean by the Tides I should feel it exceedingly difficult to answer the question. The tides have something to do with motion of the sea. Rise and fall of the sea is sometimes called a tide; but I see, in the Admiralty Chart of the Firth of Clyde, the whole space between Ailsa Craig and the Ayrshire coast marked “very little tide here.” Now, we find there a good ten feet rise and fall, and yet we are authoritatively told there is very little tide. The truth is, the word “tide” as used by sailors at sea means horizontal motion of the water; but when used by landmen or sailors in port, it means vertical motion of the water.

Lecture  
 The British Association at the Southampton Meeting, Friday, August 25, 1882

## TIME

**Adams, George** 1750–95  
 English instrument maker

Nothing can be more shocking to reason than eternal time; infinite divisibility is not less absurd.

*Lectures on Natural and Experimental Philosophy* (Volume 3)  
Chapter XXIV (p. 12)  
Printed by R. Hindmarsh. London, England. 1794

**Aristotle** 384 BCE–322 BCE  
Greek philosopher

...time is “number of movement in respect to the before and after”, and is continuous since it is an attribute of what is continuous.

In *Great Books of the Western World* (Volume 8)  
*Physics*  
Book IV, Chapter 11 (p. 300)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Aurelius Antoninus, Marcus** 121–180  
Roman emperor

Time is like a river made up of the events which happen, and a violent stream; for as soon as a thing has been seen, it is carried away, and another comes in its place, and this will be carried away too.

In *Great Books of the Western World* (Volume 12)

American physicist

Eternity can be affected by what happens in time.

Quoted by Renée Weber  
*Dialogues with Scientists and Sages: The Search for Unity* (p. 91)  
Routledge & Kegan Paul. London, England. 1986

But the puzzle is, what happened before time began?

Quoted by Renée Weber  
*Dialogues with Scientists and Sages: The Search for Unity* (p. 199)  
Routledge & Kegan Paul. London, England. 1986

**Bondi, Sir Hermann** 1919–2005  
English mathematician and cosmologist

Time must never be thought of as pre-existing in any sense; it is a manufactured quantity.

In Paul Davies  
*About Time: Einstein's Unfinished Revolution*  
Header (p. 21)  
Simon & Schuster. New York, New York, USA. 1995

**Borges, Jorge Luis** 1899–1986  
Argentine writer

Time is a river which sweeps me along, but I am the river; it is a tiger which mangles me, but I am the tiger; it

is a fire which consumes me, but I am the fire. The world, unfortunately, is real; I, unfortunately, am Borges.

Translated by Anthony Kerrigan, Alastair Reid et al.  
*A Personal Anthology*  
 A New Refutation of Time (p. 64)  
 Grove Press. New York, New York, USA. 1967

Our destiny...is not frightful because it is unreal; it is frightful because it is irreversible and ironbound. Time is the substance of which I am made. Time is a river which sweeps me along, but I am the river; it is a tiger which mangles me, but I am the tiger; it is a fire which consumes me, but I am the fire. The world, unfortunately, is real; I unfortunately, am Borges.

Translated by Anthony Kerrigan, Alastair Reid and others  
*A Personal Anthology*  
 A New Refutation of Time (p. 64)  
 Grove Press. New York, New York, USA. 1967

...he believed in an infinite series of times, a growing, dizzying web of divergent, convergent, and parallel times. That fabric of times that approach one another, fork, are snipped off, or are simply unknown for centuries, contains all possibilities. In most of those times, we do not exist; in some, you exist but I do not; in others, I do and you do not; in others still, we both do. In this one, which the favouring hand of chance has dealt me, you have come to my home; in another, when you come through my garden you find me dead; in another, I say these same words, but I am an error, a ghost.

In Donald A. Yates & James E. Irby (eds.)

 The Garden of Forking Paths (p. 28)  
 A New Direction Book. New York, New York, USA. 1964

### **Borland, Hal** 1900–78

American writer

Forget that second-ticking clock.

Time is the seed

Waiting to fly from the milkweed pod.

Time is the speed

Of a dragonfly.

Time is the rabbit's desperate scut.

Time's dimensions are hidden in rocks,

In wind and rain, but never in clocks.

*Borland Country*

Foreword (p. 5)

J.B. Lippincott Company. Philadelphia, Pennsylvania, USA. 1971

### **Bradbury, Ray** 1920–

American writer

There was a smell of Time in the air tonight. He smiled and turned the fancy in his mind. There was a thought. What did Time smell like? Like dust and clocks and people. And if you wondered what Time sounded like it sounded like water running in a dark cave and voices crying and dirt dropping down upon hollow box lids, and rain. And, going further, what it looked like a silent film

in an ancient theater, one hundred billion faces falling like those New Year balloons, down and down into nothing. That was how Time smelled and looked and sounded. And tonight...tonight you could almost touch Time.

*The Martian Chronicles*

### **Bridgman, Percy Williams** 1882–1961

American physicist

But in no case is there any question of time flowing backward, and in fact the concept of backward flow of time seems absolutely meaningless. ... If it were found that the entropy of the universe were decreasing, would one say that time was flowing backward, or would one say that it was a law of nature that entropy decreases with time?

*Reflections of a Physicist*

Chapter 8 (p. 165)

Philosophical Library. New York, New York, USA. 1950

It seems to me that in any operational view of the meaning of natural concepts the notion of time must be used as a primitive concept, which cannot be analysed but must be accepted, so that it is meaningless to speak of a reversal of the direction of time.

*Reflections of a Physicist*

Chapter 8 (p. 165)

Philosophical Library. New York, New York, USA. 1950

### **Brillouin, Léon** 1889–1969

French physicist

...one of the most important features about time is its irreversibility. Time flows on and never comes back. When the physicist is confronted with this fact he is greatly disturbed. All the laws of physics in their elementary forms are reversible.

In Walter Buckley and Anatol Rapaport (eds.)

Time which antiquates antiquities, and hat an art to make dust of all things.

*Hydriotophia*

Chapter V (p. 69)

Printed for Hen. Brome. London, England. 1658

### **Carlyle, Thomas** 1795–1881

English historian and essayist

That great mystery of Time, were there no other; the illimitable, silent, never-resting thing called Time, rolling, rushing on, swift, silent, like an all-embracing ocean-tide, on which we and all the Universe swim like exhalations, like apparitions which are, and then are not. ...

*On Heroes and Hero Worship*

Lecture I (p. 12)

John B. Alden, Publisher. New York, New York, USA. 1887

...no hammer in the Horologe of Time peals through the universe when there is a change from Era to Era. Men understand not what is among their hands...

*On Heroes and Hero Worship*

John B. Alden, Publisher. New York, New York, USA. 1887

**Carroll, Lewis (Charles Dodgson)** 1832–98

English writer and mathematician

Alice sighed wearily. “I think you might do something better with the time,” she said, “than wasting it in asking riddles with no answers.”

“If you knew Time as well as I do,” said the Hatter, “you wouldn’t talk about wasting it.”

*The Complete Works of Lewis Carroll*

Alice’s Adventures in Wonderland

Chapter VII (p. 78)

The Modern Library. New York, New York, USA. 1936

**Chaucer, Geoffrey** 1343–1400

English poet

The tyme, that may not sojourne  
But goth, and never may retourne,  
As water that down runneth ay,  
But never drope retourne may;  
Ther may no-thing as tyme endure,  
Metal, nor erthely creature;  
For alle thing it fret, and shal:  
The tyme eek, that chaungeth al,  
And all doth waxe and fostred be,  
And alle thing destroyeth he.

*The Romaunt of the Rose*

**Christianson, Gale E.**

No biographical data available

Historical time is a tricky thing; it flows at an ever accelerating speed, like a river approaching a great waterfall. We must soon learn to cope with the awesome power given to us by the heirs of Copernicus or our species, and all others on the planet, are doomed to a painful and purposeless extinction. Were this to happen, only the stars would remain; and what are the stars, after all, without the eyes of man to gaze upon them or the human mind to contemplate the vastness of their wonders?

Chapter I (p. 1)

A.L. Burt Company. New York, New York, USA. 1929

**Davies, Paul Charles William** 1946–

British-born physicist, writer, and broadcaster

Relativity physics has shifted the moving present out from the superstructure of the universe, into the minds of human beings, where it belongs.

*The Physics of Time Asymmetry* (p. 2)

University of California Press. Berkeley, California, USA. 1976

**Davis, Philip J.** 1923–

American mathematician

**Hersh, Reuben** 1927–

American mathematician

Time, that mysterious something, that flow, that relation, that mediator, that arena for event, envelops us and confounds us all.

*Descartes’ Dream: The World According to Mathematics*

Chapter IV

Of Time and Mathematics (p. 189)

Harcourt Brace Jovanovich. San Diego, California, USA. 1986

...we still cannot say what time is; we cannot agree whether there is one time or many times, cannot even agree whether time is an essential ingredient of the universe or whether it is the grand illusion of the human intellect.

*Descartes’ Dream: The World According to Mathematics*

Chapter IV

Of Time and Mathematics (p. 189)

Harcourt Brace Jovanovich. San Diego, California, USA. 1986

**Dewey, John** 1859–1952

American philosopher and educator

Time and memory are true artists; they remold reality nearer to the heart's desire.

*Reconstruction in Philosophy*

Chapter V (p. 104)

Beacon Press. Boston, Massachusetts, USA. 1920

**Dillard, Annie** 1945–

American poet, essayist, novelist, and writing teacher

Time is the continuous loop, the snakeskin with scales endlessly overlapping without beginning or end, or time is an ascending spiral if you will, like a child's toy Slinky.

*Pilgrim at Tinker Creek*

Chapter 5 (p. 76)

Harper's Magazine Press. New York, New York, USA. 1974

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

Whatever may be time *de jure*, the Astronomer Royal's time is time *de facto*. His time permeates every corner of physics.

*The Nature of the Physical World*

Chapter III (p. 36)

The Macmillan Company. New York, New York, USA. 1930

In any attempt to bridge the domains of experience belonging to the spiritual and physical sides of our nature, time occupies the key position.

*The Nature of the Physical World*

Chapter V (p. 91)

The Macmillan Company. New York, New York, USA. 1930

The great thing about time is that it goes on.

In Paul Davies

*About Time: Einstein's Unfinished Revolution*

Header (p. 25)

Simon & Schuster. New York, New York, USA. 1995

The philosopher discusses the significance of time; the astronomer measures time. The astronomer goes confidently about his business and does not think of asking the philosopher what exactly is this thing he is supposed to be measuring; nor does the philosopher always stop to consider whether time in his speculations is identical with the time which the world humbly accepts from the astronomer. In these circumstances it is not surprising that some confusion should have arisen.

The Relativity of Time

*Nature*, Volume CVI, Number 2677, February 17, 1921 (p. 802)

**Einstein, Albert** 1879–1955

German-born physicist

Till now it was believed that time and space existed by themselves, even if there was nothing — no Sun, no Earth, no stars — while now we know that time and space are not the vessel for the Universe, but could not exist at all if there were no contents, namely, no Sun, no Earth, and other celestial bodies.

*New York Times*, April 4, 1921

The distinction between past, present and future is only an illusion, even if a stubborn one.

In Paul Davies

*About Time: Einstein's Unfinished Revolution*

Header (p. 70)

Simon & Schuster. New York, New York, USA. 1995

Michele [Besso] has left this strange world just before me. This is of no importance. For us convinced physicists the distinction between past, present and future is an illusion, although a persistent one.

In Eric J. Lerner

*The Big Bang Never Happened*

Chapter 7 (p. 283)

Random House, Inc. New York, New York, USA. 1991

**Eliot, George (Mary Ann Evans Cross)** 1819–80

English novelist

Men can do nothing without the make-believe of a beginning. Even Science, the strict measurer, is obliged to start with a make-believe unit, and must fix on a point in the stars' unceasing journey when his sidereal clock shall pretend that time is Nought. His less accurate grandmother Poetry has always been understood to start in the middle; but on reflection it appears that her proceeding is not very different from his; since Science, too, reckons backward as well as forward, divides his unit into billions, and with his clock-finger at Nought really sets off in medias res. No retrospect will take us to the true beginning; and whether our prologue be in heaven or on earth, it is but a fraction of that all-presupposing fact with which our story sets out.

*Daniel Deronda*

Book I, Chapter I (p. 5)

A.L. Burt Company. New York, New York, USA. 18??

**Eliot, T. S. (Thomas Stearns)** 1888–1965

American expatriate poet and playwright

Time present and time past

Are both perhaps present in time future,

And time future contained in time past.

*The Collected Poems and Plays 1909–1950*

Burnt Norton (p. 117)

Harcourt, Brace & World, Inc. New York, New York, USA. 1952

**Fraser, Julius Thomas**

No biographical data available

The resulting dichotomy between time felt and time understood is a hallmark of scientific-industrial civilization, a sort of collective schizophrasia.

In Eric J. Lerner

*The Big Bang Never Happened*

Chapter 7 (p. 283)

Random House, Inc. New York, New York, USA. 1991

**Froude, James Anthony** 1818–94

English historian and biographer

Time has no relation to Being, conceived mathematically; it would be absurd to speak of circles or triangles as any older today than they were at the beginning of the world.

*Short Studies on Great Subjects* (Volume 1)

Spinoza (p. 359)

Longmans, Green & Company. London, England. 1879

### **Gale, Richard M.**

No biographical data available

...“time” is indefinable...due to the fact that temporal notions are implicitly involved in all of the basic concepts by means of which we think and talk about the world.

*The Language of Time*

Part One, Chapter I (p. 5)

Humanities Press. New York, New York, USA. 1968

### **Galton, Sir Francis** 1822–1911

English anthropologist, explorer, and statistician

It is difficult to withstand a suspicion that the three dimensions of space and the fourth dimension of time may be four independent variables of a system that is neither space nor time, but something else wholly unperceived by us. Our present enigma as to how a First Cause could itself have been brought into existence — how the tortoise of the fable, that bears the elephant that bears the world, is itself supported, — may be wholly due to our necessary mistranslation of the four or more variables of the universe, limited by inherent conditions, into the three unlimited variables of Space and the one of Time.

*Inquiries into Human Faculty and Its Development*

The Observed Order of Events (p. 196)

AMS Press. New York, New York, USA. 1973

### **Gardner, Earl Stanley** 1889–1970

American author

Time is really nothing but a huge circle. You divide a circle of three hundred and sixty degrees into twenty-four hours, and you get fifteen degrees of arc that is the equivalent of each hour.

*The Case of the Buried Clock* (p. 82)

Grosset & Dunlap. New York, New York, USA. 1943

### **Haughton, Samuel** 1821–97

Irish scientific writer

The infinite time of the geologists is in the past; and most of their speculations regarding this subject seem to imply the absolute infinity of time, as if the human imagination was unable to grasp the period of time requisite for the formation of a few inches of sand or feet of mud, and its subsequent consolidation into rock.

*Manual of Geology*

Lecture IV (p. 80)

Longmans, Green, Reader, and Dyer. London, England. 1866

### **Hawking, Stephen William** 1942–

English theoretical physicist

Imaginary time is another direction of time, one that is at right angles to ordinary, real time. We could get away from this one-dimensional, linelike behavior of time. ...

Ordinary time would be a derived concept we invent for psychological reasons. We invent ordinary time so that we can describe the universe as a succession of events in time, rather than as a static picture, like a surface map of the earth.... Time is just like another direction in space.

*Playboy*, Interview, April 1990

### **Heraclitus** ca. 540 BCE–ca. 475 BCE

Greek philosopher

Time is like a river flowing endlessly through the universe.

In Franzo H. Crawford

*Introduction to the Science of Physics*

Chapter 10 (p. 160)

Harcourt, Brace & World, Inc. New York, New York, USA. 1968

### **Høeg, Peter** 1957–

Danish author

Time refuses to be simplified or reduced. You cannot say that it is only found in the mind or only in the universe, that it runs only in one direction, or in every one imaginable. That it exists only in biological substructure, or is only a social convention. It is all of these things.

*Borderliners*

Chapter Seven (p. 259)

Farrar, Straus & Giroux. New York, New York, USA. 1994

### **Housman, A. E. (Alfred Edward)** 1859–1936

English poet, scholar, and satirist

Three minutes' thought would suffice to find this out; but thought is irksome and three minutes is a long time.

*Selected Prose*

Chapter II, Section 3 (p. 56)

At The University Press. Cambridge, England. 1961

### **Hoyle, Sir Fred** 1915–2001

English mathematician and astronomer

If there is one thing we can be sure enough of in physics it is that all time exists with equal reality.

*October the First Is Too Late*

Chapter Six (p. 75)

Harper & Row, Publishers. New York, New York, USA. 1966

### **Hurley, Patrick M.** 1912–2000

British geophysicist

How majestic are those broad reaches of time! Looking into an abyss, one senses the gigantic form of the void only in comparison to one's own minute stature. It is almost incomprehensible that only a few billion years ago our galaxy was born in a gigantic bomb-flash of nuclear energy. What an inspiring picture of the process of creation! But awesome and inspiring as it is to contemplate this mighty spectacle, the true reward is not to be found

in whether our calculations are correct, give or take a few million years; it lies in the discoveries, in the advancement of human knowledge and philosophy that are the inevitable products of scientific search for law in nature.

*How Old Is the Earth?*

Chapter VI (p. 152)

Greenwood Press, Publishers. Westport, Connecticut, USA. 1959

**Hutton, James** 1726–97

Scottish geologist, chemist, and naturalist

Time, which measures every thing in our idea, and is often deficient to our schemes, is to nature endless and as nothing.

Theory of the Earth

*Transactions of the Royal Society of Edinburgh*, Volume 1, 1788 (p. 215)

**Huxley, Thomas Henry** 1825–95

English biologist

Biology takes her time from geology. The only reason we have for believing in the slow rate of the change in living forms is the fact that they persist through a series of deposits which, geology informs us, have taken a long while to make. If the geological clock is wrong, all the naturalist will have to do is to modify his notions of the rapidity of change accordingly.

*Quarterly Journal of the Geological Society London*, Volume 25 (p. xxxviii)

**Jeans, Sir James Hopwood** 1877–1946

English physicist and mathematician

...time figures as the mortar which binds the bricks of matter together...

*The Mysterious Universe*

Chapter V (p. 144)

The Macmillan Company. New York, New York, USA. 1932

...time leaves its mark, its wrinkles and its grey hairs, on the stars, so that we can guess their ages tolerable well, and the evidence is all in favor of stellar lives, not of thousands of millions, but of millions of millions, of years.

*The Universe Around Us*

Chapter I (p. 78)

The Macmillan Company. New York, New York, USA. 1929

**Kant, Immanuel** 1724–1804

German philosopher

Time is not an empirical conception. For neither coexistence nor succession would be perceived by us, if the representation of time did not exist as a foundation a priori. Without this presupposition we could not represent to ourselves that things exist together at one and the same time, or at different times, that is, contemporaneously, or in succession.

In *Great Books of the Western World* (Volume 42)

*Critique of Pure Reason*

First Part, Of Time, Metaphysical Exposition of this Conception, 5  
*Encyclopædia Britannica*, Inc. Chicago, Illinois, USA. 1952

**Krauss, Lawrence M.** 1954–

American theoretical physicist

The possibilities of space travel beckon us every time we gaze up at the stars, yet we seem to be permanent captives in the present. The question that motivates not only dramatic license but a surprising amount of modern theoretical physics research can be simply put: Are we or are we not prisoners on a cosmic temporal freight train that cannot jump the tracks?

*The Physics of Star Trek*

Chapter Two (p. 13)

HarperPerennial. New York, New York, USA. 1995

**Lamarck, Jean-Baptiste Pierre Antoine** 1744–1829

French biologist

Time is insignificant and never a difficulty for Nature. It is always at her disposal and represents an unlimited power with which she accomplishes her greatest and smallest tasks.

Translated by Albert V. Carozzi

*Hydrogeology*

Chapter 3 (p. 61)

University of Illinois Press. Urbana, Illinois, USA. 1964

Oh, how very ancient the earth is!

Translated by Albert V. Carozzi

*Hydrogeology*

Chapter 3 (p. 75)

University of Illinois Press. Urbana, Illinois, USA. 1964

**Lapworth, Charles** 1842–1920

English geologist

Far be it from me to suggest that geologists should be reckless in their drafts upon the bank of Time; but nothing whatever is gained, and very much is lost, by persistent niggardliness in this direction.

*Proceedings of the Geological Society of London*, Volume 59, 1903 (p. lxxii)

**Lightman, Alan** 1948–

American physicist, novelist, and essayist

There is a place where time stands still...illuminated by only the most feeble red light, for light is diminished to almost nothing at the center of time, its vibrations slowed to echoes in vast canyons, its intensity reduced to the faint glow of fireflies.

*Einstein's Dreams*

14 May 1905 (p. 70, 72–73)

Pantheon Books. New York, New York, USA. 1993

**Lyll, Sir Charles** 1797–1875

English geologist

Such views of the immensity of past time, like those unfolded by the Newtonian philosophy in regard to space,

were too vast to awaken ideas of sublimity unmixed with a painful sense of our incapacity to conceive a plan of such infinite extent. Worlds are seen beyond worlds immeasurably distant from each other, and beyond them all innumerable other systems are faintly traced on the confines of the visible universe.

*Principles of Geology* (Volume 1)

Chapter IV (p. 63)

John Murray. London, England. 1830

...until we habituate ourselves to contemplate the possibility of an indefinite lapse of time having been comprised within each of the modern periods of earth's history, we shall be in danger of forming most erroneous and partial views of geology.

*Principles of Geology* (Volume 3)

Chapter VIII (p. 97)

John Murray. London, England. 1830

In vein do we aspire to assign limits to the works of creation in space, whether we examine the starry heavens, or that world of minute animalcules which is revealed to us by the microscope. We are prepared, therefore, to find that in time also the confines of the universe lie beyond the reach of mortal ken.

*Principles of Geology* (Volume 3)

Concluding Remarks (p. 384)

John Murray. London, England. 1830

### **Mann, Thomas** 1875–1955

German-born American novelist

Time has no division to mark its passage, there is never a thunder-storm or blare of trumpets to announce the beginning of a new month or year. Even when a new century begins it is only we mortals who ring bells and fire off pistols.

*The Magic Mountain*

Chapter V

Whims of Mercurius (p. 225)

Alfred A. Knopf. New York, New York, USA. 1966

### **Mason, Rick**

No biographical data available

With a bit of a mind slip  
You're in for a time slip  
And nothing can ever be the same.

*Time Warp*

Dance song

The Rocky Horror Picture Show

Film (1975)

### **Mehlberg, Henry** 1904–79

Polish-American philosopher of science

It seems to me that it would be either a miracle or an unbelievable coincidence if all the major scientific theories... somehow managed to co-operate with each other so as to conceal time's arrow from us. There would be neither a miracle nor an unbelievable coincidence in the

concealment of time's arrow from us only if there were nothing to conceal — that is, if time had no arrows.

In Robert S. Cohen (ed.)

American theoretical physicist

Time is defined so that motion looks simple.

In Charles W. Misner et al.

*Gravitation*

Part I, Chapter 1 (p. 23)

W.H. Freeman & Company. San Francisco, California, USA. 1973

### **Morris, Richard** 1939–2003

American physicist and science writer

Though science has not yet probed all the depths of the subject of time, it at least knows what we should be asking about the subject. Knowing what to ask is often the most significant step on the road to understanding.

*Time's Arrow: Scientific Attitudes Toward Time*

Chapter 12 (p. 218)

Simon & Schuster. New York, New York, USA. 1985

### **Nabokov, Vladimir** 1899–1977

Russian-American writer

Pure Time, Perceptual Time, Tangible Time, Time free of content, context, and running commentary — this is my time and theme. All the rest is numerical symbol or some aspect of Space. The texture of Space is not that of Time, and the piebald four-dimensional sport bred by relativists is a quadruped with one leg replaced by the ghost of a leg. My time is also Motionless Time (we shall presently dispose of "flowing" time, water-clock time, water-closet time).

*Ada or Ardor: A Family Chronicle*

Part Four (p. 539)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1969

### **Newton, Sir Isaac** 1642–1727

English physicist and mathematician

Absolute, true, and mathematical time, of itself, and from its own nature, flows equably without relation to anything external.

*Mathematical Principles of Natural Philosophy*

Definitions, Scholium I

E.P. Dutton & Company. New York, New York, USA. 1922

**Penrose, Roger** 1931–

English mathematical physicist

...our present picture of physical reality, particularly in relation to the nature of time, is due for a grand shake-up — even greater, perhaps, than that which has already been provided by present-day relativity and quantum mechanics.

*The Emperor's New Mind: Concerning Computers, Minds, and the Laws of Physics*

Chapter 8 (p. 371)

Oxford University Press, Inc. Oxford, England. 1989

**Pirsig, Robert M.** 1928–

American writer

The past cannot remember the past. The future can't generate the future. The cutting edge of this instant right here and now is always nothing less than the totality of every thing there is.

*Zen and the Art of Motorcycle Maintenance: An Inquiry into Values*  
Part III, Chapter 24 (p. 283)

William Morrow & Company, Inc. New York, New York, USA. 1974

**Plato** 428 BCE–347 BCE

Greek philosopher

Time, then, and the heaven came into being at the same instant in order that, having been created together, if ever there was to be a dissolution of them, they might be dissolved together.

In *Great Books of the Western World* (Volume 7)

*Timaeus*

Section 38 (p. 451)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

...The creator...sought to make the universe eternal, so far as might be. Now the nature of the ideal being was everlasting, but to bestow this attribute in its fullness upon a creature was impossible. Wherefore he resolved to have a moving image of eternity, and when he set in order the heaven, he made this image eternal but moving according to number, while eternity itself rests in unity, and this image we call time.

In *Great Books of the Western World* (Volume 7)

*Timaeus*

Section 37 (p. 450)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Playfair, John** 1748–1819

Scottish geologist, physicist, and mathematician

The mind seemed to grow giddy by looking so far into the abyss of time.

Biographical Account of the Late James Hutton, F.R.S.

*Transactions of the Royal Society of Edinburgh*, Volume V, Part III, 1805 (p. 73)

**Plotinus** ca. 205–270

Egyptian-Roman philosopher

Time at first — in reality before that “first” was produced by desire of succession — Time lay, though not yet as Time, in the Authentic Existent together with the Cosmos itself; the Cosmos also was merged in the Authentic and motionless within it.

In *Great Books of the Western World* (Volume 17)

*The Six Enneads*

Third Ennead VII.11 (p. 126)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

The origin of Time, clearly, is to be traced to the first stir of the Soul's tendency towards the production of the sensible Universe with the consecutive act ensuing. This is how “Time” — as we read — “came into Being simultaneously with” this All: the Soul begot at once the Universe and Time; in that activity of the Soul this Universe sprang into being; the activity is Time, the Universe is the content of Time.

In *Great Books of the Western World* (Volume 17)

*The Six Enneads*

Third Ennead VII.11 (p. 127)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Poinsoot, Louis** 1777–1859

French mathematician and physicist

If anyone asked me to define time, I should reply: “Do you know what it is that you speak of?” If he said “Yes,” I should answer, “Very well, let us talk about it.” If he said “No,” I should answer, “Very well, let us talk about something else.”

In William Maddock Bayliss

*Principles of General Physiology* (3<sup>rd</sup> edition)

Preface (p. xvii)

Longmans, Green & Company. London, England. 1920

**Prigogine, Ilya** 1917–2003

Russian-born Belgian physical chemist

Time is creation. The future is just not there.

In Eric J. Lerner

*The Big Bang Never Happened*

Chapter 7 (p. 321)

Random House, Inc. New York, New York, USA. 1991

The irreversibility [of time] is the mechanism that brings order out of chaos.

In Eric J. Lerner

*The Big Bang Never Happened*

Chapter 7 (p. 283)

Random House, Inc. New York, New York, USA. 1991

**Putnam, H.**

No biographical data available

I do not believe that there are any longer any philosophical problems about Time; there is only the physical problem of determining the exact physical geometry of the four-dimensional continuum that we inhabit.

Time and Physical Geometry

*Journal of Philosophy*, Volume 64, April 1967

**Reichenbach, Hans** 1891–1953

German philosopher of science

There is no other way to solve the problem of time than the way through physics. More than any other science, physics has been concerned with the nature of time. If time is objective the physicist must have discovered that fact.

*The Direction of Time* (p. 16)

University of California Press. Berkeley, California, USA. 1956

There is no other way to solve the problem of time than the way through physics. ... If time is objective the physicist must have discovered the fact. If there is Becoming, the physicist must know it. ... If there is a solution to the philosophical problem of time, it is written down in the equations of mathematical physics.

*The Direction of Time* (p. 16)

University of California Press. Berkeley, California, USA. 1956

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

...to realise the unimportance of time is the gate of wisdom.

*Our Knowledge of the External World*

Lecture VI (p. 167)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1891

...there is some sense — easier to feel than to state — in which time is an unimportant and superficial characteristic of reality. Past and future must be acknowledged to be as real as the present, and a certain emancipation from slavery to time is essential to philosophic thought.

*Mysticism and Logic and Other Essays*

Chapter I, Section III (p. 21)

Longmans, Green &amp; Company London, England. 1925

**Saint Augustine of Hippo** 354–430

Theologian and doctor of the Church

Time is like a river made up of events which happen, and its current is strong; no sooner does anything appear than it is swept away.

In Paul Davies

*Other Worlds: A Portrait of Nature in Rebellion, Space, Superspace, and the Quantum Universe*

Chapter 10 (p. 186)

Simon &amp; Schuster. New York, New York, USA. 1980

...all time past to be driven away by time to come; and all time to come, to follow upon the past; and that all both past and to come, is made up, and flows out of that which is always present? Who now shall so hold fast this heart of man, that it may stand, and see, how that eternity ever still standing, gives the word of command to the times past or to come, itself being neither past nor to come?

*St. Augustine's Confessions* (Volume 2)

Book XI, XI (p. 233)

William Heinemann. London, England. 1912

Clear now it is and plain, that neither things to come, nor things past, are. Nor do we properly say, there be three times, past, present, and to come; but perchance it might be properly said, there be three times: a present time of past things; a present time of present things; and a present time of future things. ... The present time of past things is our memory; the present time of present things is our sight; the present time of future things our expectation.

*St. Augustine's Confessions* (Volume 2)

Book XI, XX (p. 253)

William Heinemann. London, England. 1912

For what is time? Who is able easily and briefly to explain that? Who is so much as in thought to comprehend it, so as to express himself concerning it? And yet what in our usual discourse do we more familiarly and knowingly make mention of than time? And surely we understand it well enough, when we speak of it: we understand it also, when in speaking with another we hear it named.

*St. Augustine's Confessions* (Volume 2)

Book XI, XIV (p. 237, 239)

William Heinemann. London, England. 1912

What is time then? If nobody asks me, I know: but if I were desirous to explain it to one that should ask me, plainly I know not.

*St. Augustine's Confessions* (Volume 2)

Book XI, XIV (p. 237, 239)

William Heinemann. London, England. 1912

...if nothing were coming, there should be no time to come: and if nothing were, there should now be no present time. These two times therefore, past and to come, in what sort are they, seeing the past is now no longer, and that to come is not yet? As for the present, should it always be present and never pass into times past, verily it should not be time but eternity.

*St. Augustine's Confessions* (Volume 2)

Book XI, XIV (p. 239)

William Heinemann. London, England. 1912

 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### **Silesius, Angelus** 1624–77

German poet

Do not compute eternity  
 as light-year after year

One step across  
 that line called Time

Eternity is here.

*The Book of Angelus Silesius*  
 Of Time and Eternity (p. 42)  
 Alfred A. Knopf. New York, New York, USA. 1976

### **Stevenson, Robert Louis** 1850–94

Scottish essayist and poet

She is settling fast? said the First Lieutenant as he returned from shaving.

“Fast, Mr. Spoker?” asked the Captain. “The expression is a strange one, for Time (if you will think of it) is only relative.”

*Fables*  
 The Sinking Ship  
 Charles Scribner’s Sons. New York, New York, USA. 1923

### **Suess, Eduard** 1831–1914

Austrian geologist

The astronomer, in order to render conceivable the immensity of celestial space, points to the parallelism of the stellar rays or to the white clouds of the Milky Way. There is no such means of comparison by which we can illustrate directly the great length of cosmic periods, and we do not even possess a unit with which such periods might be measured. The distance in space of many stars from the earth has been determined; for the distance in time of the latest strand-line on Capri or the last shell-bed on Tromsø, we cannot suggest an estimate even in approximate figures.

*The Face of the Earth* (Volume 2)

Part III, Chapter XIV (p. 556)  
 At The Clarendon Press. Oxford, England. 1906

We hold the organic remains of the remote past in our hand and consider their physical structure, but we know not what interval of time separates their epoch from our own; they are like those celestial bodies without parallax, which inform us of their physical constitution by their spectrum, but furnish no clue to their distance. As Rama looks out upon the Ocean, its limits mingling and uniting with heaven on the horizon, and as he ponders whether a path might not be built into the Immeasurable, so we look over the Ocean of time, but nowhere do we see signs of a shore.

*The Face of the Earth* (Volume 2)  
 Part III, Chapter XIV (p. 556)  
 At The Clarendon Press. Oxford, England. 1906

### **Swinburne, Richard** 1843–

English philosopher

It would be an error to suppose that if the universe is infinitely old, and each state of the universe at each instant of time has a complete explanation which is a scientific explanation in terms of a previous state of the universe and natural laws (and so God is not invoked), that the existence of the universe throughout infinite time has a complete explanation, or even a full explanation. It has not. It has neither. It is totally inexplicable.

*The Existence of God*  
 Chapter 7 (p. 122)  
 At the Clarendon Press. Oxford, England. 1979

### **The X-Files**

SCULLY: No, wait a minute. You’re saying that, that time disappeared. Time can’t just disappear, it’s, it’s, it’s a universal invariant!

MULDER: Not in this zip code.

*Pilot*  
 Television program  
 Season 1 (1993)

### **Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

Time is but the stream I go a-fishin in.

*The Writings of Henry David Thoreau* (Volume 2)  
 Walden  
 Chapter II (p. 155)  
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

### **Tuttle, Hudson** 1836–1910

American spiritualist

Thousands of years are, in the chronometer of nature, one stroke of the pendulum — a moment.

In Ludwig Buchner  
*Force and Matter*  
 Chapter IX (p. 56)  
 Trubner & Company. London, England. 1864

**Urey, Harold Clayton** 1893–1981  
American chemist

However, the evolution from inanimate systems of biochemical compounds, e.g., the proteins, carbohydrates, enzymes and many others, of the intricate systems of reactions characteristic of living organisms, and the truly remarkable ability of molecules to reproduce themselves seems to those most expert in the field to be almost impossible. Thus a time from the beginning of photosynthesis of two billion years may help to accept the hypothesis of the spontaneous generation of life.

On the Early Chemical History of the Earth and the Origin of Life  
*Proceedings of the National Academy of Science*, Volume 38, 1952 (p. 362)

**Virgil** 70 BCE–19 BCE

Roman epic, didactic, and idyllic poet

Time is flying — flying never to return.

In Paul Davies

*Other Worlds: A Portrait of Nature in Rebellion, Space, Superspace, and the Quantum Universe*

Chapter 10 (p. 186)

Simon & Schuster. New York, New York, USA. 1980

**von Helmholtz, Hermann** 1821–94

German scientist and philosopher

Physico-Mechanical laws are, as it were, the telescopes of our spiritual eyes which can penetrate into the deepest night of time, past and to come.

In Alexander Winchell

*World-Life or Comparative Geology*

Part II, Chapter IV (p. 451)

S.C. Griggs & Company. Chicago, Illinois, USA. 1883

**Vyasa** ca. 3100 BCE

Vedic and Puranic scribe

Time does not sleep when all things sleep,  
Only Time stands straight when all things fall.

Is, was, and shall be are Time's Children.

Is, was, and shall be are Time's Children.

*The Mahabharata of Vyasa*

The Beginning (p. 65)

Publisher undetermined

**Weil, Simone** 1909–43

French philosopher and mystic

Time is an image of eternity, but it is also a substitute for eternity.

*Gravity and Grace*

Renunciation of Time (p. 18)

Routledge & Kegan Paul. London, England. 1952

**Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

“Can an instantaneous cube exist?”

“Don't follow you,” said Filby.

“Can a cube that does not last for any time at all, have a real existence?”

Filby became pensive. “Clearly,” the Time Traveler proceeded, “any real body must have extension in four directions: it must have Length, Breadth, Thickness, and — Duration. . . . There are really four dimensions, three which we call the three planes of Space and a fourth, Time. There is, however, a tendency to draw an unreal distinction between the former three dimensions and the latter, because it happens that our consciousness moves intermittently in one direction along the latter from the beginning to the end of our lives.”

In Robert M. Hutchins and Mortimer J. Adler (eds.)

*The Great Ideas Today, 1971*

The Time Machine, Chapter 1

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1971

**Wheeler, John Archibald** 1911–

American theoretical physicist and educator

Should we be prepared to see some day a new structure for the foundations of physics that does away with time?

In Paul Davies

*About Time: Einstein's Unfinished Revolution*

Header (p. 178)

Simon & Schuster. New York, New York, USA. 1995

Time is nature's way to keep everything from happening at once.

In Paul Davies

*About Time: Einstein's Unfinished Revolution*

Header (p. 236)

Simon & Schuster. New York, New York, USA. 1995

Time ends. That is the lesson of the “big bang.” It is also the lesson of the black hole.

The Lesson of the Black Hole

*Proceedings of the American Philosophical Society*, Volume 125, 25

Of all the obstacles to a thoroughly penetrating account of existence, none looms up more dismayingly than “time.” Explain time? Not without explaining existence. Explain existence? Not without explaining time. To uncover the deep and hidden connection between time and existence, to close on itself our quartet of questions, is a task for the future.

Hermann Weyl and the Unity of Knowledge

*American Scientist*, Volume 74, July–August 1986 (p. 374)

**White, Henry Kirke** 1785–1806

English poet

...it is fearful then

To steer the mind in deadly solitude

Up the vague stream of probability

To wind the mighty secrets of the past

And turn the key of time.

*Poetical Works*

Time

Bell & Daldy. London, England. 1870

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

Time and space express the universe as including the essence of transition and the success of achievement. The transition is real, and the achievement is real. The difficulty is for language to express one of them without explaining away the other.

*Modes of Thought*

Chapter II, Lecture Five (pp. 139–140)

The Macmillan Company. New York, New York, USA. 1938

Apart from time there is no meaning for purpose, hope, fear, energy. If there be no historic process, then everything is what it is, namely, a mere fact. Life and motion are lost.

*Modes of Thought*

Chapter II, Lecture Five (p. 139)

The Macmillan Company. New York, New York, USA. 1938

It is impossible to meditate on time and the mystery of the creative process of nature without an overwhelming emotion at the limitations of human intelligence.

*The Concept of Nature*

Chapter III (p. 73)

At The University Press. Cambridge, England. 1920

**Whitrow, G. J.** 1912–2000

English mathematician, cosmologist, and science historian

The basic objection to attempts to deduce the unidirectional nature of time from concepts such as entropy is that they are attempts to reduce a more fundamental concept to a less fundamental one.

*The Natural Philosophy of Time* (2<sup>nd</sup> ed.)

Chapter 7 (p. 338)

Clarendon Press. Oxford, England. 1980

...the history of natural philosophy is characterized by the interplay of two rival philosophies of time — one aiming at its “elimination” and the other based on the belief that it is fundamental and irreducible.

*The Natural Philosophy of Time* (2<sup>nd</sup> edition)

Chapter 7 (p. 370)

Clarendon Press. Oxford, England. 1980

**Wittgenstein, Ludwig Josef Johann** 1889–1951

Austrian-born English philosopher

What Eddington says about “the direction of time” and the law of entropy comes to this: time would change its direction if men should start walking backwards one day. Of course you can call it that if you like; but then you should be clear in your mind that you have said no more than that people have changed the direction they walk in.

Translated by Peter Winch

*Culture and Value* (p. 18e)

The University of Chicago Press. Chicago, Illinois, USA. 1980

**Yeats, William Butler** 1865–1939

Irish poet and playwright

Time drops in decay,  
Like a candle burnt out.

*The Collected Poems of W.B. Yeats*

The Moods (p. 54)

The Macmillan Company. New York, New York, USA. 1956

**Zebrowski, George** 1945–

Polish-American science fiction writer

Time is a relationship that we have with the rest of the universe; or more accurately, we are one of the clocks, measuring one kind of time. Animals and aliens may measure it differently. We may even be able to change our way of marking time one day, and open up new realms of experience, in which a day today will be a million years.

*OMNI Magazine*, 1994**TIME TRAVEL****Allen, Elizabeth Akers** 1832–1911

Journalist and poet

Backward, turn backward, O Time, in your flight.

Make me a child again just for to-night.

*Rock Me to Sleep, Mother*

Rock Me to Sleep, Mother (p. 11)

Estes &amp; Lauriat. Boston, Massachusetts, USA. 1883

**Bester, Alfred** 1913–87

American science fiction writer

“We’re like millions of strands of spaghetti in the same pot. No time traveler can ever meet another time traveler in the past or the future. Each of us must travel up or down his own strand alone.”

“But we’re meeting each other now.”

“We’re no longer time travelers, Henry. We’ve become the spaghetti sauce.”

*Starlight: The Great Short Fiction of Alfred Bester*

The Man Who Murdered Mohammed (p. 100)

Doubleday &amp; Company, Inc. Garden City, New York, USA. 1976

**Clarke, Arthur C.** 1917–

English science and science fiction writer

The most convincing argument against time travel is the remarkable scarcity of time travelers. However unpleasant our age may appear to the future, surely one would expect scholars and students to visit us, if such a thing were possible at all. Though they might try to disguise themselves, accidents would be bound to happen — just as they would if we went back to Imperial Rome with cameras and tape-recorders concealed under our nylon togas.

*Profiles of the Future: An Inquiry into the Limits of the Possible*

Chapter 11 (p. 132)

Harper &amp; Row, Publishers. New York, New York, USA. 1973

**Kaku, Michio** 1947–  
Japanese-American theoretical physicist

...imagine the chaos that would arise if time machines were as common as automobiles, with tens of millions of them commercially available. Havoc would soon break loose, tearing at the fabric of our universe. Millions of people would go back in time to meddle with their own past and the past of others, rewriting history in the process.... It would be impossible to take a simple census to see how many people there were at any given time.

*Hyperspace : A Scientific Odyssey Through Parallel Universes, Time Warps, and the 10<sup>th</sup> Dimension*  
Chapter 11 (p. 234)  
Oxford University Press, Inc. New York, New York, USA. 1995

**Krauss, Lawrence M.** 1954–  
American theoretical physicist

While every one of us is a time traveler, the cosmic pathos that elevates human history to the level of tragedy arises precisely because we seem doomed to travel in only one direction — into the future.

*The Physics of Star Trek*  
Chapter Two (p. 13)  
Harp Perennial Publishers. New York, New York, USA. 1995

**Schickel, Richard**  
American film critic

Time travel is the thinking person's UFO, an improbability that nevertheless resonates with mysterious and sometimes marvelous possibilities.

Review  
Back to the Future, Part II  
*Time*, December 4, 1989

**Wells, H. G. (Herbert George)** 1866–1946  
English novelist, historian, and sociologist

Man...can go up against gravitation in a balloon, and why should he not hope that ultimately he may be able to stop or accelerate his drift along the Time-Dimension, or even turn about and travel the other way.

*The Great Ideas Today, 1971*  
The Time Machine  
Chapter One (p. 451)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1971

I'm afraid I cannot convey the peculiar sensations of time traveling. They are excessively unpleasant.

In Robert M. Hutchins and Mortimer J. Adler (eds.)  
*The Great Ideas Today, 1971*  
The Time Machine  
Chapter Three (p. 458)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1971

## TOOL

**Beecher, Henry Ward** 1813–87  
American Congregational preacher and orator

A tool is but the extension of a man's hand, and a machine is but a complex tool. He that invents a machine augments the power of a man and the well-being of mankind.

In Lenox R. Lohr  
*Centennial of Engineering: History and Proceedings of Symposia: 1852–1952*  
Historical Background (p. 340)  
Centennial of Engineering. Chicago, Illinois. 1952

**Bergson, Henri** 1859–1941  
French philosopher

Science has equipped man in less than fifty years with more tools than he had made during the thousands of years he had lived on earth. Each new machine being for man a new organ — an artificial organ — his body became suddenly and prodigiously increased in size, without his soul being at the same time able to dilate to the dimensions of his body.

In Lenox R. Lohr  
*Centennial of Engineering: History and Proceedings of Symposia: 1852–1952*  
Historical Background (p. 343)  
Centennial of Engineering. Chicago, Illinois. 1952

**Carlyle, Thomas** 1795–1881  
English historian and essayist

Man is a Tool-using Animal. Weak in himself, and of small stature, he stands on a basis, at most for the flattest-soled, of some half square foot, insecurely enough; Has to straddle out his legs, lest the very wind supplant him. Feeblest of bipeds! Three quintals are a crushing load for him; the steer of the meadow tosses him aloft like a waste rag. Nevertheless he can use Tools: with these the granite mountain melts into light dust before him, seas are his smooth highway, winds and fire his unwearied steeds. Nowhere do you find him without Tools; without Tools he is nothing, with Tools he is all.

*Sartor Resartus*  
Book I, Chapter V (pp. 35–36)  
Ginn & Company. Boston, Massachusetts, USA. 1897

## TOOTH

**Baxter, Richard**

No biographical data available

An aching tooth is better out than in.

To lose a rotten member is a gain.  
*Hypocrisy*

**Fischer, Martin H.** 1879–1962  
German-American scientist

I find that most men would rather have their bellies opened for five hundred dollars than have a tooth pulled for five.

In Howard Fabing and Ray Marr  
*Fischerisms*  
C.C. Thomas. Springfield, Illinois, USA. 1944

**Hazlitt, William Carew** 1834–1913  
English bibliographer

One said a tooth drawer was a kind of unconscionable trade, because his trade was nothing else but to take away those things whereby every man gets his living.

*Shakespeare Jest Books* (Volume 3)  
Conceit, Clichés, Flashes and Whimzies, Number 84  
Willis & Sotheran. London, England. 1864

**Mayo, Charles Horace** 1865–1939  
American physician

A crowned tooth is not a “crown of glory” and may cover a multitude of germs.

Problems of Infection  
*Minnesota Medicine*, Volume 1, 1918

## TOOTHACHE

**Burns, Robert** 1759–96  
English author

My curse upon your venom'd stang,  
That shoots my tortur'd gooms along,  
An' thro' my lug gies monie a twang  
Wi' gnawing vengeance,  
Tearing my nerves wi' bitter pang,  
Like racking engines!

*The Poems and Songs of Robert Burns* (Volume 2)  
Address to the Toothache, Stanza I  
Clarendon Press. Oxford, England. 1968

**Busch, Wilhelm** 1832–1908  
German cartoonist, painter, and poet

A toothache, not to be perverse,  
Is an unmitigated curse...

*German Satirical Writings*  
The Poet Thwarted (p. 161)  
Continuum. New York, New York, USA. 1984

**Carroll, Lewis (Charles Dodgson)** 1832–98  
English writer and mathematician

“Do I look very pale?” said Tweedledum, coming up to have his helmet tied on. (He called it a helmet, though it certainly looked much more like a saucepan.)

“Well — yes — a little”, Alice replied gently.

“I’m very brave generally”, he went on in a low voice: “only to-day I happen to have a headache.”

“And I’ve got a toothache!” said Tweedledee, who had overheard the remark. I’m far worse than you!”

*The Complete Works of Lewis Carroll*  
Through the Looking-Glass  
Chapter IV (p. 193)  
The Modern Library. New York, New York, USA. 1936

**Collins, John** 1742–1808  
No biographical data available

Maria one Morning was smitten full sore,  
With the Tooth-ache’s unmerciful Pang;  
And she vow’d, if she liv’d to the Age of Five-score,  
That she still should remember the Fang.

*Scriptscrapologia*  
Excuse for Oblivion, l. 1–4  
Published by the author. Birmingham, England. 1804

**Fuller, Thomas** 1608–61  
English clergyman and author

The tongue is ever turning to the aching tooth.

*Gnomologia: Adages and Proverbs, Wise Sentences, and Witty Sayings. Ancient and Modern, Foreign and British*  
No. 4796  
Printed for Thomas & Joseph Allman. London, England. 1816

**Gilbert, Sir William Schwenck** 1836–1911  
English playwright and poet

**Sullivan, Arthur** 1842–1900  
English composer

Roll on, thou ball, roll on!  
Through pathless realms of Space  
Roll on!  
What though I’m in a sorry case?  
What though I cannot meet my bills?  
What though I suffer toothache’s ills?  
What though I swallow countless pills?

In Helen and Lewis Melville  
*An Anthology of Humorous Verse*  
To the Terrestrial Globe  
Dodd, Mead & Company New York, New York, USA. 1924

**Heath-Stubbs, John** 1918–2006  
English critic, anthologist, translator, and poet

Venerable Mother Toothache  
Climb down from the white battlements,  
Stop twisting in your yellow fingers  
The fourfold rope of nerves.

*Collected Poems 1943–1987*  
A Charm Against the Toothache (p. 312)  
Carc Janet Press Ltd. Manchester, England. 1988

**Hood, Thomas** 1582–98  
English poet and editor

One tooth he had with many fangs,  
That shot at once as man pangs,  
It had an universal sting;  
One tough of that ecstatic stump  
Could jerk his limbs, and make him jump,  
Just like a puppet on a string.

*The Complete Poetical Works of Thomas Hood*  
A True Story  
Greenwood Press, Publishers. Westport, Connecticut, USA. 1980

**James, Henry** 1843–1916  
American novelist

He might have been a fine young man with a bad toothache; with the first even of his life. What ailed him above all, she felt, was that trouble was new to him...

*The Spoils of Poynton*

Chapter 8 (p. 102)

New Directions Houghton Mifflin Company. Norfolk, Connecticut, USA, 1924

**Josselyn, John** 1630–75

English gentleman

...for the Toothache I have found the following medicine very available, Brimstone and Gunpowder compounded with butter; rub the mandible with it, the outside being first warm'd.

*Two Voyages to New-England*

The Second Voyage (pp. 128–129)

**Mather, Cotton** 1663–1728

American minister and religious writer

O Man, Since the Hardest and Strongest Things thou hast about thee, are so fast Consuming; Do not imagine that the rest of thy Body will remain Long Unconsumed, or that any Bones of thy Body shall not soon Moulder into Dust.

*The Angel of Bethesda*

Capsula XI (p. 63)

American Antiquarian Society and Barre Publishers. Barre, Massachusetts, USA. 1972

a Thigh-bone of a Toad, applied unto an aking Tooth, rarely fails of easing the Pain.

*The Angel of Bethesda*

Capsula XI (p. 64)

American Antiquarian Society and Barre Publishers. Barre, Massachusetts, USA. 1972

**Melville, Herman** 1819–91

American novelist

Another [sailor] has the toothache: the carpenter out pin-cers, and clapping one hand upon his bench bids him be seated there; but the poor fellow unmanageably winces under the uncompleted operation; whirling round the handle of his wooden vice, the carpenter signs him to clap his jaw in that, if he would have him draw the tooth.

In *Great Books of the Western World* (Volume 48)

Cymbeline

Act V, Scene iv, l. 177

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Shaw, George Bernard** 1856–1950

Irish comic dramatist and literary critic

The man with toothache thinks everyone happy whose teeth are sound.

*The Revolutionist's Handbook & Pocket Companion*

Maxims for Revolutionists, Greatness (p. 56)

Publisher undetermined. USA. 1962

## TRACK

**Defoe, Daniel** 1660–1731

English pamphleteer, journalist, and novelist

...there was exactly the print of a foot, toes, heel and every part of a foot; how it came thither, I knew not, nor could I in the least imagine...

*Robinson Crusoe* (p. 113)

Dodd, Mead & Company. New York, New York, USA. 1946

**Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

“Not a bird my dear Roxton — not a bird?”

“A beast?”

“No; a reptile — a dinosaur. Nothing else could have left such a track.”

*The Lost World*

Chapter X (p. 168)

The Colonial Press, Clinton, Massachusetts, USA. 1959

**Melville, Herman** 1819–91

American novelist

That turnpike earth! — that common highway all over dented with the marks of...heels and hoofs.

In *Great Books of the Western World* (Volume 48)

*Moby Dick*

Chapter 13 (p. 44)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Mills, Enos A.** 1870–1922  
Naturalist, writer and nature guide

The tracks and records in the snow which I read in passing made something of a daily newspaper for me. They told much of the news of the wilds.

In William H. Carr  
*The Stir of Nature*  
Chapter Three (p. 37)  
Oxford University Press, Inc. New York, New York, USA. 1930

## TRACKING

**Milne, A. A. (Alan Alexander)** 1882–1956  
English poet, children's writer, and playwright

"Hallo" said Piglet, "What are you doing?"  
"Tracking something" said Winnie-the Pooh very mysteriously.

"Tracking what?" said Piglet, coming closer.

"That's just what I ask myself. I ask myself, What?"

*The Complete Tales & Poems of Winnie-the-Pooh*  
Winnie-the-Pooh, Winnie-the-Pooh, Pooh and Piglet Go Hunting and Nearly Catch a Woozle (p. 34)  
Dutton Children's Books. New York, New York, USA. 2001

## TRADITION

**von Goethe, Johann Wolfgang** 1749–1832  
German poet, novelist, playwright, and natural philosopher

It would have been good, if Bacon had not poured the child out with the bath water, if he had seen the value of existing tradition and had advanced this point of view, if he would have known how to value and to make use of existing experiences, rather than in his style to refer to that which is indeterminable and infinite. He knew of Gilbert's work on magnetism, for example, but seemed to have no idea of the monumental worth which already existed in this discovery.

In Karl J. Fink  
*Goethe's History of Science*  
Chapter 6 (p. 75)  
Cambridge University Press. Cambridge, England. 1991

## TRANSISTOR

**Landauer, Rolf** 1927–99  
German-American physicist

An ordinary transistor circuit is like a door.... You slam it open, you slam it shut. You don't have to have a delicate regard for the amount of force you use when you push it one way or the other. These quantum systems are not like that. Quantum computers don't use just an open door or a shut door. Both the open door and the shut door are present simultaneously. The problems all relate to the fact that the process is not perfect. It doesn't do exactly what you want it to do.

In Tim Folger  
The Best Computer in All Possible Worlds  
*Discover Magazine*, October 1995

## TREE

**Abbey, Edward** 1927–89  
American environmentalist and nature writer

...unless the need were urgent, I could no more sink the blade of an ax into the tissues of a living tree than I could drive it into the flesh of a fellow human.

*The Journey Home: Some Words in Defense of the American West*  
Chapter 19 (p. 208)  
E.P. Dutton. New York, New York, USA. 1977

**Arnold, Sir Edwin** 1832–1904  
English poet

Almond blossom, sent to teach us  
That the spring days soon will reach us.

*Poems*  
Almond Blossoms  
Roberts Brothers. Boston, Massachusetts, USA. 1880

## Author undetermined

At that awful hour of the Passion, when the Savior of the world felt deserted in His agony, when —

The sympathizing sun, his light withdrew, and wonder'd how the stars their dying Lord could view — when earth shaking with horror, rung the passing bell for Deity, and universal nature groaned, then from the loftiest tree to the lowliest flower all felt a sudden thrill, and trembling, bowed their heads, all save the proud and obdurate aspen, which said, "Why should we weep and tremble, we trees, and plants, and flowers are pure and never sinned!"

Ere it ceased to speak, an involuntary trembling seized its every leaf, and the word went forth that it should never rest, but tremble on until the day of judgment.

Legend [of the quaking aspen tree]  
*Notes and Queries*, First Series, Volume 6, Number 161

**Bailey, William Whitman** 1843–1914  
American botanist

Nature is especially fond of tassels. With them she clothes many of her noblest trees.

Willows: "Pussy" and Other  
*The American Botanist*, Volume VI, Number 2, February 1904 (p. 23)

**Bailey, Liberty Hyde** 1858–1954  
American horticulturalist and botanist

The heavier palms are the big game of the plant world.

*Gentes Herbarium*  
Palms, and Their Characteristics, 3, Fasc. 1  
L.H. Bailey Hortorium of the New York State College of Agriculture and Life Sciences. Ithaca, New York, USA.

**Barrett-Browning, Elizabeth** 1806–61

English poet

A great acacia with its slender trunk  
 And overpoise of multitudinous leaves  
 (In which a hundred fields might spill their dew  
 And intense verdure, yet find room enough)  
 Stood reconciling all the place with green.

*The Complete Poetical Works of Elizabeth Barrett Browning*

Aurora Leigh, Book VI, l. 536–541

Houghton Mifflin Company. Boston, Massachusetts, USA. 1900

**Borland, Hal** 1900–78

American writer

Trees are the oldest living things we know. Rooted in the earth and reaching for the stars, they partake of immortality.

*Our Natural World*

The Woodlands (p. 4)

J.B. Lippincott Company. Philadelphia, Pennsylvania, USA. 1969

Only the unobservant sees nothing but trees in a forest. Any woodland is a complex community of plants and animal life with its own laws of growth and survival. But if you would know strength and majesty and patience, welcome the company of trees.

*Beyond Your Doorstep: A Handbook to the Country*

Chapter 4 (p. 75)

Alfred A. Knopf. New York, New York, USA. 1962

**Bronte, Emily** 1818–48

English novelist

My love for Linton is like the foliage in the woods. Time will change it, I'm well aware, as winter changes the trees — my love for Heathcliff resembles the eternal rocks beneath — a source of little visible delight, but necessary.

*Wuthering Heights*

Chapter IX (p. 88)

J.M. Dent &amp; Sons Ltd. London, England. 1907

**Bryant, Alice Franklin** 1900–77

No biographical data available

Like a cathedral in some old world town  
 Rising above all mundane buildings, rears  
 The banyan tree, a growth of long slow years,  
 Towering above the palms. Its verdant crown  
 Fashions a far-spread roof, from which falls down  
 A diamond and tinted light with jeweled spears  
 Of sunbeam piercing through. The whole appears  
 An ornate Gothic pile of world renown.

The Banyan Tree

*Nature Magazine*, Volume 50, Number 5, May 1957 (p. 265)**Bryant, William Cullen** 1794–1878

American poet

The tulip-tree, high up,  
 Opened, in airs of June, her multitude  
 Of golden chalices to humming-birds

And silken-winged insects of the sky.

*Poems*

The Fountain, Stanza 3

D. Appleton &amp; Company. New York, New York, USA. 1874

**Meredith, Owen (Edward Robert Bulwer-Lytton, 1<sup>st</sup> Earl Lytton)** 1831–91

English statesman and poet

Trees that, like the poplar, lift upwards all their boughs, give no shade and no shelter, whatever their height. Trees that most lovingly shelter and shade us, when, like the willow, the higher soar their summits, the lowlier droop their boughs.

*What Will He Do with It? (Volume 2)*

Book XI, Chapter X, Introductory lines (p. 359)

P.F. Collier &amp; Son. New York, New York, USA. 1902

**Burns, Robert** 1759–96

English author

Green, slender, leaf-clad holly-boughs  
 Were twisted graceful', round her brows;  
 I took her for some Scottish Muse,  
 By that same token;  
 And come to stop those reckless vows,  
 Would soon be broken.

The Vision, Duan First, Stanza 9

Houghton Mifflin Company. Boston, Massachusetts, USA. 1897

**Byron, George Gordon, 6<sup>th</sup> Baron Byron** 1788–1824

English Romantic poet and satirist

Dark tree — still sad when others' grief is fled,

The only constant mourner o'er the dead!

*The Complete Poetical Works of Byron*

The Giaour, l. 286

Houghton Mifflin Company. Boston, Massachusetts, USA. 1933

**Campbell, Thomas** 1777–1844

Scottish poet

Oh, leave this barren spot to me!  
 Spare, woodman, spare the beechen tree!

*The Complete Poetical Works*

The Beech-Tree's Petition, Stanza I

Chadwyck-Healey. Cambridge, England. 1992

**Comstock, Anna Botsford** 1854–1930

American illustrator, writer, and educator

The mortal who has never enjoyed a speaking acquaintance with some individual tree is to be pitied; for such an acquaintance, once established, naturally ripens into a friendliness that brings serene comfort to the human heart, whatever the heart of the tree may or may not experience. To those who know them, the trees, like other friends, seem to have their periods of reaching out for sympathetic understanding. How often this outreaching is met with repulse will never be told; for tree friends

never reproach us — but wait with calm patience for us to grow into comprehension.

*Trees at Leisure*

Comstock Publishing Company. Ithaca, New York, USA. 1916

**Dampier-Whetham, William** 1867–1952

English scientific writer

There was a young man who said, “God  
To you it must seem very odd

That a tree as a tree simply ceases to be  
When there’s no one about in the Quad.”...

Young man, your astonishment’s odd,  
I am always about in the Quad  
And that’s why the tree continues to be  
As observed by, Yours faithfully, God.

In Joseph Needham and Walter Pagel (eds.)

*Background to Modern Science*

From Aristotle to Galileo (pp. 40–41)

The Macmillan Company. New York, New York, USA. 1938

**de Saint-Exupéry, Antoine** 1900–44

French aviator and writer

Now there were some terrible seeds on the planet that was the home of the little prince; and these were the seeds of the baobab. The soil of that planet was infested with them. A baobab is something you will never, never be able to get rid of if you attend to it too late. It spreads over the entire planet. It bores clear through it with its roots. And if the planet is too small, and the baobabs are too many, they split it to pieces...

Translated by Katherine Woods

*The Little Prince*

Chapter V (p. 21)

Harcourt, Brace & Company. New York, New York, USA. 1943

**Dickens, Charles** 1812–70

English novelist

They whirled past the dark trees, as feathers would be swept before a hurricane. Houses, gates, churches, haystacks, objects of every kind they shot by, with a velocity and noise like roaring waters suddenly let loose. Still the noise of pursuit grew louder, and still my uncle could hear the young lady wildly screaming, “Faster! Faster!”

*The Posthumous Papers of the Pickwick Club*

Chapter XLIX (p. 597)

Dodd, Mead & Company. New York, New York, USA. 1944

The earth covered with a sable pall as for the burial of yesterday; the clumps of dark trees, its giant plumes of funeral feathers, waving sadly to and fro: all hushed, all noiseless, and in deep repose, save the swift clouds that skim across the moon, and the cautious wind, as, creeping after them upon the ground, it stops to listen, and goes rustling on, and stops again, and follows, like a savage on the trail.

*Martin Chuzzlewit*

Chapter XV (p. 232)

Dodd, Mead & Company. New York, New York, USA. 1944

**Douglas, Andrew Ellicott** 1867–1962

American astronomer

By translating the story told by tree rings, we have pushed back the horizons of history in the United States for nearly eight centuries before Columbus reached the shores of the New World...

The Secret of the Southwest Solved by Talkative Tree Rings

*National Geographic*, Volume 56, Number 6, 1929 (p. 737)

**Dryden, John** 1631–1700

English poet, dramatist, and literary critic

The monarch oak, the patriarch of the trees,  
Shoots rising up, and spreads by slow degrees.

Three centuries he grows, and three he stays  
Supreme in state; and in three more decays.

*The Poetical Works of Dryden*

Tales from Chaucer, Palamon and Arcite, Book III, l. 1058

The Riverside Press. Cambridge, Massachusetts, USA. 1949

**English, Thomas Dunn** 1819–1902

American lawyer, physician, and poet

That was a day of delight and of wonder,  
While lying the shade of the maple-trees under —  
He felt the soft breeze at its frolicsome play;  
He smelled the sweet odor of newly mown hay...

*The Select Poems of Dr. Thomas Dunn English*

Under the Trees

Published by private subscription. Newark, New Jersey, USA. 1894

**Forster, E. M. (Edward Morgan)** 1879–1970

English novelist

What is the good of your stars and trees, your sunrise and the wind, if they do not enter into our daily lives?

*Howards End*

Chapter XVI (p. 143)

Vintage Books. New York, New York, USA. 1954

The tree rustled. It had made music before they were born, and would continue after their deaths, but its song was of the moment.

*Howards End*

Chapter XL (p. 315)

Vintage Books. New York, New York, USA. 1954

**Hardy, Thomas** 1840–1928

English poet and regional novelist

To dwellers in a wood almost every species of tree has its voice as well as its feature. At the passing of the breeze the fir-trees sob and moan no less distinctly than they rock; the holly whistles as it battles with itself; the ash hisses amid its quiverings; the beech rustles while its flat boughs rise and fall.

*Under the Greenwood Tree; or The Mellstock Quire*

Part the First, Chapter I (p. 3)

Harper & Brothers. New York, New York, USA. 1939

The instinctive act of humankind was to stand and listen, and learn how the trees on the right and the trees on

the left wailed or chaunted to each other in the regular antiphonies of a cathedral choir; how hedges and other shapes to leeward then caught the note, lowering it to the tenderest sob; and how the hurrying gust then plunged into the south, to be heard no more.

*Far from the Madding Crowd*

Chapter 2 (p. 9)

Harper & Row, Publishers. New York, New York, USA. No date

**Hawthorne, Nathaniel** 1804–64

American novelist and short story writer

And what is more melancholy than the old apple-trees that linger about the spot where once stood a homestead, but where there is now only a ruined chimney rising out of a grassy and weed-grown cellar? They offer their fruit to every wayfarer — apples that are bitter-sweet with the moral of time's vicissitude.

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904–1917

O hemlock-tree!

O hemlock-tree!

how faithful

are thy branches!

Green not alone in summer time,

But in the winter's frost and rime!

O hemlock-tree! O hemlock-tree! how faithful  
are thy branches!

*The Complete Writings of Henry Wadsworth Longfellow* (Volume 6)  
The Hemlock Tree  
Stanza 1  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1904–1917

**Lowell, James Russell** 1819–91  
American poet, critic, and editor

The ash her purple drops forgivingly  
And sadly, breaking not the general hush;  
The maple's swamps glow like a sunset sea,  
Each leaf a ripple with its separate flush;  
All round the wood's edge creeps the skirting blaze,  
Of bushes low, as when, on cloudy days,  
Ere the rain falls, the cautious farmer burns his brush.

*The Poetical Works of James Russell Lowell*

Woodman, spare that tree!  
Touch not a single bough!  
In youth it sheltered me,  
And I'll protect it now.

*Poems*  
Woodman, Spare that Tree  
Charles Scribner's Sons. New York, New York, USA. 1853

**Muir, John** 1838–1914  
American naturalist

When a man plants a tree he plants himself.

*Steep Trails*  
Chapter X (p. 141)  
Norman S. Berg, Publisher. Dunwoody, Georgia, USA. 1970

Few are altogether deaf to the preaching of pine trees.  
Their sermons on the mountains go to our hearts; and if  
people in general could be got into the woods, even for  
once, to hear the trees speak for themselves, all difficul-  
ties in the way of forest preservation would vanish.

The National Parks and Forest Reservations  
*Sierra Club Bulletin*, Volume 1, Number 7, January 1896

I have seen oaks of many species in many kinds of  
exposure and soil, but those of Kentucky excel in gran-  
deur all I had ever before beheld. They are broad and  
dense and green. In the leafy bowers and caves of their

long branches dwell magnificent avenues of shade, and every tree seems to be blessed with a double portion of strong exulting life.

*A Thousand Mile Walk to the Gulf*

Chapter I (p. 2)

Houghton Mifflin Company. Boston Massachusetts, USA. 1916

We all travel the milky way together, trees and men; but it never occurred to me until this stormday, while swinging in the wind, that trees are travelers, in the ordinary sense. They make many journeys, not extensive ones, it is true; but our own little journeys, away and back again, are only little more than tree wavings, many of them not so much.

*Mountains of California*

Chapter X (p. 256)

The Century Company. New York, New York, USA. 1911

There is something wonderfully attractive in this king tree, even when beheld from afar, that draws us to it with indescribable enthusiasm; its superior height and massive smoothly rounded outlines proclaiming its character in any company; and when one of the oldest attains full stature on some commanding ridge it seems the very god of the woods.

*Our National Parks*

Chapter IX (p. 287)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

The Big Tree (*Sequoia gigantea*) is Nature's forest masterpiece, and, so far as I know, the greatest of living things.

*Our National Parks*

Chapter IX (p. 268)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

Resolute, consummate, determined in form, always beheld with wondering admiration, the Big Tree always seems unfamiliar, standing alone, unrelated, with peculiar physiognomy, awfully solemn and earnest.

*Our National Parks*

Chapter IX (p. 272)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

...Sequoias, kings of their race, growing close together like grass in a meadow, poised their brave domes and spires in the sky, three hundred feet above the ferns and lilies that enameled the ground; towering serene through the long centuries, preaching God's forestry fresh from heaven.

*Our National Parks*

Chapter IX (p. 334)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

...they never lose their god-like composure, never toss their arms or bow or wave like the pines, but only slowly, solemnly nod and sway, standing erect, making no sign of strife, none of rest, neither in alliance nor at war with the winds, too calmly unconsciously noble and strong to strive with or bid defiance to anything.

*Our National Parks*

Chapter IX (pp. 283–284)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

[The Sugar Pine is] the largest, noblest, and most beautiful of all the seventy or eighty species of pine trees in the world. ...

*Our National Parks*

Chapter IV (p. 109)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

The mighty trees getting their food are seen to be wide awake, every needle thrilling in the welcome nourishing storms, chanting and bowing low in glorious harmony, while every raindrop and snowflake is seen as a beneficent messenger from the sky.

*Our National Parks*

Chapter I (p. 26)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

I never saw a discontented tree. They grip the ground as though they liked it; and though fast rooted, they travel about as far as we do.

In Linnie Marsh Wolfe (ed.)

*John of the Mountains*

Chapter VII, Section 2, June-July 1890 (p. 313)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1938

...many of nature's five hundred kinds of wild trees had to make way for orchards and cornfields.

*Our National Parks*

Chapter IX (p. 335)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

As far as man is concerned [trees] are the same yesterday, today, and forever, emblems of permanence.

*Our National Parks*

Chapter IX (p. 269)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

...God has cared for these trees, saved them from drought, disease, avalanches, and a thousand straining, leveling tempests and floods; but he cannot save them from fools, only Uncle Sam can do that.

*Our National Parks*

Chapter X (p. 365)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

**Peattie, Donald Culrose** 1896–1964

American botanist, naturalist and author

A Tree in its old age is like a bent but mellowed and wise old man; it inspires our respect and tender admiration; it is too noble to need our pity.

*An Almanac for Moderns*

October Twenty-Seventh (p. 241)

G.P. Putnam's Sons. New York, New York, USA. 1935

**Pope, Alexander** 1688–1744

English poet

A spring there is, whose silver waters show  
Clear as a glass the shining sands below:

A flowering lotos spreads its arms above,  
Shades all the banks, and seems itself a grove.

*The Complete Poetical Works*

Sappho to Phaon, l. 177

Houghton Mifflin Company. New York, New York, USA. 1903

**Pownall, Thomas** 1722–1805

English statesman and soldier

The individual Trees of those Woods grow up, have their Youth, their old Age, and a Period to their Life, and die as we Men do. You will see many a Sapling growing up, many an old Tree tottering to its Fall, and many fallen and rotting away, while they are succeeded by others of their Kind, just as the Race of Man is: By this Succession of Vegetation this Wilderness is kept cloathed with Woods just as the human Species keeps the Earth peopled by its continuing Succession of Generations.

To yon pale river?

*The Complete Poems of W.M. Thackeray*

The Willow-Tree

White, Stokes & Allen. New York, New York, USA. 1884

Christmas is here;

Winds whistle shrill,  
Icy and chill,  
Little care we;  
Little we fear  
Weather without,  
Sheltered about  
The Mahogany-Tree.

*The Complete Poems of W.M. Thackeray*

The Mahogany-Tree

White, Stokes & Allen. New York, New York, USA. 1884

## The Bible

I shall plant cedar in the wilderness, acacias, myrtle, and wild olives; I shall grow pines on the barren heath side by side with fir the box tree...

*The Revised English Bible*

Isaiah 41:19

Oxford University Press, Inc. Oxford, England. 1989

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

It is remarkable how closely the history of the apple tree is connected with that of man.

*The Writings of Henry David Thoreau* (Volume 9)

Wild Apples (p. 356)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

**Twain, Mark (Samuel Langhorne**

**Clemens)** 1835–1910

American author and humorist

I once heard a grouty Northern invalid say that a coconut tree might be poetical, possibly it was; but it looked like a feather-duster struck by lightning.

*Roughing It* (Volume 2)

Chapter XVIII (p. 215)

Harper & Brothers. New York, New York, USA. 1899

**Wordsworth, William** 1770–1850

English poet

Of vast circumference and gloom profound  
This solitary Tree! a living thing  
Produced too slowly ever to decay;  
Of form and aspect too magnificent  
To be destroyed.

*The Complete Poetical Works of William Wordsworth*

Yew-Trees

Crowell. New York, New York, USA. 1888

## TREE OF LIFE

**Mason, Frances**

No biographical data available

Evolution does not move in a straight course, symbolized by the links in a chain; the tree is the symbol of nature's plan of creation. The trunk represents the main course of

life through the ages; the branches are the great groups of plants and animals that have appeared during the growth of the tree; the plants and animals now living are the green twigs at the tips of the branches. In the evolution of forms there are no offshoots leading from one branch to another; the branches start from below and diverge as they grow, each branch maintaining its own course.

In Frances Mason

*Creation by Evolution*

Frontispiece (p. ii)

The Macmillan Company. New York, New York, USA. 1928

## TREE RINGS

**Burroughs, John** 1837–1921

American naturalist and writer

An old tree, unlike an old person, as long as it lives at all, always has a young streak, or rather ring, in it. It wears a girdle of perpetual youth.

*Studies in Nature and Literature*

Bird Life in an Old Apple Tree (p. 38)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1908

**Leopold, Aldo** 1886–1948

American naturalist

We sensed that these two piles of sawdust were something more than wood: that they were the integrated transect of a century; that our saw was biting its way, stroke by stroke, decade by decade, into the chronology of a lifetime, written in concentric annual rings of oak.

*A Sand County Almanac, with Essays on Conservation from Round River*

Part I, February (p. 10)

Sierra Club. San Francisco, California, USA. 1970

## TRIAL AND ERROR

**Born, Max** 1882–1970

German-born English physicist

...I believe that there is no philosophical highroad in science, with epistemological signposts. No, we are in a jungle and find our way by trial and error, building our road behind us as we proceed. We do not find signposts at crossroads, but our own scouts erect them, to help the rest.

*Experiment and Theory in Physics* (p. 44)

Cambridge University Press. Cambridge, England. 1944

## TRIANGLE

**Beckett, Samuel** 1906–89

Irish playwright

...do not despair. Remember there is no triangle, however obtuse, but the circumference of some circle passes through its wretched vertices.

*The Collected Works of Samuel Beckett*  
Murphy  
Chapter 10 (p. 213)  
Grover Press, Inc., New York, New York, USA. 1970

### **Creele, August** 1780–1856

German civil engineer and mathematician

It is indeed wonderful that so simple a figure as the triangle is so inexhaustible in properties. How many as yet unknown properties of other figures may there not be?

School Science and Mathematics (p. 672)  
School Science and Mathematical Association, 1905

## TRIGONOMETRY

### **Chesterton, G. K. (Gilbert Keith)** 1874–1936

English author

A straight liner is straight  
And a square mile is flat:

But you learn in trigonometrics a trick worth two of that.

*The Collected Poems of G.K. Chesterton*  
Songs of Education, V, The Higher Mathematics (p. 97)

### **Howell, Scott** 1959–

American conservative political consultant

As long as schools continue to teach trigonometry and algebra, there will always be a moment of silence, and indeed prayer, in our public schools.

On why he sees no need to formalize a moment of silence in Utah schools

### **Philips, J. D.**

No biographical data available

The notion that anyone other than a scientist will ever use even the most elementary trigonometry or algebra is laughable. Imagine the absurdity of being in a car or on a plane when suddenly the need arises to solve a quadratic equation or to graph a trigonometric function. But this is precisely the scenario that the traditional defense has coerced us into accepting as realistic. Clearly this is absurd. And so is our complicity.

Mathematics as an Aesthetic Discipline  
*Humanistic Mathematics Network Journal*, Number 12, October 1995

## TRILOBITE

### **Conrad, Timothy** 1803–77

American geologist and malacologist

The race of man shall perish, but the eyes  
Of trilobites eternal be in stone,  
And seem to stare about in mild surprise  
At changes greater than they have yet known.

*A Geological Vision and Other Poems*  
Murphy & Bechtel. Trenton, New Jersey, USA. 1871

### **Howell, G. K.**

No biographical data available

Thou man of hammer and the disreputable trilobite I have some what to say unto thee. The hammer is an honest instrument that advertises what it does when it smashes — but for the trilobite ah what shall I say? I say that an animal that used 20 000 eyes must have been essentially a sneak! — not the one to meet a foe squarely but one that would be peeking around in all directions out of some if its headlights to be ready to run at the first sign of an adversary.

In Ellis L. Yochelson

*Charles Doolittle Walcott, Paleontologist*  
Letter to Walcott, October 31, 1879 (p. 118)  
The Kent State University Press. Kent, Ohio, USA. 1998

And then you never know how to class [a trilobite] — he wasn't a mollusk or a fish, and he wasn't a bird nor again an honest square reptile like the gay alligator. And he wasn't an Englishman — well perhaps you don't have Pinafore out among the Utes and the prairie dogs.

In Ellis L. Yochelson

*Charles Doolittle Walcott, Paleontologist*  
Letter to Walcott, October 31, 1879 (p. 118)  
The Kent State University Press. Kent, Ohio, USA. 1998

### **Levi-Setti, Riccardo**

No biographical data available

Trilobites tell me of ancient marine shores teeming with budding life, when silence was only broken by the wind, the breaking of the waves, or by the thunder of storms and volcanoes. The struggle for survival already had its toll in the seas, but only natural laws and events determined the fate of evolving life forms. No footprints were to be found on those shores, as life had not yet conquered land. Genocide had not been invented as yet, and the threat to life on Earth resided only with the comets and asteroids.

*Trilobites*

Preface (p. vii)  
The University of Chicago Press. Chicago, Illinois, USA. 1993

All fossils are, in a way, time capsules that can transport our imagination to unseen shores, lost in the sea of eons that preceded us. The time of trilobites is unimaginably far away, and yet, with relatively little effort, we can dig out these messengers of our past and hold them in our hand. And, if we learn the language, we can read the message.

*Trilobites*

Preface (p. vii)  
The University of Chicago Press. Chicago, Illinois, USA. 1993

### **Newman, Joseph S.** 1892–1960

American poet

A million years ago, or six...perhaps as much as seven,  
When rhizopods were spewing forth the chalky cliffs of  
Devon,

Upon a cool and mossy rock, beneath a bed of sedum,  
A trilobite named Annie lived in trilobitish freedom.

*Poems for Penguins and Other Lyrical Lapses*

The Trilobite

Greenburg. New York, New York, USA. 1941

## TRUTH

**Abbey, Edward** 1927–89

American environmentalist and nature writer

...I am sometimes forced to the conclusion that the whole  
truth is not always represented in certain of the orthodox  
attitudes. The intuitions of a lover are not always to be  
trusted; but neither are those of the loveless.

In Joseph Wood Krutch

*The Great Chain of Life*

Prologue (p. xi)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1957

**Adams, George** 1750–95

English instrument maker

Truth, though destined to be the guide of man, is not be-  
stowed with an unconditional profusion; but is hidden in  
darkness, and involved in difficulties; intended, like all  
the other gifts of heaven, to be fought and cultivated by  
all the different powers and exertions of human reason.

*Lectures on Natural and Experimental Philosophy* (Volume 1)

Lecture II (p. 62)

Printed by R. Hindmarsh. London, England. 1794

You should, therefore, set out in the search of truth as of  
a stranger, not in search of arguments to support as of a  
stranger, not in search of arguments to support your own  
opinions, and endeavor to maintain your mind in a state  
of equilibrium, an indifference for everything but known  
and well attested truth, totally regardless of the place  
from whence it comes, or that to which it tends...

*Lectures on Natural and Experimental Philosophy* (Volume 1)

Lecture II (p. 28)

Printed by R. Hindmarsh. London, England. 1794

**Aristotle** 384 BCE–322 BCE

Greek philosopher

The investigation of the truth is in one way hard, in  
another easy. An indication of this is found in the fact that  
no one is able to attain the truth adequately, while, on the  
other hand, we do not collectively fail, but every one says  
something true about the nature of things, and while indi-  
vidually we contribute little or nothing to the truth, by the  
union of all a considerable amount is amassed. Therefore,  
since the truth seems to be like the proverbial door, which  
no one can fail to hit, in this respect it must be easy, but  
the fact that we can have a whole truth and not the particu-

lar part we aim at shows the difficulty of it.

In *Great Books of the Western World* (Volume 8)

*Metaphysics*

Book II, Chapter I (p. 511)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Aronowitz, Stanley** 1933–

American sociologist, labor/union advocate, and writer

The power of science consists, in the first place, in its  
conflation of knowledge and truth. Devising a method of  
proving the validity of propositions about objects taken  
as external to the knower has become identical with what  
we mean by truth.

*Science as Power: Discourse and Ideology in Modern Society*

Preface (p. vii)

University of Minnesota Press. Minneapolis, Minnesota, USA. 1988

**Avedon, Richard** 1923–2004

American photographer

The moment an emotion or fact is transformed into a  
photograph it is no longer fact but an opinion. There is  
no such thing as inaccuracy in a photograph. All photo-  
graphs are accurate. None of them is the truth.

*The Chronicle of Higher Education*, July 10, 1991, (p. B2)

**Bacon, Sir Francis** 1561–1626

English lawyer, statesman, and essayist

The human understanding resembles not a dry light, but  
admits a tincture of the will and passions, which generate  
their own system accordingly; for man always believes  
more readily that which he prefers.

In *Great Books of the Western World* (Volume 30)

*Novum Organum*

First Book, Aphorism 49 (p. 111)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Balfour, Arthur James** 1848–1930

British prime minister

It is not by mere accumulation of material, nor even by a  
plant-like development, that our beliefs grow less inad-  
equate to the truths which they strive to represent. Rather  
we are like one who is perpetually engaged in altering  
some ancient dwelling in order to satisfy new-born needs.  
The ground-plan of it is being perpetually modified. We  
build here; we pull down there. One part is kept in repair,  
another part is suffered to decay. And even those portions  
of the structure which may in themselves appear quite  
unchanged, stand in such new relations to the rest, and  
are put to such different uses, that they would scarce be  
recognized by their original designer.

*The Foundations of Belief*

Appendix, Section I (p. 350)

Longmans, Green & Company. London, England. 1912

**Barfield, Owen** 1898–1997

British philosopher, critic, and anthroposophist

It was not simply a new theory of the nature of the celestial movements that was feared, but a new theory of the nature of theory; namely, that, if a hypothesis saves all the appearances, it is identical with truth.

*Saving the Appearances: A Study in Idolatry*  
Chapter VII (pp. 50–51)  
Faber & Faber Ltd. London, England. 1957

**Beaumont, William** 1785–1853  
American army surgeon

Truth, like beauty, when “unadorned, is adorned the most”; and in prosecuting these experiments and inquiries, I believe I have been guided by its light.

In William Osler  
*Aequanimitas, with Other Addresses to Medical Students, Nurses, and Practitioners of Medicine*  
The Army Surgeon (p. 113)  
The Blakiston Company. Philadelphia, Pennsylvania, USA. 1932

**Becker, Ernest** 1925–74  
Canadian anthropologist

The man of knowledge in our time is bowed under a burden he never imagined he would ever have: the overproduction of truth that cannot be consumed. For centuries man lived in the belief that truth was slim and elusive and that once he found it the troubles of mankind would be over. And here we are in the closing of the 20<sup>th</sup> century, choking on truth.

*The Denial of Death*  
Preface (p. x)  
The Free Press. New York, New York, USA. 1973

**Bernard, Claude** 1813–78  
French physiologist

It seems, indeed, a necessary weakness of our mind to be able to reach truth only across a multitude of errors and obstacles.

Translated by Henry Copley Greene  
*An Introduction to the Study of Experimental Medicine*  
Part Three, Chapter I, Section ii (p. 170)  
Henry Schuman, Inc. New York, New York, USA. 1927

Men of science, then, do not seek for the pleasure of seeking; they seek the truth to possess it, and they possess it already within the limits in the present state of the sciences. But men of science must not halt on the road; they must climb ever higher and strive toward perfection; they must always seek, as long as they see anything to be found.

Translated by Henry Copley Greene  
*An Introduction to the Study of Experimental Medicine*  
Part Three, Chapter III, Section iv (p. 222)  
Henry Schuman, Inc. New York, New York, USA. 1927

Danish physicist

Truth lies in the abyss.

In Gerald Holton  
*Scientific Optimism and Societal Concerns*  
A Note of the Psychology of Scientists (p. 83)  
Publisher undetermined

The opposite of a correct statement is a false statement. But the opposite of a profound truth may well be another profound truth.

In Werner Heisenberg  
*Physics and Beyond: Encounters and Conversations*  
Chapter 8 (p. 102)  
Harper & Row, Publishers. New York, New York, USA. 1971

**Born, Max** 1882–1970  
German-born English physicist

Truth is what the scientist aims at. He finds nothing at rest, nothing enduring, in the universe. Not everything is knowable, still less is predictable. But the mind of man is capable of grasping and understanding at least a part of Creation; amid the flight of phenomena stands the immutable pole of law.

*The Restless Universe*  
Chapter V (p. 278)  
Dover Publications, Inc. New York, New York, USA. 1951

My optimistic enthusiasm about the disinterested search for truth has been severely shaken. . . .

*The Restless Universe*  
Postscript (p. 279)  
Dover Publications, Inc. New York, New York, USA. 1951

**Bronowski, Jacob** 1908–74  
Polish-born British mathematician and polymath

Truth in science is like Everest, an ordering of the facts.

*Science and Human Values*  
The Sense of Human Dignity (p. 52)  
Harper & Row, Publishers. New York, New York, USA. 1965

We cannot define truth in science until we move from fact to law. And within the body of laws in turn, what impresses us as truth is the orderly coherence of the pieces. They fit together like the characters of a great novel, or like the words of a poem. Indeed, we should keep that last analogy by us always, for science is a language, and like a language it defines its parts by the way they make up a meaning. Every word in a sentence has some uncertainty of definition, and yet the sentence defines its own meaning and that of its words conclusively. It is the internal unity and coherence of science which gives it truth, and which makes it a better system of prediction than any less orderly language.

*The Common Sense of Science*  
Chapter VIII, Section 5 (p. 131)  
Harvard University Press. Cambridge, Massachusetts, USA. 1953

**Brown, John** 1810–82  
Scottish physician and author

You may come to the chest of knowledge. It is shut, it is bolted, but...you have the key; put it in steadily and home. But what is the key? It is the love of truth; neither more or less; no other key opens it; no false one, however cunning can pick that lock; no assault of hammer, however stout, can force it open; but with its own key, a little child may open it; often does open it.

In Sir Richard Arman Gregory

*Discovery; or, The Spirit and Service of Science*

Chapter II (p. 28)

Macmillan & Company Ltd. London, England. 1918

### **Bush, Vannevar** 1890–1974

American electrical engineer and physicist

It is a great truth of science that every ending is a beginning, that each question answered leads to new problems to solve, that each opportunity grasped and utilized engenders fresh and greater opportunities.

In Helen Wright

*Palomar: The World's Largest Telescope*

Dedication of the Hale Telescope (p. 183)

The Macmillan Company. New York, New York, USA. 1952

### **Calvin, Melvin** 1911–97

American biochemist

The true student will seek evidence to establish fact rather than confirm his own concept of truth, for truth exists whether it is discovered or not.

*Chemical Evolution*

Chapter 11 (p. 252)

Oregon State System of Higher Education. Eugene, Oregon, USA. 1961

### **Carmichael, Robert Daniel** 1879–1967

American mathematician

He who discovers a fact or makes known a new law or adds a novel beauty to truth in any way makes every one of us his debtor. How beautiful upon the highway are the feet of him who comes bringing in his hands the gift of a new truth to mankind.

*The Logic of Discovery*

Chapter IX (p. 273)

The Open Court Publishing. Chicago, Illinois, USA. 1930

### **Chandler, Raymond Thornton** 1888–1959

American novelist

There are two kinds of truth: the truth that lights the way and the truth that warms the heart. The first of these is science, and the second is art. ... With art science would be as useless as a pair of high forceps in the hands of a plumber. Without science art would become a crude mess of folklore and emotional quackery.

*The Notebooks of Raymond Chandler*

Great Thought (p. 7)

Ecco Press. New York, New York, USA. 1976

**Davy, Sir Humphry** 1778–1829

English chemist

To explain nature and the laws instituted by the Author of nature and to apply the phenomena presented in the external world to useful purposes are the great ends of physical investigation, and these ends can only be obtained by the exertion of all the faculties of the mind. And the imagination, the memory, and the reason are perhaps equally essential to the development of great and important truths.

*Humphry Davy on Geology: The 1805 Lectures for the General Audience*

Lecture Four (p. 58)

The University of Wisconsin Press. Madison, Wisconsin, USA. 1980

**de Fontenelle, Bernard le Bovier** 1657–1757

French author

Truth enters so naturally into the mind, that when we learn any thing for the first time, it appears as if we only remembered the thing learned, or exerted the faculty of our memory.

*Conversations on the Plurality of Worlds*

The Second Evening (p. 70)

Printed for Peter Wilson. Dublin, Ireland. 1761

**Descartes, René** 1596–1650

French philosopher, scientist, and mathematician

...we must believe that all the sciences are so interconnected, that it is much easier to study them all together than to isolate one from all the others. If, therefore, anyone wishes to search out the truth of things in serious earnest, he ought not to select one special science; for all the sciences are cojoined with each other and interdependent....

In *Great Books of the Western World* (Volume 31)

*Rules for the Direction of the Mind*

Rule 1 (p. 1)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Dewey, John** 1859–1952

American philosopher and educator

There is but one sure road of access to truth — the road of cooperative inquiry operating by means of observation, experiment, record, and controlled reflection.

*Common Faith*

Chapter II (p. 32)

Yale University Press. New Haven, Connecticut, USA. 1934

**Drake, Daniel** 1785–1852

American physician

The love of pleasure and the love of science may coexist, but cannot be indulged at the same time; though in fact they are seldom united. A student should draw his pleasures from the discovery of truth, and find his amusements in the beauties and wonders of nature. He should seek for recreation not debauchery

*Physician to the West* (p. 298)

University Press of Kentucky. Lexington, Kentucky, USA. 1970

**Dumas, Jean Baptiste-Andre** 1800–84

French biochemist

Truth is so beautiful that it deserves every effort a man can bestow to attain it; it is so fruitful that it carries along with it its own recompense. By keeping the end in view, without occupying ourselves with particulars, we find the ordinary details of prosperity and riches fall into their proper places.

In Faraday Lectures

*Lectures Delivered Before the Chemical Society*

The First Faraday Lecture (p. 3)

The Chemical Society. London, England. 1928

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

An addition to knowledge is won at the expense of an addition to ignorance. It is hard to empty the well of Truth with a leaky bucket.

*The Nature of the Physical World*

Chapter X (p. 229)

The Macmillan Company. New York, New York, USA. 1930

In science as in religion the truth shines ahead as a beacon showing us the path; we do not ask to attain it; it is better far that we be permitted to seek.

*Science and the Unseen World*

Chapter II (p. 23)

The Macmillan Company. New York, New York, USA. 1929

Accidental truth of a conclusion is no compensation for erroneous deduction.

*Space, Time and Gravitation: An Outline of the General Relativity Theory*

Chapter I (p. 29)

At The University Press. Cambridge, England. 1921

**Einstein, Albert** 1879–1955

German-born physicist

Truth is what stands the test of experience.

In Philipp Frank

*Relativity — A Richer Truth*

The Laws of Science and the Laws of Ethics (p. 10)

Jonathan Cape. London, England. 1951

The search for truth is more precious than its possession.  
*The American Mathematical Monthly*, Volume 100, Number 3, March 1993 (p. 254)

As for the search for truth, I know from my own painful searching, with its many blind alleys, how hard it is to take a reliable step, be it ever so small, towards the understanding of that which is truly significant.

In Helen Dukas and Banesh Hoffman  
*Albert Einstein: The Human Side: New Glimpses from His Archives*  
Letter dated 13 February 1934 (p. 18)  
Princeton University Press. Princeton, New Jersey, USA. 1979

It is the most beautiful reward for one who has striven his whole life to grasp some little bit of truth if he sees that other men have real understanding of and pleasure with his work.

In Helen Dukas and Banesh Hoffman  
*Albert Einstein: The Human Side: New Glimpses from His Archives*  
Letter dated 9 December, 1952 (p. 29)  
Princeton University Press. Princeton, New Jersey, USA. 1979

But the years of searching in the dark for a truth that one feels, but cannot express; the intense desire and the alternations of confidence and misgiving, until one breaks through to clarity and understanding, are only known to him who has himself experienced them.

In Ronald W. Clark  
*Einstein: The Life and Times*  
Part Five, Chapter 21 (p. 590)  
The World Publishing Company. New York, New York, USA. 1971

I want to know how God created this world. I am not interested in this or that phenomenon, in the spectrum of this or that element. I want to know His thoughts, the rest are details.

In Ronald W. Clark  
*Einstein: The Life and Times*  
The World Publishing Company. New York, New York, USA. 1971

**Eliot, George (Mary Ann Evans Cross)** 1819–80  
English novelist

Approximate truth is the only truth attainable, but at least one must strive for that, and not wade off into arbitrary falsehood.

Belgian botanist

Truth is on a curve whose asymptote our spirit follows eternally.

In J.A. Thomson  
*Introduction to Science*  
Chapter V (p. 125)  
Williams & Norgate Ltd. London, England. 1916

**Esquivel, Laura** 1951?–  
Mexican novelist

Anything could be true or false, depending on whether one believed it.

*Like Water for Chocolate*  
July (p. 127)  
Doubleday & Company, Inc. New York, New York, USA. 1989

**Everett, Edward** 1794–1865  
American statesman, educator, and orator

In the pure mathematics we contemplate absolute truths, which existed in the Divine Mind before the morning stars sang together, and which will continue to exist there, when the last of their radiant host shall have fallen from heaven.

In E.T. Bell  
*Mathematics: Queen and Servant of Science*  
Mathematical Truth (p. 21)  
McGraw-Hill Book Company, Inc. New York, New York, USA. 1951

**Feynman, Richard P.** 1918–88  
American theoretical physicist

We've learned from experience that the truth will come out. Other experimenters will repeat your experiment and find out whether you were wrong or right. Nature's phenomena will agree or they'll disagree with your theory. And, although you may gain some temporary fame and excitement, you will not gain a good reputation as a scientist if you haven't tried to be very careful in this kind of work. And it's this type of integrity, this kind of care not to fool yourself, that is missing to a large extent in much of the research in cargo cult science.

*Surely You're Joking, Mr. Feynman!: Adventures of a Curious Character* (Caltech commencement address, 1974) Cargo Cult Science (p. 342)  
W.W. Norton & Company, Inc. New York, New York, USA. 1985

It is possible to know when you are right way ahead of checking all the consequences. You can recognize truth by its beauty and simplicity.

*The Character of Physical Law*  
Chapter 7 (p. 171)  
BBC. London, England. 1965

**Fourcroy, Antoine-François** 1755–1809  
French chemist

The general truths in any science are continually multiplied, as its perfection advances, and its means of investigation are improved. Such has been the fortune of chemistry.

Translated by R. Heron  
*Elements of Chemistry and Natural History* (Volume 1)  
Advertisement (p. 1)  
Printed for G. Mudie & Son. Edinburgh, Scotland. 1796

**Frederick the Great** 1712–86  
German king

The greatest and noblest pleasure which men can have in this world is to discover new truths; and the next is to shake off old prejudices.

In Lloyd William Taylor  
*Physics: The Pioneer Science* (Volume 2)  
 Chapter 47 (p. 729)  
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1941

**Galilei, Galileo** 1564–1642  
 Italian physicist and astronomer

Two truths cannot contradict one another.  
 Translated by Stillman Drake  
*Discoveries and Opinions of Galileo*  
 Letter to Madame Christina of Lorraine (p. 186)  
 Doubleday & Company, Inc. New York, New York, USA. 1957

**Galilei, Vincenzo** 1520–1591  
 Father of Galileo Galilei

It appears to me that they who in proof of any assertion rely simply on the weight of authority, without adducing any argument in support of it, act very absurdly. I, on the contrary, wish to be allowed freely to question and freely to answer you without any sort of adulation, as well becomes those who are in search of truth.

In John Joseph Fahie  
*Galileo*  
 Chapter I (p. 3)  
 John Murray. London, England. 1903

**Gauss, Johann Carl Friedrich** 1777–1855  
 German mathematician, physicist, and astronomer

In the Theory of Numbers it happens rather frequently that, by some unexpected luck, the most elegant new truths spring up by induction.

In G. Polya  
*Induction and Analogy in Mathematics* (Volume 1)  
 Chapter IV (p. 59)  
 Princeton University Press. Princeton, New Jersey, USA. 1954

**Gore, George** 1826–1909  
 English electrochemist

The deepest truths require still deeper truths to explain them.

*The Art of Scientific Discovery*  
 Chapter III (p. 26)  
 Longmans, Green & Company. London, England. 1878

**Gray, George W.**  
 American free lance science writer

No truth is sacrosanct. No belief is too generally accepted, too well established by experiment, to escape the challenge of doubt. And no doubt is too radical to receive a hearing if it is seriously proposed.

The Riddle of Our Reddening Skies  
*Harper's Monthly Magazine*, July 1937 (p. 169)

**Gregory, Sir Richard Arman** 1864–1952  
 British science writer and journalist

In the pursuit of truth the man of science spends his days; and for the defense of truth he is prepared to stand against the world.

*Discovery; or, The Spirit and Service of Science*  
 Chapter II (p. 24)  
 Macmillan & Company Ltd. London, England. 1918

A truthful mind is necessary for the discovery of truth in Nature.

*Discovery; or, The Spirit and Service of Science*  
 Chapter II (p. 25)  
 Macmillan & Company Ltd. London, England. 1918

**Halmos, Paul R.** 1916–2006  
 Hungarian-born American mathematician

The joy of suddenly learning a former secret and the joy of suddenly discovering a hitherto unknown truth are the same to me — both have the flash of enlightenment, the almost incredibly enhanced vision, and the ecstasy and euphoria of released tension.

*I Want to Be a Mathematician*  
 Chapter 1 (p. 3)  
 Springer-Verlag. New York, New York, USA. 1985

**Heaviside, Oliver** 1850–1925  
 English electrical engineer, mathematician, and physicist

We do not dwell in the Palace of Truth. But, as was mentioned to me not long since, “There is a time coming when all things shall be found out.” I am not so sanguine myself, believing that the well in which Truth is said to reside is really a bottomless pit.

*Electromagnetic Theory*  
 Chapter I, Volume 1 (p. 1)  
 “The Electrician” printing & publishing company. London, England. 1894–1912

**Heinlein, Robert A.** 1907–88  
 American science fiction writer

The hardest part about gaining any new idea is sweeping out the false idea occupying that niche. As long as that niche is occupied, evidence and proof and logical demonstration get nowhere. But once the niche is emptied of the wrong idea that has been filling it — once you can honestly say, “I don’t know,” then it becomes possible to get at the truth.

*The Cat Who Walks Through Walls: A Comedy of Manners*  
 Chapter XVIII (p. 230)  
 G.P. Putnam’s Sons. New York, New York, USA. 1985

**Herschel, Sir John Frederick William** 1792–1871  
 English astronomer and chemist

It is only when we are wandering and lost in the mazes of particulars, or entangled in fruitless attempts to work our way downwards in the thorny paths of applications, to which our reasoning powers are incompetent, that nature appears complicated: — the moment we contemplate it as

it is, and attain a position from which we can take a commanding view, though but of a small part of its plan, we never fail to recognise that sublime simplicity on which the mind rests satisfied that it has attained the truth.

*The Cabinet of Natural Philosophy*

Part III, Chapter VI, Section 393 (pp. 360–361)

Longman, Rees, Orme, Brown & Green. London, England. 1831

### **Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

Every probability — and most of our common, working beliefs are probabilities — is provided with buffers at both ends, which break the force of opposite opinions clashing against it; but scientific certainty has no spring in it, no courtesy, no possibility of yielding. All this must react on the minds which handle these forms of truth.

*The Autocrat of the Breakfast-Table*

Chapter III (p. 56)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1891

### **Huxley, Aldous** 1894–1963

English writer and critic

Science is the only way we have of shoving truth down the reluctant throat.

*Literature and Science*

Chapter 27 (p. 79)

Harper & Row, Publishers. New York, New York, USA. 1963

### **Huxley, Thomas Henry** 1825–95

English biologist

Ecclesiasticism in science is only unfaithfulness to truth.

*Collected Essays* (Volume 2)

*Darwiniana*

Mr. Darwin's Critics (p. 149)

Macmillan & Company Ltd. London, England. 1904

The scientific spirit is of more value than its products, and irrationally held truths may be more harmful than reasoned errors.

*Collected Essays* (Volume 2)

*Darwiniana*

The Coming of Age of "The Origin of Species" (p. 229)

Macmillan & Company Ltd. London, England. 1904

History warns us, however, that it is the customary fate of new truths to begin as heresies and to end as superstitions. . . .

*Collected Essays* (Volume 2)

*Darwiniana*

The Coming of Age of "The Origin of Species" (p. 229)

Macmillan & Company Ltd. London, England. 1904

Science has fulfilled her function when she has ascertained and enunciated truth. . . .

*Collected Essays* (Volume 7)

Man's Place in Nature, On the Relations of Man to the Lower Animals (p. 151)

Macmillan & Company Ltd. London, England. 1904

*Magna est veritas et praevaleret!* Truth is great, certainly, but, considering her greatness, it is curious what a long time she is apt to take about prevailing.

*Man's Place in Nature and Other Anthropological Essays*

Preface (pp. ix–x)

D. Appleton & Company. New York, New York, USA. 1896

But to those whose life is spent, to use Newton's noble words, in picking up here a pebble and there a pebble on the shores of the great ocean of truth — who watch, day by day, the slow but sure advance of that mighty tide, bearing on its bosom the thousand treasures wherewith man ennobles and beautifies life: — it would be laughable, if it were not so sad, to see the little Canutes of the hour enthroned in solemn state, bidding that great wave to stay, and threatening to check it beneficent progress.

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 2)

Chapter II (p. 77)

D. Appleton & Company. New York, New York, USA. 1896

### **Inge, William Ralph** 1860–1954

English religious leader and writer

Every truth is a shadow, except the last; but every truth is a substance in its own place, though it be but a shadow in another place; and the shadow is a true shadow, as the substance is a true substance.

*Proceedings of the Aristotelian Society*, 1918–1919 (p. 272)

### **Jeffers, Robinson** 1887–1962

American poet

The mathematicians and physics men  
Have their mythology; they work alongside the truth,  
Never touching it; their equations are false  
But the things work. Or, when gross error appears,  
They invent new ones; they drop the theory of waves  
In universal ether and imagine curved space.

*The Beginning and the End and Other Poems*

The Great Wound (p. 11)

Random House, Inc. New York, New York, USA. 1963

### **Jones, Raymond F.** 1915–94

American writer

...in the statistical world you can multiply ignorance by a constant and get truth.

*The Non-Statistical Man* (p. 58)

Belmont Books, New York, New York, USA. 1964

### **Jonson, Ben** 1573?–1637

English dramatist and poet

If in some things I dissent from others, whose wit, industry, diligence, and judgment I look up at and admire, let me not therefore hear presently of ingratitude and rashness. For I thank those that have taught me, and ever will; but yet dare not think the scope of their labour and inquiry

was to envy their posterity what they also could add and find out... If I err, pardon me...

*Timber; or Discoveries Made upon Man and Matter Explorata; or, Discoveries* (p. 7)  
Ginn & Company. Boston, Massachusetts, USA. 1892

**Kepler, Johannes** 1571–1630  
German astronomer

The very truth, and the nature of things, though repudiated and ordered into exile, sneaked in again through the back door, to be received by me under an unwonted guise.

Translated by William H. Donahue  
*New Astronomy*  
Part IV, 58 (p. 575)  
At The University Press. Cambridge, England. 1992

**Lamarck, Jean-Baptiste Pierre Antoine** 1744–1829  
French biologist

Man is condemned to exhaust all possible errors when he examines any set of facts before he recognises the truth.

Translated by Hugh Elliot  
*Zoological Philosophy: An Exposition with Regard to the Natural History of Animals*  
Chapter V (p. 57)  
The University of Chicago Press. Chicago, Illinois, USA. 1984

...both individual and public reason, when they find themselves exposed to any alteration, usually set up so great an obstacle to it, that it is often harder to secure the recognition of a truth than it is to discover it.

Translated by Hugh Elliot  
*Zoological Philosophy: An Exposition with Regard to the Natural History of Animals*  
Chapter VIII (p. 404)  
The University of Chicago Press. Chicago, Illinois, USA. 1984

**Laplace, Pierre Simon** 1749–1827  
French mathematician, astronomer, and physicist

Induction, analogy, hypotheses founded upon facts and rectified continually by new observations, a happy tact given by nature and strengthened by numerous comparisons of its indications with experience, such are the principal means for arriving at truth.

*A Philosophical Essay on Probabilities*  
Chapter XVII (p. 176)  
Dover Publications, Inc. New York, New York, USA. 1951

**Lawson, Alfred William** 1869–1954  
American baseball player, popular philosopher and economist

Education is the science of knowing TRUTH.  
Miseducation is the art of absorbing FALSITY.  
TRUTH is that which is, not that which ain't.  
FALSITY is that which ain't, not that which is.

In Martin Gardner  
*Fads and Fallacies in the Name of Science*  
Chapter 6 (p. 76)  
Dover Publications, Inc., New York, New York, USA. 1957

**Le Bon, Gustave** 1841–1931  
French social psychologist, author, and amateur physicist

Science has promised us truth — an understanding of such relationships as our minds can grasp; it has never promised us either peace or happiness.

*La Psychologie des Foules*  
Introduction

**Levy, Hyman** 1889–1975  
British mathematician and social activist

Truth is a dangerous word to incorporate within the vocabulary of science. It drags with it, in its train, ideas of permanence and immutability that are foreign to the spirit of a study that is essentially an historically changing movement, and that relies so much on practical examination within restricted circumstances....

*The Universe of Science*  
Chapter V (p. 206)  
The Century Company. New York, New York, USA. 1933

Truth is an absolute notion that science, which is not concerned with any such permanency, had better leave alone.

*The Universe of Science*  
Chapter V (p. 207)  
The Century Company. New York, New York, USA. 1933

**Lewis, Gilbert Newton** 1875–1946  
American chemist

The theory that there is an ultimate truth, although very generally held by mankind, does not seem useful to science except in the sense of a horizon toward which we may proceed, rather than a point which may be reached.

*The Anatomy of Science*  
Chapter I (p. 7)  
Yale University Press. New Haven, Connecticut, USA. 1926

**Lodge, Sir Oliver** 1851–1940  
English physicist

The direct aim of Science is Truth, and the temptation of its devotees is to concentrate too narrowly on this one aim and lose sight of the wealth of existence which gives all the meaning and value to bare fact, thus gaining but a purblind view of the universe, in spite of a large accumulation of knowledge which is accurate as far as it goes, but so incomplete as regards the totality of things as to be liable to mislead.

In J. Arthur Thomson  
*The Outline of Science* (Volume 4)  
Chapter XXIV (p. 1077)  
G.P. Putnam's Sons. New York, New York, USA. 1937

**Mach, Ernst** 1838–1916  
Austrian physicist and philosopher

Truth suffers herself to be won. She flirts at times disgracefully. Above all, she is determined to be merited,

and has naught but contempt for the man who will win her too quickly.

*Popular Scientific Lectures*

On the Causes of Harmony (p. 45)

The Open Court Publishing Company. Chicago, Illinois, USA. 1898

The inquirer seeks the truth. I do not know if the truth seeks the inquirer. But were that so, then the history of science would vividly remind us of that classical rendezvous, so often immortalized by painters and poets. A high garden wall. At the right a youth, at the left a maiden. The youth sighs, the maiden sighs! Both wait. Neither dreams how near the other is.

*Popular Scientific Lectures*

On the Causes of Harmony (p. 45)

The Open Court Publishing Company. Chicago, Illinois, USA. 1898

Only when Truth is in exceptionally good spirits does she bestow upon her wooer a glance of encouragement. For, thinks Truth, if I do not do something, in the end the fellow will not seek me at all.

*Popular Scientific Lectures*

On the Causes of Harmony (pp. 45–46)

The Open Court Publishing Company. Chicago, Illinois, USA. 1898

### **Medawar, Sir Peter Brian** 1915–87

Brazilian-born English zoologist

The truth is not in nature waiting to declare itself, and we cannot know a priori which observations are relevant and which are not; every discovery, every enlargement of the understanding begins as an imaginative preconception of what the truth might be. This imaginative preconception — a “hypothesis” — arises by a process as easy or as difficult to understand as any other creative act of mind; it is a brainwave, an inspired guess, the product of a blaze of insight. It comes, anyway, from within and cannot be arrived at by the exercise of any known calculus of discovery.

*Advice to a Young Scientist*

Chapter 11 (p. 84)

Basic Books, Inc. New York, New York, USA. 1979

### **Millikan, Robert Andrews** 1868–1953

American physicist

...in science, truth once discovered always remains truth.

*Science and the New Civilization*

Chapter III (p. 76)

Charles Scribner's Sons. New York, New York, USA. 1930

### **Moulton, Forest Ray** 1872–1952

American astronomer

Many a chemist, physicist, biologist, psychologist, and historian, as well as monk, has had as his first and only love The Truth, and as it his greatest reward the approval of his own conscience.

In H.H. Newman (ed.)

*The Nature of the World and of Man*

Astronomy (p. 2)

The University of Chicago Press. Chicago, Illinois, USA. 1927

Science does not bow down before precedent nor custom nor dogma; it exalts the truth and honestly seeks it.

In H.H. Newman (ed.)

*The Nature of the World and of Man*

Astronomy (p. 4)

The University of Chicago Press. Chicago, Illinois, USA. 1927

### **Newton, Sir Isaac** 1642–1727

English physicist and mathematician

Truth is the offspring of silence and unbroken meditation.

Attributed to Newton

Source unknown

I do not know what I may appear to the world, but to myself I seem to have been only like a boy playing on the sea-shore, and diverting myself in now and then finding a smoother pebble or a prettier shell than ordinary, whilst the great ocean of truth lay all undiscovered before me.

In David Brewster

*Memoirs of the Life, Writings and Discoveries of Sir Isaac Newton* (Volume 2)

Chapter 27 (p. 407)

Hamilton, Adams & Company. London, England. 1855

### **Orlans, Harold** 1912–

American education researcher

A profession which seeks the truth must consider whether silence about motives and restraint in expression serve, on balance, to enhance or suppress it.

Neutrality and Advocacy in Policy Research

*Policy Sciences*, Volume 6, 1975

### **Osler, Sir William** 1849–1919

Canadian physician and professor of medicine

Truth has been well called the daughter of Time, and even in anatomy, which is a science in a state of fact, the point of view changes with successive generations.

*Aequanimitas, with Other Addresses to Medical Students, Nurses, and Practitioners of Medicine*

The Leaven of Science (p. 84)

The Blakiston Company. Philadelphia, Pennsylvania, USA. 1932

The truth is the best you can get with your best endeavor, the best that the best men accept — with this you must learn to be satisfied, retaining at the same time with due humility an earnest desire for an ever larger portion.

*Selected Writings of Sir William Osler*

Chapter 11 (p. 172)

Oress. London, England. 1951

### **Pagels, Heinz R.** 1939–88

American physicist and science writer

The only touchstone for empirical truth is experiment and observation.

*Perfect Symmetry: The Search for the Beginning of Time*  
Part Four, Chapter 1 (p. 355)  
Simon & Schuster. New York, New York, USA. 1985

**Pascal, Blaise** 1623–62  
French mathematician and physicist

We may have three main objects in the study of truth: first, to find it when we are seeking it; second, to demonstrate it after we have found it; third, to distinguish it from error by examining it.

In *Great Books of the Western World* (Volume 33)  
*Scientific Treatises*

On Geometrical Demonstration (p. 430)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Pasteur, Louis** 1822–95  
French chemist

Truth, Sir, is a great coquette. She will not be won by too much passion. Indifference is often more successful with her. She escapes when apparently caught, but she yields readily if patiently waited for. She reveals herself when one is about to abandon the hope of possessing her; but she is inexorable when one affirms her, that is when loves her with too much fervor.

In Rene Dubos

*Louis Pasteur: Free Lance of Science*

Chapter XIV (p. 389)

Little, Brown & Company. Boston, Massachusetts, USA. 1950

**Peirce, Charles Sanders** 1839–1914  
American scientist, logician, and philosopher

...truths, on the average, have a greater tendency to get believed than falsities have. Were it otherwise, considering that there are myriads of false hypotheses to account for any given phenomenon, against one sole true one (or if you will have it so, against every true one), the first step towards genuine knowledge must have been next door to a miracle.

*The Collected Works of Charles Sanders Peirce* (Volume 5)

Pragmatism and Pragmaticism (p. 431)

**Penrose, Roger** 1931–  
English mathematical physicist

Scientists do not invent truth — they discover it.

In John Horgan

Quantum Consciousness

*Scientific American*, Volume 261, Number 5, November 1989 (p. 32)

**Planck, Max** 1858–1947  
German physicist

Conscientiousness and truth are as necessary in research in pure science as in practical life.

*A Survey of Physical Theory*

Dynamical Laws and Statistical Laws

Methuen & Company Ltd. London, England. 1925

If we seek a foundation for the edifice of exact science which is capable of withstanding every criticism, we must first of all tone down our demands considerably. We must not expect to succeed at a stroke, by one single lucky idea, in hitting on an axiom of universal validity, to permit us to develop, with exact methods, a complete scientific structure. We must be satisfied initially to discover some form of truth which no skepticism can attack. In other words, we must set our sights not on what we would like to know, but first on what we do not know with certainty.

*Scientific Autobiography and Other Papers*

The Meaning and Limits of Exact Science, Part I (p. 84)

Philosophical Library. New York, New York, USA. 1949

It is not the possession of truth, but the success which attends the seeking after it, that enriches the seeker and brings happiness to him.

In H.A. Ross

*Elihu Root Lectures of Carnegie Institution of Washington on the Influence of Science and Research on Current Thought*

The Nature of Progress in Science (p. 14)

Washington, D.C. 1945

...“to believe” means “to recognize as a truth,” and the knowledge of nature, continually advancing on incontrovertibly safe tracks, has made it utterly impossible for a person possessing some training in natural science to recognize as founded on truth the many reports of extraordinary occurrences contradicting the laws of nature, of miracles which are still commonly regarded as essential supports and confirmations of religious doctrines, and which formerly used to be accepted as facts pure and simple, without doubt or criticism.

*Scientific Autobiography and Other Papers*

Religion and Natural Science, Part I (p. 154)

Philosophical Library. New York, New York, USA. 1949

...the whole strenuous intellectual work of an industrious research worker would appear, after all, in vain and hopeless, if he were not occasionally through some striking facts to find that he had, at the end of his all criss-cross journeys, at last accomplished at least one step which was conclusively nearer the truth.

*Nobel Lectures, Physics 1901–1921*

Nobel lecture for award received in 1918 (p. 407)

Elsevier Publishing Company. Amsterdam, Netherlands. 1967

**Poe, Edgar Allan** 1809–49  
American short story writer

Truth is not always in a well. In fact, as regards the more important knowledge, I do believe that she is invariably superficial. The depth lies in the valleys where we seek her, and not upon the mountain-tops where she is found.

*Complete Tales and Poems of Edgar Allan Poe*

The Murders in the Rue Morgue (p. 153)

The Modern Library. New York, New York, USA. 1965

**Priestley, Joseph** 1733–1804  
English theologian and scientist

When I...compare my last discoveries relating to the constitution of the atmosphere with the first, I see the closest and easiest connexion in the world between them, so as to wonder that I should not have been led immediately from the one to the other. That this was not the case, I attribute to the force of prejudice, which unknown to ourselves, biases not only our judgments, properly so called, but even the perception of our senses: for we may take a maxim so strongly for granted, that the plainest evidence of sense will not entirely change, and often hardly modify, our persuasions; and the more ingenious a man is, the more effectually he is entangled in his errors; ...his ingenuity only helping him to deceive himself, by evading the force of truth.

In F.W. Gibbs

*Joseph Priestley: Adventurer in Science and Champion of Truth*  
Chapter 9 (p. 119)  
Thomas Nelson & Sons Ltd. London, England. 1965

**Reichenbach, Hans** 1891–1953  
German philosopher of science

He who searches for truth must not appease his urge by giving himself up to the narcotic of belief.

In Ruth Renya

*The Philosophy of Matter in the Atomic Era: A New Approach to the Philosophy of Science* (p. 16)  
Asia Publishing House. Bombay, India. 1962

**Renan, Ernest** 1823–92  
French philosopher and Orientalist

Science has no enemies save those who consider truth as useless and making no difference, and those who granting to truth its priceless value profess to get at it by other roads than those of criticism and rational investigation.

*The Future of Science*

Chapter IV (p. 68)

Roberts Brothers. Boston, Massachusetts, USA. 1893

The simplest schoolboy is now familiar with truths for which Archimedes would have sacrificed his life.

In L.I. Ponomarev

*The Quantum Dice* (p. 34)

Institute of Physics Publishing. Bristol, England. 1993

**Richet, Charles** 1850–1935  
French physiologist

Truth, the goddess, the sovereign, the all-powerful, who will freeze with terror those who jeer at her!

Translated by Sir Oliver Lodge

*The Natural History of a Savant*

Chapter II (p. 25)

J.M. Dent & Sons Ltd. London, England. 1927

...if you would discover a new truth, do not seek to know what use will be made of it.

*The Natural History of a Savant*

Chapter XII (p. 133)

J.M. Dent & Sons Ltd. London, England. 1927

**Romanoff, Alexis Lawrence** 1892–1980  
Russian soldier and scientist

Science speaks the language of universal truth.

*Encyclopedia of Thoughts*

Aphorisms 961

Ithaca Heritage Books. Ithaca, New York, USA. 1975

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

When a man tells you that he knows the exact truth about anything, you are safe in inferring that he is an inexact man.

*The Scientific Outlook*

Characteristics of Scientific Method (p. 65)

George Allen & Unwin Ltd. London, England. 1931

Science thus encourages abandonment of the search for absolute truth, and the substitution of what may be called “technical” truth, which belongs to any theory that can be successfully employed in inventions or in predicting the future. “Technical” truth is a matter of degree: a theory from which more successful inventions and predictions spring is truer than one which gives rise to fewer.

*Religion and Science*

Grounds of Conflict (p. 15)

Henry Holt & Company. New York, New York, USA. 1935

**Sagan, Carl** 1934–96

American astronomer and science writer

The truth may be puzzling. It may take some work to grapple with. It may be counterintuitive. It may contradict deeply held prejudices. It may not be consonant with what we desperately want to be true. But our preferences do not determine what’s true.

Wonder and Skepticism

*Skeptical Inquirer*, Volume 19, Issue 1, January–February 1995

We have a method, and that method helps us to reach not absolute truth, only asymptotic approaches to the truth — never there, just closer and closer, always finding vast new oceans of undiscovered possibilities.

Wonder and Skepticism

*Skeptical Inquirer*, Volume 19, Issue 1, January–February 1995

**Sattler, R.**

No biographical data available

Modern philosophy of science has gone far beyond the naive belief that science reveals the truth. Even if it could, we would have no means of proving it. Certainty seems unattainable. All scientific statements remain open to doubt.... We cannot reach the absolute at least as far as science is concerned; we have to content ourselves with the relative.

*Biophilosophy*

Chapter 1 (p. 41)

Springer-Verlag, Berlin, Germany. 1986

**Sendivogius, Michael** 1566–1636

Polish alchemist and inventor

There is abundance of knowledge, yet but little Truth known. The generality of our knowledge is as Castles in the Air, or groundless Fancies.

Clarendon Press, Oxford, England, 1988

**Wilkins, John** 1614–72

English writer

That the strangeness of this opinion is no sufficient reason why it should be rejected, because other certain truths have been formerly esteemed ridiculous, and great absurdities entertained by common consent.

*The Discovery of a World in the Moone* (p. 1)

**Wilson, Edward O.** 1929–

American biologist and author

...if history and science have taught us anything, it is that passion and desire are not the same as truth. The human mind evolved to believe in the gods. It did not evolve to believe in biology. Acceptance of the supernatural conveyed a great advantage throughout prehistory, when the brain was evolving. Thus it is in sharp contrast to biology, which was developed as a product of the modern age and is not underwritten by genetic algorithms. The uncomfortable truth is that the two beliefs are not factually compatible. As a result those who hunger for both intellectual and religious truth will never acquire both in full measure.

*Consilience: The Unity of Knowledge*

Chapter 11 (p. 262)

Alfred A. Knopf, New York, New York, USA, 1998

The Liberal Arts Press, New York, New York, USA, 1958

## TUNNELING

**Drinker, Henry** 1850–1937

A barbarous people may, perhaps, develop a high degree of perfection in the mere art of open-air building, where stone can be piled on stone, and rafter fitted to rafter, in the light of day; but it takes the energy, knowledge, experience, and skill of an educated and trained class of men to cope with the unknown dangers of the dark depths that are to be invaded by the tunnel-man.

In Henry Drinker

*Tunneling, Explosive Compounds, and Rock Drilling* (p. 32)

John Wiley & Sons, Inc. New York, New York, USA, 1878

## TURBULENCE

**Feynman, Richard P.** 1918–88

American theoretical physicist

**Leighton, Robert B.** 1919–97

American physicist

**Sands, Matthew L.** 1919–

American physicist

The next great era of awakening of human intellect may well produce a method of understanding the qualitative content of equations. Today we cannot. Today we cannot see that the water flow equations contain such things as the barber pole structure of turbulence that one sees between rotating cylinders. Today we cannot see whether Schrödinger's equation contains frogs, musical composers, or morality — or whether it does not.

*The Feynman Lectures on Physics* (Volume 2)

Chapter 41 (p. 41–12)

Addison-Wesley Publishing Company, Reading, Massachusetts, USA, 1983

**Lamb, Sir Horace** 1848–1934

English applied mathematician

It remains to call attention to the chief outstanding difficulty of our subject [turbulent motion].

*Hydrodynamics*

Chapter VI, section 365 (p. 663)

Dover Publications, Inc. Mineola, New York, USA, 1945

**Saffman, P. G.**

No biographical data available

...we should not altogether neglect the possibility that there is no such thing as “turbulence.” That is to say, it is not meaningful to talk of the properties of a turbulent flow independently of the physical situation in which it arises. In searching for a theory of turbulence, we are perhaps looking for a chimera.

In H. Fiedler (ed.)

*Structure and Mechanisms of Turbulence* (Volume 2)

Problems and Progress in the Theory of Turbulence (p. 276)

Springer-Verlag, Berlin, Germany, 1978

## TYPHUS

**Butler, Samuel** 1612–80

English novelist, essayist, and critic

They made a clean sweep of all machinery that had not been in use for more than two hundred and seventy-one years (which period was arrived at after a series of compromises), and strictly forbade all further improvements and inventions under pain of being considered in the eye of the law to be labouring under typhus fever, which they regard as one of the worst of all crimes.

*Erewhon and Erewhon Revisited*

Chapter IX (pp. 81–82)

The Modern Library. New York, New York, USA. 1955

**Nicolle, Charles** 1866–1936

French bacteriologist

And this is the ultimate lesson that our knowledge of the mode of transmission of typhus has taught us: Man carries on his skin a parasite, the louse. Civilization rids him of it. Should man regress, should he allow himself to resemble a primitive beast, the louse begins to multiply again and treats man as he deserves, as a brute beast.

*Nobel Lectures, Physiology or Medicine 1922–1941*

Nobel lecture for award received in 1928

Investigations on Typhus (p. 187)

Elsevier Publishing Company. Amsterdam, Netherlands. 1965

## TYPOLGY

**Bordes, Francois** 1919–81

French scientist, geologist, and archaeologist

One has to see a great number of implements, classify them, see them again several times, before one acquires a “typological eye.”

On Old and New Concepts of Typology

*Current Anthropology*, Volume 13, Number 1 (p. 141)

**Brögger, A. W.**

No biographical data available

The proud edifice of chronology built on a foundation of typology is a dangerous mirage.

*Kulturgeschichte des Norwegischen Altertums* (p. 14)

**Hawksworth, D. L.**

No biographical data available

The Purpose of typification is to fix permanently the application of names of all ranks governed by the Code so as to preclude the possibility of the same name being used in different senses; i.e., for different plants.

*Mycologist's Handbook: An Introduction to the Principles of Taxonomy and Nomenclature in the Fungi and Lichens* (p. 127)

Commonwealth Mycological Institute. Kew, England. 1974

**Krieger, A.**

In speaking of “types” did the author follow any philosophy of typology, or — as is so common — did he merely devise still another “typology” for his own convenience.

Epistemology and Archaeological Theory, Comment on Lowtherm

*Current Anthropology*, Volume 3, 1963 (p. 506)

**Malmer, Mats P.**

No biographical data available

Archaeology is directed at the general, it aims to depict the important features of existence for groups of people in prehistoric times. It is clear, therefore, that typology is the central method in archaeology: the study of types and their associations. This central archaeological concept is the type. If typology were not the central and unifying factor, all other methods and subsidiary sciences would fall hopelessly apart, and archaeology as a science would cease to exist.... There can be no typology without types, no archaeology without typology.

*Acta Archaeologica Lundensis*

*Jungneolithische Studien*, Number 2 (pp. 880–881)

**Reed, T. D.**

No biographical data available

Towards the end of the last century those strange new gods Typology and Chronology, Athanasian in their relationship, arose and the archaeologists bowed down and worshipped them.... The younger archaeologist of today is a sad, wise, disillusioned, and almost human being.

*The Battle for Britain in the 5<sup>th</sup> Century: An Essay in Dark Age History* (pp. 5–6)

**Taylor, Walter W.** 1913–97

American archaeologist

It is possible to type automobiles on the basis of the length of the scratches in their paint, to classify sand tempered potsherds on the number of sand grains in each, or to group together all chipped stone points which have side notches. It would be possible, but the pertinent question is “So what?”

*A Study of Archeology*

Part II, Chapter 5 (p. 127)

Southern Illinois University Press. Carbondale, Illinois, USA. 1967

#### **Heisenberg, Werner Karl** 1901–76

German physicist and philosopher

In fact, our ordinary description of nature, and the idea of exact laws, rests on the assumption that it is possible to observe the phenomena without appreciably influencing them.

*The Physical Principles of the Quantum Theory*

Translated by Carl Eckhart and Frank C. Hoyt. (p. 62)

The University of Chicago Press. Chicago, Illinois, USA. 1930

#### **Hoyle, Sir Fred** 1915–2001

English mathematician and astronomer

If matters still seem very uncertain it must always be

remembered that clearly sign-posted roads are not to be expected at a pioneering frontier.

*Frontiers of Astronomy*

Chapter Nineteen (p. 341)

Harper & Row, Publishers. New York, New York, USA. 1955

#### **Pagels, Heinz R.** 1939–88

American physicist and science writer

Space looks empty only because this great creation and destruction of all the quanta takes place over such short times and distances.

*The Cosmic Code: Quantum Physics as the Language of Nature*

Part II, Chapter 8 (p. 274)

Simon & Schuster. New York, New York, USA. 1982

#### **Professor Hubert J. Farnsworth**

Fictional character

Announcer [on loudspeaker]: And it’s a dead heat! They’re checking the electron microscope. And the winner is...[A man holds up a “3” in a window.]...number 3, in a quantum finish.

Farnsworth: No fair! You changed the outcome by measuring it.

*Futurama*

Luck of the Fryrish

Aired 11 March 2001

#### **Vincenti, Walter G.** 1917–

American aeronautical engineer

In the end, decreasing uncertainty in the growth of knowledge in a technology comes, I suggest, mainly from the increase in scope and precision (that is, the decrease in unsureness) in the vicarious means of selection. Just as expanding scope tends, as we saw, to widen the field that can be overtly searched, so also the increase in both scope and precision sharpens the ability to weed out variations that won’t work in the real environment. Blindness in the variations may by the same token even increase — engineers have freedom to be increasingly blind in their trial variations as their means of vicarious selection become more reliable. One sees engineers today, for example, using computer models to explore a much wider field of possibilities than they were able to select from just a decade ago.

*What Engineers Know and How They Know It: Analytical Studies from Aeronautical History*

Chapter 8 (p. 250)

The Johns Hopkins University Press. Baltimore, Maryland, USA. 1990

#### **Ziman, John M.** 1925–

British physicist

Many philosophers have now sadly come to the conclusion that there is no ultimate procedure which will wring the last drops of uncertainty from what scientists call their knowledge.

*Public Knowledge: An Essay Concerning the Social Dimension of Science*

Chapter 1 (p. 5)

Cambridge University Press. Cambridge, England. 1968

## UNCERTAINTY PRINCIPLE

**Stoppard, Tom** 1937–

Czech-born English playwright

An electron can be here or there at the same moment. You can choose. It can go from here to there without going in between; it can pass through two doors at the same time, or from one door to another by a path which is there for all to see until someone looks, and then the act of looking has made it take a different path.

[An electron's] movements cannot be anticipated because it has no reasons. It defeats surveillance because when you know what it's doing you can't be certain where it is, and when you know where it is you can't be certain what it's doing: Heisenberg's uncertainty principle; and this is not because you're not looking carefully enough, it is because there is no such thing as an electron with a definite position and a definite momentum; you fix one, you lose the other, and it's all done without tricks, it's the real world, it is awake.

*Tom Stoppard: Plays*

Hapgood, Act I, Scene 5 (p. 544)

Faber & Faber. London, England. 1999

## UNDERSTANDING

**Arnott, Neil** 1788–1874

Scottish physician

...no man can understand a subject of which he does not carry a distinct outline in his mind...

*Elements of Physics, or, Natural Philosophy, General and Medical Synopsis* (p. 4)

Printed for Thomas & George Underwood. London, England. 1827

**Atiyah, Sir Michael** 1929–

English mathematician

...it is hard to communicate understanding because that is something you get by living with a problem for a long time. You study it, perhaps for years, you get the feel of it and it is in your bones. You can't convey that to anybody else. Having studied the problem for five years you may be able to present it in such a way that it would take somebody else less time to get to that point than it took you, but if they haven't struggled with the problem and seen all the pitfalls, then they haven't really understood it.

An Interview with Michael Atiya

*The Mathematical Intelligencer*, Volume 6, Number 1, 1984 (p. 17)

## Author undetermined

The rabbi spoke three times. The first talk was brilliant; clear and simple. I understood every word. The second was even better; deep and subtle. I didn't understand much, but the rabbi understood all of it. The third was by far the finest; a great and unforgettable experience. I understood nothing, and the rabbi himself didn't understand much either.

In Aage Petersen

*The Philosophy of Niels Bohr*

*Bulletin of the Atomic Scientists*, Volume 19, Number 7, September

1963 (p. 8)

I understand the material. I just can't do the problems.

*The Physics Teacher*, Volume 6, Number 9, December

1968

**Bacon, Sir Francis** 1561–1626

English lawyer, statesman, and essayist

The eye of the understanding is like the eye of the sense: for as you may see great objects through small crannies or levels; so you may see great axioms of nature through small and contemptible instances.

*The Works of Francis Bacon* (Volume 1)

*Sylva Sylvarum*

Century I, 91 (p. 278)

Printed for C. & J. Rivington. London, England. 1826

The human understanding is like a false mirror, which, receiving rays irregularly, distorts and discolors the nature of things by mingling its own nature with it.

In *Great Books of the Western World* (Volume 30)

*Novum Organum*

First Book, Aphorism 48 (p. 110)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Barbour, Julian** 1937–

English physicist

...the higher we climb, the more comprehensive the view. Each new vantage point yields a better understanding of the interconnection of things. What is more, gradual accumulation of understanding is punctuated by sudden and startling enlargements of the horizon, as when we reach the brow of a hill and see things never conceived of in the ascent. Once we have found our bearings in the new landscape, our path to the most recently attained summit is laid bare and takes its honourable place in the new world.

*The End of Time: The Next Revolution in Physics*

Part 1, Chapter 1 (p. 13)

Weidenfield & Nicolson. London, England. 1999

**Becker, Carl L.** 1873–1945

American historian

We really haven't time to stand amazed, either at the stary firmament above or the Freudian complexes within

us. The multiplicity of things to manipulate and make use of so fully engage our attention that we have neither the leisure nor the inclination to seek a rational explanation of the force that makes them function so efficiently.

### **Bush, Vannevar** 1890–1974

American electrical engineer and physicist

The enthusiasm, the exuberance, that properly accompanies the great achievements of science, the thrill of at last beginning to understand nature and the universe about us, in all their awesome magnificence, continues to lead many men all over the world, especially young men, on to this new materialism.

*Science Is Not Enough*

Chapter II (pp. 19–20)

William Morrow & Company, Inc. New York, New York, USA. 1967

### **Chu, Steven** 1948–

American physicist

You want to try to put something that you learn in your own language, so that it's no longer something that's merely memorized but something you transfer from your head to your gut — you simplify it and put it in your own language to the point where it seems almost obvious and intuitive. It's only when you understand your science in this very obvious, intuitive way that you have a chance of thinking of something new.

Interview

*American Scientist*, Volume 86, January–February 1998 (p. 25)

### **Cole, K. C.** 1946–

American science writer

...the need to go to the moon or smash atoms is on a par with the need to have natural history museums: Science provides a handle on who we are and how we fit into the scheme of things. Understanding our place in the sun requires an understanding of the sun's place in the solar system, the cycles of the sky, the nature of the elements, and the improbabilities of life. If what we learn leaves us a little stunned by our limitations and potentials, so be it. Science gives us a sense of scale and a sense of limits, an appreciation for perspective and a tolerance for ambiguity.

Pantheon Books. New York, New York, USA. 1966

### **Dahlberg, Edward** 1900–77

American novelist and essayist

It takes a long time to understand nothing.

*Reasons of the Heart*

On Wisdom and Folly  
Horizon Press, Inc. New York, New York, USA. 1965

**Eco, Umberto** 1932–  
Italian novelist, essayist, and scholar

ADSO: “But how does it happen,” I said with admiration, “that you were able to solve the mystery of the library looking at it from the outside, and you were unable to solve it when you were inside?”

WILLIAM OF BASKERVILLE: “Thus God knows the world, because He conceived it in His mind, as if from the outside, before it was created, and we do not know its rule, because we live inside it, having found it already made.”

Translated by William Weaver  
*The Name of the Rose*  
Vespers (p. 218)  
Harcourt Brace Jovonovich. San Diego, California, USA. 1983

**Einstein, Albert** 1879–1955  
German-born physicist

The hardest thing to understand is why we understand anything at all.  
In Morton Wagman  
*Cognitive Science and Concepts of Mind* (p. 103)  
Praeger. New York, New York, USA. 1991

**Einstein, Albert** 1879–1955  
German-born physicist

**Infeld, Leopold** 1898–1968  
Polish physicist

With the help of physical theories we try to find our way through the maze of observed facts, to order and understand the world of our sense impressions.  
*The Evolution of Physics*  
Physics and Reality (p. 296)  
Simon & Schuster. New York, New York, USA. 1961

The scientist reading the book of nature...must find the solution for himself, for he cannot, as impatient readers of other stories often do, turn to the end of the book. In our case the reader is also the investigator, seeking to explain, at least in part, the relation of events to their rich context. To obtain even a partial solution the scientist must collect the unordered facts available and make them coherent and understandable by creative thought.  
*The Evolution of Physics*  
The Great Mystery (pp. 4–5)  
Simon & Schuster. New York, New York, USA. 1961

**Ferguson, Marilyn** 1938–  
American writer

Real progress in understanding nature is rarely incremental. All important advances are sudden intuitions, new principles, new ways of seeing. We have not fully

recognized this process of leaping ahead, however, in part because textbooks tend to tame revolutions, whether cultural or scientific. They describe the advances as if they had been logical in their day, not at all shocking.  
*The Aquarian Conspiracy: Personal and Social Transformation in the 1980s*  
Chapter 1 (p. 28)  
J.P. Tarcher, Inc. Los Angeles, California, USA. 1980

**Ferris, Timothy** 1944–  
American science writer

We might eventually obtain some sort of bedrock understanding of cosmic structure, but we will never understand the universe in detail; it is just too big and varied for that. If we possessed an atlas of our galaxy that devoted but a single page to each star system in the Milky Way (so that the sun and all its planets were crammed in on one page), that atlas would run to more than ten million volumes of ten thousand pages each. It would take a library the size of Harvard's to house the atlas, and merely to flip through it, at the rate of a page per second, would require over ten thousand years.  
*Coming of Age in the Milky Way*  
Chapter 20 (p. 383)  
William Morrow & Company, Inc. New York, New York, USA. 1988

**Feynman, Richard P.** 1918–88  
American theoretical physicist

What I cannot create I do not understand.  
In James Gleick  
*Genius: The Life and Science of Richard Feynman*  
Epilogue (p. 437)  
Pantheon Books. New York, New York, USA. 1992

I would like to be rather more special, and I would like to be understood in an honest way rather than in a vague way.  
*The Character of Physical Law*  
Chapter 1 (p. 13)  
BBC. London, England. 1965

One does not, by knowing all the physical laws as we know them today, immediately obtain an understanding of anything much.  
*The Character of Physical Law*  
Chapter 5 (p. 122)  
BBC. London, England. 1965

**Galilei, Galileo** 1564–1642  
Italian physicist and astronomer

We proceed in step-by-step discussion from inference to inference, whereas He conceives through mere intuition. Thus in order to gain insight into some of the properties of the circle, of which it possesses infinitely many, we begin with one of the simplest; we take it for a definition and proceed from it by means of inference to a second property, from this to a third, and hence a fourth, and

so on. The divine intellect, on the other hand, grasps the essence of a circle *senza temporaneo discorso* and thus apprehends the infinite array of the properties.

*Opere* (VII)

Dialogo (p. 129)

SAGREDO: My brain already reels. My mind, like a cloud momentarily illuminated by a lightning-flash, is for an instant filled with an unusual light, which now beckons to me and which now suddenly mingles and obscures strange, crude ideas.

In *Great Books of the Western World* (Volume 28)

*Dialogues Concerning the Two New Sciences*

First Day (p. 132)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

The vain presumption of understanding everything can have no other basis than never understanding anything. For anyone who had experienced just once the perfect understanding of one single thing, and had truly tasted how knowledge is accomplished, would recognize that infinity of other truths of which he understands nothing.

Translated by Stillman Drake

*The Two Chief World Systems*

First Day (p. 101)

University of California Press. Berkeley, California, USA. 1953

### **Hawking, Stephen William** 1942–

English theoretical physicist

...there may be no ultimate theory, and even if there is, we may not find it. But it is surely better to strive for a complete understanding than to despair of the human mind.

*Black Holes and Baby Universes and Other Essays*

Preface (p. ix)

Bantam Books. New York, New York, USA. 1993

### **Hazlitt, William Carew** 1834–1913

English bibliographer

...in what we really understand, we reason but little.

*The Collected Works of William Hazlitt*

On the Conduct of Life (p. 430)

McClure, Phillips & Company. New York, New York, USA. 1904

### **Heisenberg, Werner Karl** 1901–76

German physicist and philosopher

Whenever we proceed from the known into the unknown we may hope to understand, but we may have to learn at the same time a new meaning of the word “understanding.”

*Physics and Philosophy*

Chapter XI (p. 201)

Harper & Row, Publishers. New York, New York, USA. 1962

The exact sciences also start from the assumption that in the end it will always be possible to understand nature, even in every new field of experience, but that we may make no a priori assumptions about the meaning of the word understand.

In Heinrich O. Proskauer

*The Rediscovery of Color: Goethe Versus Newton Today*

Preface (p. ix)

Anthroposophic Press. Spring Valley, New York, USA. 1986

Even for a physicist the description in plain language will be a criterion of the degree of understanding that has been reached.

*Physics and Philosophy: The Revolution in Modern Science*

Chapter X (p. 168)

Harper & Row, Publishers. New York, New York, USA. 1958

...as facts and knowledge accumulate, the claim of the scientist to an understanding of the world in a certain sense diminishes.

*Wandlungen in der Grundlagen der Naturwissenschaft*

Zur Geschichte der physikalischen NaturerklSrung (p. 28)

### **Hoffman, Roald** 1937–

Polish-born applied theoretical chemist and writer

In principle one could go ahead and calculate each molecule. ... [H]owever...even if the results were in excellent agreement with experiment, the resultant predictability would not necessarily imply understanding. True understanding implies a knowledge of the various physical factors, the mix of different physical mechanisms, that go into making an observable.

*Interaction of Orbitals Through Space and Through Bonds*

*Accounts of Chemical Research*, Volume 4, Number 1, 1971 (p. 1)

### **Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

A moment's insight is sometimes worth a life's experience.

*The Professor at the Breakfast-Table*

Chapter X (p. 301)

Ticknor & Fields. Boston, Massachusetts, USA. 1860

### **Hoyle, Sir Fred** 1915–2001

English mathematician and astronomer

The man who voyages strange seas must of necessity be a little unsure of himself. It is the man with the flashy air of knowing everything, who is always on the ball, always with it, that we should beware of.

*Of Men and Galaxies*

Motives and Aims of the Scientist (pp. 24–25)

University of Washington Press. Seattle, Washington, USA. 1964

### **Hugo, Victor** 1802–85

French author, lyric poet, and dramatist

...a man may be a fine genius, and yet understand nothing of an art which he has not studied.

*Notre-Dame de Paris*

Book III, Chapter 2 (p. 126)

J.M. Dent & Sons Ltd. London, England. 1910

### **Huygens, Christiaan** 1629–95

Dutch mathematician, astronomer, and physicist

If any one is resolved to find fault with it, let him first be sure he understands it.

*The Celestial Worlds Discover'd, or, Conjectures Concerning the Planetary Worlds, Their Inhabitants and Productions*  
Book the First, Arguments for the Truth of It (p. 13)  
Printed for T. Childe. London, England. 1698

**Juster, Norton** 1929–

American architect and author

Milo tried very hard to understand all the things he'd been told, and all the things he'd seen, and, as he spoke, one curious thing still bothered him. "Why is it, " he said quietly, "that quite often even the things which are correct just don't seem to be right?"

*The Phantom Tollbooth*  
Chapter 16 (p. 198)  
Alfred A. Knopf. New York, New York, USA. 1989

**Kaufmann, William J., III** 1942–94

American astronomer

We shall speak of things we cannot understand. We shall discuss concepts we cannot grasp. We shall examine processes we cannot comprehend.

*Stars and Nebulas*  
Chapter I (p. 4)  
W.H. Freeman & Company. San Francisco, California, USA. 1978

**Kelvin, Lord William Thomson** 1824–1907

Scottish engineer, mathematician, and physicist

Some people say they cannot understand a million million. Those people cannot understand that twice two makes four. That is the way I put it to people who talk to me about the incomprehensibility of such large numbers. I say finitude is incomprehensible, the infinite in the universe is comprehensible.

Wave Theory of Light  
*Journal of the Franklin Institute*, Volume 118, November 1884

**Le Guin, Ursula K.** 1929–

American writer of science fiction and fantasy

If the human creatures will not understand Relativity, very well; but they must understand Relatedness.

*The Wind's Twelve Quarters*  
Direction of the Road (p. 223)  
Harper & Rowe, Publishers, New York, New York, USA; 1975

**Lec, Stanislaw** 1909–66

Polish poet and aphorist

Some like to understand what they believe in. Others like to believe in what they understand.

*Unkempt Thoughts* (p. 159)  
St. Martin's Press. New York, New York, USA. 1962

**Oppenheimer, Frank** 1912–85

American physicist

Understanding is a lot like sex. It's got a practical purpose, but that's not why people do it normally.

In K.C. Cole  
*The Universe and the Teacup: The Mathematics of Truth and Beauty*  
Chapter 1 (p. 5)  
Harcourt Brace & Company. New York, New York, USA. 1998

**Ortega y Gasset, José** 1883–1955

Spanish philosopher

To be surprised, to wonder, is to begin to understand.

*The Revolt of the Masses*  
Chapter I (p. 12)  
W.W. Norton & Company, Inc. New York, New York, USA. 1960

**Osler, Sir William** 1849–1919

Canadian physician and professor of medicine

To understand the old writers one must see as they saw. Feel as they felt, believe as they believed — and this is hard, indeed impossible! We may get near them by asking the Spirit of the Age in which they lived to enter in and dwell with us, but it does not always come.... Each generation has its own problems to face, look at truth from a special focus, and does not see quite the same outlines as any other.

*The Evolution of Medicine*  
Chapter VI (p. 218)  
Yale University Press. New Haven, Connecticut, USA. 1922

**Pagels, Heinz R.** 1939–88

American physicist and science writer

The attempt to understand the origin of the universe is the greatest challenge confronting the physical sciences. Armed with the new concepts, scientists are rising to meet that challenge, although they know that success may be far away. Yet when the origin of the universe is understood, it will open a new vision that is beautiful, wonderful and filled with the mystery of existence. It will be our intellectual gift to our progeny and our tribute to the scientific heroes who began this great adventure of the human mind, never to see it completed.

*Perfect Symmetry: The Search for the Beginning of Time*  
Part One, Chapter 7 (p. 156)  
Simon & Schuster. New York, New York, USA. 1985

**Palade, George E.** 1912–?

Russian-born American cell biologist

For a scientist, it is a unique experience to live through a period in which his field of endeavor comes to bloom — to be witness to those rare moments when the dawn of understanding finally descends upon what appeared to be confusion only a while ago — to listen to the sound of darkness crumbling.

*Les Prix Nobel. The Nobel Prizes in 1974*  
Nobel banquet speech for award received in 1974  
Nobel Foundation. Stockholm, Sweden. 1975

**Polanyi, Michael** 1891–1976

Hungarian-born English scientist, philosopher, and social scientist

We have a solid tangible object before us... But we do not know what it is. Then let a team of physicists and chemists inspect the object. Let them be equipped with all the physics and chemistry ever to be known, but let their technological outlook be that of the stone age. Or, if we cannot disregard the practical incompatibility of these two assumptions, let us agree that in their investigations they shall not refer to any operational principles. They will describe the clock precisely in every particular, and in addition, they will predict all its possible future configurations. Yet they will never be able to tell us that it is a clock. The complete knowledge of a machine as an object tells us nothing about it as a machine.

*Personal Knowledge*

Chapter 11, Section 2 (p. 330)

Harper & Row, Publishers. New York, New York, USA. 1962

**Popper, Karl R.** 1902–94

Austrian/British philosopher of science

Only a man who understands science (that is scientific problems) can understand its history... [O]nly a man who has some real understanding of its history (the history of its problem situations) can understand science.

*Objective Knowledge*

On the Theory of the Objective Mind

Oxford University Press, Inc. Oxford, England. 1972

Bohr...thought of understanding in terms of pictures and models — in terms of a kind of visualization. This was too narrow, I felt; and in time I developed an entirely different view. According to this view what matters is the understanding not of pictures but of the logical force of a theory: its explanatory power, its relation to the relevant problems and to other theories.

*Unended Quest: An Intellectual Autobiography*

Chapter 18 (p. 93)

Open Court Publishing Company. La Salle, Illinois, USA. 1976

...the activity of understanding is, essentially, the same as that of all problem solving.

*Objective Knowledge: An Evolutionary Approach*

Chapter 4 (p. 166)

Clarendon Press. Oxford, England. 1972

**Rabi, Isidor Isaac** 1898–1988

Austrian-born American physicist

Scientific understanding...is an essential step to our finding a home for ourselves in the universe. Through understanding the universe, we become at home in it. In a certain sense we have made this universe out of human concepts and human discoveries. It ceases to be a lonely place, because we can to some extent actually navigate in it.

In A.A. Warner, Dean Morse and T.E. Cooney (eds.)

*The Environment of Change*

The Revolution in Science (p. 49)

Columbia University Press. New York, New York, USA. 1969

**Ramsay, Sir William** 1852–1916

English chemist

I trust we have not wearied you in giving some account of our attempts to see the invisible, touch the intangible, and weigh the imponderable.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1912*

Measurements of Infinitesimal Quantities of Substances (p. 229)

Government Printing Office. Washington, D.C. 1913

**Recorde, Robert** 1510?–58

English mathematician and writer

I see in the heaven marvelous motions; and in the reste of the worlde straunge transmutations, and therefore desire muche to know what the worlde is, and what are the principall partes of it, and also how all these strange sightes doo come.

*The Castle of Knowledge*

The First Treatise (p. 3)

Imprinted by R. Wolfe. London, England. 1556

**Sagan, Carl** 1934–96

American astronomer and science writer

We go about our daily lives understanding almost nothing of the world. We give little thought to the machinery that generates the sunlight that makes life possible, to the gravity that glues us to an Earth that would otherwise send us spinning off into space, or to the atoms of which we are made and on whose stability we fundamentally depend. Except for children (who don't know enough not to ask the important questions), few of us spend much time wondering why nature is the way it is; where the cosmos came from, or whether it was always here; if time will one day flow backward and effects precede causes; or whether there are ultimate limits to what humans can know.

In Stephen W. Hawking

*A Brief History of Time: From the Big Bang to Black Holes*

Introduction (p. ix)

Bantam Books. Toronto, Ontario, Canada. 1988

If you know something only qualitatively, you know it no more than vaguely. If you know it quantitatively — grasping some numerical measure that distinguishes it from an infinite number of other possibilities — you are beginning to know it deeply.

*Billions & Billions: Thoughts on Life and Death at the Brink of the Millennium*

Chapter 2 (p. 21)

Random House, Inc. New York, New York, USA. 1997

**Stewart, Ian** 1945–

English mathematician and science writer

A person who insists on understanding every tiny step before going on to the next is liable to concentrate so much on looking at his feet that he fails to realize he is walking in the wrong direction.

*Concepts of Modern Mathematics*

Chapter 20 (p. 286)

Dover Publications, Inc. New York, New York, USA. 1995

**Swift, Jonathan** 1667–1745

Irish-born English writer

...where I am not understood, it shall be concluded, that something very useful and profound is couched underneath...

*Gulliver's Travels, the Tale of a Tub, Battle of the Books, Etc.*

Tale of a Tub, the Preface (p. 403)

Oxford University Press, Inc. London, England. 1929

**Teller, Edward** 1908–2003

Hungarian-born American nuclear physicist

What is called understanding is often no more than a state where one has become familiar with what one does not understand.

*Better a Shield than a Sword: Perspectives in Defense and Technology*

Chapter 30 (p. 218)

The Free Press. New York, New York, USA. 1987

**Walker, Kenneth** 1882–1966

Physician

It may be said that all understanding of the universe comes from the combined action of two faculties in us, the power to register impressions and the capacity to reason and reflect on them.

*Meaning and Purpose*

Chapter II (p. 18)

Jonathan Cape. London, England. 1944

**Welch, Lew** 1926–71?

American Beat poet

Step out onto the Planet. Draw a circle a hundred feet round. Inside the circle are 300 things nobody understands, and maybe nobody's ever really seen. How many can you find?

*Hermit Poems*

Step Out Onto the Planet

Four Seasons Foundation. San Francisco, California, USA. 1965

**Wittgenstein, Ludwig Josef Johann** 1889–1951

Austrian-born English philosopher

Telling someone something he does not understand is pointless, even if you add that he will not be able to understand it.

Translated by Peter Winch

*Culture and Value* (p. 7e)

The University of Chicago Press. Chicago, Illinois, USA. 1980

**Woodbridge, Frederick James Eugene** 1867–1940

American philosopher

We understand a thing when we have discovered what it can do in relation to other things. In different relations it acts differently, but in every case with a definiteness in accord with its property. Its operation in specific cases is a specific operation which nonetheless illustrates its proper action.

*Nature and Mind: Selected Essays of Frederick J.E. Woodbridge*

(p. 257)

Columbia University Press. New York, New York, USA. 1937

## UNEXPECTED

**Heraclitus** 540 BCE–480 BCE

Greek philosopher

If one does not expect the unexpected one will not find it out, since it is not to be searched out, and difficult to compass.

In G.S. Kirk and J.E. Raven

*The Pre-Socratic Philosophers: A Critical History with a Selection of Texts*

Fragment 213 (p. 195)

At the University Press. Cambridge, England. 1963

**Raymo, Chet** 1936–

American physicist and science writer

Delight in the unexpected is part of the lifeblood of science. Almost alone among belief systems, science welcomes the disturbingly new.

*The Virgin and the Mousetrap: Essays in Search of the Soul of Science*

Chapter 15 (p. 138)

The Viking Press. New York, New York, USA. 1991

**Selye, Hans** 1907–82

Austrian endocrinologist

...“peripheral vision”: the ability not only to look straight at what you want to see, but also to watch continually, through the corner of your eye, for the unexpected. I believe this to be one of the greatest gifts a scientist can have. Usually we concentrate so much upon what we intend to examine that other things cannot reach our consciousness, even if they are far more important. This is particularly true of things so different from the commonplace that they seem improbable. Yet, only the improbable is really worthy of attention! If the unexpected is nevertheless found to be true, the observation usually represents a great step forward.

*From Dream to Discovery: On Being a Scientist*

McGraw-Hill Book Company, Inc. New York, New York, USA. 1950

## UNIFIED FIELD THEORY

**Davies, Paul Charles William** 1946–

British-born physicist, writer, and broadcaster

Ranged against GUTs, however, is the fact that there is no unique theory, and the unification scale is so remote there

is no prospect whatever that it will become accessible to direct experimentation. How, then, are we to discriminate between rival theories? If the GUTs describe a world so small and so energetic that we can never observe it, has not physics degenerated to pure philosophy? Are we not in the same position as Democritus and the other Greek philosophers who mused endlessly about the shapes and properties of atoms without any hope of ever observing them?

*Superforce: The Search for a Grand Unified Theory of Nature*  
Chapter 8 (p. 135)  
Simon & Schuster. New York, New York, USA. 1984

**Hawking, Stephen William** 1942–  
English theoretical physicist

The discovery of a complete unified theory, therefore, may not aid the survival of our species. It may not even affect our life-style. But ever since the dawn of civilization, people have not been content to see events as unconnected and inexplicable. They have craved an understanding of the underlying order in the world. Today we still yearn to know why we are here and where we came from. Humanity's deepest desire for knowledge is justification enough for our continuing quest. And our goal is nothing less than a complete description of the universe we live in.

*A Brief History of Time: From The Big Bang to Black Holes*  
Chapter 2 (p. 13)  
Bantam Books. Toronto, Ontario, Canada. 1988

**Kaku, Michio** 1947–  
Japanese-American theoretical physicist

**Thompson, Jennifer**  
American author

To a physicist, finally discovering the unified field theory is like being a child left in the middle of a toy store. Far from the end, it is only a beginning.

*Beyond Einstein : The Cosmic Quest for the Theory of the Universe*  
Chapter 11 (p. 204)  
Bantam Books. Toronto, Ontario, Canada. 1987

## UNIFORMITARIANISM

**Gould, Stephen Jay** 1941–2002  
American paleontologist and evolutionary biologist

Is uniformitarianism necessary?  
Is Uniformitarianism Necessary?  
*Journal of Science*, Volume 263, 1965 (p. 223)

**Lapworth, Charles** 1842–1920  
English geologist

Uniformity and Evolution are one.  
*Report of the British Association for the Advancement of Science*  
(1892)  
Presidential Address to the Geology Section (p. 707)

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

...what is surprising in physics is not the existence of general laws, but their extreme simplicity. It is not the uniformity of nature that should surprise us, for, by sufficient analytic ingenuity any conceivable course of nature might be shown to exhibit uniformity. What should surprise us is the fact that the uniformity is simple enough for us to be able to discover it. But it is just this characteristic of simplicity which it would be fallacious to generalize, for it is obvious that simplicity has been a part of cause of their discovery, and can, therefore, give not ground for the supposition that other undiscovered laws are equally simple.

*Scientific Method in Philosophy*  
Section I (p. 8)  
At The Clarendon Press. Oxford, England. 1914

## UNIQUENESS

**Doyle, Sir Arthur Conan** 1859–1930  
Scottish writer

As a rule, when I have heard some slight indication of the course of events, I am able to guide myself by the thousands of other similar cases which occur to my memory. In the present instance I am forced to admit that the facts are, to the best of my belief, unique.

In William S. Baring-Gould (ed.)  
*The Annotated Sherlock Holmes* (Volume 1)  
The Red-Headed League (p. 419)  
Wings Books. New York, New York, USA. 1967

**Simon, Herbert Alexander** 1916–2001  
American social scientist

The definition of man's uniqueness has always formed the kernel of his cosmological and ethical systems. With Copernicus and Galileo, he ceased to be the species located at the centre of the universe, attended by sun and stars. With Darwin, he ceased to be the species created and specially endowed by God with soul and reason. With Freud he ceased to be the species whose behavior was — potentially — governable by rational mind. As we begin to produce mechanisms that think and learn, he has ceased to be the species uniquely capable of complex, intelligent manipulation of his environment.

What Computers Mean for Man and Society  
*Science*, Volume 195, Number 4283, March 18, 1977 (p. 190)

## UNITS

**Lodge, Sir Oliver** 1851–1940  
English physicist

Changing the units does not affect the velocity of light. Whether you say light travels at 186,000 miles a second

or whether you say it is so many inches an hour makes no difference to the velocity. An algebraic symbol ought to represent the thing itself, not a mere number of units. Altering the numerical specifications — which is what you do by altering units — means no difference to the thing itself.

Royal Astronomical Society

*Monthly Notices*, Volume 80, 1919 (p. 107)

## UNIVERSE

**Adams, Douglas** 1952–2001

English author, comic radio dramatist, and musician

For a long period of time there was much speculation and controversy about where the so-called “missing matter” of the Universe had got to. All over the Galaxy the science departments of all the major universities were acquiring more and elaborate equipment to probe and search the hearts of distant galaxies, and then the very center and the very edges of the whole Universe, but when eventually it was tracked down it turned out in fact to be all the stuff which the equipment had been packed in.

*The Ultimate Hitchhiker's Guide to the Galaxy*

Mostly Harmless

Chapter 17 (p. 756)

Ballantine Books. New York, New York, USA. 2002

The Universe, as has been observed before, is an unsettlingly big place, a fact which for the sake of a quiet life most people tend to ignore.

*The Ultimate Hitchhiker's Guide to the Galaxy*

The Restaurant at the End of the Universe

Chapter 10 (p. 194)

Ballantine Books. New York, New York, USA. 2002

If the Universe came to an end every time there was some uncertainty about what happened in it, it would never have got beyond the first picosecond. And many of course don't. It's like the human body, you see. A few cuts and bruises here and there don't hurt it. Not even major surgery if it's done properly. Paradoxes are just the scar tissue. Time and space heal themselves up around them and people remember a version of events which makes as much sense as they require it to make.

*Dirk Gently's Holistic Detective Agency*

Chapter 32 (p. 283)

Simon & Schuster. New York, New York, USA. 1988

**Alfven, Hannes** 1908–95

Swedish physicist

I have never thought that you can get the extremely clumpy, heterogeneous universe we have today from a smooth and homogenous one dominated by gravitation.

In Eric J. Lerner

*The Big Bang Never Happened*

Chapter 1 (p. 42)

Random House, Inc. New York, New York, USA. 1991

**Amaldi, Ginestra Giovane**

Italian physicist

Our imagination has roamed far and wide through distant reaches of the Universe. Understandably, we may have become dazed by the immense dimensions of space and the enormous sizes of some of its occupants.

*Our World and the Universe Around Us* (Volume 1)

First Steps into Space (p. 124)

Abradale Press. New York, New York, USA. 1966

**Apfel, Necia H.** 1930–

**Hynek, J. Allen** 1910–?

No biographical data available

It is hard for us today to assimilate all the new ideas that are being suggested in response to the new information we have. We must remember that our picture of the universe is based not only on our scientific knowledge but also on our culture and our philosophy. What new discoveries lie ahead no one can say. There may well be civilizations in other parts of our galaxy or in other galaxies that have already accomplished much of what lies ahead for mankind. Others may just be beginning. The universe clearly presents an unending challenge.

*Architecture of the Universe*

Chapter 21 (p. 453)

The Benjamin/Cummings Publishing Company, Inc. Menlo Park, California, USA. 1979

**Atkins, Peter William** 1940–

English physical chemist and writer

My aim is to argue that the universe can come into existence without intervention, and that there is no need to invoke the idea of a Supreme Being in one of its numerous manifestations.

*The Creation*

Preface

W.H. Freeman. San Francisco, California, USA. 1981

**Aurelius Antoninus, Marcus** 121–180

Roman emperor

Either it is a well-arranged universe or a chaos huddled together, but still a universe. But can a certain order subsist in thee, and disorder in the All?

In *Great Books of the Western World* (Volume 12)

*The Meditations of Marcus Aurelius*

Book IV, #27 (p. 266)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Bacon, Leonard** 1887–1954

American poet and critic

Eddington's universe goes phut.

Richard Tolman's can open and shut.

Eddington's bursts without grace or tact,

But Tolman's swells and perhaps may contract.

*Rhyme and Punishment*

Richard Tolman's Universe  
Farrar & Rinehart, Inc. New York, New York, USA. 1936

**Bacon, Sir Francis** 1561–1626  
English lawyer, statesman, and essayist

For the fabric of this universe is like a labyrinth to the contemplative mind, where doubtful paths, deceitful imitations of things and their signs, winding and intricate folds and knots of nature everywhere present themselves, and a way must constantly be made through the forests of experience and particular natures, with the aid of the uncertain light of the senses, shining and disappearing by fits.

In Basil Montague  
*The Works of Francis Bacon* (Volume 3)  
The Great Instauration, Preface (p. 336)  
Parry & McMillan. Philadelphia, Pennsylvania, USA. 1859

**Bagehot, Walter** 1826–77  
English journalist

We are startled to find a universe we did not expect.  
*Literary Studies* (Volume 2) (p. 403)  
J.M. Dent & Sons Limited. London, England. 1951

Taken as a whole, the universe is absurd. There seems an unalterable contradiction between the human mind and its employments.

*Literary Studies* (Volume 1) (p. 36)  
J.M. Dent & Sons Limited. London, England. 1951

**Barbellion, Wilhelm Nero Pilate** 1889–1919  
English author

This great bully of a universe overwhelms me. The stars make me cower. I am intimidated by the immensity surrounding my own littleness.

*The Journal of a Disappointed Man*  
March 2, 1917 (p. 283)  
George H. Doran Company. New York, New York, USA. 1919

**Barth, John** 1930–  
American writer

All the scientists hope to do is describe the universe mathematically, predict it, and maybe control it. The philosopher, by contrast, seems unbecomingly ambitious: He wants to understand the universe; to get behind phenomena and operation and solve the logically prior riddles of being, knowledge, and value. But the artist, and in particular the novelist, in his essence wishes neither to explain nor to control nor to understand the universe. He wants to make one of his own, and may even aspire to make it more orderly, meaningful, beautiful, and interesting than the one God turned out. What's more, in the opinion of many readers of literature, he sometimes succeeds.

*The Friday Book: Essays and Other Nonfiction*  
How to Make a Universe (p. 17)  
G.P. Putnam's Sons. New York, New York, USA. 1984

**Bergson, Henri** 1859–1941  
French philosopher

The universe is not made, but is being made continually. It is growing, perhaps indefinitely....

Translated by Arthur Mitchell  
*Creative Evolution*  
Chapter III (p. 255)  
The Modern Library. New York, New York, USA. 1944

**Bloch, Arthur** 1948–  
American humorist

The universe is simmering down, like a giant stew left to cook for four billion years. Sooner or later we won't be able to tell the carrots from the onions.

In John D. Barrow  
*The World Within the World* (p. 221)  
Clarendon Press. Oxford, England. 1988

**Blount, Sir Thomas Pope** 1649–97  
English author

Whoever surveys the curious fabric of the universe can never imagine, that so noble a structure should be fram'd for no other use, than barely for mankind to live and breathe in. It was certainly the design of the great Architect, that his creatures should afford not only necessities and accommodations to our animal part, but also instructions to our intellectual.

*A Natural History*  
Preface  
Printed for R. Bentley. London, England. 1693

**Born, Max** 1882–1970  
German-born English physicist

We have sought for firm ground and found none. The deeper we penetrate, the more restless becomes the universe; all is rushing about and vibrating in a wild dance.

*The Restless Universe*  
Chapter V (p. 277)  
Dover Publications, Inc. New York, New York, USA. 1951

**Bove, Ben**  
No biographical data available

The universe lies before us. What we know about it today is merely the steppingstone to a greater, deeper understanding.

*The Milky Way Galaxy*  
Chapter 10 (p. 201)  
Holt, Rinehart & Winston. New York, New York, USA. 1961

**Bradley, Jr., John Hodgdon** 1898–1962  
American geologist

...man is the only animal who can face with a thought, a dream, and a smile the mystery and the madness and the terrible beauty of the universe.

*Autobiography of Earth*

Chapter XII, Section III (p. 347)

Coward-McCann, Inc. New York, New York, USA. 1935

### **Browne, J. Stark**

No biographical data available

And we, listening to this wonderful music of the spheres, are filled with emotions of the deepest humility and awe, but at the same time with a great pride in the achievements of the mind of man in wrestling from the dark universe about us some of its long-hidden secrets.

*The Rationalist Annual*

The Number and Distances of the Stars, 1931 (p. 66)

### **Bruno, Giordano** 1548–1600

Italian philosopher and pantheist

The center of the universe is everywhere, and the circumference nowhere.

In Joseph Silk

*The Big Bang* (p. 84)

W.H. Freeman & Company. San Francisco, California, USA. 1980

The universe is then one, infinite, immobile.... It is not capable of comprehension and therefore is endless and limitless, and to that extent infinite and indeterminable, and consequently immobile.

Translated by Jack Lindsay

*Cause, Principle, and Unity*

Fifth Dialogue (p. 135)

International Publishers. New York, New York, USA. 1962

### **Burritt, Elijah H.** 1794–1838

American astronomer

Beyond these are other suns, giving light and life to other systems, not a thousand, or two thousand merely, but multiplied without end, and ranged all around us, at immense distances from each other, attended by ten thousand times ten thousand worlds, all in rapid motion; yet calm, regular and harmonious — all space seems to be illuminated, and every particle of light a world.... And yet all this vast assemblages of suns and worlds may bear no greater proportion to what lies beyond the utmost boundaries of human vision, than a drop of water to the ocean.

*The Geography of the Heavens*

Chapter XVI (p. 153)

Huntington & Savage, Mason & Law. New York, New York, USA. 1850

### **Burroughs, William S.** 1914–97

American writer

This is a war universe. War all the time. That is its nature. There may be other universes based on all sorts of other principles, but ours seems to be based on war and games.

The War Universe

*Grand Street 37*, Volume Ten, Number 1, 1991 (p. 95)

### **Bush, Vannevar** 1890–1974

American electrical engineer and physicist

In no other discipline...do men confront mystery and challenge of the order of that which looms down on the astronomers in the long watches of the night. The astronomer knows at first hand...how slight is our earth, how slight and fleeting are mankind.... But more than that, he senses...the majesty which resides in the mind of man because that mind seeks in all its slightness to see, to learn, to understand at least some part of the mysterious majesty of the universe.

In James Mullaney

Some Noted Dreamers Tell of the Skies' Spell

*Science Digest*, June 1978 (p. 41)

### **Calder, Alexander** 1898–1976

American kinetic sculptor

The universe is real but you can't see it. You have to imagine it.

In Katharine Kuh

*The Artist's Voice: Talks with Seventeen Artists*

Josef Albers (p. 14)

Da Capo Press Edition. Cambridge, Massachusetts, USA. 2000

### **Camus, Albert** 1913–60

French novelist, essayist, and playwright

...I laid my heart open to the benign indifference of the universe.

*The Outsider*

Part II, Chapter V (p. 127)

H. Hamilton. London, England. 1946

### **Card, Orson Scott** 1951–

Science fiction writer

Give the universe a push, and you don't know which dominoes will fall. There are always a few you never thought were connected.

*Ender's Shadow*

Chapter 22 (p. 342)

TOR. New York, New York, USA. 1999

### **Carlyle, Thomas** 1795–1881

English historian and essayist

Margaret Fuller: I accept the Universe.

Thomas Carlyle: Gad! she'd better!

In D.A. Wilson

*Carlyle on Cromwell and Others*

Looking Round, Margaret Fuller Has to Listen (pp. 349–350)

Kegan Paul, Trench, Trubner & Company Ltd. London, England. 1925

I don't pretend to understand the Universe — it's a great deal bigger than I am.

In D.A. Wilson and D.W. MacArthur

*Carlyle in Old Age (1865–1881)* (p. 177)

Kegan Paul, Trench, Trubner & Company Ltd. London, England. 1934

### **Chekhov, Anton Pavlovich** 1860–1904

Russian author and playwright

But perhaps the universe is suspended on the tooth of some monster.

*Note-Book of Anton Chekhov* (p. 20)

B.W. Huebsch, Inc. New York, New York, USA. 1921

**Clarke, Arthur C.** 1917–

English science and science fiction writer

There is no reason to assume that the universe has the slightest interest in intelligence — or even in life. Both may be random accidental by-products of its operations like the beautiful patterns on a butterfly's wings. The insect would fly just as well without them....

*The Lost Worlds of 2001*

Chapter 16 (p. 109)

New American Library. New York, New York, USA. 1972

Every thoughtful man has often asked himself: Is our race the only intelligence in the universe, or are there other, perhaps far higher, forms of life elsewhere? There can be few questions more important than this, for upon its outcome may depend all philosophy — yes, and all religion, too.

Lecture

St Martin's Technical School on Charing Cross Road, October 5, 1946

The universe: a device contrived for the perpetual astonishment of astronomers.

In Clifford A. Pickover

*Keys to Infinity*

Chapter 5 (p. 41)

John Wiley & Sons, Inc. New York, New York, USA. 1995

Many and strange are the universes that drift like bubbles in the foam of the river of time.

*The Collected Stories of Arthur C. Clarke*

The Wall of Darkness (p. 104)

Tom Doherty Associates. New York, New York, USA. 2001

...the universe has no purpose and no plan...

*The Collected Stories of Arthur C. Clarke*

The Star (p. 521)

Tom Doherty Associates. New York, New York, USA. 2001

...the universes...drift like bubbles in the foam upon the River of Time.

The Wall of Darkness

*Super Science Stories*, July 1949

**Coleridge, Samuel Taylor** 1772–1834

English lyrical poet, critic, and philosopher

It surely is not impossible that to some infinitely superior being the whole universe may be as one plain, the distance between planet and planet being only as the pores in a grain of sand, and the spaces between system and system no greater than the intervals between one grain and the grain adjacent.

*The Table Talk and Omniana of Samuel Taylor Coleridge*

Omniana

The Universe (p. 415)

George Bell & Sons. London, England. 1884

**Conger, George Perrigo** 1884–1960

American philosopher

The universe as revealed in modern days and ways is so overwhelming that mind needs some other title than that of self-appointed legislator for it. Mind must register before it can regulate.

*A World of Epitomizations: A Study in the Philosophy of the Sciences*

Introduction to Division Two (pp. 345–346)

Princeton University Press. Princeton, New Jersey, USA. 1931

**Cook, Peter** 1937–95

English comedian

I am very interested in the Universe — I am specializing in the Universe and all that surrounds it.

*Beyond the Fringe*

Disc 2, Sitting on the Bench

EMI International. 1996

**Copernicus, Nicolaus** 1473–1543

Polish astronomer

But they say that beyond the heavens there isn't any body or place or void or anything at all; and accordingly it is not possible for the heavens to move outward: in that case it is rather surprising that something can be held together by nothing. But if the heavens were infinite and were finite only with respect to a hollow space inside, then it will be said with more truth that there is nothing of heaven, since anything which occupied any space would be in them, but the heavens will remain immobile. For movement is the most powerful reason wherewith they try to conclude that the universe is finite.

In *Great Books of the Western World* (Volume 16)

*On the Revolutions of the Heavenly Spheres*

Book One, Chapter 8 (p. 519)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Crane, Stephen** 1871–1900

American writer

A man said to the universe:

“Sir I exist!”

“However,” replied the universe,

“The fact has not created in me

A sense of obligation.”

*The Collected Poems of Stephen Crane*

War Is Kind (p. 101)

Alfred A. Knopf. New York, New York, USA. 1965

**Croswell, Ken**

American astronomer and author

Is it mere coincidence that the universe happens to possess just those properties which allow part of it to be alive? Some people say yes; it was simply good luck that the universe was born with the particular characteristics that it has. Others say no; our universe is only one of many universes.... Still others, of a more spiritual persuasion,

see the universe's remarkable offspring as a sign that an intelligent creator wrote a tremendous symphony whose melodies the stars, galaxies, and planets now play with beauty and precision.... Whatever the case, and vast and complex though the universe is, its most astonishing features are two of the simplest: it exists, and so do we.

*Planet Quest: The Epic Discovery of Alien Solar Systems*

Chapter 12 (p. 247)

Oxford University Press, Inc. Oxford, England. 1997

### **Crowley, Aleister** 1875–1947

British occultist and writer

It sometimes strikes me that the whole of science is a piece of impudence; that nature can afford to ignore our impertinent interference. If our monkey mischief should ever reach the point of blowing up the earth by decomposing an atom, and even annihilated the sun himself, I cannot really suppose that the universe would turn a hair.

*The Confessions of Aleister Crowley: An Autohagiography*

Part One, Chapter 14 (p. 128)

Arkana. London, England. 1989

I have never grown out of the infantile belief that the universe was made for me to suck.

*The Confessions of Aleister Crowley: An Autobiography*

Part Three, Chapter 54 (p. 460)

Arkana. London, England. 1989

### **D'Alembert, Jean Le Rond** 1717–83

French mathematician

To some one who could grasp the universe from a unified standpoint, the entire creation would appear as a unique truth and necessity.

In Charles W. Misner et al.

*Gravitation*

Part X, Chapter 44 (p. 1218)

W.H. Freeman & Company. San Francisco, California, USA. 1973

### **Darling, David** 1953–

British astronomer and science writer

In giving birth to us, the universe has performed its most astonishing creative act. Out of a hot, dense melee of subatomic particles...it has fashioned intelligence and consciousness.... Somehow the anarchy of genesis has given way to exquisite, intricate order, so that now there are portions of the universe that can reflect upon themselves....

*Equations of Eternity: Speculations on Consciousness, Meaning, and the Mathematical Rules that Orchestrate the Cosmos*

Introduction (p. xiii)

Hyperion. New York, New York, USA. 1993

### **Davies, Paul Charles William** 1946–

British-born physicist, writer, and broadcaster

Mathematics and beauty are the foundation stones of the universe. No one who has studied the forces of nature

can doubt that the world about us is a manifestation of something very, very clever indeed.

*The Forces of Nature* (2<sup>nd</sup> edition)

Conclusion (p. 167)

Cambridge University Press. Cambridge, England. 1983

If there is a purpose to the universe, and it achieves that purpose, then the universe must end, for its continued existence would be gratuitous and pointless. Conversely, if the universe endures forever, it is hard to imagine that there is any ultimate purpose to the universe at all.

*The Last Three Minutes: Conjectures About the Ultimate Fate of the Universe*

Chapter 11 (p. 155)

Basic Books, Inc. New York, New York, USA. 1994

### **Dawkins, Richard** 1941–

British ethologist, evolutionary biologist, and popular science writer

I believe that an orderly universe, one indifferent to human preoccupations, in which everything has an explanation even if we still have a long way to go before we find it, is a more beautiful, more wonderful place than a universe tricked out with capricious, ad hoc magic.

*Unweaving the Rainbow: Science, Delusion and The Appetite for Wonder*

Preface (p. xi)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1998

### **Day, Clarence** 1874–1935

American writer

Is it possible that our race may be an accident, in a meaningless universe, living its brief life uncared for, on this dark, cooling star: but so — and all the more — what marvelous creatures we are! What fairy story, what tale from the Arabian Nights of the Jinns, is a hundredth part as wonderful as this story of simians! It is so much more heartening, too, than the tales we invent. A universe capable of giving birth to so many accidents is — blind or not — a good world to live in, a promising universe.

*This Simian World*

Chapter XIX (p. 91)

Alfred A. Knopf. New York, New York, USA. 1941

### **de Fontenelle, Bernard le Bovier** 1657–1757

French author

How vast then! And beyond all reckoning, and beyond all mensuration must the spaces of the universe be!

*Conversations on the Plurality of Worlds*

The Fifth Evening (p. 151, fn)

Printed for Peter Wilson. Dublin, Ireland. 1761

...I see the universe so large...that I know not where I am, or what will become of me.

*Conversations on the Plurality of Worlds*

The Fifth Evening (p. 151)

Printed for Peter Wilson. Dublin, Ireland. 1761

...the universe is but a watch on a larger scale; all its motions depending on determined laws and mutual relation of its parts.

*Conversations on the Plurality of Worlds*

The First Evening (p. 10)

Printed for Peter Wilson. Dublin, Ireland. 1761

...when the heavens appeared to me as a little blue vault, stuck with stars, methought the universe was too straight and close, I was almost stifled for want of air; but now, it is enlarged in height and breadth, and a thousand and a thousand vortexes taken in, I begin to breathe with more freedom, and think the universe to be incomparably more magnificent than it was before.

*Conversations on the Plurality of Worlds*

The Fifth Evening (pp. 151–152)

Printed for Peter Wilson. Dublin, Ireland. 1761

**de Sitter, Willem** 1872–1934

Dutch mathematician, physicist and astronomer

Our conception of the structure of the Universe bears all the marks of a transitory structure. Our theories are decidedly in a state of continuous and just now very rapid evolution.

In J.H.F. Umbgrove

*The Pulse of the Earth*

Chapter I (p. 1)

Martinus Nijhoff. The Hague, Netherlands. 1947

XI (p. 127)

University of California Press. Berkeley, California, USA. 1978

**DeLillo, Don** 1936–

American novelist

It's the size of things that worries people. No reason for the universe to be so large.

*Ratner's Star*

Vintage Contemporaries. Toronto, Ontario, Canada. 1976

**Deutsch, Karl W.** 1912–92

Czech-born American international political scientist

Any universe uneven enough to sustain the life of a flat-worm should perhaps be uneven enough to be eventually known by man.

Mechanism, Organism, and Society: Some Models in Natural and Social Science

*Philosophy of Science*, Volume 18, Number 3, July 1951 (p. 231)

**Dillard, Annie** 1945–

American poet, essayist, novelist, and writing teacher

The universe was not made in jest but in solemn incomprehensible earnest.

*Pilgrim at Tinker Creek*

Chapter 15 (p. 270)

Harper's Magazine Press. New York, New York, USA. 1974

**du Prel, Karl** 1839–99

German hypnosis researcher

The universe as a totality is without cause, without origin, without end.

In Ludwig Buchner

*Force and Matter* (p. 11)

Truth Seeker. New York, New York, USA. 1950

**Dyson, Freeman J.** 1923–

American physicist and educator

The hypothesis is that the universe is constructed according to a principle of maximum diversity. The principle of maximum diversity operates both at the physical and at the mental level. It says that the laws of nature and the initial conditions are such as to make the universe as interesting as possible. As a result, life is possible but not too easy. Always when things are dull, something new turns up to challenge us and to stop us from settling into a rut. Examples of things which make life difficult are all around us: comet impacts, ice ages, weapons, plagues, nuclear fission, computers, sex, sin and death. Not all challenges can be overcome, and so we have tragedy. Maximum diversity often leads to maximum stress. In the end we survive, but only by the skin of our teeth.

*Infinite in All Directions*

Part Two, Chapter Seventeen (p. 298)

Harper Collins Publisher, Inc. New York, New York, USA. 1988

As a working hypothesis to explain the riddle of our existence, I propose that our universe is the most interesting of all possible universes, and our fate as human beings is to make it so.

*Infinite in All Directions*

Preface (p. vii)

Harper Collins Publisher, Inc. New York, New York, USA. 1988

As we look out into the Universe and identify the many accidents of physics and astronomy that have worked together to our benefit, it almost seems as if the Universe must in some sense have known that we were coming.

In John D. Barrow and Frank J. Tipler

*The Anthropic Cosmological Principle*  
Chapter 5.5 (p. 318)  
Clarendon Press. Oxford, England. 1986

I have found a universe growing without limit in richness and complexity, a universe of life surviving forever and making itself known to its neighbors across unimaginable gulfs of space and time. Whether the details of my calculations turn out to be correct or not, there are good scientific reasons for taking seriously the possibility that life and intelligence can succeed in molding this universe of ours to their own purposes.

*Infinite in All Directions*  
Part One, Chapter Six (p. 117)  
Harper Collins Publisher, Inc. New York, New York, USA. 1988

I do not feel like an alien in this universe. The more I examine the universe and study the details of its architecture, the more evidence I find that the universe in some sense must have known that we were coming.

*Disturbing the Universe*  
Chapter 23 (p. 250)  
Basic Books, Inc. New York, New York, USA. 1979

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

The unanimity with which the galaxies are running away looks almost as though they had a pointed aversion to us. We wonder why we should be shunned as though our system were a plague spot in the universe.

*The Expanding Universe*  
Chapter I, Section III (p. 12)  
The University Press. Cambridge. 1933

Meanwhile the knowledge that has been attained shows only the more plainly how much there is to learn. The perplexities of today foreshadow the discoveries of the future. If we have still to leave the stellar universe a region of hidden mystery, yet it seems as though, in our exploration, we have been able to glimpse the outline of some vast combination which unites even the farthest stars into an organised system.

*Stellar Movements and the Structure of the Universe*  
Chapter XII (p. 261)  
Macmillan & Company Ltd. London, England. 1914

I would feel more content that the universe should accomplish some great scheme of evolution and, having achieved whatever may be achieved, lapse back into chaotic changelessness, than its purpose should be banalised by continual repetition. I am an Evolutionist, not a Multiplicationist. It seems rather stupid to keep doing the same thing over and over again.

*The Nature of the Physical World*  
Chapter IV (p. 86)  
The Macmillan Company. New York, New York, USA. 1930

## Editorial

It is obvious that we must regard the universe as extending infinitely, forever, in every direction; or that we must regard it as not so extending. Both possibilities go beyond us.

### Engard, Charles J.

American botanist

We accept the universe as far as we know it, but we do not attempt to explain why it exists. It is difficult enough to understand how!

In Johann Wolfgang von Goethe, Bertha Mueller, and Charles J. Engard

*Goethe's Botanical Writings*

Introduction (p. 14)

University of Hawaii Press. Honolulu, Hawaii, USA. 1952

### Estling, Ralph

No biographical data available

There is no question about there being design in the Universe. The question is whether this design is imposed from the Outside or whether it is inherent in the physical laws governing the Universe. The next question is, of course, who or what made these physical laws.

*The Skeptical Inquirer*, Spring 1993

I do not know what, if anything, the Universe has in its mind, but I am quite, quite sure that, whatever it has in its mind, it is not at all like what we have in ours. And, considering what most of us have in ours, it is just as well.

*The Skeptical Inquirer*, Spring 1993

### Euler, Leonhard 1707–83

Swiss mathematician and physicist

For since the fabric of the universe is most perfect and the work of a most wise Creator, nothing at all takes place in the universe in which some rule of maximum or minimum does not appear.

In Morris Kline

*Mathematical Thought from Ancient to Modern Times* (p. 573)

Oxford University Press, Inc. New York, New York, USA. 1972

### Ferris, Timothy 1944–

American science writer

There could be more life out there than we've ever imagined — for if the universe has taught us anything, it is that reality is richer and more resourceful than our wildest dreams.

*Life Beyond Earth*

The Ice Zone (p. 116)

Simon & Schuster. New York, New York, USA. 2000

We live in a changing universe, and few things are changing faster than our conception of it.

*The Whole Shebang: A State-of-the Universe's Report*

Preface (p. 11)

Simon & Schuster. New York, New York, USA. 1996

### Feynman, Richard P. 1918–88

American theoretical physicist

This universe has been described by many, but it just goes on, with its edge as unknown as the bottom of the bottomless sea of the other ideas — just as mysterious, just as awe-inspiring, and just as incomplete as the poetic pictures that came before.

*The Meaning of It All: Thoughts of a Citizen Scientist*

Chapter I (p. 10)

Perseus Books. Reading, Massachusetts, USA. 1998

Is no one inspired by our present picture of the universe? The value of science remains unsung by singers: you are reduced to sharing not a song or poem, but an evening lecture about it. This is not yet a scientific age.

*What Do You Care What Other People Think?*

The Value of Science (p. 244)

W.W. Norton & Company, Inc. New York, New York, USA. 1988

### Feynman, Richard P. 1918–88

American theoretical physicist

### Leighton, Robert B. 1919–97

American physicist

### Sands, Matthew L. 1919–

American physicist

A poet once said, "The whole universe is in a glass of wine." We will probably never know in what sense he meant that, for poets do not write to be understood... How vivid is the claret, pressing its existence into the consciousness that watches it! If our small minds, for some convenience, divide this glass of wine, this universe, into parts — physics, biology, geology, astronomy, psychology, and so on — remember that nature does not know it! So let us put it all back together, not forgetting ultimately what it is for. Let it give us one more final pleasure: drink it and forget it all!

*The Feynman Lectures on Physics* (Volume 1)

Chapter 3–7 (p. 3–10)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1983

### Field, Edward 1924–

American poet

Look, friend, at this universe  
With its spiral clusters of stars  
Flying out all over space

Like bedsprings suddenly bursting free;

*New and Selected Poems from the Book of My Life*

From Stand Up, Friend, with Me (1963) Prologue

### Flammarion, Camille 1842–1925

French astronomer and author

When the last human eyelid closes here below, and our globe — after having been for so long the abode of life with its passions, its labour, its pleasures and its pains, its loves and its hatred, its religious and political expectations and all its vain finalities — is enshrouded in the

winding-sheet of a profound night, when the extinct sun wakes no more; well, then — then, as to-day, the universe will be as complete, the stars will continue to shine in the sky, other suns will illuminate other worlds, other springs will bring round the bloom of flowers and the illusions of youth, other mornings and other evenings will follow in succession, and the universe will move on as at present; for creation is developed in infinity and eternity.

*Popular Astronomy: A General Description of the Heavens*  
Book II, Chapter VI (p. 164)  
Chatto & Windus. London, England. 1894

May we conclude, then, that in these successive endings the universe will one day become an immense and dark tomb. No: otherwise it would already have become so during a past eternity. There is in nature something else besides blind matter; an intellectual law of progress governs the whole creation; the forces which rule the universe cannot remain inactive. The stars will rise from their ashes. The collision of ancient wrecks causes new flames to burst forth, and the transformation of motion into heat creates nebulae and worlds. Universal death shall never reign.

*Popular Astronomy: A General Description of the Heavens*  
Book I, Chapter VII (p. 80)  
Chatto & Windus. London, England. 1894

**France, Anatole (Jean Jacques Brousson)** 1844–1924  
French writer

The universe which science reveals to us is a dispiriting monotony. All the suns are drops of fire and all the planets are drops of mud.

In Stanley L. Jacki

*Creator*

Chapter Two (p. 26)

Scottish Academic Press. Edinburgh, Scotland. 1980

If desire lends a grace to whatsoever be the object of it, then the desire of the unknown makes beautiful the Universe.

*My Friend's Book*

Chapter XI (p. 159)

Dodd, Mead & Company. New York, New York, USA. 1924

**Frayn, Michael** 1933–  
English dramatist

The complexity of the universe is beyond expression in any possible notation. Lift up your eyes. Not even what you see before you can ever be fully expressed. Close your eyes. Not even what you see now.

*Constructions*

No. 1

Wildwood House. London, England. 1974

**Fritzsich, Harald** 1943–  
German theoretical physicist

The universe is more than merely an accretion of electrons, quarks, and galaxies, more than space and time. The complex, interrelated world of the earth which created us is part of it. It is our duty not only to ourselves to preserve this world. The universe itself imposes this task on us.

*The Creation of Matter: The Universe from Beginning to End*

Chapter 17 (p. 282)

Basic Books, Inc. New York, New York, USA. 1984

**Frost, Robert** 1874–1963  
American poet

The Universe is but the Thing of Things  
The things but balls all going round in rings  
Some of them mighty huge, some mighty tiny  
All of them radiant and might shiny.

*Complete Poems of Robert Frost*

Accidentally on Purpose

Henry Holt & Company. New York, New York, USA. 1949

...all reasoning is in a circle. At least that's why the universe is round.

*Complete Poems of Robert Frost*

Build the Soil

Henry Holt & Company. New York, New York, USA. 1949

**Galilei, Galileo** 1564–1642  
Italian physicist and astronomer

No one will be able to read the great book of the Universe if he does not understand its language which is that of mathematics.

In A. Zee

*Fearful Symmetry*

Chapter 9 (p. 122)

Macmillan Publishing Company. New York, New York, USA. 1986

Philosophy is written in this grand book, the universe, which stands continually open to our gaze. But the book cannot be understood unless one first learns to comprehend the language and read the letters in which it is composed. It is written in the language of mathematics, and its characters are triangles, circles, and other geometric figures without which it is humanly impossible to understand a single word of it.

Translated by Stillman Drake

*Discoveries and Opinions of Galileo*

The Assayer (pp. 237–238)

Doubleday & Company, Inc. New York, New York, USA. 1957

I should think that anyone who considered it more reasonable for the whole universe to move in order to let the Earth remain fixed would be more irrational than one who should climb to the top of a cupola just to get a view of the city and its environs, and then demand that the whole countryside should revolve around him so that he would not have to take the trouble to turn his head.

*Dialogues Concerning the Two Chief World Systems*

**Giraudoux, Jean** 1882–1944  
French novelist, playwright, and essayist

COUNTESS: I know perfectly well that at this moment the whole universe is listening to us — and that every word we say echoes to the remotest star.

English adaptation by Maurice Valency  
*The Madwoman of Chaillot*  
Act Two (p. 94)  
Random House, Inc. New York, New York, USA. 1947

**Gleiser, Marcello** 1959–  
Brazilian-born physicist and astronomer

Our planet is not in a special place in the solar system, our Sun is not in a special place in our galaxy and our galaxy is not in a special place in the Universe.

*The Dancing Universe*  
Chapter 9 (p. 274)  
The Penguin Group. New York, New York, USA. 1997

**Guth, Alan** 1947–  
American physicist

The universe may be the ultimate free lunch.  
In P.C.W. Davies (ed.)  
*The New Physics*  
The Inflationary Universe (p. 54)  
Cambridge University Press. Cambridge, England. 1989

**Guth, Alan** 1947–  
American physicist

**Steinhardt, Paul**  
American physicist

The inflationary model of the universe provides a possible mechanism by which the observed universe could have evolved from an infinitesimal region. It is then tempting to go one step further and speculate that the entire universe evolved from literally nothing.

The Inflationary Universe  
*Scientific American*, Volume 250, Number 5, May 1984 (p. 128)

**Halacy, Jr., D. S.**  
No biographical data available

Our universe operates not at the whims of those who live in it, but by inexorable natural laws.

*They Gave Their Names to Science*  
Prologue (p. 9)  
G.P. Putnam's Sons. New York, New York, USA. 1967

**Haldane, John Burdon Sanderson** 1892–1964  
English biologist

...the universe is not only queerer than we suppose but it is queerer than we can suppose.

*Possible Worlds and Other Papers*  
Chapter XXXIV (p. 298)  
Harper & Brothers Publishers. New York, New York, USA. 1928

**Hale, George Ellery** 1868–1938  
American astronomer

It is a far cry from the facile imaginings of the philosopher to the rigorous demonstrations of exact science, and the true structure of the universe is not yet known.

*Beyond the Milky Way*  
Beyond the Milky Way (p. 100)  
Charles Scribner's Sons. New York, New York, USA. 1926

**Hardy, G. H. (Godfrey Harold)** 1877–1947  
English pure mathematician

“Imaginary” universes are so much more beautiful than this stupidly constructed “real” one; and most of the finest products of an applied mathematician's fancy must be rejected, as soon as they have been created, for the brutal but sufficient reason that they do not fit the facts.

*A Mathematician's Apology*  
Section 26 (p. 135)  
Cambridge University Press. Cambridge, England. 1967

**Harrison, Edward Robert**  
Cosmologist

What determines the design of a universe; is it the Universe, God, fortuity, or the human mind?

*Masks of the Universe*  
Chapter 1 (p. 5)  
Macmillan Publishing Company. New York, New York, USA. 1985

We cannot doubt the existence of an ultimate reality. It is the Universe forever masked. We are part of an aspect of it, and the masks figured by us are the Universe observing and understanding itself from a human point of view. When we doubt the Universe we doubt ourselves. The Universe thinks, therefore it is.

*Masks of the Universe*  
Chapter I (p. 14)  
Macmillan Publishing Company. New York, New York, USA. 1985

We do not know what sets limits to the Great Chain of hierarchical structures, nor do we know what unifies it. We are clueless as to why atoms exist and why the Universe is structured the way it is. Of course, if the Universe were structured in any other way, we would not be here asking these pertinent questions; or so we are told. But I am a heretic and inclined to think the other way: without us this Universe would not be here.

*A Twinkle in the Eye of the Universe*  
*Quarterly Journal of the Royal Astronomical Society*, Volume 25, Number 4, December 1984 (p. 428)

From the outset we must decide whether to use Universe or universe. This is not so trivial a matter as it might seem. We know of only one planet called Earth; similarly, we know of only one Universe. Surely then the proper word is Universe?

*Cosmology: The Science of the Universe*  
Chapter 1 (p. 10)  
Cambridge University Press. Cambridge, England. 1981

The universe consists only of atoms and the void: all else is opinion and illusion.

*Masks of the Universe*

Chapter 4 (p. 55)

Macmillan Publishing Company. New York, New York, USA. 1985

### **Haught, James A.**

No biographical data available

The universe is a vast, amazing, seething dynamo which has no discernable purpose except to keep on churning. From quarks to quasars, it's alive with incredible power. But it seems utterly indifferent to any moral laws. It destroys as blindly as it nurtures.

*2000 Years of Disbelief: Famous People with The Courage to Doubt*

Afterthought (p. 324)

Prometheus Books. Amherst, New York, USA. 1996

### **Hawking, Stephen William** 1942–

English theoretical physicist

There ought to be something very special about the boundary conditions of the universe and what can be more special than the condition that there is no boundary.

In John D. Barrow and Frank J. Tipler

*The Anthropic Cosmological Principle*

Chapter 6.15 (p. 444)

Clarendon Press. Oxford, England. 1986

We see the universe the way it is because we exist.

*A Brief History of Time: The Updated and Expanded Edition*

Chapter 8 (p. 128)

Bantam Books. Toronto, Ontario, Canada. 1988

Even if there is only one possible unified theory, it is just a set of rules and equations. What is it that breathes fire into the equations and makes a universe for them to describe? The usual approach of science of constructing a mathematical model cannot answer the questions of why there should be a universe for the model to describe. Why does the universe go to all the bother of existing?

*A Brief History of Time: From the Big Bang to Black Holes*

Chapter 11 (p. 174)

Bantam Books. Toronto, Ontario, Canada. 1988

I do not agree with the view that the universe is a mystery, something that one can have intuition about but never fully analyze or comprehend.

*Black Holes and Baby Universes and Other Essays*

Preface (p. viii)

Bantam Books. New York, New York, USA. 1993

I think the universe is completely self-contained. It doesn't have any beginning or end, it doesn't have any creation or destruction.

In Renée Weber

*Dialogues with Scientists and Sages: The Search for Unity* (p. 89)

Routledge & Kegan Paul. London, England. 1986

...we do not know what is happening at the moment farther away in the universe: the light that we see from distant galaxies left them millions of years ago and in the case of the most distant object that we have seen, the light left some eight thousand million years ago. Thus, when we look at the universe, we are seeing it as it was in the past.

*A Brief History of Time: From the Big Bang to Black Holes*

Chapter 2 (p. 28)

Bantam Books. Toronto, Ontario, Canada. 1988

### **Hawkins, Michael** 1942–

British astrophysicist

The stars and galaxies that fill our view as we survey the depths of the Universe are really just a froth delineating the massive, dark unseen structures beneath.

*Hunting Down the Universe: The Missing Mass, Primordial Black Holes, and Other Dark Matters*

Chapter 13 (p. 183)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1997

### **Hayflick, Leonard** 1928–

American microbiologist

Everything in the universe ages, including the universe.

In Nancy Shute

*U.S. News and World Report*, 18/25 August 1997 (p. 57)

### **Haynes, Margaret**

No biographical data available

The universe is just a bowl of spaghetti.

In Eric J. Lerner

*The Big Bang Never Happened*

Chapter 1 (p. 49)

Random House, Inc. New York, New York, USA. 1991

### **Heinlein, Robert A.** 1907–88

American science fiction writer

Tomorrow I will seven eagles see, a great comet will appear, and voices will speak from whirlwinds foretelling monstrous and fearful things — This Universe never did make sense; I suspect that it was built on government contract.

*The Number of the Beast*

Chapter II (p. 19)

Fawcett Columbine Books. New York, New York, USA. 1980

No storyteller has ever been able to dream up anything as fantastically unlikely as what really does happen in this mad universe.

*Time Enough for Love*

Prelude, Chapter II (p. 51)

G.P. Putnam's Sons. New York, New York, USA. 1973

A zygote is a gamete's way of producing more gametes. This may be the purpose of the universe.

*Time Enough for Love*

Intermission (p. 262)

G.P. Putnam's Sons. New York, New York, USA. 1973

**Henderson, Archibald** 1877–1933

American mathematician and writer

We are doomed to dwell within a finite universe a thousand million times greater than the region now accessible to astronomical observation. Our glances are confined for ever within this giant — this all too minute — monad.

The Size of the Universe

*Science*, Volume 58, Number 1497, 7 September, 1923 (p. 172)**Hinshelwood, Sir Cyril** 1897–1967

English chemist

To some men knowledge of the universe has been an end possessing in itself a value that is absolute: to others it has seemed a means of useful application.

*The Structure of Physical Chemistry*

Chapter I (p. 2)

Clarendon Press, Oxford, England, 1951

**Hogan, John**

No biographical data

...cosmologists — and the rest of us — may have to forego attempts at understanding the universe and simply marvel at its infinite complexity and strangeness.

Universal Truths

*Scientific American*, Volume 263, Number 4, October 1990 (p. 117)**Holmes, John Haynes** 1879–1964

American clergyman

The universe is not hostile, nor yet is it friendly. It is simply indifferent.

*A Sensible Man's View of Religion*

Is the Universe Friendly? (p. 39)

**Hoyle, Sir Fred** 1915–2001

English mathematician and astronomer

There is a coherent plan in the universe, though I don't know what it's a plan for.

*Wired*, 2/98 (p. 174)

Perhaps the most majestic feature of our whole existence is that while our intelligences are powerful enough to penetrate deeply into the evaluation of this quite incredible Universe, we still have not the smallest clue to our own fate.

*The Nature of the Universe*

Chapter 7 (p. 142)

The University Press, Cambridge, 1933

The Universe is everything; both living and inanimate things; both atoms and galaxies; and if the spiritual exists as well as the material, of spiritual things also; and if there is a Heaven and a Hell, of Heaven and Hell too; for by its very nature the Universe is the totality of all things.

*Frontiers of Astronomy*

Chapter Eighteen (p. 304)

Harper &amp; Row, Publishers, New York, New York, USA, 1955

...if there is one important result that comes out of our inquiry into the nature of the Universe it is this: when by patient inquiry we learn the answer to any problem, we always find, both as a whole and in detail, that the answer thus revealed is finer in concept and design than anything we could ever have arrived at by a random guess.

*The Nature of the Universe*

Chapter 7 (p. 140)

The University Press, Cambridge, 1933

**Hubble, Edwin Powell** 1889–1953

American astronomer

We find them smaller and fainter, in constantly increasing numbers, and we know that we are reaching out into space, further and ever further, until, with the faintest nebulae that can be detected with the greatest telescope, we arrive at the frontiers of the known universe.

In Joseph Silk

*The Big Bang* (p. 26)

W.H. Freeman &amp; Company, San Francisco, California, USA, 1980

...equipped with his five senses, man explores the universe around him and calls the adventure science.

*The Nature of Science and Other Lectures*

Part I, The Nature of Science (p. 6)

The Huntington Library, San Marino, California, USA, 1954

**Huygens, Christiaan** 1629–95

Dutch mathematician, astronomer, and physicist

What a wonderful and amazing Scheme have we here of the magnificent Vastness of the Universe! So many Suns, so many Earths...!

*The Celestial Worlds Discover'd; or, Conjectures Concerning the Planetary Worlds, Their Inhabitants and Productions*

Kosmotheoros (p. 222)

Printed for T. Childe, London, England, 1698

**Inge, William Ralph** 1860–1954

English religious leader and author

If the universe is running down like a clock, the clock must have been wound up at a date which we could name if we knew it. The world, if it is to have an end in time, must have had a beginning in time.

*God and the Astronomers*

Chapter 3 (p. 48)

W.W. Norton &amp; Company, Inc, New York, New York, USA, 1978

**Ionesco, Eugene** 1912–94

French playwright

...the universe seems to me infinitely strange and foreign. At such a moment I gaze upon it with a mixture of anguish and euphoria; separate from the universe, as though placed at a certain distance outside it; I look and I see pictures, creatures that move in a kind of timeless time and spaceless space, emitting sounds that are a kind of language I no longer understand or ever register.

*Notes and Counter Notes: Writing on the Theatre*  
Part II, Interviews, Brief Notes for Radio (p. 136)

**James, William** 1842–1910  
American philosopher and psychologist

Whatever universe a professor believes in must at any rate be a universe that lends itself to lengthy discourse. A universe definable in two sentences is something for which the professorial intellect has no use. No faith in anything of that cheap kind!

*Pragmatism: A New Name for Some Old Ways of Thinking*  
Lecture I (p. 4)  
Longmans, Green & Company. London, England. 1914

**Jastrow, Robert** 1925–  
American space scientist

Theologians generally are delighted with the proof that the Universe had a beginning, but astronomers are curiously upset. Their reactions provide an interesting demonstration of the response of the scientific mind — supposedly a very objective mind — when evidence uncovered by science itself leads to a conflict with the articles of faith in our profession. It turns out that the scientist behaves the way the rest of us do when our beliefs are in conflict with the evidence. We become irritated, we pretend the conflict does not exist, or we paper it over with meaningless phrases.

*God and the Astronomers*  
Epilogue (p. 117)  
W.W. Norton & Company, Inc. New York, New York, USA. 1978

Thus, the facts indicate that the Universe will expand forever. We still come across pieces of mass here and there in the Universe, and someday we may find the missing matter, but the consensus at the moment is that it will not be found. According to the available evidence, the end will come in darkness.

*God and the Astronomers*  
Epilogue (p. 123)  
W.W. Norton & Company, Inc. New York, New York, USA. 1978

**Jeans, Sir James Hopwood** 1877–1946  
English physicist and mathematician

The universe can not go on forever as it now is, and neither can it have existed in its present condition from all eternity.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1926*  
The New Outlook in Cosmogony (p. 155)  
Government Printing Office. Washington, D.C. 1928

The Universe can be best pictured, although still very imperfectly and inadequately, as consisting of pure thought, the thought of what, for want of a wider word, we must describe as a mathematical thinker.

*The Mysterious Universe*  
Chapter V (p. 136)  
The Macmillan Company. New York, New York, USA. 1932

The universe begins to look more like a great thought than a machine.

In Jefferson Hane Weaver  
*The World of Physics* (Volume 2)  
Q.3 (p. 632)  
Simon & Schuster. New York, New York, USA. 1987

The physical universe never has any choice — it must inevitably move along a single road to a predestined end. Contributions to a British Association Discussion on the Evolution of the Universe  
*Nature*, Supplement, October 24, 1931 (p. 701)

The universe consists in the main not of stars but of desolate emptiness — inconceivably vast stretches of desert space in which the presence of a star is a rare and exceptional event. ... The stars move blindly through space, and the players in the stellar blind-man's-buff are so few and far between that the chance of encountering another star is almost negligible.

*The Universe Around Us*  
Chapter I (pp. 84–85)  
The Macmillan Company. New York, New York, USA. 1929

**Jeffers, Robinson** 1887–1962  
American poet

The learned astronomer  
Analyzing the light of most remote star-swirls  
Has found them — or a trick of distance deludes his prism — All at incredible speeds fleeing outward from ours.

I thought, no doubt they are fleeing the contagion  
Of consciousness that infects this corner of space.  
In Tim Hunt (ed.)  
*The Collected Poetry of Robinson Jeffers* (Volume 2)  
Margrave (p. 161)  
Stanford University Press. Stanford, California. USA. 1988

The universe expands and contracts like a great heart.  
It is expanding, the farthest nebulae  
Rush with the speed of light into empty space.  
*The Beginning and the End and Other Poems*  
The Great Explosion (p. 3)  
Random House, Inc. New York, New York, USA. 1963

It seemed to Barclay the cloud broke and he saw the stars,  
Those of this swarm were many, but beyond them  
universe past universe  
Flared to infinity, no end conceivable. Alien, alien, alien universes.

In Tim Hunt (ed.)  
*The Collected Poetry of Robinson Jeffers* (Volume 1)  
The Women at Point Sur (p. 312)  
Stanford University Press. Stanford, California. USA. 1988

**Jennings, Herbert Spencer** 1868–1947  
American zoologist

...the universe is not “a mere clockwork mechanical wonder swinging in a vast vacuum,” but is a system that, in the course of time, comes to life.

*The Universe and Life*

Chapter II (p. 33)

Yale University Press. New Haven, Connecticut, USA. 1941

**Joad, Cyril Edwin Mitchinson** 1891–1953

English philosopher and broadcasting personality

When the scientist leaves his laboratory and speculates about the universe as a whole, the resultant conclusions are apt to tell us more about the scientist than about the universe.

*Philosophical Aspects of Modern Science*

Chapter XI (p. 339)

George Allen & Unwin Ltd. London, England. 1939

**Kaku, Michio** 1947–

Japanese-American theoretical physicist

The fact that our universe, like Appleworld, is curved in an unseen dimension beyond our spatial comprehension has been experimentally verified. These experiments, performed on the path of light beams, shows that starlight is bent as it moves across the universe.

*Hyperspace : A Scientific Odyssey Through Parallel Universes, Time Warps, and the 10<sup>th</sup> Dimension*

Chapter 1 (p. 17)

Oxford University Press, Inc. New York, New York, USA. 1995

**Kepler, Johannes** 1571–1630

German astronomer

This very cogitation carries with it I don't know what secret, hidden horror; indeed one finds oneself wandering in this immensity to which are denied limits and centre and therefore also all determinate places.

In Alexander Koyre

*From the Closed World to the Infinite Universe*

Chapter III (p. 61)

The Johns Hopkins Press. Baltimore, Maryland, USA. 1968

The diversity of the phenomena of Nature is so great, and the treasures hidden in the heavens so rich, precisely in order that the human mind shall never be lacking in fresh nourishment.

*Mysterium Cosmographicum*

Original Dedication (p. 55)

**Keyser, Cassius Jackson** 1862–1947

American mathematician

Depend upon it, the universe will never really be understood unless it may be sometime resolved into an ordered multiplicity and made to own itself an everlasting drama of the calculus.

*The Human Worth of Rigorous Thinking: Essays and Addresses*

Mathematical Emancipations: Dimensionality and Hyperspace (p. 101)

Columbia University Press. New York, New York, USA. 1925

American astronomer

Although the Universe is under no obligation to make sense, students in pursuit of the Ph.D. are.

Exploding Stars and the Expanding Universe

*Quarterly Journal of the Royal Astronomical Society*, Volume 32, Number 3, September 1991 (p. 240)

If Copernicus taught us the lesson that we are not at the center of things, our present picture of the universe rubs it in.

In John Noble Wilford

From Distant Galaxies, News of a "Stop-and-Go Universe"

*New York Times*, June 3, 2003

**Koestler, Arthur** 1905–83

Hungarian-born English writer

There are no longer any absolute directions in space. The universe has lost its core. It no longer has a heart, but a thousand hearts.

*The Sleepwalkers*

Part Three, Chapter II, Section 6 (p. 217)

The Macmillan Company. New York, New York, USA. 1966

In my youth I regarded the universe as an open book, printed in the language of physical equations, whereas now it appears to me as a text written in invisible ink, of which in our rare moments of grace we are able to decipher a small fragment.

*Bricks to Babel*

Epilogue (pp. 682–683)

Random House, Inc. New York, New York, USA. 1980

**Kolb, Edward W. (Rocky)** 1951–

American cosmologist

There are many beautiful and wondrous things to see in the universe, and to discover them we simply have to gaze into the dark night sky.

*Blind Watchers of the Sky*

Chapter One (p. 1)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

Whether our cosmological view of the universe is right or wrong, or just incomplete, we were brave enough to confront our ignorance and look. We looked with all our might, and with boldness and imagination managed to see a little bit farther than our predecessors. We were not proud of our blindness, but neither were we ashamed of it or intimidated by it, for we chose to look for the light of truth fully cognizant of our blindness.

*Blind Watchers of the Sky*

Chapter Ten (p. 282)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

**Krauss, Lawrence M.** 1954–

American theoretical physicist

There is a maxim about the universe which I always tell my students: That which is not explicitly forbidden is

guaranteed to occur. Or, as Data said in the episode “Parallels,” referring to the laws of quantum mechanics, “All things which can occur, do occur.”

*The Physics of Star Trek*

Chapter Two (p. 16)

Harp Perennial Publishers. New York, New York, USA. 1995

**Kunitz, Stanley** 1905–2006

American poet

I see lines of your spectrum shifting red,  
The Universe expanding, thinning out,  
Our worlds flying, oh flying, fast apart.

*The Collected Poems*

The Science of the Night (p. 88)

W.W. Norton & Company, Inc. New York, New York, USA. 2000

**Kunz, F. L.**

No biographical data available

The whole universe is one mathematical and harmonic expression, made up of finite representations of the infinite.

In Renée Weber

*Dialogues with Scientists and Sages: The Search for Unity* (p. 139)

Routledge & Kegan Paul. London, England. 1986

**Lambert, Johann Heinrich** 1728–77

Swiss-German mathematician and astronomer

...the firmament must be more enduring than things on our earth and the empires of the world.

Translated by Stanley Jaki

*Cosmological Letters on the Arrangement of the World-Edifice*

Twentieth Letter (p. 193)

Science History Publications. New York, New York, USA. 1976

**Lao Tzu** fl. 6<sup>th</sup> century BCE

Chinese philosopher and father of Taoism

Something mysteriously formed,  
Born before heaven and earth.

In the silence and the void,  
Standing alone and unchanging,  
Ever present and in motion.

Translated by Gia-Fu Feng and Jane English

*Tao Te Ching*

Twenty-five

Alfred A. Knopf. New York, New York, USA. 1974

**Lederman, Leon** 1922–

American high-energy physicist

We hope to explain the entire universe in a single, simple formula that you can wear on your T-shirt.

In Richard Wolkomir article

Quark City

*OMNI Magazine*, February 1984 (p. 41)

**Lemaître, Abbé Georges** 1894–1966

Belgian astronomer and cosmologist

Our universe bears the marks of youth and we can hope to reconstruct its story. The documents at our disposal

are not buried in the piles of bricks carved by the Babylonians; our library does not risk being destroyed by fire; it is in space, admirably empty, where light waves are preserved better than sound is conserved on the wax of phonograph discs.

*The Primeval Atom*

Chapter II (p. 75)

D. Van Nostrand Company, Inc. New York, New York, USA. 1950

**Lloyd, Seth** 1950–

American engineer

I wanted to get a handle on why the universe is so complex.... Or at any rate why there seems to be so much information processing going on. You can look at life and almost all the things — well, all the things — that we see going on around us in terms of information processing. You could say that life is an example of information being processed in the service of getting a free lunch out of your environment. A typical event in evolution, for example, is some organism suddenly, by a mutation, being able to produce an enzyme that allows it to digest something it couldn't get at before. The free lunch is there, but in order to get it, you've got to be able to process information.

In Tim Folger

*Discover Magazine*

The Best Computer in All Possible Worlds, October 1995

**Longfellow, Henry Wadsworth** 1807–82

American poet

The Universe as an immeasurable wheel  
Turning for evermore

In the rapid and rushing river of Time.

*The Poetical Works of Henry Wadsworth Longfellow*

Rain in Summer

Houghton Mifflin Company. Boston, Massachusetts, USA. 1883

**Lucretius** ca. 99 BCE–55 BCE

Roman poet

...the existing universe is bounded in none of its dimensions; for then it must have an outside.

In *Great Books of the Western World* (Volume 12)

*Lucretius: on the Nature of Things*

Book One, l. 958 (p. 12)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Mach, Ernst** 1838–1916

Austrian physicist and philosopher

The universe is like a machine in which the motion of certain parts is determined by that of others, only nothing is determined about the motion of the whole machine.

*History and Root of the Principle of the Conservation of Energy*

Chapter IV (p. 62)

The Open Court Publishing Company. Chicago, Illinois, USA. 1911

**Marquis, Don** 1878–1937

American newspaperman, poet, and playwright

you write so many things  
 about me that are not true  
 complained the universe  
 there are so many things  
 about you which you seem to be  
 unconscious of yourself said archy  
 contain a number of things  
 which i am trying to forget  
 rejoined the universe  
 such as what asked archy  
 such as cockroaches and poets  
 replied the universe

*the lives and times of archy & mehitablel*  
 poets (p. 289)

Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1933

do not tell me said warty bliggens that there is not a  
 purpose in the universe

the thought is blasphemy

*the lives and times of archy & mehitablel*

warty bliggens, the toad (p. 56)

Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1933

the men of science are talking about the size and shape  
 of the universe

again i thought i had settled that for them years ago

it is as big as you think it is and it is spherical in shape

*the lives and times of archy & mehitablel*

why the earth is round (p. 284)

Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1933

### Masson, David

No biographical data available

Erst, space was nebulous.

It whirled and in the whirl, the nebulous milk

Broke into rifts and curdled into orbs —

Whirled and still curdled, till the azure rifts

Severed and shored vast systems, all of orbs.

In Alexander Winchell

*World-Life or Comparative Geology*

Part II, Chapter I (p. 145)

S.C. Griggs & Company. Chicago, Illinois, USA. 1883

### McAleer, Neil 1942–

American science writer

If science ever knows for certain the fate of the Universe,  
 what will this tell us? It will tell us the ultimate fate  
 of the atoms that now make up our living bodies and  
 brains, the same atoms that allow us to exist and strug-  
 gle to give meaning to the Universe and to our brief  
 lives.

*The Mind-Boggling Universe*

Chapter 6 (p. 239)

Doubleday & Company, Inc. Garden City, New York, USA. 1957

### Melville, Herman 1819–91

American novelist

It's too late to make any improvements now. The universe  
 is finished; the copestone is set on, and the chips were  
 carted off a million years ago.

In *Great Books of the Western World* (Volume 48)

*Moby Dick*

Chapter 2 (p. 7)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### Minto, Walter

This immense, beautiful, and varied universe is a book  
 written by the finger of Omnipotence and raises the  
 admiration of every attentive beholder.

In John Archibald Wheeler

*At Home in the Universe*

The Spirit of Collegueship at Princeton (p. 89)

The American Institute of Physics. Woodbury, New York, USA. 1994

### Morris, Richard 1939–2003

American physicist and science writer

How is it that common elements such as carbon,  
 nitrogen, and oxygen happened to have just the right  
 kind of atomic structure that they needed to combine  
 to make the molecules upon which life depends? It is  
 almost as though the universe had been consciously  
 designed.

*The Fate of the Universe*

Chapter 8 (pp. 154–155)

Playboy Press. New York, New York, USA. 1982

### Muir, John 1838–1914

American naturalist

When we try to pick out anything by itself, we find it  
 hitched to everything else in the universe.

*My First Summer in the Sierra*

July 27 (p. 211)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

The clearest way into the Universe is through a forest  
 wilderness.

*The Wilderness World of John Muir*

The Philosophy of John Muir (p. 312)

Houghton, Mifflin & Company. Boston, Massachusetts, USA. 2001

How hard to realize that every camp of men or beast has  
 this glorious starry firmament for a roof! In such places  
 standing alone on the mountaintop it is easy to realize that  
 whatever special nests we make of leaves and moss like  
 marmots and birds, or tents or piled stone we all dwell in  
 a house of one room the world with the firmament for its  
 roof and are sailing the celestial spaces without leaving  
 any track.

*The Wilderness World of John Muir*

The Philosophy of John Muir (p. 312)

Houghton, Mifflin & Company. Boston, Massachusetts, USA. 2001

### Newton, Sir Isaac 1642–1727

English physicist and mathematician

The most beautiful system of the sun, planets, and comets, could only proceed from the counsel and dominion of an intelligent and powerful Being.

A Heavenly Master governs all the world as Sovereign of the universe. We are astonished at Him by reason of His perfection, we honor Him and fall down before Him because of His unlimited power. From blind physical necessity, which is always and everywhere the same, no variety adhering to time and place could evolve, and all variety of created objects which represent order and life in the universe could happen only by the willful reasoning of its original Creator, Whom I call the Lord God.

*Principia*

General Scholium

...since Space is divisible in infinitum, and Matter is not necessarily in all places, it may be also allow'd that God is able to create Particles of Matter of several Sizes and Figures, and in several Proportions to Space, and perhaps of different Densities and Forces, and thereby to vary the Laws of Nature, and make Worlds of several sort in several Parts of the Universe.

In *Great Books of the Western World* (Volume 34)

*Optics*

Query 31

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Nietzsche, Friedrich** 1844–1900

German philosopher

If the universe may be conceived as a definite quantity of energy, as a definite number of centers of energy — and every other concept remains indefinite and therefore useless — it follows therefore that the universe must go through a calculable number of combinations in the great game of chance which constitutes its existence. In infinity, at some moment or other, every possible combination must once have been realized; not only this, but it must have been realized an infinite number of times.

*Complete Works*

Volume IX (p. 430)

Foulis, Edinburgh, Scotland. 1913

**Noyes, Alfred** 1880–1958

English poet

This universe exists, and by that one impossible fact Declares itself a miracle.

*The Torch Bearers: Watchers of The Sky*

Newton, VII (p. 226)

Frederick A. Stokes Company Publishers. New York, New York, USA. 1922

**Oates, Joyce Carol** 1938–

American writer

Nothing is accidental in the universe — this is one of my Laws of Physics — except the entire universe itself, which is Pure Accident, pure divinity.

*Do What You Will*

The Summing Up: Meredith Dawe

Random House, Inc. New York, New York, USA. 1982

**Pagels, Heinz R.** 1939–88

American physicist and science writer

...the universe contains the record of its past the way that sedimentary layers of rock contain the geological record of the earth's past.

*Perfect Symmetry: The Search for the Beginning of Time*

Part One, Chapter 2 (p. 24)

Simon & Schuster. New York, New York, USA. 1985

**Parker, Barry**

Canadian science writer

Looking into the dark night sky we feel a tingle of excitement as we are overcome by its grandeur and beauty. Each point of light we see is the image of a star, an image of light that may have left the star long before we were born. The universe is vast beyond imagination — almost terrifying in its intensity and complexity.

*Einstein's Dream: The Search for a Unified Theory of the Universe*

Chapter 1 (p. 1)

Plenum Press. New York, New York, USA. 1986

**Pascal, Blaise** 1623–62

French mathematician and physicist

The spaces of the universe enfold me and swallow me up like a speck; but I, by the power of thought, may comprehend the universe.

In *Great Books of the Western World* (Volume 33)

*Pensées*

Section VI, 348

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

[The Universe] is an infinite sphere, the centre of which is everywhere, the circumference nowhere.

In *Great Books of the Western World* (Volume 33)

*Pensées*

Section II, 72

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Pasteur, Louis** 1822–95

French chemist

The universe is asymmetrical; for, if the whole of the bodies which compose the solar system moving with their individual movements were placed before a glass, the image in the glass could not be superimposed upon the reality.

In René Dubos

*Louis Pasteur: Free Lance of Science*

Chapter IV (p. 111)

Little, Brown & Company. Boston, Massachusetts, USA. 1950

**Peattie, Donald Culrose** 1896–1964

American botanist, naturalist, and author

There is no certainty vouchsafed us in the vast testimony of Nature that the universe was designed for man, nor yet for any purpose, even the bleak purpose of symmetry. The courageous thinker must look the inimical aspects of his environment in the face, and accept the stern fact that the universe is hostile and deadly to him save for a very narrow zone where it permits him, for a few eons, to exist.

*An Almanac for Moderns*

March Twenty-Ninth (p. 11)

G.P. Putnam's Sons. New York, New York, USA. 1935

**Penzias, Arno** 1933–

German-American mathematical physicist

Either we've seen the birth of the universe, or we've seen a pile of pigeon shit.

In Roylston Roberts

*Serendipity: Accidental Discoveries in Science*

John Wiley & Sons, Inc. New York, New York, USA. 1989

**Peirce, Charles Sanders** 1839–1914

American scientist, logician, and philosopher

The universe ought to be presumed too vast to have any character.

*Chance, Love, and Logic: Philosophical Essays* (p. 127)

University of Nebraska Press. Lincoln, Nebraska, USA. 1998

**Plato** 428 BCE–347 BCE

Greek philosopher

Time and the heavens came into being at the same instant, in order that, if they were ever to dissolve, they might be dissolved together. Such was the mind and thought of God in the creation of time.

In James Jeans

*The Mysterious Universe*

Chapter V (p. 182)

The Macmillan Company. New York, New York, USA. 1932

...had we never seen the stars, and the sun, and the heaven, none of the words which we have spoken about the universe would ever have been uttered.

In *Great Books of the Western World* (Volume 7)

*Timaeus*

Section 47 (p. 455)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Poe, Edgar Allan** 1809–49

American short story writer

Telescopic observations, guided by the laws of perspective, enable us to understand that the perceptible Universe exists as a roughly spherical cluster of clusters irregularly disposed.

*Eureka*

Line 16 (p. 96)

Geo. P. Putnam. New York, New York, USA. 1848

The Universe is a plot of God.

*Eureka*

Line 7 (p. 120)

Geo. P. Putnam. New York, New York, USA. 1848

I design to speak of the Physical, Metaphysical and Mathematical — of the Material and Spiritual Universe: — of its Essence, its Origin, its Creation, its Present Condition and its Destiny.

*Eureka*

Line 9 (p. 7)

Geo. P. Putnam. New York, New York, USA. 1848

**Polanyi, Michael** 1891–1976

Hungarian-born English scientist, philosopher, and social scientist

The universe is still dead, but it already has the capacity of coming to life.

In Freeman Dyson

*Personal Knowledge*

Chapter 13, Section 7 (p. 404)

Harper & Row, Publishers. New York, New York, USA. 1962

An Essay on Man, Epistle IV, l. 49

Houghton Mifflin Company. New York, New York, USA. 1903

**Prigogine, Ilya** 1917–2003

Russian-born Belgian physical chemist

I certainly think we are only living in the prehistory of the understanding of our universe.

In Renée Weber

*Dialogues with Scientists and Sages: The Search for Unity* (p. 199)

Routledge & Kegan Paul. London, England. 1986

**Rabi, Isidor Isaac** 1898–1988

Austrian-born American physicist

The scientist does not defy the universe. He accepts it. It is his dish to savor, his realm to explore; it is his adventure and never-ending delight. It is complaisant and elusive but never dull. It is wonderful both in the small and in the large. In short, its exploration is the highest occupation for a gentleman.

In Leon Lederman

*The God Particle: If the Universe Is the Answer, What Is the Question?*

Chapter 4 (p. 104)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1993

**Ramón y Cajal, Santiago** 1852–1934

Spanish histologist

As long as the brain is a mystery, the universe will also be a mystery.

In Victor Cohn

Charting the Soul's Frail Dwelling-House

*The Washington Post*, September 5, 1982, Final Edition (p. A1)

**Rand, Ayn**

Russian-born American novelist and philosopher

I know not if this earth on which I stand is the core of the universe or if it is but a speck of dust lost in eternity.

*Anthem*

Chapter XI (p. 95)

E.P. Dutton & Company. New York, New York, USA. 1995

**Raymo, Chet** 1936–

American physicist and science writer

Give me the ninety-two elements and I'll give you a universe. Ubiquitous hydrogen. Standoffish helium, Spooky boron. No-nonsense carbon. Promiscuous oxygen. Faithful iron. Mysterious phosphorous. Exotic xenon. Brash tin. Slippery mercury. Heavy-footed lead.

*The Soul of The Night*

Chapter 7 (p. 65)

Prentice-Hall, Inc. Englewood Cliffs, New Jersey, USA. 1985

**Reade, Winwood** 1838–75

English philosopher and historian

The universe is anonymous; it is published under secondary laws; these at least we are able to investigate, and in these perhaps we may find a partial solution of the great problem.

*The Martyrdom of Man*

Chapter IV (p. 465)

E.P. Dutton & Company. New York, New York, USA. 1926

**Reed, Ishmael** 1938–

American poet, essayist, and writer

The universe is a spiraling Big Band in a polka-dotted speak-easy, effectively generating new lights every one-night stand.

In A. Zee

*An Old Man's Toy: Gravity at Work and Play in Einstein's Universe*

Chapter 8 (p. 123)

The Macmillan Company. New York, New York, USA. 1989

**Reichenbach, Hans** 1891–1953

German philosopher of science

Instead of asking for a cause of the universe, the scientist can ask only for the cause of the present state of the universe; and his task will consist in pushing farther and farther back the date from which he is able to account for the universe in terms of laws of nature.

*The Rise of Scientific Philosophy*

Chapter 12 (p. 208)

University of California Press. Berkeley, California, USA. 1951

**Remsen, Ira** 1846–1927

American chemist

The universe is inexhaustible, and its mysteries are inexplicable. We may and must strive to learn all we can, but we can not hope to learn all. We are finite; the mysteries we are dealing with are infinite.

The Age of Science

*Science*, New Series, Volume 20, Number 407, July 15, 1904 (p. 73)

**Renard, Maurice** 1875–1939

French writer

Man, peeping at the Universe through only a few tiny windows — his senses — catches mere glimpses of the world around him. He would do well to brace himself against unexpected surprises from the vast unknown; from that immeasurable sector of reality that has remained a closed book.

In Charles Noël Martin

*The Role of Perception in Science* (p. 7)

Hutchinson of London. London, England. 1963

**Richards, Theodore William** 1868–1928

American chemist

The mystery that enshrouds the ultimate nature of the physical universe has always stimulated the curiosity to the thinking man.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1911* (Faraday Lecture) The Fundamental Properties of the Elements

(p. 100)

Government Printing Office. Washington, D.C. 1912

**Rindler, Wolfgang**

Physicist and author

Modern scientific man has largely lost his sense of awe in the Universe. He is confident that given sufficient intelligence, perseverance, time, and money, he can understand all there is beyond the stars.

In M. Taube

*Evolution of Matter and Energy*

Chapter 2 (p. 18)

Springer-Verlag. New York, New York, USA. 1985

**Rothman, Tony** 1953–

American cosmologist

When confronted with the order and beauty of the universe and the strange coincidences of nature, it's very tempting to take the leap of faith from science into religion. I am sure many physicists want to. I only wish they would admit it.

In J.L. Casti

*Paradigms Lost: Images of Man in the Mirror of Science*

Chapter 7 (pp. 482–483)

William Morrow & Company, Inc., New York, New York, USA. 1989

**Rubin, Vera** 1928–

American astronomer

The joy and fun of understanding the universe we bequeath to our grandchildren — and to their grandchildren. With over 90% of the matter in the universe still to play with, even the sky will not be the limit.

In Marcia Bartusiak

*The Woman Who Spins the Stars*

*Discover*, October 1990 (p. 94)

**Ruderman, M. A.**

No biographical data available

**Rosenfeld, A. H.**

No biographical data available

We are peeling an onion layer by layer, each layer uncovering in a sense another universe, unexpected, complicated, and — as we understand more — strangely beautiful.

An Explanatory Statement on Elementary Particle Physics  
*American Scientist*, Volume 48, June 1960, Number 2 (p. 210)

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

So far as scientific evidence goes, the universe has crawled by slow stages to a somewhat pitiful result on this earth, and is going to crawl by still more pitiful stages to a condition of universal death.

*Why I Am Not a Christian: And Other Essays on Religion and Related Subjects*

Has Religion Made Useful Contributions to Civilization (p. 32)  
Watts. London, England. 1927

The Universe may have a purpose, but nothing that we know suggests that, if so, this purpose has any similarity to ours.

*Why I Am Not a Christian: And Other Essays on Religion and Related Subjects*

Do We Survive Death? (p. 92)  
Watts. London, England. 1927

All the labors of the ages, all the devotion, all the inspiration, all the noonday brightness of human genius, are destined to extinction in the vast death of the solar system; and the whole temple of Man's achievement must inevitably be buried beneath the debris of a universe in ruins.

In George Smoot

*Wrinkles in Time*

Chapter 4 (p. 69)

William Morrow & Company, Inc. New York, New York, USA. 1993

**Sagan, Carl** 1934–96

American astronomer and science writer

We might have lived in a Universe in which nothing could be understood by a few simple laws, in which Nature was complex beyond our abilities to understand, in which laws that apply on Earth are invalid on Mars, or in a distant quasar. But the evidence — not the preconceptions, the evidence — proves otherwise. Luckily for us, we live in a Universe in which much can be “reduced” to a small number of comparatively simple laws of Nature. Otherwise we might have lacked the intellectual capacity and grasp to comprehend the world.

*The Demon-Haunted World: Science As a Candle in the Dark*

Chapter 15 (pp. 273–274)

Random House, Inc. New York, New York, USA. 1995

The universe is not required to be in perfect harmony with human ambition.

But the fact that some geniuses were laughed at does not imply that all who are laughed at are geniuses. They laughed at Columbus, they laughed at Fulton, they laughed at the Wright brothers. But they also laughed at Bozo the Clown.

*Cosmos*

Chapter II (p. 31)

Random House, Inc. New York, New York, USA. 1980

A universe in which everything is known would be static and dull, as boring as the heaven of some weak-minded theologians. A Universe that is unknowable is no fit place for a thinking being.

*Broca's Brain: Reflections on the Romance of Science*

Part I, Chapter 2 (p. 18)

Random House, Inc. New York, New York, USA. 1979

A religion old or new, that stressed the magnificence of the universe as revealed by modern science, might be able to draw forth reserves of reverence and awe hardly tapped by the conventional faiths. Sooner or later, such a religion will emerge.

*Pale Blue Dot: A Vision of the Human Future in Space*

Chapter 4 (p. 52)

Random House, Inc. New York, New York, USA. 1994

**Sagan, Carl** 1934–96

American astronomer and author

**Druyan, Ann** 1949–

American author and television producer

The Universe is lavish beyond imagining.

*Shadows of Forgotten Ancestors: A Search for Who We Are*

Chapter 1 (p. 13)

Random House, Inc. New York, New York, USA. 1992

**Sandage, Allan** 1926–

American astronomer

The present universe is something like the old professor nearing retirement with his brilliant future behind him.

In G. Borner

*The Early Universe*

Chapter 3 (p. 90)

Springer-Verlag, Berlin, Germany. 1988

**Santayana, George (Jorge Agustín Nicolás**

**Ruiz de Santillana)** 1863–1952

Spanish-born American philosopher

The universe, as far as we can observe it, is a wonderful and immense engine; its extent, its order, its beauty, its cruelty, make it alike impressive. If we dramatize its life and conceive its spirit, we are filled with wonder, terror, and amusement, so magnificent is that spirit, so prolific, inexorable, grammatical and dull.

In Logan Pearsall Smith

*Little Essays Drawn from the Writings of George Santayana*

Piety (p. 85)

Books for Libraries Press, Freeport, New York, USA. 1967

**Schiller, Ferdinand Canning Scott** 1759–1805

German poet, dramatist and philosopher

The universe is one of God's thoughts.

*Essays: Aesthetical and Philosophical*

Letter 4: Theosophy of Julius

**Shelley, Percy Bysshe** 1792–1822

English poet

The curtain of the Universe is rent and shattered,  
The splendor-winged worlds disperse like wild doves  
scattered.

Hellas, Leaves of Grass. A Lyrical Drama

Its easier to suppose that the universe has existed from  
all eternity than to conceive a Being beyond its limits  
capable of creating it.

*The Complete Poetical Works of Percy Bysshe Shelley*

Queen Mab

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

Below lay stretched the boundless universe!

American philosopher, poet, critic, and founder of Aesthetic Realism

The universe is Why, How, and What, in any order, and  
all at once.

*Damned Welcome*

Aesthetic Realism, Maxims, Part One, #69 (p. 28)

Definition Press. New York, New York, USA. 1972

The universe, being clever, has given scientists trouble.

*Damned Welcome*

Aesthetic Realism, Maxims, Part One, #71 (p. 28)

Definition Press. New York, New York, USA. 1972

The weight of the universe is at one with all its space.

*Damned Welcome*

Aesthetic Realism, Maxims, Part One, #70 (p. 28)

Definition Press. New York, New York, USA. 1972

**Silk, Joseph** 1942–

American astronomer and physicist

The development of human awareness of the Universe  
evolved from the geocentric cosmology of the ancient  
world via the heliocentric cosmology of the Renaissance  
and the egocentric cosmology of the nineteenth century,  
to the ultimate destination of the Big-Bang theory of the  
expanding Universe.

*Cosmic Enigmas*

Cosmologists and Their Myths (p. 3)

AIP Press. Woodbury, New York, USA. 1994

**Smith, Logan Pearsall** 1865–1946

American author

I woke this morning...into the well-known, often-dis-  
cussed, but, to my mind, as yet unexplained Universe.

*Trivia*

Book I, To-Day (p. 4)

Doubleday, Page &amp; Company. Garden City, New York, USA. 1917

**Smuts, Jan Christiaan** 1870–1950

South African statesman, military leader, and holistic philosopher

Truth, beauty, goodness, and love are as much structures  
of the evolutionary universe as the sun and the earth and  
the moon.

Contributions to a British Association Discussion on the Evolution of  
the Universe*Nature*, Supplement, October 24, 1931 (p. 718)**Spenser, Edmund** 1552–99

English poet

Why then should witless man so much misween,

That nothing is, but that which he hath seene?

What if in the Moones faire shining speheare?

What if in every other starre unseene,

Of other worldes he happily should heare?

That nothing is, but that which he hath seene?

*The Complete Poetical Works of Edmund Spenser*

The Faerie Queene

Book the Second, Introduction

Houghton Mifflin Company. Boston, Massachusetts, USA. 1908

**Stern, S. Alan**

American planetary scientist and author

The place we call our Universe is, for the most part, cold  
and dark and all but endless. It is the emptiest of emp-  
ties. It is old, and yet very young. It contains much that  
is dead, and yet much that is alive, forever reinventing  
itself, and sometimes inventing something wholly new.

In S. Alan Stern (ed.)

Leading Experts*

The Frontier Universe: At the Edge of the Night (p. 1)

Cambridge University Press. Cambridge, England. 2001

**Sullivan, Walter** 1918–96

American science journalist

We do know enough already, however, to believe that no  
myth or legend could be as rich in beauty, wonder, and  
awe as the full reality of the universe that is our home.

In Ray Bradbury, Arthur C. Clarke, Bruce Murray, Carl Sagan, and  
Walter Sullivan*Mars and the Mind of Man*

Walter Sullivan (p. 127)

Harper &amp; Row, Publishers. New York, New York, USA. 1973

**Swann, William Francis Gray** 1884–1962

Anglo-American physicist

There is one great work of art; it is the universe. Ye  
men of letters find the imprints of its majesty in your  
sense of the beauty of words. Ye men of song find it in

the harmony of sweet sounds. Ye painters feel it in the design of beauteous forms, and in the blending of rich soft colors do your souls mount on high to bask in the brilliance of nature's sunshine. Ye lovers are conscious of its beauties in forms ye can but ill define. Ye men of science find it in the rich harmonies of nature's mathematical design.

*The Architecture of the Universe*

Chapter XII (p. 424)

The Macmillan Company. New York, New York, USA. 1934

**Swimme, Brian** 1950–

American mathematical cosmologist

I am convinced that the story of the universe that has come out of three centuries of modern scientific work will be recognized as a supreme human achievement, the scientific enterprise's central gift to humanity, a revelation having a status equal to that of the great religious revelations of the past.

In Connie Barlow (ed.)

*Evolution Extended: Biological Debates on the Meaning of Life*

The MIT Press. Cambridge, Massachusetts, USA. 1994

**Talbot, Michael** 1953–92

American physicist

...we have to begin to view the universe as ultimately constituted not of matter and energy, but of pure information.

*Beyond the Quantum*

Chapter 6 (p. 155)

The Macmillan Company. New York, New York, USA. 1986

**Teller, Woolsey** 1890–1954

Essayist

...the picture of the universe presented by astronomy is one of dismal stretches of time and space and unparalleled desolation. In the eternal abyss of space — bleak, cold, and dark — there are no signs of a Cosmic Consciousness.

*The Atheism of Astronomy*

Chapter VI (p. 120)

Part One, Chapter Three (p. 53)

HarperCollins Publisher, Inc. New York, New York, USA. 1988

### **Young, Louise B.**

American science writer

The universe is unfinished, not just in the limited sense of an incompletely realized plan but in the much deeper sense of a creation that is a living reality of the present. A masterpiece of artistic unity and integrated Form, infused with meaning, is taking shape as time goes by. But its ultimate nature cannot be visualized, its total significance grasped, until the final lines are written.

*The Unfinished Universe*

Conclusion (p. 205, 208)

Simon & Schuster. New York, New York, USA. 1986

### **Zebrowski, George** 1945–

Polish-American science fiction writer

The rationality of our universe is best suggested by the fact that we can discover more about it from any starting point, as if it were a fabric that will unravel from any thread.

Is Science Rational?

*OMNI Magazine*, June 1994 (p. 50)

In a perfectly rational universe, infinities turn back on themselves...

Is Science Rational?

*OMNI Magazine*, June 1994 (p. 50)

## UNIVERSE AND COSMOGENESIS

### **Ackerman, Diane** 1948–

American writer

Fifteen billion years ago, when the Universe let rip and, in disciplined panic, Creation spewed mazy star-treacle and resin, shrinking balls of debut fire smoldered and glitched.

*The Planets: A Cosmic Pastoral*

Neptune, IV (p. 129)

William Morrow & Company, Inc. New York, New York, USA. 1976

### **Adams, Douglas** 1952–2001

English author, comic radio dramatist, and musician

In the beginning the universe was created. This made a lot of people very angry and has been widely regarded as a bad move. Many races believe that it was created by some sort of god, though the Jatravartid people of Viltvodle VI believe that the entire Universe was in fact sneezed out of the nose of a being called the Great Green Arkle seizure.

*The Ultimate Hitchhiker's Guide to the Galaxy*

The Restaurant at the End of the Universe

Chapter 1 (p. 149)

Ballantine Books. New York, New York, USA. 2002

### **Barrow, John D.** 1952–

English theoretical physicist

One day we may be able to say something about the origins of our own cosmic neighborhood. But we can never know the origins of the universe. The deepest secrets are the ones that keep themselves.

*The Origin of the Universe*

Chapter 8 (p. 137)

Basic Books, Inc. New York, New York, USA. 1994

### **Bowyer, Stuart** 1934–

American astrophysicist

Ultimately, the origin of the universe is, and always will be, a mystery.

In Henry Margenau and Roy Abraham Varghese (eds.)

*Cosmos, Bios, Theos*

Chapter 2 (p. 32)

Open Court. La Salle, Illinois, USA. 1992

### **Cardenal, Ernesto** 1925–

Nicaraguan poet and Roman Catholic priest

In the beginning there was nothing  
neither space  
nor time.

The entire universe concentrated  
in the space of the nucleus of an atom,  
and before that even less,  
much less than a proton,  
and even less still,  
an infinitely dense mathematical point.

Translated by John Lyons

*Cosmic Canticle*

Cantigua 1, Big Bang (p. 11)

Curbstone Press. Willimantic, Connecticut, USA. 1993

### **Egyptian Myth** ca. 2500 B.C.

In the beginning, only the ocean existed, upon which there appeared an egg. Out of the egg came the sun-god and from himself he begat four children: Shu and Tefnut, Keb and Nut. All these, with their father, lay upon the ocean of chaos. Then Shu and Tefnut thrust themselves between Keb and Nut. They planted their feet upon Keb and raised Nut on high so that Keb became the earth and Nut the heavens.

In Eric J. Lerner

*The Big Bang Never Happened*

Chapter 2 (p. 58)

Random House, Inc. New York, New York, USA. 1991

### **Flaubert, Gustave** 1821–90

French novelist

SMARH: How vast creation is! I see the planets rise,  
I see the fiery stars driven along.... Space opens out as

I rise, worlds revolve around me, and I am the center of this bustling creation.

*Early Writings*

Smarh (p. 216)

University of Nebraska Press. Lincoln, Nebraska, USA. 1991

### **Gamow, George** 1904–68

Russian-born American physicist

Before we can discuss the basic problem of the origin of our universe, we must ask ourselves whether such a discussion is necessary.

*The Creation of the Universe*

Chapter I (p. 6)

The Viking Press. New York, New York, USA. 1952

In the beginning God created radiation and ylem. And ylem was without shape or number, and the nucleons were rushing madly over the face of the deep.

*My World Line: An Informal Autobiography*

Chapter 6 (p. 127)

The Viking Press. New York, New York, USA. 1979

### **Hawkins, Gerald S.** 1928–2003

English archaeoastronomer

In the beginning.... A scientist cannot continue this sentence with absolute certainty. It would be like asking a child to give an account of his birth or a description of his conception.

*In Reader's Digest*

Marvels and Mysteries of the World Around Us

Earth's Ancient Drama (p. 10)

The Reader's Digest Association. Pleasantville, New York, USA. 1972

### **Hein, Robert**

No biographical data available

The first world the cosmic colossus created with a word: One lightning word from the golden lips of Truth And electric earth condensed on a creamy cloud, Adorned with a necklace of blue-gold stars and a chain Of peppermint planets in the amphitheater of space.

*Quest of the Singing Tree*

The Larger Creation, Creation of the Earth

H. Harrison. New York, New York, USA. 1938

### **Hoyle, Sir Fred** 1915–2001

English mathematician and astronomer

Without continuous creation, the Universe must evolve toward a dead state in which all the matter is condensed into a vast number of dead stars.

*The Nature of the Universe*

Chapter 6 (pp. 131–132)

The University Press. Cambridge. 1933

### **Kipling, Rudyard** 1865–1936

British writer and poet

Before the High and Far-Off Times, O my Best Beloved, came the Time of the Very Beginnings; and that was in

the days when the Eldest Magician was getting Things ready. First he got the Earth ready; then he got the Sun ready; and then he told all the Animals that they could come out and play.

*Just So Stories*

The Crab that Played with the Sea (p. 171)

Doubleday & Company, Inc. Garden City, New York, USA. 1952

### **Marquesas Islanders**

In the beginning there was nothing. There arose a swelling, a ferment, a black fire, a spinning vortices, a bubbling, a swallowing — there arose a whole series of pairs of props, posts, or piles, large and small, long and short, crooked and bent, decayed and rotten. Similarly there arose pairs of roots, large and small, long and short, and so forth; there arose countless and infinitely many supports. Above all, there now arose the ground, the foundation, the hard rock, there arose the space for light, there arose rocks of different sorts.

In John A. Wood

*Meteorites and the Origin of Planets*

Creation Myth (p. v)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1968

### **Reeves, Hubert** 1932–

Canadian astrophysicist

In the beginning was the absolute rule of the flame: The universe was in limbo. Then after countless eras, the fires slowly abated like the sea at the outgoing tide. Matter awoke and organized itself; the flame gave way to music.

*Atoms of Silence*

Introduction (p. 5)

The MIT Press. Cambridge, Massachusetts. USA. 1984

### **Sagan, Carl** 1934–96

American astronomer and science writer

If the general picture of an expanding universe and a Big Bang is correct, we must then confront still more difficult questions. What were conditions like at the time of the Big Bang? What happened before that? Was there a tiny universe, devoid of all matter, and then the matter suddenly created from nothing? How does that happen? In many cultures it is customary to answer that God created the universe out of nothing. But this is mere temporizing. If we wish courageously to pursue the question, we must of course ask next where God comes from. And if we decide this to be unanswerable, why not save a step and decide that the origin of the universe is an unanswerable question. Or, if we say that God has always existed, why not save a step and conclude that the universe has always existed?

*Cosmos*

Chapter X (p. 257)

Random House, Inc. New York, New York, USA. 1980

**Singh, Jagjit** 1919–2002

Indian mathematician and science writer

In the beginning there was neither heaven nor earth,  
 And there was neither space nor time.  
 And the Earth, the Sun, the Stars, the Galaxies and the  
 whole universe were  
 confined within a small volume like the bottled genie of  
 the Arabian Nights.  
 And then God said, “Go!”  
 And straight way the Galaxies rushed out of their  
 prison, scattering in all  
 directions, and they have continued to run away from  
 one another ever since,  
 afraid lest some cosmic Hand should gather them again  
 and put them back in  
 the bottle (which is not bigger than a pin-point).  
 And they shall continue to scatter thus till they fade  
 from each other’s ken —  
 and thus, for each other, cease to exist at all.

*Mathematical Ideas: Their Nature and Use*

Space and Time (pp. 209–210)

Hutchinson & Company Ltd. London, England. 1972

**Smoot, George** 1945–

American experimental astrophysicist

The question of “the beginning” is as inescapable for  
 cosmologists as it is for theologians.

*Wrinkles in Time*

Chapter 9 (p. 189)

William Morrow & Company, Inc. New York, New York, USA. 1993

**Spenser, Edmund** 1552–99

English poet

Through knowledge we behold the world’s creation,  
 How in his cradle first he fostered was;  
 And judge of Natures cunning operation,  
 How things she formed of a formless mass.

*The Complete Poetical Works of Edmund Spenser*

The Tears of the Muses, I. 499–502

Houghton Mifflin Company. Boston, Massachusetts, USA. 1908

**Sturluson, Snorri** 1179–1241

Icelandic writer

Erst was the age when nothing was;  
 Nor sand nor sea, nor chilling stream-waves;  
 Earth was not found, nor Ether — Heaven,  
 — A Yawning Gap, but grass was none.

*The Prose Edda*

Here Begins the Beguiling of Gylfi (p. 16)

The American-Scandinavian Foundation. New York, New York, USA.  
 1916

I was a hidden treasure and desired to be known: therefore  
 I created the creation in order to be known.

In George Smoot

*Wrinkles in Time*

Chapter 1 (p. 1)

William Morrow & Company, Inc. New York, New York, USA. 1993

**Tagore, Rabindranath** 1861–1941

Indian poet and philosopher

It seems to me that, perhaps, creation is not fettered by  
 rules,

That all the hubbub, meeting and mingling are blind hap-  
 penings of fate.

Translated by Indu Dutt

*Our Universe* (p. 75)

Jaico Publishing House. Bombay, India. 1969

**The Bible**

In the beginning God created the heaven and the earth.

*The Revised English Bible*

Genesis 1:1

Oxford University Press, Inc. Oxford, England. 1989

**Townes, Charles H.** 1915–

American inventor of the laser

I do not understand how the scientific approach alone,  
 as separated from a religious approach, can explain an  
 origin of all things. It is true that physicists hope to look  
 behind the “big bang,” and possibly to explain the origin  
 of our universe as, for example, a type of fluctuation. But  
 then, of what is it a fluctuation and how did this in turn  
 begin to exist? In my view the question of origin seems  
 always left unanswered if we explore from a scientific  
 view alone.

In Henry Margenau and Roy Abraham Varghese (eds.)

*Cosmos, Bios, Theos*

Chapter 25 (p. 123)

Open Court. La Salle, Illinois, USA. 1992

**Updike, John** 1932–

American novelist, short story writer and poet

By computation, they all must have begun at one place  
 about five billion years ago; all the billions and trillions  
 and quadrillions squared and squared again of tons of  
 matter in the universe were compressed into a ball at the  
 maximum possible density, the density within the nucle-  
 us of the atom; one cubic centimeter of this primeval egg  
 weighed two hundred and fifty tons.

*The Centaur*

Chapter I (p. 38)

Alfred A. Knopf. New York, New York, USA. 1995

**Weinberg, Steven** 1933–

American nuclear physicist

...the urge to trace the history of the universe back to the  
 beginnings is irresistible. From the start of modern sci-  
 ence in the sixteenth and seventeenth centuries, physicists  
 and astronomers have returned again and again to the  
 problem of the origin of the universe.

*The First Three Minutes*

Chapter I (p. 4)

Basic Books, Inc. New York, New York, USA. 1988

**Wilmot, John (2<sup>nd</sup> Earl of Rochester)** 1647–80

English libertine and satirical and bawdy poet

E'er time and place were, time and place were not,  
When Primitive Nothing something straight begot,  
Then all proceeded from the great united — What.

*Collected Works of John Wilmot Earl of Rochester*

Upon Nothing

The Nonesuch Press. London, England. 1926

**Zuni Creation Myth**

In the beginning of things Awonawilona was alone. There was nothing beside him in the whole of time. Everywhere there was black darkness and void. Then Awonawilona conceived in himself the thought, and the thought took shape and got out into space and through this stepped out into the void, into outer space, and from them came nebulae of growths and mists, full of power and growth.

In Raymond Van Over

*Sun Songs*

Zuni Creation Myths

Cosmic Creation (p. 23)

New American Library. New York, New York, USA. 1980

**UNIVERSE, DEATH OF**

**Balfour, Arthur James** 1848–1930

English prime minister

...the energies of our system will decay, the glory of the sun will be dimmed, and the earth, tideless and inert, will no longer tolerate the race which has for a moment disturbed its solitude. Man will go down into the pit, and all his thoughts will perish.

*The Foundations of Belief*

Part I, Chapter I, Section III (p. 33)

Longmans, Green & Company. London, England. 1912

**Byron, George Gordon, 6<sup>th</sup> Baron Byron** 1788–1824

English Romantic poet and satirist

I had a dream, which was not all a dream.  
The bright sun was extinguish'd, and the stars  
Did wander darkling in the eternal space,  
Rayless, and pathless, and the icy earth  
Swung blind and blackening in the moonless air.

*The Complete Poetical Works of Byron*

Miscellaneous Poems, Darkness

Houghton Mifflin Company. Boston, Massachusetts, USA. 1933

**Davies, Paul Charles William** 1946–

British-born physicist, writer, and broadcaster

Many billions of years will elapse before the smallest, youngest stars complete their nuclear burning and shrink

into white dwarfs. But with slow, agonizing finality perpetual night will surely fall.

*The Last Three Minutes: Conjectures About the Ultimate Fate of the Universe*

Chapter 5 (p. 50)

Basic Books, Inc. New York, New York, USA. 1994

A universe that came from nothing in the big bang will disappear into nothing at the big crunch. Its glorious few zillion years of existence not even a memory.

*The Last Three Minutes: Conjectures About the Ultimate Fate of the Universe*

Chapter 9 (p. 123)

Basic Books, Inc. New York, New York, USA. 1994

**Dyson, Freeman J.** 1923–

American physicist and educator

Since the universe is on a one-way slide toward a state of final death in which energy is maximally degraded, how does it manage, like King Charles, to take such an unconsciously long time a-dying.

Energy in the Universe

*Scientific American*, Volume 224, Number 3, 1971 (p. 52)

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

...the universe will finally become a ball of radiation, becoming more and more rarified and passing into longer and longer wave-lengths. The longest waves of radiation are Hertzian waves of the kind used in broadcasting. About every 1500 million years this ball of radio waves will double in diameter; and it will go on expanding in geometrical progression for ever. Perhaps then I may describe the end of the physical world as — one stupendous broadcast.

*New Pathways in Science*

Chapter III, Section VI (p. 71)

The Macmillan Company. New York, New York, USA. 1935

**Eliot, T. S. (Thomas Stearns)** 1888–1965

American expatriate poet and playwright

This is the way the world ends  
Not with a bang but a whimper.

*The Collected Poems and Plays 1909–1950*

The Hollow Men (p. 59)

Harcourt, Brace & World, Inc. New York, New York, USA. 1952

**Frost, Robert** 1874–1963

American poet

Some say the world will end in fire,  
Some say in ice.

From what I've tasted of desire  
I hold with those who favor fire.  
But if it had to perish twice,  
I think I know enough of hate  
To say that for destruction ice  
Is also great

And would suffice.

*Complete Poems of Robert Frost*

Fire and Ice

Henry Holt & Company. New York, New York, USA. 1949

**Gamow, George** 1904–68

Russian-born American physicist

Galaxies are ever spinnik,  
Stars will burn to final sparrk,  
Till ourr universe is thinnink  
And is lifeless, cold and darrk.

*Mr. Tompkins in Paperback*

Chapter 6 (p. 60)

At The University Press. Cambridge, England. 1965

**Gribbin, John** 1946–

British science writer and astronomer

“Big Crunch” is...an ugly term which hardly seems appropriate for so important an event as the end of the universe. But there is no convention as yet for a label of the moment of destruction at the end of time, and I am free to borrow the term “omega point.”

*The Omega Point: The Search for the Missing Mass and the Ultimate Fate of the Universe*

Introduction (p. 2)

Bantam Books. Toronto, Ontario, Canada. 1988

**Harrison, Edward Robert** 1919–2007

English-born American cosmologist

The stars begin to fade like guttering candles and are snuffed out one by one. Out of the depths of space the great celestial cities, the galaxies, cluttered with the memorabilia of ages, are gradually dying. Tens of billions of years pass in the growing darkness. Occasional flickers of light pierce the fall of cosmic night, and spurts of activity delay the sentence of a universe condemned to become a galactic graveyard.

*Cosmology: The Science of the Universe*

Chapter 18 (p. 360)

Cambridge University Press. Cambridge, England. 1981

**Hawking, Stephen William** 1942–

English theoretical physicist

The present evidence therefore suggests that the universe will probably expand forever, but all we can really be sure of is that even if the universe is going to recollapse, it won't do so for at least another ten thousand million years, since it has already been expanding for at least that long. This should not unduly worry us: by that time, unless we have colonized beyond the Solar System, mankind would long since have died out, extinguished along with our sun!

*A Brief History of Time: From the Big Bang to Black Holes*

Chapter 3 (p. 46)

Bantam Books. Toronto, Ontario, Canada. 1988

**James, William** 1842–1910

American philosopher and psychologist

Though the ultimate state of the universe may be its vital and psychical extinction, there is nothing in physics to interfere with the hypothesis that the penultimate state might be the millennium — in other words a state in which a minimum of difference of energy-level might have its exchanges so skillfully canalised that a maximum of happy and virtuous consciousness would be the only result. In short, the last expiring pulsation of the universe's life might be, “I am so happy and perfect that I can stand it no longer.”

*The Atlantic Monthly*

Letter to Henry Adams dated June 17, 1910

September 1920 (p. 316)

**Jastrow, Robert** 1925–

American space scientist

Within the isolated galaxies, the old stars burn out one by one, and fewer and fewer new stars are formed to replace them. Stars are the source of the energy by which all beings live. When the light of the last star is extinguished, the Universe fades into darkness, and all life comes to an end.

*God and the Astronomers*

Epilogue (p. 117)

W.W. Norton & Company, Inc. New York, New York, USA. 1978

**Jeans, Sir James Hopwood** 1877–1946

English physicist and mathematician

Everything points with overwhelming force to a definite event, or series of events, of creation at some time or times, not infinitely remote. The universe cannot have originated by chance out of its present ingredients, and neither can it have been always the same as now. For in either of these events no atoms would be left save such as are incapable of dissolving into radiation; there would be neither sunlight nor starlight but only a cool glow of radiation uniformly diffused through space. This is, indeed, so far as present-day science can see, the final end towards which all creation moves, and at which it must at last arrive.

*Eos or the Wider Aspects of Cosmogony* (p. 55)

Kegan Paul, Trench, Trubner & Company, Ltd. London, England. 1931

**Jeffers, Robinson** 1887–1962

American poet

Time will come no doubt  
When the sun too shall die; the planets will freeze, and  
the air on them; frozen gases, white flakes of air  
Will be the dust: which no wind will ever stir: this very  
dust in dim starlight glistening  
Is dead wind, the white corpse of wind.  
Also the galaxy will die; the glitter of the Milky Way,  
our universe, all the stars that have names are dead.

In Tim Hunt (ed.)

*The Collected Poetry of Robinson Jeffers* (Volume 3)

The Double Axe: The Inhumanist (p. 261)

Stanford University Press. Stanford, California, USA. 1988

For man will be blotted out, the blithe earth die, the  
brave sun

Die blind and blacken to the heart...

In Tim Hunt (ed.)

*The Collected Poetry of Robinson Jeffers* (Volume 1)

To the Stone-Cutters (p. 5)

Stanford University Press. Stanford, California, USA. 1988

It will contract, the immense navies of stars and  
galaxies,

Dust-clouds and nebulae

Are recalled home, they crush against each other in one  
harbor, they stick in one lump.

*The Beginning and the End and Other Poems*

The Great Explosion (p. 3)

Random House, Inc. New York, New York, USA. 1963

I seem to have stood a long time and watched the stars  
pass.

They also shall perish I believe.

Here to-day, gone to-morrow, desperate wee galaxies

Scattering themselves and shining their substance away

Like a passionate thought. It is very well ordered.

In Tim Hunt (ed.)

*The Collected Poetry of Robinson Jeffers* (Volume 2)

Margrave (p. 171)

Stanford University Press. Stanford, California, USA. 1988

**Joyce, James** 1882–1941

Irish expatriate writer and poet

Gasballs spinning about, crossing each other, passing.  
Same old dingdong always. Gas, then solid, then world,  
then cold, then dead shell drifting around, frozen rock  
like that pineapple rock. The moon.

*Ulysses* (p. 164)

Random House, Inc. New York, New York, USA. 1946

**Lucretius** ca. 99 BCE–55 BCE

Roman poet

And so some day,

The mighty ramparts of the mighty universe

Ringed round with hostile force,

Will yield and face decay and come crumbling to ruin.

In Paul Davies

*About Time: Einstein's Unfinished Revolution*

Header (p. 33)

Simon & Schuster. New York, New York, USA. 1995

**MacLeish, Archibald** 1892–1982

American poet and Librarian of Congress

And there, there overhead, there, there hung over  
Those thousands of white faces, those dazed eyes,  
There in the starless dark the poise, the hover,  
There with vast wings across the canceled skies,  
There in the sudden blackness the black pall

Of nothing, nothing, nothing — nothing at all.

*Collected Poems 1917–1952*

The End of the World

Houghton Mifflin Company. Boston, Massachusetts, USA. 1952

**Nicholson, Norman** 1914–87

English poet

And if the universe

Reversed and showed

The colour of its money;

If now observable light

Flowed inward, and the skies snowed

A blizzard of galaxies,

The lens of night would burn

Brighter than the focused sun,

And man turn blinded

With white-hot darkness in his eyes.

*The Pot Geranium*

The Expanding Universe (p. 212)

Faber & Faber Ltd. London, England. 1994

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

In the vast death of the solar system, and the whole temple  
of Man's achievements must inevitable be buried beneath  
all the labours of the ages, all the devotion, all the  
inspiration, all the noonday brightness of human genius,  
are destined to extinction debris of a universe in ruins  
— all these things, if not quite beyond dispute, are yet so  
nearly certain that no philosophy which rejects them can  
hope to stand. Only within the scaffolding of these truths,  
only on the firm foundation of unyielding despair, can the  
soul's habitation henceforth be safely built.

*Why I Am Not a Christian: And Other Essays on Religion and Related  
Subjects* (p. 107)

Watts. London, England. 1927

**Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

There will be a time when the day will be as long as a  
year is now, and the cooling sun, shorn of its beams, will  
hang motionless in the heavens.

*The Outline of History* (Volume 1)

Book I, Chapter I, Section 3 (p. 15)

Garden City Books. Garden City, New York, USA. 1961

...a steady twilight brooded over the Earth.... All traces  
of the moon had vanished. The circling of the stars,  
growing slower and slower, had given place to creeping  
points of light...the sun, red and very large, halted motionless  
upon the horizon, a vast dome glowing with a dull heat....  
The rocks about me were of a harsh reddish colour, and all the  
traces of life that I could see at first was the intensely green  
vegetation...the same rich green that one sees on forest moss  
or on the lichen in caves: plants which like these grow in a  
perpetual twilight....

I cannot convey the sense of abominable desolation that hung over the world.

Chapter 1 (p. 4)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Mencken, H. L. (Henry Louis)** 1880–1956  
American journalist and literary critic

Penetrating so many secrets, we cease to believe in the unknowable. But there it sits nevertheless, calmly licking its chops.  
*Minority Report: H.L. Mencken's Notebooks*  
No. 364 (p. 241)  
Alfred A. Knopf. New York, New York, USA. 1956

**Nicholson, Norman** 1914–87  
English poet

No man has seen it; nor the lensed eye  
That pin-points week by week the same patch of sky  
Records even a blur across its pupil. Only  
The errantry of Saturn, the wry  
Retarding of Uranus, speak  
Of the pull beyond the pattern:  
The unknown is shown  
Only by a bend in the known.  
In Neil Curry (ed.)

*Norman Nicholson Collected Works*  
The Undiscovered Planet (p. 211)  
Faber & Faber Ltd. London, England. 1994

**Nietzsche, Friedrich** 1844–1900  
German philosopher

To trace something unknown back to something known is alleviating, soothing, gratifying and gives moreover a feeling of power, Danger, disquiet, anxiety attend the unknown — the first instinct is to eliminate these distressing states. First principle: any explanation is better than none....  
In Alexander Tille (ed.), Thomas Common (trans.)  
*The Works of Friedrich Nietzsche*, Volume 11  
Twilight of the Idols, The Four Great Errors, Section 5 (p. 138)  
Henry & Company. London, England. 1896

**Oppenheimer, J. Robert** 1904–67  
American theoretical physicist

The problem of doing justice to the implicit, the imponderable and the unknown is always with us in science, it is with us in the most trivial of personal affairs, and it is one of the great problems of all forms of art.  
In Lincoln Barnett  
*Writing on Life: Sixteen Close-Ups*  
Physicist Oppenheimer (p. 358)  
William Sloane Associates, Publishers. New York, New York, USA. 1951

**Pinter, Harold** 1930–  
English absurdist playwright

In other words, apart from the known and the unknown, what else is there?  
*The Homecoming*  
Act Two (p. 52)  
Methuen & Company Ltd. London, England. 1966

**Rabi, Isidor Isaac** 1898–1988  
Austrian-born American physicist

With the beginning of direct exploration of the solar system and promise; in fact science derives its sustenance from the unknown; all the good things have come from that inexhaustible realm.  
Faith in Science  
*The Atlantic Monthly*, Volume 187, Number 1, January 1951 (p. 28)

**Rumsfeld, Donald** 1932–  
American businessman, politician, and secretary of state

As we know, There are known knowns. There are things we know we know. We also know there are known unknowns. That is to say we know there are some things We do not know. But there are also unknown unknowns, The ones we don't know we don't know.  
Department of Defense News Briefing  
February 12, 2002

**Service, Robert William** 1874–1958  
Canadian poet and novelist

Let us probe the silent places,  
let us seek what luck betides us;  
Let us journey to a lonely land I know.  
There's a whisper on the night-wind,  
there's a star a gleam to guide us,  
And the Wild is calling, calling...let us go.

*The Complete Poems of Robert Frost*

The Call of the Wild

Stanza 5

Dodd, Mead & Company, New York, New York, USA. 1940

**Singer, June** 1920–2004  
American Gnostic

As knowledge proceeds with spiraling movement to penetrate the vast universe of black mystery, one is continually astonished to discover that at the outer limit of awareness where science interfaces with the unknown, there is nothing but a growing edge, where knowledge and ignorance meet. The more one learns, the more one discovers the increasing magnitude of the unknown, as anyone who has tried to do "exhaustive" research knows very well!

*Androgyne: Toward a New Theory of Sexuality* (p. 59)

Doubleday & Company, Inc. Garden City, New York, USA. 1967

**Vernon, A. G.**

No biographical data available

It is the successful, or even the unsuccessful, pursuit of truth which gives happiness to each generation of scientific men, and not the value of the truth itself — the energy, the doing, not the thing done. If a time could arrive when all was known, when there could not be a new investigation or experiment, our keenest pleasure would be at an end. We may therefore feel happy in the thought of how much is still unknown.

In Sir Richard Arman Gregory

*Discovery; or, The Spirit and Service of Science*

Chapter II (p. 28)

Macmillan & Company Ltd. London, England. 1918

**Whitney, Willis Rodney** 1868–1958  
American chemical and electrical engineer

Scientists know that research merely discloses parts of the infinite unknown. Paradoxically, the enticing, helpful "unknown" increases as men continue to subtract from it. Progress in every line of experimental science follows the same law. The apparently narrow path gradually expands into unlimited, unexplored territory.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1924*

The Vacuum — There's Something in It (p. 194)

Government Printing Office. Washington, D.C. 1925

## UREA

**Wöhler, Friedrich** 1800–82  
German chemist

The fact that in the union of these substances they appear to change their nature, and give rise to a new body, drew my attention anew to the subject, and research gave the unexpected result that by the combination of cyanic acid with ammonia, urea is formed, a fact that is more noteworthy inasmuch as it furnishes an example of the artificial production of an organic, indeed a so-called animal substance, from inorganic material.

In Henry M. Leicester and Herbert S. Klickstein

*A Source Book in Chemistry: 1400–1900*

Friedrich Wöhler (p. 310)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1952

## URIC ACID

**Wöhler, Friedrich** 1800–82  
German chemist

No other substance in organic chemistry attracts the attention of the physiologist and chemist to a higher degree than uric acid.

In Rolf Huisgen

Adolf von Baeyer's Scientific Achievements — A Legacy

*Angewandte Chemie International Edition in English*, Volume 25, Number 4, April 1986 (p. 302)

## URINANALYSIS

**Addis, Thomas** 1881–1949  
English-American physician

When the patient dies the kidneys may go to the pathologist, but while he lives the urine is ours. It can provide us day by day, month by month, and year by year, with a serial story of the major events going on within the kidney.

*Glomerular Nephritis: Diagnosis and Treatment* (p. 2)

The Macmillan Company. New York, New York, USA. 1948

**Harrington, John** 1561–1612  
English inventor of flush toilet

He called for his urinal and having made water in it, he cast it, & viewed it (as Physicians do) a prettie while; at last he swore soberly, he saw nothing in that man's water, but that he might live.

*The Metamorphosis of Aiax: A New Discourse of a Stale Subject*  
1596

**Shakespeare, William** 1564–1616  
English poet, playwright, and actor

FALSTAFF: What says the Doctor to my water?

PAGE: He said, Sir, the water itself was good healthy water; but, for the party that owned it, he might have more diseases than he knows for.

In *Great Books of the Western World* (Volume 26)

The Second Part of Kink Henry the Fourth

Act I, Scene ii, l. 1–4

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

## V

### VACCINATION

**Jeffers, Robinson** 1887–1962  
American poet

They take horses  
And give them sicknesses through hollow needles, their  
blood saves babies: I am here on the mountain making  
Antitoxin for all the happy towns and farms...

In Tim Hunt (ed.)  
*The Collected Poetry of Robinson Jeffers* (Volume 1)  
A Redeemer (p. 407)  
Stanford University Press. Stanford, California, USA. 1988

### VACUUM

**Bacon, Roger** 1214–92  
English philosopher, scientist, and friar

For vacuum rightly conceived of is merely a mathematical  
quantity extended in the three dimensions, existing per se  
without heat and cold, soft and hard, rare and dense, and  
without any natural quality, merely occupying space, as  
the philosophers maintained before Aristotle, not only  
within the heavens, but beyond.

*Opus Majus* (Volume 2)  
Part Five, Ninth Distinction, Chapter II (p. 485)

**Huygens, Christiaan** 1629–95  
Dutch mathematician, astronomer, and physicist

...but what God has bin pleas'd to place beyond the  
Region of the Stars, is as much above our Knowledge, as  
it is our Habitation.

Or what if beyond such a determinate space he has left  
an infinite Vacuum; to show, how inconsiderable is all  
that he has made is, to what his Power could, had he so  
pleas'd, have produc'd?

*The Celestial Worlds Discover'd; or, Conjectures Concerning the Plan-  
etary Worlds, Their Inhabitants and Productions*  
Book the Second (p. 156)  
Printed for T. Childe. London, England. 1698

**Marquis, Don** 1878–1937  
American newspaperman, poet, and playwright

he i said is afraid of a vacuum  
what is there in a vacuum to make one afraid said the  
flea there is nothing in it i said  
and that is what makes one afraid to contemplate it  
a person can t think of a place with nothing at all in it  
without going nutty  
and if he tries to think that nothing is something after all  
he gets nuttier

*the lives and times of archy & mehitabel*

the merry flea (p. 45)  
Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1933

**Morris, Richard** 1939–2003  
American physicist and science writer

In modern physics, there is no such thing as “nothing.”  
Even in a perfect vacuum, pairs of virtual particles are  
constantly being created and destroyed. The existence of  
these particles is no mathematical fiction. Though they  
cannot be directly observed, the effects they create are  
quite real. The assumption that they exist leads to predic-  
tions that have been confirmed by experiment to a high  
degree of accuracy.

*The Edges of Science*  
Chapter II (p. 25)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1955

**Pagels, Heinz R.** 1939–88  
American physicist and science writer

Once our minds accept the mutability of matter and the  
new idea of the vacuum, we can speculate on the origin  
of the biggest thing we know — the universe. Maybe the  
universe itself sprang into existence out of nothingness  
— a gigantic vacuum fluctuation which we know today  
as the big bang. Remarkably, the laws of modern physics  
allow for this possibility.

*The Cosmic Code: Quantum Physics as the Language of Nature*  
Part II, Chapter 8 (p. 278)  
Simon & Schuster. New York, New York, USA. 1982

**Pascal, Blaise** 1623–62  
French mathematician and physicist

Because...you have believed from childhood that a box  
was empty when you saw nothing in it, you have believed  
in the possibility of a vacuum.

In *Great Books of the Western World* (Volume 33)  
*Pensées*  
Section II, 82  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

You cannot have first space and then things to put into  
it, any more than you can have first a grin and then a  
Cheshire cat to fit on to it.

In Sir Arthur Stanley Eddington  
*New Pathways in Science*  
Chapter II, Section VI (p. 48)  
The Macmillan Company. New York, New York, USA. 1935

**Williams, Tennessee** 1911–83  
American playwright

...a vacuum is a hell of a lot better than some of the stuff  
that nature replaces it with.

*Cat on a Hot Tin Roof*

Act 2

A New Directions Book. New York, New York, USA. 1975

**VALUE****Bronowski, Jacob** 1908–74

Polish-born British mathematician and polymath

The values by which we are to survive are not rules for just and unjust conduct, but are those illuminations in whose light justice and injustice, good and evil, means and ends are seen in fearful sharpness of outline.

*Science and Human Values*

The Sense of Human Dignity (p. 73)

Harper &amp; Row, Publishers. New York, New York, USA. 1965

**Poincaré, Henri** 1854–1912

French mathematician and theoretical astronomer

If a new result has value it is when, by binding together long-known elements, until now scattered and appearing unrelated to each other, it suddenly brings order where there reigned apparent disorder.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1909*

The Future of Mathematics (p. 126)

Government Printing Office. Washington, D.C. 1910

**VARIANCE****Boring, Edwin Garrigues** 1886–1968

American psychologist

McDougall's freedom was my variance. McDougall hoped that variance would always be found in specifying the laws of behavior, for there freedom might still persist. I hoped then — less wise than I think I am now (it was 31 years ago) — that science would keep pressing variance towards zero as a limit. At any rate this general fact emerges from this example: freedom, when you believe it is operating, always resides in an area of ignorance. If there is a known law, you do not have freedom.

When Is Human Behavior Predetermined

*The Scientific Monthly*, Volume 84, 1957 (p. 190)**Cooley, Charles Horton** 1864–1929

American sociologist

It is clear that one who attempts to study precisely things that are changing must have a great deal to do with measures of change.

Observations on the Measure of Change

*Journal of the American Statistical Association*, New Series, Number 21, March 1893**Crichton, Michael** 1942–

American novelist

The computer informed her that three spaces accounted for eighty-one percent of variance.

*The Terminal Man*

Chapter 6 (p. 47)

Alfred A. Knopf. New York, New York, USA. 1972

**VARIATION****Darwin, Charles Robert** 1809–82

English naturalist

...individuals of the same species often present, as is known to every one, great differences of structure, independently of variation, as in the two sexes of various animals, in the two or three castes of sterile females or workers amongst insects, and in the immature and larval states of many of the lower animals.

*In Great Books of the Western World* (Volume 49)*The Origin of Species by Means of Natural Selection*

Chapter II (p. 25)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Many laws regulate variation, some few of which can be dimly seen.... I will here only allude to what may be called correlated variation. Important changes in the embryo or larva will probably entail changes in the mature animal.... Breeders believe that long limbs are almost always accompanied by an elongated head...cats which are entirely white and have blue eyes are generally deaf.... [I]t appears that white sheep and pigs are injured by certain plants whilst dark-colored individuals escape....

*In Great Books of the Western World* (Volume 49)*The Origin of Species by Means of Natural Selection*

Chapter I (p. 11)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

But at present, after drawing up a rough copy on this subject, my conclusion is that external conditions do extremely little, except in causing mere variability. This mere variability (causing the child not closely to resemble the parent) I look at as very different from the formation of a marked variety or new species.

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 1)C. Darwin to J.D. Hooker, November 23<sup>rd</sup> [1856] (p. 445)

D. Appleton &amp; Company. New York, New York, USA. 1896

...the number of intermediate varieties, which must have formerly existed, [must] be truly enormous. Why then is not every geological formation and every stratum full of such intermediate links? Geology assuredly does not reveal any such finely graduated organic chain; and this, perhaps, is the most obvious and gravest objection which can be urged against the theory.

*In Great Books of the Western World* (Volume 49)*The Origin of Species by Means of Natural Selection*

Chapter X (p. 152)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Fieller, E. C.**

American statistician

Before the inherent variability of the test-animals was appreciated, assays were sometimes carried out on as few as three rabbits: as one pharmacologist put it, those were the happy days.

The Biological Standardization of Insulin

*Supplement to the Journal of the Royal Statistical Society*, Volume 7, Number 1, 1940–41 (p. 3)

**Harvey, William** 1578–1657

English physician

...to me the form of the egg has never appeared to have aught to do with the engenderment of the chick, but to be a mere accident; and to this conclusion I come the rather when I see the diversities in the shapes of the eggs of different hens.

In *Great Books of the Western World* (Volume 28)

*Anatomical Exercises on the Generation of Animals*

Exercise 59 (p. 462)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Hume, David** 1711–76

Scottish philosopher and historian

Nothing so like as eggs; yet no one, on account of this appearing similarity, expects the same taste and relish in all of them.

In *Great Books of the Western World* (Volume 35)

*An Enquiry Concerning Human Understanding*

Section IV, Part II (p. 462)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Huxley, Thomas Henry** 1825–95

English biologist

The student of anatomy is perfectly well aware that there is not a single organ of the human body the structure of which does not vary, to a greater or less extent, in different individuals.

*Man's Place in Nature and Other Anthropological Essays*

Chapter III (p. 185)

D. Appleton & Company. New York, New York, USA. 1896

**Leibniz, Gottfried Wilhelm** 1646–1716

German philosopher and mathematician

...there are never in nature two beings which are exactly alike...

*Philosophical Papers and Letters* (Volume 2)

Monadology, 9 (p. 1044)

The University of Chicago Press. Chicago, Illinois, USA. 1956

**Pallister, William Hales** 1877–1946

Canadian physician

What shall we say of a plot of ground  
Planted in similar seed,  
Where thousands of similar plants are found  
But one is a new type indeed;  
When dissimilar comes from similar,  
And freedom has its hour,

When the scion is not as ancestors are,  
What is this latent power?

*Poems of Science*

De Ipsa Natura, Variation (p. 213)

Playford Press. New York, New York, USA. 1931

**Peirce, Charles Sanders** 1839–1914

American scientist, logician, and philosopher

The endless variety in the world has not been created by law. It is not the nature of uniformity to originate variation, nor of law to beget circumstance.

*Collected Papers* (Volume 6)

Chapter 6, Section 2 (p. 373)

Harvard University Press. Cambridge, Massachusetts, USA. 1960

**Tippett, L. C.**

English statistician

Variation is, of course, an important characteristic of populations that individuals cannot have.... A thousand exactly similar steel bearing balls (if such were possible) would be no more than one ball multiplied one thousand times. It is the quality of variation that makes it difficult at first to carry in mind a population in its complexity.

*The World of Mathematics* (Volume 3)

Sampling and Standard Error (p. 1480)

Simon & Schuster. New York, New York, USA. 1956

**Waddington, Conrad Hal** 1905–75

British biologist and paleontologist

To suppose that the evolution of the wonderfully adapted biological mechanisms has depended only on a selection out of a haphazard set of variations, each produced by blind chance, is like suggesting that if we went on throwing bricks together into heaps, we should eventually be able to choose ourselves the most desirable house.

*The Listener*, 13 February 1952

**Wheeler, William Morton** 1865–1937

American entomologist

Since no two events are identical, every atom, molecule, organism, personality, and society is an emergent and, at least to some extent, a novelty.

Emergent Evolution of the Social

*Proceedings of the Sixth International Congress of Philosophers*,

Cambridge, Massachusetts, USA, 1926.

**Ricklefs, R.**

No biographical data available

Variation in the environment is a fact of life for all plants and animals, except perhaps for inhabitants of the abyssal depths of the sea.

*Ecology* (2<sup>nd</sup> edition) (p. 159)

Chiron Press. New York, New York, USA

American humorist and critic

**VARIETY**

**Cowper, William** 1731–1800  
English poet

Variety's the very spice of life,  
That gives it all its flavor.

*The Poetical Works of William Cowper*

The Task, Book II (The Timepiece), l. 606

John W. Lovell Company. New York, New York, USA. No date

**Feyerabend, Paul K.** 1924–94

Austrian-born American philosopher of science

Unanimity of opinion may be fitting for a church, for the frightened or greedy victims of some (ancient, or modern) myth, or for the weak and willing followers of some tyrant. Variety of opinion is necessary for objective knowledge. And a method that encourages variety is also the only method that is comparable with a humanitarian outlook.

*Against Method: Outline of an Anarchistic Theory of Knowledge*

Chapter 3 (p. 46)

Verso. London, England. 1978

**VECTOR**

**Kelvin, Lord William Thomson** 1824–1907

Scottish engineer, mathematician, and physicist

Quaternions came from Hamilton...and have been an un-mixed evil to those who have touched them in any way. Vector is a useless survival...and has never been of the slightest use to any creature.

In Jerrold E. Marsden and Anthony J. Tromba

*Vector Calculus*

Chapter 1 (p. 1)

W.H. Freeman & Company. New York, New York, USA. 2003

**Warren, Robert Penn** 1905–89

American writer and critic

What if angry vectors veer  
Round your sleeping head, and form.

There's never need to fear

Violence of the poor world's abstract storm.

*Poems*

Lullaby: Smile in Sleep

Louisiana State University Press. Baton Rouge, Louisiana, USA. 1998

**VECTOR ANALYSIS**

**Gibbs, J. Willard** 1839–1903

American mathematician

If I wished to attract the student of any of these sciences to an algebra for vectors, I should tell him that the fundamental notions of this algebra were exactly those with which he was daily conversant.... In fact, I should tell him that the notions which we use in vector analysis are

those which he who reads between the lines will meet on every page of the great masters of analysis, or of those who have probed the deepest secrets of nature.

Quaternions and the Algebra of Vectors

*Nature*, Volume 47, Number 1220, 16 March, 1893 (p. 464)

The numerical description of a vector requires three numbers, but nothing prevents us from using a single number for its symbolical designation. An algebra or analytical method in which a single letter or other expression is used to specify a vector may be called a vector algebra or vector analysis.

*Elements of Vector Analysis Arranged for the Use of Students in Physics*, 1881

**VEGETARIAN**

**Hutchison, Sir Robert Grieve** 1871–1960

English radiologist

Don't scrape your insides with much roughage as it is more likely to do harm than good. Vegetarianism is harmless enough though it is apt to fill a man with wind and self-righteousness.

Address

British Medical Association, Winnipeg, Canada, 1930

**VEGETATION**

**Carson, Rachel** 1907–64

American marine biologist and author

The earth's vegetation is a part of the web of life in which there are intimate and essential relations between plants and the earth, between plants and other plants, between plants and animals, and we must learn to respect that fine and fragile web if there is to be anything left for the next generation.

*Silent Spring*

Chapter 6 (p. 64)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1961

**White, Gilbert** 1720–93

English naturalist and cleric

Vegetation is highly worthy of our attention; and in itself is of the utmost consequence to mankind, and productive of many of the greatest comforts and elegancies of life.

*The Natural History of Selborne*

Letter XL (p. 192)

Robert M. McBride & Company. New York, New York, USA. 1925

**VENUS, TRANSIT OF**

**Harkness, William** 1837–1903

Scottish-American astronomer and surgeon

We are now on the eve of the second transit of a pair [of two transits of Venus as it passes directly between the

Earth and the Sun], after which there will be no other till the twenty-first century of our era has dawned upon the earth, and the June flowers are blooming in 2004. When the last transit season occurred the intellectual world was awakening from the slumber of ages, and that wondrous scientific activity which has led to our present advanced knowledge was just beginning. What will be the state of science when the next transit season arrives God only knows. Not even our children's children will live to take part in the astronomy of that day. As for ourselves, we have to do with the present...

Address by William Harkness

*Proceedings of the AAAS 31<sup>st</sup> Meeting* (Salem, 1883), August, 1882 (p. 77)

**Proctor, Richard A.** 1837–88

English astronomer

I think the astronomers of the first years of the twenty first century, looking back over the long transit-less period which will then have passed, will understand the anxiety of astronomers in our own time to utilize to the full whatever opportunities the coming transits may afford...; and I venture to hope...they will not be disposed to judge over harshly what some in our own day may have regarded as an excess of zeal.

*Transits of Venus, a Popular Account* (p. 231)

Longmans, Green & Company. London, England. 1882

American humorist and critic

## VERNAL EQUINOX

**Cuppy, Will** 1884–1929

American humorist and critic

Among things you might be thinking about today is the vernal equinox — it's March 21, you know. The vernal equinox is the point at which the sun apparently crosses the celestial equator toward the north, or you can say it is the moment at which this occurs, or you can simply say: "Hooray! Spring is here!" Exactly why the sun does this on March 21 is a long story.

*How to Get from January to December*

March 21 (p. 61)

Holt. New York, New York, USA. 1951

## VERNIER

**Langley, Samuel Pierpoint** 1834–1906

American astronomer and aviation pioneer

That little Vernier, on whose slender lines  
The midnight taper trembles as it shines,  
Tells through the mist where dazzled Mercury burns,  
And marks the point where Uranus returns.

*The New Astronomy*

Chapter I (p. 3)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1889

## VERTEBRATE

**Lamarck, Jean-Baptiste Pierre Antoine** 1744–1829

French biologist

...if the vertebrates differ markedly from one another in their organisation, it is because nature only started to carry out her plan in their respect with the fishes; that she made further advances with the reptiles; that she carried it still nearer perfection with the birds, and that finally she only attained the end with the most perfect mammals.

Translated by Hugh Elliot

*Zoological Philosophy: An Exposition with Regard to the Natural History of Animals*

Chapter VI (p. 81)

The University of Chicago Press. Chicago, Illinois, USA. 1984

## VIBRATION

**Tuttle, Hudson** 1836–1910

American spiritualist

There is no breath of air so gentle, no wave breaking on the sands, but the vibrations of these movements run through all space.

In Ludwig Buchner

*Force and Matter*

Chapter III (p. 16)

Trubner & Company. London, England. 1864

## VIEW

**Dewey, John** 1859–1952

American philosopher and educator

It is not truly realistic or scientific to take short views, to sacrifice the future to immediate pressure, to ignore facts and forces that are disagreeable and to magnify the enduring quality of whatever falls in with immediate desire. It is false that the evils of the situation arise from absence of ideals; they spring from wrong ideals.

*Reconstruction in Philosophy*

Chapter V (p. 130)

Beacon Press. Boston, Massachusetts, USA. 1920

## VIRUS

**Cudmore, Lorraine Lee**

American cell biologist

All living things need their instruction manual (even nonliving things like viruses) and that is all they need, carried in one very small suitcase.

*The Center of Life: A Natural History of the Cell*

The Universal Cell (p. 8)

New York Times Book Company. New York, New York, USA. 1977

**Newman, Michael**

No biographical data available

Observe this virus: think how small  
 Its arsenal, and yet how loud its call;  
 It took my cell, now takes your cell,  
 And when it leaves will take our genes as well.

*The Sciences*

Cloned Poem, 1982

**Thomas, Lewis** 1913–93

American physician and biologist

We live in a dancing matrix of viruses; they dart, rather like bees, from organism to organism, from plant to insect to mammal to me and back again, and into the sea, tugging along pieces of this genome, strings of genes from that, transplanting grafts of DNA, passing around heredity as though at a great party. They may be a mechanism for keeping new, mutant kinds of DNA in the widest circulation among us. If this is true, the odd virus disease on which we must focus so much of our attention in medicine, may be looked on as an accident, something dropped.

*The Lives of a Cell: Notes of a Biology Watcher*

The Lives of a Cell (p. 5)

The Viking Press. New York, New York, USA. 1974

## VITALITY

**Burroughs, John** 1837–1921

American naturalist and writer

Biological science has hunted the secret of vitality like a detective, and it has done some famous work; but it has not yet unraveled the mystery.

*The Breath of Life*

Chapter IV (p. 76)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1915

## VITAMIN

**Drummond, Jack Cecil** 1891–1952

English biochemist

The suggestion is now advanced that the final “-e” [of Funk’s “vitamine”] be dropped, so that the resulting word Vitamin is acceptable under the standard scheme of nomenclature adopted by the Chemical Society.... It is recommended that the somewhat cumbersome nomenclature introduced by McCollum (Fat-soluble A, Water-soluble B), be dropped, and that the substances be spoken of as Vitamin A, B, C, etc.

The Nomenclature of the So-Called Accessory Food Factors (Vitamins)

*Biochemical Journal*, Volume 14, 1920

## VOID

**Blake, William** 1757–1827

English poet, painter, and engraver

For the Chaotic Voids outside of the Stars are measured  
 by The Stars...

*The Complete Poetry and Prose of William Blake*

*Milton*

Book the Second

University of California Press. Berkeley, California, USA. 1982

**Pagels, Heinz R.** 1939–88

American physicist and science writer

The nothingness “before” the creation of the universe is the most complete void that we can imagine — no space, time, or matter existed. It is a world without place, without duration or eternity, without number — it is what mathematicians call “the empty set.” Yet this unthinkable void converts itself into the plenum of existence — a necessary consequence of physical laws. Where are these laws written into that void? What “tells” the void that is pregnant with a possible universe? It would seem that even the void is subject to law, a logic that exists prior to space and time.

*Perfect Symmetry: The Search for the Beginning of Time*

Part Three, Chapter 5 (p. 347)

Simon & Schuster. New York, New York, USA. 1985

**Thomson, James** 1700–48

Scottish poet

With what an awful, world-revolving power,  
 Were first the unwieldy planets launched along  
 The illimitable void! There  
 to remain

Amidst the flux of many  
 thousand years,

That oft has swept the toiling race of men,  
 And all their labored monuments, away.

In Eli Maor

*To Infinity and Beyond: A Cultural History of the Infinite* (p. 206)

Birkhäuser. Boston, Massachusetts, USA. 1987

## VOLATILITY

**Bowen, Norman L.** 1887–1956

Canadian geologist

To many petrologists a volatile component is exactly like a Maxwell demon; it does just what one may wish it to do.

*The Evolution of the Igneous Rocks*

Chapter XVI (p. 282)

Dover Publication, Inc., New York, New York, USA. 1956

## VOLCANO

**Anderson, Tempest** 1846–1913

British ophthalmic surgeon

Very few branches of science still remain available for the amateur of limited leisure. Electricity, Chemistry,

Bacteriology, most branches of Geology and Mineralogy, have all led to results of highest economic value, and they are cultivated by a large body of professional men subsidized by Colleges or by the Government. They are in a position to give their whole time to their work, and their results are so voluminous that to keep abreast of the literature of any single branch would occupy more than the entire leisure of most men, yet this is a necessary preliminary to any attempt at original work. I was consequently led to seek some branch of Science which gave no prospect of pecuniary return, and I determined on Vulcanology, which had the additional advantage of offering exercise in the open air, and in districts often remote and picturesque.

*Volcanic Studies in Many Lands*

Preface (p. ix)

John Murray. London, England. 1917

**Anyidoho, Kofi** 1947–

Ghanaian poet

Our Earth survives recurring furies  
of her stomach pains and quakes  
From the bleeding anger of her wounds  
volcanic ash becomes the hope  
that gives rebirth to abundance of seedtimes.

*Earthchild, with Brain Surgery: Poems*

The Homing Call of Earth

Woeli Publishing Services. 1985

### Author undetermined

Among the many wonderful works of God, none exhibits so much of awful grandeur as an active volcano.

*Wonders of Creation: A Descriptive Account of Volcanoes and Their Phenomena*

Preface

T. Nelson. London, England. 1890

For the clouds that overhang an active volcano during an eruption of its vapours are, in reality, thunderclouds highly charged with electricity. They accordingly produce what Baron Humboldt calls the volcanic storm. It includes all the most terrible of atmospheric phenomena — lightnings of extraordinary vividness; thunders that peal and reverberate as if they would rend the echoes asunder; torrents of rain that pour down upon the mountain and its neighborhood, hissing like thousands of serpents when they fall on the glowing lava-torrent; and whirlwinds that sweep the volcanic ashes round and round in vast eddies, and before whose violence no man of mortal mould is able for a moment to stand.

*Wonders of Creation: A Descriptive Account of Volcanoes and Their Phenomena*

Chapter I

T. Nelson. London, England. 1890

A volcano is a mountain that is busted and squirts out stuff.

In C. Judson Herrick

*The Evolution of Human Nature*

Chapter Five (p. 57)

University of Texas Press. Austin, Texas, USA. 1956

**Bradley, Jr., John Hodgdon** 1898–1962

American geologist

Volcanoes are personalities that resist classification.

*Autobiography of Earth*

Chapter VII (p. 211)

Coward-McCann, Inc. New York, New York, USA. 1935

**Burnet, Thomas** 1635–1715

English cleric and scientist

There is nothing certainly more terrible in all Nature than Fiery Mountains, to those that live within the view or noise of them; but it is not easier for us, who never see them nor heard them, to represent to our selves with such just and lively imaginations as shall excite us in the same passions, and the same horror as they would excite, if present to our senses.

*The Sacred Theory of the Earth* (2<sup>nd</sup> edition)

Book III, Chapter VII (p. 272)

Printed by R. Norton. London. 1691

**Cassius Dio** 150–235

Roman senator and historian

Thus day was turned into night and light into darkness. Some thought that the Giants were rising again in revolt (for at this time also many of their forms could be discerned in the smoke and, moreover, a sound as of trumpets was heard), while others believed that the whole universe was being resolved into chaos or fire.

*Dio's Roman History*

Epitome of Book LXVI (p. 211)

Heinemann. London, England. 1914–27

**de Saint-Exupéry, Antoine** 1900–44

French aviator and writer

This day, as I fly, the lava world is calm. There is something surprising in the tranquility of this deserted landscape where once a thousand volcanoes boomed to each other in their great subterranean organs and spat forth their fire. I fly over a world mute and abandoned, strewn with black glaciers.

*Wind, Sand and Stars*

Chapter 5, Section I (pp. 99–100)

Reynal & Hitchcock. New York, New York, USA. 1939

He carefully cleaned out his active volcanoes. He possessed two active volcanoes; and they were very convenient for heating his breakfast in the morning. He also had one volcano that was extinct. But, as he said, “One never knows!” So he cleaned out the extinct volcano, too. If they are well cleaned out, volcanoes burn slowly and steadily, without any eruptions. Volcanic eruptions are like fires in a chimney.

Translated by Katherine Woods

*The Little Prince*

Chapter IX (p. 32)

Harcourt, Brace & Company. New York, New York, USA. 1943

**Decker, Robert** 1927–2005

American volcanologist

**Decker, Barbara**

American science writer

Volcanoes are nature's forges and stills where the elements of the Earth, both rare and common, are moved and sorted.

*Volcanoes* (3<sup>rd</sup> edition)

Chapter 13 (p. 168)

W.H. Freeman & Company. San Francisco, California, USA. 1981

Volcanoes assail the senses. They are beautiful in repose and awesome in eruption; they hiss and roar, they smell of brimstone. Their heat warms, their fires consume; they are the homes of gods and goddesses.

Volcanoes are described in words and pictures, but they must be experienced to be known. Their roots reach deep inside the Earth; their products are scattered in the sky. Understanding volcanoes is an unconquered challenge.

*Volcanoes* (3<sup>rd</sup> edition)

Preface (p. vii)

W.H. Freeman & Company. San Francisco, California, USA. 1981

**Francis, Peter** 1944–99

English volcanologist

If mountains can have personalities, then volcanoes are schizophrenic — they have split personalities. For most of their life, they are dormant, and one tends to think of them as graceful unsweeping cones, delicately capped with snow, dreaming serenely over the cherry-blossom-draped landscapes of calendars and travel posters. Sometimes, perhaps not very often during their lifetimes, volcanoes erupt and present a wholly different character. Convolute eruption clouds tower above them, raining hot ashes on the helpless humans who live on their flanks, and glowing tongues of liquid rock ooze inexorably downwards, engulfing the flimsy structures which stand in their way.

*Volcanoes: A Planetary Perspective*

Chapter 1 (p. 13)

Penguin Books Ltd. Middlesex, England. 1976

**Guterson, David** 1956–

American writer

“Everything up here is crumbling,” he said. “Erosion city or something.”

Basalt lava,” Christine said.

“Old volcanoes.”

“Very old volcanoes.”

“Like fifty million years.”

“Even older.”

*East of the Mountains*

Chapter Two (pp. 37–38)

Harcourt Brace & Company. New York, New York, USA. 1999

**Hutton, James** 1726–97

Scottish geologist, chemist, and naturalist

A volcano is not made on purpose to frighten superstitious people into fits of piety and devotion, nor to overwhelm devoted cities with destruction; a volcano should be considered as a spiracle to the subterranean furnace, in order to prevent the unnecessary elevation of land and fatal effects of earthquakes.

*The Theory of the Earth* (Volume 1)

Part I, Section III (p. 146)

Messrs. Cadwell, Junior & Davies. London, England. 1795

**Krafft, Katia** 1942–91

French volcanologist and photographer

I would always like to be near craters, drunk with fire, gas, my face burned by the heat... It's not that I flirt with my death, but at this point I don't care about it, because there is the pleasure of approaching the beast and not knowing if he is going to catch you.

In Stanley Williams and Fen Montaigne

*Surviving Galeras*

Chapter 6 (p. 101)

Houghton Mifflin Company. Boston, Massachusetts, USA. 2001

**Lowry, Malcolm** 1909–57

English novelist

...it was in eruption, yet no, it wasn't the volcano, the world itself was bursting, bursting into black spouts of villages catapulted into space with himself falling through it all, through the blazing of ten million bodies, falling...

*Under the Volcano*

Chapter XII (p. 375)

Penguin Books, USA. New York, New York, USA. 1971

**McBirney, Alexander R.** 1924–

American geologist and founder of Center for Volcanology

The progress that volcanology has made since ancient scholars explained the lavas of Vesuvius and Etna as products of combustion and subterranean storms is more apparent than real. The sad fact is that we desperately need a coherent and demonstrable theory on volcanism. Why do volcanoes erupt? The only honest answer is that we do not have the vaguest idea.

In Katia Krafft

*Volcanoes: Earths Awakening* (p. 4)

Hamond World Atlas Corporation. 1916

**Michener, James A.** 1907?–97

American novelist

For nearly forty million years the first island struggled in the bosom of the sea, endeavoring to be born as

observable land. For nearly forty million submerged years its subterranean volcano hissed and...spewed forth rock, but it remained nevertheless hidden beneath the dark waters of the restless sea...a small climbing pretentious thing of no consequence.

*Hawaii*

Chapter I (p. 5)

Random House, Inc. New York, New York, USA. 1959

**Miller, Hugh** 1802–56

Scottish geologist and theologian

The billows fall back in boiling eddies; the solid strata are upheaved into a flat dome, crusted with corals and shells; it cracks, it severs, a dark gulf yawns suddenly in the midst; a dense strongly variegated cloud of mingled smoke and steam arises black as midnight in its central volumes, but checquered, where the boiling waves hiss at its edge, with wreaths of white....

*Sketch-Book of Popular Geology*

Lecture Third (p. 109)

William P. Nimmo & Company. Edinburgh, Scotland. 1880

And over the roar of waves or the rush of tides we may hear the growling of a subterranean thunder, that now dies away in low deep mutterings, and no, ere some fresh earthquake-shock tern — pests the sea, bellows wildly from the abyss.

*Sketch-Book of Popular Geology*

Lecture Third (pp. 109)

William P. Nimmo & Company. Edinburgh, Scotland. 1880

**Muir, John** 1838–1914

American naturalist

Like gigantic geysers, spouting hot stone instead of hot water, they work and sleep, and we have no sure means of knowing whether they are only sleeping or dead.

*Steep Trails*

Chapter III (p. 56)

Norman S. Berg, Publisher. Dunwoody, Georgia, USA. 1970

**Ovid** 43 BCE–17 AD

Roman poet

Near Troezen, ruled by Pittheus, there is a hill, high and treeless, which once was a perfectly level plane, but now a hill; for (horrible to relate) the wild forces of the winds, shut up in dark regions underground, seeking an outlet for their flowing and striving vainly to obtain a freer space, since there was no chink in all their prison through which their breath could go, puffed out and stretched the ground, just as when one inflates a bladder with his breath, or the skin of a horned goat. That swelling in the ground remained, has still the appearance of a high hill, and has hardened as the years went by.

Translated by Frank Justus Miller

*Metamorphoses* (Volume 2)

Chapter XV (pp. 385–387)

William Heinemann. London, England. 1916

**Perry, Lilla Cabot** 1848–1933

American poet

Forgive me not! Hate me and I shall know  
Some of love's fire still burns in your breast!  
Forgiveness finds its home in hearts at rest,  
On dead volcanoes only lies the snow.

*Ode to Volcanoes and the Living Earth*

**Scrope, George Poulett** 1797–1876

English geologist and political economist

The action of a Volcano, in its simplest and most general form, may be described as the rise of earthly substances in a liquefied state and at a high temperature, from beneath the outer crust of the earth; accompanied by prodigious volumes of elastic fluids, which, appearing to be evolved from the interior of the mass, burst upwards with violent successive detonations, scattering into the air, to a considerable height, numerous fragments, still in a liquid state, of the lava, through which they tear their way, together with shattered blocks of the solid pre-existing rocks, which obstructed their expansion.

*Considerations on Volcanoes*

Chapter I (pp. 1–2)

W. Phillips & George Yarp. London, England. 1825

**Shelley, Percy Bysshe** 1792–1822

English poet

Nature's most secret steps  
He like her shadow has pursued, where'er  
The red volcano overcanopies  
Its fields of snow and pinnacles of ice  
With burning smoke.

*The Complete Poetical Works of Percy Bysshe Shelley*

Alastor

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

**Shindler, Tom**

Musician

Those lovely white snow peaks, those rulers of mountains,  
Who knows what secrets they keep?

But when they look like forever, just stop and remember

The Giants are only asleep.

*The Giants Are Only Asleep*

Source undetermined

**Tazieff, Haroun** 1914–98

Polish-born French volcanologist

In all ages volcanoes have frightened, fascinated and attracted man, because what they hold is at once terrifying, splendid, and mysterious.

*Craters of Fire*

Chapter XVIII (p. 209)

Hamish Hamilton. London, England. 1952

**Tennyson, Alfred (Lord)** 1809–92

English poet

Fires that shook me once, but now to silent ashes fallen away.

Cold upon the dead volcano sleeps the gleam of dying day.

*Alfred Tennyson's Poetical Works*

Locksley Hall, Sixty Years After, Stanza 21

Oxford University Press, Inc. London, England. 1953

Had the fierce ashes of some fiery Peak  
Been hurled so high they ranged round the World,  
For day by day through many a blood-red eve  
The wrathful sunset glared.

*Alfred Tennyson's Poetical Works*

St. Telemachus

Oxford University Press, Inc. London, England. 1953

### Thompson, Dick

American science journalist

Volcanoes are magnificent primordial beasts. They are geology's living dinosaurs.

*Volcano Cowboys: The Rocky Evolution of a Dangerous Science*

Introduction (p. 1)

St. Martin's Press. New York, New York, USA. 2000

### Twain, Mark (Samuel Langhorne

Clemens) 1835–1910

American writer and humorist

Here was a yawning pit upon whose floor the armies of Russia could camp, and have room to spare...over a mile square of it was ringed and streaked and striped with a thousand branching streams of liquid and gorgeously brilliant fire! Occasionally the molten lava flowing under the superincumbent crust broke through — split a dazzling streak, from five hundred to a thousand feet long, like a sudden flash of lightning, and then acre after acre of the cold lava parted into fragments, turned up edgewise like cakes of ice when a great river breaks up, plunged downwards, and were swallowed in the crimson cauldron.

*Roughing It* (Volume 2)

Chapter XXXIII (pp. 296, 298, 299)

Harper & Brothers Publishers. New York, New York, USA. 1899

### Virgil 70 BCE–19 BCE

Roman epic, didactic, and idyllic poet

There is an isle hard by Sicania's coast.  
That rises, and Aeolian Lipare,  
With smoking rocks precipitous, where beneath  
Thunders a cave, and Aetna's vaults, scooped out  
By Cyclopean forges; the strong strokes  
Of anvils to the ear bring echoing groans;  
Hisses the steel ore through its hollow depths,  
And from its furnaces pants fire — the home  
of Vulcan, and Vulcania the land's name.

In *Great Books of the Western World* (Volume 13)

*The Aeneid*

Book VIII, l. 416–424 (p. 270)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

## VOLCANOLOGIST

### Tazieff, Haroun 1914–98

Polish-born French volcanologist

Studying dormant volcanoes is of no more profit to the volcanologist who is attempting to make forecasts than is the study of healthy people for the practicing physician.

In Stanley Williams and Fen Montaigne

*Surviving Galeras*

Chapter 6 (p. 101)

Houghton Mifflin Company. Boston, Massachusetts, USA. 2001

### Twain, Mark (Samuel Langhorne

Clemens) 1835–1910

American writer and humorist

I found the reddest-faced set of men I almost ever saw. In the strong light every countenance glowed like red-hot iron, every shoulder was suffused with crimson and shaded rearward into dingy, shapeless obscurity! The place below looked like the infernal regions and these men like half-cooked devils just come up on furlough. The smell of sulphur is strong, but not unpleasant to a sinner.

*Mark Twain's Letters from Hawaii*

Volcano House, June 3<sup>rd</sup> — Midnight (p. 294)

The University Press of Hawaii. Honolulu, Hawaii, USA. 1975

## VOLUME

### Avogadro, Amedeo 1776–1856

Italian chemist

It must then be admitted that very simple relations also exist between the volumes of gaseous substances and the numbers of simple or compound molecules which form them. The first hypothesis to present itself in this connection, and apparently even the only admissible one, is the supposition that the number of integral molecules in any gases is always the same for equal volumes, or always proportional to the volumes.

Essay on a Manner of Determining the Relative Masses of the Elementary Molecules of Bodies, and the Proportions in Which They Enter into These Compounds

*Journal de Physique de Chimie d'histoire Naturelle et des Artes,*

Volume 73, 1811

### Shenstone, W. A. 1850–1908

American science teacher and silica glass-blowing inventor

Avogadro's hypothesis affords a bridge by which we can pass from large volumes of gases, which we can handle, to the minuter molecules, which individually are invisible and intangible.

In Joseph William Mellor

*Mellor's Modern Inorganic Chemistry*

Chapter 5 (p. 73)

Longmans. London, England. 1967

## W

### WARNING

**Churchill, Winston Spencer** 1882–1965  
British prime minister, statesman, soldier, and author

The era of procrastination, of half-measures, of soothing and baffling expedients, of delays, is coming to its close. In its place we are entering a period of consequences.

In Al Gore

*An Inconvenient Truth: The Planetary Emergency of Global Warming and What We Can Do About It* (pp. 101–102)

From a 1936 speech to citizens of Great Britain  
Rodale. New York, New York, USA. 2006

### WATER

**Abbey, Edward** 1927–89  
American environmentalist and nature writer

Water, water, water. ... There is no shortage of water in the desert but [in] exactly the right amount, a perfect ratio of water to rock, of water to sand, insuring that wide, free, open, generous spacing among plants and animals, homes and towns and cities, which makes the arid West so different from any other part of the nation. There is no lack of water here, unless you try to establish a city where no city should be.

*Desert Solitaire*

Water (pp. 144–145)

Ballantine Books. New York, New York, USA. 1968

**Bangs, Richard** 1950–  
Adventure writer

...of all our planet's activities — geological movements, the reproduction and decay of biota, and even the disruptive propensities of certain species (elephants and humans come to mind) — no force is greater than the hydrologic cycle.

*Rivergods: Exploring the World's Great Wild Rivers*

Introduction (p. xiii)

Sierra Club Books. San Francisco, California, USA. 1958

**Bradley, Jr., John Hodgdon** 1898–1962  
American geologist

The history of the land has been written very largely in water.

*Autobiography of Earth*

Chapter III (p. 72)

Coward-McCann, Inc. New York, New York, USA. 1935

**Buckley, Arabella B.** 1840–1929  
English naturalist and science writer

We are going to spend an hour today in following a drop of water on its travels. If I dip my finger in this basin of water and lift it up again, I bring with it a small glistening drop out of the water below and hold it before you. Tell me, have you any idea where this drop has been? What changes it has undergone, and what work it has been doing during all the long ages water has lain on the face of the earth?

*The Fairy-Land of Science*

Lecture IV (pp. 95–96)

D. Appleton & Company. New York, New York, USA. 1899

**Burke, Edmund** 1729–97  
English statesman and philosopher

Water, when simple is insipid, inodorous, colorless, and smooth; it is found, when not cold, to be a great resolver of spasms, and lubricator of the fibers; this power it probably owes to its smoothness.

*On the Sublime and the Beautiful*

Part IV, Section XXI (p. 166)

Cassell & Company Ltd. London, England. 1887

**Butler, Samuel** 1612–80  
English novelist, essayist, and critic

Water is frozen steam, and ice frozen water.

*The Note-Books of Samuel Butler* (Volume 1)

1874–1883 (p. 74)

University Press of America, Inc. Lanham, Maryland, USA. 1984

**Coleridge, Samuel Taylor** 1772–1834  
English lyrical poet, critic, and philosopher

Water, water, everywhere,

And all the boards did shrink;

Water, water, everywhere,

Nor any drop to drink.

*The Rime of the Ancient Mariner and Other Poems*

Rime of the Ancient Mariner, Part II, l. 114–118

Little Leather Library Corporation. New York, New York, USA. 1915

**da Vinci, Leonardo** 1452–1519  
Italian High Renaissance painter and inventor

The water wears away the mountains and fills up the valleys, and if it had the power it would reduce the earth to a perfect sphere.

Translated by Edward MacCurdy

*The Notebooks of Leonardo da Vinci* (Volume 1)

Physical Geography (p. 317)

George Braziller. New York, New York, USA. 1958

If a drop of water falls into the sea when it is calm, it must of necessity be that the whole surface of the sea is raised imperceptibly, seeing that water cannot be compressed within itself, like air.

*Leonardo da Vinci's Note Books* (p. 101)

Duckworth & Company. London, England. 1906

**Davy, Sir Humphry** 1778–1829  
English chemist

...I have come to [the] conclusion...that water is the basis of all the gases, and that oxygen, hydrogen, nitrogen, ammonia, nitrous acid, &c., are merely electrical forms of water...

*Fragmentary Remains*

Chapter IV

Letter to T.A. Knight (p. 129)

John Churchill. London, England. 1858

**de Saint-Exupéry, Antoine** 1900–44

French aviator and writer

Water, thou hast no taste, no color, no odor; canst not be defined, art relished while ever mysterious. Not necessary to life, but rather life itself, thou fillest us with a gratification that exceeds the delight of the senses.

*Wind, Sand and Stars*

Chapter 8 (p. 234)

Reynal & Hitchcock. New York, New York, USA. 1939

**Earle, Sylvia Alice** 1935–

American oceanographer and education advocate

It doesn't matter where on Earth you live, everyone is utterly dependent on the existence of that lovely, living saltwater soup. There's plenty of water in the universe without life, but nowhere is there life without water.

*Sea Change: A Message of the Oceans*

Introduction (p. xii)

G.P. Putnam's Sons. New York, New York, USA. 1995

**Eiseley, Loren C.** 1907–77

American anthropologist, educator, and author

If there is magic on this planet, it is contained in water.

*The Immense Journey*

The Flow of the River (p. 15)

Vintage Books. New York, New York, USA. 1957

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

Water...transports vast boulders of rock in its iceberg a thousand miles. But its far greater power depends on its talent of becoming little, and entering the smallest holes and pores. By this agency, carrying in solution elements needful to every plant, the vegetable world exists.

*The Complete Works of Ralph Waldo Emerson* (Volume 7)

Society and Solitude

Chapter VI (p. 146)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

**Esar, Evan** 1899–1995

American humorist

A beautiful blonde is chemically three-fourths water, but what lovely surface tension.

*20,000 Quips and Quotes* (p. 127)

Doubleday & Company, Inc. Garden City, New York, USA. 1968

**Franks, Felix**

English chemist and water researcher

Of all known liquids, water is probably the most studied and least understood. ...

*Water: A Comprehensive Treatise*

Introduction — Water, the Unique Chemical (p. 18)

Plenum Press. New York, New York, USA. 1972–82

**Herbert, Sir Alan** 1890–1971

English novelist, playwright, poet, and politician

The rain is plenteous but, by God's decree,

Only a third is meant for you and me;

Two-thirds are taken by the growing things

Or vanish Heavenward on vapour's wings:

Nor does it mathematically fall

With social equity on one and all.

The population's habit is to grow

In every region where the water's low:

Nature is blamed for failings that are Man's,

And well-run rivers have to change their plans.

*Water*

Source undetermined

**Hugo, Victor** 1802–85

French author, lyric poet, and dramatist

The water is supple because it is incompressible. It glides away from under the effort. Borne down on one side, it escapes on the other. It is thus that the water becomes a wave. The wave is its liberty.

Translated by Isabel F. Hapgood

*The Toilers of the Sea*

Part II, Book Third, Chapter II (p. 402)

The Heritage Press. New York, New York, USA. 1961

**Huxley, Thomas Henry** 1825–95

English biologist

...we live in the hope and the faith that, by the advance of molecular physics, we shall by and by be able to see our way as clearly from the constituents of water to the properties of water, as we are now able to deduce the operations of a watch from the form of its parts and the manner in which they are put together.

The Value of Animal and Plant Species for Agriculture, Medicine, and Industry (p. 62)

Smithsonian Institution Press. Washington, D.C. 1985

### **Overstreet, Harry Allen** 1875–1970

American social psychologist and civic awareness advocate

Water, however, is not simply the sum of hydrogen and oxygen. It is something qualitatively new, something that cannot be found by the most searching examination of the gas, hydrogen, nor of the gas, oxygen. No amount of previous knowledge of the atomic structure of hydrogen and oxygen could, apparently, give a knowledge of this peculiar fluid that results from combining the two gasses.

*The Enduring Quest*

Chapter IV (p. 59)

W.W. Norton & Company, Inc. New York, New York, USA. 1931

### **Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

A drop of water is not immortal; it can be resolved into oxygen and hydrogen. If, therefore, a drop of water were to maintain that it had a quality of aqueousness which would survive its dissolution we should be inclined to be skeptical.

*What I Believe*

Chapter I (p. 6)

E.P. Dutton & Company. New York, New York, USA. 1925

### **Snicket, Lemony (Daniel Handler)** 1970–

American writer

After a great deal of time examining oceans, investigating rainstorms, and staring very hard at several drinking fountains, the scientists of the world developed a theory regarding how water is distributed around our planet, which they have named the “water cycle.” The water cycle consists of three key phenomena — evaporation, precipitation, and collection — and all of them are equally boring.

*A Series of Unfortunate Events. Book the Eleventh: The Grim Grotto*

HarperCollins Publishers. New York, New York, USA. 2004

### **Strauss, Maurice B.**

In the beginning the abundance of the sea

Led to profligacy.

The ascent through the brackish waters of the estuary

To the salt-poor lakes and ponds

Made immense demands

Upon the glands.

Salt must be saved, water is free.

In the never-ending struggle for security,

Man’s chiefest enemy.

According to the bard of Stratford on the Avon,

The banks were climbed and life established on dry land

Making the incredible demand

Upon another gland

That water, too, be saved.

Salt and Water

Chapter XII (p. 238)

Little, Brown & Company. Boston, Massachusetts, USA. 1957

### **Maury, Matthew Fontaine** 1806–73

American hydrographer and naval officer

The tooth of running water is very sharp.

*The Physical Geography of the Sea*

Chapter XIV (p. 321)

Harper & Brothers. New York, New York, USA. 1855

### **van Helmont, Jean-Baptista** 1579–1644

Flemish chemist

That all plants immediately and substantially stem from the element water alone I have learnt from the following experiment. I took an earthen vessel in which I placed two hundred pounds of earth dried in an oven, and watered with rain water. I planted in it the stem of a willow tree weighing five pounds. Five years later it had developed a tree weighing one hundred and sixty-nine pounds and three ounces. Nothing but rain (or distilled water) had been added. The large vessel was placed in earth and covered by an iron lid with a tin-surface that was pierced with many holes. I have not weighed the leaves that came off in the four autumn seasons. Finally I dried the earth in the vessel again and found the same two hundred pounds of it diminished by about two ounces. Hence one hundred and sixty-four pounds of wood, bark and roots had come up from water alone.

In William H. Brock  
*The Norton History of Chemistry*  
 Introduction (p. xxi)  
 W.W. Norton & Company, Inc. New York, New York, USA. 1933

**Walton, Izaak** 1593–1683  
 English writer

And an ingenious Spaniard says that rivers and the inhabitants of the watery element were made for wise men to contemplate, and fools to pass by without consideration...for you may note, that the waters are Nature's storehouse, in which she locks up her wonders.

*The Complete Angler*  
 First Day, Chapter I (p. 31, 34)  
 T.N. Foulis. London, England. 1913

## WAVE

**Crew, Henry**  
 American physicist

To the mathematician the problems of wave-motion offer a field for his highest power of analysis; to the physicist they suggest experiments demanding all the skill at his disposal; to the engineer and to those who go down to the sea in ships these problems are matters of life and death, while to the poet and the artist they are “the sea dancing to its own music.”

In Lloyd William Taylor  
*Physics: The Pioneer Science* (Volume 1)  
 Chapter 24 (p. 327)  
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1941

**Thomson, Sir George Paget** 1892–1975  
 British physicist

The wind catches the filaments and the spider is carried where the filaments take it. In much the same way the point which represents the energy of the electron is guided by the waves which surround it, and extend possibly to an indefinite distance in all directions. If the waves pass over an obstacle like an atom their direction is modified and the modification is transmitted back to the electron and enables it to guide its path in accordance with the distribution of matter which it finds around it.

*The Atom*  
 Chapter VII (p. 110)  
 Oxford University Press, Inc. London, England. 1956

## WAVE MECHANICS

**Eddington, Sir Arthur Stanley** 1882–1944  
 English astronomer, physicist, and mathematician

Schrödinger's wave-mechanics is not a physical theory, but a dodge — and a very good dodge too.

*The Nature of the Physical World*

Chapter X (p. 219)  
 The Macmillan Company. New York, New York, USA. 1930

**Gamow, George** 1904–68  
 Russian-born American physicist

In wave mechanics there are no impenetrable barriers, ... as the British physicist R.H. Fowler [also] put it after my lecture on that subject at the Royal Society of London...

*My World Line: An Informal Autobiography*  
 Chapter 3 (p. 60)  
 The Viking Press. New York, New York, USA. 1979

## WAVE-PARTICLE DUALITY

**Glashow, Sheldon L.** 1932–  
 American physicist

One quantum notion that mystifies the novice is the wave-particle duality. Does light consist of a beam of particles or is it a wave phenomenon? the question is hundreds of years old. Newton thought light was probably a stream of particles. Maxwell seemed to answer the problem decisively by showing light to be an electromagnetic wave. Yet Einstein in 1905, demonstrated that under some circumstances light behaves as if it were a beam of discrete particles, which are now called photons.

*Interactions: A Journey Through the Mind of a Particle Physicist and the Matter of This World*  
 Chapter 3 (p. 51)  
 Warner Books. New York, New York, USA. 1988

## WEAPON

**Amis, Martin** 1949–  
 English writer

Nuclear weapons...are remarkable artifacts. They derive their power from an equation: when a pound of uranium-235 is fissioned, the “liberated mass” within its 1,132,000,000,000,000,000,000,000,000 atoms is multiplied by the speed of light squared — with the explosive force, that is to say, of 186,000 miles per second times 186,000 miles per second. Their size, their power, has no theoretical limit. They are biblical in their anger.

*Einstein's Monsters*  
 Introduction: Thinkability (p. 8)  
 Jonathan Cape Ltd. London, England. 1987

## WEATHER

**Hopfield, John** 1933–  
 American physicist and neural scientist

You might understand how a few gas molecules interact with one another, but you wouldn't imagine that putting millions of them together would get you weather.

In Ti Sanders

*Weather: A User's Guide to the Atmosphere*

Part One, Chapter I (p. 7)  
The Macmillan Company. New York, New York, USA. 1936

**Thoreau, Henry David** 1817–62  
American essayist, poet, and practical philosopher

Who watched the forms of the clouds over this part of the earth a thousand years ago? Who watches them to-day?

*The Journal of Henry David Thoreau* (Volume 13)  
December 13. P.M. (p. 23)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1906

## WEED

### Author undetermined

Weeds are unuseful flowers.

In John Burroughs  
*Birds and Bees Essays*  
Introduction (p. 6)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1914

**Bailey, William Whitman** 1843–1914  
American botanist

Weeds are active enemies, not to be despised so much as hated. They are cut down or uprooted whenever found. So great a pest are they that man has taken them for a type of rank, rapid and useless growth. Yet, when curiosity leads us to observe them, we find beauty even in the meanest.

*The American Botanist*  
Volume I, Number 4, October 1901 (p. 50)

**Emerson, Ralph Waldo** 1803–82  
American lecturer, poet, and essayist

What is a weed? A plant whose virtues have not yet been discovered...

*The Complete Works of Ralph Waldo Emerson* (Volume 11)  
Miscellanies  
Chapter XXX (p. 512)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

**Larcom, Lucy** 1824–93  
American writer

I like these plants that you call weeds  
Sedge, hardhack, mullein, yarrow, —  
That knit their roots and sow their seeds  
Where any grassy wheel-track leads  
Through country by-ways narrow.

I Like These Plants that You Call Weeds: Historicizing American

Women's Nature Writing  
*Nineteenth Century*, Volume 58, June 2003

**Shakespeare, William** 1564–1616  
English poet, playwright, and actor

Now 'tis the spring and weeds are shallow rooted;  
Suffer them now and they'll outgrow the garden  
And choke the herbs for lack of husbandry.

Act III, Scene I  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

## WEIGHT

**da Vinci, Leonardo** 1452–1519  
Italian High Renaissance painter and inventor

Weight, pressure, and accidental movement together with resistance are the four accidental powers in which all the visible works of mortals have their existence and their end.

*Leonardo da Vinci's Note Books* (p. 55)  
Duckworth & Company. London, England. 1906

## WEIGHTLESSNESS

**Verne, Jules** 1828–1905  
French novelist

Fancy has depicted men without reflection, others without shadow. But here reality, by the neutralizations of attractive forces, produced men in whom nothing had any weight, and who weighed nothing themselves.

*From the Earth to the Moon, and Round the Moon*  
Chapter VIII (p. 228)  
A.L. Burt Company. New York, New York, USA. 1890

## WETLANDS

**Beebe, William** 1877–1962  
American ornithologist

The marsh, to him who enters it in a receptive mood, holds, besides mosquitoes and stagnation, — melody, the mystery of unknown waters, and the sweetness of Nature undisturbed by man.

*The Log of the Sun*  
Night Music of the Swamp (p. 172)  
Henry Holt and Company. New York, New York, USA. 1906

**Lanier, Sidney** 1842–81  
American writer and musician

Ye marshes, how candid and simple and nothing-with-holding and free  
Ye publish yourselves to the sky and offer yourselves to the sea!

In Goodridge Bliss Roberts  
*Younger American Poets, 1830–1890*  
 The Marshes of Glynn  
 Griffith, Farran, Okeden & Welsh. London, England. 1891

## WHIRLPOOL

**Poe, Edgar Allan** 1809–49  
 American short story writer

I became possessed with the keenest curiosity about the whirl itself. I positively felt a wish to explore its depths, even at the sacrifice I was going to make; and my principal grief was that I should never be able to tell my old companions on shore about the mysteries I should see.

In H. Beaver (ed.)  
*The Science Fiction of Edgar Allan Poe*  
 A Descent into the Maelstrom (p. 83)  
 Penguin Books. Hammondsworth, England. 1976

## WHITE DWARF

**Updike, John** 1932–  
 American novelist, short story writer, and poet

You offer cheer to tiny Man  
 ‘Mid galaxies Gargantuan  
 A little pill in endless night,  
 An antidote to cosmic fright.

White Dwarf  
 Source undetermined

## WILDERNESS

**Abbey, Edward** 1927–89  
 American environmentalist and nature writer

We would guard and defend and save it [wilderness] as a place for all who wish to discover the nearly lost pleasures of adventure, adventure not only in the physical sense, but also mental, spiritual, moral, aesthetic, and intellectual adventure. A place for the free.

*The Journey Home: Some Words in Defense of the American West*  
 Chapter 8 (p. 88)  
 E.P. Dutton & Company. New York, New York, USA. 1977

The idea of wilderness needs no defense. It only needs more defenders.

*The Journey Home: Some Words in Defense of the American West*  
 Chapter 21 (p. 223)  
 E.P. Dutton & Company. New York, New York, USA. 1977

On this great river [the Colorado River] one could glide forever — and here we discover the definition of bliss, salvation, Heaven, all the old Mediterranean dreams: a journey from wonder to wonder, drifting through eternity into ever deeper, always changing grandeur, through beauty continually surpassing itself: the ultimate Homeric voyage.

*The Journey Home: Some Words in Defense of the American West*  
 Chapter 17 (p. 201)  
 E.P. Dutton & Company. New York, New York, USA. 1977

Now I can do no more than offer one final prayer to the young, to the bold, to the angry, to the questioning, to the lost. Beyond the wall of the unreal city, beyond the security fences topped with barbed wire and razor wire, beyond the asphalt belting of the superhighways, beyond the cemented banksides of our temporarily stopped and mutilated rivers, beyond the rage of lies that poisons the air, there is another world waiting for you. It is the old true world of the deserts, the mountains, the forests, the islands, the shores, the open plains. Go there. Be there. Walk gently and quietly deep within it.

*Beyond the Wall*  
 Author's Introduction (p. xvi)  
 Ballantine Books. New York, New York, USA. 1968

Come on in. The earth, like the sun, like the air, belongs to everyone — and to no one.

*The Journey Home: Some Words in Defense of the American West*  
 Chapter 8 (p. 88)  
 E.P. Dutton & Company. New York, New York, USA. 1977

But the love of wilderness is more than a hunger for what is always beyond reach; it is also an expression of loyalty to the earth, the earth which bore us and sustains us, the only home we shall ever know, the only paradise we ever need — if only we had the eyes to see.

*Desert Solitaire*  
 Down the River (p. 190)  
 Ballantine Books. New York, New York, USA. 1968

How difficult to imagine this place without a human presence; how necessary. I am almost prepared to believe that this sweet virginal primitive land will be grateful for my departure and the absence of the tourists, will breathe metaphorically a collective sigh of relief — like a whisper of wind — when we are all and finally gone and the place and its creations can return to their ancient procedures unobserved and undisturbed by the busy, anxious, brooding consciousness of man. Grateful for our departure? One more expression of human vanity. The finest quality of this stone, these plants and animals, this desert landscape is the indifference manifest to our presence, our absence, our coming, our staying or our going. Whether we live or die is a matter of absolutely no concern whatsoever to the desert.

*Desert Solitaire*  
 Bedrock and Paradox (p. 300)  
 Ballantine Books. New York, New York, USA. 1968

It is my fear that if we allow the freedom of the hills, and the last of the wilderness to be taken from us, then the very idea of freedom may die with it.

*Down the River*  
 Part II, Chapter 8 (p. 121)  
 E.P. Dutton & Company. New York, New York, USA. 1982

**Berry, Wendell** 1934–  
American essayist, poet, critic, and farmer

There does exist a possibility that we can live more or less in harmony with our native wilderness; I am betting my life that such a harmony is possible. But I do not believe that it can be achieved simply or easily or that it can ever be perfect, and I am certain that it can never be made, once and for all, but it is the forever unfinished lifework of our species.

*The Land of Harmony*  
Preserving Wilderness (pp. 138–139)  
Five Seasons Press. Hereford, England. 1987

This wilderness, the universe, is somewhat hospitable to us, but it is also absolutely dangerous to us (it is going to kill us, sooner or later), and we are absolutely dependent upon it.

*The Land of Harmony*  
Preserving Wilderness (pp. 138–139)  
Five Seasons Press. Hereford, England. 1987

We live in a wilderness, in which we and our works occupy a tiny space and play a tiny part. We exist under its dispensation and by its tolerance.

*The Land of Harmony*  
Preserving Wilderness (pp. 138–139)  
Five Seasons Press. Hereford, England. 1987

**Brower, David** 1912–2000  
American environmentalist

My feeling is we need to save wilderness for its own sake, for the mysterious and complex knowledge it has within it. Thoreau was right when he said, “In wilderness is the preservation of the world.”

In Jonathan White  
*Talking on the Water*  
Sierra Club Books. San Francisco, California, USA. 1994

...we need boundaries around cities, not around wilderness.

*Let the Mountains Talk, Let the Rivers Run*  
Chapter 5 (p. 43)  
HarperCollins Publishers. New York, New York, USA. 1995

**Carr, William H.** 1902–85  
American desert environmentalist and writer

I am thankful for the wild spaces that are yet untouched. May they not decrease in size and number!

*The Stir of Nature*  
Chapter Eight (p. 116)  
Oxford University Press, Inc. New York, New York, USA. 1930

**Gerould, Katherine Fullerton** 1879–1944  
American writer

The wilderness is a good place to cry in; the echoes are magnificent.

*Modes and Morals*

The Extirpation of Culture (p. 67)  
Charles Scribner's Sons. New York, New York, USA. 1920

**Gould, Stephen Jay** 1941–2002  
American paleontologist and evolutionary biologist

I can easily understand why, for most naturalists, the highest form of beauty, inspiration, and moral value might be imputed to increasingly rare patches of true wilderness — that is, to parcels of nature devoid of any human presence, either in current person or by previous incursion.

*Leonardo's Mountain of Clams and the Diet of Worms*  
Introduction (p. 1)  
Harmon Brown. New York, New York, USA. 1998

**Hopkins, Frederick Gowland** 1844–89  
English biochemist

What would the world be, once bereft  
Of wet and of wilderness? Let them be left,  
O let them be left, wilderness and wet;  
Long live the weeds and the wilderness yet.

In W.H. Gardner and N.H. MacKenzie (eds.)  
*The Poems of Gerard Manley Hopkins*  
Inversnaid, Stanza 4  
Oxford University Press, Inc. London, England. 1930

**Krutch, Joseph Wood** 1893–1970  
American naturalist, conservationist, and writer

The Wilderness and the idea of wilderness is one of the permanent homes of the human spirit.

*Grand Canyon: Today and All Its Yesterday.*  
William Sloane Associates, Publishers. New York, New York, USA. 1958

**Lindbergh, Charles A.** 1902–74  
American aviator

In wilderness I sense the miracle of life, and behind it our scientific accomplishments fade to trivia.

The Wisdom of Wilderness  
*Life*, Volume 63, Number 25, December 22, 1967 (p. 10)

**Thoreau, Henry David** 1817–62  
American essayist, poet, and practical philosopher

In wildness is the preservation of the world.  
Walking  
*The Atlantic Monthly*, Volume 9, Number 56, June 1862 (p. 665)

## WILDLIFE

**Borland, Hal** 1900–78  
American writer

The newcomer to the country will find the first signs of “wild life” in his own house. Even before he explores the dooryard he can sharpen his eyes indoors. He may be surprised at the outsiders who want to share that house with him.

*Beyond Your Doorstep: A Handbook to the Country*  
Chapter 1 (p. 1)  
Alfred A. Knopf. New York, New York, USA. 1962

**Hornaday, William Temple** 1854–1937  
American naturalist

And yet the game of North America does not belong wholly and exclusively to the men who kill! The other ninety-seven per cent of the People have vested rights in it.... Posterity has claims upon it that no man can ignore.... A continent without wild life is like a forest with no leaves on the trees.

*Our Vanishing Wild Life*  
Preface (p. ix)

C. Scribner's Sons. New York, New York, USA. 1913

**Myers, Norman** 1934–  
British environmentalist

Without knowing it, we utilize hundreds of products each day that owe their origin to wild animals and plants. Indeed our welfare is intimately tied up with the welfare of wildlife. Well may conservationists proclaim that by saving the lives of wild species, we may be saving our own.

*A Wealth of Wild Species: Storehouse for Human Welfare*  
Wild Species (p. 3)  
Westview Press. Boulder, Colorado. 1983

**Prince Philip (Philip Mountbatten), Duke of Edinburgh** 1921–  
British naturalist

Miners used to take a canary around the coal mines to warn them when the air was so foul that the canary died. This is the importance of wildlife to us; because if wildlife dies it is our turn next. If any part of the life of this planet is threatened, all is threatened. If you say "not interested" to wildlife conservation then you are signing your own death warrant.

*The Times (London)*, May 17, 1988

## WIND

**Conrad, Joseph** 1857–1924  
Polish-born English novelist

It was something formidable and swift, like the sudden smashing of a Vial of Wrath. It seemed to explode all around the ship with an overpowering concussion and a rush of great waters, as if an immense dam had been blown up to windward. It destroyed at once the organised life of the ship by its shattering effect. In an instant the men lost touch of each other. This is the disintegrating power of a great wind. It isolates one from one's kind. An earthquake, a landslip, an avalanche, overtake a man incidentally, as it were — without passion. A furious

gale attacks him like a personal enemy, tries to grasp his limbs, fastens upon his mind, seeks to rout the very spirit out of him.

*Typhoon*

Chapter X (p. 77)

Doubleday, Page & Company. Garden City, New York, USA. 1920

**Longfellow, Henry Wadsworth** 1807–82  
American poet

Through woods and mountain passes  
The winds, like anthems, roll.

*The Poetical Works of Henry Wadsworth Longfellow*

Midnight Mass for the Dying Year

Houghton Mifflin Company. Boston, Massachusetts, USA. 1883

**Maury, Matthew Fontaine** 1806–73  
American hydrographer and naval officer

Properly to appreciate the various offices which the winds and the waves perform, we must regard nature as a whole, for all the departments thereof are intimately connected. If we attempt to study in one of them, we often find ourselves tracing clews which lead us off insensibly into others, and, before we are aware, we discover ourselves exploring the chambers of some other department.

*The Physical Geography of the Sea*

Chapter X (p. 181)

Harper & Brothers. New York, New York, USA. 1855

**Peattie, Donald Culrose** 1896–1964  
American botanist, naturalist, and author

The oldest voice in the world is the wind. When you see it fitfully turning the blades of a mill lazily to draw water, you think of it as an unreliable servant of man. But in truth it is one of our masters, obedient only to the lord sun and the whirling of the great globe itself.

*Weather: A National Journal* (p. 24)

Weldon Owen Pty Ltd. Sydney, Australia. 1996

## WISDOM

**Abelard, Peter** 1079–1142  
French scholastic philosopher

Assiduous and frequent questioning is indeed the first key to wisdom.

*Sic et Non (Yes and No)*

**Aquinas, St. Thomas** 1227?–74  
Dominican philosopher and theologian

Wisdom is a kind of science in so far as it has that which is common to all the sciences, namely, to demonstrate conclusions from principles. But since it has something proper to itself above the other sciences, in so far, that is, as it judges of them all, not only as to their conclusions, but also as to their first principles, therefore it is a more perfect virtue than science.

*Summa Theologica*  
I–II, 57, 2

**Aristotle** 384 BCE–322 BCE  
Greek philosopher

Again, we do not regard any of the senses as wisdom; yet surely these give us the most authoritative knowledge of particulars. But they do not tell us the “why” of anything — e.g., why fire is hot; they only say that it is hot.

In *Great Books of the Western World* (Volume 8)  
*Metaphysics*

Book I, Chapter 1 (pp. 499–500)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Bell, E. T. (Eric Temple)** 1883–1960  
Scottish-American mathematician and educator

Wisdom was not born with us, nor will it perish when we descend into the shadows with a regretful backward glance that other eyes than ours are already lit by the dawn of a new and truer mathematics.

*The Queen of the Sciences*  
Chapter X (p. 138)

The Williams & Wilkins Company. Baltimore, Maryland, USA. 1931

**Berrill, Norman John** 1903–96  
English-born American biologist

Wisdom, the highest product of the human mind, comes late; the young are rarely wise and are not expected to be.

*Man's Emerging Mind*  
Chapter I (p. 14)

Dodd, Mead & Company. New York, New York, USA. 1955

**Bush, Vannevar** 1890–1974  
American electrical engineer and physicist

There are also the old men, whose days of vigorous building are done, whose eyes are too dim to see the details of the arch or the needed form of its keystone, but who have built a wall here and there, and lived long in the edifice; who have learned to love it and who have even grasped a suggestion of its ultimate meaning; and who sit in the shade and encourage the young men.

*Endless Horizons*  
Chapter 17 (p. 181)

Public Affairs Press. Washington, D.C. 1946

**Campbell, Donald T.** 1916–96  
American evolutionary philosopher and social scientist

In going beyond what is already known, one cannot but go blindly. If one can go wisely, this indicates already achieved wisdom of some general sort.

In Paul Arthur Schlipp (ed.)  
*The Philosophy of Karl R. Popper*  
Evolutionary Epistemology (p. 422)  
Open Court. La Salle, Illinois, USA. 1974

**Collingwood, Robin George** 1889–1943  
English historian and philosopher

A man ceases to be a beginner in any given science and becomes a master in that science when he has learned that...he is going to be a beginner all his life.

*The New Leviathan; or, Man, Society, Civilization and Barbarism*  
Part I, Chapter I, aphorism I.46 (p. 3)  
At The Clarendon Press. Oxford, England. 1942

**Davies, Robertson** 1913–95  
Canadian novelist

Knowledge may enable you to memorize the whole of Gray's Anatomy and Osler's Principles and Practice of Medicine, but only wisdom can teach you what to do with what you have learned.

*The Merry Heart*  
Chapter 5 (p. 105)

McClelland & Stewart. Toronto, Ontario, Canada. 1996

Knowledge and Wisdom and they are not the same, - because Knowledge is what you are taught, but Wisdom is what you bring to it.

*The Cunning Man* (p. 167)

McClelland & Stewart. Toronto, Ontario, Canada. 1994

**Descartes, René** 1596–1650  
French philosopher, scientist, and mathematician

...human wisdom...always remains one and the same, however applied to different subjects, and suffers no more differentiation proceeding from them than the light of the sun experiences from the variety of things which it illumines....

In *Great Books of the Western World* (Volume 31)

*Rules for the Direction of the Mind*

Rule 1 (p. 1)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Eisenschiml, Otto** 1880–1963  
Austrian-American chemist and historian

Wisdom, if inarticulate, is as impotent as loud-mouthed stupidity.

*The Art of Worldly Wisdom: Three Hundred Precepts for Success Based on the Original Work of Baltasar Gracian*  
Part Nine (p. 112)

Duell, Sloan & Pearce. New York, New York, USA. 1947

Learn as much as you can, but remember that wisdom is more than a mere accumulation of facts. No one hires a man because he knows the encyclopedia by heart.

*The Art of Worldly Wisdom: Three Hundred Precepts for Success Based on the Original Work of Baltasar Gracian*  
Part Nine (p. 108)

Duell, Sloan & Pearce. New York, New York, USA. 1947

**Gregory, Sir Richard Arman** 1864–1952  
British science writer and journalist

The love of truth is the beginning and end of wisdom.

*Discovery; or, The Spirit and Service of Science*  
Chapter II (p. 27)

Macmillan & Company Ltd. London, England. 1918

**Kingsley, Charles** 1819–75  
English clergyman and author

Wise men know that their business is to examine what is,  
and not to settle what is not.

*The Water-Babies*  
Chapter II (p. 62)  
Dodd, Mead & Company. New York, New York, USA. 1910

**Milton, John** 1608–74  
English poet

...to know  
That which before us lies in daily life  
Is the prime Wisdom...

In *Great Books of the Western World* (Volume 32)  
*Paradise Lost*  
Book VIII, l. 192–194  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Narby, Jeremy**  
Swiss-born anthropologist and author

...wisdom requires not only the investigation of many  
things, but the contemplation of the mystery.  
*The Cosmic Serpent: DNA and the Origins of Knowledge*  
Chapter 11 (p. 162)  
Tarcher/Putnam. New York, New York, USA. 1998

**Procter, Bryan Waller** 1787–1874  
English poet

...he who can draw a joy  
From rocks, or woods, or weeds, or things  
That seem all mute, and does it — is wise.  
*The Poetical Works of Barry Cornwall*  
A Haunted Stream  
Henry Colburn & Company London, England. 1822

## The Bible

...I applied my mind to study and explore by means of  
wisdom all that is done under heaven. It is a worthless task  
that God has given to mortals to keep them occupied.

*The Revised English Bible*  
Ecclesiastes 1:13  
Oxford University Press, Inc. Oxford, England. 1989

For in much wisdom is much vexation; the more knowl-  
edge, the more suffering.

*The Revised English Bible*  
Ecclesiastes 1:18  
Oxford University Press, Inc. Oxford, England. 1989

## WONDER

**Chesterton, G. K. (Gilbert Keith)** 1874–1936  
English author

The world will never starve for want of wonders; but  
only for want of wonder.

*Tremendous Trifles*

*Tremendous Trifles*, I  
Dodd, Mead & Company New York, New York, USA. 1909

**Cole, William** 1530–1600  
English man of letters

When we contemplate the works of creation in the con-  
struction of the planetary system, and the stupendous  
parts of the universe, we are struck with admiration at  
their magnitude; so, when we descend the scale of nature,  
and contemplate the minutiae of material objects, we dis-  
cover an equal harmony and beauty in their disposition,  
and are equally lost in wonder.

*Philosophical Remarks on the Theory of Comets, a Dissertation on the  
Nature and Properties of Light*  
Conclusion (p. 93)

B.J. Holdsworth. London, England. 1823

**Dawkins, Richard** 1941–  
British ethologist, evolutionary biologist, and popular science writer

We have an appetite for wonder, a poetic appetite, which  
real science ought to be feeding but which is being hi-  
jacked, often for monetary gain, by purveyors of super-  
stition, the paranormal and astrology.

*Unweaving the Rainbow: Science, Delusion and the Appetite for Wonder*  
Chapter 6 (p. 114)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1998

I believe that astrologers, for instance, are playing on —  
misusing, abusing — our sense of wonder. I mean when  
they hijack the constellations, and employ sub-poetic  
language like the moon moving into the fifth house of  
Aquarius. Real astronomy is the rightful proprietor of the  
stars and their wonder. Astrology gets in the way, even  
subverts and debauches the wonder.

*Science, Delusion and the Appetite for Wonder*  
Richard Dimpleby Lecture, BBC1 Television, November 12<sup>th</sup>, 1996

The fact that we slowly apprehend our world, rather  
than suddenly discover it, should not subtract from its  
wonder.

*Unweaving the Rainbow: Science, Delusion and the Appetite for Wonder*  
Chapter 1 (p. 5)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1998

The feeling of awed wonder that science can give us  
is one of the highest experiences of which the human  
psyche is capable. It is a deep aesthetic passion to rank  
with the finest that music and poetry can deliver. It is  
truly one of the things that makes life worth living and it  
does so, if anything, more effectively if it convinces us  
that the time we have for living it is finite.

*Unweaving the Rainbow: Science, Delusion and the Appetite for Wonder*  
Preface (p. x)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1998

There is an appetite for wonder, and isn't true science  
well qualified to feed it?

*Science, Delusion and the Appetite for Wonder*  
Richard Dimpleby Lecture, BBC1 Television, November 12<sup>th</sup>, 1996

The mystic is content to bask in the wonder and revel in a mystery that we were not “meant” to understand. The scientist feels the same wonder but is restless, not content; recognizes the mystery as profound, then adds, “But we’re working on it.”

*Unweaving the Rainbow: Science, Delusion and the Appetite for Wonder*  
Chapter 2 (p. 17)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1998

**Gardner, Martin** 1914–

American writer and mathematics games editor

...almost all scientists believe that as their knowledge increases, their sense of wonder also grows. The scientist sees a flower, said physicist John Tyndall, “with a wonder superadded.”

Science vs. Beauty?

*Skeptical Inquirer*, March 1, 1995

**Guiducci, Mario** 1585–1646

Italian follower of and ghost writer for Galileo Galilei

When new or rarely seen things awaken in our minds more wonder than those which are common and ordinary, our desire to learn their causes should be aroused accordingly, and with it our wish to put to test those things reported to us by others or supplied by our own minds.

*Discourse on the Comets*

Discourse on the Comet (p. 2)

Published by the author. Florence, Italy. 1619

**Hardy, Thomas** 1840–1928

English poet and regional novelist

Until a person has thought out the stars and their inter-spaces, he has hardly learnt that there are things more terrible than monsters of shape, namely, monsters of magnitude without known shape. Such monsters are the voids and waste places of the sky.

*Two on a Tower*

Chapter IV (p. 34)

Harper & Brothers, Publishers. New York, New York, USA. No date

**Herschel, Sir John Frederick William** 1792–1871

English astronomer and chemist

Accustomed to trace the operation of general causes, and the exemplification of general laws, in circumstances where the uninformed and uninquiring eye perceives neither novelty nor beauty, [the scientist and natural philosopher] walks in the midst of wonders.

*A Preliminary Discourse on the Study of Natural Philosophy*

Part I, Chapter I, Section 10 (p. 15)

Printed for Longman, Rees, Orme, Brown & Green. London, England. 1831

**Krauss, Lawrence M.** 1954–

American theoretical physicist

There is plenty of wonder left in the universe even after we have examined all the clues nature has thrown our

way. I really believe that our imaginations have not even begun to exhaust the possibilities of existence. To proclaim the slogan “The Truth IS Out There” is perhaps too trite. I prefer “You ain’t seen nothin’ yet!”

*Beyond Star Trek: Physics from Alien Invasions to the End of Time*  
Epilogue (p. 175)

Basic Books, Inc. New York, New York, USA. 1997

**Poe, Edgar Allan** 1809–49

American short story writer

...wonders and wild fancies...strangely rife among mankind.

In H. Beaver (ed.)

*The Science Fiction of Edgar Allan Poe*

The Conversation of Eiros and Charmion (p. 67)

Penguin Books. Hammondsworth, England. 1976

**Pope, Alexander** 1688–1744

English poet

Pretty! in amber to observe the forms

Of hairs, of straws, or dirt, or grubs, or worms!

The things, we know, are neither rich nor rare,

But wonder how the devil they got there.

*The Complete Poetical Works*

Prologue to the Satires, l. 169

Houghton Mifflin Company. New York, New York, USA. 1903

**Sagan, Carl** 1934–96

American astronomer and science writer

Claims that cannot be tested, assertions immune to disproof are veridically worthless, whatever value they may have in inspiring us or in exciting our sense of wonder.

*The Demon-Haunted World: Science as a Candle in the Dark*

Chapter 10 (p. 171)

Random House, Inc. New York, New York, USA. 1995

**Steeff, Duncan**

No biographical data available

There is philosophy, and hope, in this great enterprise [of planetary exploration]. What a tribute to the human mind it is! We are replete with ambitions and egotisms, and with our love of the temporal — and yet we project our consciousness to the moons of Jupiter and light-years beyond, to the edges of the universe. This fascination, which has endured in some form since our ancestors first contemplated the stars, has nothing to do with the material. It exists because we already possess the greatest treasure of all, wonder. wonder. For such a species, there is hope indeed.

In Nigel S. Hey

*Solar System*

Ices in the Solar System (p. 257)

Weidenfield & Nicolson. London, England. 2002

**Verhoeven, Cornelis** 1928–2001

Dutch philosopher and essayist

Wonder is a certainty which has only just been established and has not yet lost the expectation of seeing its opposite appear. This does not exclude the knowledge of that which is incited by wonder. On the contrary: the more we know about something the more we realize that this knowledge is never exhaustive. Knowledge may nourish wonder since it can postulate the possibility that things may be different than they are.... Wonder that a thing is so is motivated by the possibility that it might be different. This movement is endless since this “difference” remains completely undefined.

Translated by Mary Foran  
*The Philosophy of Wonder*

Two (p. 27)

The Macmillan Company. New York, New York, USA. 1972

## WORD

**Becker, Carl L.** 1873–1945

American historian

If we would discover the little backstairs door that for any age serves as the secret entranceway to knowledge, we will do well to look for certain unobtrusive words with uncertain meanings that are permitted to slip off the tongue or the pen without fear and without research; words which, having from constant repetition lost their metaphorical significance, are unconsciously mistaken for objective realities.

*The Heavenly City of the Eighteenth Century Philosophers*

Chapter II (p. 47)

Yale University Press. New Haven, Connecticut, USA. 1932

**Heisenberg, Werner Karl** 1901–76

German physicist and philosopher

Words have no well-defined meaning. We can sometimes by axioms give a precise meaning to words, but still we never know how these precise words correspond to reality, whether they fit reality or not.

In Paul Buckley and F. David Peat (eds.)

*Glimpsing Reality: Ideas in Physics and the Link to Biology*

Werner Heisenberg (p. 7)

University of Toronto Press. Toronto, Ontario, Canada. 1996

**Horace (Quintus Horatius Flaccus)** 65 BCE–8 BCE

Roman philosopher and dramatic critic

If so be there are abstruse things which absolutely require new terms to make them clear, it will be in your power to frame words which never sounded in the ears of a cinctured Cethegus, and free pardon will be granted if the license be used modestly.... Each generation has been allowed, and will be allowed still to issue words that bear the mint-mark of the day.

In James Boswell

*Boswell's "Life of Samuel Johnson"*

*Ars Poetica* 48 (Wickham) (fn p. 158, year 1750)

Oxford University Press, Inc. Oxford, England. 1965

**Lewis, Gilbert Newton** 1875–1946

American chemist

There is always the danger is scientific work that some word or phrase will be used by different authors to express so many ideas and surmises that, unless redefined, it loses all real significance.

Valence and Tautomerism

*Journal of the American Chemical Society*, Volume 35, 191 (p. 144S)

**Maxwell, James Clerk** 1831–79

Scottish physicist

When a physical phenomenon can be completely described as a change in the configuration and motion of a material system, the dynamical explanation of that phenomenon is said to be complete. We cannot conceive any further explanation to be either necessary, desirable, or possible, for as soon as we know what is meant by the words configuration, mass and force, we see that the ideas which they represent are so elementary that they cannot be explained by means of anything else.

*Scientific Papers*

II, On the Dynamical Evidence of the Molecular Constitution of Bodies

(p. 419)

**Popper, Karl R.** 1902–94

Austrian/British philosopher of science

The relationship between a theory (or a statement) and the words used in its formulation is in several ways analogous to that between written words and the letters used in writing them down.

In Paul Arthur Schlipp (ed.)

*The Philosophy of Karl Popper* (Volume 1)

Book I, Part I

Autobiography of Karl Popper

Section 7 (p. 15)

The Open Court Publishing Company. LaSalle, Illinois, USA. 1974

**Schuster, Sir Arthur** 1851–1934

English physicist

Scientific controversies constantly resolve themselves into differences about the meaning of words.

In C. K. Ogden and I. A. Richards

*The Meaning of Meaning*

Introductory Quotations (p. xxiv)

Harcourt, Brace & Company. New York, New York, USA. 1949

**Whewell, William** 1794–1866

English philosopher and historian

I am always glad to hear of the progress of your researches, and never the less so because they require the fabrication of a new word or two. Such a coinage has always taken place at the great epochs of discovery; like the medals that are struck at the beginning of a new reign — or rather like the change of currency produced by the

accession of a new sovereign; for their value and influence consists in their coming into common circulation.

In Silvanus P. Thompson

*Michael Faraday: His Life and Work*

Chapter IV

Letter from Whewell to Faraday

14 October 1837 (p. 163)

Cassell & Company Ltd. London, England. 1901

**Wolfenden, John Frederick** 1906–85

English education leader

The everyday difficulty is to use words “pure and simple,” without getting entangled in their emotional lives.... [T]he scientist is to a large extent freed from this temptation. He knows very well the danger of using words.

*The Gap—The Bridge*

Essay on institutional dichotomy

## WORK

**Darwin, Charles Robert** 1809–82

English naturalist

I forget whether I ever told you what the object of my present work is, — it is to view all facts that I can master (ehue, ehue, how ignorant I find I am) in Natural History (as on geographical distribution, palaeontology, classification, hybridism, domestic animals and plants, &c., &c., &c.) to see how far they favor or are opposed to the notion that wild species are mutable or immutable: I mean with my utmost power to give all arguments and facts on both sides.

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 1)

Letter to Fox, March 27, 1855 (p. 409)

D. Appleton & Company. New York, New York, USA. 1896

**Davy, Sir Humphry** 1778–1829

English chemist

The most important part of the history of a man of science is necessarily recorded in his work.

*The Collected Works of Sir Humphry Davy* (Volume 1)

Memories of the Life of Sir Humphry Davy

Chapter I (p. 1)

London, England. 1839–1840

## Editor

No man is truly equal to his work until he is superior to it.

Editor's Outlook

*Journal of Chemical Education*, Volume 10, Number 2, February 1933

**Thoreau, Henry David** 1817–62  
American essayist, poet, and practical philosopher

This curious world which we inhabit is more wonderful  
than it is convenient, more beautiful than it is useful; it is  
more to be admired than to be used.

Commencement address

*Harvard University, 1837*

**Toulmin, Stephen** 1922–  
English philosopher

**Goodfield, June**

Science writer, screenwriter, and historian

The picture of the natural world we all take for granted today has one remarkable feature, which cannot be ignored in any study of the ancestry of science: it is a historical picture. Not content with achieving intellectual command over the world of their own times, men have been anxious to go further, and discover how the present state of things came to be as it is. Having mapped the existing topography of the heavens and grasped the principles now governing the world of matter, they have also reached back into the darkness of past time, to a period which earlier generations would have found inconceivably remote.

*The Discovery of Time*

Introduction (p. 17)

Harper & Row, Publishers. New York, New York, USA. 1965

**Twain, Mark (Samuel Langhorne Clemens)** 1835–1910

American writer and humorist

It takes a long time to prepare a world for man, and such a thing is not done in a day. Some of the great scientists, carefully ciphering the evidence furnished by geology, have arrived at the conviction that our world is prodigiously old, and they may be right, but Lord Kelvin is not of their opinion. He takes the cautious, conservative view, in order to be on the safe side, and feels sure it is not so old as they think. As Lord Kelvin is the highest authority in science now living, I think we must yield to him and accept his view. He does not concede that the world is more than a hundred million years old.

## WRITING

**Cohen, I. Bernard** 1914–2003

American physicist and science historian

The writings of all great men stand as a perpetual challenge to each succeeding generation which attempts to make an interpretation suitable to its own age.

*Franklin and Newton*

Chapter One (p. 3)

Harvard University Press. Cambridge, Massachusetts, USA. 1966

**Einstein, Albert** 1879–1955

German-born physicist

Your exposition is of matchless clarity and perspicuity. You did not dodge any problems but took the bull by the horns, said all that is essential, and omitted all that is inessential.

*The Collected Papers of Albert Einstein* (Volume 8)

Letter 297. Letter to Moritz Schlick, 6 February 1917 (p. 284)

**Emerson, William** 1701–82

English mathematician

I am very sensible how difficult a thing it is to write well upon the science of Astronomy; by reason the subject is so comprehensive, and consists of so many parts, and is connected with so many other sciences, which it requires the perfect knowledge of; and besides, is a work of so much time, that a man had need have the life of Mathusalem, to go thro' the whole of it.

*A System of Astronomy: Containing the Investigation and Demonstration of the Elements of that Science*

The Preface (p. iii)

Printed for J. Nourse. London, England. 1769

**Kepler, Johannes** 1571–1630

German astronomer

...prolixity of phrases has it own obscurity, no less than terse brevity. The latter evades the mind's eye while the former distracts it; the one lacks the light while the other overwhelms with superfluous glitter; the latter does not arouse the sight while the former quite dazzles it.

*New Astronomy*

Author's introduction (p. 47)

At The University Press. Cambridge, England. 1992

**Locke, John** 1632–1704

English philosopher and political theorist

I have put into thy hands what has been the diversion of some of my idle and heavy hours. If it has the good luck to prove so of any of thine, and thou hast but half so much pleasure in reading as I had in writing it, thou wilt as little think thy money, as I do my pains, ill bestowed.

In *Great Books of the Western World* (Volume 35)

*An Essay Concerning Human Understanding*

Epistle to the Reader (p. 87)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Lowell, Percival** 1855–1916

American astronomer

I believe that all writing should be a collection of precious stones of truth which is beauty. Only the arrangement differs with the character of the book. You string them into a necklace for the world at large, pigeon hole them in drawers for the scientist. In the necklace you have the cutting of your thought, i.e., the expressing of it and the arrangement of the thoughts among themselves.

In Ferris Greenslet

*The Lowells and Their Seven Worlds*

Book VII, Chapter I (p. 355)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1946

**Moog, Florence** 1915–87

American biologist

Good writing, after all, is just clear thinking. Anyone who can think well enough to make advances in any learned field ought to be able to write about his work. I am, of course, aware than many research papers submitted to scientific journals are, from a literary standpoint, putrid; but usually such essays are scientifically not very fragrant either.

Can Scientists Write for the General Public

*Science*, Volume 119, Number 3095, 23 April, 1954 (p. 567)

**Oersted, Hans Christian** 1777–1851

Danish physicist and chemist

So much is certain: that nothing is better adapted to form a mind which is capable of great development, than living and participating in great scientific revolutions. I would therefore counsel all those whom the period they live in has not naturally presented with this advantage, to procure it artificially for themselves, by reading the writings of those periods in which the sciences have suffered great changes. To pursue the writings of the most opposite systems, and to extract their hidden truth, to answer questions raised by these opposite systems, to transfer the chief theories of the one system into the other, is an exercise which cannot be sufficiently recommended to the student. He would certainly be rewarded for this labour, by becoming as independent as possible of the narrow opinions of his age.

*The Soul in Nature with Supplementary Contributions*

Observations on the History of Chemistry: A Lecture 1805–1807

(p. 322)

Henry G. Bohn. London, England. 1852

**Rossi, Hugo** 1935–

American mathematician

It is extremely hard for mathematicians to do expository writing. It is not in our nature. In fact, the very nature of mathematical meaning and grammar militates against it. However, this puts us at a distinct disadvantage relative to other sciences. ... Good exposition should be valued, not only for the success in communication but also as evidence of real mathematical insight. It is no accident that among our greatest mathematicians are our greatest teachers and expositors.

From the Editor

*Notices of the American Mathematical Society*, Volume 42, Number 1,

January 1995 (p. 4)

**von Braun, Wernher** 1912–77

German-born rocket scientist

When a good scientific paper earns a student as much glory as we shower upon the halfback who scored the winning touchdown, we shall have restored the balance that is largely missing from our schools.

Text of Address by von Braun Before the Publishers' Group Meeting Here

*New York Times*, 29 April 1960, L 20, column 5

**WRONG**

**Kingsley, Charles** 1819–75  
English clergyman and author

You must not say that this cannot be, or that that is contrary to nature. You do not know what Nature is, or what she can do; and nobody knows, not even Sir Roderick Murchison, or Professor Owen, or Professor Sedg-

wick, or Professor Huxley, or Mr. Darwin, or Professor Faraday, or Mr. Grove.... They are very wise men; and you must listen respectfully to all they say: but even if they should say, which I am sure they never would, "That cannot exist. That is contrary to nature, you must wait a little and see; for perhaps even they may be wrong."

*The Water-Babies*

Chapter II (p. 58)

Dodd, Mead & Company. New York, New York, USA. 1910

### X-RAY

#### Author undetermined

The Roentgen Rays, The Roentgen Rays  
What is this craze,  
The town's ablaze,  
With the new phase  
of X-rays ways  
I'm full of daze,  
Shock and amaze,  
For nowadays,  
I hear they'll gaze,  
Thro' cloak and gown — and even stays,  
These naughty, naughty Roentgen Rays.  
In John G. Taylor  
*The New Physics*  
Chapter 2 (p. 46)  
Basic Books, Inc. New York, New York, USA. 1972

**Bacon, Roger** 1214–92  
English philosopher, scientist, and friar

No substance is so dense as altogether to prevent rays from passing. Matter is common to all things, and thus there is no substance on which the action involved in the passage of a ray may not produce a change. Thus it is that rays of heat and sound penetrate through the walls of a vessel of gold or brass. It is said by Boethius that a lynx's eye will pierce through thick walls. In this case the wall would be permeable to visual rays. In any case there are many dense bodies which altogether interfere with the visual and other senses of man, so that rays cannot pass with such energy as to produce an effect on human sense, and yet nevertheless rays do really pass, though without our being aware of it.

In Victor Robinson  
*The Story of Medicine*  
Chapter VII (pp. 208–209)  
The New York Home Library. New York, New York, USA. 1943

**Jauncey, G. E. M.** 1888–1947  
Australian physicist

O Roentgen, then the news is true  
And not a trick of idle rumor  
That bids us each beware of you  
And of your grim and graveyard humor.  
*Scientific American*, February 22, 1896

**Lewis, Edwin Herbert** 1866–1938  
American rhetorician, novelist, and poet

...left alone with the X-ray man, Marvin plied him with questions. He so fascinated the radiographer that presently he was rewarded with a mystery even greater than

that of the subtle unseen light. He was taken into a dark closet and permitted to peer into a small instrument containing salts of radium.

He saw a flight of stars, a sheaf of rays, a faint fierce sparkling! The heavy metallic radium atom was exploding! It was bombarding a small black screen with cannon flashes!

Instantly the boy inquired why somebody did not capture the power of that explosion and set it to work. He was told that any such achievement was impossible. The show was not affected by heat or cold, and would continue for a thousand years or more till the radium was all used up.

What were those flashes? How could he learn more about them? He must wait till he had enough physics to follow the writings of a man named Rutherford.

*White Lightning*  
Chapter 2 (p. 8)  
Covici-McGee. Chicago, Illinois, USA. 1923

**Polanyi, Michael** 1891–1976  
Hungarian-born English scientist, philosopher, and social scientist

One of the greatest and most surprising discoveries of our own age, that of the diffraction of X-rays by crystals (in 1912) was made by a mathematician, Max von Laue, by the sheer power of believing more concretely than anyone else in the accepted theory of crystals and X-rays.

*Personal Knowledge*  
Chapter 9, Section 5 (p. 277)  
Harper & Row, Publishers. New York, New York, USA. 1962

It's a whole beautiful subject and the Riemann zeta function is just the first one of these, but it's just the tip of the iceberg. They are just the most amazing objects, these L-functions — the fact that they exist, and have these incredible properties are tied up with all these arithmetical things — and it's just a beautiful subject. Discovering these things is like discovering a gemstone or something. You're amazed that this thing exists, has these properties and can do this.

In K. Sabbagh  
*The Riemann Hypothesis: The Greatest Unsolved Problem in Mathematics*  
Chapter 12 (p. 196)  
Farrar, Straus & Giroux. New York, New York, USA. 2002

**Gutzwiller, M. C.**  
Swiss-born American physicist

The zeta function is probably the most challenging and mysterious object of modern mathematics, in spite of its utter simplicity.... The main interest comes from trying to improve the Prime Number Theorem, i.e., getting better estimates for the distribution of the prime numbers. The secret to the success is assumed to lie in proving a conjecture which Riemann stated in 1859 without much fare, and whose proof has since then become the single most desirable achievement for a mathematician.

*Chaos in Classical and Quantum Mechanics*

Chapter 17.9 (p. 308)  
Springer-Verlag, New York, New York, USA. 1990

### Sabbagh, K.

Writer and television producer

In 1859, a German mathematician called Bernhard Riemann, a “timid diffident soul with a horror of attracting attention to himself,” published a paper that drew more attention to him than to almost any other mathematician in the 19<sup>th</sup> century. In it he made an important statement: the non-trivial zeros of the Riemann zeta function all have real part equal to  $1/2$ . That is the Riemann Hypothesis: 15 words encapsulating a mystery at the heart of our number system.

In Ernst Peter Fischer  
*Beautiful Mathematics*  
Prospect, January 2002

## ZETA FUNCTION

### Bombieri, Enrico 1940–

Italian mathematician

I am firmly convinced that the most important unsolved problem in mathematics today is the truth or falsity of a conjecture about the zeros of the zeta function, which was first made by Riemann himself.... Even a single exception to Riemann’s conjecture would have enormously strange consequences for the distribution of prime numbers.... If the Riemann hypothesis turns out to be false, there will be huge oscillations in the distribution of primes. In an orchestra, that would be like one loud instrument that drowns out the others — an aesthetically distasteful situation.

Prime Territory: Exploring the Infinite Landscape at the Base of the Number System  
*The Sciences*, Sept/Oct 1992

### Borwein, J. 1951–

Scottish mathematician

### Bradley, D.

No biographical data available

It is intriguing that any of the various new expansions and associated observations relevant to the critical zeros arise from the field of quantum theory, feeding back, as it were, into the study of the Riemann zeta function. But the feedback of which we speak can move in the other direction, as techniques attendant on the Riemann zeta function apply to quantum studies.

Computational Strategies for the Riemann Zeta Function  
*Journal of Computational and Applied Mathematics*, Volume 121, 2000

### Sarnak, P. 1953–

South African-born American mathematician

[It has been] said that the zeros [of the Riemann zeta function] weren’t real, nobody measured them. They

are as real as anything you will measure in a laboratory — this has to be the way we look at the world.

1999 *Mathematical Science Research Institute lecture*  
Random Matrix Theory and Zeroes of Zeta Functions – A Survey

## ZOO

### Diolé, Philippe 1908–77

French biologist

The world of animals in captivity offers us at once a prophetic glimpse and a caricature of the world in which modern man lives out his life. The animal suffers psychologically and his suffering is not unlike that of man himself, since its world is characterized by deterioration of its environment and by its own degradation. The causes are the same in both cases: the increase in the number of individual animals in a zoo — baboons, for example — suffer from, and are deformed by, lack of sufficient space for them to lead a harmonious social existence. When captivity has done its work and an animal has become truly dangerous, it then becomes necessary to isolate it in a cage of its own.

Translated by J.F. Bernard  
*The Errant Ark: Man’s Relationship with Animals*  
The Cruelty of Paradise  
Putnam, New York, New York, USA. 1974

### Hediger, Heini 1908–92

Swiss zoologist

One of the most frequent misconceptions which is constantly met in the zoo is the business of regarding the animals as prisoners. This is as false and old-fashioned as if in these days everybody still thought that radio and television sets contained little men who talked, sang and danced inside the sets.

Translated by Gwynne Vevers and Winwood Reade  
*Man and Animal in the Zoo*  
Chapter 3 (p. 99)  
Delacorte Press, New York, New York, USA. 1969

### Queneau, Raymond 1903–76

French poet, novelist, and publisher

In the dog days while I was in a bird cage at feeding time I noticed a young puppy with a neck like a giraffe who, like the toad, ugly and venomous, wore yet a precious beaver upon his head. This queer fish obviously had a bee in his bonnet and was quite bats; he started yak-yakking at a wolf in sheep’s clothing claiming that he was treading on his dogs with his beetle-crushers, but the sucker got a flea in his ear; that foxed him, and quiet as a mouse he ran like a hare for a perch.

I saw him again later in front of the Zoo with a young buck who was telling him to bear in mind a certain drill about his fevers.

*Exercises in Style*

Zoological (p. 179)

New Direction Publishing Corporation. New York, New York, USA. 1981

**Wynne, Annette**

American poet

Excuse us, Animals in the Zoo,  
I'm sure we're very rude to you;  
Into your private house we stare  
And never ask you if you care;  
And never ask you if you mind.  
Perhaps we really are not kind:  
I think it must be hard to stay  
And have folks looking in all day,  
I wouldn't like my house that way.

*All Through the Year*

Excuse Us, Animals in the Zoo

Frederick A. Stokes. New York, New York, USA. 1932

**ZOOLOGIST****Agassiz, Jean Louis Rodolphe** 1807–73

Swiss-born American naturalist, geologist, and teacher

Lay aside all conceit. Learn to read the book of nature for yourself. Those who have succeeded best have followed for years some slim thread which has once in a while broadened out and disclosed some treasure worth a life-long search.

In David Stair Jordan

*Popular Science Monthly*, Volume 40, 1891**Wheeler, William Morton** 1865–1937

American entomologist

...I shall strenuously endeavor to be modern, I can only beg you, if I fail to come within hailing distance of the advance guard of present-day zoologists, to remember that the range of adaptability in all organisms, even zoologists, is very limited.

*Essays in Physiological Biology*

Essay I (p. 4)

Harvard University Press. Cambridge, Massachusetts, USA. 1939

**ZOOLOGY****Bierce, Ambrose** 1842–1914

American newspaperman, wit, and satirist

**HIPPOGRIF**, n. An animal (now extinct) which was half horse and half griffin. The griffin was a compound creature, half lion and half eagle. The hippogriff was, therefore, only one quarter eagle, which is \$2.50 in gold. Zoology is full of surprises.

*The Devil's Dictionary*

Doubleday &amp; Company, Inc. Garden City, New York, USA. 1967

**Bock, W. J.**

No biographical data available

Communication — information exchange — among zoologists is the core of zoological nomenclature; everything else pales in the light of the importance of communication.

History and Nomenclature of Avian Family Group Names

*Bulletin of the American Museum of Natural History*, Volume 221, 1994 (p. 8)**Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

Living, as I do, in an educated and scientific atmosphere, I could not have conceived that the first principles of zoology were so little known. Is it possible that you do not know the elementary fact in comparative anatomy, that the wing of a bird is really the forearm, while the wing of a bat consists of three elongated fingers with membranes between?

*The Lost World*

Chapter IV (p. 55)

The Colonial Press. Clinton, Massachusetts, USA. 1959

**Elton, Charles S.** 1900–91

English biologist

...the discoveries of Darwin, himself a magnificent field naturalist, had the remarkable effect of sending the whole zoological world flocking indoors, where they remained hard at work for fifty years or more, and whence they are now beginning to put forth cautious heads again into the open air.

*Animal Ecology*

Chapter I (p. 3)

Sidgwick &amp; Jackson, Ltd. London, England. 1927

**Feynman, Richard P.** 1918–88

American theoretical physicist

I began to read the paper. It kept talking about extensors and flexors, the gastrocnemius muscle, and so on. This and that muscle were named, but I had not the foggiest idea of where they were located in relation to the nerves or to the cat. So I went to the librarian in the zoology section and asked her if she could find me a map of the cat.

“A map of the cat, sir?” she asked horrified. “You mean a zoological chart!”

*Surely You're Joking, Mr. Feynman!: Adventures of a Curious Character*

A Map of a Cat? (p. 72)

W.W. Norton &amp; Company, Inc. New York, New York, USA. 1985

**Hugo, Victor** 1802–85

French author, lyric poet, and dramatist

Zoology is as limitless as cosmography.

Translated by Isabel F. Hapgood

*The Toilers of the Sea*

Part II, Book Third, Chapter III (p. 418)  
The Heritage Press. New York, New York, USA. 1961

**Kovalevskii, V. O.**

Russian paleontologist

And so, the task of modern zoology consists in this; it should acquaint us with the entire variety of animal forms which populate our world, not in terms of a disorganized multitude from which this or that form happens to catch our attention, but as a structured whole, in which each form occupies a designated place, so one can instantly note and critically analyze all the particularities of each separate member; it should show us the inner structure of these groups and of their individual members, and in what relationship they stand to members of other groups; it should present the history of each member, beginning with its [first] appearance...it should open the ancient

tombs of the earth and demonstrate to us the endless series of ancestors and relatives which proceed those animals which we now see.

In William Coleman and Camille Limoges (eds.)

*Studies in History of Biology* (Volume 2)

Kovalevskii and Paleontology (pp. 112–113)

The Johns Hopkins University Press. Baltimore, Maryland, USA.  
1977–84

**Polanyi, Michael** 1891–1976

Hungarian-born English scientist, philosopher, and social scientist

The existence of animals was not discovered by zoologists, nor that of plants by botanists, and the scientific value of zoology and botany is but an extension of man's pre-scientific interests in animals and plants.
